any other questions or concerns. The Compliance team participates in workgroups and meetings across our health plan, including a twice monthly meeting with the Vendor Delegation Oversight Group (VDOG).

Speaking Up. In our Florida health plan and nationally across our affiliates, we work to establish a culture that empowers employees to “speak up” to identify any potential compliance concerns or issues through multiple reporting avenues. We maintain a strict and highly publicized policy of non-retaliation for any employee who proactively comes forward to identify potential compliance risks or concerns. We publicize policies in many ways, including annual training, and our compliance intranet site.

Ethics and Compliance Hotline. Our national Ethics and Compliance Hotline supports confidential (anonymous as requested) and secure reporting of potential violations by phone or e-mail. All hotline reports are investigated and the Compliance Officer is frequently involved in the investigation of reports impacting the Florida market. Results are communicated to the national Medicaid Chief Compliance Officer.

1.1.5. AHCA Requirement: Enforcement of standards through well-publicized statutory and contractual requirements and related disciplinary guidelines

Information. We inform employees of our compliance standards, statutory and contractual requirements, and related disciplinary guidelines through online news articles/announcements, online training, the Ethics and Compliance Resource Center, screensavers, posters, newsletters, and the Compliance Committee. Employee training includes relevant scenarios and guidance. We explain our expectations to subcontractors during the contracting, pre-delegation, and annual delegation processes. We require subcontractors to have their own compliance program and fraud plan, as well as training programs for their employees and providers. Subcontractors must comply with the provisions of the Medicaid Contract.

Enforcement. Clear Health has a strong commitment to compliance and enforcement of compliance program standards, applicable laws, and regulations. The Code specifies the expectations of employees and subcontractors, as well as disciplinary actions for non-compliance. Any employee approving or participating in actions that violate the Code, the Compliance Plan, company policies, or applicable laws and regulations is subject to corrective action, up to and including termination of employment.

Subcontractors in violation of their contract, the Medicaid program provisions, or Clear Health’s compliance program are subject to corrective action up to and including contract termination. Corrective action depends upon the nature and circumstance of the violation. We consistently enforce discipline for violations through policies and procedures that address disciplinary action for employees and subcontractors who breach compliance and ethics standards. We communicate our expectations clearly and concisely, as outlined in the Code. Ethics and compliance considers factors such as previous investigations of the same or similar misconduct, information from interviews, and input from Human Resources when recommending disciplinary action.

EXHIBIT A-4-a

GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

National Ethics and Compliance Office. The national Ethics and Compliance Office administers and advises employees on the Code, serves as an independent resource to receive and investigate allegations of employee misconduct, provides employees with training on ethics and compliance issues, and maintains high-level oversight of compliance programs across the enterprise.

1.1.6. AHCA Requirement: Provision for internal monitoring and auditing

Our Compliance team regularly monitors and audits any significant compliance issues, areas of operations with inherent compliance risk, and subcontractor performance indicators with remediation plans implemented to address them. Reviews are conducted objectively and routinely by internal and external compliance and audit personnel.

Compliance Program and Work Plan. Our Compliance team maintains the Compliance Plan and Work Plan. The Compliance Committee reviews and approves the work plan each year and receives regular progress updates. The core functions of the work plan track the elements of an effective compliance program: written standards, structured program, training and education, auditing and monitoring, reporting and investigation, enforcement and discipline, and response and prevention. The work plan is also submitted to the National Ethics and Compliance office for review.

Partnership with Internal Audit. Our compliance resources and national Internal Audit department work together to help make sure that master audit plans include key compliance issues and risks for detailed review, evaluation, monitoring, and corrective action as needed.

1.1.7. AHCA Requirement: Provisions for prompt response to detected offenses and for development of corrective action initiatives

Clear Health promptly investigates any reported potential violations and conducts investigations in a confidential, fair, and impartial manner. Our investigation, response, and prevention activities include mechanisms, processes, and resources to report compliance and ethics concerns (such as anonymous hotlines), evaluate suspected non-compliance, and report discovered violations.

Employees can use a variety of methods to ask compliance questions, review concerns, or report suspected misconduct, including a helpline, an email box, or physical mailing address. Reports can be submitted anonymously and Clear Health has a strict non-retaliation policy for compliance concerns reported in good faith. Through the Code and training, we make all employees aware that they must report any suspected misconduct. Members, providers, subcontractors, and others can also report compliance concerns and suspected misconduct.

Issues reported to the national Ethics and Compliance office are typically handled by the Ethics Office, which is primarily responsible for conducting investigations. They involve other areas as needed, such as the SIU, Human Resources, and the local Compliance team. Issues are promptly logged and tracked through to resolution.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

When the local Compliance team learns of any deficiency, whether identified by the Agency, a member, a provider, a subcontractor, or internally; our Compliance Officer, in collaboration with other internal stakeholders and department leaders, immediately logs the issue, investigates the root cause of the problem, and tracks the issue through resolution. An action plan may also be necessary for escalation and to prevent a recurrence.

1.2. Using Tools to Promote Compliance with Contract Requirements

Clear Health is committed to maintaining high performance and compliance with the Agency's expectations and requirements under our current and future Contracts. To augment our program and activities, we maintain a systematic approach to assess, track, and report compliance, using three tools: Compliance Assessment Tool (CAT), Compliance 360, and the Risk and Issues Tracking Tool.

Our Compliance Officer and Regulatory team collaboratively oversee CAT to capture contractual requirements. We load key Contract requirements into CAT and assign each one a senior-level business owner who is responsible for the functional area associated with the requirement. Business owners may designate a team member to respond and must periodically, but at least annually (as determined by the Compliance team), assess our compliance with its assigned contractual requirements.

CAT subsequently automates and tracks communications related to the business owner's compliance assessments and the Compliance team's review of them. CAT generates automatic prompts for business owners to respond within specific time frames. CAT also calculates an assessment score as a combination of compliance and monitoring – the higher the score, the greater the risk. The Compliance Officer receives notification of all responses with a non-compliant status for follow-up and resolution. The CAT process helps us identify any contractual compliance gaps and provides a system of documenting and tracking action plans that addresses these gaps to enable us to continue to meet the requirements and expectations of the Agency.

We use the Compliance 360 application to make sure that we maintain compliance with new or revised regulatory requirements. Whenever there is a new or revised requirement, such as a Contract Amendment, Reporting Manual update, AHCA alert, contract interpretation, policy transmittal, or bulletin; our Florida Regulatory team creates an alert in Compliance 360 and disseminates it to all affected employees and stakeholders who serve as assessors. Assessors evaluate alerts to determine whether the regulatory content affects their unit. If it does, the assessor must list planned tasks to reach compliance and document their completion. Our Compliance Officer monitors timely assessments and task completion. Assistance from a dedicated project management team within the national Medicaid division is available for medium-to large-scope Compliance 360 alerts such as large, cross-functional Contract amendments.

As the Compliance team identifies risks and issues within the organization, they document them in the Risk and Issues Tracking Tool. The Tracking Tool captures descriptions of risks and issues, along with root cause analysis. Risks are stratified and ranked to help determine the appropriate level of oversight and monitoring. Users enter monthly updates. The Tool tracks and trend risks and issues locally and nationally across our affiliate health plans.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.3. Clear Health's Anti-Fraud Plan

Our comprehensive approach to fraud, waste, abuse, and overpayments is detailed in our Anti-Fraud Plan, developed with collaboration and support from our SIU. Our Anti-Fraud Plan complies with all federal and State requirements and industry best practices. As a living document, the Anti-Fraud Plan is evaluated and updated at least annually to reflect changes in federal and State regulations, new sources of fraudulent activity, changes in business processes, and best practices.

Clear Health maintains an SIU team staffed with Florida-based employees. We have developed and implemented a FWA prevention program and policy that describe the internal controls to prevent, reduce, detect, investigate, correct, and report suspected and known cases of FWA, in compliance with 42 CFR 438.608 and ss 409.91212, 626.989, and 641.3915 F.S. Our SIU Manager provides reports and updates to the Compliance Committee, and the Compliance Officer maintains unrestricted access to our governing body for compliance reporting, including FWA reporting.

Clear Health will continue to submit our Anti-Fraud Plan to MPI by September 1 of each Contract year, with our most recent submission on September 1, 2017. Our Anti-Fraud Plan addresses all AHCA requirements as specified in Section X.F.4.c. and includes:

- A written description outlining the organizational arrangement of our employees who are responsible for the investigation and reporting of possible overpayment, abuse, or fraud
- A description of our procedures for preventing, detecting, and investigating possible acts of fraud, waste, abuse, and overpayment
- A description of our procedures for the mandatory reporting of possible overpayment, abuse, or fraud to the MPI
- A description of our program and procedures for educating and training employees on how to detect and prevent fraud, abuse, and overpayment, including new hire training within 30 days and annually thereafter; a process to verify that training occurs as required; and inclusion of Deficit Reduction Act requirements in the training curriculum
- The name, address, telephone number, e-mail address, and fax number of the individual responsible for carrying out our Anti-Fraud Plan
- A summary of the results of the investigations of fraud, abuse, or overpayment conducted during the previous year by our SIU

We will continue to build upon the strengths of our current team and the extensive compliance policies already in place. Clear Health will review and submit our Compliance Plan, Anti-Fraud Plan, and FWA policies and procedures or any changes to these items to the MPI Bureau for written approval at least 45 calendar days before we implement any change.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.4. Educating and Monitoring Providers and Subcontractors

Training and educating network providers and subcontractors on compliance and FWA is a critical part of our overall compliance program. Clear Health trains providers and their staff regarding the requirements of the SMMC Contract, including Contract amendments. Our provider onboarding, ongoing training, and workshops include specific modules on FWA policies and procedures and the compliance program. In addition, our provider agreements require providers to comply with program integrity requirements and applicable AHCA-approved policies and procedures, including those on FWA and all applicable laws.

Details and education provided to employees, subcontractors and providers include information as required by s. 6032 of the federal Deficit Reduction Act of 2005, including the Federal False Claims Act, the penalties and administrative remedies for submitting false claims and statements, whistleblower protections, the entity's role in preventing and detecting FWA, each person's responsibility for detection and prevention, and the toll-free State telephone numbers for reporting fraud and abuse.

In addition, our provider handbook, distributed at orientation and available on the public portion of our provider portal, includes a section titled "First Line of Defense Against Fraud" that discusses the provider's obligation to prevent, detect, and deter FWA; the importance of these activities; and examples of both provider and member FWA.

Clear Health thoroughly reviews and vets subcontractors during the pre-delegation process. During this process, we advise the subcontractor of Clear Health's expectations, require that they confirm and attest to their understanding of all contractual and operational requirements, and review evidence they provide of their ability to comply. We also review the subcontractor's organization, ownership, and management for sanctions. We confirm that they are eligible to provide services to Medicaid members and comply with the statutory and contractual requirements for ownership and management, including background screenings. The pre-delegation process confirms the existence and compliance of key requirements, including the compliance plan, fraud program, and training programs. Annual subcontractor audits confirm ongoing compliance with contractual requirements.

Our dedicated VDOG team performs ongoing oversight and monitoring of subcontractor performance, including compliance and FWA. The VDOG receives Key Performance Indicators (KPI) and other reports from the subcontractors on a regular basis and reports this information to the Compliance team and the Compliance Committee. The VDOG and Compliance teams use subcontractor data to monitor subcontractor performance and proactively identify compliance or fraud issues. The VDOG's Vendor In-Service and Handbook, both deploying in January 2018, will include discussions of subcontractor responsibilities related to compliance and FWA. The VDOG also monitors subcontractor submission of a quarterly attestation that they are identifying, monitoring, and reporting FWA.

2. QUALIFIED INDIVIDUAL TO EFFECTIVELY MAINTAIN THE COMPLIANCE PROGRAM

Our Compliance Officer, Alison Cardenas, is responsible for implementation and daily oversight of our Florida compliance program, with local oversight from our multidisciplinary Florida Compliance Committee. Ms. Cardenas has unrestricted access to our governing body for compliance reporting.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Our Compliance Officer, the Compliance team, and the Florida Compliance Committee maintain day-to-day responsibility for our compliance program and our internal and external FWA monitoring. Our Compliance Officer serves as the organization's compliance and FWA authority with the ultimate oversight responsibility for carrying out the provisions of the plan.

We provide a résumé of our Compliance Officer in Attachment SRC# 31-1: Compliance Officer Résumé and an organization chart of our Compliance team in Attachment SRC# 31-2: Organizational Chart.

2.1. Compliance Officer Qualifications

Clear Health's Compliance Officer, Alison Cardenas, is responsible for day-to-day operations, oversight of our compliance program, and ensuring compliance with the laws, regulations, and policies that govern the Medicaid business. Ms. Cardenas is a full-time employee based in our Miami office and is 100 percent dedicated to SMMC.

Ms. Cardenas has more than 17 years of managed care plan experience in Florida, with 13 years in compliance with a focus on government contracts. She has served in regulatory and compliance roles for Florida MCOs and dental health plans. In addition, in her client services roles with DentaQuest, she worked directly with many of the major MCOs as well as AHCA and Florida Healthy Kids.

Ms. Cardenas started with Clear Health in 2012 as the Senior Manager of Medicaid Compliance and then became the Director of Medicaid Compliance. In 2015, Ms. Cardenas served as a Regulatory Manager and then became the full-time Compliance Officer in 2016.

Ms. Cardenas brings a deep understanding of Medicaid medical and dental services in Florida, and also has experience with Medicare and CHIP programs. Her operational knowledge, years of managed care experience, and significant regulatory and compliance experience fully support our organization and adherence to all State, federal, and contractual compliance requirements.

Ms. Cardenas has direct access to Clear Health's Plan President and CEO, CFO, and COO, as well as our national Medicaid Chief Compliance Officer, Chief Compliance Officer, and other compliance resources that help support Florida's compliance program and initiatives. Ms. Cardenas reports to the Florida Plan President and CEO and BOD indirectly, and reports directly to the Medicaid Chief Compliance Officer (also based in Florida). She maintains regular communication with all parties.

Ms. Cardenas chairs the Florida Compliance committee. The committee meets monthly and as needed to oversee the compliance program and includes the Plan President and CEO, the executive team, other department managers, and managers from national support services departments. As our Compliance Officer, Ms. Cardenas' primary responsibilities include:

- Confirming maintenance of policies, procedures, and standards of conduct that articulate Clear Health's commitment to comply with federal and State requirements
- Chairing, organizing, and maintaining the Compliance Committee

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Coordinating resources and developing training programs to make sure all employees, Board members, subcontractors, and providers understand and comply with all applicable standards and requirements
- Conducting internal monitoring and audits, and participating in investigations involving violations of law or policy
- Making sure standards are well publicized and enforced
- Implementing internal and external corrective action plans
- Confirming compliance with Medicaid non-discrimination requirements
- Overseeing and collaborating with the SIU Manager in the design, implementation, and oversight of Clear Health's FWA program

2.2. Reporting Relationships

Our Compliance Officer reports dually to the Clear Health Plan President and CEO (indirectly) and our national Medicaid Chief Compliance Officer (directly) in the national Ethics and Compliance Office. Our Compliance Officer has the authority and reporting relationships to effectively implement our compliance program, and our Plan President and CEO is ultimately responsible for compliance. Our Compliance Officer, Regulatory Director and Plan President and CEO have a standing meeting, every other week to discuss Compliance issues. Our Compliance Officer is accountable for reporting FWA to the national Medicaid Chief Compliance Officer and appropriate State agencies, and making sure that employees cooperate fully with State and federal FWA investigations.

The dual reporting relationship provides accountability to our Florida leadership and to our national compliance leadership; facilitates coordination with the Ethics and Compliance Office to support ethics and compliance initiatives; and enhances communication between local senior management and national leadership regarding changes in State and federal regulations as they affect the scope and content of the national Ethics and Compliance Plan.

The Compliance Officer has primary accountability for maintaining oversight of day-to-day compliance and ethics activities for Clear Health. The Compliance Officer is also responsible for working with executives and functional areas to identify and assist in the mitigation of potential risks. She consults, advises, and implements initiatives for tracking and reporting risks; facilitates audit coordination and responses; monitors the implementation and effectiveness of integrity programs; and coordinates and assures timely responses to regulatory amendments and changes. The Compliance Officer is involved in program integrity operations and compliance with all Florida and federal requirements pertaining to FWA and overpayments.

Our Compliance Officer participates in multiple committees, reinforcing our organizational commitment to compliance, including the Quality Management, Health Plan Oversight, VDOG, Compliance and national Operational Compliance Committees.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

3. SUFFICIENT STAFF TO IMPLEMENT THE COMPLIANCE PROGRAM

We continually monitor the size, capacity, and performance of the team to verify that we continue to meet all department deliverables and will expand the staff as necessary under the new Contract. Currently, we have 16 full-time employees dedicated to supporting our Florida compliance program, with additional staff providing support. Employees fall into three main groups: compliance, regulatory, and SIU. Attachment SRC# 31-2: Organizational Chart illustrates the staff supporting our compliance program.

3.1. Compliance Staff

The Compliance Officer has two full-time Florida-based employees to provide support: the Compliance Manager and the Compliance Program Administrator. Together, the Compliance team supports our MMA, LTC, Comprehensive, and HIV/AIDS specialty plan contracts.

The Compliance Manager monitors and oversees all contractual requirements. Working with designated business owners, she reviews policies and procedures, operational guidelines, and other relevant documentation to verify alignment with our customer contracts. The Compliance Manager regularly monitors compliance through one-on-one observation with employees and desktop quality review of related documentation. This includes monitoring Contract compliance through CAT and Compliance 360.

The Compliance Program Administrator is responsible for the administrative functions of the Compliance team, which includes recording and producing all meeting minutes; tracking all training requirements; collaborating with Records Management to track all off-site document storage; and performing field audits and retrospective review of community outreach activities. The administrator also develops employee communications in collaboration with our SIU and Privacy Unit teams, including emails to reinforce HIPAA and FWA compliance. The administrator also oversees the annual review process for all Florida Operational Guidelines in support of both national and local policies and procedures.

The Florida Compliance Committee addresses compliance issues, remediation initiatives, and compliance-related risk management concerns for our MMA, LTC, and HIV/AIDS specialty plan operations. The committee includes leadership and representation across functional areas, including Compliance (local and national), Regulatory, Quality, Utilization Management, Case Management, LTC, SIU, Provider Relations, Member Services, Subcontractor Oversight, Finance, and Human Resources. The Compliance Committee also serves as a forum for the discussion of potential risk, control, and compliance issues related to health plan operations, including monitoring of action plans; completion of internal and external audit deficiencies and recommendations; and current activities in the market and legislation, including timely response to new and emerging State and federal legislation. The Plan President and CEO serves as the Executive Director of the Compliance Committee, and the Compliance Officer chairs the committee. The committee meets monthly or more frequently if necessary.

During Compliance Committee meetings, the Compliance Officer always reiterates that we foster a proactive culture centered in trust and accountability and we all share the responsibility of reporting possible violations of law, regulations, the Compliance Plan, the Code, and policies and procedures. Clear Health employees are encouraged and empowered to ask questions and report any concerns.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

3.2. Regulatory Staff

There are six full-time Florida-based employees who support the regulatory aspects of our compliance program. The Regulatory Director and Regulatory Oversight Manager oversee the regulatory implementation and compliance of our SMMC operations. Regulatory employees are the primary liaison with the Agency and facilitate communications between our local operation and the Agency on meeting contractual obligations and deliverables. They are the subject matter experts and provide education and support on our Contract, as well as rules and regulations governing our operations and AHCA expectations. They also coordinate delivery of AHCA deliverables, ensuring timely, accurate, and complete submissions of reports and data files.

Regulatory staff serve as Contract Managers for the MMA, LTC, Comprehensive, and HIV/AIDS specialty plan contracts, overseeing operational compliance and serving as the primary point of contact for State communication. Regulatory staff are responsible for: 1) communicating all contract requirements and new amendments; 2) training and communication about existing and new State and Federal regulations that impact the contract (such as the Federal Mega Reg); 3) confirming implementation of required processes and procedures for operational compliance; 4) delivering timely and compliant Agency reports and ad hoc requests; and 5) filing required Health Care Provider Certificate renewals with AHCA.

3.3. Special Investigation Unit Staff

We have seven full-time employees supporting our statewide FWA efforts, with five located in Florida. This team includes five dedicated SIU Investigators (four in Florida), an Investigative Assistant, and a Certified Professional Coder. The team receives support from the SIU Manager, three Data Analysts, and a Regulatory Compliance Consultant.

Our SIU Investigators work closely with the Compliance team and other departments. The Investigators conduct in-depth investigations of suspected fraud and promote compliance with all contractual requirements related to FWA and the SIU's investigations. Our Investigators understand the unique Florida market conditions and trends, have proximity to relevant State employees to develop relationships and share information, and can easily access Clear Health employees.

Our SIU staff bring nearly 100 cumulative years of investigative experience. Our investigators are retired FBI and Medicaid Fraud Control Unit agents who work alongside others who have experience in the health care industry with MCOs or government contractors. The investigative team holds professional designations with the National Healthcare Anti Fraud Association (NHCAA) and the Association of Certified Fraud Examiners (ACFE), and are Certified Professional Coders (CPC).

The Florida SIU meets with the MPI quarterly, with interim meetings as needed (approximately six meetings annually). The SIU participates at national conferences hosted by NHCAA and the National Association of Medicaid Program Integrity (NAMPI). The SIU also attends local meetings such as the newly formed Central Florida Healthcare Fraud Workgroup that the Central Region FBI sponsors.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

The SIU stays current with industry schemes and issues and contributes to national initiatives, such as the Federal Healthcare Fraud Prevention Partnership and the NHCAA. The SIU interacts regularly with Florida regulators and law enforcement, participating in or hosting task forces with various law enforcement and prosecuting agencies. Our Florida SIU shares information with our national Medicaid, commercial, and Medicare SIUs. This sharing of schemes and investigative techniques provides our Florida SIU with a valuable and constant supply of best practices and lessons learned from across the country.

4. EXPERIENCE IDENTIFYING SUBCONTRACTOR FRAUD AND INTERNAL FRAUD AND ABUSE IN MANAGED CARE PROGRAMS

Clear Health's compliance program includes comprehensive processes and controls to prevent, deter, and identify subcontractor and internal fraud and abuse.

4.1. Oversight of Subcontractors and Identification of Fraud

Clear Health's subcontractor selection and oversight process has controls to confirm the delivery of services to our Medicaid membership and avoid fraud. Controls begin during the contracting process and continue with regular oversight and monitoring. Activities include audits, checks for debarred or excluded individuals, and SIU investigations of potential fraud. We provide information on these activities in the sections below.

4.1.1. Contracting

Our contracting process has checks and balances to identify or help to eliminate the potential for fraud at its various stages. Clear Health's legal counsel thoroughly reviews subcontractor agreements to ensure compliance with the provisions of the Medicaid Contract, and the inclusion of required language. We hold subcontractors to the same standards that we are, including allowing us and the State access to their records and facilities for audits. During this phase, the review includes details of the subcontractor's organization, ownership, and management and the validity of their Medicaid identification and NPI numbers. Compliance and Regulatory may be involved in the review of the subcontractor agreement. Regulatory informs the Agency and submits the agreement for review as required.

4.1.2. Pre-delegation and Annual Audits

Each potential subcontractor undergoes a pre-delegation assessment and documentation review to determine ability to perform the required functions. Standardized audit tools support subcontractor evaluation prior to delegation and annually thereafter. In addition to addressing the departmental functions to be delegated, audit tools are specific to functional area and product, and include contractual, federal, State, regulatory, and accreditation standards. Risks and evidence of non-compliance or fraud (such as false statements or falsification of information) can be identified during this stage. Depending on the severity of risks or issues that arise during pre-delegation, the subcontractor may be placed on an action plan or implementation may be delayed. The audit team reports actions and delays to the VDOG and Compliance teams for tracking.

The subcontractor review process involves a team of employees. Recommendations and actions are reviewed and double-checked to avoid mistakes, bias, or employee fraud.

EXHIBIT A-4-a

GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

4.1.3. Debarred or Excluded Individuals

Clear Health requires subcontractors to attest that they do not knowingly employ or contract with individuals or entities who are debarred or excluded from any federal health care program or who have been convicted of a crime related to that person's involvement in any program under Medicare, Medicaid, or the Title XX services program since the inception of those programs. Subcontractors must also check their own staff, subcontractors, and providers against the federal lists/databases as well as the Agency's listing of suspended, terminated, or ineligible providers. Clear Health also executes these checks when we engage a new subcontractor to confirm we do not contract with an entity that is in nonpayment status or is excluded from participation in federal health programs.

Monitoring and Reporting. Clear Health monitors subcontractor performance on an ongoing basis, including financial statements, claims and encounter data, KPI reports, and other data, where applicable. Any anomalies identified during these reviews prompt further investigation. Should the investigation identify potential fraud and abuse, we notify AHCA, DHHS OIG, and/or MIPI as appropriate. If we determine actual fraud, waste, and/or abuse occurred, we take immediate action, up to and including termination of the subcontractor.

As part of the ongoing oversight process and as required by the Contract, Clear Health requires subcontractors to disclose convictions of criminal offense, changes to owners and management, and actions taken against the subcontractor's organization or its leadership. The VDOG gathers and reports these infractions to the Compliance office for reporting to AHCA, DHHS OIG, and/or MPI.

4.1.4. SIU Review

The SIU receives and investigates all potential cases of fraud, regardless of their referral source (employees, subcontractors, members, providers, or data analysis). The SIU will continue to send a notification to MPI within 15 calendar days of receiving information about suspected fraud, waste, and overpayment and initiate investigation. If the investigative team finds evidence of possible subcontractor fraud or abuse, the case, along with documented findings, is referred to MPI and notification sent to Compliance, Regulatory, and the VDOG.

If a breach of contract, cessation of business functions, loss of required license/certification, or endangerment of members occurs, we will activate the Contingency Plan to de-delegate or terminate the subcontractor's agreement. Severe non-compliance or evidence of any fraud will lead to a cessation of the contracting process and appropriate reporting to external entities as necessary.

4.2. Identifying Internal Fraud, Waste, or Abuse

Clear Health's robust compliance program, provides a guide to ethical decision-making, covering issues that may arise with employees, providers, members, subcontractors, competitors, and the public. We mandate that all employees to read the Code and understand how it applies to their day-to-day decisions, including their responsibility to report suspected violations and to cooperate in company investigations. We take all reports seriously, and any retaliation for good faith reporting is strictly prohibited.

EXHIBIT A-4-a

GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Our compliance program helps us avoid and identify fraud within our organization. Ethics and compliance concerns may include conflicts of interest; employee dishonesty (such as intentionally falsifying expense reimbursement requests or production reports); improper disclosure/receipt of confidential or proprietary information; inappropriate access/disclosure of PHI; accepting/offering gifts or entertainment over limits; retaliation for reporting an ethical or compliance issue; accounting, auditing, or internal control irregularities; and not maintaining adequate clinical licensing.

We deter, prevent, and identify internal fraud and abuse through processes and controls embedded in our Compliance Plan that align with the seven elements of an effective compliance program, including the following:

- A strong Compliance Plan, the Code, and written standards, policies and procedures help employees understand Clear Health's ethics and compliance expectations. Employees know what they are expected to do, what they should not do, how to report suspected fraud or misconduct, and the repercussions of engaging in non-compliant activities.
- The visible presence of our local Florida Compliance team reinforces the culture of compliance and the team's open door policy gives employees direct access to ask questions and receive guidance and education. The Compliance team works with the national Ethics and Compliance department on risk identification and mitigation as well as investigation of reports of employee fraud or misconduct.
- Regular training and ongoing education reinforce the messaging. Trainings also provide specific interactive scenarios with real life examples of employee fraud to educate and discourage engagement in non-compliant activities.
- The Compliance Committee provides an excellent venue for ongoing reinforcement of the compliance program and Code expectations. Committee members share information across the organization, including their direct reports and subcontractors.
- Numerous online and written resources are available to employees related to statutory and contractual requirements, as well as disciplinary guidelines. We enforce standards promptly and consistently.
- Regular monitoring and auditing by internal and external audit and compliance personnel provide avenues for identification of potential internal fraud.
- Detected offenses are reported to the appropriate entities, including local authorities, AHCA, DHHS OIG, and MPI. We develop internal action plans in response to offenses to mitigate and prevent reoccurrence.

Effective internal controls are a significant part of Clear Health's efforts to deter internal fraud. A few examples include documentation requirements, segregation of certain responsibilities, tracking system changes, passwords/access codes, monitoring subcontractor relationships, mandatory conflict of interest disclosure, marketing oversight, prohibitions on excluded persons, and procurement integrity. We monitor these efforts regularly and escalate any potential concerns for further review. For example, if we notice that a specific employee is making more changes to claims records than his/her peers, we investigate to determine the root cause. It could be for valid

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

reasons, such as a recent configuration time and the need to reprocess previously paid claims. However, if the changes are not valid and could be due to fraud and abuse, we would take immediate action including, and up to, termination of employment.

4.3. Examples of our Program in Action

We provide two recent examples of our program in action.

Dental Provider. Identified through data analysis, the SIU investigated a dental provider for improperly billing millions of dollars against the dental and medical benefits (dental surgical procedures – extractions). The SIU submitted a referral to the State and recommended termination. The SIU worked closely with the dental subcontractor's SIU, dental surgery experts, and our Medical Directors throughout the investigation.

Behavioral Health Provider. The SIU is currently investigating a behavioral health provider referred to the State for services not rendered. Analysis of utilization reports identified the provider as submitting nearly \$1 million in claims for school-based behavioral therapy services (H2017 and H2019). The investigation was initiated after complaints for services not rendered were filed with the SIU through the hotline. The allegation was substantiated through member interviews and preliminary medical records review. Currently, the provider is not fully complying with the record review (not submitting the required parent consent forms) and was placed on 100 percent pre-payment review.

Coordination is key to everything we do at Clear Health and this includes how we combat FWA across all lines of business and all aspects of our organization. When we identify a potential FWA trend or case in our Medicaid operations, we also check Medicare and commercial lines of business across our affiliates as well, and vice versa. Our national SIU also monitors emerging industry trends and provides that information to our Florida SIU. By casting a wider net, we can identify and address emerging issues earlier and take preventive measures to protect all our members.

Our Florida SIU staff continues to expand and so does our complement of technology tools, methodologies (provider self-audits, pre-payment reviews, and field audits), and partnerships with the State and other MCOs. The Florida SIU operation is growing and poised to identify and respond to growing concerns and issues related to Medicaid oversight.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

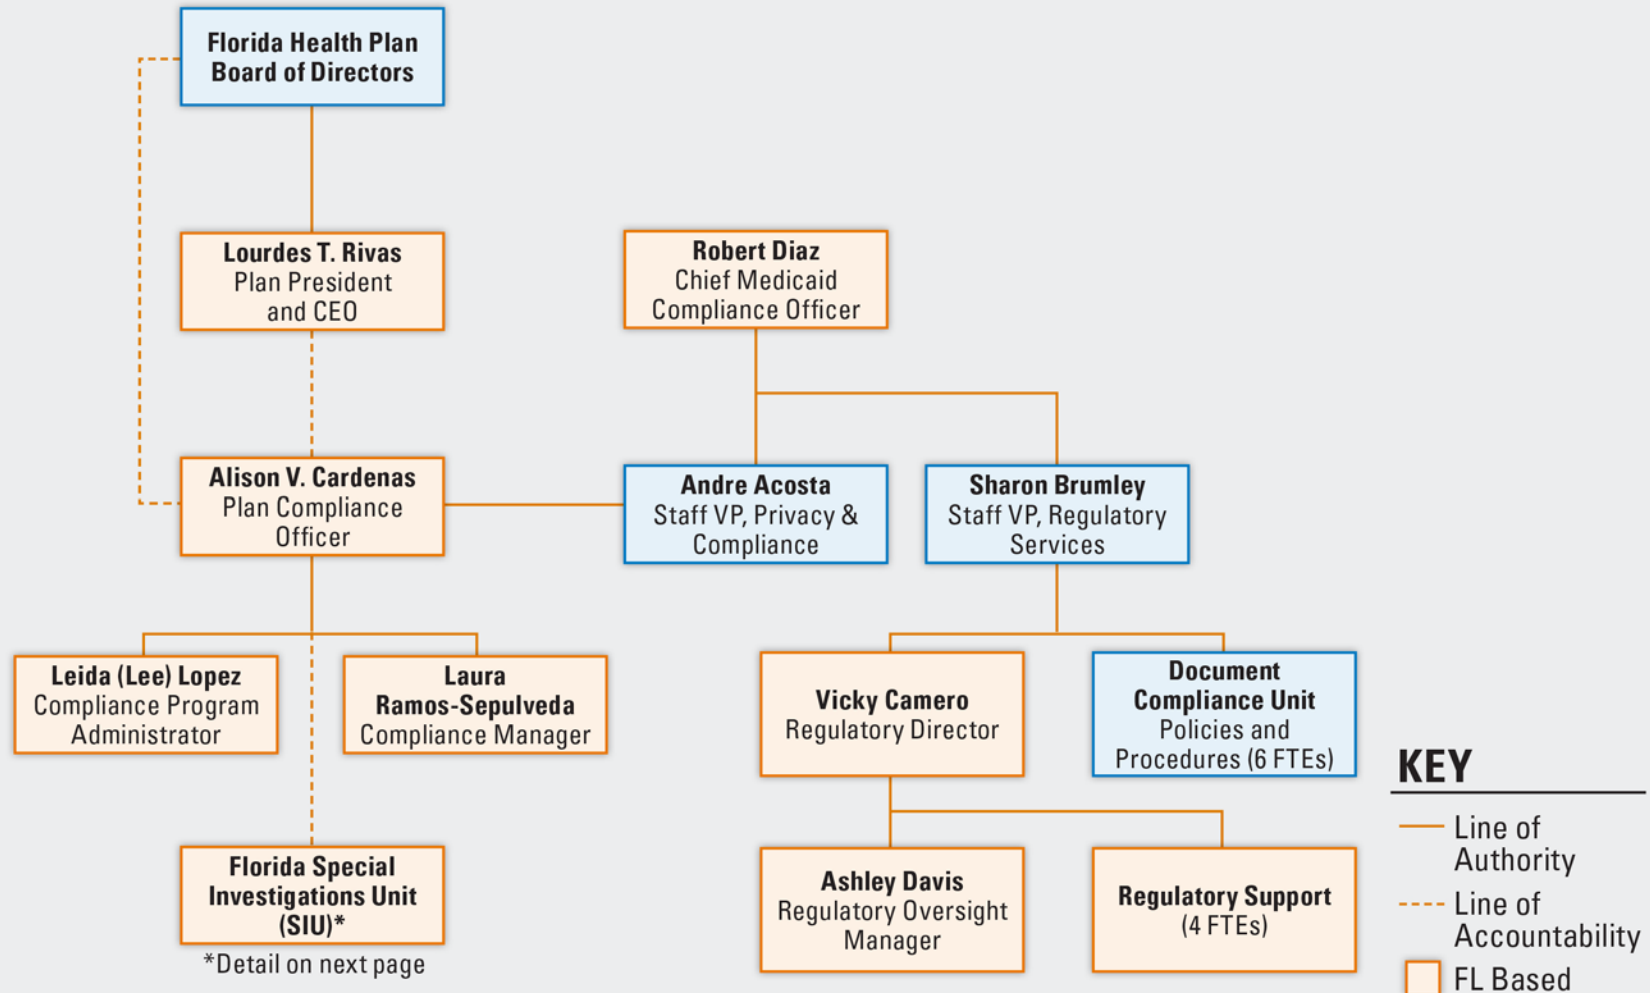

Evaluation Criteria:

1. The extent to which the respondent's compliance program complies with all State and federal requirements.
2. The extent to which the respondent has identified a qualified individual with sufficient authority and adequate corporate governance reporting relationships to effectively implement and maintain the compliance program.
3. The extent to which there are sufficient staff to implement the compliance program.
4. The extent to which the respondent's compliance program has experience identifying subcontractor fraud and internal fraud and abuse in managed care programs.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 32 – Fraud and Abuse Special Investigations Unit (SIU) (Statewide):

The respondent shall describe its Special Investigations Unit (SIU) program and its controls for prevention and detection of potential or suspected fraud and abuse and overpayment, including the use of biometric or other technology to ensure that services are provided to the correct enrollee, including verification of home-based visits and services, to ensure those services are being appropriately provided and that services billed were received by the correct enrollee.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Simply brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). The unified Simply draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations.

Clear Health recognizes the importance of preventing and investigating fraud, waste, and abuse (FWA). We are committed to protecting and preserving the integrity and availability of health care resources for our enrollees (members) and business partners by maintaining a comprehensive fraud detection program. The responsibility for the Florida fraud detection program and Anti-fraud Plan is delegated to the Special Investigations Unit (SIU) whose mission it is to combat FWA and misrepresentation perpetrated against Clear Health and the Medicaid program in Florida.

In addition to the considerable efforts of the Florida SIU team to combat FWA, our national Program Integrity team works to make sure proper payments are being made to legitimate providers for reasonable services provided to eligible members and to combat Medicaid provider FWA, which diverts dollars that could otherwise be spent to safeguard the health and welfare of Medicaid members. The Program Integrity team uses advanced analytics and strong enterprise governance to detect FWA.

Clear Health's comprehensive program integrity approach incorporates dedicated staff and empowers them with an integrated system of activities, processes, and controls that involve virtually every department of Clear Health's Florida operations and our national shared services team.

Special Investigations is a unique and critical part of program integrity, as it has specific resources dedicated to several key markets, including Florida. The local presence increases the effectiveness of our efforts to prevent, detect, and investigate FWA. The professional capabilities among the SIU associates are varied and diverse; experiences include retired law enforcement professionals (e.g., FBI, military, state, local, etc.), certified professional coders, claims processors, provider network, nursing, and pharmacy fraud investigations.

The Florida SIU has made two new additions to the team this year. We now have seven full-time employees for Florida to support statewide FWA efforts. This team includes five dedicated SIU Investigators (four located in Florida), an Investigative Assistant, and a Certified Professional Coder. Full-time employees receive support from the SIU Manager, three Data Analysts, and a

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Regulatory Compliance Consultant. Our growing team focuses on cultivating and growing our collaborative relationship so that we can continue meeting the Agency for Health Care Administration's (the Agency or AHCA) expectations, requirements, and standards. We have a diverse team of highly trained and experienced individuals managing program integrity at the national level to support Florida.

From July 2016 through June of 2017, the Florida SIU opened 134 cases and 89 leads with savings that totaled more than \$7 million — attributable to program recoveries, provider education, interventions to change billing behavior, and prepayment reviews.

We are proud of our long tenure as a trusted AHCA partner as well as the experience and relationships our affiliate health plans have developed with Medicaid agencies in 19 other markets over the past 26 years. Together with our affiliate health plans, we currently serve more than 6.5 million members enrolled in Medicaid and other state-sponsored programs. Our combined national and local plan Medicaid FWA experience positions us well to continue meeting all of AHCA's program integrity requirements.

We will continue to deliver superior value by combining quality health care with financial predictability. We understand that the increasingly complex Medicaid marketplace and interconnected programs require diligent monitoring and oversight to maintain program integrity, and we have the comprehensive systems in place to prevent, detect, and correct unnecessary or wasteful practices and fraudulent activities. We pride ourselves on being a good steward of public funds and working collaboratively with AHCA to assure that the public dollars entrusted to us are properly spent. We have extensive experience implementing program integrity initiatives and processes, and we will build on the best practices we are currently using in Florida. Program integrity objectives are as follows:

- Identification and implementation of system and oversight activities to reduce instances of fraudulent activities
- Increased use of advanced data analytics to expand detection capabilities across a broader spectrum of clinical services
- Deployment of improved operational performance and metrics aimed at optimizing savings for AHCA
- Combatting the diversion of funds that could otherwise be spent on or applied to safeguarding the health and welfare of our members

As illustrated in Table 32-1 of Attachment SRC# 32-1: Program Integrity Structure, our national organization's program integrity activities and responsibilities cross many functional areas with multiple departments working in collaboration, including:

- Program Integrity Strategy and Planning
- Claims Payment Integrity
- Reimbursement Policy Management
- Provider Education
- Subrogation
- Clinical Reimbursement Programs

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Health Plan Services
- Program Integrity Analytics
- Special Investigations Unit
- Pharmacy
- Health Plan
- Long Term Services and Supports Unit

We review and update our comprehensive Florida Special Investigations Unit Antifraud Plan annually or more frequently as necessary to prevent, detect, and correct FWA. This plan will continue to include our current best practices used in Florida to monitor members and providers. We will continue to notify AHCA promptly of all potential cases of FWA and provide timely updates when any allegations are authenticated. Our SIU brings up issues and trends with AHCA in the quarterly face-to-face meetings and will continue to deploy a wide range of proven strategies and tactics that stretch from “feet on the ground” local insight to industry-leading, high-tech systems and analyses to combat FWA. Monthly analysis using our claims activity dashboard supports the generation and verification of leads related to potential provider FWA.

Overview of FWA Procedures and Examples

Our local and national staff employ a variety of program integrity tools and processes to make sure services provided to our members are effective, efficient, and safe and to make sure that payments are to legitimate providers for reasonable services to eligible members. Processes focus on avoiding and detecting FWA, encouraging reporting, investigating allegations, and implementing corrective actions. Our FWA tools and processes enable us to monitor for the following examples of provider and member fraud:

- Billing for services or goods not actually provided or for medically unnecessary services
- Billing of services under another member identification number
- Billing under another provider’s license number
- Unbundling tests, double billing, or upcoding
- Misrepresenting diagnoses, tests, provider qualifications, and/or treatments to increase reimbursement
- Soliciting, offering, or receiving kickbacks or bribes
- Failing to meet professionally recognized health care standards
- Falsifying certificates of medical necessity, plans of treatment, and medical records to justify payment
- Violating Medicaid policies, procedures, rules, regulations, and/or statutes
- Ping-ponging patients (referral of patients to other providers within the same medical group so they may benefit financially)

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Splitting billing over a period of days (separate billings for services rendered on the same day, billed on different days, with some charges duplicated on each billing)

Examples of member fraud:

- Excessively using or overusing Medicaid
- Using another's Medicaid identification card (ID)
- Lending, altering, or duplicating a Medicaid ID
- Providing incorrect eligibility or false information to a provider to obtain treatment
- Simultaneously receiving benefits in Florida and another state
- Knowingly assisting providers in rendering services to defraud the Medicaid program
- Committing Prescription fraud

We will continue to make sure that the services provided to our members are effective and efficient and that payments are made to legitimate providers for reasonable services provided to eligible members. Our experienced Florida staff will also continue to use a variety of tools and processes to promptly investigate reports of suspected FWA by employees, subcontractors, providers, members, and others with whom we conduct business.

We protect against FWA in all we do and reinforce our commitment to prevention in new hire and annual employee trainings, focused Fraud Prevention Week initiatives, provider orientations, member handbook, and well-publicized reporting channels, such as our hotline and website. Our employee, subcontractor, and provider training and education programs address FWA signs and methods to report suspected concerns and are reinforced with monthly tips on how to identify and report FWA. Our robust FWA program complies with all applicable laws. The program includes initiatives, policies, systems, and best practices directed at FWA prevention and detection. Our Florida SIU Antifraud Plan and Compliance Plan (reviewed and updated at least annually) contain comprehensive information on our processes that guide our activities.

1. CONTROLS AND AUTOMATED METHODS TO PREVENT FWA AND OVERPAYMENT

With our extensive experience in Florida implementing program integrity initiatives and processes, we continuously gather best practices and refine our internal controls. We have refined systems and oversight activities to identify, reduce, review, recover, and report instances of fraudulent activities. Advanced data analytics and detection capabilities are established for all clinical services types. We have deployed operational performance and metrics to optimize savings across Florida. We require comprehensive annual training, which educates our employees to be on the lookout for FWA. All of these best practices combat the diversion of funds that could otherwise be applied to safeguarding the health and welfare of our members.

We conduct clinical reviews through prior authorization of select services and point-of dispensing reviews at network pharmacies and during Managed Care Coordinator contacts with members enrolled in Case Management. We refer suspected FWA to our national SIU and the Florida Compliance Officer for investigation.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Our prior authorization process requires Utilization Management employees to comprehensively and continuously review case records and assess member needs. Managed Care Coordinators confirm member's receipt of services as authorized in the member's care plan during contact with the member, family members, or the member's representative. We conduct retrospective clinical reviews during the claims review.

1.1. Controls and Automated Approaches to Prevent and Detect Fraud

Clear Health deploys both proactive (pre-payment and prevention) and reactive (post-payment) detection methods and internal controls, including:

- Systems and oversight activities to identify, reduce, review, recover, and report fraud
- Advanced data analytics and detection capabilities across all clinical services types
- Announced and/or unannounced onsite visits to provider location(s)
- Member interviews by telephone or in-person
- Operational performance and metrics deployment to optimize savings for AHCA

Internal controls drive our program's philosophy of prevention. Pre-payment review is highly effective and efficient since it avoids suspect claim payments rather than attempting to recoup inappropriate payments. In our experience, these upstream activities account for roughly three times the savings of downstream post-payment recoveries.

Our primary tools for detecting anomalous behaviors are coding software, FWA analytics, and our internal, proprietary health care analytics. Mining claims data is the primary way investigators detect and deter FWA. Coding software and data analyses (such as exploratory, confirmatory, and predictive analytics) drive decisions in reviewing atypical provider behaviors. The SIU — staffed with coders and clinicians who review providers for miscoding concerns such as up-coding, unbundling, and billing for services not delivered — can recommend them for pre-payment review. Predictive modeling tools can analyze provider claims and billing practices against their peers and detect instances not specifically restricted to CPT codes.

In addition to pre-payment review, we use prevention tools, including:

- McKesson ClaimsXten, which automatically and comprehensively audits codes, identifying the appropriate relationship between thousands of medical, surgical, radiology, laboratory, pathology, and anesthesiology procedures identified by CPT®-4 and HCPCS codes
- The Policy Administration Model, which addresses claims editing based on national reimbursement policies and national coding standards not currently available in ClaimsXten
- Cotiviti, which validates services across providers, taking claim modifiers and specialties into consideration, as well as how often the service can be performed
- FICO Insurance Fraud Manager, which is a pre- and post-payment predictive model that scores claims and providers for the likelihood of fraud, abuse, and the level of financial risk
- Credentialing and Provider Profiling, which includes review of the Office of Inspector General (OIG) List of Excluded Individuals/Entities (LEIE), the Federal LEIE, System for Award Management (SAM) Excluded Parties List, license verification, and billing history check for fraud.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Our Health Care Analytics team has developed benchmarking metrics for certain specialties that are used in our pre- and post-payment programs. Monthly analysis using our claims activity dashboard supports the generation and verification of leads related to potential provider FWA. The dashboard displays a rolling 13 months of data and supports sorting, filtering, and drill-down analysis on a number of elements, including county or city, provider tax ID, and top procedure codes. The ability to show a summary of billing history for a provider, including change from last month and peer comparison is a key strategy to detect and prevent provider FWA

- Quality Control and Utilization Management using information from our Utilization, Quality, and Case Management departments on member and provider over- and under-utilization is reviewed and analyzed

1.2. Additional Internal FWA Controls Outside of the SIU

Other programs and departments outside of the SIU that contribute to FWA prevention and/or collaborate with Program Integrity include: provider oversight, credentialing, medical management, member oversight, and restricted recipient programs. Clear Health screens the eligibility of our providers, and we require our subcontractors to screen their providers.

1.2.1. Provider Oversight

Contractually, participating providers must obey federal and state laws and permit our company, state, and/or federal staff to review records pertaining to members.

1.2.2. Credentialing

The Credentialing area is responsible for checking all sanction listings as well as board certifications concerning the suspension/loss/probation of provider professional licenses. In addition to federal sanctions databases in Florida, we also check AHCA Ineligible lists and the state's Provider Master List to make sure of Medicaid eligibility. SIU associates must work closely with Credentialing associates when investigating a provider and give advice to the credentialing area when issues affecting a provider's continued participation are discovered. Provider manuals include a section on requirements for physicians to notify our company of any event that changes their credentialing statutes (for example, loss of licensure or sanction).

1.2.3. Medical Management

Medical Management associates collect patient information during the prior-authorization process and identify situations that may be FWA (for example, request for authorization of an outpatient service for a member currently inpatient or request for authorization of a service not medically appropriate for the patient's condition). These associates regularly review utilization reports, including pharmacy reports, to identify any unusual patterns of utilization that may indicate FWA (for example, use of high cost pharmaceuticals medically inappropriate for the member's condition or billing for more inpatient days than authorized).

EXHIBIT A-4-a

GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.2.4. Member Oversight

Member oversight occurs through the following methods:

- Member ID cards have member identifying information
- Medicaid member ID contains the phrase “Use of this card by any person other than the member is fraud”
- Primary Care Providers (PCP) receive monthly lists of the members assigned to them
- Our company provider manual urges providers to check the member ID card and call the Provider Services toll free number to confirm the member is enrolled
- Member Services, Nurse help line, and Medical Management associates verify member eligibility every time a member calls
- Medical Management obtains patient information during the pre-authorization process and identifies situations that may be FWA
- Medical Management associates obtain information during case management activities
- Fraud detection and prevention information is provided to members and providers through provider newsletters and educational updates

1.2.5. Pharmacy Restriction Program

Clear Health maintains a Pharmacy Restriction Program to identify members who demonstrate patterns of FWA that often result in unnecessary ED visits and doctor shopping. Once identified, we review the member’s case to make sure placement in the lock-in program is appropriate. If appropriate, we assign the member to a single pharmacy for filling all prescriptions for the following 12 months. We also notify the member, the member’s PCP, and the pharmacy we restricted the member to, and we encourage the member to enroll in our Substance Use Disorder Program, if indicated. Certain members, such as members with cancer and dual eligibles, are never enrolled.

By restricting members identified as potentially misusing or fraudulently obtaining controlled substances, we aim to reduce misuse of controlled substances and related potentially preventable events that result from doctor shopping. In the first half of 2017, the program resulted in a 17 percent reduction in prescriptions for controlled substances for members enrolled in the lock-in program.

Target Population: members who 1) obtained three or more controlled substance prescriptions from three or more pharmacies, 2) used more than 10 different controlled substance prescribers in 90 days, 3) obtained two or more controlled substance prescriptions written by two different prescribers from two or more different pharmacies within 180 days, if they also have a documented diagnosis of narcotic poisoning or drug abuse within the last year, or 4) violated a pain management agreement with their prescriber. We also take referrals from the AHCA, law enforcement agencies, prescribers, and pharmacies.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

2. INNOVATIVE TECHNOLOGY AT THE POINT OF SERVICE TO PREVENT FWA

Providers participating in Clear Health's network have access to our Case Management System through a secure website. Using our Case Management System, they can access a single view of member data in an easy-to-navigate dashboard, including HEDIS® care alerts, authorizations, prescriptions, and claims organized by type, such as inpatient, ER, and office visits. It also serves as our primary method for sharing member care management information, including health needs screenings and the integrated care plan. Our vendor's EVV solution deploys industry standard biometric options and accurate but flexible GPS tracking tools for caregivers. Our real-time point-of sale processing system for pharmacy claims determines, within seconds, whether to send a warning or rejection message for select alerts including refill-too-soon, excessive dosing, and severe drug interactions.

2.1. Three Part Authentication for HIPAA Verification, using iPad Mobile Technology

Our Case Management System Mobile tablet technology guides the assessment process for field-based providers, caregivers, and Managed Care Coordinators — helping collect detailed information from members, families, and caregivers to inform care planning through an in-home, face-to-face interview and assessment. Web browser and iPad mobile technology include three step HIPAA verification protocols and prompts to prevent and detect FWA. This functionality permits field-based verification of location, as well as guided tools to complete assessments, consent documents, and other critical forms while in the member's home.

Members are required to provide proof of enrollment at the point of service by showing their member ID card. This card is available in both hard copy and can be downloaded or shown on a mobile device through our app. Providers are able to verify eligibility real-time via multiple channels including through our IVR (24-7), through the Provider portal, or by speaking with a Provider Services Representative during normal business hours.

2.2. Digital Signatures, Fingerprint and Facial Recognition, and GPS-based Location Tracking

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

2.3. Real-time Point-of Sale Processing System for Pharmacy Claims

Clear Health's pharmacy vendor provides network and administrative pharmacy services including a real-time point-of sale processing system for pharmacy claims. The online claims adjudication system operates 24/7. Once received, claims are verified for eligibility, drug coverage, plan design, formulary compliance, and DUR. In addition, the system applies hundreds of edits within seconds based on benefit design and eligibility requirements. Concurrently, targeted alert messaging is delivered to dispensing pharmacists. These edits may include the following:

- Member eligibility
- Benefit design edits, such as quantity, days' supply, and refill-too-soon edits
- Prospective (Concurrent) DUR edits

Within seconds, we determine whether to send a warning (passive alert) or reject message (soft-block alert) for select alerts, including refill-too-soon, excessive dosing, and severe drug interactions. Passive alerts are informational warning messages sent to the pharmacist for evaluation. Soft-block alerts are clinical warning messages sent to the dispensing pharmacist to alert him or her of a potential issue, including potential FWA. The system also provides a mechanism to track and report the member's usage, manual payments, adjustments, recoupments, and other identifying accounts receivable and claim information. This usage and claims processing data is used by our SIU department in its comprehensive data mining analysis to further identify potential FWA and overpayment.

3. REVIEWS AND INVESTIGATIONS TO DETECT SUSPECTED FWA AND OVERPAYMENT.

We maintain sophisticated FWA detection tools and systems that we apply during post-payment claim review, as part of systematic data mining, and during referral follow-up. Our experience managing and integrating these tools has been very effective in detecting FWA and in recovering inappropriate payments. Additionally, we will use post-payment reviews to assure claims have been paid in accordance with the terms of our contract and all applicable laws. Our proactive, data-analysis-driven post-payment review resources to identify erroneously billed claims and behaviors not detected by up-front edits include the following:

- Florida-based medical management staff for training and analysis, supported by national resources
- Facility site information
- Membership information

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Medical record reviews
- Field staff information
- Information databases such as Accurint for Insurance (Public Records), CPT-Inquiry Services, National HealthCare Anti-Fraud Association Special Investigations Resource, and Intelligence System

We conduct clinical reviews through prior authorization of select services and point-of dispensing reviews at network pharmacies and during Managed Care Coordinator contacts with members enrolled in Case Management. We will refer suspected FWA to our national SIU and Florida Compliance Officer for investigation.

- Our prior authorization process requires Utilization Management employees to comprehensively and continuously review case records and assess member needs
- Managed Care Coordinators confirm member's receipt of services as authorized in the member's care plan during ongoing contact with the member, family members, or the member's representative
- We conduct retrospective clinical reviews during the claims process

While we focus heavily on pre-payment activities, we also use proactive, analysis-driven, post payment review to identify erroneously billed claims and behaviors undetectable by up-front edits. Our detection systems and resources include state-based and national medical management staff available for training and analysis, facility site data, membership information, medical record reviews, field staff information, and databases. We apply sophisticated detection tools during post-payment claim review (as part of systematic data mining) and during referral follow-up that have proven effective in detecting FWA and recovering inappropriate payments with our affiliates. Via post-payment reviews, we confirm that claims were paid pursuant to Contract terms and applicable laws.

3.1. Process for Suspected Cases of FWA

Our Compliance Officer works closely with our SIU, the staff with primary responsibility for the investigative process. When we receive a FWA referral, the SIU follows a formal process that complies with AHCA requirements. We notify the State of any proposed recoveries and report amounts collected in compliance with 42 CFR 438.608 and ss 409.91212, 626.989, and 641.3915 F.S. Our Compliance Officer maintains unrestricted access to our governing body for compliance reporting, including FWA reporting. Clear Health will continue to submit our Anti-Fraud Plan to MPI by September 1 of each Contract year, with our most recent submission on Sept. 1, 2017.

In partnership with AHCA, we take appropriate action (such as education, pre-payment review, and record audits) to address confirmed cases of FWA. For each case, actions vary based on scope, severity, and circumstances. In planning actions, we tap into our knowledge of and experience with the local community. This sets us apart from other health plans that apply a rigid, inflexible approach. Our ultimate goal is to educate, not penalize providers for aberrant practice patterns. We then monitor them to confirm compliance and report any resultant savings. If necessary, we terminate the provider when in the best interest of members and AHCA.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

3.2. Service Verification with Members (Member Verification of Services)

Our program includes strategies to verify that services billed by providers were actually provided to members. We submit our methodology and sampling process to AHCA for approval and include criteria for identifying “high-risk” services and provider types. Service verification occurs within 14 days of implementing LTC services. Monthly, we randomly select a statistically valid sampling of members from claims paid the prior month and send a member verification of services letter that instructs members to contact us if they did not receive the services. Member Services logs calls and routes them to the SIU for review and investigation.

3.3. Cooperating with State or Federal Agencies or Representatives

We embrace the goal of maximizing program efficiency, effectiveness, and integrity. Clear Health has built strong partnerships with regulatory agencies, including AHCA’s Medicaid Program Integrity Unit, the Medicaid Fraud Control Unit (MFCU), and law enforcement, to combat FWA. Our investigators work closely with AHCA and others to promptly bring provider- and member-related issues to their attention. In addition to ongoing dialogue, we meet with AHCA at least quarterly to review FWA detection efforts and results, ongoing and completed cases, and discuss future efforts. We take our role seriously as a sentinel for Florida and diligently pursue all suspected cases, regardless of size. We deliver timely reports of activities and results and assist AHCA in its investigations.

3.4. The Success of Our Program Integrity Approach

Our Florida SIU opened 134 cases and 89 leads in SFY 2016 (July 1, 2016-June 30, 2017). For calendar year 2016, program savings totaled more than \$7 million, including:

- \$1,508,735 in program savings and recoveries
- \$1,716,911 in provider education and intervention to change billing behavior
- \$3,861,594 in prepayment reviews

We routinely monitor and measure our compliance program, including FWA activities, to make sure we conduct activities and initiatives in a way that supports an effective Antifraud Plan. We also use these monitors and measures to validate that controls are in place to mitigate targeted compliance risks, including those that arise in connection with operational areas.

The oversight and support from our national SIU provides our Florida efforts with systems and best practices developed from affiliates’ experiences. When we identify a potential FWA trend or case in our Medicaid operations, we also check Medicare and commercial lines of business across our affiliates as well, and vice versa. Our national SIU also monitors emerging industry trends and provides that information to all affiliated health plans. As new processes, tools, and best practices are identified, we will adjust our program accordingly. For example, we found that allergy testing is a new scheme in Florida after data analysis identified a spike in claims for non-allergy providers. The SIU intercepted the scheme after field investigations confirmed the non-allergy providers were utilizing various non-credentialed, unapproved entities to perform allergy testing on their patients without their supervision. Medical records confirmed the suspicion and we referred several providers to the State. Additionally, the SIU placed the providers on prepayment review. Clear Health’s Medical Directors, legal, and Provider Relations teams are

EXHIBIT A-4-a

GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

addressing this issue with actions that include cease and desist or termination. Our efforts will increase savings and quality of care.

3.5. Strategies to Adapt FWA Approach to Evolving Risks

We understand the importance of adapting our program to evolving risks and monitoring new fraud schemes identified by various organizations. We have established strong partnerships with Florida regulatory agencies and law enforcement. Our organization also participates in regional task forces aimed at reducing health care fraud, including FBI-sponsored task forces in many states. Through these relationships, we share information and best practices in avoiding and detecting FWA, allowing us to continuously enhance our program.

Our national SIU staff regularly participates in CMS-sponsored FWA outreach and education events to provide us with information on current trends and tools in health care fraud prevention. Our early relationship with the Healthcare Fraud Prevention Partnership provides a way to share data and information between public and private sectors to detect and prevent health care fraud.

The SIU also focuses on issue-driven concepts to identify multiple providers engaged in similar billing schemes across our affiliates. In addition, national "Watch Lists" identify common nationwide schemes, as well as aberrations not yet seen in certain states. Advanced data analytics evaluate paid claims across affiliates to identify local aberrations and national fraud trends.

To identify and address increasing instances of opioid FWA across the country, our organization uses a range of strategies that leverage data mining and analytics, including daily monitoring of claims; the award-winning Operation Pillbox, a collaboration with law enforcement that promotes better understanding of prescribing trends, frequently used pharmacies, and insight into possible illegal activity; data mining for top prescribers, drugs, and therapy classes; review of pharmacies when identified for high volume dispensing of controlled substances; monitoring cases of potential "doctor shopping;" and investigating "pill mills." Our affiliates also work with other MCOs in their market to share information, resources, and best practices. Activities typically include education, case and scheme sharing, and networking to identify issues and methods to reduce FWA. This collaboration optimizes efforts, minimizes redundancy, and expands efforts to reduce increased costs associated with FWA. We welcome the opportunity to collaborate with other MCOs on detecting and preventing FWA.

3.6. Experience in Action: Real SIU Cases Detect and Resolve Overpayment

A provider in Florida was referred to the SIU for billing out of scope for allergy testing. Medical record reviews revealed that the physician was not present (based on absence of signatures) for either the mixing or the injection of the serum, as required by CPT guidelines. A visit to the provider location found that the physician was not in the office; however, the mixing of allergy serums and injections was taking place. These findings were shared with the medical director who reported quality of care concerns. A subsequent request for repayment for overpayment in the amount of approximately \$150k was sent to the provider, who subsequently rebutted and refused to cooperate with the review findings and education. The provider was referred to the State for further investigation and the health plan terminated the provider from the network.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

In another case, an algorithm-rules based data analysis program detected an oral surgeon for billing excessive medical services. The SIU obtained medical records that were reviewed by the dental vendor, who determined all services billed under the medical benefit should have been billed under the dental benefit. The oral surgeon billed the dental vendor for the extractions; however, all services in conjunction with the extraction (surgical in nature) were billed to the medical plan in order to bypass incidental system edits and the dental vendor's clinical criteria. All dental services should be submitted to the vendor for possible reimbursement. In addition, services were found to be improperly documented, not rendered, or not medically necessary. An request for repayment of approximately \$1.1 million was issued to the provider who subsequently rebutted and refused to cooperate with the recovery. The SIU recommended health plan network termination and referred the provider to the Agency.

A case was opened after the SIU conducted data mining to find excessive billing units for behavioral health services and case management services (H2019 and T1017) on the same date of service. Subsequently, a complaint was received from another provider via the Health Plan Compliance Officer, stating the provider's licensed clinical social worker (LCSW) was taking assisted living facility (ALF) residents on a car ride and switching them to another ALF provider upon returning. SIU contacted the complainant who reported the LCSW admitted to recruiting activity. The medical records reviewed were found to be incomplete per state standard requirements. The records lacked documentation, including start and end times and location of services rendered. Furthermore, it appeared from the notes that the LCSW was providing mental health services AND case management services to each member on the same date of service. An overpayment for \$67,000 was identified, which the provider rebutted and submitted additional medical records. The second set of medical records reviewed also lacked necessary documentation, and it was discovered that on three separate occasions the medical records had been altered by the LCSW. Therefore, the initial overpayment was sustained for which the provider repaid and agreed to a corrective action plan. Subsequently, the provider and LCSW were referred to the state with a recommendation to terminate.

4. INNOVATIVE TECHNOLOGY FOR VERIFYING HOME-BASED VISITS AND SERVICES

4.3. Participant Directed Services in Florida

Clear Health oversees the use of Participant Directed (PD) services in collaboration with the FEA and Public Partnerships (PPL). PPL provides real-time reporting information for over and under-utilization of services or when an incorrect service is billed for follow-up.

The Managed Care Coordinator conducts outreach to the member and their authorized representative, as appropriate, to discuss the reasoning for the alert and to assess the ongoing appropriateness of the plan of care and determine if the PD services are still meeting the member's needs. The Managed Care Coordinator will provide education to the worker, member, and their employer of record regarding the importance of providing services as developed in the plan of care. Ongoing assessment of participant directed services continues with each contact with the member to assure that the member's needs are being met and services are being rendered as expected. Staff overseeing PD services receive extensive training regarding the oversight of such services and utilize specific tools and resources to support identification of FWA.

If the Managed Care Coordinator identifies concerns based on telephonic communication with the member, they may implement unannounced visits to the member to assess the care being provided through PD services and conduct further assessment.

PPL performs the following functions:

- Fiscal/Employer Agent Services in compliance with the IRS regulations
 - Payroll and timesheet processing
 - Tax filing and reporting

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

- Criminal background checks and provider credentialing
- Development of a provider registry
- E-verification
- OIG verification checks
- Financial Management
 - Budget planning, tracking, and accounting
 - Authorization management via business rules engine
 - Claims processing and payment
 - Banking and disbursing funds
- Support, Counseling, and Customer Service
 - Telephonic customer service during business hours in English and Spanish; a language line is also available
 - Provide training for support brokers and Managed Care Coordinators
 - Provide training for other health plan staff
 - Provide training for consumers and providers
 - Offer peer trainer services
 - Help individuals understand billing and documentation responsibilities, perform payroll and employer-related duties, purchase approved goods and services, track and monitor individual budget expenditures, and identify expenditures that are over or under the budget

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The extent to which the respondent uses various types of controls and automated approaches as part of a comprehensive approach to prevent and detect potential or suspected fraud and abuse and overpayment.
2. The extent to which the respondent uses biometric or other technology at the point of service delivery to prevent and detect potential or suspected fraud and abuse and overpayment.
3. The extent to which the respondent conducts clinical reviews and SIU investigations to detect potential or suspected fraud and abuse and overpayment.
4. The extent to which the respondent uses innovative technology for the purposes of verifying home-based visits and services.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-a

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 33 – Disaster Recovery Requirements (Statewide):

The respondent shall demonstrate its capability and approach to meet the requirements described in **Attachment B**, Scope of Services, **Section X.D.4.h**.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Simply brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). The unified Simply draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations.

Clear Health believes that comprehensive disaster recovery planning, coupled with continuous readiness, are integral to our responsibility as an employer, partner to the Agency, and service provider to our enrollees (members), and providers. As a long-time Florida-based health plan, we have experienced several natural disasters, including Hurricane Matthew in October 2016 and most recently, the devastation caused by Hurricane Irma.

Our disaster recovery plan is not a theoretical document that sits on a shelf; rather, it is a vital guide to help protect the safety of our members and staff. We are proud of our response to Hurricane Irma, demonstrating the effectiveness of our preparation and Hurricane Preparedness Plan. In Attachment SRC# 33-1: Our Plan in Action: Hurricane Irma, we highlight some of the actions we took before, during, and after Irma in our efforts to recover, with priority always on the safety and well-being of our members.

Clear Health maintains and is continually ready to implement a comprehensive Business Continuity-Disaster Recovery (BC-DR) plan that meets AHCA requirements outlined in Section X.D.4.h of Attachment B, Scope of Services of the ITN Contract. We put our plan in place when we began operations in 2003 and regularly update it in response to our changing technology and systems environment, industry best practices, and AHCA requirements. Our BC-DR plan includes resources (technology and staffing) to recover and restore operation of information systems, data, and software well within AHCA's requirement to limit service interruption to 24 hours or less. Two additional plans, our Hurricane Preparedness Plan and Emergency Management Plan, supplement our BC-DR plan and support Clear Health's response to an event.

Through our national resources, we monitor and support the development and ongoing maintenance of our BC-DR plan. Employees supporting our plan have significant industry experience and hold numerous certifications, including Certified Business Continuity Professional (CBCP), Certified HIPAA Security Professional (CHSP), Certified Business Continuity Management Systems Auditor, and ITIL Foundation Certification.

With the collaboration and support of these resources, Clear Health will continue to maintain a BC-DR plan to resume normal business operations following an emergency, systems failure, or systems disruption for our Florida operations.

EXHIBIT A-4-a

GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1. APPROACH AND CAPABILITY TO MAINTAIN A DISASTER RECOVERY PLAN

We designed our BC-DR plan to swiftly and effectively respond to an incident or event with minimal impact on all constituencies. We have detailed disaster recovery plans for our systems and business continuity plans for operations, including operations related to our systems. Together, these plans comprise our comprehensive BC-DR plan and represent a detailed blueprint of our preparation for and planned response to any emergency or business disruption.

Our BC-DR plan is “scenario neutral” and focuses on unavailable resources, rather than the event that caused the loss. This approach allows us to respond to any event that disrupts access to necessary services or resources. Using this approach, Clear Health’s BC-DR plan supports recovery from the types of incidents outlined in the Scope of Services, as well as natural disasters, human error, computer virus, or malfunctioning network, hardware, software, or electrical supply.

Clear Health’s BC-DR plan safeguards the continuation of established services and systems and addresses our systems, applications, and platforms. Each national support business unit (such as claims, enrollment, call centers, and finance), also develops and maintains a business continuity plan specific to the operational needs of its customers and stakeholders.

In our BC-DR plan, definition of a disaster includes any type of occurrence that could jeopardize processing integrity or temporarily disable or interrupt operations, as well as catastrophic events, such as a major weather event or natural disaster, pandemic, major telecommunications outage, or computer virus.

Our disaster recovery plans protect against data loss and provide recovery from major unplanned interruptions to computing services, including system infrastructure, data, and applications. Our plans allow us to quickly recover from a situation where production systems are disabled or destroyed, through the availability of redundant systems and hardware and our disaster recovery hot site.

Several other programs also enable maintenance of critical business functions:

- The Safety program – to maintain a safe workplace for employees, contractors, and visitors
- The Emergency Management program – to detail overall response, command, and control before, during, and after an incident or event causing a business disruption
- The Business Continuity program – to document recovery strategy of critical business processes

Clear Health will continue to be ready to implement and monitor our BC-DR plan throughout operation of our Florida programs.

2. CAPABILITY OF PLAN TO LIMIT SERVICE INTERRUPTION TO 24 HOURS

We invest in the technology and equipment necessary to support our disaster recovery and business continuity needs and limit the service disruption associated with an event. Our BC-DR plan supports the ability to limit service interruption to a period of 24 hours or less and comply with the Agency’s requirements in Section X.D.4.h.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

The national Technology Services department applies industry best practices that geographically distribute data centers, back-up data centers, and off-site storage locations to support restoration and recovery efforts. Technology Services takes care to locate sites in areas with different risk profiles, including the topography of the area for vulnerability to natural disasters and malicious physical attack.

Technology Services develops and maintains hundreds of individual guides – Application Recovery Guides and Technical Recovery Guides – each with assigned resources that will execute the plan if a disaster occurs. They review and update guides at least annually as part of the recovery testing process and after major system changes. Guides employ different strategies based on criticality of the application system, including the following:

- **Dedicated Standby.** Some application systems have dedicated standby hardware in a second location that can be quickly activated if the primary site fails. Storage Area Network (SAN) replication and database log shipping keep database copies at secondary sites synchronized with production.
- **Warm Site Recovery.** Critical systems that are not replicated are protected by warm site agreements. Technical teams restore the latest production backups onto the new hardware and bring the systems up as production replacements. Redundant circuits connect to the disaster recovery warm sites and are tested regularly. In a disaster, the recovery sites become part of the production network.

Technology Services assigns employees to disaster recovery teams along with developed contingency plans to respond to worst-case scenarios. Those teams take ownership of business operations recovery by reviewing all documentation, making recommendations, alerting the disaster recovery contingency planners of system changes and upgrades, and participating in testing of the disaster recovery plans. The comprehensive disaster recovery program contains four major content areas:

- Data center recovery, including environment- and application-specific documentation
- Technology Services business unit recovery
- Telecommunications recovery, including voice and data
- Local communication room recovery

2.1. Recovery Time of Mission Critical Applications

The Recovery Time Objective (RTO) indicates how long resources can be unavailable and the Recovery Point Objective (RPO) identifies the amount of data loss that may be sustained in an unplanned event. Business units, in partnership with our national Business Continuity team, work to define the RTO for critical business processes, or how long the process can be unavailable. Critical business processes are then mapped to critical applications to establish the technology RTOs. Additionally, Technology Services has taken steps to minimize the RPO and the data loss associated with an outage.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Our BC-DR plan supports an RTO of less than 24 hours for mission critical applications, meeting the AHCA requirement. Technology Services evaluates each new application to determine the appropriate RTO. The business units and Business Continuity team continually re-evaluate each application's RTO to assess its ongoing appropriateness. That ongoing assessment enables the team to identify additional mission-critical applications and work through the associated redundancy and replication planning.

Technology Services stages mission-critical applications in a secondary geographically distributed data center for immediate failover, and performs near real-time data replication. For example, this means that as a transaction is committed to our production systems in Virginia Beach, the same transaction is routed to our recovery hot site so that we have a duplicate copy of our production databases. The replication for these solutions delivers an RPO of 15 minutes or less, minimizing the risk of data loss in the event of a disruption. Technology Services applies this optimal recovery solution to our Core Operations System (the system of record for members, providers, claims, and authorizations), Case Management System, medical criteria, and workforce management application, among others.

2.2. Disaster Recovery Hot Site

Our primary data center in Virginia Beach hosts the majority of systems, applications, databases, and technologies that support our Florida programs. The disaster recovery site, or "hot site", for our Virginia Beach data center is in Harrisonburg, Virginia. The recovery hot site includes equipment to support our most critical medical management and member/provider contact applications, including our Core Operations System, clinical criteria, Fax II/Rightfax databases, imaging and workflow document management, and call center workforce management. There is continuous real-time replication between the production data center in Virginia Beach and the recovery hot site to keep critical applications and data in sync with production.

The Harrisonburg Data Center (HDC) is owned by our ultimate parent company, Anthem, Inc. Because Anthem owns our recovery hot site, Technology Services does not rely on a vendor for disaster recovery testing or actual recovery of operations. Rather, Technology Services fully controls the location, capacity, and resources to support a recovery event. In a regional event, this mitigates the risk of competition for shared vendor resources.

Harrisonburg is more than 220 miles from our Virginia Beach data center. The geographic distribution and different risk profiles, including the topography of the area for vulnerability to natural disasters and malicious physical attack, support the HDC's use as a recovery hot site for our Florida operations. The HDC is an Uptime Institute Tier III Certified facility. Certified in design and construction, it is one of only 50 of its kind in the country. The facility is also a Leadership in Energy and Environmental Design (LEED) Silver Certified (construction) facility.

The HDC is 102,000 gross square feet, has top-level physical security, and an electrical substation on premises that has a 33 megawatt capacity in a fully redundant, mirrored system (2N configuration). Physical security includes a perimeter fence, 24/7 onsite staffed security operations, and surveillance cameras. Access to the building, the data center, and individual data halls requires a security key card and entry of a PIN (something you have and something you know). Biometric controls provide additional security to the data center. Security systems log and track all personnel movements.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

The HDC's configuration supports maintenance, replacement, and improvement of critical infrastructure without impacting operations. The design is simple, but highly redundant. The configuration provides UPS-protected dual-path distribution to each server rack. The system has no single points of failure from the utility source to the rack level and is concurrently maintainable.

HDC has four data halls (10,000 square feet each) to allow for segregation of sensitive environments, with one hall dedicated as the recovery hot site. HDC currently has more than:

- 450 devices deployed
- 4,500 intel cores of compute with 45 terabytes of memory
- 500 Power8 cores of compute with more than 10 terabytes of memory
- 2,500 terabytes of data replicated

Persistent environments for certain mission critical infrastructure and systems (network, DNS/DHCP, security authentication, and backup and recovery) are live and in place at all times to support faster recovery

For cooling, the HDC has a high-efficiency water-cooled solution to handle peak demand conditions of 105°F. The design includes onsite back-up water storage tanks to support approximately 24 hours of operation.

For electricity, in addition to the onsite substation, the HDC has seven dedicated 2.5 megawatt generators, each with a 3,000-gallon belly tank. Two 20,000 gallon above ground storage tanks provide long-term fuel, if necessary. The generators are tested monthly.

For fire protection, all four data halls have a Very Early Smoke Detection System Apparatus (VESDA) installed. VESDA Systems are aspirating smoke detection used for early warning applications where response to a fire is critical. The VESDA detectors communicate with our security and building monitoring systems.

3. MAINTAINING RECORDS BACKUP STANDARDS AND COMPREHENSIVE DISASTER RECOVERY PLAN FOR THE ENTIRE CONTRACT PERIOD AND SUBMITTING FOR REVIEW

Clear Health will continue to submit our BC-DR plan, or certification that the approved plan is unchanged, to the Agency by May 1st each year, as specified in Section X.D.4.h. of the ITN. For 2017, we submitted our BC-DR Plan and Hurricane Preparedness Plan on May 1, 2017.

We follow a defined process to make sure that we submit our plans for review in accordance with Contract requirements. Our dedicated Regulatory team manages the review and submission of all reports and deliverables to AHCA, including our required submissions of the BC-DR, Hurricane Preparedness, and Emergency Management plans.

We maintain the requirements for each deliverable in our report tracking system, with the AHCA due date, an advance internal due date, and the business owners responsible for review and approval. Our report tracking system generates email alerts to remind business owners of upcoming report due dates and as notification that a deliverable is ready for review. Business owners and leadership review deliverables for completeness and accuracy prior to submission to the Agency.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

For records backup standards and our comprehensive BC-DR plan, the national Technology Services and Business Continuation teams are heavily involved in the development and maintenance of the plans. Since these are critical documents for the enterprise, as well as required deliverables to AHCA, these teams maintain internal processes to make sure they are consistently maintained. Clear Health will continue to collaborate with these teams to confirm that records backup standards and the BC-DR plan are maintained for the entire period of the SMMC Contract.

4. MAINTAINING A DISASTER RECOVERY PLAN FOR RESTORING DAY-TO-DAY OPERATIONS, INCLUDING ALTERNATIVE LOCATIONS FOR BUSINESS OPERATIONS

Clear Health understands that restoring day-to-day operations as quickly as possible is critical. Our BC-DR plan includes access to a substantial workspace recovery capability using a combination of resources, including network redirection of work, our national organization's worksite recovery capacity, mobile recovery resources, and secure satellite connectivity for voice and data.

Our Business Continuity program aligns the business requirements of the operating units and the deliverables of the support areas to meet stakeholder commitments following an unplanned event. The program:

- Identifies business process critical paths
- Documents the recovery strategies and resources required to support those critical paths
- Defines roles and responsibilities
- Links critical path business processes with the resources, systems, and vital records required to support response, recovery, and survival

Clear Health identifies essential business functions by looking at each process to evaluate:

- What are absolute essentials that sustain the core functions of the business?
- What triggers the implementation of the BC-DR plan?
- What resources will be required and when?

In the sections below, we describe key components of our BC-DR plan that support restoring day-to-day operations, including alternate work locations, communication protocols, continuity of service to members and providers, and employee training and awareness.

4.1. Providing Alternate Locations if Workspace is Unavailable

The ability to provide continuing business services throughout any occurrence is critical for Clear Health. Whether it is a short-term incident (such as inclement weather) or a long-term emergency (such as a pandemic or natural disaster), we have established protocols to guide business continuity and data recovery.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Technology tools enable our employees to seamlessly access necessary systems remotely to facilitate continuing operations when their primary work location is unavailable. Using our Citrix Access Gateway, employees can securely use critical applications from any location with Internet access.

To supplement worksite recovery, Clear Health can access a Mobile Recovery Solution that can be operational within 96 hours following an event that results in unavailable network connectivity. Through two owned technology vans, this solution can provide both network and Voice Over Internet Protocol (VOIP) to support up to 500 call center seats and includes the following components:

- Two mobile satellite units (data connectivity for 1,000 seats each, including servers, data switches, onboard generator, and HVAC)
- Satellite connectivity for voice and data (bandwidth equivalent to two DS-3s)
- VOIP phone switch (ACD) for 500 seats/1,000 line servers and data switches
- Two satellite ground stations
- Workstations to use with mobile recovery seat

If the building is unavailable, Mobile Workspace trailers can provide seats for employees and personal computers within 72 hours. The Mobile Workspace trailers can be deployed in conjunction with or separately from our Mobile Recovery Solution, which provides network connectivity. To confirm its continued viability, the Mobile Recovery Solution is tested every six months.

With the ability to deploy multiple protocols, our BC-DR plan will support continued operation of our SMMC program during a disruption.

4.2. Communication when Systems are Unavailable

Communicating promptly and effectively is critical in an emergency or service disruption. Our plan provides multiple methods to communicate with staff, suppliers, the Agency, members, providers, and other stakeholders.

A Virtual Command Center delivers the ability to command, control, and communicate during any event-based activity (planned or unplanned). Elements supporting communication during an event include redundant communication tools issued to key managers; automated call tree notification and management functionality; repositories for business continuity documents; employee, site, subcontractor, external partner, and other mission-critical information; and collaborative meeting tools. Our mass notification system quickly and effectively notifies employees during potential emergency situations, using a process similar to the message and alert systems in school systems and police departments nationwide. This system allows us to reach each employee impacted by an incident through multiple communications channels, both work and personal, until the employee confirms receipt.

EXHIBIT A-4-a

GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Our BC-DR plan is “scenario neutral” to address any situation that disrupts normal operations. In our plan, a recovery strategy is based on an “unavailable resource” – such as people, facilities, or systems – as an “event trigger.” The plan includes multiple event triggers related to communications systems, including data network, inbound and outbound calls, and automatic call distributor, and outlines the appropriate recovery strategy.

4.3. Notifying Members and Providers and Continuity of Services

Clear Health knows that communicating promptly and effectively with our members and providers is critical in an emergency or service disruption. Consequently, our plan includes steps to notify members or providers depending on the type of event and what services are unavailable. Our plan emphasizes proactive communication to members and providers along with reduced administrative requirements so they can focus on their health and safety.

We maintain member and provider access to information and services in any emergency. We will use our call centers, websites, and self-service voice portals to provide information and to make sure services are available before, during, and after an emergency or business disruption.

We use numerous methods to notify our members and providers of an upcoming or current emergency and to provide information on accessing services. Depending on the nature of the disruption and its impact on members and providers, notification methods may include:

- **Member and Provider Websites.** We may post alerts on our website notifying members and providers of a service disruption and how it affects their ability to access services.
- **Automated Calls, Text Messages, and Email Messages.** We can generate automated telephone calls, text messages, and emails to communicate information to our members and providers.
- **Personal Calls.** Our employees may make personal calls to vulnerable members, including those in case management.
- **Member and Provider Call Centers.** Our call center will provide up-to-date information to callers on their ability to continue to access services.
- **Local Media.** We may use local radio and television to disseminate emergency information to our members and providers.

Regardless of the nature of the emergency, redundant operations will minimize disruption for our Florida members and providers. Because redundant operations exist for key functions, we can use telecommunications and networking technology among remote sites to re-route member and provider calls to an unaffected worksite.

Our national call center maintains 10 facilities across the United States, and our telephonic technology enables them to flow calls among them as necessary, creating virtual member and provider call centers. In an emergency or service disruption, we can quickly and seamlessly route calls to another site to continue to serve our members and providers. Using our call center Integrated Desktop and Knowledge Management System, representatives in other facilities have real-time access to SMMC program requirements, covered services, eligibility, and claims data.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Access to this technology will allow them to support our Florida members and providers in the event of a disruption.

Clear Health will also mobilize our employees, including Case Managers (Managed Care Coordinators), Member and Provider Services staff, and other clinical staff, to assist members with access to information and services before, during, and after a declared incident. We can also leverage the experience of our national support services teams and affiliate health plans to augment staff in the event of a disruption.

We employed all of these strategies in our response to Hurricane Irma to minimize the disruption in service for our members and providers. Attachment SRC# 33-1: Our Plan in Action: Hurricane Irma, provides specific information about our outreach to members and providers before, during, and after the storm.

4.3.1. Emergency Planning for Vulnerable Populations

We maintain specific disaster management operating procedures and guidelines for our most vulnerable members. For these members, the guideline has three main parts: 1) emergency planning, 2) implementing the emergency plan, and 3) after the emergency. Members who reside in a facility setting will follow the facility's emergency and evacuation plan.

Emergency planning involves the Managed Care Coordinator working with members to review their emergency plan or help them develop one. The emergency plan discussion may include assisting with registration for a county special needs registry/shelter; making sure the member has at least two weeks of medications, shelf-stable food, water, and medical supplies; making a plan for their pets; registering with the county transportation, if going to a shelter; and understanding the member's desire to evacuate to a facility (based on level of care needed).

When notified of an impending emergency, the Managed Care Coordinator will reach out to members on their case load. The Managed Care Coordinator will verify and document location and contact information for the member and their representative. The Managed Care Coordinator will also talk to the member about early refill for medications and supply needs the member may have, including oxygen tanks and ventilator supplies, diabetic supplies, CPAP and BiPAP supplies, wound care supplies, as well as other essential items they need to obtain in advance of the storm.

They will also advise the member about the on-call process during the emergency, but that weather conditions may affect the ability of providers to deliver services. If during this outreach the member reports that his or her plan is not going to meet his or her needs, the Managed Care Coordinator will collaborate on other options and arrangements.

After the emergency has passed, the Managed Care Coordinator will contact all members to confirm that they are safe. If the member has unmet needs, the Managed Care Coordinator will coordinate services.

EXHIBIT A-4-a

GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

4.4. Employee Training and Awareness

Effective and efficient response to any type of emergency or business disruption requires that employees in Florida and our national shared services areas understand their roles and responsibilities. Training and awareness make sure our employees are prepared to:

- Develop components of a contingency plan
- Perform emergency tasks
- Designate off-site crisis meeting places and implement crisis communications plans

We involve employees and leadership in exercises specific to responding to an emergency. Exercises, drills, and training courses in emergency response procedures foster understanding for managers and employees with direct responsibility under the plans. Additional online courses are available to all employees, including one on Employee Safety and Emergency Response Procedures focusing on the actions employees should or should not take in emergency situations.

To help maintain awareness, employees receive regular emails and notification of internal news articles. An intranet page provides important information about what to do in emergency situations, including appropriate procedures for specific circumstances, such as weather-related events or other office emergencies, including crime or threats. Additionally, a Quick Action Guide outlines what to do in situations such as power failure, fire or smoke, or crime in progress.

5. MAINTAINING DATABASE BACKUPS THAT ELIMINATE DISRUPTION OF SERVICE OR LOSS OF DATA DUE TO SYSTEM OR PROGRAM FAILURES OR DESTRUCTION

Technology Services maintains backup and recovery plans for the types of events that could interrupt operations or cause a loss of data. A comprehensive backup strategy is a key component of our BC-DR plan and protects Clear Health from a loss of data due to system or program failures or destruction. We consistently back up systems and databases and store copies of key files in multiple locations, including secure off-site locations.

5.1. Backup Strategy

Established policies and procedures govern database and system backup, storage, and tracking. The Infrastructure team in Technology Services manages the backups, the documentation and tracking of these backups, and their secure storage. We backup our mission critical systems at our recovery hot site data center using near real-time replication. We also perform daily, weekly, and monthly full backups.

We employ a 3-2-1 backup strategy: 3 copies, 2 different types of media, and 1 copy is stored offsite. Under this strategy, we maintain the production copy (original copy) and a replicated copy within the data center. We take a backup of the replicated copy, and store it offsite.

Technology Services uses Oracle tools and software with NetApp integration to solve data management challenges, such as workload management, database cloning, and backup and recovery. Using the NetApp Snapshot technology delivers better performance and efficient use of storage. Maintaining multiple versions of the database allows for faster, near instantaneous recovery and supports more frequent testing activities.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

We store physical backup copies off-site with Iron Mountain, an industry-leader in storage and information management. Our procedures detail the rotation of backup copies to and from the Iron Mountain facility in Richmond, Virginia and the documentation and logging maintained to support tracking. In addition, we have backups and off-site storage through our business continuity and recovery solutions in our alternate data centers and our high availability solutions.

5.2. High Availability Solution

Our data center in Virginia Beach hosts the majority of systems, applications, databases, and technologies that support our Florida programs. We maintain complete redundancy for all tiers of our Core Operations System, providing a high availability instance in addition to the production and disaster recovery instances. We invest in the technology and equipment necessary to support our operational and business continuity needs.

This high availability solution is located in our primary data center in Virginia Beach. If there is a non-disaster issue with our Management Information System, we can switch to it. Likewise, we back up key hardware and communication lines that enable us to switch operations quickly from one piece of hardware to another. In most cases, we maintain mirror images of files so that if the hardware fails, a system can be quickly switched to operate from those recovery environments.

To support disaster recovery, mission critical systems in Virginia Beach have replicated backups at our recovery hot site data center in Harrisonburg, providing an additional solution during a widespread event that affects our primary data center.

6. FINALIZING THE DISASTER RECOVERY PLAN NO LATER THAN 30 CALENDAR DAYS PRIOR TO THE CONTRACT EFFECTIVE DATE

As an incumbent, Clear Health submits our BC-DR plan, or certification that the approved plan is unchanged, to the Agency by May 1st of each contract year. We will provide the Agency with a finalized BC-DR plan no later than 30 calendar days prior to the effective date of the new SMMC Contract.

7. UPDATING THE DISASTER RECOVERY PLAN IN ACCORDANCE WITH THE BEST INTERESTS OF THE AGENCY AND AT NO ADDITIONAL COST

Clear Health knows that our BC-DR plan must meet the best interests of the Agency and the members we serve. We will amend or update our plan at no additional cost to the Agency.

During our annual review, we amend or update our BC-DR plan as necessary to make sure that it aligns with applicable federal or State laws and regulations, and supports the needs of the Agency and our ability to provide service to our members, providers, and other stakeholders. After review of our plan, if AHCA requests updates or additional information, Clear Health will amend or update the plan or provide additional information as requested.

In addition to our annual review, major system upgrades or significant operational changes prompt a review to determine whether our BC-DR plan needs revision.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

8. MAKING THE DISASTER RECOVERY PLAN AVAILABLE TO THE AGENCY

Clear Health will continue to provide our BC-DR plan (or certification that it is unchanged from the prior year's submission) to the Agency by May 1st. On May 1, 2017 we submitted our BC-DR and Hurricane Preparedness plans to AHCA. We will resubmit our plan to the Agency no later than 30 calendar days prior to the effective date of the new SMMC Contract. We will continue to submit any plan changes to the Agency within 10 business days after making the change.

Clear Health will review all aspects of the BC-DR plan with the Agency, to make sure AHCA is confident in our ability to restore systems and operations and limit service interruption. We will make sure that the Agency has the information they need at all times.

9. CONDUCTING ANNUAL DISASTER RECOVERY PLAN TESTS

Every year, Technology Services and Business Continuation teams conduct tests of our BC-DR plan. We will continue to comply with the Agency's requirement to conduct comprehensive tests annually, by April 30th of each Contract year. Clear Health will submit a report of our BC-DR testing for Agency review.

During testing, we investigate and remediate any problems or situations where results do not meet expectations. We assign each item a priority (with corresponding 30-day or 60-day service level agreement) and track them to closure. We analyze test results to identify potential problem areas and improve the plans. By completing internal audits, we confirm that plans are tested regularly as well as verify that any deficiencies identified in the tests are corrected and the plans are updated accordingly.

9.1. Disaster Recovery Testing

Technology Services tests individual critical systems at least once a year and establishes recovery objectives in advance. They establish simulated disaster or recovery scenarios and lower level failures and activate plan procedures. Scenarios include testing and restoring applications at the disaster hot site recovery facility and verifying the ability of alternate locations to assume business operations for a health plan experiencing a disruption.

Each year, we conduct comprehensive data center disaster recovery exercises that require extensive planning and involve potentially hundreds of Technology Services and business unit employees. In addition to these exercises, we conduct numerous individual application recoveries and proof-of-concept activities each year to confirm the resiliency of critical technology resources across the enterprise.

The 2017 testing schedule includes three national organization data center recovery exercises and 87 application recovery exercises. Tests executed to date have been successful.

The most recent Virginia Beach data center exercise was conducted on November 20, 2016 to test the ability to bring up systems at an alternate location during a disruption in our primary data center. During the six- to eight-hour exercise, we executed a failover test of our production systems to the hot site recovery facility, tested systems and applications, and transitioned them back to Virginia Beach. During the exercise, critical production systems remained operational to

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

all users – internal and external. The exercise was successful, with two follow-up items identified, tracked, and closed within 60 days.

9.2. Business Continuity Testing

We also test business continuity at least annually using a combination of tabletop exercises and evaluating our workspace recovery capability. The team structures tabletop exercises to simulate an incident that escalates to disruption. Designated employees participate and discuss the steps to be taken in accordance with the plan. In workspace recovery testing, employees simulate an incident that requires them to telework or relocate and test access to required systems.

As part of the Safety and Emergency Management program, our Florida offices conduct two evacuation drills each year (in coordination with the landlord). A combination of planned and unplanned drills test evacuation procedures and confirm our ability to maintain the safety of employees and visitors. Evacuation drills include routing calls to another site to maintain continuity.

After each exercise or drill, we complete a formal review to compare expected and actual results to identify lessons learned and areas for improvement.

9.3. Post Incident Review

In addition to annual testing activities, when we have an incident that involves activating our BC-DR or Hurricane Preparedness Plan, Clear Health reviews what worked well and identifies areas for improvement. We highlight some of the lessons learned from Hurricane Irma in Attachment SRC# 33-1: Our Plan in Action: Hurricane Irma.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The adequacy of the respondent's proposed approach and capability to develop and maintain a disaster recovery plan for restoring the application of software and current master files and for hardware backup in the event the production systems are disabled or destroyed.
2. The adequacy of the respondent's proposed approach and capability to ensure the disaster recovery plan limits service interruption to a period of twenty-four (24) hours and ensures compliance with all requirements under the resulting Contract.
3. The adequacy of the respondent's proposed approach and capability to ensure the records backup standards and a comprehensive disaster recovery plan are developed and maintained by the respondent for the entire period of the resulting Contract and submitted for review annually by the anniversary date of the resulting Contract.
4. The adequacy of the respondent's proposed approach and capability to ensure it maintains a disaster recovery plan for restoring day-to-day operations including alternative locations for the vendor to conduct the requirements of the resulting Contract.
5. The adequacy of the respondent's proposed approach and capability to ensure it maintains database backups in a manner that eliminates disruption of service or loss of data due to system or program failures or destruction.
6. The adequacy of the respondent's proposed approach and capability to ensure the disaster recovery plan is finalized no later than thirty (30) calendar days prior to the resulting Contract effective date.
7. The adequacy of the respondent's proposed approach and capability to ensure it amends or updates its disaster recovery plan in accordance with the best interests of the Agency and at no additional cost to the Agency.
8. The adequacy of the respondent's proposed approach and capability to ensure it makes all aspects of the disaster recovery plan available to the Agency at all times.
9. The adequacy of the respondent's proposed approach and capability to ensure it conducts an annual Disaster Recovery Plan test and submits the results for review to the Agency.

Score: This section is worth a maximum of 45 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Our Plan in Action: Hurricane Irma

In September, Florida was hit with a Category 4 hurricane. Irma caused devastation across Florida, including widespread power outages, flooding, and substantial property damage. The impact on Clear Health Alliance members, providers, and employees was immense, and full recovery will take time.

Clear Health's Hurricane Preparedness Plan

In an emergency, nothing saves lives, time, and money, and lessens property damage like being prepared. In addition to our Disaster Recovery Plan, Simply D/B/A Clear Health Alliance maintains a Hurricane Preparedness Plan that outlines specific pre-season preparedness tasks, roles and responsibilities, and operational and post-storm activities. Our Hurricane Preparedness Plan (submitted to the Agency on May 1, 2017) guided our response to Hurricane Irma.

Our Crisis Action Team (CAT) oversees our preparedness and response to a hurricane. Led by Lourdes Rivas, our Plan President and CEO, Crisis Action Team includes 11 executives, directors, and essential employees and serves as an advisory committee to oversee activities.

We execute pre-season activities prior to June 1, the beginning of hurricane season. Tasks include reviewing hurricane policies and procedures and call trees and updating documentation, staff information, and departmental activities.

Our Hurricane Preparedness Plan outlines the responsibilities of major functional areas, including: Member Services, Health Services (clinical and non-clinical), Pharmacy, Human Resources, Information Technology, and Finance.

Our Response to Hurricane Irma

We activated our Hurricane Preparedness Plan on September 4th, as the path of Hurricane Irma was projected to impact South Florida. The following sections highlight some of the actions we took before, during, and after Irma in our efforts to recover, with priority always on the safety and well-being of our members.

Preparing for Irma

The week prior to landfall, We began working to make sure that our members were prepared. We activated our outreach protocol, identifying the most vulnerable populations, such as medically complex members. We prioritized the most vulnerable and prioritized our outreach to populations including children with complex conditions, those in long-term care (LTC), those who are ventilator or oxygen dependent, on dialysis, and our members in the highest level of case management.

We took extra measures to focus on members residing in the areas with anticipated landfall, including opening up evacuation assistance with transportation services. We implemented our

State of Emergency pharmacy protocols and expanded member access, going above and beyond to provide member access to medical and durable medical equipment (DME) supplies, as well as lifting other pharmacy edits.

Following our protocol, we initiated twice daily Emergency Response meetings with senior leadership to review and strategize member and employee contingency planning and coordinate operational communications. We also established daily clinical team meetings to coordinate and address the clinical needs of our members, including the use of a triage list to assure that members with critical needs were addressed and refer any follow up items to the “Go Team” and any post-storm activity.

We deployed a 20-person, cross-functional “Go Team” to a non-impacted location in Kentucky to address member and provider needs and concerns until normal business could resume. The “Go Team” provided support across operations, including:

- Entering service notifications into our system to facilitate claims processing
- Coordinating critically needed care for members
- Coordinating transportation needs
- Providing eligibility and payment information to out-of-state providers delivering care for evacuated members
- Handling member and provider concerns
- Processing member grievances and appeals

Supporting our Members

The following list is just a sample of the activities we performed to support our members as we prepared for Hurricane Irma:

- Our member call center and case management teams initiated outreach campaigns to members who:
 - Rely on ventilators or use oxygen to coordinate delivery of portable tanks and refills
 - Are in late stage or high-risk pregnancies
 - Undergo dialysis to assure they had pre-storm dialysis treatments and arrangements for post storm dialysis treatment and coordinate transportation or hospitalization assistance
 - Are complex, pediatric members that require a higher level of care
- Communicated with facilities to confirm that they had adequate supplies, generators, caregivers, and evacuation plans in place to protect the well-being of our members
- Suspended many of the edits restricting pharmacy access to reduce member point of sale impact, such as refill too soon, prior authorization, and step therapy
- Authorized transportation subcontractors to evacuate our members to shelters or family homes outside of an evacuation zone
- Leveraged our National Call Center footprint to assure continuity of service and expanded hours and augmented our 24/7 live answering service strategies

Simply Helping

Prior to the hurricane, our Member Services Representative, Irene, reached out to Mary, a member in the Florida Keys to check on her. When asked about her plans to evacuate, she became very emotional and stated she was afraid to be in her home during the storm, but she didn't want to leave behind her cat and two dogs. Irene identified a pet friendly shelter for Mary and her pet family to go to together.

FL_Simply_33_Mary_59_RS_4.2

- Created a hurricane emergency database listing community and state resources such as FEMA, Red Cross, shelter information, and evacuation orders so that we could assist members with storm-related questions and direct them to the appropriate resources
- Included a Hurricane Irma message on our website to provide members with important storm specific information and contacts

We employed a two-pronged approach, understanding that members in LTC in a home-based setting have different needs than those that are facility based. Our goal was to meet the needs of both populations during the event.

For home-based members, actions included the following:

- Validating that they were following their pre-established emergency plan and determining if they needed assistance evacuating
- Confirming that the member had sufficient supplies, including DME, food, water, and medication
- Helping facilitate transportation and placement in an appropriate facility, for members needing evacuation assistance

For facility-based members, actions included the following:

- Confirming emergency plans with each member at the facility and offering to assist with evacuation and placement if desired
- Verifying with the facility their emergency disaster plan to include evacuation contingencies
- Offering assistance to facilities with member placement and transportation

Supporting Providers and Subcontractors

Our providers and subcontractors are critical to our ability to serve our members in the event of an emergency like Hurricane Irma, and proactive outreach is critical. Among the many activities performed, Simply D/B/A Clear Health Alliance:

- Sent a Fax Blast to all providers that outlined special hurricane protocols regarding authorizations and pharmacy access and placed notices on our website
- Coordinated with hospitals to confirm the safety and well-being of members
- Reached out to all dialysis centers to understand continuity plans and the ability for member access post storm
- Contacted DME providers to understand contingency plans and verify they had adequate supplies, such as oxygen (and the ability to issue portable tanks) and ostomy supplies
- Contacted subcontractors to understand contingency plans in place to minimize member disruption

Simply Helping

I greatly appreciate all the efforts and coordination you provided in helping us transfer two bed-bound members from our facility to the hospital before the hurricane made landfall. This shows me that you show great interest in providing quality care to their members.

– **Arnaldo Quintero**, Owner of Hogar De Abuelos (ALF)

FL_Simply_33_Quintero_59_RS_3.3

Supporting Employees

As Florida residents, our employees were also facing the impact of the hurricane, including evacuation. We took steps to address the safety and security of our employees, such as communicating the need to begin preparing, office closure, and flexible work arrangements. We used a mass notification system to communicate with employees, which enabled us to reach each employee through multiple channels, both work and personal, until the employee confirmed receipt.

During the Hurricane

During the hurricane, our focus was on safety. We continued twice daily Emergency Response meetings, with participation from senior management as they were able, to assure member and employee communication and safety. We also continued daily clinical team meetings to coordinate and address member clinical issues.

Some of the additional activities during the hurricane included the following:

- Updating phone messages to explain that offices were closed, while providing members and providers instructions on how to communicate throughout the storm
- Waiving administrative requirements for providers to allow clinical flexibility

In addition, the “Go Team” had daily meetings with senior management to address any new member or provider concerns, responded to member and provider needs during the storm, and continued to process grievances and appeals.

After Irma

Activities after the hurricane focused on assessing the impact on members, providers, employees, and other stakeholders and returning to normal operation. We reopened all of our offices within 48 hours with 85 percent of staff reporting for work.

Twice daily Emergency Response meetings and daily clinical meetings continued during this time to assess member, provider, and employee needs and coordinate fulfillment. We also maintained close contact with AHCA, providing proactive updates on our activities and member needs.

We continued to provide member and provider support 24/7 through our call center, with additional support from our national call center. We also implemented an “Feet on the Street” approach, encouraging staff to go out into the field to personally deliver needed supplies and assess member needs.

Supporting our Members

We conducted extensive outreach after the storm to identify member needs and get them the support they needed. We leveraged our Case Management and Member Services teams to personally reach out to our members after the storm, including following up on members from the critical populations identified pre-storm and members residing in the Keys. We supplemented efforts with an automated outreach message to all members that provided key information such as Red Cross and FEMA numbers.

Some of the many additional activities during this time included the following:

- Outreach to member, with priority on the most impacted geographic areas
- Member Services outreach to all members in case management
- Providing case management outreach to all critical care members, such as pediatric complex cases and members on a ventilator, to coordinate care, medication access, and assistance with basic needs, including food, water, and shelter
- Proactively outreaching to all dialysis members to assure their continuity of care
- Engaging our transportation subcontractor to help evacuated members return home from shelters, access food banks and temporary housing, and access FEMA emergency locations, if needed
- Leveraging our over-the-counter supplier to deliver supplies to assist impacted members
- Maintaining pharmacy edit suspension to facilitate the ability of members to replace medications lost during the storm

We began outreach to LTC home-based members after the storm. Managed Care Coordinators began communicating with members to identify needs and answer questions. If we were unable to reach members by phone, we initiated face-to-face visits.

We also started outreach to LTC facilities post storm to confirm member safety, including onsite visits to all assisted living facilities and nursing facilities. We offered assistance in placements and transportation for members that needed to relocate.

Simply Helping

Javier is 55-year-old, legally blind, diabetic member who actively participates in our diabetes disease management program. When Olga, our Case Manager, reached out to check on him post-hurricane, he told her his power had been restored, but all his food went bad, and he had no money or means to purchase additional food and no transportation. His friends, who usually take him to buy groceries and occasionally cook for him, were unavailable during the hurricane.

So Olga got right to work and placed a nutritious food order through the CVS Hurricane Emergency portal for overnight delivery. She also gave him Community Resource 311 and local food distribution centers information, and encouraged him to reach out to Miami Lighthouse for the Blind for additional assistance. But she knew he needed food right away to avoid diabetes complications, so she arranged for another Case Manager living near Javier to make a home visit that same day. She helped him get groceries to last for a few days, talked with him about his options, including assisted living facilities, and let him know we'd continue to be there for him.

FL_Simply_33_Javier_59_RS_1.3

Supporting Providers and Subcontractors

Provider Relations staff conducted outreach activities to address any concerns. We outreached to all 10,000+ providers to confirm that they had reopened and rescheduled missed appointments. Provider Relations Managers contacted facilities to check on facility and member status and offer assistance.

Our Vendor Delegation and Oversight Group worked closely with every subcontractor to understand their business resumption status and communicated updates to Member Services and Case Management departments.

Supporting Employees

The health of our employees is critical to our success and during this strenuous period, we did everything possible to assure their safety and well-being. Our support included the following:

- Managers initiated direct outreach to their employees and reported back so that Human Resources could track the status and impact of all employees.
- We used our mass notification system to send “Are you safe?” messages to employees with prompts if they had evacuated.
- We accommodated unique employee needs with flexible work arrangements including variable work schedules and work from home.
- Our Employee Assistance Program, which offers tools and resources designed to meet the challenges of our employees and their families, provided onsite counseling in our Miami and Tampa offices.
- We provided assistance through our peer-to-peer program, which coordinates employee contributions to support fellow employees in time of need with financial grants.

Additionally, our parent company’s foundation matched donations made toward disaster relief, increasing the normal 50 percent match to 200 percent.

Lessons Learned

While we are proud of our response before, during, and after Irma; we know that there are always things that we can do to better. We conducted a survey to identify best practices, lessons learned, and suggestions from employees across Clear Health and our national support areas. The “Go Team” was a great response to the situation; however, a few areas identified include the following:

- Initiating the “Go Team” earlier, as soon as the region was within the five-day cone, will help with preparation efforts (especially considering this was the largest evacuation in U.S. history)
- Expanding the “Go Team” to include other key functional areas
- Developing a menu of decision points and minimum requirements to prompt decision making during the pre- and post- event periods
- Creating a library of prepared provider communications to leverage during an incident
- Increasing leverage of the national call center to conduct outbound calls to members and providers

Over the coming months, we will continue to work on action plans to refine and expand our Hurricane Preparedness Plan. We welcome the opportunity to meet with AHCA and the other Florida Managed Care Plans to share best practices that would help us all better support our members, providers, employees, and other stakeholders.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

G. STATUTORY REQUIREMENTS

SRC# 34 – Statutory Community Partnerships (Regional):

The respondent shall describe the extent to which its organization has established community partnerships with local providers or agencies that create opportunities for reinvestment in community-based services that play a critical role in improving the health and quality of life for enrollees, including:

- a. Participation by senior executive leadership staff on local health and human service boards, councils, and commissions.
- b. Partnerships with local community organizations focused on addressing the following social determinants of health:
 - (1) Access to Food;
 - (2) Employment;
 - (3) Housing Stability;
 - (4) Education; and
 - (5) Exposure to Crime/Violence.
- c. Participation in both grass-roots and grass-tops provider initiatives.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Simply brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). The unified Simply draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations. Within all our programs and contracts, we recognize the critical importance of developing partnerships in the communities and among the populations we serve. We describe our partnership efforts in Region 1 related to Clear Health in this section.

Through a contract with AHCA, Clear Health has been coordinating care to individuals with HIV/AIDS since February 2012. Since then, we have expanded our program and now operate the largest Medicaid Specialty Plan for this population in Florida. During this time, we have built a comprehensive network of providers, key community partnerships, and multi-disciplinary care coordination systems that optimize care access and outcomes for our enrollees (members).

We have learned much in the past five years about coordinating care for individuals with HIV/AIDS. We have learned that the HIV community is generally tight-knit, and developing a trusting relationship between members, providers, and the health plan is critical to engaging and maintaining care for individuals in this community. Additionally, privacy is a prime consideration for individuals with HIV/AIDS, because there is still significant stigma related to the diagnosis. Protection of health information inside and outside the care system is therefore paramount to our members.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

To build trust with our Clear Health members and communities, we have engaged in consistent outreach, education, and engagement among members, providers, and subcontractors. In addition, we have established a statewide Clear Health Member Advisory Committee to make certain we stay in touch with member needs and concerns. We also continue to leverage our relationship with former NBA superstar, Earvin “Magic” Johnson, arguably the most credible and well-known advocate for people living with HIV/AIDS. Mr. Johnson serves as an ambassador for both Simply and Clear Health and is an active participant in setting strategic direction for the organization. Indeed, Magic chairs Clear Health’s Strategic Advisory Group, which makes recommendations regarding improvements to quality, operations, and community partnerships in conjunction with our Member Advisory Committee and the broader HIV/AIDS community and research experts. He recently served as keynote speaker at the 17th Annual Center for AIDS Research Scientific Symposium. The symposium was sponsored by the University of Miami and organized by Dr. Margaret Fischl, Clear Health network provider and nationally renowned AIDS researcher. Through his direct input, leadership, and the efforts of his foundation, the Magic Johnson Foundation, Magic has provided invaluable insight and entrée to minority populations and communities that have historically been difficult to reach. Moreover, in his role as plan ambassador and community advocate, Magic visits with students in local schools, pastors in local churches, with providers in our network, and our employees (see Attachment SRC# 34-1: Earvin “Magic” Johnson). In May of this year, he met with Florida lawmakers in Tallahassee, expressing support for our innovative efforts to serve Medicaid and Medicare members.

We continuously build relationships and partnerships in the communities we serve, because we understand that the needs of our Clear Health members and providers change over time, as does the availability of local resources. We also understand that the health of our members depends on resources and relationships both inside and outside the health care sector.

Within the health care sector, we work closely with Clear Health network providers and other partners such as Ryan White agencies and public health departments to reach members in need of health care services and health education. This partnership development includes sponsoring and participating in community screening events, health fairs, and workshops, as well as participating in local coalitions and collaboratives. We have found this community work complements our targeted Clear Health member outreach efforts and offers an opportunity for providers in our network and other partners to engage community members and learn more about local needs, strengths, and aspirations.

We also reach across sectors to make sure our Clear Health members have access to critical resources such as stable housing, food security, education, and gainful employment — the social determinants of health. This includes developing working relationships with a variety of social, educational, and human service organizations and assisting in key areas such as capacity building. For example, we contracted with professional grant writers and organized grant-writing workshops across multiple regions for approximately 200 non-profit organizations, which received training in obtaining funding for their missions and become more self-sustaining. We identified a need and played a leadership role by organizing the workshops — the benefits of which were multiplied across many communities.

We also collaborate with our partners and colleagues on grassroots and grass-tops initiatives that create positive change in the community, and our Community Relations staff are embedded in their communities and serve as members on many local boards, councils, and commissions in support of community goals.

EXHIBIT A-4-a

GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

We support communities in other ways as well. For instance, in 2016, Simply contributed \$102,000 to sponsor community health programs throughout Florida. In addition, over the past decade our ultimate parent company, Anthem, Inc., has invested \$7.2 million supporting low-income housing in Florida. The Anthem Foundation has also pledged \$860,000 over a five-year period to support the “Triple Play Program”, a dynamic youth wellness program. For good measure, Simply employees personally support communities throughout Florida through our Associate Giving Program (\$52,909 donated in 2016, including a Foundation match) and volunteerism (1,345 total volunteer hours in 2016). Indeed, the day after Hurricane Irma, volunteers from our Community Relations team reached out to community partners to offer assistance and pitched in to trim and clear branches, distribute food and clothing, and provide a warm, helpful presence during the post-storm crisis impacting many Florida regions.

Currently, Clear Health has an HIV/AIDS specialty contract with AHCA to coordinate care for members in Region 1, and below we describe our partnerships in support of this contract.

1. COMMUNITY PARTNERSHIPS SUPPORT THE LOCAL CARE SYSTEM

Clear Health has actively been building partnerships throughout Region 1 in support of our members’ needs and to build a more responsive and accessible care system in the region. We supported the 19th Annual Positive Living Conference held in Fort Walton Beach, organized by the Okaloosa AIDS Support and Informational Services (OASIS). A Clear Health Managed Care Coordinator who lives and works in the area was a featured speaker. The conference provided valuable information about navigating the health care system for those living with HIV/AIDS, in addition to offering advocacy training, education on treatment options, prevention services, the Affordable Care Act, and other pertinent information.

Our Provider Relations team is engaged in meetings of the Northwest Florida AIDS/HIV Consortium (NoFLAC) to support local activities to improve access to high quality HIV/AIDS care and services. We partner with the Okaloosa County Health Department in Latino AIDS Awareness Day, and we provide support for a Latino HIV testing initiative.

Our Case Managers work closely with HIV providers in the area to coordinate services and assist members in receiving immediate assistance with any care-related issues (for instance, authorizations and referrals). In Region 1, these providers include Dr. Barbara Wade, the Okaloosa County Health Department, and the HIV Care Center at Sacred Heart.

Lastly, we hold Clear Health Member Advisory Committee meetings in Region 1 to hear from members and other stakeholders about local needs, issues, and concerns. As indicated, we make adjustments in our services and policies and establish new partnerships based upon input received.

2. PARTICIPATION ON LOCAL HEALTH AND HUMAN SERVICES BOARDS, COUNCILS AND COMMISSIONS

At Clear Health, we are committed to building healthy and resilient communities, and we strive to work shoulder-to-shoulder with community members in this endeavor. This includes serving on local boards, councils, and commissions, offering a voice and resources as appropriate on behalf of our members and other underserved individuals, families, and populations.

EXHIBIT A-4-a

GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Our senior leaders, including Lourdes Rivas, President and Chief Executive Officer (CEO); Dr. Vincent Pantone, Chief Medical Officer; Suzanna Roberts, Chief Operating Officer; Judi Peterson, Staff Vice President; Holly Prince, Chief Financial Officer; and Dr. Fatimah Tahil, Medical Director for Behavioral Health are actively engaged in civic affairs, often at a statewide level, due to the nature of their positions and ability to influence policies and practices at the grass-tops level. Provided below is a listing of the committees, associations, coalitions, and councils in which they currently participate:

- Center for Leadership at Florida International University, Board of Advisors
- Florida Alcohol and Drug Abuse Association
- Florida Association for Community Mental Health
- Florida Association of Health Plans
- Florida Coalition of Supportive Housing
- Florida Council for Mental Health
- Florida HMO Consumer Assistance Board of Directors
- Florida International University Center for Leadership
- Florida Maternal Mental Health Collaborative
- Florida Policy Academy
- Hispanic Chamber of Commerce
- Miami Chamber of Commerce
- National Alliance on Mental Illness (NAMI) Florida
- St. Thomas University, Board of Trustees
- United HomeCare Services, Inc.
- United Way of Miami-Dade County

In Region 1, our Clear Health Alliance Community Relations Manager, Jose Camino, sits on the Northwest Florida AIDS Consortium. His participation and input makes certain that the HIV/AIDS prevention and treatment needs of our Clear Health members are voiced and addressed and that Clear Health resources are available, as appropriate, to assist the Consortium in meeting its goals and objectives.

3. PARTNERSHIPS WITH LOCAL AGENCIES THAT FOCUS ON ADDRESSING SOCIAL DETERMINANTS OF HEALTH

We understand that social factors such as income, employment, housing, education, and exposure to crime and violence play a critical role in health outcomes. This is particularly true for individuals living with HIV/AIDS, who are more likely to live in poverty and face challenges accessing housing, employment, and health care.

To assist Clear Health members in Region 1 with housing and access to food, our Case Managers have developed referral relationships with OASIS, Lutheran Services, and Catholic Charities. In addition, we connect members requiring housing assistance with the Housing Opportunities for Persons with AIDS (HOPWA) program, which is the only federal program dedicated to the housing needs of people living with HIV/AIDS. Under the HOPWA program, HUD makes grants to local communities, states, and nonprofit organizations for projects that benefit low-income persons living with HIV/AIDS and their families.

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

In other regions of Florida, we have developed partnerships with job training programs (CareerSource South Florida and LifeNet4Families), educational institutions (Concorde College and Buren Middle School), and violence prevention initiatives (Hillsborough Community Violence Prevention Collaborative) to improve access to social determinants such as employment, education, and violence prevention. We are particularly supportive of the St. Petersburg 2020 Task Force in Pinellas County, a poverty reduction initiative that is addressing multiple health determinants (housing, employment, and education). Our Senior Human Resources Director, Patricia Cruzalvarez, is our representative to the 2020 Task Force. These types of partnerships will serve as a blueprint for expanding our relationships in Region 1.

4. DEVELOPMENT AND INCORPORATION OF CHANGE FROM GRASSROOTS AND GRASS-TOPS INITIATIVES

Clear Health actively participates in community-based initiatives endeavoring to level the playing field so that everyone has an equal opportunity for good health. In Region 1, we are members of the Northwest Florida AIDS/HIV Consortium (NoFLAC) and work closely with consortium members to establish policies that improve access to health care services for people with HIV/AIDS and improve access to social determinants such as housing, employment, and transportation.

In other regions of Florida, we participate in grass roots dental initiatives (Tampa Bay Oral Health Coalition), substance abuse prevention initiatives (Orange County Drug Free Coalition), poverty reduction efforts (Orange County Community Action Advisory Board), and ethnic-specific coalitions (Latino Coalition of Tampa Bay). We expect to bring the best practices of these initiatives to Region 1 in areas that align with community priorities and interest.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The extent to which the respondent provides details on how their local community partnerships, activities and initiatives support the local system of care.
2. The extent to which the respondent has senior executive leadership staff who will be assigned to the resulting Contract who also participate on local health and human service related boards, councils, and commissions.
3. The extent to which the respondent has partnerships with local agencies that focus on addressing social determinants of health.
4. The extent to which the respondent jointly develops and incorporates change from grassroots and grass-tops provider initiatives.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 35 – Organization Commitment to Quality (See Section 409.966, Florida Statutes) (Statewide):

The respondent shall describe its organizational commitment to quality improvement, including active involvement by the respondent's medical and administrative leadership, and document its achievements with two (2) examples of completed quality improvement projects, including description of interim measurement and rapid cycle improvement processes, and a summary of results.

Response:

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

**EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

Evaluation Criteria:

1. The extent to which the respondent's description demonstrates that the medical director has substantial oversight in the assessment and enhancement of quality improvement activities, and the Chief Executive Officer is actively involved in quality management.
2. The adequacy of the respondent's approach to incorporating quality improvement activities into the culture and operations of the organization.
3. The extent to which the respondent describes proactive processes and strategies that are utilized to recognize and solve problems before they occur or are exacerbated.
4. The extent to which the respondent provides two examples of completed quality improvement projects that incorporated a data-driven quality improvement cycle.
5. The extent to which the respondent provides data on the results of the quality improvement projects that demonstrates the efficacy of the interventions.
6. The extent to which one of the quality improvement projects described by the respondent is related to reducing potentially preventable events or improving birth outcomes.

Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 5 points each.

AND EVALUATION CRITERIA (10-2-17)

SRC# 36 – Health Plan Accreditation (See Section 409.966, Florida Statutes) (Statewide):

The respondent shall specify its current accreditation status by a nationally recognized accrediting body. This shall include the name of the accrediting body, the most recent date of certification, the effective date of the accreditation, the type and/or level of accreditation, and the status of accreditation (i.e., provisional, conditional, etc.). The respondent shall attach documentation that supports this information.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Simply brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). The unified Simply draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations.

Clear Health, through Simply, and each one of our legacy organizations is currently accredited by a national accrediting body. The accreditations reflect our organizational commitment to attaining the highest quality and regulatory standards in everything we do.

1.a. FULL HEALTH PLAN ACCREDITATION BY A NATIONAL ACCREDITING BODY

Our legacy health plans, Simply and Better Health, have been continuously accredited by the Accreditation Association for Ambulatory Health Care, Inc. (AAAH), a nationally recognized accrediting body, since 2013. The most recent certifications last for a period of three years, through January 2019. Simply's accreditation covers Clear Health, as reflected in Attachment SRC# 36-1: Clear Health Proof of AAAHC Accreditation.

Name of the accrediting body: AAAHC

Original date of certification: January 30, 2013 (Better Health) and January 31, 2013 (Simply/Clear Health)

Most recent date of certification: February 3, 2016 (Both)

Effective date of accreditation: January 30, 2016 (Better Health) and January 31, 2016 (Simply/Clear Health)

Type and/or level of accreditation: Full (Both)

Status of accreditation: Accredited (Both)

Attachment SRC# 36-1: Clear Health Proof of AAAHC Accreditation and Attachment SRC# 36-2: Better Health Proof of AAAHC Accreditation include a copy of the current AAAHC certificate of accreditation and the accompanying notification letter for each plan.

**** RESULTS & SUCCESSES:** High Praise in Most Recent AAAHC Survey

Clear Health, through Simply, and Better Health achieved full compliance in 11 out of 11 categories in their most recent AAAHC Survey Reports. During the onsite visit, the AAAHC auditor lauded the comprehensive programs and provided praise for the infusion of continuous quality improvement in all company activities and processes. **

EXHIBIT A-4-a GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Our other legacy organization, Amerigroup, also maintains full health plan accreditation by a national accrediting body. Amerigroup is accredited by the NCQA, and achieved full accreditation and Commendable status in 2016. Prior to obtaining NCQA accreditation, they were continuously accredited with the AAAHC starting in 2003.

Name of the accrediting body: NCQA
Original date of certification: July 29, 2016
Most recent date of certification: July 29, 2016
Effective date of accreditation: July 29, 2016
Type and/or level of accreditation: Commendable
Status of accreditation: Accredited

Attachment SRC# 36-3: Amerigroup Proof of NCQA Accreditation includes a copy of Amerigroup's current NCQA certificate of accreditation and the accompanying notification letter.

Looking forward, the recent changes in our organizational structure will provide new opportunities for Clear Health to implement NCQA-approved practices and programs to improve the health and overall experience of our members. For example:

- **NCQA Accreditation.** We are seeking full accreditation by the NCQA, through Simply, and recently initiated the process with a Letter of Intent. Due to our relationship with Amerigroup, we can undergo NCQA's Mergers, Acquisitions, and Consolidation Survey. Simply will do this in the first half of 2018 to gain full NCQA accreditation for all of its Medicaid products, including Clear Health. During this time, we will maintain our AAAHC accreditation status and therefore will have no breaks in accreditation.
- **Managed Behavioral Health Organization (MBHO) Accreditation.** Our ultimate parent company, Anthem, Inc., obtained MBHO accreditation by the NCQA in June 2017, demonstrating an organizational commitment to integrating care through evidence-based practices that improve quality and case management across medical and behavioral health (BH) systems of care.
- **Disease Management (DM) Program Accreditation.** Seven of our 12 DM programs are accredited by the NCQA, including asthma, diabetes, depression, schizophrenia, chronic obstructive pulmonary disease, coronary artery disease, and congestive heart failure.
- **Multicultural Health Care Distinction.** This distinction reflects an organizational commitment to the provision of culturally competent services and reducing health disparities. Our legacy organization, Amerigroup, was awarded this honor by the NCQA in March 2017, and is one of only two Medicaid health plans in Florida that has this distinction. Clear Health, through Simply, is currently seeking its own designation as part of the NCQA Mergers, Acquisitions, and Consolidation Survey process.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. Evidence that the respondent has:

- (a) Full health plan accreditation by a nationally recognized accrediting body; e.g., full three (3) year accreditation for the National Committee for Quality Assurance (NCQA), full three (3) year accreditation for Utilization Review Accreditation Commission (URAC), or full three (3) year accreditation for Accreditation Association for Ambulatory Health Care, Inc. (AAAHC); or
- (b) Partial/conditional health plan accreditation (e.g., provisional for NCQA, conditional or provisional for URAC, or one (1) year or six (6) months for AAAHC); or
- (c) No health plan accreditation or denied accreditation.

Score: This section is worth a maximum of 5 raw points as outlined below:

- (a) 5 points for full health plan accreditation.
- (b) 3 points for partial/conditional health plan accreditation.
- (c) 0 points if health plan accreditation denied or no accreditation.

AND EVALUATION CRITERIA (10-2-17)

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Congratulations!

You have been awarded a three year term of accreditation!

Your AAAHC accreditation is a significant achievement. Seeking accreditation implies a commitment to ongoing self-evaluation and continuous improvement. The dedication and effort required is substantial and I commend your staff for this approach to high-quality patient care and business practices.

Granting accreditation reflects confidence, based on evidence from this recent survey, that you meet AAAHC Standards and will continue to demonstrate the attributes of an accreditable organization. Each year of your term of accreditation, you will receive notification of release of the updated Standards. It is vital that your organization has an up-to-date copy of the *Handbook*, whether through the purchase of the annual binder, or by taking advantage of the window of opportunity to download an electronic copy free of charge.

I hope the survey experience was beneficial to your organization in identifying strengths as well as opportunities to improve, and that you found your surveyor(s) to be consultative and educational in approach.

Enclosed is your Accreditation Notification with additional details describing your award and the next steps for your organization. Your Survey Report is also enclosed. Review and use it as a periodic reference throughout your term of accreditation.

Your organization has been added to our communications mailing list. Soon you will receive our quarterly newsletter, *Triangle Times*. This publication includes news items, announcements of policy changes, review of individual Standards, and other information relevant to our accredited organizations. It will be mailed to the primary contact for your organization. You may request additional copies by providing additional names via e-mail to marketing@aaahc.org. Our e-newsletter, *Connection*, requires a subscription. It is published every other month and usually focuses on a single topic. Request a free subscription by e-mailing marketing@aaahc.org.

Again, please accept my sincere congratulations on your achievement.

Best regards,

A handwritten signature in black ink, appearing to read "Stephen A. Martin, Jr." with a stylized flourish at the end.

ACCREDITATION NOTIFICATION

February 3, 2016

Organization #	18589		
Organization Name	Simply Healthcare Plans, Inc.		
Address	9250 W. Flagler, 6th Floor		
City State Zip	Miami	FL	33174
Decision Recipient	Ms. Lila Labarces		
Survey Date	January 25-26, 2016	Type of Survey	Reaccreditation
Accreditation Type	Full Accreditation		
Accreditation Term Begins	January 31, 2016	Accreditation Term Expires	January 30, 2019
Accreditation Renewal Code		f4d223e418589	
Complimentary AAAHC Institute study participation code		18589FREEIQI	

As health plan that has undergone the AAAHC Accreditation Survey, your organization has demonstrated its substantial compliance with AAAHC Standards. The AAAHC Accreditation Committee recommends your organization for accreditation.

Next Steps

- Members of your organization should take time to thoroughly review your Survey Report.
 - Any Standard marked “PC” (Partially Compliant), “MC” (Minimally Compliant), or “NC” (Non-compliant) must be corrected promptly. Subsequent surveys by AAAHC will seek evidence that deficiencies from this survey were addressed without delay.
 - The Summary Table provides an overview of compliance for each chapter applicable to your organization.
- AAAHC Standards, policies and procedures are reviewed and revised annually. You are invited to participate in the review through the public comment process each fall. Your organization will be notified when the proposed changes are available for review. You may also check the AAAHC website in late summer for details.
- Accredited organizations are required to maintain operations in compliance with the current AAAHC Standards and policies. Updates are published annually in the AAAHC *Handbooks*. Mid-year updates are announced and posted to the AAAHC website, www.aaahc.org.

4. In order to ensure uninterrupted accreditation, your organization should submit the *Application for Survey* approximately five months prior to the expiration of your term of accreditation. In states for which accreditation is mandated by law, the *Application* should be submitted six months in advance to ensure adequate time for scoping and scheduling the survey. Here is the web address:

<https://application.aaahc.org/healthplan.aspx>

NOTE: You will need the Accreditation Renewal Code found in the table at the beginning of this document to submit your renewal application.

Additional Information

The complimentary AAAHC Institute study participation code on the first page of this document may be used to register for one six-month, AAAHC Institute for Quality Improvement benchmarking study.

Please visit www.aaahc.org/institute for more information or contact Michelle Chappell at 847.324.7747 or mchappell@aaahc.org.

The packet of brochures and the marketing kit in this mailing are designed to help you use your accreditation to educate and inform multiple audiences—your current and prospective patients, your payers, and your community—about AAAHC accreditation and the quality of care you deliver. Please remember that these are suggestions; tailored marketing activities with specific objectives will be most effective.

Throughout your term of accreditation, AAAHC will communicate announcements via e-mail to the primary contact for your organization. Please be sure to notify us (notify@aaahc.org) should this individual or his/her contact information change.

If you have questions or comments about the accreditation process, please contact AAAHC Accreditation Services at 847.853.6060. We look forward to continuing to partner with you to deliver safe, high-quality health care.

July 29, 2016

Rosy Cozad
Pres Medicaid Health Plan - FL
AMERIGROUP Florida, Inc.
4200 West Cypress Street Suite 900
Tampa, FL 33607

Dear Mrs. Cozad:

We are pleased to inform you that based on the information gathered during your recent HP survey, the National Committee for Quality Assurance (NCQA) Review Oversight Committee has awarded **AMERIGROUP Florida, Inc.** the accreditation status(es) listed below. The final assessment report, which incorporates relevant changes made in response to your organization's earlier comments, is now ready for your review. You may now access the final report and results online by visiting <https://iss.ncqa.org> and looking under the section entitled Survey and Results.

Product Line/ Product	Accreditation Status	Effective Date	Expiration Date
Medicaid-HMO	Accredited	July 29, 2016	July 29, 2019

The NCQA Health Plan Report Card will be updated to reflect this status by no later than the 15th of August. A certificate reflecting your accreditation status(es) is enclosed in recognition of your achievement. Also, for your convenience, you may download the NCQA accreditation seal by visiting our Web site at www.ncqa.org. Please refer to the 'Guidelines for Advertising NCQA HPA Survey Accreditation,' enclosed.

If you have reason to believe that the compliance scoring of any standard or standards does not accurately reflect your organization's compliance with the standards, you have the opportunity to request a reconsideration of compliance designations and/or accreditation outcome by the NCQA Reconsideration Committee. To proceed with reconsideration, NCQA must receive within the next 30 days a written request for reconsideration that addresses at least one of the grounds for appeal identified in the Reconsideration section of the "Administrative Policies and Procedures" of the 2015 *Standards and Guidelines for the Accreditation of Health Plans*. This request must not exceed five pages in length and must include a listing of the standards for which reconsideration is being requested. A fee, as specified in the Agreement for HP Accreditation Survey, "Pricing Methodology and Cancellation Policy" (Exhibit A), is charged for reconsideration. The fee must be paid at the time reconsideration is requested.

July 29, 2016
Page 2

In order to maintain your accreditation status(es), AMERIGROUP Florida, Inc. will need to participate in a resurvey approximately three months prior to the expiration date. Your next survey will be conducted in two stages using NCQA's Interactive Survey System (ISS) and standards in effect at the time of the survey. The first, or offsite, stage will begin immediately upon submission of your organization's completed Survey Tool. During this stage, NCQA reviews the organization against most of the standards and elements, thus reducing the duration of the second, or onsite, stage which will be scheduled to begin seven weeks after your Survey Tool is submitted to NCQA.

We have tentatively reserved **May 7, 2019** as the submission date of the completed Survey Tool to NCQA. NCQA has tentatively set **June 24 - 25, 2019** for your two-day onsite survey. If the proposed dates present a problem for you or if you have any questions regarding these dates, please contact Cindy Francis, Program Manager, Accreditation, at (202) 955-5147 or e-mail francis@ncqa.org.

If you have questions about the ISS, please contact NCQA Customer Support at (888) 275-7585 or via my.ncqa.org. You can also visit www.ncqa.org for additional information.

While it is our understanding that the results of this accreditation survey may satisfy a state regulatory requirement, NCQA assumes no responsibility for transmitting copies of this report to relevant state agencies.

We wish to acknowledge your quality improvement efforts, which were evident throughout the survey process. NCQA looks forward to working with you and your staff again in the future.

Sincerely,

A handwritten signature in black ink, appearing to read 'Gerald Stewart', with a stylized flourish at the end.

Dear Mrs. Cozad:

NCQA has completed the annual review of HEDIS® data as outlined in the *Standards and Guidelines for the Accreditation of Health Plans*. Based on your organization's HEDIS® 2016 results, the accreditation status for AMERIGROUP Florida, Inc.'s Medicaid HMO has increased to Commendable. The new score sheets are attached.

The NCQA Health Plan Report Card will be updated to reflect your new status at the time of the September release (September 15th) and will continue to reflect this status until the expiration date, or until the next review of your HEDIS® results, whichever comes first. A certificate reflecting your new accreditation status is attached.

Should you have any questions about the annual HEDIS® update process, please contact Stephanie Hoch at 202-955-3519.

Sincerely,

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

RESPONDENT NAME: Simply Healthcare Plans, Inc. D/B/A Clear Health Alliance

A. RESPONDENT BACKGROUND/EXPERIENCE

No SRCs in this Category for MMA.

B. AGENCY GOALS

MMA SRC# 1 – Potentially Preventable Events (Regional):

The respondent shall describe its organizational commitment to quality improvement as it relates to reducing potentially preventable events. More specifically, the respondent shall describe its overall approach and specific strategies that will be used to ensure a reduction in potentially preventable hospital admissions and readmissions, a reduction in the use of the emergency department for non-emergent/urgent visits, and a reduction in the use of unnecessary ancillary services during hospitalization and outpatient visits. The respondent's approach shall also include:

- A description of the respondent's assessment (using available data sources) of hospital utilization rates and the potential for improvement;
- A description of performance benchmarks for each area of focus;
- A description of incentives that will be implemented for providers and enrollees aimed at diverting care to more appropriate and cost-effective settings; and
- A description of evidence-based interventions and strategies that will be used to target super-utilizers, particularly related to pain management and behavioral health conditions.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Simply brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). The unified Simply draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations.

Clear Health shares the Agency's commitment to reducing potentially preventable events (PPEs) and utilization of unnecessary ancillary services, which increase program costs and negatively impact the overall quality of care our members receive. As recognized by the Agency in the Quarterly Statewide Medicaid Managed Care Report (Spring 2017) (the "Spring 2017 Report"), "although not all potentially preventable events can be avoided, PPE rates in populations can be used as a gauge regarding failure to access primary care and the quality of care available." When we avoid PPEs, we know we are delivering more holistic, higher quality care at the right time and in the right place.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

As defined by the Agency, PPEs include potentially preventable hospital admissions (PPAs), potentially preventable hospital readmissions (PPRs), and potentially preventable emergency department (ED) visits (PPVs). We address PPEs through a multi-faceted strategy that includes improving:

- Care transitions
- Coordination of services
- Continuity of care
- Integrated approach for members with co-occurring physical and BH conditions
- Access to primary care and other services
- Medication management and helping members and providers avoid therapeutic duplication and polypharmacy
- Self-management of chronic conditions
- Systems that monitor and analyze appropriate use of health care resources
- Health Information Exchange (HIE), including Florida Health Information Exchange's Event Notification System
- Telemedicine and telehealth
- Provider and member incentives

Our comprehensive approach of collaborating with providers and community resources to better coordinate and manage care, supported by sophisticated data analytics, an integrated disease management (DM) and case management program, focused initiatives for high utilizers, and targeted outreach, continues to demonstrate impressive results that improve outcomes while containing costs:

- Our PPA rate is the second lowest in the state. As detailed in Figure 1-1 in Attachment MMA SRC# 1-1: PPE Results, our risk adjusted PPA rate per 1,000 enrollee months is 1.3, significantly less than the statewide average of 2.14. (Spring 2017 Report).

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Our DM programs reduce PPAs and PPRs. When we analyzed our DM programs in 2016, we found a 20 percent decrease in inpatient costs with a corresponding three percent increase in physician costs, indicating members in DM are more engaged with their PCPs and specialists, are managing their conditions, and are avoiding costly, unnecessary hospital care.
- Our value-based reimbursement strategies have a clear impact on reducing PPEs. Members assigned to providers in our value-based purchasing (VBP) programs have lower ED rates (605/1000 compared to 747/1000) and lower readmissions (12.01 percent compared to 14.6 percent) than members not assigned to providers in our VBP programs.
- As a result of focused behavioral health post-discharge management efforts, we achieved a 13.4 percent decrease in BH hospital readmissions in the last 12 months.

1. OPPORTUNITIES TO REDUCE PPEs IN REGION 1

1.1. Assessment of Region 1 PPEs and Opportunities for Improvement

We believe focusing on reducing PPVs and PPRs will have the greatest impact on reducing overall PPEs in Region 1. We reviewed the Spring 2017 Report and other available data to assess hospital utilization rates and the potential for improvement in Region 1. Because this region already has the lowest PPA rate in the state, we do not believe it offers the same opportunity for improvement (although reducing PPAs is always a priority at Clear Health).

Based on the aggregated data for all Managed Care Plans in the region, we identified many systemic and clinical factors that we believe contribute to PPVs and PPRs in Region 1:

- PPVs: Region 1 has the highest rate of PPVs in the state (32.98 in Region 1 compared to 24.08 statewide). PPVs result from lack of access, inadequate monitoring and management of chronic conditions, uncoordinated care, and poor follow-up after the initial discharge. The top three conditions leading to a PPV in Region 1 are upper respiratory infections; abdominal pain; and gastroenteritis, nausea, and vomiting. The top conditions driving PPVs at Clear Health are abdominal pain and chest pain. (Spring 2017 Report)
- PPRs: Region 1's PPR rate is slightly above the state average (88.69 in Region 1, compared to 87.11 statewide). PPRs are the result of care provided during an initial hospitalization or after discharge, reflect the continuation or recurrence of a medical condition addressed in the original hospitalization, or result from the continuation or recurrence of a BH or substance abuse condition following the original hospitalization. Inadequate follow-up care, or lack of necessary services after a hospital discharge, can also cause a PPR. The top three conditions driving PPRs in Region 1 are bipolar disorders, COPD, and pancreas disorders. Statewide, children are most commonly readmitted for bipolar disorders and major depression. For adults, schizophrenia is the most common condition resulting in a PPR. The top conditions driving PPRs at Clear Health, after HIV, are schizophrenia and COPD. (Spring 2017 Report)

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Based on our assessment, we will leverage the combined resources, effective programming, and best practices of all our legacy plans and engage or continue to use the following strategies to address PPVs and PPRs in Region 1:

- Increase access to and coordination between primary and BH care
- Expand alternatives to ED care, including telehealth and after-hours Nurse help line, and provide better access to primary care, which is a cornerstone to preventing avoidable events
- Improve identification and monitoring of members at higher risk for a PPV or PPR, especially members with asthma, COPD, and BH or substance use disorder conditions
- Enhance member engagement and follow-up post-discharge
- Provide DM, case management, and medication management programs to better manage chronic conditions, coordinate services, and improve care

1.2. Targeted Action Plans to Address Barriers and Improve Coordination of Services

Clear Health will take many steps to overcome barriers and improve coordination of care. These steps include both statewide programs and local approaches to reduce PPVs and PPRs. While many of the programs reflect activities already underway in one or more of our legacy plans, we will also implement new programs to improve our overall PPE approach (e.g., rare disease management).

- Twelve evidence-based DM programs to improve monitoring and management of chronic conditions, including our integrated HIV/AIDS DM and case management program
- High-touch case management programs to better coordinate care and overcome barriers between different systems of care
- Post Discharge Management (PDM) Program, Transitions of Care (TOC) Program, and inpatient outreach and referrals to provide adequate follow-up and coordinate necessary services after a hospital discharge
- CD4 Project and HAART Initiative
- Mobile clinic days and new telemedicine and telehealth initiatives to improve access to primary and BH services
- Complex case management rounds to develop individual action plans for super-utilizers and complex cases, including members with co-occurring BH conditions and/or multiple psychiatric admissions
- Rare Disease Management Program to improve monitoring and management of members with unique health care needs

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Initiatives to identify and address barriers to care for homeless members
- In-home physician visits when needed as part of transitional care case management for members at high risk for readmission

Our comprehensive approach includes many local activities specific to Region 1 that overcome barriers between different systems of care.

- We will provide Mobile Clinic Days to improve access to primary care and other needed services.
- We will partner with providers through our effective VBP programs to incentivize the right care, in the right place, at the right time with a region-appropriate goal based on provider capacity
- We will use ENS to improve case management and mitigate unnecessary ED utilizations

Many of the programs and initiatives included in our comprehensive approach are described in further detail below. Additional details about tailored programs for super-utilizers is described in Section 2.2. of this SRC response, and information about our member and provider incentives is described in Section 6 of this SRC response.

1.2.1. NCQA-Accredited DM Programs

We offer integrated case management and DM services to all our members to address the unique care coordination, access, and other challenges persons living with HIV/AIDS face. We also holistically address member co-morbidities with DM programs for asthma, diabetes, cancer, hypertension, major depressive disorder, schizophrenia, substance abuse, Alzheimer's/dementia, congestive heart failure, COPD, and coronary artery disease. Seven of our DM programs are accredited by the NCQA. They all focus on closing gaps in care that contribute to PPEs and are effective because Case Managers (Managed Care Coordinators) proactively engage members in goal-setting, increasing health literacy, and improving self-care. For members with asthma and diabetes, clinical pharmacists and/or pharmacy technicians will review members' medication history and provide counseling to improve medication adherence. We also promote smoking cessation, since smoking can cause or exacerbate COPD and other lung conditions driving PPVs, and refer members to tobacco cessation programs and our Quit Smoking and Using Tobacco Healthy Behaviors Program.

1.2.2. Case Management (Care Coordination)

Our continual data mining, claims review processes, and predictive modeling tools systematically identify members with an increased risk for ED visits, inpatient admissions, including first time admissions for BH conditions, and readmissions. These processes and tools also identify members with over-utilization of health care resources, such as multiple ED visits and inpatient admissions and under-utilization of preventive and wellness services such as annual PCP visits, EPSDT services, and routine prenatal visits. Members are assigned a Managed Care Coordinator to work with them, their families/caregivers, and providers as appropriate to identify the intervention or program that will best meet their needs. Interventions include providing member education on benefits and services available in their communities, partnering with providers to

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

make them aware of gaps in care, and providing ongoing engagement to assist enrollees with high-risk conditions access appropriate preventive care. Other key interventions include removing barriers in and across systems of care, such as scheduling follow-up appointments, arranging transportation, and connecting members to providers who will accommodate any special needs.

The Clear Health Managed Care Coordinators are specifically recruited and hired based on their experience working with persons living with HIV/AIDS and/or are persons with knowledge of the disease. Many of our Managed Care Coordinators have dedicated their careers to improving the health of persons living with HIV/AIDS and are very familiar with the local resources and specialty providers who most frequently serve our members.

1.2.3. Inpatient Outreach and Referrals

We outreach to all members when they are admitted to the hospital, improving the likelihood of making contact with the member, identifying and supporting their needs, coordinating the necessary care and services, and removing administrative barriers. We start discharge planning upon admission, working with hospital staff and providers to engage members in their discharge planning. Our Managed Care Coordinators collaborate with the assigned concurrent nurse reviewer to make sure the member remains on their anti-retroviral therapy (ART) outpatient regimen while in the hospital setting.

We take this opportunity to partner with the facility to address medication adherence, post admission provider appointments, identify and address barriers that may result in a PPE, and support member self-management and risk in order to mitigate likelihood of readmission. We further support inpatient members with post-discharge outreach, following the recognized Coleman model protocols, as described below in our Post Discharge Management (PDM) and Transition of Care (TOC) Programs. When appropriate based on risk for readmission, the TOC Managed Care Coordinator will make a face-to-face visit to assist and address coordination of care issues as needed. Additionally, members are referred to our integrated DM and case management program.

During utilization review activities for facility stays, we excel at addressing post-discharge needs early by focusing on home health and follow-up appointments. If discharge to the home is not an option, we carefully review alternative, lower levels of care and facilitate a transfer. Our Inpatient Coordinators contact members and/or facility discharge planners while they are still in the facility to make sure we have the accurate contact information for case management activities post-discharge.

1.2.4. Post Discharge Management (PDM) Program

While a member is still inpatient, Concurrent Review Nurses and Inpatient Coordinators work with the member and hospital/facility discharge planners to coordinate services to be provided to assure a safe discharge. Post-discharge Customer Care Representatives call members within 48 hours of the discharge to ensure that services are in place, schedule follow-up PCP/specialist appointments, and arrange for necessary support services such as transportation. Within 3-7 days post-discharge, Managed Care Coordinators follow-up with the member to assure appointments were attended or rescheduled, discuss barriers to care, update the plan of care, conduct additional assessments and provide further interventions and follow up. Additional contacts are

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

made as needed with at least two more follow ups within 30 days to reduce risk of readmission. This program is especially beneficial for members with inpatient admissions for acute, mental health, and substance use disorder conditions, including admissions to psychiatric residential treatment facilities. BH Managed Care Coordinators include licensed mental health and/or substance use disorder clinicians who are responsible for coordinating transition planning for members with short- and long-term behavioral health stays. These employees collaborate directly with the hospital discharge nurse and PCP, specialist, and/or home health provider to engage and assess the member prior to discharge. The clinician evaluates the member's strengths, needs, and preferences; identifies natural supports; and determines the services and resources needed to successfully transition and support the member safely in the environment he or she chooses. As a result of focused behavioral health post-discharge management efforts, we achieved a 13.4 percent decrease in hospital readmissions across all participating regions in the last 12 months.

1.2.5. Field-Based Transitions of Care (TOC) Program

We recently expanded our TOC program due to positive results in reducing PPRs in Miami-Dade and Broward counties. Our TOC program is targeted toward members who are at high risk for readmission based on predictive modeling and evidence-based criteria. The program has the dual goals of improving member outcomes and controlling costs by reducing PPRs. The program is based on the Care Transitions Intervention® developed by Eric Coleman, MD, MPH from the University of Colorado. This intervention uses best practices to reduce PPRs by engaging members, their families, and caregivers and better meeting health care needs by providing coordination and continuity of care in the transition home.

Our Managed Care Coordinators, who are licensed and cross trained in physical and BH, conduct home visits to provide a comprehensive risk assessment, examine the home environment, and support the development of a person-centered plan of care with the member and the member's family and other caregivers using a multi-disciplinary approach. The plan of care addresses the whole person, with an emphasis on self-management, medication reconciliation and management, and closure of gaps in care. It includes an emphasis on identification of risk factors that may impede the member's recovery or achievement of their goals.

The Managed Care Coordinator encourages the member's Primary Care Provider (PCP) and other providers to provide feedback into the member's plan of care and helps coordinate services across different systems of care. For example, he or she will work closely with the member's providers and community resources to make sure a seven-day follow-up visit is scheduled; the member is connected to necessary transportation, DME, home health, and therapy services; and that we identify and refer the member to effective community resources and supports.

The Managed Care Coordinator continues to work with the member and his or her providers as needed over a 30-day period, providing additional support and follow-up through telephonic and in-person outreach and visits. Even if the Managed Care Coordinator does not believe the member is at high risk for a PPR, he or she will still provide follow up at seven-, 14-, and 30-day intervals post-discharge to make sure the member's condition has not deteriorated and to refer the member to case management and/or DM as appropriate.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

We target members with certain discharge diagnoses, including congestive heart failure, COPD, and other conditions associated with a high risk of PPRs. We also target members with hospital lengths of stay exceeding three days and members with at least one prior hospitalization in the past 12 months. The following sources help us identify members who would benefit from the TOC program:

- Hospital discharge reports
- Claims data
- Concurrent Review Nurse referrals
- Medical Director referrals
- Propriety risk algorithm

1.2.6. HAART Initiative

We use special reports run by our pharmacy analytics team to provide antiretroviral therapy (ART) compliance data to our members' PCPs. The reports identify all the medications the member is taking, as well as prescribing providers. Our Managed Care Coordinators use these reports, as well as medication history in our Case Management System, to assist when prescriptions are rejected at the point of service or require prior authorization and to make sure there are no lapses in medication adherence for our members. When members are in the hospital, UM Nurses provide Managed Care Coordinators critical information regarding any changes to the member's ART regimen to prevent lapses in medication adherence after discharge.

1.2.7. CD4 Project.

Our CD4 project addresses members with low CD4 counts (<200 cells/mL) who typically are not fully engaged in their care. A CD4 count is a blood test to determine the strength of the immune system as measured by the presence of a type of white blood cell. A normal range for CD4 cells is between 600 and 1,500, while a CD4 count of <200 cells/mL indicates a severely compromised immune system and a clinical diagnosis of AIDS. In our CD4 project, Managed Care Coordinators must refer members to community-based programs such as Ryan White agencies. We closely track labs, hospitalizations, and referrals to BH Managed Care Coordinators to identify opportunities for improvement and non-compliance patterns. Our Medical Director leads interdisciplinary rounds to discuss each case and develop specific action plans. In addition, a physician with expertise in treating HIV/AIDS populations (and our former Medical Director) leads a discussion and lends his expertise in the cases of our most difficult members to engage. Since it began in 2014, our CD4 Project has stabilized or improved outcomes for 41 percent of the members not lost to follow-up (due to disenrollment, death, or inability to contact). Currently, we track approximately 250 members through the CD4 project.

**** Spotlight On: CD4 Project success**

Emilia's Ryan White case manager reached out to connect her with one of our Managed Care Coordinators when she was released from prison. Emilia's records showed diagnoses of neuropathy, enlarged aorta, bipolar disorder, and depression, and she already had an infectious disease specialist and a mental health provider, but needed a PCP and a cardiologist.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

With a low CD4 count, our Medical Director enrolled Emilia in our CD4 Project for members with an AIDS diagnosis and a severely compromised immune system. Celeste, a Managed Care Coordinator, met with Emilia and conducted a comprehensive assessment and depression screening and helped Emilia develop a plan of care that addressed her medical and mental health needs, and shared the plan with her new PCP. She also educated Emilia on additional behavioral health benefits available through her new Clear Health plan. Emilia actively participated in the Project and complied with the medication, lab test, appointments, and other requirements, and within four months her viral load was undetectable. She expressed her thanks to Celeste for her support, help navigating the health care system, and connections to her new PCP and heart specialist to address her other health issues. **

1.2.8. Complex Case Management Rounds

We hold a variety of interdisciplinary care team rounds that dedicate resources to developing specific interventions for our super-utilizers, medically complex cases, recent admissions and discharges, BH admissions, and members with coordination of care concerns. These rounds occur bi-weekly or monthly, depending on the area of focus. We solicit feedback and expertise in these meetings from a variety of disciplines, including Medical Directors, Concurrent Review Nurses, Managed Care Coordinators, Psychiatrists, Outreach Specialists, Peer Educators, and BH Managed Care Coordinators. They discuss member needs, resolve challenging coordination of care issues, and break down barriers across systems of care. For example, members identified as high-risk for PPEs due to BH conditions or multiple psychiatric admissions in the month prior would be covered in our monthly Medical/BH Interdisciplinary Care Team Rounds. In the future, our Medically Complex Interdisciplinary Care Team Rounds will include an invitation to the member and their PCP.

1.2.9. Mobile Unit

Our Mobile Unit address gaps in care and improve access. In Region 1, we will host asthma-focused clinic days to provide education and preventive services to help our members manage their condition and avoid unnecessary ED visits. The Mobile Clinic Days program began in October 2014. Since its inception, the number of clinic days held statewide and the number of members who attended has increased by 50 percent between 2015 and 2016. Similar attendance is expected in 2017, and we anticipate a 20 percent increase in the number of clinic days in the first year of the new Contract based on this experience. In 2017, we have held 145 clinic days statewide and 1,248 members have attended.

1.2.10. Telemedicine and Telehealth

We use telemedicine to expand access to specialty care and BH services for members in rural areas, as well as to provide an effective alternative to the ED for care that can be provided in another setting. We are working with GlobalMed to provide pediatric and adult primary care, NICU, cardiology, pulmonology, endocrinology, and internal medicine through a secure internet connection on a computer, tablet, or smartphone.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

If approved by the Agency, we will also offer our LiveHealth Online (LHO) solution, which will provide urgent care telemedicine through two-way audio/video technology to Florida licensed, board-certified physicians for consultations on clinically appropriate conditions (such as upper respiratory infections or the flu as well as BH conditions). Members can access LHO through a secure internet connection or an application on their smartphones.

We are also conducting a pilot study with telemonitoring for members with COPD, CHF, diabetes, and hypertension. This program offers remote monitoring of vital signs and symptoms related to the member's condition, which is tracked by a central station nurse who is in communication with the member and physician. Telemonitoring enables the identification of minor fluctuations in health that, left untreated, lead to acute exacerbations and unnecessary hospital and ED visits. If the pilot is successful, we will expand this program to all regions including Region 1.

1.2.11. Rare Disease Management

This program, called Accordant, is an adjunctive, telephonic rare disease program designed to help members find the additional answers and support they need to manage their unique health care needs and maximize their overall health status. It targets members with specific conditions such as sickle cell disease, epilepsy, rheumatoid arthritis, multiple sclerosis, and cystic fibrosis, among others. A Nurse Managed Care Coordinator who specializes in rare conditions provides a health risk assessment to identify risk factors, gaps in care, knowledge deficits, and self-management skills to develop a personalized plan of care. The Nurse Managed Care Coordinator provides ongoing support and education to prevent complications and optimize medication management, co-morbidity support, and psychosocial support.

1.2.12. Addressing Barriers to Care Caused by Homelessness

We have recently secured access to the Health Management Information System (HMIS), a local information technology system that collects client-level data and data on the provision of housing and services to homeless individuals and families and persons at risk of homelessness. This system enables us to use the "client tracker" — a valuable application that helps us locate members experiencing homelessness. This application identifies shelters and other organizations that are currently providing services or that recently provided services to a member. We will use service need information collected through the HMIS as another source of information to help us identify organizations and services currently being provided to our members who are or have been homeless, so that we can identify and fill service gaps and make sure that member needs are being met.

2. OUR TAILORED CASE MANAGEMENT INITIATIVES AND PROTOCOLS REDUCE PPES FOR SUPER-UTILIZERS

When we identify a super-utilizer or potential super-utilizer, our general coordination of care approach involves motivational interviewing and identification of social determinants of health and barriers to access care, followed by specific interventions to address those barriers according to an individualized plan of care. We refer members to appropriate providers, arrange transportation, schedule appointments, and address care and service needs that may be preventing a member from seeking care.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

As described below, we also have very targeted programs for super-utilizers, which include their own coordination of care protocols.

2.1. Identification of Super-Utilizers

Our Chronic Illness Intensity Index (CI3) is the primary component of our proprietary predictive modeling system, which synthesizes data from a variety of sources to indicate the member's overall illness burden and develop an individualized member risk profile. This includes diagnosis, demographics, hospitalizations, readmissions, ED visits, over- and under-utilization of services, and expenditures. The CI3 algorithm results in each member being stratified in low, moderate/rising, and high/urgent risk levels.

We use CI3 to identify super utilizers, based on which members are stratified in our high/urgent risk category. These members have complex medical histories including multiple chronic conditions in poor control, co-occurring BH and medical conditions, or intensive health care needs. They access care at the highest levels or have patterns of high utilization of the ED and/or a history of multiple admissions.

Six other predictive modeling tools also generate risk scores to stratify the member's risk level, prioritize outreach and assessment, and determine the level or type of intervention needed. Many of these tools are particularly useful in identifying super-utilizers and emerging super-utilizers to prioritize member outreach, assessment, and engagement:

- Likelihood of Inpatient Admission (LIPA): Predicts the likelihood of an inpatient admission within 60 days and helps us identify members at risk of a PPA
- ER TRIAGE: Predicts likelihood of ED utilization and helps us identify members at risk of a PPV
- Readmission Risk: Recalculates based on the inpatient daily census report to determine the likelihood of readmission and helps us identify members at risk of a PPR
- Behavioral Health First Time Admission: Identifies indicators of BH issues that may result in a first-time admission and helps us identify members at risk of a PPA for a mental health condition or substance abuse disorder
- Pharmacy: Identifies indicators of over-utilization and possible substance use disorder
- STORK: Assesses for a poor pregnancy outcome or NICU admission based on results of our OB High Risk Screener

In addition to predictive modeling tools, our targeted programs for super-utilizers, such as our CARES Program, may have other unique algorithms to identify members for outreach and enrollment in the specific program.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

2.2. Interventions Designed to Avoid PPEs and Target Super-Utilizers

We recognize the pressure high rates of ED utilization, avoidable hospitalizations, readmissions, and other PPEs are having on Florida's Medicaid program. In addition to increasing costs, they limit access by consuming limited resources, interfere with the development of medical home relationships, and negatively impact the quality of care our members receive. We use data mining with our predictive modeling tools to flag members with a high likelihood of a PPE and reach out to them and their providers to identify case management and service coordination needs and eliminate barriers to care.

In addition to the comprehensive programs we already highlighted, including our PDM and TOC programs, we also have a number of programs specifically designed to address super-utilizers. Many of these programs focus on BH conditions because we have identified members with complex and co-occurring BH and substance use disorder conditions as driving many of our PPEs. A description of the program, as well as any applicable algorithm used to identify super-utilizers is included.

- **ED Diversion Program.** To address the root causes of unnecessary and frequent ED use, our ED Case Management Program assists members and their families or caregivers manage the member's symptoms in alternative settings. We exchange information about ED "frequent flyers" with all our network hospitals and educate members on proper utilization of services, discuss the importance of primary and preventive care, provide information on nearby resources such as urgent care, and determine whether the member should be referred to case management.

Target Population: Members with three or more admissions in the prior six months, or at least 45 days of inpatient BH services in the prior six months (excluding state institutions)

- **Clear Health CARES Program.** Our field-based Case Management program helps us engage hard to reach members and address the behavioral and social barriers that negatively affect their health outcomes. Compared to a more traditional case management approach, this program locates hard to find members, addresses non-clinical needs and barriers through frequent, face-to-face contact (i.e., daily, weekly), and uses paraprofessionals to focus on social determinants of health by connecting members to community resources and social services such as housing, child care, and educational services. Managed Care Coordinators coordinate PCPs and BH providers and other specialists. They also schedule provider visits, arrange transportation, and accompany the member to the appointment. If the member is admitted to a hospital, the Managed

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Care Coordinator provides onsite inpatient discharge coordination to improve the transition home and avoid a PPR.

Target Population: CI3 Group 3, psychiatric or substance abuse condition, age 18 or older, and not in case management

- Long-Acting Anti-Psychotic Injectables (LAI) Program. Schizophrenia is the top condition contributing to PPRs statewide. Our Behavioral Health LAI program targets members who are non-adherent to prescribed long acting injectable antipsychotic medications and aims to improve medication compliance, decrease the risk of institutionalization, and reduce PPRs.

Once a member is enrolled in the LAI program, he or she is assigned a BH Managed Care Coordinator for outreach, engagement, and ongoing case management. The BH Managed Care Coordinator also works with the member and the prescribing provider to ensure the member receives the next scheduled LAI dose. When appropriate, the BH Managed Care Coordinator facilitates in-home administration of the LAI, including accompanying the home health care agency to the member's home to improve success of the injection, working with the local pharmacy to ensure home delivery, and working with a Provider Network Manager to locate a nearby home health care agency to provide the injection.

We recently initiated this program to help the Agency meet its goals of reducing PPEs and keeping members in the community for a greater length of time. Although it is too early to evaluate program outcomes, we plan to measure the following outcomes at six-month intervals:

- Reduction in PPRs
- Proportion of members LAI-adherent for at least three consecutive injections
- Proportion of members becoming LAI-adherent due to in-home LAI administration
- Reduction in overall medical costs

Target Population: Members currently prescribed an LAI form of one of the target medications who have missed a scheduled injection, members who received an LAI during an inpatient behavioral health stay and require their next LAI in the outpatient setting, and members with a prescription for an oral administration form of one of the target medications who missed a recent refill and may benefit from switching to an LAI. Haldol, Abilify, Invega, Prolixin, Risperdal, and Invega are the target medications.

- Controlled Substance Utilization Management (CSUM) Program. Clear Health will implement a new program that uses several retrospective drug utilization reviews designed specifically to decrease controlled substance over-utilization, including opioids. Our Medicare Opioid Overutilization Management program, which includes similar components, received an Excellence Award for Care Management Strategies from the Pharmacy Benefit Management Institute.

Target Population: Members receiving multiple controlled substance medications, receiving opioids from multiple providers and filled at multiple pharmacies, or combinations of controlled substances that may indicate risk.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Behavioral Health Substance Use Disorder Program. This Case Management program is based on the principles of recovery, harm reduction, and motivational interviewing. Behavioral Health Managed Care Coordinators connect the member to a network of treatment and recovery services, including detoxification services, rehabilitation services, intensive outpatient services, partial hospitalization services, outpatient therapy, pain management, and peer services. Managed Care Coordinators also coordinate care across different providers, including medical providers. They refer members to additional supports such as peer services and 12-Step programs, as well as other resources that can address the occupational, housing, and relationship consequences of their disorder. Initially, contact with the member occurs at least weekly. Some members may be referred to our Pharmacy Restriction Program. We have evidence-based protocols providers can use when managing chronic pain in members with substance use disorders.

Target Population: C13 identified substance use disorder as primary or secondary diagnosis, prescription drug outlier behavior (i.e., enrolled in our Pharmacy Restriction Program), or referred by providers or internal or external sources (e.g., Case Management, Behavioral Health Crisis Line)

- Opioid Workgroup. Our ultimate parent organization, Anthem, Inc., has taken a leadership role in addressing the national opioid epidemic. Pharmacy is at the core of this commitment, building an integrated strategy with our medical, BH, provider, and fraud, waste, and abuse (FWA) partners. Anthem's multi-faceted strategy established a goal to reduce the number of opioids dispensed to members by 30 percent from 2012 to 2019. By May 2017, they had cut opioid prescriptions by 31 percent. Because it met its goal to reduce the number of opioid prescriptions early, Anthem updated its goal to achieve a 35 percent reduction in opioids dispensed by 2019.

At Clear Health, we recently initiated an interdisciplinary Opioid Workgroup following the Governor's recent declaration that Florida is in a state of emergency due to the opioid epidemic. We are in the process of expanding member access to medication-assisted treatment (MAT) for opioid abuse. We are working toward more accurately identifying those at risk for opioid abuse and non-adherence to MAT for more targeted case management and will be expanding our substance use disorder (SUD) program in the future. We have pulled representatives from Utilization Management, Pharmacy, Case Management, Quality Improvement (QI), Data and Analytics, and other areas to develop and execute a global strategy focused on:

- Pain management
- Addiction prevention
- Overdose prevention
- Addiction treatment

As responsible stewards of tax payer dollars, we anticipate implementation of new initiatives to not only improve member outcomes but reduce costs related to PPEs. In implementing these initiatives, we will borrow the best practices of our affiliated health plans, who in the past year alone have demonstrated large decreases in opioid use, including a 29 percent reduction in Virginia and a 22 percent reduction in Maryland.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Target Population: Members with patterns of either overutilization of opiates or other evidence of possible abuse

- Pharmacy Restriction Program. Clear Health will implement a Pharmacy Restriction Program to identify members who demonstrate patterns of FWA that often result in unnecessary ED visits and doctor shopping. Once identified, we review the member's case to make sure placement in the lock-in program is appropriate. If appropriate, we assign the member to a single pharmacy for filling all prescriptions for the following 12 months. We also notify the member, the member's PCP, and the pharmacy we restricted the member to, and encourage the member to enroll in our Substance Use Disorder Program, if indicated. Certain members, such as members with cancer and dual eligibles, are never enrolled.

By limiting members identified as potentially misusing or fraudulently obtaining controlled substances, we aim to reduce misuse of controlled substances and related PPEs that result from doctor shopping. In the first half of 2017, the program resulted in a 17 percent reduction in prescriptions for controlled substances for members enrolled in the lock-in program.

Target Population: Members who 1) obtained three or more controlled substance prescriptions from three or more pharmacies, 2) used more than 10 different controlled substance prescribers in 90 days, 3) obtained two or more controlled substance prescriptions written by two different prescribers from two or more different pharmacies within 180 days, if they also have a documented diagnosis of narcotic poisoning or drug abuse within the last year, or 4) violated a pain management agreement with their prescriber. We also take referrals from the Agency, law enforcement agencies, prescribers, and pharmacies.

3. DATA EXCHANGE IMPROVES COORDINATION OF SERVICES

Through our secure Provider portal, all Providers can access our provider-facing Case Management System. The provider-facing Case Management System supports our strategy of using health information exchange to promote the right care, at the right time, and in the right place. It offers access to a single view that displays member-specific data in an easy-to-navigate dashboard, including HEDIS® care alerts, authorizations, prescriptions, and claims organized by type such as inpatient, ED, and office visits. It is also our primary method for sharing members' case management information, including health risk assessments and the plan of care, with providers.

In addition to member data available to providers in our provider-facing Case Management System, our Provider Relations team uses a suite of reports to discuss with providers individually which specific members who may need attention. For example, we use a pharmacy profile report that identifies for provider outliers the complete prescription fill history of each of the provider's members and calls attention to potential drug to drug conflicts.

For providers participating in our Value Based Purchasing (VBP) programs, which are described in detail below, we offer additional tools and data exchanges to improve care coordination for members, including high-risk members. This information sharing includes data about ED utilization, inpatient admissions, gaps in care, readmission rates, and cost of their member population.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- APM Provider Scorecards. Clear Health provides periodic scorecards with performance data, including cost and utilization data, for providers participating in our VBP programs.
- Provider Care Management Solution (PCMS). For providers participating in our VBP programs, additional PCMS access allows providers to see actionable, member-specific information to help identify members who need outreach and engagement, as well as care gaps. PCMS provides real-time information; including alerts, icons, hover overs, drop downs, and drill-throughs to support population health management. PCMS has the ability to filter patient populations by key conditions, risk factors, gaps in care, and visit history. PCMS is updated daily and provides real-time availability for providers on demand.

4. CLEAR HEALTH LEVERAGES FLORIDA'S EVENT NOTIFICATION SYSTEM

In 2017, we enrolled in the Florida Health Information Exchange's Event Notification System (ENS). ENS provides real-time notification when our members have an admission, discharge, or transfer (ADT) from a participating hospital, including ED discharges. We receive ENS data twice a day. These notifications are built into our case management workflow and provide important notifications to our Managed Care Coordinators about when to intervene in a member's care and start preparing for discharge or other outreach. For example, we use ENS notifications to identify members upon admission, so we can successfully contact the member, especially hard to reach members, while they are at the facility. We also use ENS notifications to identify members being discharged from the hospital who may have questions about their discharge plans or medications or who need assistance setting up appointments. When members are being transferred to another facility, this early notification helps us expedite necessary authorizations for needed services.

5. EVALUATING IMPACT OF OUR SUPER UTILIZER INTERVENTIONS

We have many interventions for super-utilizers, as described above. Example measures we use to evaluate the impact of these interventions include:

- Inpatient admissions
- Readmissions
- ED visits
- Medical and pharmacy utilization metrics
- Follow-up after hospitalization for mental illness – seven days (HEDIS)
- Initiation and engagement of alcohol and other drug dependence treatment – initiation total (HEDIS)
- Adherence to antipsychotic medications for individuals with schizophrenia (HEDIS)
- Diabetes monitoring for people with diabetes and schizophrenia
- Follow-up after ED visit for alcohol and other drugs of abuse or dependence

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

- Follow-up after ED visit for mental illness
- Antidepressant medication management

6. ENCOURAGING APPROPRIATE CARE THROUGH INCENTIVES

6.1. Provider Incentives

MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

7. PROPOSED BENCHMARKS FOR REDUCING REGION 1 PPES

Clear Health's PPA rate is already the second lowest in the state (Spring 2017 Report). In Region 1, we will drive further reductions in PPEs by setting ambitious goals related to our experience in existing regions instead of using state averages, which we already exceed.

7.1. Reducing PPAs and PPRs

We propose to attain a ranking in the top 20 percent of health plans for both PPAs and PPRs by the end of the third year of the new contract, and sustain this level for subsequent years.

7.2. Reducing PPVs

We propose to attain a ranking in the top 20 percent of health plans for PPVs by the end of the third year of the new contract, and sustain this level for subsequent years.

7.3. Reducing the Use of Unnecessary Ancillary Services

Health plans are not currently ranked on this metric. We will collaborate with the Agency to determine a feasible measurement approach, as well as benchmarks for all health plans to use.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The extent to which the respondent identified specific localized opportunities for improvement in achieving a reduction in potentially preventable events and subsequent steps the respondent will implement to overcome any barriers across and within different systems of care (i.e., medical, behavioral health).
2. The extent to which the respondent describes specific care coordination protocols, including a description of the risk stratification algorithm used to identify super-utilizers.
3. The extent to which the respondent describes strategies to improve data exchanges and communications between practitioners to improve care coordination efforts for high-risk enrollees, using specific local examples.
4. The extent to which the respondent plans to include the use of the Agency's Event Notification System as a means to extract relevant data from hospitals.
5. The adequacy of the respondent's description of specific indicators or measures that will be used to evaluate the effectiveness of evidenced-based programs and interventions that target super-utilizers.
6. The extent to which the respondent describes financial and non-financial provider and enrollee incentives that are aimed at diverting care to more appropriate and cost-effective settings (e.g., incentives for primary care providers that agree to extended or after-hours clinic care for their Medicaid patients).
7. The extent to which the respondent proposed local performance benchmarks for:
 - (a) Reducing potentially preventable hospital admissions and readmissions;
 - (b) Reducing use of the emergency department for non-emergent/urgent visits; and
 - (c) Reducing the use of unnecessary ancillary services during hospitalization and outpatient visits.

Score: This section is worth a maximum of 45 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Figure 1-1. Clear Health Excels at Reducing PPAs

This page is intentionally left blank

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 2 – Birth Outcomes (Statewide):

The respondent shall describe its organizational commitment to quality improvement as it relates to pregnancy and birth outcomes. More specifically, the respondent shall describe its overall approach, and specific strategies, that will be used to address prematurity prevention, improve perinatal outcomes, and reduce unintended pregnancies, including:

- A description of performance benchmarks for reducing non-medically indicated cesarean sections and early elective deliveries;
- A description of incentives that will be implemented for providers and enrollees aimed at improving birth outcomes; and
- A description of strategies to decrease unintended pregnancies (e.g., increase in the use of long acting reversible contraceptives).

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Simply brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). The unified Simply draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations.

Clear Health is committed to working with the State to meet its goal of improving birth outcomes. In addition to our Case Management program, we offer our comprehensive Maternal Child Health Program, Taking Care of Baby and Me®, to our enrollees (members) who are pregnant. We recognize that our members experience normal pregnancies, and many also have complex conditions and benefit from high-risk case management to obtain the best outcomes form mom and baby.

Taking Care of Baby and Me® addresses maternal and newborn health risks by providing members with access to the information, care, and support needed to stay healthy before, during, and after pregnancy. We encourage pregnant women to take action to optimize the outcome of their pregnancies, prepare for the delivery and homecoming of their infants, and participate in their infants' care should a Neonatal Intensive Care Unit (NICU) stay be required.

Taking Care of Baby and Me® makes sure that our members have access to appropriate obstetrical, medical and behavioral health (BH) care services. We engage members in care management as advocates for their own health care and by assisting with the essential elements of personal responsibility and health care that lead to a healthy pregnancy and newborn. We strive to identify pregnant women as early as possible, conduct a thorough clinical and psycho-social assessment to assess each woman's risk, then develop an individualized care management plan based on the member's risk. Our approach for improving birth outcomes focuses on:

- Promoting preconception care
- Promoting prenatal care

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Increasing the number of prenatal care visits
- Increasing compliance with an anti-retroviral treatment (ART) regimen through pregnancy to delivery to decrease chance of vertical transmission or other adverse outcomes
- Reducing infant mortality
- Reducing premature births
- Reducing incidence of low birth weight
- Reducing NICU admissions and lengths of stay
- Improving identification of perinatal depression and access to treatment
- Promoting education and access to treatment for smoking cessation and substance use disorders
- Improving access to and completion of postpartum care visits
- Educating on breastfeeding and the risk of transmission of HIV and alternative baby nutrition options
- Encouraging compliance with administration of ART prophylaxis to the newborn and all appropriate follow-up screening for HIV

We use our Simply, Better Health, and Amerigroup collective Florida experience to best meet our members' needs. For example, through the breadth and depth of our local experience, we quickly recognized the serious risk Zika poses for our members and the communities we serve. In response, we developed various tools to make sure we provide timely and accurate information to our members and providers. These tools include:

- Zika Virus Associate Resources Guide
- Member and Provider Resources Guide
- Medical Policy for Zika diagnostic testing (which parallels the Centers for Disease Control and Prevention and the American Congress of Obstetricians and Gynecologists guidelines)
- Coverage for commercially-available insect repellent when prescribed by a provider.

Additionally, we are part of a national organization that represents nearly 10 percent of the nation's births. We are stronger with the support of our national organization, Anthem, Inc. (Anthem), and the experience of our affiliate plans in 18 other states and the District of Columbia. We draw on our experience in Florida to determine how best to leverage our national and affiliate plan resources for the advantage of our members.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

For example, we are using the expertise of Dr. Susan Brown to support our local efforts to collaborate with Florida on collecting Neonatal Abstinence Syndrome (NAS) rates and developing initiatives to combat the impact of opioid use and reduce the rate of babies born with NAS. Dr. Brown is a board-certified Anthem Medical Director specializing in Neonatal-Perinatal medicine and serves as Anthem's Enterprise Medical Director and Neonatal Lead for NAS. She has sponsored a NAS study, pairing mothers with their babies to identify maternal risk factors, medications, and outcomes for infants identified with NAS.

Clear Health is advantaged by its combination of a strong, local presence in Florida and access to recognized experts and resources through its national organization. This combination exemplifies our organizational commitment to quality improvement for pregnancy and birth outcomes. Our members have access to the most innovative practices that best support healthy moms, babies, and families in Florida.

1. OPPORTUNITIES FOR IMPROVEMENT IN ACHIEVING BENCHMARKS

1.1. Establishing Performance Benchmarks

Despite considerable evidence of increased risk for adverse health outcomes for women and newborns, rates of unnecessary medical interventions in labor and delivery remain high. This includes low-risk cesarean (C-section) deliveries, elective inductions, and scheduled deliveries before 39 weeks gestation. In our population of members with HIV/AIDS, C-section may be the preferred method of delivery to prevent vertical transmission of the virus. Scheduled C-section delivery is recommended for prevention of perinatal transmission of HIV in women with HIV RNA levels >1,000 copies/mL near delivery and for women with unknown HIV RNA levels. Our C-section rate is 67 percent; however, no vertical transmissions have been reported since our inception.

Clear Health's comprehensive Maternal Child Health Program, Taking Care of Baby and Me® program, with its focus on improving birth outcomes, is working. In 2016, our rate for early elective deliveries was lower than the national average at 3.3 percent. Looking forward, we will utilize the Leapfrog Group target for early elective deliveries (5 percent) and for C-sections for all hospitals (23.9 percent), where applicable, based on national guidelines. We propose to attain these benchmarks in current and new regions by the end of the third year of implementation and sustain this level subsequently.

1.2. Programming and Tools to Achieve Targets and Overcome Barriers

Taking Care of Baby and Me® addresses maternal and newborn health risks by assuring members of access to the information, care, and support needed to stay healthy before, during, and after pregnancy. The program sees that our members have access to appropriate obstetrical, medical and BH care services. We engage members in care management as advocates for their own health care and by assisting with the essential elements of personal responsibility and health care that lead to a healthy pregnancy and newborn.

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

All pregnant members with HIV/AIDS are stratified as high risk for OB case management. Frequency of contact is at least monthly, and focuses on adherence to ART in addition to normal high-risk OB protocols. We advocate for healthy deliveries through member engagement, provider and stakeholder collaborations, innovative payment models, and performance-based incentives:

- My Advocate — In an effort to effectively screen for risk factors and engage our members during and after pregnancy, Clear Health employs My Advocate, a multi-channel communication program that provides health education by phone, text message, smartphone app, or online to pregnant members in our Medicaid markets. In addition to promoting healthy habits, My Advocate:

- Enables members to complete our High-Risk OB Screener by phone or online to determine level of risk and need for case management or care coordination services

- Alerts Case Managers (Managed Care Coordinators) to reach out to members when they experience a change in risk level

- Allows members to ask questions and get a prompt callback from a Managed Care Coordinator

- Maternal Postpartum Outreach Program (MPOP) — MPOP is an all-inclusive (member, provider, and data collection) call outreach program focused on improving access to care and assuring the timeliness of a mother's visits with a practitioner after delivery of her baby. Outreach is completed by providing experienced, compassionate Outreach Care Specialists and a state-of-the-art web-based system to help members with postpartum visits, refer at-risk members to care providers and community resources, and educate members about recommended newborn checkups and Early and Periodic Screening, Diagnostic and Treatment (EPSDT). Program components include:

- MPOP System — A state-of-the-art, web-based system that identifies moms who have just delivered a baby and may need assistance with scheduling their postpartum visit. It captures all components of the outreach process, including appointments, mailings, and outreach attempts.

- Outreach Care Specialists — Experienced Outreach Care Specialists attempt to contact new mothers assigned in the MPOP system to help with appointment scheduling, reminders (five days prior to the postpartum appointment), and appointment coordination and verification (contact OB provider to schedule an appointment for moms and verify that they kept their postpartum appointments).

- Postpartum Packet — New mothers receive a postpartum packet that includes a flyer congratulating them on their newborns, a booklet on caring for the infant, a brochure on baby blues vs. postpartum depression, and "Making a Family Life Plan."

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- **Programs Integrating Comorbid Conditions** — To identify existing health risks for pregnant women and prevent future health problems, we developed specific programs to integrate comorbid conditions such as diabetes, depression, hypertension and heart disease, and SUD, including tobacco. We include a registered dietician/certified diabetes education in the members' multi-disciplinary care team who assist (co-manage) these members. Screening of pregnant members for BH issues is conducted as early as possible. The early screening has helped to successfully identify perinatal depression, substance use, and intimate partner violence, and helped members connect to resources and supports.

- **Post-Traumatic Stress Disorder Program (PTSD)** — We offer targeted postpartum help for our families with babies in the NICU through our PTSD program. We know that children cared for by mothers with (PTSD) and depression are at significantly higher risk for psychological aggression, child abuse, and neglect. The stress of having a critically ill infant in a NICU can result in PTSD symptoms. Incorporating this screening into our care for mothers, infants and families, and referring parents to support programs may mitigate the impact of PTSD, decrease NICU length of stay, and improve the health of our member and her child.

**** RESULTS & SUCCESSES:** Innovative PTSD program helps parents of NICU babies
We are pleased to offer our PTSD program, which was recognized as an innovative and promising best practice by the Institute for Medicaid Innovation and the Medicaid Health Plans of America. With PTSD symptoms reported in 20-50 percent of NICU parents, our Indiana affiliate incorporated a PTSD screening tool into its care for mothers and infants' families and referred parents with positive screening to support programs.

- 11.5 percent of families of NICU patients screened positive for PTSD symptoms
- 77 percent accepted referrals for treatment
- At a one month follow-up, 80 percent remained engaged in the health care system ******

- **OB Practice Consultants** — Provider education and collaboration efforts are enhanced by OB Practice Consultants, Registered Nurses who meet regularly with provider partners to build and maintain a coordinated approach to caring for women before, during, and after pregnancy. Our OB Practice Consultants will be based out of Miami, Orlando, and Tampa.

- **Early Elective Delivery (EED) Pre-Payment Claim Edit** — In 2018, we will enhance our program by implementing an EED pre-payment claim edit to help reduce the number of EEDs. We will roll out an initiative to educate providers on EEDs — scheduled births (induction or cesarean) without a medical reason between 37 and 39 weeks of pregnancy. Hard stop policies and mandatory reporting have helped, but we see the greatest decline in EED rates in states that have implemented medical necessity criteria with non-payment policies through their state's Medicaid agency. Following recognized Milliman and Interqual EED criteria, and requiring professional delivery claims be submitted with a code that defines the gestational age, we match 37- and 38-week delivery claims with a medically necessary diagnosis code and deny EED claims that do not meet medical necessity.

At times, locating members can be a challenge. For this reason, we have a close working relationship with the Healthy Start Coalition as well as the TOPWA (Targeted Outreach to Pregnant Women Act) program, referring members for outreach. TOPWA was created in 1999 to reach HIV-infected pregnant women or high risk pregnant women who are not receiving services.

EXHIBIT A-4-b

**MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

Recognizing the special risks for pregnant women with HIV, we also engage our Member Outreach Team Case Managers (Managed Care Coordinators) and Outreach Care Specialists for any ongoing efforts as needed. This reduces duplication while making sure that all avenues are exhausted to bring these members into care.

Other barriers we encounter relate to social determinants of health. In response, we will pilot a program targeting healthy birth outcomes for women with gestational diabetes mellitus (GDM). Compared to women without it, those with gestational diabetes had higher rates of emergency C-section, infants with higher rates of NICU admissions, and 34 percent higher costs of care.

In addition to our collaboration with Florida on collecting NAS rates, developing initiatives to combat the impact of opioid use, and reducing the rate of babies born with NAS, we are considering piloting a Women's Health Peer Support Program. Our affiliate health plans are piloting this program and it may be expanded into Florida if its design and goals align with the needs of our members.

We also plan to integrate our Women's Wellness and Recovery program aims to support and empower women of reproductive age who have substance use disorders by providing non-clinical peer support to promote wellness and recovery. Wellness and Recovery Specialists will conduct field-based and telephonic outreach to members in an effort to connect members to care, recovery, and social support services; engage them in reproductive life planning; and enhance care management services by adding a layer of peer-based social and emotional support.

We continually make enhancements to our Taking Care of Baby and Me® program by improving existing components and integrating new ones. The program is effectively helping improve birth outcomes. We focus on the whole person and her well-being before, during, and after pregnancy.

2. CARE COORDINATION PROTOCOL AND IDENTIFYING HIGH-RISK PREGNANCIES

Clear Health understands the importance of identifying high-risk pregnancies and assuring appropriate care for mom and baby. We use a Maternal Child Services model — preconception, prenatal, postnatal, and infant health — to deliver a seamless, coordinated approach to the continuum of care for our childbearing aged members and their infants. From initial identification of a pregnant member through targeted outreach and education, case management and care planning, trained staff seeks to improve the overall quality of life, functional status, and health outcomes for pregnant members and their newborns.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

The goal of our program is to promote healthy pregnancies and delivery of HIV-negative babies through early identification of potential risk complications with appropriate referrals and interventions. To help achieve that goal, each pregnant member is assigned a Nurse Case Manager (experienced in obstetrics) in addition to a Clear Health Managed Care Coordinator who follows the member from pregnancy through birth.

2.1. Identification of High Risk Pregnancies

To assure the broadest range of identification, several avenues are used to identify members for OB case management. These include identification through State enrollment files, claims data, medical management data, and manual referral. Most pregnant members are identified through State enrollment data and claims data. Pregnant Clear Health members, by their enrollment in the Plan, are automatically identified as high risk.

Clear Health providers can also use our web portal, Availity, to identify pregnant members and collect data on HEDIS® prenatal and postpartum measures. We implemented a daily feed from Availity into our Case Management System when newly pregnant members are identified by their providers, which supports our goal of early identification. It also identifies the date of the first prenatal visit, date of delivery, notifications of preterm births, and postpartum visits.

Upon identification of a pregnant member, an obstetrical (OB) risk screening tool is completed — either by the automated My Advocate program, specially trained associates, or Case Managers — to determine the need for further assessment for case management services. The OB risk screener was developed through a comprehensive analysis of pregnant women who were screened for OB case management services. It has been designed to predict the likelihood of a NICU admission. The tool prioritizes pregnant members in need of education and case management. We conduct a periodic review of the risk screening tool to improve its effectiveness.

Following screening, the member is assigned to a risk group based on the results. Based on the member's responses, the screener generates the following scores:

- Statistical Obstetrical Risk Score (STORK Score), which is based on a predictive model and will indicate the increased risk of a NICU admission. A scored benchmark of > 12.57 is “referral point” for OB case management (NCQA Compliance). Health Plans will continue to assess lower scored members for their case management needs.
- STORK Score benchmarks will be:
 - Urgent ≥ 12.57
 - High 9.99 -12.56
 - Medium 8.36 - 9.98
 - Low ≤ 8.35

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Group Level is based on the member's responses to the screener. A tally of each scored question and its predictive value will group the member into one of the following case management Groups:

- Urgent
- High
- Medium
- Low

All cases will be designated as "potential referrals."

2.2. Care Coordination Protocols

Clear Health considers case management (care coordination) based on the following protocol:

- Members are educated regarding required frequency of screening and prenatal visits.
- The OB Case Manager works with Healthy Start for referral of high-risk pregnancies. In addition, bi-directional data is exchanged regarding member risk and Healthy Start interventions.
- Members are educated regarding T-DAP (tetanus, diphtheria, and pertussis) immunizations for every pregnancy.
- Members are introduced to the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) program and other State and local resources available to pregnant women, new mothers, infants, and young children.
- Members who are pregnant and infected with HIV are counseled and offered the latest ART regimen recommended by the federal Department of Health and Human Services and referred to HIV-experienced OB providers.
- Members in My Advocate have access to its IVR, text, or smartphone app program; they may choose to opt-out of it at any time.

All pregnant members with HIV/AIDS are stratified as high risk for OB case management. Frequency of contact is at least monthly and focused on adherence to ART in addition to normal high-risk OB protocols.

Our Case Managers are in our members' communities, often speak their languages, and are licensed clinicians – a Registered Nurse (RN) or a social worker, based on the member's needs. The Case Manager conducts an initial visit when possible, completes a comprehensive assessment, and works with the member to create a person-centered plan of care. The person-centered plan of care is finalized within five business days of the initial visit.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

After finalizing the person-centered plan of care, the Case Manager makes sure all services are authorized, coordinated, and initiated within 14 days or less, as appropriate for the member. The Case Manager follows up with members residing in their home or their authorized representative within 14 days of the initial visit to confirm that services were initiated as described in the person-centered plan of care. The Case Manager will contact the member at least monthly or more frequently when issues arise.

We have a maternity-specific health assessment that screens for co-occurring disorders, as well as additional assessments triggered by positive responses that help us identify the need for BH case management. Assessments result in a risk score (STORK) and members are placed accordingly in the appropriate case management level.

2.3. How High-Risk Case Management Helps Moms and Babies

Providing case management to women experiencing high-risk pregnancies can decrease complications and prevent disease transmission to babies. Case management makes a real difference to our members, including Krysten, who delivered a full-term, healthy baby girl.

**** REAL STORY: High-risk OB Case Management Helps Mother Deliver Healthy Baby Girl**
When Carmen, our OB Case Manager, offered 36-year-old Krysten high-risk OB case management services based on her HIV status, she was reluctant to discuss her status, but she accepted help managing her pregnancy. Happily, although Krysten had not sought prenatal care in the first months of her pregnancy, she welcomed Carmen coordinating services and referrals for her, including WIC, Healthy Start, and an OB/GYN. Carmen also worked with the Orange County Department of Health Ryan White case manager to coordinate education on prenatal and postpartum care, nutrition, baby feeding, and the signs and symptoms of pre-term labor and postpartum depression.

Carmen was there for Krysten throughout her pregnancy, answering her questions, providing support, and reinforcing the importance of medication, lab work, and appointment compliance to keep her and her baby healthy. By keeping her appointments and taking her medications, Krysten avoided complications, including pre-term labor and transmitting the virus to her full-term baby girl, Andrea. And she kept her OB/GYN follow-up and pediatrician appointments, too. Krysten expressed her gratitude to Carmen and delivered a healthy baby girl. ******

3. STRATEGIES TO IMPROVE DATA EXCHANGE AND PROVIDER COMMUNICATION

Clear Health understands the importance of data exchange and provider communication to improve case management for pregnant members who are identified as high-risk. We apply several strategies to see that our providers are equipped with the best information to render the best care to our members. We focus on simplifying data exchange, engaging providers where they work, and offering tools to easily access information.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

3.1. Improve Data Exchange

Clear Health is leading efforts with Healthy Start to outline options for a file exchange that will notify health plans of Prenatal Risk Screening tools received for members, improving timeliness of notification for newly pregnant moms. This will enable Clear Health to initiate prenatal programs earlier for members.

Clear Health and Healthy Start are also discussing the development of a program for exchanging information through data files regarding referrals, referral status, and notification of enrollment for new pregnant mothers to streamline communication, improve tracking and increase efficiencies for both organizations. The discussions have centered on a centralized solution, but could begin at the county level with agreement from Healthy Start.

3.2. Provider Engagement

Clear Health's OB Practice Consultant helps strengthen our relationships with OB providers, make sure they understand our programs, and help enhance maternity-related quality scores. The OB Practice Consultant serves as a liaison between us and the provider, to either answer their questions or direct them to someone at Clear Health who can respond. We will have three OB Provider Practice Consultants (RNs) for Florida based out of Miami, Orlando, and Tampa.

The Practice Consultants will meet face-to-face with OB providers and promote our Taking Care of Baby and Me Program and address any questions they have. Through the Practice Consultants, we will receive pregnancy notifications, due dates, and other key information direct from the provider. This enables us to learn about a member's pregnancy earlier than if we only relied on claims data.

Practice Consultants will meet face to face with OB Providers to discuss their group profile report and discuss best practices to enhance their maternity HEDIS® or other quality-oriented results. The OB Practice Consultant will also coordinate with Health Plan Quality Representatives on other quality gaps in care that should be raised in the already scheduled provider visits.

3.3. Availity for Providers

Another strategy for improving provider communication is the use of Availity. Clear Health providers have long used Availity to verify member benefits and eligibility across all health plans; now they can also use it to identify pregnant members and collect data on HEDIS® prenatal and postpartum measures. Availity gives providers another opportunity to connect with urgent and high-risk OB providers via care planning and coordination activities.

Clear Health also communicates with providers through clinical watch newsletters, the provider portal, and peer-to-peer consults made available with OB medical directors. These are important mechanisms for communicating with our providers. For example, we used the clinical watch newsletter during the Zika outbreak to educate providers on what supports and services were available to members.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

4. REDUCE UNINTENDED PREGNANCIES

Clear Health and its affiliate health plans currently provide family planning services as a covered benefit across 20 Medicaid markets. We understand that Florida's rate of unintended pregnancies is well above the national average, that most unplanned births in the state are publicly funded, and that 41 percent of all unintended pregnancies result from inconsistent or incorrect use of contraceptives, according to the Guttmacher Institute.

Members in Florida receive information at enrollment on family planning benefits and services available to them through our member handbook and portal. We also provide this information at community events and through our Customer Care Representatives during telephonic contact and Care Managers during member interactions.

The CDC identifies long-acting reversible contraceptives (LARCs) as the most effective in preventing pregnancy. The use of LARCs in the United States has increased — but the rate of utilization is still low at only 11.6 percent.

CDC, through its 6|18 initiative, also identifies three payment interventions to reduced unintended pregnancies:

- Reimburse providers for the full range of contraceptive services, including the actual cost of LARC or other contraceptive devices
- Reimburse for immediate postpartum insertion of LARCs by unbundling payment from other postpartum services
- Remove administrative and logistical barriers to LARC contraception

Clear Health applies all three of these interventions to prevent unintended pregnancies, and includes LARCs as a benefit to members. We educate our members on LARCs through educational materials, such as brochures, and through our OB Case Managers, who are trained on them.

6. PROPOSE PERFORMANCE BENCHMARKS FOR REDUCING NON-MEDICALLY INDICATED C-SECTIONS AND EARLY ELECTIVE DELIVERIES

In 2016, 67 percent of our births were via C-section. Based on the federal Department of Health and Human Services guidelines, C-section may be the preferred method of delivery to prevent vertical transmission of HIV. However, vaginal delivery is recommended for women with HIV Disease who are adherent to ART and whose HIV viral load is below 1,000 copies/ml. The latest guidelines, updated on October 26, 2016, recommend:

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Scheduled C-section at 38 weeks' gestation to minimize perinatal transmission of HIV for women with HIV RNA levels >1,000 copies/mL or unknown HIV levels near the time of delivery, regardless of administration of antepartum ART. Scheduled C-section delivery performed solely for prevention of perinatal transmission in women receiving ART with HIV RNA ≤1,000 copies/mL is not routinely recommended because of the low rate of perinatal transmission in this group. In women with HIV RNA levels ≤1000 copies/mL, if scheduled C-section or induction is indicated, it should be performed at the standard time.
- In women with an HIV RNA >1,000 copies/mL or unknown HIV RNA level who present in spontaneous labor or with ruptured membranes, there is insufficient evidence to determine whether C-section reduces the risk of perinatal HIV transmission. Management of women originally scheduled for C-section because of HIV infection who present in labor must be individualized at the time of presentation.
- In women on ART with HIV RNA ≤1,000 copies/ml, duration of ruptured membranes is not associated with an increased risk of perinatal transmission, and vaginal delivery is recommended. National benchmarks for individuals with HIV/AIDS are not available. In lieu of national benchmarks, we will monitor deliveries by C-section to establish benchmarks going forward. For members where vaginal delivery is recommended, we will apply the Leapfrog Group benchmarks. The Leapfrog Group, a national leadership organization in measuring and promoting positive outcomes in the hospital setting, and the Healthy People 2020 program set a target on C-sections of 23.9 percent for all hospitals. Similarly, the Leapfrog Group target rate for EED is five percent. Clear Health proposes to attain these benchmarks within current and new regions by the end of the third year after implementation and to sustain this level subsequently.

We will also review trends and relative performance each year to determine if goals need to be adjusted up or down to meet quality improvement expectations.

7. SUCCESSFUL STRATEGIES IN REDUCING NON-MEDICALLY INDICATED C-SECTIONS AND EARLY ELECTIVE DELIVERIES

In our population of members with HIV/AIDS, C-section may be the preferred method of delivery to prevent vertical transmission of the virus. Scheduled C-section delivery, defined as cesarean delivery performed before the onset of labor and before rupture of membranes, is recommended for prevention of perinatal transmission of HIV in women with HIV RNA levels >1,000 copies/mL near delivery and for those with unknown HIV RNA levels. Since our inception, no vertical transmissions have been reported. Vaginal delivery is recommended for women with HIV Disease who are adherent to ART and whose HIV viral load is below 1,000 copies/ml. We adhere to these guidelines.

We will continue to work closely with our HIV-experienced provider network, consultants, and case management staff to provide education on the guidelines and promote best practices to reduce risk of transmission. Our efforts center on encouraging strict adherence to ART and compliance with prenatal visits, as well as postpartum care and HIV screening/exposure protocols for all newborns.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

The Clear Health rates for early elective deliveries and C-sections will be higher than standard health plans due to Department of Health and Human Services guidelines. The guidelines recommend providers schedule cesarean delivery at 38 weeks of gestation for women with HIV RNA levels of over 1,000 copies or for those with unknown levels near the time of delivery in order to minimize the risk of transmission from mother to child. As such, our results are reflective of Clear Health's comprehensive maternal child health strategy. It incorporates comprehensive education, support, and case management programs and tools to members during and after pregnancy. We start with early identification of pregnancy and prompt screening for risk factors, then follow with quality, culturally-competent case management to pregnant Medicaid members during the prenatal and postpartum periods.

In 2018, we will implement an EED pre-payment claim edit. Clear Health affiliate plans in six states have EED payment rules. Five out of the six with EED payment rules saw a reduction in rates from 2015 to 2016.

Clear Health continues to invest in innovative solutions and collaborations to increase the use of safe, evidence-based practices in maternity care, and reduce unnecessary medical interventions in labor and delivery.

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

Evaluation Criteria:

1. The extent to which the respondent identified opportunities for improvement in achieving the benchmarks and subsequent steps the respondent will implement to overcome any barriers across and within different systems of care.
2. The extent to which the respondent describes specific care coordination protocols, including a description of the risk stratification algorithm used to identify high-risk pregnancies (including enrollees with co-occurring behavioral health conditions).
3. The extent to which the respondent describes strategies to improve data exchanges and communications between practitioners to improve care coordination efforts for pregnant enrollees that are determined to be high-risk.
4. The adequacy of the respondent's description of specific evidenced-based programs and interventions that will be used to decrease the number of unintended pregnancies and the associated indicators or measures that will be used to determine their effectiveness.
5. The extent to which the respondent describes financial and non-financial provider and enrollee incentives for evidence-based practices that will contribute to hitting the benchmarks.
6. The adequacy of the respondent's proposed performance benchmarks for reducing non-medically indicated cesarean sections and early elective deliveries.
7. The extent to which the respondent describes its experience implementing successful strategies that resulted in a reduction in non-medically indicated cesarean sections and early elective deliveries. In order to receive all points for this component, the respondent must include outcome data on specific performance metrics.

Score: This section is worth a maximum of 35 raw points with each of the above components being worth a maximum of 5 points each.

MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 3 – Patient Centered Medical Homes (Regional):

The respondent shall describe its experience with patient centered medical homes (PCMHs) including the respondent's efforts toward the solicitation of PCMH-recognized practices to improve access, facilitate care integration and improvement in quality measures. Specifically, the respondent shall describe programs and initiatives utilizing PCMHs to promote the Agency's goals.

Evaluation Criteria:

1. The extent to which the respondent's description demonstrates experience that includes contracts with patient centered medical homes in the network serving populations similar to the target population of this solicitation and demonstrates:
 - (a) Enhanced access;
 - (b) Coordinated and/or integrated care; and
 - (c) Achievement of improved quality outcomes.
2. The extent to which the respondent's description of recognizing PCMHs addresses the reduction of potentially preventable events for enrollees assigned to a PCMH for their PCP.
3. The extent to which the respondent's description of recognizing PCMHs addresses methodologies and processes to improve prenatal care and birth outcomes for enrollees assigned to a PCMH as their PCP.

Score: This section is worth a maximum of 25 raw points with each of the above components being worth a maximum of 5 points each.

MMA SRC# 4 – Telemedicine (Regional):

The respondent shall describe its overall approach to utilizing telemedicine services to promote the Agency's goals, in particular as it relates to enhanced access to the following providers within the plan's network:

- a. Primary Care;
- b. Licensed mental health clinicians;
- c. Psychiatrists;
- d. Cardiologists;
- e. Pulmonologists;
- f. Endocrinologists; and
- g. Internists.

The respondent shall describe any limitations placed on telemedicine services within its network and the percentage of providers with the network that are authorized to provide telemedicine services for the specialty types referenced above and those actually providing telemedicine.

Evaluation Criteria:

1. The extent to which the respondent describes an approach on the use of telemedicine services within its provider network that supports achievement of the Agency's goals.
2. The extent to which the respondent describes the methodology it will use to identify providers eligible for participation, limitations/barriers in its proposed use of telemedicine and proposed strategies to overcome those limitations/barriers.
3. The extent to which the respondent has already made significant achievements in the deployment of telemedicine within its network as evidenced by:
 - (a) The percentage of providers authorized to provide telemedicine services for the provider types referenced; and
 - (b) The percentage and type of authorized providers that provided telemedicine services during the 2016 calendar year.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 5 – Provider Network Development (Statewide):

The respondent shall submit a draft network development and management plan demonstrating how it will ensure timely access to primary and specialty care services, necessary to promote the Agency's goals, including:

- a. Identification of network gaps (time/distance standards, after-hours clinic availability, closed panels, etc.);
- b. Strategies that will be deployed to increase provider capacity and meet the needs of enrollees where network gaps have been identified;
- c. Strategies (including a description of data sources utilized) for measuring timely access to appointments with the following provider types:
 - (1) Cardiologists (pediatric and adult);
 - (2) Pulmonologists (pediatric and adult);
 - (3) Endocrinologists (adult);
 - (4) Internists (adult);
 - (5) Psychiatrists (pediatric and adult);
 - (6) Obstetricians/Gynecologists (adult); and
 - (7) Licensed mental health clinicians (pediatric and adult).
- d. Strategies for recruitment and retention efforts planned for each provider type, including the quality and/or performance metrics that will be used to determine a provider's success in making progress towards the Agency goals.

Response:

We submit our annual network plan and corresponding policies and procedures (including supporting documents such as data analytics, reports, graphs, identified trends, and patterns of care) to the Agency each year for approval. We make sure covered services are available and accessible for all members and develop and monitor network development plans that assure the provision of covered services for the maximum number of members for each region.

Simply Healthcare Plans, Inc. D/B/A Clear Health Alliance (Clear Health) acknowledges that we have read and will comply with all contract provisions as identified in Attachment B, VIII Provider Services, and B.2 Annual Network Development Plan. A draft network development and management plan is included as Attachment MMA SRC# 5-1: Network Development and Management Plan (Statewide).

1. IDENTIFYING AND RESOLVING BARRIERS AND NETWORK GAPS

As Florida's largest HIV/AIDS specialty plan, Clear Health has extensive experience and qualifications in contracting and servicing networks designed to meet the special needs of this population. We recognize that to develop and maintain a high quality network to serve the HIV/AIDS Medicaid population, our company must have the respect and trust of the community. Our management team has a combined 105 years of experience serving the Florida Medicaid community.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Clear Health has built an extensive HIV/AIDS Medicaid network in Florida, establishing close relationships with PCPs, specialists, county health departments (CHDs), Rural Health Clinics (RHCs), Federally Qualified Health Centers (FQHCs), and teaching institutions. We have recruited PCPs and specialists in infectious disease, cardiology, dermatology, rheumatology, gastroenterology, endocrinology, and all other specialties who have experience in treating patients with HIV disease to become Medicaid providers and contract with us. We have developed a provider recruitment strategy and message of inclusivity and collaboration and actively provided education and support for the providers who serve our population.

Our ongoing recruitment efforts specifically target specialists who are experienced in working with people living with HIV/AIDS. It is our practice to work closely with our PCPs and determine who they most commonly refer enrollees to so we can make every attempt to include those providers in our network. We have been successful in contracting with most physicians who have traditionally not accepted Medicaid enrollees from other plans and/or direct MediPass recipients.

Based on our experience in providing services to the specialty population proposed, we have identified that the following specialties are critical due to the most commonly seen comorbidities in the HIV/AIDS population: Infectious Disease, Cardiology, Hematology/Oncology, Dermatology, Pulmonology, Endocrinology, Gastroenterology, Ophthalmology, and Behavioral Health. We meet the required access standards in all regions for all of these specialties.

We maintain an annual network development and management plan (annual network plan), including policies and procedures for assuring covered services are available, accessible, and provided promptly. In our response, we describe the various tools and methods we use to monitor our network and identify gaps including time/distance standards, after-hours clinic availability, and open/closed panels.

Our statewide provider network for the provider types identified above includes:

- Cardiologists (pediatric and adult)
- Pulmonologists (pediatric and adult)
- Endocrinologists (adult)
- Internists (adult)
- Psychiatrists (pediatric and adult)
- Obstetricians/Gynecologists (adult)
- Licensed mental health clinicians (pediatric and adult)

To assure our network of PCPs meets member needs, we have expanded our definition of primary care physicians to include family practice, general practice, pediatrics, internal medicine, and infectious disease providers. We designate providers with specialized HIV/AIDS training with a red ribbon beside their name in the Provider Directory, informing members of the provider's additional specialized HIV/AIDS care and treatment competency. This "Red Ribbon" program is nationally recognized and testament to our patient-centered model of service and support. In addition, many of our physician assistants, nurse practitioners, and pharmacists are also credentialed as HIV experts/specialists. Based on our experience, we believe that these physicians have the best understanding of the underlying condition of the member.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

**** SPOTLIGHT ON: Maintaining Access for Clear Health Members**

We recently faced the loss of providers when a large group decided to disband. We immediately reached out to their entire underlying network of providers to recruit them. We individually contracted PCPs with assigned members including a large number of infectious disease providers and endocrinologists. This assured continuity of care for our members and no erosion of access for Clear Health members. **

Clear Health considers the following elements (as required by 42 CFR 438.206) when establishing the provider network:

- Anticipated number and types of members
- Expected utilization of services, taking into consideration the characteristics and health care needs of specific Medicaid populations represented
- Numbers and types (in terms of training, experience, and specialization) of providers required to furnish the covered services
- Number of network providers with open panels
- Geographic location of providers and members, considering ratios, time and distance
- After-hours availability
- Travel time, the means of transportation ordinarily used by members, and whether the location provides physical access for Medicaid members with disabilities. We provide transportation across counties. Additionally, Clear Health offers a medically-related lodging and food benefit for enrollees and caregivers needing to travel in excess of 120 miles for medically necessary care.

1.1. Ongoing Network Monitoring

Clear Health knows that a network composed of high quality providers is key to improved member outcomes, positive member experience, and appropriate utilization of services. We review data from various sources (such as Quest Analytics, Member Services data, satisfaction survey results, and provider feedback) and take action based on analysis of data as well as provider or membership changes. In addition, while comprehensive network data plays an important role in the ongoing management of our network, our hands-on collaborative approach to provider engagement is a critical source of information allowing us to best meet the needs of our members and providers.

1.1.2. Quest Analytics

To assure we are adequately monitoring contract requirements, we use Quest Analytics, the same software currently used by the Agency and the Centers for Medicare and Medicaid Services (CMS), to verify ratios and confirm we meet time and distance standards on assigned enrollment files and participating providers submitted in the PNV file. The Quest Analytics software includes contract-defined access standards to assure we review the network against AHCA standards. This allows for the consistent monitoring and reporting of our network. Analysis is run bi-weekly

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

and reported to Provider Relations for investigation and resolution of any gaps. Additionally, we report it every quarter to the Gap Committee and before a significant provider termination to ensure adequate coverage. A standard Quest report includes the following features:

- **Geographical Overview Maps:** Overview maps display the provider locations in the geographical area requested. We can shade the service area by ZIP code, county, or state for easier interpretation by the end-user.
- **Provider and Member Location Maps:** Provider/member maps plot members and providers of any or all specialty/specialties – or combinations of both. These maps overlay the provider network against the membership base, with the appropriate radius encompassing each provider to identify geographical coverage in the service area.
- **Member Accessibility Summary:** The Member Accessibility Summary is a data sheet that provides an overview of the entire analysis displayed in the report. It shows the number and percentage of members with or without access. In addition, the Summary displays the top 10 key geographic areas and summary information. The top 10 key geographic areas are determined by the greatest number of members in that area.
- **Access Standard Comparison:** The Access Standard Comparison graph demonstrates the point at which the percentage of members attains compliant status with the specified provider type and defined access standard. The information from this graph can provide a quick evaluation of the strength-of-network in conjunction with the membership.
- **Accessibility Detail:** The Accessibility Detail data sheet provides an in-depth look at the summary information contained on the Accessibility Summary Page. We assess this data on a ZIP code level and display counts of members with and without access to care under the defined access standards. The detail provides the total number of members and providers along with a member-to-provider ratio for the demographic/geographic area analyzed. Additionally, the report continues this detailed analysis of a member's choice of up to five providers and the average distance to achieve that access.

1.1.3. Member and Provider Feedback

We monitor provider adherence to access standards through trending of member and provider complaint data. This is accomplished through real-time communication from our Member Services and Clinical teams to the Provider relations team to address the issue and provide immediate resolution. We assess these actions at monthly staff meetings. We also use annual member and provider satisfaction surveys to monitor access standards.

We continually monitor and act on information obtained through our Provider Relations, Case Management, Quality Management, and Marketing departments. We discuss this information at Gap Committee and QMC meetings. Member Advisory Committee (MAC) meetings, where members are invited to attend, are held on a regular basis to gauge member needs specific to the region. We relay data collected from the MAC to the different departments to inform process improvements.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.1.4. Additional Data Sources

Additional methods we use to monitor access standards include:

- Member Services data, which helps us identify potential compliance issues. For example, for each call regarding a provider's inaccessibility, we contact the provider to investigate.
- Quality of Care and access concerns are investigated as part of our Quality Management program. We review the outcomes of Quality of Care reviews, including Peer Review Committee actions.
- HEDIS® scores and our HEDIS® hybrid process enables collaboration with providers to improve access and outcomes. Our staff reviews medical records for documentation, access to care, and quality of services during provider visits.
- Administrative data review and annual comprehensive analysis of access and availability includes analysis of administrative complaints, after-hours availability, survey information, appointment access statistics, Provider Call Center reports, Quest Analytics® reports, and provider satisfaction survey results. We use data from departments such as Provider Contracting and Database Administration, Operations, Medical Management, and Quality Management in the analysis.
- Grievance and appeals data identify trends at an individual provider level.
- Annually, our Quality Management Department engages a qualified organization to administer the most current version of the Consumer Assessment of Health Care Providers and Systems (CAHPS®) survey that queries members on access to care among other key questions.

Once we identify a network gap, we identify prospects in the affected area and work to close the gap and/or address the barrier by negotiating a contract with specialty providers in the geographic area as a long-term intervention. During the contracting and negotiation process, we execute a letter of agreement (LOA) or single-case agreement to assure care for a specific member in that region that may require immediate access to specialty services. This is a short-term intervention as the ultimate goal is to fully contract and credential the provider(s). We monitor any future membership changes and our capacity to provide covered services. Provider network managers are responsive to new gaps and adjust network recruitment strategies accordingly.

1.2. Gap Committee

Clear Health has a detailed and proactive process to promptly address network gaps because we know from experience that network gaps are high on the list of reasons for member dissatisfaction and voluntary disenrollment. Our Gap Committee is our frontline team responsible for monitoring gaps in the network and assuring that network deficiencies are resolved. The Gap Committee includes representatives from Member Services, Grievances and Appeals, Medical Management, Quality Management, Health Services, Provider Relations, and Delegation Oversight.

Each of these departments track and trend member or provider barriers obtaining access to covered services, whether it is appointment availability or a lack of a necessary specialty type in the network. We track and trend claims and encounter data for peaks and valleys that could

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

indicate a provider is at capacity and identify those that are being under-utilized for special investigation into why Clear Health members are not being seen at expected rates for that provider type. We identify issues and determine root causes through the analysis of Quest Analytics data and review of the PNV files for ratio analysis.

Each department brings the results of their review of network issues, access challenges, and member and provider complaints to the Gap Committee meetings. We review, aggregate, and analyze data from all of these departments. We develop short- and long-term interventions and prioritize the implementation of each strategy based upon the number and type of members impacted, as well as the urgency of the need for the services/provider.

We maintain minutes of each meeting. Minutes document estimated resolution dates for each issue and the individual accountable to support for future follow-up. Each Gap Committee meeting results in a prioritization list that is assigned to the Provider Relations department and a recruitment list is provided to each Provider Network Manager. Recruitment updates are reported back to the Gap Committee or to the workgroups by Provider Relations. We escalate recruitment difficulties in high-impact areas to our Regional Vice President of Provider Solutions for assistance.

The Gap Committee reports network findings, performance metrics, corrective action plans (CAPs), and all other pertinent information to the Quality Management Committee (QMC). Our QMC meeting, led by our Health Services and Quality departments, addresses potential access to care concerns. When members report access issues or complaints about providers, the source department tracks and trends these issues and reports them to the Gap Committee. The Gap Committee reports them to the Quality Management department (and these are included in the Provider's recredentialing review).

1.3. Capacity to Accept New Patients

Clear Health's network includes more than 3,435 Primary Care Providers (PCPs). Our network of PCPs is more than adequate to meet the needs of our projected membership. Using a ratio of members to PCPs of 750:1, our current network can accommodate state-wide membership growth. We evaluate capacity by identifying providers with open panels and mapping them against our current membership. This allows us to measure access against AHCA access standards. We also use other mechanisms to monitor capacity to accept new members including:

- Dedicated staff make outbound calls to providers requesting updated information for the provider directory, which includes whether or not they are accepting new members.
- We send a monthly fax blast to providers requesting them to review their directory information and submit changes via fax, email, mail, or by informing their Provider Network Manager.
- We capture information about provider offices not accepting members during the Appointment Accessibility Audit process and forwarded to Provider Relations for follow-up.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.4. Monitoring Access

Our provider agreements require network providers to abide by all AHCA appointment standards, including standards for after-hours availability. We educate providers on these standards through initial and recurring provider training and the provider manual, which we incorporate by reference as part of the provider agreement. Our provider newsletters supplement initial orientation training and serve as recurring reminders for timely scheduling of appointments and after-hours availability.

Clear Health conducts wait time and after-hours surveys to monitor network accessibility in compliance with AHCA requirements. Our Quality Management department contracts with an NCQA certified survey vendor to administer the Appointment Accessibility audit. We conduct initial audits in the spring and re-audits of noncompliance in the fall. We will increase the frequency of our access audits to quarterly in compliance with Attachment B, VIII Provider Services, A.8 Timely Access Standards.

Our Appointment Accessibility Audit program surveys PCPs, OB/GYNs, pediatricians, high volume specialists, high impact specialists, and BH providers (prescribers and non-prescribers). This includes the provider types listed in this MMA SRC 5 – cardiologists, pulmonologists, internists, psychiatrists, obstetricians/gynecologists, and licensed mental health clinicians and other specialty within the network. We provide additional information about monitoring access in Section 3 below.

1.5. Strategies to Increase Capacity if an Accessibility Issue is Identified

Any findings of gaps in access and availability standards result in interventions, focusing on helping improve performance. Our assistance may include working with providers to extend their office hours or expand their practice, or we may recalibrate the member-to-PCP assignments to maximize our network capacity. We assess data at monthly Gap and QMC Committee meetings.

1.5.1. Mitigation Steps if an Issue is Related to a Specific Provider

Clear Health's first priority is to make sure that members have timely access to quality care. For issues related to a specific provider we immediately contact the provider to inquire on the access constraints for the member. If the provider cannot serve the member, we help the member identify other available providers within the area to ensure the member gets timely care/service.

We mail all provider offices a letter advising them of the results of their survey along with access standards when we encounter a problem with timely access either after conducting appointment access audits, reviewing satisfaction surveys, or receiving complaints. Our Grievances and Appeals process includes requesting feedback and providing resolutions back to Provider Relations for investigation and Provider education. The mailing includes a form that the provider must return within 30 days advising what action will be taken to meet the applicable access standard(s). The Provider Network Manager contacts the provider by telephone or through an on-site visit to discuss the plan, re-educate the provider about access standards, formalize a corrective action plan, and obtain agreement for follow-up reassessment. We obtain an acknowledgement of provider engagement immediately following the training.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

The Provider Network Manager monitors and evaluates the action plan to make sure the provider completes the critical tasks according to schedule and that issues do not re-occur. Noncompliant providers are also re-audited to confirm compliance. If provider noncompliance continues, Provider Network Managers re-educate providers on the proper protocol and their contractual obligations and regularly monitor performance.

If provider noncompliance persists, we refer the provider to the Peer Review Committee for guidance. The Peer Review Committee may impose sanctions, such as limiting the provider's referrals. Finally, if the provider does not correct his/her deficiencies after our continued improvement efforts, the sanctions may ultimately lead to termination of active network status.

1.5.2. Incorporating Member Feedback

Clear Health's Quality Management department tracks and trends member complaints regarding access over time to identify ongoing patterns of noncompliance. The Member Advisory Committee (MAC) is also another avenue in which we receive this feedback. When we identify a pattern, The Provider Network Manager sends a written notice to the provider and develops an action plan. The Provider Network Manager meets with the provider to review the action plan and the provider signs an attestation form confirming the meeting took place.

1.5.3. Mitigation Steps for Regional or Systemic Issues

If our analyses indicate that any component of our provider network is insufficient, our Provider Relations team will develop an action plan. The action plan will identify staffing, responsibilities, resources, and a timeline to correct the situation. Actions related to current network providers may include:

- Partnering with existing network providers to recruit and retain clinical staff, expand access through physician extenders, expand services in rural areas, offer additional services to address rural needs, and provide additional after-hours and weekend appointments
- Reviewing the directory and identifying referral pattern needs
- Coordinating transportation for members to see necessary providers outside their access area
- Collaborating with providers to open new practice sites
- Encouraging and supporting PCMH practice models that utilize a patient-centered team-based practice approach. Through our efforts, we identify practices and provide incentives to apply and complete PCMH certification.
- Promoting innovations to expand access to care such as using mid-level practitioners, utilizing health workers, using BH coaches to extend PCP capacity, and bundled FQHC coding to promote integration
- Providing focused training and education in team-based care

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Encouraging primary care practices to participate in one of our incentive programs. Practices can use these resources to expand office hours or the use of physician extenders
- Educating providers on and encouraging the use of telemedicine

Actions focused on non-participating providers may include:

- Recruiting out-of-network providers to participate in our network through referral trends, PCP referrals, completed out-of-network single case agreements (SCAs), and new providers entering the market, and converting non-traditional managed care providers
- Leveraging relationships with independent practice associations and other provider organizations to recruit additional providers
- Coordinating members' care with out-of-network providers
- Contacting providers (through Network Development outreach efforts) who are not enrolled as Florida Medicaid providers and explaining the process for enrolling, answering any questions they have, and following up with them to check their progress. We also provide them with the appropriate link to the AHCA website and include the paper application.

1.5.4. Incorporating Provider Feedback

We continually seek out provider feedback and improve our processes based on their feedback. For example, we heard from providers via the 2016 provider satisfaction survey that some PCPs were having problems with specialists that are in-network, but say they do not accept the Medicaid plan. Provider Network Managers contacted the specialists that PCPs identified as most problematic with scheduling appointments and re-educated them on their contractual obligations with Clear Health. When onboarding network PCPs, the Provider Network Manager asks which specialists they usually use for referrals to determine if they are participating in our network. If these specialists are not participating, we initiate network development protocols.

1.5.5. Waiver Requests

Clear Health is committed to providing a complete network for each region. Prior to submitting a waiver request, we confirm that there are no providers available to meet member needs. We review provider directories of other MCOs, Department of Health data, perform a Florida license search, and perform additional online searches. In addition, we perform a zip code analysis to determine the closest provider to the member. We check to see if the provider is in our network (and that they are listed appropriately in our provider directory) and outreach with an invitation to join the network if the provider is non-participating.

Next, we evaluate our participating PCPs to determine the pattern of care. Clear Health makes every attempt to accommodate the member with providers in adjacent regions/ counties and provide transportation when needed. We continue to monitor the region for any new providers or facilities that may be available to render services.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

In certain situations, such as rural counties where providers may not be available, Clear Health submits a waiver request to AHCA. We will continue to work with AHCA to address access issues due to limited availability of some specialties. Our proven process for arranging for care from out-of-network providers through SCAs expedites access to medically appropriate care for our members should a service not be available in our network.

2. MEETING MEMBER NEEDS WHEN A SERVICE IS NOT AVAILABLE WITHIN OUR PROVIDER NETWORK

**** SPOTLIGHT ON: Locating a Provider Assures a Successful Return Home**

A member was hospitalized in Atlanta and in need of specialized oxygen in order to be discharged from the hospital. Through our vast provider network of Durable Medical Equipment (DME) providers, we were able to obtain a letter of agreement with an out-of-state vendor in order for the member to be discharged with oxygen. The member was able to travel back to his hometown in Florida successfully. **

We are committed to facilitating access to medically appropriate care for our members. Our comprehensive Florida provider network offers an array of accessible and convenient options for members. In the unlikely event a network provider is unavailable, our procedures foster timely access to out-of-network providers so that our members can access the full range of services quickly, regardless of network capacity. We follow these processes for cardiologists, pulmonologists, endocrinologists, internists, psychiatrists, obstetricians/gynecologists, and licensed mental health clinicians.

We meet the needs of members and provide covered services even if we are unable to provide the service through our provider network. If we are unable to provide medically necessary services to a member with our network providers, we cover the services in an adequate and timely manner by using providers and services that are not in our network. We educate providers on how to interact with the health plan while the member is under their care. In addition, Clear Health also coordinates/facilitates transportation when needed.

We have a clear and consistent process to resolve access issues expeditiously, which includes escalation to senior management if it appears the issue will not be resolved prior to the deadline. Our Regional Vice President of Provider Solutions retains accountability for timely resolution. We review all agreements are reviewed and we attempt to contract with non-participating providers in an effort to further enhance the provider network.

Access issues may be identified within various departments and each department has a method to escalate to the appropriate Provider Relations staff. When we identify an access issue, our Regional Provider Relations Director assigns a representative to negotiate a case contract or LOA, guaranteeing reimbursement of services to out-of-network providers for as long as we are unable to provide the medically necessary covered services within our network.

If it appears that the issue will not be resolved in a timely manner, we escalate it to the Regional Vice President of Provider Solutions for resolution. Issues which are unable to be resolved are escalated to our Plan President and Chief Medical Officer. Clear Health also maintains an open line of communication where any person within the organization who comes across a potential concern can send a detailed request to Provider Relations for research/assistance and resolution.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

2.1. Immediate Interventions

We meet the needs of our members and provide covered services even if we are unable to provide the service through our provider network. When a network provider is not available to meet a member's needs, we refer that member to an out-of-network provider. This process does not apply to emergent situations as no referral is required.

To resolve a gap or barrier using a short-term intervention, Provider Network Managers contact a qualified out-of-network provider/specialist in the county or region who can offer the services needed and negotiate a Letter of Agreement (LOA) or a single-case agreement. We verify provider licensure and confirm that the provider does not appear on any governmental exclusion lists. We provide education on how to interact with the health plan while the member is under the out-of-network provider's care. In addition to the measures taken to coordinate care for the member, Clear Health also coordinates transportation when needed.

2.2. Short-term Interventions

We attempt to contract with out-of-network providers used by our members to enhance access and continuity of care. Our out-of-network coordination nurses encourage out-of-network providers to join our network while they are developing the single case agreement. If the provider is interested in joining, the out of network coordination nurse coordinates with the Provider Network Manager to follow up with the provider for contracting. At this point, the provider relations team negotiates rates in an effort to expedite care and follows up with the provider in an attempt to contract the provider to enhance the participating physician network. As part of our network recruitment strategy, we review all single case agreement patterns in our monthly and quarterly meetings in order to proactively engage providers not currently in network.

2.3. Long-term Interventions

As a long-term intervention, we work to close a gap and/or barrier by negotiating a contract with a qualified provider/specialist in the county or region able to offer the services needed.

If we are unable to provide medically necessary services to a member via our network providers, we will cover the services in an adequate and timely manner by using providers and services that are not in our network. We use a well-established process to resolve these issues expeditiously, which includes escalating to senior management if it appears the issue will not be resolved timely. We hold our Regional Vice President of Network Solutions ultimately accountable for resolution in a timely manner.

2.4. Telemedicine Solutions

Telemedicine services can play an important role in providing members with ready access to both physical health (PH) and behavioral health (BH) services. Telemedicine is used to support health care when the provider and member are physically separated. Telemedicine can also play an important role in expanding access for members in rural areas of Florida where certain specialties might not exist, as well as those in more urban areas of the state for after-hours access to care as an effective alternative to unnecessary use of the emergency department (ED), and for expanding access for members with limited mobility.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Clear Health will cover telemedicine consistent with Florida state regulations and Medicaid program requirements with respect to the provision of services via telemedicine. We will administer our telemedicine program in accordance with the telemedicine coverage provisions specified in the AHCA Standard Contract, including but not limited to the requirements related to technical safeguards, HIPAA, provider training, member choice, and fraud and abuse. We will comply with the telemedicine requirements specified in Attachment B, and will follow Florida Medicaid billing and reimbursement policies, as well as limitations, and restrictions on the provision of telemedicine.

Clear Health's telemedicine strategy is multi-faceted and designed to increase access to care in the above specialties as well as other services that support achievement of the Agency's goals. Our objective is to provide quicker and easier access to primary care, BH, and specialty services through telemedicine, and to address barriers related to travel, thereby reducing potentially preventable events (PPEs) and improving member health outcomes. Our strategies are designed to provide a comprehensive telemedicine solution and include:

Specialty Teleconsults. Through our strategic partnership with GlobalMed, we will address the lack of adequate access to specialty consultations in rural areas and regions with our innovative pediatric and adult specialty telemedicine consultation solution. We will offer access to telemedicine consultations with locally-based Florida-licensed in-network providers for primary care, and various specialties including cardiology, pulmonology, endocrinology, internal medicine, and licensed mental-health clinicians and psychiatrists. We will use a two-way audio/video communication with a secure Internet connection from a video-enabled device such as a computer, tablet, or smart phone and/or facilitated presentation site with integrated diagnostic equipment. Patients will have telemedicine access to specialist consultations from PCP offices and other provider-facilitated presentation sites. This capability will support multiple participants, allowing the patient, PCP, and specialist to all participate simultaneously in the telemedicine visit. The member could also engage in a provider visit from the comfort of their home making this process convenient for them. We will offer scheduling for specialty consultations at blocks of time during the week for various specialties and engage with our network providers and members to educate and create awareness of appointment availability. We will also establish strategically located and facilitated community-based outreach center (CBOC) presentation sites in rural regions and areas of the state where access to a PCP location is limited.

LiveHealth Online. Through LiveHealth Online (LHO), we will offer our innovative member-direct access solution for urgent care telemedicine. LHO facilitates online access through two-way audio/video technology to Florida-licensed, board-certified physicians covering primary care specialties (such as family practice, general practice, pediatricians, internal Medicine, and emergency medicine) for consultations on clinically appropriate conditions (such as a cough, fever, or flu). Members can access services through a secure Internet connection or an application on their smartphone.

Telemonitoring. Through our strategic partnership with Telemedcare America (TMC) and First Quality Home Care (FQHC) we are developing a pilot to provide telehealth monitoring to members with the goal of reducing utilization and cost. The goals of this pilot program focus on improving outcomes and reducing costs for a selected group of 100 members who suffer from chronic

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

conditions of congestive heart failure (CHF), chronic obstructive pulmonary disease (COPD), and diabetes, for a six month period. Members will be monitored on an integrated model of service facilitated by TMC and FQHC in order to reduce hospitalizations and maintain control of chronic diseases through specific protocols.

3. MEASURING TIMELY ACCESS FOR SPECIFIED PROVIDER TYPES

The primary objectives of our Appointment Availability Audit program include:

- Helping improve the services provided to our members
- Providing quantifiable feedback regarding compliance with access and availability standards
- Assuring compliance with regulations set forth in our Contract with AHCA

We survey providers to determine the accessibility and availability of appointments for members. We currently assess the following appointment types:

- Urgent Care
- Routine Sick Care
- Well Care
- Initial Visit Routine Care
- Follow-up Routine Care
- Non-Life Threatening Emergent Care
- Prenatal First Trimester Care
- Prenatal Second Trimester Care
- Prenatal Third Trimester Care
- Wait Time

Under the new Contract, we will measure timely access against the revised standards set forth in Attachment B, VIII Provider Services, A.8 Timely Access Standards.

3.a. Average Wait Time for an Urgent Appointment

Using a Computer-Assisted Telephone Interviewing (CATI) methodology, we survey providers to determine the accessibility and availability of appointments for our members. Interviewers utilize a prepared script that identifies Clear Health as the health plan. We include scenarios for different appointment types in our scripting and tailor them to be appropriate for the type of provider being surveyed. Interviewers list multiple choice response options to help guide schedulers' answer format. We compare the response to our standards to determine compliance. We document verbatim comments during the call for additional review. We lace telephone calls placed during normal business hours.

We send out corrective action letters to noncompliant provider offices. These letters advise the office of the results of their audit along with access standards. We also include in the mailing a form that the provider must return within 30 days advising what action will be taken to meet the applicable access standard(s). Provider Network Managers reach out to assist providers in developing an action plan. Noncompliant providers are also re-audited to assure compliance. If a provider continues to be noncompliant, Provider Network Managers train providers on the proper protocol.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

3.a.1. Additional Monitoring of Behavioral Health Providers

Beacon Health Options (Beacon), our subcontractor for BH, performs additional auditing for their network providers. Beacon provider relations staff contact 100 percent of network prescribers (MDs, DOs, and ARNPs) each quarter and ask questions to determine the provider's ability to accommodate members. If a provider is unable to accommodate a member according to access standards, they assure the provider has an alternate plan in place to help members access care during urgent, emergent, and routine situations. Once the calls have been made to the prescribers, any changes that need to be made in the system are documented via their management information system.

In addition to contacting the provider network quarterly by telephone, Beacon's provider relations and quality improvement departments undertake additional monitoring activities to assure the Florida Medicaid provider network is accessible for members. Their quality improvement team also survey 100 percent of the provider network (including non-prescribers) via an online survey tool. This online tool gives providers the opportunity to self-report their availability to provide timely access to care and their plan if those standards cannot be met. This information is received by Clear Health quarterly. In the event there is a deficiency, the providers within the Beacon network are re-trained and audited for compliance. If a barrier is found after re-training and audit efforts, a Corrective Action Plan (CAP) will be issued. This assures that members have timely access to BH services that will meet their needs; timely opportunities for improvement are identified; and interventions are implemented to continually improve members' access to BH services.

3.b. Average Wait Time for a Routine Appointment

As described in section 3.a above, we survey providers to determine the accessibility and availability of appointments for our members. We notify any noncompliant providers and request an action plan to mitigate the deficiency. Our Provider Network Managers will offer assistance to problems in developing an action plan.

3.1. Other Methods Used to Monitor Compliance with Access Standards

We routinely monitor provider adherence to access standards through trending of member and provider complaint data. We accomplish this through real-time communication from our Member Services and Clinical teams to the Provider Relations team and assessed at monthly staff meetings. We also use annual member satisfaction surveys and provider satisfaction surveys to monitor access standards. We also continually monitor and act on information obtained through our Provider Relations, Case Management, Quality Management, and Marketing departments. We discuss this information at Gap Committee and QMC meetings.

Additional methods we use to monitor access standards include:

- Member Services data, which helps us identify potential compliance issues. For example, for each call we receive regarding a provider's inaccessibility, we contact the provider to investigate.
- Quality of Care and access concerns are investigated as part of our Quality Management program. We review the outcomes of Quality of Care reviews, including Peer Review Committee actions.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- HEDIS® scores and our HEDIS® hybrid process enables collaboration with providers to improve access and outcomes. Our staff reviews medical records for documentation, access to care, and quality of services during provider visits.
- Administrative data review and annual comprehensive analysis of access and availability includes analysis of administrative complaints, after-hours availability, survey information, appointment access statistics, Provider Call Center reports, Quest Analytics® reports, and provider satisfaction survey results. We use data from departments, such as Provider Contracting and Database Administration, Operations, Medical Management, and Quality Management in the analysis.
- Grievance and appeals data identify trends at an individual provider level.
- Each year, our Quality Management Department engages a qualified organization to administer the most current version of the Consumer Assessment of Health Care Providers and Systems (CAHPS®) survey that queries members on access to care among other key questions.

4. DEPLOYING RECRUITMENT EFFORTS

The Provider Relations department reviews future membership changes and our capacity to provide covered services by establishing ratios to guide growth. Provider Relations develops ongoing network recruitment strategies based on any identified gaps as well as enrollment modeling for future endeavors.

Adequacy reports are reviewed monthly, or ad hoc when a major network change has occurred. We also consider member services data, quality of care and access concerns, HEDIS® data, administrative data, comprehensive analysis of access and availability, grievance and appeals data, and satisfaction surveys. We review and monitor data in Gap Committee and QMC meetings.

We follow this process for all provider types including cardiologists, pulmonologists, endocrinologists, internists, psychiatrists, obstetricians/gynecologists. We monitor licensed mental health clinicians through our dedicated Florida-based Vendor Delegation Oversight Group (VDOG) which oversees and monitors subcontractor performance.

In addition to our monthly review of adequacy reports, we perform a formal network analysis on an annual basis (Network Development Plan) based on estimated membership for the upcoming year. This annual analysis includes Quest Analytics reports, as well as reports, by market from the Gap Committee, which identify network gap issues based on the tracking and tending that was done during the previous year. Should we identify a gap we immediately start recruiting to located needed providers. Network recruitment activities are ongoing until the gap is filled or until we have determined that there are no providers available to add to the network. Only after we have exhausted all possibilities to fill the gap do we submit a Waiver Request to AHCA.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

The Network Development Plan also takes into account the ease with which care is provided to the member by all providers (including those provided by our subcontractors) by monitoring the number of enrollee and provider complaints, reviewing utilization data to assure enrollees are being seen and assessing the willingness to work with us via interactions and meeting requests and correspondence.

**** SPOTLIGHT ON: Cold Call Brings a New PCP to Our Osceola Members**

Locating a PCP in the southern part of Osceola that meets time and distance standards can be a challenge. In an effort to improve member access and satisfaction, a Provider Relations Manager conducted a cold call field visit to a provider with a new office in Osceola. The provider, an internal medicine specialist, recently opened her practice after serving as a hospitalist. Clear Health was the first Medicaid HMO to contract with this provider who already had a Medicaid number. **

4.1. Recruitment Strategies

**** SPOTLIGHT ON: Opening a New PCP Location**

The need presented itself for an adult PCP in rural east Hillsborough County. We approached Dr. Camejo as he is a high-performing, high-quality network provider who has a Value Based Purchasing (VBP) contract. Clear Health collaborated with Dr. Camejo to fill the need by opening a new practice location in the underserved area, thereby improving member access and satisfaction. **

Our proven recruitment strategies include:

- Recruiting out-of-network providers to participate in our provider network through referral trends, PCP referrals patterns, completed out-of-network SCAs, new providers entering the market, and converting non-traditional managed care providers, and encouraging providers to enroll as Medicaid providers
- Reviewing other MCO provider directories, Facility Finder, Department of Health data, and other internet searches (for example Google) to locate non-participating providers
- Partnering with existing network providers to recruit and retain clinical staff, expand access through physician extenders, expand services in rural areas, offer additional services to address rural needs, and provide after-hours and weekend appointments
- Contracting with providers in adjacent counties to provide services to members
- Increasing the use of telemedicine service providers for members in rural Florida who may not have close access to specialists; in urban areas, where after-hours access to care may be needed to alleviate unnecessary use of emergency departments (EDs); or for members with limited mobility

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

5. THE EXTENT TO WHICH THE RETENTION EFFORTS OUTLINE THE APPROACH TO KEEPING PROVIDERS SATISFIED AND IN GOOD-STANDING WITH THE RESPONDENT

We value providers as allies who help us support members to live independently and thrive in the setting of their choice. Across Florida, we collaborate with providers in our network and support them with timely communications, effective and informative one-on-one training, user-friendly technical assistance, and proactive issue resolution to foster continuous improvement and high-quality care.

We have designed our provider engagement strategy to keep our provider partners satisfied. We value their input and incorporate their feedback into operations. Our experience shows us that providers appreciate frequent outreach and communication, ongoing education opportunities, technical assistance where and when they need it, prompt issues resolution, and provider incentives.

Clear Health is further sharpening our focus on quality by bringing together the best practices and innovative solutions of three Florida health plans that have recently merged to become one entity. Provider satisfaction scores were reported separately for each of the legacy plans comprising the new unified Simply. We are presenting the legacy Simply scores as an example of our Florida provider satisfaction scores.

For legacy Simply, 2016 overall satisfaction with the health plan was 100 percent, with 100 percent of respondents stating they would definitely or probably recommend the health plan to other provider offices. We gather and incorporate provider feedback to maintain our high satisfaction scores. The following areas received the highest satisfaction ratings:

- 99 percent of responding providers expressed satisfaction with the quality of our health education and wellness promotion services for members.
- 99 percent of responding providers are satisfied with our credentialing process.
- 98 percent of responding providers were satisfied with the information provided in the provider manual, as well as communication provided via letters and faxes, received a composite score of 95 percent. The highest scoring item was the provider manual with a 98 percent satisfaction rating.
- 95 percent of responding providers expressed satisfaction with the authorization and appeals processes. The authorization and appeals processes received a composite score of 95 percent. Respondents were satisfied with the various avenues for requesting an authorization, the timeliness of the process, and the clarity of the review decisions.
- 95 percent of responding providers expressed satisfaction with claims. The Claims area received a composite score of 95 percent, which included four components: claims processing accuracy, timeliness, helpfulness of staff when resolving a claims issue, and claims review and/or appeal.
- 94 percent of responding providers were satisfied with Provider Relations. Provider Relations received a score of 94 percent, which included satisfaction with the response time and provider education conducted by this area.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

5.1. Provider Outreach and Communications for Programmatic Changes.

We use various methods to outreach and communicate with providers in our network including our provider website, provider manual, newsletters, blast faxes, bulletins, ongoing training, and technical provider assistance delivered online, by telephone, and in-person by our Provider Network Managers. Methods to communicate programmatic changes include provider visits by our Provider Relations staff, workshops, and in-service presentations by Clear Health employees, broadcast faxing, provider mailings, provider web demonstrations and web tutorials, and secure email. In the case of planned programmatic changes, we notify providers at least 30 days prior to the change. Our provider website houses current policies and procedures and includes information specific to SMMC providers when appropriate.

5.2. Ongoing Provider Training

Clear Health providers regularly receive ongoing education through our Clear Health Training Academy, as well as through onsite visits, webinars, network bulletins, fax broadcasts, and resource documents posted to our provider website. We select training topics based on updates to State and federal regulations pertaining to Medicaid and CHIP, NCQA standards, Clear Health's policies and procedures, provider requests, and other relevant sources. The Academy offers a truly comprehensive approach to all provider training. It incorporates multi-modality delivery processes (in-person, online courses, tailored webinars, written materials) for trainings and mechanisms for monitoring, alerting, and reporting on compliance and completion of trainings.

We encourage providers to participate in our intentional training program. This program encompasses four key strategies: 1) integrated care training based on a library of offerings specific to each type of provider, 2) specific training libraries and content related to population-driven health needs, 3) practices of excellence recognition programs that recognize providers for their additional knowledge and management of specific conditions, and 4) trainings related to specific contract requirements, HEDIS® measures, and NCQA requirements.

Training is specific to provider type and tailored to meet the particular needs of regional providers. Sessions give providers program and regulation updates, information on industry and care trends, new ways to improve member outcomes, recommendations for simplifying administration, information that can impact performance, and enhancements to our services and programs.

5.3. Technical Provider Assistance

Our regional Provider Relations staff work with providers to deliver specialized, high-touch training and assistance. They meet with providers in person at convenient locations, explaining processes for authorizations, use of electronic systems, credentialing, needs assessments, policies and procedures, claims issues, and any other technical assistance required. Our provider call center offers specialized assistance to new providers.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

5.4. Provider Issue Resolution

We are deeply committed to assuring providers receive timely and accurate issue resolution. Clear Health has frontline Provider Services staff available to assist providers with day-to-day issues. In addition, our regionally-based Provider Relations staff lead the resolution of issues from beginning to end. They are embedded in the local community and meet with providers face-to-face to understand and coordinate the resolution of any issues, share best practices, and continuously refine our provider issue resolution processes. They also coordinate and provide training to providers who are struggling with issues, and provide research and coordination of claims resolution by working with our Florida claims resolution team to reprocess claims for providers who are experiencing special circumstances. We log and track all provider issues in our centralized database.

We also maintain a dedicated, toll-free Provider Services call center for appropriate and timely responses to questions, concerns, and other issues related specifically to the SMMC program. Representatives are available during business hours to assist providers with enrollment, service authorizations, and reimbursement questions. Clear Health provides after-hours services, in which providers can contact so we can assist with any urgent matter that may arise.

5.5. Provider Incentives

6. THE TRANSPARENCY OF QUALITY AND/OR PERFORMANCE METRICS

Collaboration and engagement between providers and our organization is essential to effectively meet the challenges of improving health care for low-income and underserved individuals. Our Provider Network Managers are embedded in the regional communities, meeting face-to-face with providers to build trusting, open communication and develop collaborative relationships. They collaborate with providers to improve the effectiveness and efficiency of their practices and to identify opportunities for improving care and service.

Our Provider Network Managers are in the community meeting face-to-face with providers. We support providers with actionable data (gaps in care reporting, HEDIS® care alerts, prescriptions, lab results, and more to help identify and address barriers to accessing care and services) they can use immediately to make sure members are getting the right care, at the right time, and in the right place.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

6.1. Clear Health Performance Management Reports.

Clear Health provides actionable performance and utilization data to all PCPs and Medicaid Physician Incentive Program (MPIP) participating providers monthly whether or not they are participating in one of our other VBP programs. In addition, each Provider Network Manager is responsible for reviewing monthly reports for their assigned PCPs. They compare current results to the previous month and review the results with the PCP during their monthly visit.

6.1.1. Alternative Access to Performance Metrics

For providers that do not participate in the VBP agreements, we offer access to the Performance Metrics via Financial Recovery Group (FRG), a web-based software program. FRG provides performance targets, measures gains, member dashboard, provider scorecards, inpatient census, ED reporting, HEDIS® care gaps, member opportunities, pharmacy reporting, readmission reporting, institutional outpatient and professional claims detail, last PCP visit by member, specialty referral patterns, and individual member utilization. In addition to FRG, we also provide a secure FTP site for delivery of the PCP roster by location, inpatient concurrent census, Child Health Check-Up (CHCUP) care gap report, and monthly HEDIS® report. We provide CHCUP care gap and HEDIS® reports monthly to the provider by mail.

We also use our data sources to monitor providers across our network for completion rates of key services. For example, we monitor completion rates for EPSDT and HEDIS® services. Through our Case Management System, all providers have quick access to longitudinal data for each member.

6.1.2. Clear Health's Case Management System

Our Case Management System is available on-demand to all providers through our secure provider website, so that providers have electronic access to member data. It enables providers to access a single view that displays member data in an easy-to-navigate dashboard, including HEDIS® care alerts, authorizations, prescriptions, and claims organized by type, such as inpatient, ED, and office visits. The system, updated daily, also serves as our primary method for sharing member case management information, including health needs screenings and individualized plans of care.

6.2. Access to Financial Management and Performance Reports

For providers who participate under our Shared Savings / Risk-based programs, in addition to the data and reports described above, providers have access to our robust suite of financial management and performance reports. Providers can pull a variety of reports to meet their data needs through FRG, our secure FTP site. This site includes the following data is available to providers:

- Monthly capitation report with member detail in excel format
- Daily inpatient census report with member detail in excel format
- Daily roster of membership assigned to PCPs

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

- Cumulative financial summary of group which includes stop loss and IBNR
- Cumulative report detailing all capitation paid to vendors and PCPs
- Cumulative report detailing all claims paid on behalf of members assigned to the PCPs
- Cumulative report detailing all revenue and major expenses of members assigned to the PCPs
- Cumulative financial summary of PCP which includes stop loss and IBNR
- Report listing every part D Medicare member of the contract and provides details about the payments and adjustments made for each member
- Data file version of the risk adjustment model output report - Hierarchical chronic conditions

6.2.1. Provider Care Management Solution

Provider Care Management Solution (PCMS). PCMS is available to Florida providers who participate in our Provider Quality Improvement Program (PQIP) program. PCMS allows providers to see actionable, member-specific information to help identify members who need outreach and engagement, as well as care gaps that may impact a provider's performance. PCMS provides real-time information; including alerts, icons, hover overs, drop downs, and drill-through to support population health management. PCMS has the ability to filter patient populations by key conditions, risk factors, gaps in care, and visit history. PCMS, updated daily, provides real-time availability for providers on demand.

PCMS uses alerts, icons, hover-overs, drop-downs, and drill-through functionality to help providers identify actionable, member-specific information that supports their population health management efforts, including patient outreach and engagement activities that may impact a provider's performance. Providers can use PCMS filters to stratify their patient populations by key conditions, risk factors, gaps in care, visit history, ER utilization, inpatient admissions, and readmissions. Below we provide a description of just some of the data available through PCMS, including the Care Opportunities Dashboard and the ER Visits View.

Care Opportunities Dashboard: PCMS provides information about a provider's attributed members who are found to have care opportunities—active or potential gaps in care associated with recommended evidence-based care and our clinical quality metrics. We alert providers about members due for a particular service or treatment based on a specific condition or measure. The Care Opportunities by Condition dashboard provides a graphic representation of the members attributed to the provider group who have opportunities for the specific condition.

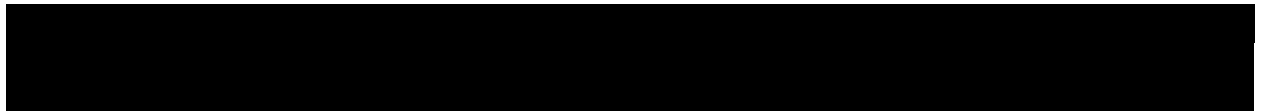

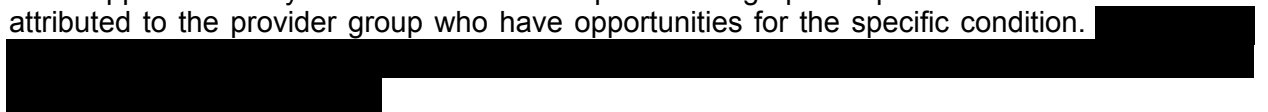

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The adequacy of the respondent's methodology for identifying and resolving barriers and network gaps; including ongoing activities for network development based on identified gaps and future needs projection.
2. The adequacy of the respondent's plan to meet the needs of enrollees if it is unable to provide the service within its provider network; including immediate, short-term and long-term interventions.
3. The adequacy of the respondent's approach for measuring timely access for the specified provider types and the extent to which the respondent's approach includes clear methodology for determining the following:
 - (a) Average wait time for an urgent appointment; and
 - (b) Average wait time for a routine appointment.
4. The extent to which the recruitment efforts outline the frequency and specific measures to be used to track the need to deploy recruitment activities for the provider types listed.
5. The extent to which the retention efforts outline the approach to keeping providers satisfied and in good-standing with the respondent.
6. The extent to which the quality and/or performance metrics it will use to gauge progress toward the Agency goals are transparent to providers, including the frequency with which providers will be able to access their progress.

Score: This section is worth a maximum of 40 raw points with each of the above components being worth a maximum of 5 points each.

5 additional points will be awarded to respondents who demonstrate that providers shall have real-time access to their progress in achieving quality and/or performance metrics.

Annual Network Plan

The mission of Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health) is to expand and simplify access to coordinated health care services for enrollees (members) and beneficiaries in government-sponsored programs. We will enable members to achieve optimal health through an outstanding network of providers and high-touch, local customer service delivered with the highest level of respect and service.

As Florida's largest HIV/AIDS specialty plan, Clear Health has extensive experience and qualifications in contracting and servicing networks designed to meet the special needs of this population. We recognize that to develop and maintain a high quality network to serve the HIV/AIDS Medicaid population our company must have the respect and trust of the community.

We know from experience that an integrated provider engagement model is critical to ongoing success. Everyone at Clear Health shares responsibility for interacting with providers in a way that drives superior results and outcomes. All areas within our organization (such as Member Services, Utilization Management, Case Management, Pharmacy, Claims, Quality Management, HEDIS®, and Medical Economics) work with providers to make sure they have the information, tools, and ongoing support necessary to achieve the best outcomes for our members and reduce providers' administrative burden. Across Florida, we support providers with timely communications, effective and informative one-on-one training, user-friendly technical assistance, actionable data and analytical support, and proactive issue resolution to foster continuous improvement and high-quality care.

We understand that a network of high-quality providers is key to improved member outcomes, positive member experience, and appropriate utilization of services. We have designed our engagement model to move providers along the value-based continuum, providing support to advance them through the array of value-based services.

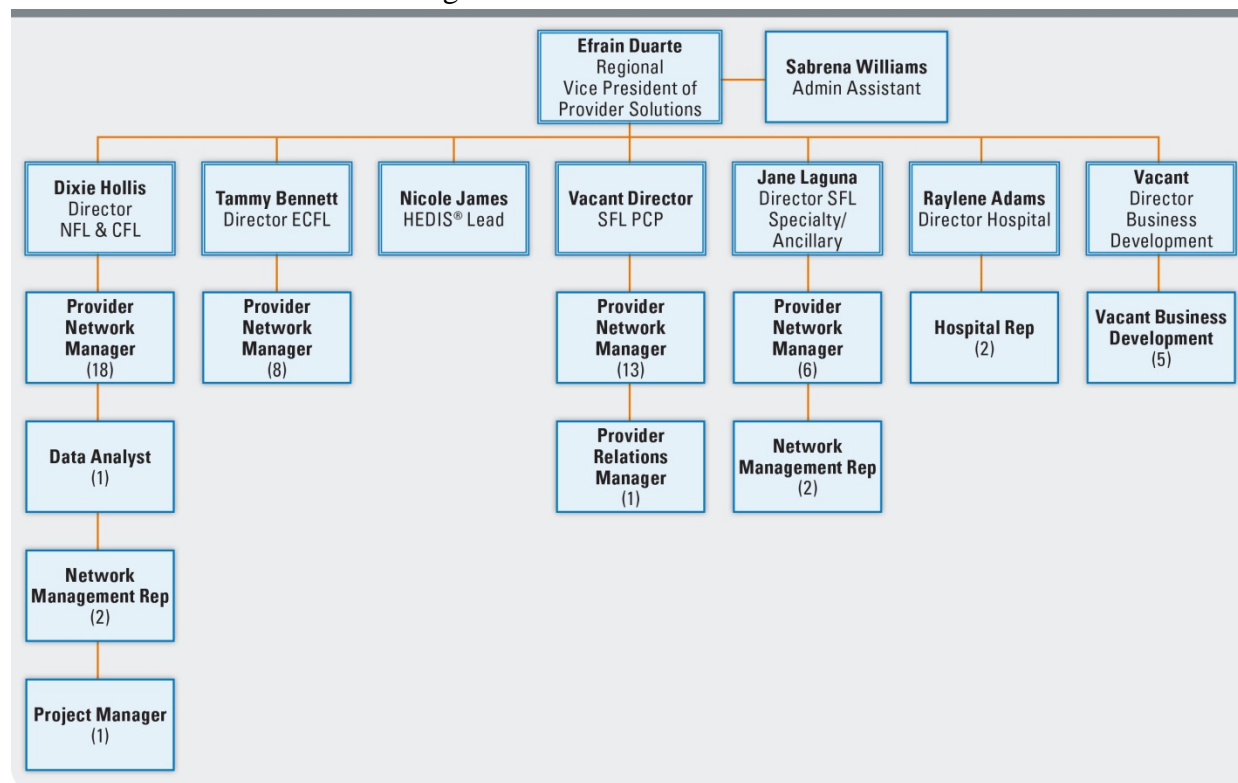

We have developed a provider recruitment strategy and message of inclusivity and collaboration, and have actively provided education and support for the providers who serve our population. Clear Health has built an extensive HIV/AIDS Medicaid network in Florida, establishing close relationships with primary care providers (PCPs), specialists, county health departments, Federally Qualified Health Centers (FQHCs), Regional Health Clinics (RHCs), and teaching institutions. We have been able to recruit PCPs and specialists in infectious disease, cardiology, dermatology, rheumatology, gastroenterology, and endocrinology who have experience in treating patients with HIV disease to become Medicaid providers and contract with us.

We have developed an intimate understanding of the unique needs of members with HIV/AIDS and the providers needed in their treatment and care. We allow family practice, general practice, pediatric, internal medicine, and infectious disease providers to serve as PCPs. An obstetrician may also serve as a PCP for a pregnant member, if that obstetrician meets criteria for HIV expertise and is willing to participate as a PCP. This broader definition has enabled us to lower member-to-provider ratio requirements to facilitate more frequent and more comprehensive interaction with the members.

We provide an enhanced level of support to network providers we designate as red ribbon providers. They have specialized HIV/AIDS training and are designated by a red ribbon beside their names in our provider directory, which informs members of their additional specialized HIV/AIDS care and treatment competency. Our red ribbon program is nationally recognized and a testament to our person-centered model of service and support.

Clear Health has established a Network Development and Management Plan (“Annual Network Plan”). It demonstrates our processes for developing, maintaining, and monitoring the Medicaid provider network. We will continue to submit the plan to the Agency every year by September 1.

Our Florida Provider Relations organization chart is included below

FL_CHA_DeliverySysOrg_60_Org_1.1

Provider Relations Approach

Clear Health’s collaborative provider engagement strategy transforms health care delivery, creates an integrated system of care, and drives improved access and health outcomes for our members. Our success is anchored by our local, hands-on approach. We meet providers where they are and have been trusted partners through changes in programs, policy and benefits, demographics, cultural needs, and public health initiatives. Our provider engagement model brings us together with our providers by leveraging data, insights, and technology for a common objective – delivering the right care at the right time in the right place.

We embed Provider Network Managers in the regional communities, meeting face-to-face with providers to build trusting, open communication, and develop collaborative relationships. They

collaborate with providers to improve the effectiveness and efficiency of their practices and identify opportunities to improve care and service. By analyzing quality metrics, utilization trends, and reports for care opportunities, Provider Network Managers help providers coordinate care and create action plans to manage costs and improve quality, performance, and our members' experience while encouraging them to adopt practice management strategies that work for top-performing peers.

Our network management strategy, with its focus on reducing administrative burden and allowing providers more time to take care of our members, includes the following:

- On-demand technical assistance to help providers succeed, such as proactively contacting them if we identify possible submission errors through ongoing claims review
- Proactive education, delivered by a team of professionals focused on Medicaid products, that addresses the specific needs of providers in our network
- Assistance for providers at the point-of-care through actionable information using a variety of delivery methods to help manage members' care, including notifying providers of care gaps through online clinical alerts; providing periodic gaps in care reports for their assigned members; and providing access to our Case Management System that displays HEDIS[®] care alerts, prescriptions, lab results, and more to help identify and address barriers to care and services
- Sound reimbursement practices, including prompt and accurate claims payment and innovative incentive programs that reward providers for improvements in quality measures, leading to improved outcomes
- Practices to simplify and minimize administrative burden, including technology solutions such as online claims and prior authorization submission
- Ongoing collaboration with providers to improve member outcomes
- Educating PCPs on identifying members with behavioral health (BH) needs, including Screening, Brief Intervention, and Referral to Treatment (SBIRT)

Across Florida, we collaborate with network providers and support them with timely communications, effective and informative one-on-one training, user-friendly technical assistance, and proactive issue resolution to foster continuous improvement and high-quality care. Our regionally based Provider Relations staff is located in local communities throughout the state. They know their local communities and the providers in those communities, and they are able to meet face-to-face to build trust, open communication, and collaborative relationships.

A. Processes to Develop, Maintain and Monitor Network

Clear Health maintains an appropriate provider network sufficient to provide adequate access to all services covered under the SMMC MMA Contract. We build our network to reflect the health care needs of our Florida members and our development approach reflects our understanding of the population's unique characteristics as described below.

1. Development

- Clear Health considered the following elements (as required by 42 CFR 438.206) when we established the provider network:

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

1. The anticipated number of members
 2. The expected utilization of services, taking into consideration the characteristics and health care needs of the specific Medicaid population represented
 3. The numbers and types (in terms of training, experience, and specialization) of providers required to deliver the covered services
 4. The numbers of network providers who are not accepting new members
 5. The geographic location of providers and member, including distance
 6. Travel time, the means of transportation ordinarily used by members and whether the location provides physical access for Medicaid members with disabilities
- Clear Health developed our plan for each region by determining network gaps. We use various means to regularly monitor the network and identify any barriers and gaps in care. Our Gap Committee is the primary method for reporting identified gaps in the network and making sure they are resolved. Our Directors are responsible for resolving network gaps and are accountable for any delays. The Gap Committee meets quarterly with department representatives from Member Services, Medical Management, Quality Management, Health Services, Provider Relations, Grievances and Appeals, and Delegation Oversight
 - Each of these departments tracks and trends member or provider disputes with access to covered services, whether it is appointment availability or a lack of a necessary specialty type in the network. We also track and trend claims and encounter data to identify peaks and valleys that could indicate a provider is at capacity and identify those underutilized to investigate why Clear Health members are not seen at expected rates for that provider type. Data from all of these sources is aggregated and prioritized based upon the impact, number of affected members, and urgency of the requested services. Documented minutes of each GAP Committee meeting include accountable individual and estimated dates for issue resolution for follow-up. Gap Committee meetings result in a prioritized list for the Provider Relations department and, when necessary, a recruitment list for each Provider Network Manager. Provider Relations reports recruitment updates to the Gap Committee and difficulties in high-impact areas are escalated to the Regional Vice President of Provider Solutions for resolution assistance.
 - In addition, we consider the wishes of current providers in our network. When new providers join our network, we ask for their preferred referral specialists and providers and proactively add those to the recruitment list. This preserves the new provider's established referral patterns and supports continuity of care for assigned members. Additionally, as the Provider Network Manager meets regularly with providers, we continue to request information on referral specialists to keep current with changes and new providers who may have started practice in the community.

2. Maintaining

To maintain our network, Clear Health reviews data from various sources and takes action based on provider or membership changes, including:

- When members report access issues or complaints about providers, they are tracked and trended by the source department, reported to the Gap Committee and Quality Management (QM) department, and included in the providers' recredentialing review.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

- When Clear Health recognizes a network gap, we identify prospects in the affected area and work to close the gap and address the barrier by negotiating a contract with nearby providers of that specialty as a long-term intervention. During the contracting and negotiation process, we will execute a letter of agreement (LOA) or single-case agreement to meet the needs of members in that region who may require those specialty services. This is a short-term intervention, because our ultimate goal is to fully contract and credential the providers.
- Clear Health monitors any future membership changes and our capacity to provide covered services. We are also responsive to new gaps and adjust network recruitment strategies accordingly.

3. Monitoring

- Adequacy reports and Quest Maps are presented quarterly to the Gap Committee, and more frequently as an ad hoc report when a major network change occurs
- The Gap Committee performs an annual formal network analysis (Annual Network Plan) based on estimated membership for the upcoming year. This analysis includes reports from directors. Reports reflect any new trend identified in the market, gaps, and the closure of any gaps or issues identified in the previous year's Network Development Plan
- Clear Health takes into account the accessibility and availability of our contracted ancillary providers, such as Beacon (BH), DentaQuest (dental), ESI (pharmacy), EyeQuest (vision), contracted hospitals, and specialty providers. This is accomplished through the review of member and provider complaints, Quest Analytics access reports, and quality management and utilization reports
- In addition, Clear Health meets regularly with contracted ancillary providers to review their performance and service standards. Our Director of Statewide Ancillary Contracting and the Subcontractor Oversight Director are included in these meetings.
- The Subcontractor Oversight team is responsible for the contracts and service overviews of all subcontractors. Ancillary providers and subcontractors are held to the same standards that Clear Health is required to uphold. Compliance with standards is determined via pre-delegation audits and annual audits thereafter. Standards must be met to continue participation in our network. We hold monthly meetings with each subcontractor to address deficiencies, concerns, and issues, and discuss intervention strategies, as necessary, to remedy the situation.

Provider Relations employees diligently monitor network adequacy, anticipates future needs, and promptly identify gaps to make sure that members have access to care and we continue to meet AHCA standards. We use our proven techniques to monitor and evaluate our network and seek input from various sources (members, providers, AHCA, and other stakeholders) to make sure our members have access to care when and where they need it.

We identify gaps in our provider network and collaborate with the AHCA to improve access, encouraging providers to enroll as Medicaid providers. We submit regular and ad hoc provider network reports in accordance with AHCA requirements.

Other Data Sources Used to Monitor Access to Care

In addition to Quest Analytics reports, we use a number of other data sources to monitor access to care and quality of services including:

- **Secret shopper phone calls** are used to collect data from providers in our network regarding appointment availability and access to care, including hours of operation and after-hours availability. We document provider responses to confirm compliance, identify potential quality improvement opportunities, and make sure our system contains accurate information for the provider directory
- **Routine appointment waiting times.** We also consider routine appointment waiting times. Every quarter, we survey a statistically sound sample across our network to identify appointment standards and access to services for PCPs, specialists, and BH providers
- **Member services data** identifies potential compliance issues. For example, if we receive repeated calls regarding a provider's inaccessibility, we contact the provider to investigate
- **Quality of Care and access concerns** are investigated as part of our Continuous Quality Improvement (CQI) program. We review the outcomes of Quality of Care reviews, including Peer Review Committee actions
- **HEDIS® scores.** The HEDIS® hybrid process enables collaboration with providers to improve access and outcomes. Our staff reviews medical records for documentation, access to care, and quality of services during provider visits
- **Administrative data review and annual comprehensive analysis of access and availability** includes analysis of administrative complaints, after-hours availability, survey information, appointment access statistics, provider help line reports, Quest Analytics access reports, grievance and appeals data, and provider satisfaction survey results. The analysis includes data from various departments, such as Provider Contracting, Operations, Medical Management, and Quality Management
- **Grievance and appeals data** identify trends at an individual provider level
- **Member satisfaction surveys.** Each year, our Quality Management department engages a qualified organization to administer the most current version of the CAHPS survey that queries members on access to care and other key questions

Any findings of provider non-compliance with access and availability standards will result in interventions, focusing on helping improve performance. We may work with providers to extend their office hours or expand their practices, or we may recalibrate the member-to-PCP assignments to maximize our network capacity.

B. Network Design by Region and County for the General Population

Clear Health is a Medicaid Specialty Plan for people living with HIV/AIDS. Our network includes all Florida regions, except Region 4.

When developing and reviewing the network in each region, Clear Health considers the member population type, its culture, language needs, members' limited resources and education, as well as the availability of providers in the region and access to them. This member population is

composed of Medicaid-eligible children and adults of all ages, which include low-income families, persons with limited resources, Aged, Blind, and Disabled persons, and others.

The population requires specialty provider types with the education and experience serving and treating individuals diagnosed with HIV/AIDS, related disease complications, and co-morbidities. The population also requires BH providers with experience treating individuals with HIV/AIDS and Medicaid.

There are regions in Florida with limited access to certain providers, requiring Clear Health to develop strategies that include access to providers in adjacent regions. This may exceed travel time and distance access standards required in the Contract, and require transportation to these providers.

Clear Health currently serves approximately 9,500 members in our active regions (as of August 2017). The regions vary between very rural and urban areas, with some regions having a mix. The recruitment and contracting was a challenge in regions with rural counties and much easier for the larger urban areas. By having contracts with providers in the larger urban area, we identified patterns of care to enable a member to obtain services when none are available in their area.

Our statewide network for the following identified providers includes:

- Cardiologists (pediatric and adult): 1,102 providers
- Pulmonologists (pediatric and adult): 402 providers
- Endocrinologists (adult): 244 providers
- Internists (adult): 1,043 providers
- Psychiatrists (pediatric and adult): 799 providers
- Obstetricians/Gynecologists (adult): 925 providers
- Licensed mental health clinicians (pediatric and adult): 1,880 providers

Our network also includes the following identified providers by region:

Region 1 includes Escambia, Okaloosa, Santa Rosa, and Walton Counties. Our network for Region 1 also includes:

- Physical therapy (pediatric): 39 providers
- Speech-language pathology services (pediatric): 24 providers
- Occupational therapy (pediatric): 26 providers
- Private duty nursing services (pediatric): 57 providers
- Intermittent skilled nursing (pediatric and adult): 12 providers
- Early intervention services: 64 providers
- Specialized therapeutic foster care: 1 provider
- Compounding pharmacies: 1 provider

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

Region 2 includes Bay, Calhoun, Franklin, Gadsden, Gulf, Holmes, Jackson, Jefferson, Leon, Liberty, Madison, Taylor, Wakulla, and Washington Counties. Our network for Region 2 also includes:

- Physical therapy (pediatric): 22 providers
- Speech-language pathology services (pediatric): 21 providers
- Occupational therapy (pediatric): 4 providers
- Private duty nursing services (pediatric): 73 providers
- Intermittent skilled nursing (pediatric and adult): 18 providers
- Early intervention services: 28 providers
- Specialized therapeutic foster care: 1 provider
- Compounding pharmacies: 1 provider

Region 3 includes Alachua, Bradford, Citrus, Columbia, Dixie, Gilchrist, Hamilton, Hernando, Lafayette, Lake, Levy, Marion, Putnam, Sumter, Suwanee, and Union Counties. Our network for Region 3 also includes:

- Physical therapy (pediatric): 59 providers
- Speech-language pathology services (pediatric): 59 providers
- Occupational therapy (pediatric): 21 providers
- Private duty nursing services (pediatric): 71 providers
- Intermittent skilled nursing (pediatric and adult): 30 providers
- Early intervention services: 81 providers
- Specialized therapeutic foster care: 25 providers
- Compounding pharmacies: 1 provider

Region 4 includes Nassau, Baker, Duval, Clay, St. Johns, Flagler, and Volusia Counties. Our network for Region 4 also includes:

- Physical therapy (pediatric): 26 providers
- Speech-language pathology services (pediatric): 14 providers
- Occupational therapy (pediatric): 40 providers
- Private duty nursing services (pediatric): 117 providers
- Intermittent skilled nursing (pediatric and adult): 86 providers
- Early intervention services: 17 providers
- Specialized therapeutic foster care: 4 providers
- Compounding pharmacies: 3 providers

Region 5 includes Pinellas and Pasco Counties. Our network for Region 5 also includes:

- Physical therapy (pediatric): 41 providers
- Speech-language pathology services (pediatric): 48 providers
- Occupational therapy (pediatric): 12 providers
- Private duty nursing services (pediatric): 142 providers
- Intermittent skilled nursing (pediatric and adult): 33 providers
- Early intervention services: 28 providers
- Specialized therapeutic foster care: 1 provider

- Compounding pharmacies: 3 providers

Region 6 includes Hardee, Highland, Hillsborough, Manatee, and Polk Counties. Our network for Region 6 also includes:

- Physical therapy (pediatric): 109 providers
- Speech-language pathology services (pediatric): 218 providers
- Occupational therapy (pediatric): 78 providers
- Private duty nursing services (pediatric): 145 providers
- Intermittent skilled nursing (pediatric and adult): 60 providers
- Early intervention services: 25 providers
- Specialized therapeutic foster care: 5 providers
- Compounding pharmacies: 5 providers

Region 7 includes Seminole, Orange, Osceola, and Brevard Counties. Our network for Region 7 also includes:

- Physical therapy (pediatric): 61 providers
- Speech-language pathology services (pediatric): 37 providers
- Occupational therapy (pediatric): 42 providers
- Private duty nursing services (pediatric): 313 providers
- Intermittent skilled nursing (pediatric and adult): 149 providers
- Early intervention services: 12 providers
- Specialized therapeutic foster care: 3 providers
- Compounding pharmacies: 6 providers

Region 8 includes Charlotte, Collier, Desoto, Glades, Hendry, Lee, and Sarasota Counties. Our network for Region 8 also includes:

- Physical therapy (pediatric): 30 providers
- Speech-language pathology services (pediatric): 44 providers
- Occupational therapy (pediatric): 47 providers
- Private duty nursing services (pediatric): 113 providers
- Intermittent skilled nursing (pediatric and adult): 19 providers
- Early intervention services: 13 providers
- Specialized therapeutic foster care: 11 providers
- Compounding pharmacies: 8 providers

Region 9 includes Indian River, Okeechobee, St. Lucie, Martin, and Palm Beach Counties. Our network for Region 9 also includes:

- Physical therapy (pediatric): 64 providers
- Speech-language pathology services (pediatric): 25 providers
- Occupational therapy (pediatric): 12 providers
- Private duty nursing services (pediatric): 7 providers
- Intermittent skilled nursing (pediatric and adult): 20 providers
- Early intervention services: 9 providers

- Specialized therapeutic foster care: 4 providers
- Compounding pharmacies: 4 providers

Region 10 includes Broward County. Our network for Region 10 also includes:

- Physical therapy (pediatric): 117 providers
- Speech-language pathology services (pediatric): 147 providers
- Occupational therapy (pediatric): 105 providers
- Private duty nursing services (pediatric): 312 providers
- Intermittent skilled nursing (pediatric and adult): 204 providers
- Early intervention services: 189 providers
- Specialized therapeutic foster care: 3 providers
- Compounding pharmacies: 1 provider

Region 11 includes Miami-Dade and Monroe Counties. Our network for Region 11 also includes:

- Physical therapy (pediatric): 166 providers
- Speech-language pathology services (pediatric): 258 providers
- Occupational therapy (pediatric): 169 providers
- Private duty nursing services (pediatric): 522 providers
- Intermittent skilled nursing (pediatric and adult): 183 providers
- Early intervention services: 15 providers
- Specialized therapeutic foster care: 30 providers
- Compounding pharmacies: 3 providers

Provider recruitment efforts are ongoing. We anticipate contracting with all available providers prior to rollout. We will continue to deploy innovative strategies in rural areas, including encouraging providers to open additional locations; extend the hours of established practices; and use mid-level practitioners, BH coaches, and other physician extenders to increase capacity. We will implement telemedicine solutions where appropriate to support the population. Below we describe our process for identifying and mitigating network gaps.

Early Intervention and Specialized Foster Care

Early intervention and specialized foster care are currently accessed through Florida's Early Steps System. Clear Health network providers are experienced in early intervention and specialized foster care services. In fact, our network providers currently render services through Florida's Early Steps System. They understand the needs of medically complex infants and toddlers.

Our network is capable of offering services to the family and child in the community and is designed to maximize participation and development. We are able to meet these specialized needs in the office or home through our provider network and home health services. Beacon offers specialized therapeutic services through Community Mental Health Centers CMHCs. We continue to recruit additional providers to make sure our network has all the necessary capabilities to meet the needs of this population.

Private Duty Nursing and Intermittent Skilled Nursing

Regionally, there are no gaps for home health. The challenge in the more rural areas is for home health nurses to be able to cover the travel distance between members.

We have collaborated with home health providers in our network to increase capacity to mitigate this issue. We have worked hard to establish ongoing, preferential relationships with home health providers. These relationships, which foster a higher level of service and availability, include frequent and open communication. In many cases, it has resulted in enhanced levels of staffing at the home health agency. We offer additional compensation to support home health providers and make sure members get the care they need when they need it.

Clear Health focuses on MMA provider training, network expansions, delivering member access to care, and provider encounter data collection and submission. This last year, we continued the focus on improving processes for measuring our provider network performance. With the availability of prior years' claims data experience and two full MMA years of HEDIS[®] data, Clear Health was better equipped to review collected encounter data and establish network provider performance measures. Using this data and provider-specific performance measures, we identified providers who performed better than their peers in care management, health outcome measures, HEDIS[®] quality measures, CHCUP scores, medical record reviews, and other measures such as re-admission rates, emergency department (ED) visits, and cost saving.

This past year, Clear Health set higher benchmarks and gave providers tools and strategy training aimed at improving health outcomes.

Inpatient Census Report. We learned that giving providers a daily inpatient report increased the rate of timely follow-up visits after admission, expedited and addressed the treatment of high-risk conditions, and prevented readmission. Providers need to know when their members receive inpatient care. One successful initiative is the delivery of an inpatient census report that informed PCPs of a facility admission for members assigned to them. We found that keeping providers informed of inpatient care is critical to overall care of the member and improving health outcomes. Clear Health implemented the automatic delivery of the inpatient census report to high-volume PCPs and we are in the process of rolling this out to the remaining PCP network.

PCP Panel Report. Clear Health continued to deliver the PCP Panel report through our provider portal. This report provides PCPs a list of members in their panel and their contact information. We expect providers to perform outreach to all members and schedule an appointment for a health screening and evaluation.

HEDIS[®] Dashboard Report. Clear Health continued to send the HEDIS[®] Dashboard report, providing PCPs with their performance measure rates. This report helps providers identify the procedures to be rendered to the members on their panel.

PCP Capitation Reports. This year, Clear Health identified a gap between our fee-for-service and capitated providers. The percent of encounters received from capitated providers was very low.

To mitigate the issue, we sent high-volume providers their capitation reports and checks together to make sure PCPs were aware of our members to improve the health of everyone in their panel.

While consistently maintaining our contractual network requirements, Clear Health strives to continue to foster close relationships with providers who demonstrate quality care, good utilization patterns, better quality outcomes, and cost savings.

Overall, the Clear Health network is very tightly knit because of the sensitivity in treating people with HIV/AIDS. Our case management team has developed relationships with community resources and clinics in each county and has thoroughly identified the pattern of care for each member. They communicate closely with organizations to identify new providers moving into the area that can deliver services to our members.

Section J of the Network Development and Management Plan provides additional details on network status.

C. Evaluation of Prior Year

Below is a description of the evaluation of the prior year's plan, including an explanation of the method used to evaluate the network and reference to the success of proposed interventions and/or the need for re-evaluation:

1. Clear Health uses Quest Analytics reports to determine availability and evaluate the network. The Quest Analytics Software includes the MMA Contract-defined access standards to make sure the network is reviewed against AHCA standards. We also conduct a PCP wait time survey for the purpose of accessibility analysis.
2. Clear Health reviews individual provider performance measure data upon recredentialing, as well as member complaints, risk management issues, quality reviews, and other key indicators identified in credentialing policies and procedures.
3. Section J of the document provides details of the prior year and Section K provides supporting reports.

D. Description of the Current Status of the Network

1. How Members Access Services

Members receive covered Medicaid and expanded services through our network of providers, specialists, facilities, and ancillary providers. They are able to locate participating providers using the following methods:

- A printed directory available to each member at no charge by calling the Member Services line or accessing the member website
- A provider directory available on the member website, searchable by name, specialty type, county, and zip code
- A call to the Member Services line to request assistance or a printed copy of the directory

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

- A call to a Case Manager or Disease Manager (when enrolled in a case or disease management program) for help locating a provider and arranging care
- The ID card that identifies the name of members' PCPs and phone number to call should the member have any questions about accessing care
- New member welcome calls upon becoming Clear Health members, making sure they have a PCP, as well as explaining how to access care when needed. This process also helps us identify members who would benefit from case or disease management
- An after-hours Nurse help line where members can interact with a nurse who helps them with advice and recommendations for seeking treatment aided by decision support software
- Opportunities for members to communicate with us at all approved community outreach events, as well as through our Mobile Medical Units staffed by licensed providers

In addition, PCPs receive training and education during onboarding that reviews how members access services. PCPs also receive a list of specialty and ancillary providers so they may assist members in the selection, when necessary.

2. Analysis of Timely Access to Services

On an annual basis, Clear Health conducts PCP wait time and after-hours surveys to monitor network accessibility. We conduct initial audits in the spring and re-audits of noncompliance in the fall. For those in a Case or Disease Management program for medically complex cases, the Case Manager (Managed Care Coordinator) will help schedule the member's first visit. We also provide PCPs a monthly roster of new members they can use to initiate contact to schedule their first visit.

The status of the network is monitored quarterly through review of Quest Analytics reports and analysis of their trends and data. Reviews of Internal Ratio network reports and Agency Ratio network reports occur every other week to assure ongoing compliance with MMA contract requirements. (In the annual submission to the State, we will include our Current Network Status report.)

3. Partners

Relationships between the various levels, focusing on provider-to-provider contact and facilitation for PCPs, specialists, hospitals, as well as BH providers, assisted living facilities (ALFs), and home health agencies.

During the recruitment and network maintenance process, determining the relationship between the PCPs, specialists, and facilities within an area is crucial to identifying patterns of care. As mentioned above, when a new physician joins our network, we request a list of preferred referral specialists and facilities and proactively add them to the recruitment list. Not only does this help maintain established referral patterns in the area, it also supports continuity of care for members. The local Provider Relations team meets regularly with network providers to stay current with changes in the area and facilitate relationships between all entities involved with the provision of care to our members.

4. Communication Tools

The assistance and communication tools provided to PCPs when they refer members to specialists and the methods used to communicate availability of this assistance to the providers.

We give all providers a provider handbook when they join the network. Clear Health has a website and provider portal, both used to furnish resources necessary for delivering care to our members. We send fax blasts and policy updates on an ongoing basis to communicate new information or remind providers of a process or change. These communications are typically also available on the website. We advise providers of all available resources during initial training, ongoing education, and through their assigned Provider Network Manager. Each year, we send providers a CD with updated documents for their review and a reminder to visit our websites.

E. Current Barriers and Network Gaps

1. The Methodology Used to Identify Barriers and Network Gaps

Clear Health uses various methods to regularly monitor the network and identify barriers and gaps in care. As mentioned earlier, the Gap Committee is the primary means of reporting identified gaps in the network and confirming that they are resolved. Directors are responsible for resolving the network gaps and held accountable for any delays. Experience has shown that network gaps are one of the primary reasons for member dissatisfaction and voluntary disenrollment. As a result, we have a detailed and proactive process to address network gaps with a heightened sense of urgency.

The quarterly Gap Committee meetings incorporate all departments that interact with network providers and members, such as Member Services, Health Services, Grievances and Appeals, and Provider Relations. The different departments bring results of their reviews of network issues, access challenges, and member and provider complaints to the meetings. We review, aggregate, and analyze data from all of these departments to identify issues and determine the root causes. We develop interventions to resolve issues and gaps and prioritize the implementation of each strategy based upon the number of impacted members, as well as the urgency of need for the services or provider. Meeting minutes track anticipated completion dates, responsible parties, required follow-up, and final resolution of issues.

2. Accommodating Additional Members and Assuring Access Standards Compliance

If our membership exceeds our current network's capacity, we use several methods to deliver access to the services members need, including:

- Communication to current network providers about their ability to service more members
- Coordinating transportation for members to see necessary specialty providers that are not available in their area
- Recruiting out-of-network providers to participate in our network
- Referring members to out-of-network providers for care via a single-case agreement

3. Immediate Short-term Interventions to Address Network Gaps

To resolve a gap or barrier using a short-term intervention, Provider Network Managers outreach to a qualified provider or specialist able to offer the needed services and work to negotiate a

letter of agreement (LOA) or a single case agreement. We provide education on how to interact with Clear Health while the member is under his or her care.

4. Long-term Interventions to Fill Network Gaps and Resolve Barriers

A long-term intervention would consist of closing a gap or barrier by negotiating a contract with a qualified provider or specialist in the county or region able to offer the services needed.

We make sure member needs are met and covered services are provided, even if we are unable to deliver the service within our provider network. We will cover medically necessary services in an adequate and timely manner by using providers and services that are not in our network. We maintain a standard process to resolve these issues in an expedited manner.

Our process includes communication of the issue and resolution time requirements to the team, as well as an escalation to senior management if it appears the issue will not be resolved prior to the deadline. The Regional Vice President of Provider Solutions is ultimately accountable for resolution in a timely manner.

Various departments may identify issues and each department has a method to escalate to the appropriate Provider Relations staff. The issue is communicated verbally and in writing. The Provider Relations Director assigns a representative to negotiate a single-case agreement or LOA, guaranteeing reimbursement of services to out-of-network providers while we are unable to provide the medically necessary covered services within our network. If it appears that the issue will not be resolved in a timely manner, it is escalated to the Vice President of Provider Relations for resolution. Issues that cannot be resolved are escalated to the President and CEO and Chief Medical Officer.

In addition to the measures taken to coordinate care for the member, we also coordinate and facilitate transportation when needed.

5. Outcome Measures/Evaluation of Interventions to Fill Network Gaps and Resolve Barriers

We monitor and evaluate interventions using an interdisciplinary model that includes all necessary departments. All information is reported to the Gap Committee that develops performance measures and monitors progress until resolution. Each measure and outcome is specific to the issue, region/county, and line of business. The Gap Committee considers issue indicators when developing outcome measures, evaluation, and time frames.

6. Projection of Changes in Future Capacity Needs, by Covered Service

The Provider Relations department reviews membership changes, projects growth, and reviews our capacity to provide covered services using internal ratios and MMA contractual requirements to confirm compliance with network adequacy. The team is also charged with developing ongoing network recruitment strategies based on current gaps, as well as enrollment projections. The Gap Committee reviews adequacy reports quarterly or ad hoc when a major network change occurs. In addition, the Gap Committee performs a formal network analysis annually and

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

prepares a Network Development and Management Plan based on estimated membership for the coming year. This annual analysis includes Quest Analytics reports that identify network gap issues from tracking and trending done during the previous year. The Network Development and Management Plan also takes into account the ease in which care is provided to members by network ancillary providers (such as BH, dental, and specialty providers) by monitoring the number of member and provider complaints, reviewing utilization data to confirm that members are being seen, and assessing willingness to work with the plan through interactions and meeting requests correspondence.

7. Ongoing Activities for Network Development Based on Identified Gaps and Future Needs Projection

Each Gap Committee meeting results in a prioritization list that is assigned to the Provider Relations department and a recruitment list for each Provider Network Manager. Provider Relations reports recruitment updates to the Gap Committee each month and escalates recruitment difficulties in high-impact areas to the Vice President for resolution.

F. Committees

The Gap Committee promotes communication and coordination among internal departments pertaining to network development and adequacy. The committee consists of representatives from Member Services, Quality Management, Health Services (including utilization, case, and disease management), Grievances and Appeals, and Provider Relations, with each presenting on behalf of his or her department. Issues are tracked and trended, and short- and long-term interventions are developed and monitored to completion. The Gap Committee reports network findings, performance metrics, corrective action plans (CAPs), and all other pertinent information to the Quality Improvement Committee and Compliance Committee.

G. Description of Coordination with Outside Organizations

Clear Health maintains a community presence by working closely with local organizations. We support our relationships with these partners through frequent outreach and visits to offer pertinent health care information and resources. During these visits, we focus on methods to inform members of their health care options, provide educational materials, and offer updates of various community events. Our objective for outreach is creating an open forum to obtain feedback from the community in the form of questions, concerns, and suggestions pertaining to situations they may be encountering. This enables us to better address members' concerns and offer further support to our community.

Clear Health works closely with community organizations that also service our members. We contract with Rural Health Clinics (RHCs), FQHCs, and County Health Departments (CHDs). We also have an agreement with the Statewide Healthy Start Coalition to provide outreach and educational services to our pregnant members. In addition, we work closely with the Florida Assertive Care Teams (FACT) and the PAC AIDS Waiver programs to provide care for our most vulnerable members. We refer them to these and other identified community organizations to assist with the coordination of additional non-Medicaid covered and wrap-around services available to them.

While working with community organizations, we are also able to obtain leads on providers who serve the population for recruiting opportunities.

H. Continuity of Care Waiver

A. Per the MMA Contract, if Clear Health is able to demonstrate to the Agency's satisfaction that a region as a whole is unable to meet network requirements, the Agency may waive the requirement at its discretion in writing. However, as soon as additional service providers become available, we shall augment its network to include such providers in order to meet the network adequacy requirements.

Clear Health is committed to providing a complete network for each of its MMA regions. In certain situations, such as rural counties where providers may not be available, we will approach AHCA to request a waiver. We will also make all attempts to accommodate the member with providers in adjacent regions and provide transportation when needed.

In addition, following the implementation of the MMA Program, the Agency began issuing quarterly Facility/Group/Organization Waivers applicable to specific regions and counties. We monitor the providers, facilities, groups, and organizations in each region and county to make sure that we contact any new qualified entities that come into the market and add them to our network when possible.

B. If Clear Health is unable to provide medically necessary services to a member through its network, we will cover these services in an adequate and timely manner by using providers and services that are not in the Clear Health network for as long as needed to provide the medically necessary services.

As mentioned previously in this document, we make sure the needs of members are met and covered services are provided, even if we are unable to provide the service within our provider network. In those cases, we will cover the services in a timely manner using providers and services outside of the network. We have a standard process to resolve these issues in an expedited manner.

Our process includes communication of issue and resolution time requirements to the team, as well as an escalation process to senior management if it appears the issue will not be resolved prior to the deadline. The Regional Vice President of Provider Solutions is ultimately accountable for resolution in a timely manner.

Issues may be identified within various departments and each has a method to escalate to the appropriate Provider Relations employee. The issue is communicated verbally and in writing. The Provider Relations Director assigns a representative to negotiate a single-case agreement or LOA, guaranteeing reimbursement of services to out-of-network providers while we are unable to provide the medically necessary covered services within our network. If it appears that the issue will not be resolved in a timely manner, the issue is escalated to the Regional Vice

**2017 ANNUAL NETWORK DEVELOPMENT AND
MANAGEMENT PLAN**

President of Provider Solutions. Issues that cannot be resolved are escalated to the President and CEO and Chief Medical Officer.

In addition to the measures taken to coordinate care for the member, Clear Health will also coordinate and facilitate transportation when needed.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

I. Regional Network Change Requirements

A. Clear Health has procedures to address changes in the network that negatively affect members' ability to access services, including access to a culturally diverse provider network.

In the annual submission to the State, we will include our most recent policy for handling and reporting regional network changes.

B. Clear Health will provide the Agency documentation of compliance with access requirements at any time there has been a significant change in regional operations that would affect adequate capacity and services, including the following:

1. Changes in Managed Care Plan services
2. Enrollment of a new population

In the annual submission to the State, we will include our most recent policy for handling and reporting regional network changes.

C. Clear Health will notify the Agency within seven business days of any adverse changes to its regional provider network. An adverse change is defined as follows: For MMA, adverse changes to the composition of the network that impair access standards as specified in the MMA Exhibit.

In the annual submission to the State, we will include our most recent policy for handling and reporting regional network changes.

D. Significant changes in regional network composition that the Agency determines negatively impact member access to services may be grounds for Contract termination or sanctions as determined by the Agency and in accordance with Section XI, Sanctions.

In the annual submission to the State, we will include our most recent policy for handling and reporting regional network changes.

If at any point during our regular network analysis we identify a change that affects the ability of members to access services, we will immediately notify the Agency. The notification will include information on how we will accommodate the members impacted by the change and make sure covered services will continue to be rendered, including access to a culturally diverse provider network and translation services. We report adverse changes to the Agency within seven days when the change causes more than five percent of members in the region to change their PCP or when there is a decrease in the total number of PCPs by more than five percent. We also provide an impact analysis to the Agency whenever changes in services are made, when there are adverse changes, and upon request.

J. Regional Network Analysis

1. Challenges and Barriers

Region 1

Region 1- Hospital or Facility with Birth/Delivery Services and Hospice.

Some of the major challenges/barriers revolve around the sensitivity of the patient population that we serve and how this population impacts other patients and/or clients. Providers in some of these areas feel they do not have adequate resources and time to manage the patients. This issue is more evident in many of these rural counties because there are limited or no providers. There are many providers who have refused to contract with the Plan as a result of the potential risk factors. We continue our efforts to contract with providers to develop and maintain a complete and comprehensive network.

Our network is currently lacking in respiratory therapy (RT) therapy in each county. The cause of this gap, the same as has been described to the Agency in the past, is that therapists work for facilities and will not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and NPIs are not always available for this provider type. We continue efforts to contract respiratory therapists.

Region 2

Region 2 – Hospital or Facility with Birth/Delivery Services, 24/7 Emergency Facilities, Licensed Community Substance Abuse Treatment Centers, Home Health Agency, Assisted Living Facility, Hospice, Nursing Home.

Our network meets or exceeds the provider capacity ratios in all specialties except respiratory therapy (RT). Our network is currently lacking in RT therapy in each county. The cause of this gap, the same as has been described to the Agency in the past, is that therapists work for facilities and will not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and NPIs are not always available for this provider type. We continue efforts to contract respiratory therapists.

Some of the major challenges/barriers revolve around the sensitivity of the patient population that we serve and how this population impacts other patients and/or clients. Providers in some of these areas feel they do not have adequate resources and time to manage the patients. This issue is more evident in many of these rural counties due to the fact that there are limited or no providers. There are many providers who have refused to contract with the plan as a result of the potential risk factors. We continue our efforts to contract with providers to develop and maintain a complete and comprehensive network.

Allergy – the number of allergists is limited in the region. We continue to search for new providers in the area. Based on the placement of these clinics, time and distance cannot cure all counties within the region.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

Dermatology – the plan was able to locate 13 within the region of which the health plan has nine and continues efforts to contract the remaining. Based on the placement of these clinics time and distance cannot cure all counties within the region.

Endocrinology – the Plan was able to locate 12 within the region of which the health plan has five and continues efforts to contract the remaining. Based on the placement of these clinics time and distance cannot cure all counties within the region.

Podiatry – the Plan has built out the podiatry network based on clinics within the region. The required ratio is higher than what exists in the County.

Pulmonology – the Plan has built out the pulmonology network based on clinics within the region. Based on the placement of these clinics time and distance cannot cure all counties within the region.

Rheumatology – the Plan has built out the rheumatology network based on clinics within the region. Based on the placement of these clinics time and distance cannot cure all counties within the region.

Urology – the Plan has built out the urology network based on clinics within the region. The required ratio is higher than what exists in the County.

Region 3

Region 3 – Hospital or Facility with Birth/Delivery Services, 24/7 Emergency Facilities, Assisted Living Facilities, Hospice, and Licensed Community Substance Abuse Treatment Centers, Nursing Home, Home Health Agency.

Some of the major challenges/barriers revolve around the sensitivity of the patient population that we serve and how this population impacts other patients and/or clients. Providers in some of these areas feel they do not have adequate resources and time to manage the patients. This issue is more evident in many of these rural counties due to the fact that there are limited or no providers. There are many providers who have refused to contract with the Plan as a result of the potential risk factors. We continue our efforts to contract with providers to develop and maintain a complete and comprehensive network.

Our network meets or exceeds the provider capacity ratios in all specialties except respiratory therapy (RT). Our network is currently lacking in RT therapy in each county. The cause of this gap, the same as has been described to the Agency in the past, is that therapists work for facilities and will not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and NPIs are not always available for this provider type. We continue efforts to contract respiratory therapists.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

Region 4

The counties in region 4 are considered Metro with an abundance of providers in the area, including various Medical schools and centers. However, due to the competitive nature of the region, maintaining reasonable negotiated rates is a challenge.

Our network meets or exceeds the provider capacity ratios in all specialties except respiratory therapy (RT). Our network is currently lacking in RT therapy in each county. The cause of this gap, the same as has been described to the Agency in the past, is that therapists work for facilities and will not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and NPIs are not always available for this provider type. We continue efforts to contract respiratory therapists.

Region 5

The network for Region 5 is robust, with the exception of Hospice facilities and Home Health Agency in the region (currently only one). The area is urban and the Plan experienced less challenges in identifying providers willing to treat members diagnosed with HIV/AIDS.

The Agency has issued Facility/Group/Organization Waivers for Hospice facilities applicable to certain counties in the region.

Our network meets or exceeds the provider capacity ratios in all specialties except respiratory therapy (RT). Our network is currently lacking in RT therapy in each county. The cause of this gap, the same as has been described to the Agency in the past, is that therapists work for facilities and will not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and NPIs are not always available for this provider type. We continue efforts to contract respiratory therapists.

Region 6

The Plan has encountered some geographical barriers in certain counties in this region, and a lack of specialties serving this area.

The Agency has issued Facility/Group/Organization Waivers for Hospital or Facility with Birth/Delivery Services, 24/7 Emergency Facilities, Hospice, Licensed Community Substance Abuse Treatment Center, Adult Family Care Home, and Home Health Agency, applicable to certain counties in the region.

Provider Type	Required Provider Description	Required Amount	Contracted	Comments:
200	Hospital or Facility with Birth/Delivery Services	10	15	Hardee County has zero licensed facilities in the County.
201	24/7 Emergency Service Facility	10	14	Hardee County has zero licensed facilities in the County.
915	Hospice	10	8	Hillsborough and Manatee Counties only have one facility licensed in the County.

**2017 ANNUAL NETWORK DEVELOPMENT AND
MANAGEMENT PLAN**

905	Licensed Community Substance Abuse Treatment Centers	10	12	Hardee County only has one licensed facility in the County.
965	Home Health Agency	10	8	Hardee County has zero licensed facilities in the County.

Our network meets or exceeds the provider capacity ratios in all specialties except respiratory therapy (RT). Our network is currently lacking in RT therapy in each county. The cause of this gap, the same as has been described to the Agency in the past, is that therapists work for facilities and will not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and NPIs are not always available for this provider type. We continue efforts to contract respiratory therapists.

Region 7

The network for Region 7 is robust. The Agency has issued waivers for Hospice, Adult Day Care Center, and Home Health Agency. The makeup of the community is urban with the exception of Brevard County that has certain rural areas to the north; however members do have access to providers within Network Adequacy Standards.

Our network meets or exceeds the provider capacity ratios in all specialties except respiratory therapy (RT). Our network is currently lacking in RT therapy in each county. The cause of this gap, the same as has been described to the Agency in the past, is that therapists work for facilities and will not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and NPIs are not always available for this provider type. We continue efforts to contract respiratory therapists.

Region 8

Region 8 is challenging due to the rural counties located in this region and the lack of providers in the vicinity.

The Agency has issued Facility/Group/Organization Waivers for Hospital or Facility with Birth/Delivery Services, 24/7 Emergency Facilities, Adult Day Care Center, Assisted Living Facilities, Hospice, Licensed Community Substance Abuse Treatment Centers, and Home Health Agency applicable to certain counties in the region.

Our network meets or exceeds the provider capacity ratios in all specialties except respiratory therapy (RT). Our network is currently lacking in RT therapy in each county. The cause of this gap, the same as has been described to the Agency in the past, is that therapists work for facilities and will not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and NPIs are not always available for this provider type. We continue efforts to contract respiratory therapists.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

Region 9

We have been successful in identifying and contracting providers willing to see our members in this region; however, the region is a difficult one for finding providers willing to treat patients diagnosed with HIV/AIDS. We encountered hesitation from facilities in which we are currently deficient in due to the complexity HIV members would require. The population is composed of an elderly population and the network has developed in a way support those demographics. There is one provider that specializes and treats the bulk of our membership in this area to which we have established very good case management communication to facilitate access to care.

The Agency has issued Facility/Group/Organization Waivers for Hospital or Facility with Birth/Delivery Services, 24/7 Emergency Facilities, Adult Day Care Center, Adult Family Care Home, Assisted Living Facilities, Hospice, and Nursing Home applicable to certain counties in the region.

Our network meets or exceeds the provider capacity ratios in all specialties except respiratory therapy (RT). Our network is currently lacking in RT therapy in each county. The cause of this gap, the same as has been described to the Agency in the past, is that therapists work for facilities and will not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and NPIs are not always available for this provider type. We continue efforts to contract respiratory therapists.

Region 10

It is an urban area with a vast amount of providers in the required specialties. However, due to the competitive nature of the region, maintaining reasonable negotiated rates was and continues to be a challenge. The Plan currently is experiencing challenges with the development of an ST/PT/OT network as the majority of therapy providers in the region are employed by facilities that do not require that they obtain a Medicaid provider number. The challenge has been in the Plan's receipt of the completed and signed Medicaid Provider Registration Forms from the therapist. Our subcontractor, HN1 assists us by ensuring their providers are appropriately registered when submitted to the Plan.

Our network meets or exceeds the provider capacity ratios in all specialties except respiratory therapy (RT). Our network is currently lacking in RT therapy in each county. The cause of this gap, the same as has been described to the Agency in the past, is that therapists work for facilities and will not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and NPIs are not always available for this provider type. We continue efforts to contract respiratory therapists.

Region 11

Our network development efforts consider the cultural needs of our membership in all regions; however due to the vast cultural diversity within Miami-Dade County, we worked to ensure that the provider network is reflective of the demographics of the community. The network consists

**2017 ANNUAL NETWORK DEVELOPMENT AND
MANAGEMENT PLAN**

of providers who are fluent in Spanish and Creole. The South Florida market also demonstrates strong relationships between the PCP and members due to the amount of PCPs available in this county. We have contracted a large network of PCP's to accommodate our enrollees and ensure continuity of care. In such a large metropolitan area, case management is critical to treat enrollees with specialized care; the Plan prepared internally for this volume as well as developing relationships with groups of providers that treat many of our enrollees and develop the open communication needed for this population.

Specialists are limited in Monroe County and the Plan experienced challenges in contracting in this county. We have made transportation available to members as needed to assist with access to covered services. We contracted with the largest provider network in the area as well as many of the individual providers. The network of providers in this area is close knit and do not always welcome managed care plans. Repetition and persistence allowed us to secure the vast majority of PCP's in the area.

The Plan encountered many plan members in the county who are very transient with no stable place for housing, making health care less of a priority. Our Managed Care Coordinators have gone above and beyond trying to outreach to the members and "find" them. The strategy remains the same to outreach to these members as traditional mail and systems is not effective.

The Agency has issued Facility/Group/Organization Waivers for Hospital or Facility with Birth/Delivery Services, Adult Family Care Home, Home Health Agency, and Hospice.

We have low membership in comparison to our other health plans; therefore, we exceed the maximum enrollments levels for the Plan as we offer all providers all our products when contracting. The Plan does have some of the same waivers for facilities and issues for lack of providers in certain remote counties. The Plan checks facility finder quarterly to review waivers in the case a new facility may have opened in those counties.

The Plan does not have provider ratio issues but does have time and distance issues. Based on how the analysis is run, which is to be within range of our membership, some of our members live in very remote areas where we are not able to find a provider near them within guidelines. In these instances, we have identified patterns of care for the member and where they can obtain services, have made transportation available, and continue our recruitment efforts in case providers move into surrounding area.

We include in the following table the provider type and area where we have a waiver, as the specialty type is not found in the county.

Provider Type	Required Provider Description	Providers per Recipient	Recipients Serviced by Single Provider/Bed	Required Amount	Contracted	Comments
965	Home Health Agency	2 per county	n/a	2	1	Only 1 in Monroe County

The Plan is currently lacking in RT therapy in each county. The cause of this gap is the same as that described to the Agency in the past where therapist work in facility basis and not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and NPI's are not always available for this provider type.

Monroe has quite a few gaps due to the lack of specialist in the region and/or providers not accepting Medicaid. These patterns of care for members in Monroe is to use the providers in the southern region of Miami Dade. The Plan has also submitted most of the failing specialties in Monroe as a waiver request; we are pending response from the agency.

(In the annual submission to the State, we will include our SMMC Network Waiver Request Report).

(In the annual submission to the State, we will include our SMMC Network Waiver Request Report).

(In the annual submission to the State, we will include our SMMC Network Waiver Request Report).

2. Out of Network Usage

Clear Health manages and reviews out-of-network usage on a monthly basis and reports trending analysis to the Gap Committee every quarter. A review of the first three quarters of 2017 demonstrates low utilization of out-of-network providers. With membership less than 5,000, we averaged 29.1 LOAs for the year. There was no identified trend of LOA providers because services were approved as needed for all members. Integrated Home Care Services, Inc., (IHCS) a durable medical equipment, infusion therapy and home health provider, accounting for over 50 percent of our LOA volume. This was a result of contractual changes between providers in our network and IHCS.

Clear Health adds data to previous months' data to identify any high or low indicators. (In the annual submission to the State, we will include our LOA Statistics Report as reported to the Gap Committee).

3. Network Adequacy

Clear Health uses Quest Analytics to determine time and distance network adequacy based on the ratio and time and distance requirements per specialty required under the Contract. Traditionally, ratio and time and distance analysis were generated from software called Geo Networks. Although Geo Networks and Quest perform the same functions, we could not replicate the Agency's result using Geo Networks. To adequately monitor contract requirements, we purchased Quest Analytics, the same software currently used by the Agency and CMS, allowing consistent monitoring and reporting of our networks. We run analysis bi-weekly and reported every quarter to the Gap Committee and before a significant provider termination to confirm adequate coverage.

Requests for waiver are submitted to the Agency using the approved template, including detail around ratio and time and distance waiver requests and details on geographic and provider make-up of the area. (In the annual submission to the State, we will include our SMMC Network Waiver Request, Gap Committee Minutes, and Quest analysis).

4. Member Experience

The Grievance and Appeals department also provides analysis to the Gap Committee. A review of 2017 complaints and grievances did not identify trends specific to any provider type. The highest percentage of Medicaid grievances is for access to care at 36.9 percent, due partially because of dissatisfaction with Medicaid limits. This is consistent with the highest percentage of appeals, which are for Medicaid deny, and limit authorization. Unfortunately, although we educate members on the reasons for denial, it leads to grievances and perceived issues with quality of customer service.

Our Member Advisory committee (MAC) assures a mechanism is in place for obtaining member input into our QI Program and its priorities. This includes receiving member feedback on the provider network and their satisfaction with the network. In the past year, the MAC did not present any network concerns to the Gap Committee. The MAC meets at least annually for each line of business. (In the annual submission to the State, we will include our Medicaid Grievance and Appeals Log).

In addition, Clear Health makes sure that National **Standards** for Culturally and Linguistically Appropriate Services in Health and Health Care (CLAS) measures are met for the member population with emphasis on languages. Clear Health currently meets the language requirements for our population. Our monitoring and results report provides information over the past year. (In the annual submission to the State, we will include our Cultural Competency report.)

The MAC assures provider offices are maintained in line with facility requirements. Providers must receive a passing site visit prior to initial credentialing and maintain compliance, which is verified no less than every three years.

5. Provider Complaints

Provider complaints are presented and analyzed each quarter at our Gap Committee. Depending on the issue, short- or long-term interventions are discussed.

A review of the provider complaints received in the second quarter of 2017 demonstrated an increase in the number of complaints related to claims payment and service authorizations. A review of the complaints did not reflect any significant trends as to the cause of this increase, because there were multiple complaint types. We continue to monitor provider complaints related to claims and authorizations. (In the annual submission to the State, we will include our monthly Provider Complaint report.)

6. Provider Survey

Clear Health greatly improved our provider satisfaction survey method in 2016. We increased distribution of surveys by 70 percent with the help of a new subcontractor, Morpace. This

allowed us to obtain valuable and actionable data to create effective action plans. We list a few of the initiatives below, and we include action plans as part of our supporting documents.

The survey was distributed to 1,000 providers. We conducted the annual survey using a mixed mode methodology (mail, telephone, and Internet). The initial mailing in March 2017 consisted of a cover letter, self-addressed envelope, and survey. The letter informed providers of the option to complete the survey online. A second survey was mailed in April 2017 to all providers who had not returned the original survey. In May 2017, provider offices that had not responded to the survey were called and the survey conducted telephonically. Two hundred and fifty-seven surveys were completed for a response rate of 25.7 percent. Morpace conducted a key driver analysis that identified items with the most significant impact on provider satisfaction and dissatisfaction. The results were presented to the Gap Committee who used the key driver analysis identify items needing an action plan.

The provider satisfaction survey tool measures the following:

- Claims processing and provider reimbursement
- Utilization Management
- Quality Management
- Disease Management
- Provider services
- Communication and technology
- Continuity and coordination
- Provider help line
- Complaint resolution
- Provider enrollment process

The results and analysis of the surveys were shared with the Provider Relations, Health Services, Claims, and Credentialing departments. Results were also presented to the Gap Committee, Quality Improvement Committee, and Board of Directors.

Strengths

Strengths are those items that have a high impact on providers' satisfaction and small room for improvement. The following five measures received the highest satisfaction ratings in the 2017 Provider Satisfaction Survey:

- Satisfaction with provider orientation and training process
- Satisfaction with the timeliness of information to coordinate care
- Satisfaction with the knowledge of the Provider help line staff
- Satisfaction with the helpfulness of the complaint resolution staff
- Satisfaction with the accuracy of information to coordinate care

Opportunities

Opportunities are areas that have the highest impact on the provider's overall satisfaction with and have the highest room for improvement. These items include:

- Rate the quality and effectiveness of general provider communications

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

- Rate the quality and effectiveness of the provider handbook
- Rate the quality and effectiveness of the provider newsletters
- Rating of the quality of case management services regarding continuity and coordination of care

We created a detailed action plan to address opportunities for improvement. (In the annual submission to the State, we will include our Provider Satisfaction Action Plan.)

7. HEDIS®

Clear Health prepares a full set of HEDIS® measures annually using the analysis and reporting of data collected through medical record review, claims, and encounter data (such as laboratory, pharmacy, and health care utilization). Network providers share health care data with us so that we can generate accurate and complete reports. As part of this annual data collection, the Quality Improvement department requests access to medical records and charts to abstract specific HEDIS® information.

Following NCQA technical specification, the HEDIS® Roadmap is the tool used to describe how information collection practices affect HEDIS® data reporting. The Roadmap provides preliminary information for the contracted auditor to conduct the audit.

We contract with a CMS and AHCA approved NCQA-certified HEDIS® audit firm or auditor.

HEDIS® reports are certified by the HEDIS® auditor, and the auditor must certify the actual file submitted to AHCA and CMS. The HEDIS® auditor is responsible for ensuring the HEDIS® production process adheres to the regulatory agencies requirements and specifications. The auditor is available to assist with the HEDIS® Roadmap development and completion. Onsite visits by the auditor to Clear Health occur at least annually.

Clear Health annually evaluates the HEDIS® and CAHPS results to determine the effectiveness of the Quality Improvement Plan, the quality of our network providers, and to identify opportunities for improvement, implement corrective actions and interventions such as provider and member education and outreach, and development of Performance Improvement and Quality Improvement projects.

We report the results of the evaluation and any interventions to the Quality Management Committee and Board of Directors.

Clear Health collects, analyzes, and reports quality performance measures as defined by the Agency. We also collect internal service performance data that measures the quality of service delivered to all members and providers. This includes data related to Member Services line phone metrics and problem resolution timeframes, member and provider complaints, grievances and appeals, utilization rates, authorizations, referrals, and claims processing time standards. These measures are reported, tracked, and trended through our quarterly Quality Improvement Committee meetings.

Clear Health also collects the following information:

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

- Access to care (such as Quest Analytics reports, appointment availability surveys, service and benefit utilization rates, and timeliness of referrals or treatment)
- Improvement in the member's health status such as quality of life indicators, depression scales, or chronic disease outcomes
- Comprehensive health assessment that includes accuracy of acuity stratification, safety indicators, or timeliness of initial assessments or annual reassessments
- Implementation of an individual plan of care (rate of participation by multi-disciplinary team members and beneficiaries in care planning)
- Use and adequacy of a provider network having targeted clinical experience via claims review, pharmacy claims, and diagnostic reports
- Delivery of add-on services and benefits that meet the specialized needs of the most vulnerable members (such as frail, disabled, or near the end-of-life)
- Provider use of evidence-based practices and or nationally recognized clinical protocols
- Effectiveness of communication, such as call center utilization rates, rates of beneficiary involvement in plan of care development, analysis of member or provider complaints

In the event of an ongoing failure by a provider to meet our health information standard, the provider-specific data is incorporated into the provider re-credentialing and re-contracting processes (or earlier, if necessary). During the HEDIS® session, 90 percent of providers were able to provide records to support the required measures. Please refer to the Provider Interventions section below that illustrates the steps taken by our Provider Relations team to outreach to the providers about required metrics and importance of capturing data.

We evaluate the results of the HEDIS® and CAHPS annually to determine the effectiveness of our disease management programs and case management activities. This evaluation process is part of a comprehensive system to track all quality improvement data and results to track member outcomes and experience of care.

We will develop and apply strategies to address the results. We may implement quality improvement strategies that include feedback to providers, regular prioritization of measures, and goals to ensure that the quality measures are appropriate for the member population.

The results of the evaluation and any interventions implemented are reported to the QMC and Board of Directors.

To allow members to be able to perform a reliable comparison of performance among different managed care plans, we publish HEDIS® measures results on our website.

(In the annual submission to the State, we will include our Quality Evaluation.)

An intervention process was identified to send providers their scores; it is currently being rolled out to the network.

8. Provider Specific Performance Monitoring

Clear Health monitors the quality and performance of each network provider. At the beginning of the Contract period, we will notify all network providers of the metrics we use to evaluate performance and determine continued participation in the network.

We monitor the quality and performance of participating providers, including the use of nationally accepted performance measures (HEDIS®) and use certified software to extract data and develop provider profiles by provider and measure.

In addition to HEDIS®, we use other measures of access to care and services, disease management and monitoring measures, as well as preventive services. We also address provider performance issues, including contract termination, when necessary.

Clear Health performs ongoing activities to monitor and improve provider performance, promote education, as well as promote improvements in the quality of care and services delivered by providers in our network.

We maintain two essential provider monitoring processes: Peer Review and Medical/Case Record Review.

In addition to the Peer Review and the Medical/Case Record Review, we perform the following provider monitoring activities:

- Provider profiling using HEDIS® accredited performance measures
- “Secret shopper” calls to providers
- Investigation and tracking potential Quality of Care concerns through complaint and occurrence reporting
- Monitoring access, availability, and cultural competence
- Monitoring continuity and coordination of care
- Monitoring appropriate utilization of services
- Promoting member safety
- Monitoring of subcontractors
- Member satisfaction survey and complaint analysis

9. Provider Interventions

Each month QM provides the Provider Relations department with a list of members who have not had a child health check-up in compliance with the periodicity schedule, sorted by enrollment date. Provider Network Managers discuss results from this report with providers, focusing on providers who have large lists of non-compliant members. We encourage providers to contact non-compliant members and attempt to schedule well-child visits.

We include provider education on CHCUP and dental screenings in the provider handbook and newsletters, as well as performed during onsite visits by Provider Network Managers and medical record reviewers. We send fax blasts to providers to remind them about non-compliant members and correct CHCUP coding requirements.

10. Appointment Access Times and After Hours

We conduct an Appointment Availability Survey quarterly and submit results to the Agency by February 1. The QI department audits using calls to PCP offices to verify compliance and provides the Provider Relations department with providers who need intervention or education because they are not meeting one or more standards. Failure to comply when re-audited may result in termination.

Providers were audited to determine the accessibility and availability of appointments for members. The Appointment Availability Survey was administered in two waves: PCPs and BH providers (8/17/16 through 8/30/16) and pediatricians (9/8/16 through 9/19/16). The following appointments types were assessed:

- (1) Urgent care
- (2) Routine sick care
- (3) Well care
- (4) Initial visit routine care
- (5) Follow-up routine care
- (6) Non-life threatening emergent care
- (7) Wait time

Interviewers utilized a prepared script that identified Clear Health during the call. The script included scenarios for each type of appointment and was tailored for the type of provider.

Interviewers listed multiple choice response options to help guide schedulers' answer format. Morpace compared the response to Clear Health's standards to determine compliance for each appointment type.

Telephone calls were placed during normal business hours: 8:30 a.m. to 5:30 p.m. EDT.

After-hours Surveys were conducted 8/17/16 through 8/26/16 weekdays between 5:30 p.m. and 9:00 p.m. Morpace surveyed a random sample of providers in the Florida providers in our network. Noncompliant providers from 2015 may be included in the random sample. Noncompliant providers from 2015 were re-surveyed in 2016, either as a part of the random sample or through census dialing all remaining noncompliant providers after the random sample quotas was achieved. Prior to dialing, Morpace "cleaned" the database so that there would be only one record for each phone number even though other providers shared the same number. After the survey was conducted, Morpace extrapolated the After-hours Survey data collected to all remaining providers at the same number. Because of this extrapolation, the total number of providers after extrapolation is greater than the actual number of surveys conducted.

In 2016, the Provider Appointment Access and After Hours Survey results performance standard of greater than 90 percent was met. (In the annual submission to the State, we will include analytics from a Gap presentation.)

11. Delegated Vendors

Clear Health retains sole responsibility for fulfilling SMMC Contract requirements. We are fully accountable for our subcontractors' performance, and will continue our successful Subcontractor Oversight Program. Clear Health will continue to oversee, monitor, supervise, and enforce Contract compliance, as well as promote frequent, open, and effective communication that emphasizes delivery of quality services to members.

Our dedicated Florida-based Vendor Delegated Oversight Group (VDOG) oversees and monitors subcontractor performance. Led by our Staff Vice President of Operations and System Solutions, VDOG includes four full-time dedicated staff. VDOG has support from executive leadership and departments across Clear Health, including Provider Relations, Compliance, Regulatory, Operations, Utilization Management, and Medical Management.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

VDOG assigns an Account Manager to each subcontractor to conduct day-to-day management, as well as oversight and review of subcontractor performance using tools such as the monthly Key Performance Indicator (KPI) report.

The Account Manager works in conjunction with Provider Relations to monitor the subcontractor's network development and ongoing network management efforts to confirm continued compliance with AHCA access and availability requirements.

For example, we receive a weekly add/termed provider report from each subcontractor in addition to their monthly full roster submissions. The weekly add/terms provider reports allow us to update our systems to have the most updated provider directory for our members.

In the event we have any concerns of gaps within the subcontractor networks, VDOG will immediately bring those gaps to the attention of the subcontractor and request for an updated roster to fill the gap or an action plan outlining efforts being taken to fill the gap. If the subcontractor is unable to fill the gap, we ask them to submit a waiver with all details of attempt to fill their gap.

Due to the unique nature of administering pharmacy benefits, the Pharmacy Performance Oversight Council will continue to monitor the performance of Clear Health's pharmacy subcontractor. This assures performance meets all regulatory and accreditation standards (such as NCQA, CMS, URAC, State, and federal regulations).

Subcontractor standards are established and must be met to continue participation in our network. Monthly meetings are held with each subcontractor to address any issues at the time or develop an intervention strategy to remedy the situation. Participation and support are items reviewed as part of our Annual Network Plan.

Clear Health engages our subcontractors with any changes that are or will be implemented. Our subcontractors are required to meet the same standards as network providers including network adequacy and education. Our subcontractors have established a series of provider trainings as well as other initiatives to improve the communication and knowledge of their providers.

Clearly defined expectations and consistent monitoring of performance against them is a key component of our Subcontractor Oversight Program. Clear Health executes written agreements with each subcontractor that detail the specific scope of services required, performance standards, service level agreements (SLAs), and reporting responsibilities. The agreements also specify the actions Clear Health will take to address inadequate or substandard performance, such as development of a CAP, use of sanctions, and termination. If at any time performance does not meet requirements, we take action and work closely with the subcontractor toward a resolution and a return to complete and ongoing compliance.

We outline specific SLAs for each function we delegate to the subcontractor. SLAs are never less stringent than those required by AHCA in the SMMC Program Scope of Services. If AHCA modifies a standard, we will amend the delegation agreement to reflect the change.

Clear Health also at times requires subcontractors to meet SLAs for areas that do not have a corresponding AHCA requirement. For example, Clear Health requires our transportation

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

subcontractors to meet an on-time performance metric, a standard that is not a current AHCA requirement. In addition, Clear Health sent subcontractors a survey to make sure they were addressing and reporting Access and Availability according to Contract requirements. All subcontractors explained their process and addressed compliance requirements. We will use the document in upcoming audits as part of the subcontractors' annual review.

We requested the following information:

1. Explain how you identify network gaps time/distance standards and availability when panels are closed
2. What strategies will you deploy to increase provider capacity to meet member needs where network gaps have been identified?
3. Describe how you ensure members receive timely access to services by measuring the time from when services are authorized to when they are received
4. What recruitment strategies and retention efforts are planned for each provider type and include quality and performance metrics used to determine provider's success?
5. What methodology is used to identify and resolve barriers for network gaps? Please also include strategies used to support ongoing monitoring activities for your provider network
6. How do you meet the needs of the member if you are unable to provide the service within your provider network? Please include your approach for long-term and short-term solution
7. What is the average wait time for an urgent appointment?
8. What is the average wait time for a routine appointment?

(In the annual submission to the State, we will include information on our vendors/subcontractors).

12. Telemedicine

Telemedicine services can play an important role in providing members with ready access to both physical health (PH) and behavioral health (BH) services. Telemedicine is used to support health care when the provider and member are physically separated. Telemedicine can also play an important role in expanding access for members in rural areas of Florida where certain specialties might not exist, as well as those in more urban areas of the state for after-hours access to care as an effective alternative to unnecessary use of the emergency department (ED), and for expanding access for members with limited mobility.

Clear Health will cover telemedicine consistent with Florida state regulations and Medicaid program requirements with respect to the provision of services via telemedicine. We will administer our telemedicine program in accordance with the telemedicine coverage provisions specified in the AHCA Standard Contract, including but not limited to the requirements related to technical safeguards, HIPAA, provider training, member choice, and fraud and abuse. We will comply with the telemedicine requirements specified in Attachment B, and will follow Florida Medicaid billing and reimbursement policies, as well as limitations, and restrictions on the provision of telemedicine.

Clear Health's telemedicine strategy is multi-faceted and designed to increase access to care in the above specialties as well as other services that support achievement of the Agency's goals. Our objective is to provide quicker and easier access to primary care, BH, and specialty services through telemedicine, and to address barriers related to travel, thereby reducing potentially preventable events (PPEs) and improving member health outcomes. Our strategies are designed to provide a comprehensive telemedicine solution and include:

Specialty Teleconsults. Through our strategic partnership with GlobalMed, we will address the lack of adequate access to specialty consultations in rural areas and regions with our innovative pediatric and adult specialty telemedicine consultation solution. We will offer access to telemedicine consultations with locally-based Florida-licensed in-network providers for primary care, and various specialties including cardiology, pulmonology, endocrinology, internal medicine, and licensed mental health clinicians and psychiatrists. We will use a two-way audio/video communication with a secure internet connection from a video-enabled device such as a computer, tablet, or smart phone and/or facilitated presentation site with integrated diagnostic equipment. Patients will have telemedicine access to specialist consultations from PCP offices and other provider-facilitated presentation sites. This capability will support multiple participants, allowing the patient, PCP, and specialist to all participate simultaneously in the telemedicine visit. The member could also engage in a provider visit from the comfort of their home making this process convenient for them. We will offer scheduling for specialty consultations at blocks of time during the week for various specialties and engage with our network providers and members to educate and create awareness of appointment availability. We will also establish strategically located and facilitated community-based outreach center (CBOC) presentation sites in rural regions and areas of the state where access to a PCP location is limited.

LiveHealth Online. Through LiveHealth Online (LHO), we will offer our innovative member-direct access solution for urgent care telemedicine. LHO facilitates online access through two-way audio/video technology to Florida-licensed, board-certified physicians covering primary care specialties (such as family practice, general practice, pediatricians, internal medicine, and emergency medicine) for consultations on clinically appropriate conditions (such as a cough, fever, or flu). Members can access services through a secure internet connection or an application on their smart phone.

Telemonitoring. Through our strategic partnership with Telemedcare America (TMC) and First Quality Home Care (FQHC) we are developing a pilot to provide telehealth monitoring to members with the goal of reducing utilization and cost. The goals of this pilot program focus on improving outcomes and reducing costs for a selected group of 100 members who suffer from chronic conditions of congestive heart failure (CHF), chronic obstructive pulmonary disease (COPD), and diabetes, for a six month period. Members will be monitored on an integrated model of service facilitated by TMC and FQHC in order to reduce hospitalizations and maintain control of chronic diseases through specific protocols.

K. Reports

In our submission of our Annual Network Plan to the State, we will include the most recent versions of reports and policies.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 6 – Provider Network Agreements/Contracts (Regional):

The Agency has identified some of the key network service provider types that will be critical in order for the respondent to promote the Agency's goals.

The respondent shall demonstrate its progress with executing agreements or contracts it has with providers in the region by submitting **Exhibit A-4-b-1**, Provider Network Agreements/Contracts (Regional):

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health) is building upon its existing Specialty Plan network in Region 1. Clear Health has successfully executed agreements/contracts with the key network service provider types (identified by the Agency in Exhibit A-4-b-1) that will be critical in order for the respondent to promote the Agency's goals in Region 1 including:

- Board Certified or Board Eligible Adult Psychiatrist: 31 agreements/contracts executed
- Board Certified or Board Eligible Child Psychiatrist: 6 agreements/contracts executed
- Cardiology: 49 agreements/contracts executed
- Cardiology (PEDS): 11 agreements/contracts executed
- Cardiovascular Surgery: 12 agreements/contracts executed
- Endocrinology: 10 agreements/contracts executed
- Endocrinology (PEDS): 3 agreements/contracts executed
- Internal Medicine: 55 agreements/contracts executed
- Obstetrics/Gynecology: 64 agreements/contracts executed
- Pulmonology: 20 agreements/contracts executed

The ratio percentage of agreements/contracts for each service provider type is 100%.

As required, Clear Health has submitted Attachment MMA SRC# 6-1: Exhibit A-4-b-1, Provider Network Agreements/Contracts, which demonstrates our progress with executing agreements or contracts with providers in Region 1.

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

Evaluation Criteria:

For each service provider type the respondent may receive up to 20 points as described below. Points for each service provider type will be awarded as outlined in the table below:

Percentage of agreements/contracts for each service provider type	Points
0.0%	0
1.0% - 25%	5
25.1%- 50%	10
50.1%- 75%	15
75.1% or greater	20

Score: This section is worth a maximum of 240 raw points based on the above point scale.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 7 – MMA Physician Incentive Program (MPIP) (Statewide):

The Agency has designed the MMA Physician Incentive Program with the expectation that Managed Care Plans should be able to increase compensation for physicians, using funds achieved through savings from effective care management, as specified by Section 409.967(2)(a), Florida Statutes. The respondent shall describe its plan for ensuring physician compensation rates are equal to or exceed Medicare rates for MMA covered services. Specifically, the response shall include detailed descriptions of quality initiatives the respondent intends to implement or maintain that produce savings by promoting the Agency's goals, as well as other areas where the respondent has evidence that a potential for savings and increased quality exists.

Response:

Simply Healthcare Plans, Inc. D/B/A Clear Health Alliance (Clear Health) has participated in AHCA's MMA Physician Incentive Program (MPIP) program since 2016. The purpose of this program is to allow our organization to monitor the performance and quality of care and service of our network on an annual basis with the intent to increase quality and enrollee (member) satisfaction, reduce readmissions, lower avoidable emergency department (ED) use, and increase Clear Health's overall performance. Our MPIP provides enhanced payment for select pediatric primary care providers (PCPs), pediatric subspecialties, and OB/GYNs by supplementing their current contracted rate under the Medicaid line of business and increasing it to the Medicare reimbursement rate.

Our initial AHCA-approved MPIP (10/1/16-9/30/17) was focused on being designated as a health plan PCP as well as board-certified OB/GYNs who met or exceeded specified quality measures and target benchmarks. For the first three quarters of the program (10-1-16 through 6/30/17), Clear Health paid out over \$22,000 in MPIP incentive payments to MPIP program providers

For the 10/1/17-9/30/18 period, in line with AHCA goals to increase provider compensation to Medicare rates for a larger segment of provider services, Clear Health expanded the program. The expansion will include additional pediatric PCPs (pediatricians, family practitioners, general practitioners) and board certified OB/GYNs who meet or exceeded quality measure benchmarks, or who meet or exceed ER utilization quality measures benchmarks. Clear Health also expanded the program to board certified pediatric cardiologists, pediatric endocrinologists, pediatric nephrologists, pediatric neurologists, and to pediatric psychiatrists who meet or exceed the follow-up after a hospitalization for mental illness quality measures and target benchmarks.

Beginning 10/1/18 and forward, we will enhance our existing MPIP to further align with AHCA's goals of redirecting costs to incentivize improvements in quality and efficiency. We will do this by expanding MPIP participation to additional subspecialists and by implementing additional quality and utilization performance measures and targets that drive improvements in quality outcomes. We will expand the program to incorporate both pediatric and adult subspecialists and member populations. We will also expand our array of quality measures for OB/GYNs to further drive achievement of the Agency's goals for improvements in birth outcomes and prenatal care.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

For PCP and OB providers, we will continue to value and incentivize PCMH recognition as a component for enhanced reimbursement, but going forward PCMH certification alone will no longer be the sole criteria for enhanced reimbursement. In order to further drive utilization and quality performance, PCPs and OB/GYNs who meet the PCMH incentive criteria will now also be required to meet additional utilization and quality performance targets in order to fully qualify for enhanced reimbursement. This approach will drive improvements in efficient utilization of services and increase quality outcomes, thereby resulting in reduced costs, while simultaneously making incentive dollars available to a larger pool of providers.

1. REDIRECTING COSTS TO PAY HIGHER RATES

Our MPIP proposal is a key component of our value-based purchasing (VBP) strategy in Florida. We describe our array of value-based programs and strategies in detail in our response to MMA SCR 13, Value Based Purchasing. In addition to MPIP, our VBP models incentivize the shift from payment based on volume of services to payment based on quality, thereby driving improved outcomes and cost reductions.

1.1. MPIP Pediatric Primary Care Providers

1.1.1. Provider Eligibility; Qualified providers include Primary Care Providers (PCPs) (including pediatricians, family practitioners, and general practitioners) that provide medical services to members under the age of 21 years.

1.1.2. PCMH Recognition (Weight = 25 percent): Recognition by one of the following organizations as a Patient-Centered Medical Home (PCMH):

- National Committee for Quality Assurance (NCQA)
- Accreditation Association for Ambulatory Health Care (AAAHC)
- The Joint Commission (JC)
- Utilization Review Accreditation Commission (URAC)

1.1.3. Performance Measures

We utilize a set of internally developed performance measures to track readmissions and emergency department (ED) utilization. We compare the measure results for Readmission Avoidance and ED Utilization to the national HEDIS® percentiles for the Plan-All Cause Readmissions (PCR) and Emergency Department Utilization (EDU) measures as published by the National Committee for Quality Assurance (NCQA).

The next set of measurements used when evaluating the provider's performance are a combination of HEDIS®, HEDIS-like measures, or National Quality Forum (NQF) measures. The same methodology used for the utilization-based measures will be used for the HEDIS® measures or the provider's peers within our organization if NQF measures are being used. We believe that this case mix of measures provides the optimal representation of the circle of care the member receives.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.1.3.1. Utilization Measures (Weight = 35 percent if Provider is PCMH; 50 percent if Provider is Non-PCMH)

We use the following utilization based measures for all providers:

- Avoidance of Readmissions (RA): the percentage of members in the provider's panel/roster of care that stay in our coverage for at least 6 months of enrollment prior to the discharge date for a diagnosis for which the provider is responsible for and continuously enrolled for, at least, 30 days after the date of the discharge who are readmitted to an inpatient facility within 30 days for diagnoses related to the specific specialty This is an inverse measure (lower score is better).
- Emergency Department Utilization (EDU): the percentage of members in the provider's panel/roster of care that stay in our coverage for at least 6 months of enrollment prior to the end of the measurement period and for who Clear Health receives a claim for ED for diagnoses related to the specific specialty within the measurement year. This is an inverse measure (lower score is better).
- Percentage of Outpatient procedures Performed in the Hospital setting: The percentage of procedures that are not on the plan's inpatient-only list performed at a hospital where the referring provider matches the provider in the measurement. This is an inverse measure (Lower rate indicates better performance).

1.1.3.2. Quality Measures - HEDIS, HEDIS-Like and NQF Measures (Weight =40 percent if Provider is PCMH; 50 percent if Provider is Non-PCMH)

The Plan will use a combination of measures to evaluate providers. A site with at least 30 panel members must achieve or exceed the benchmark for the following metrics:

- Adolescent Well-Care Visits: percentage of members 12-21 years who had one or more well-care visits
- Children and Adolescent Access to Primary Care Practitioners (12-24 months): percentage of members 12-24 months old who had a visit with a PCP during the measurement period
- Children and Adolescent Access to Primary Care Practitioners (25 months-6 years): Percentage of members 25 months-6 years of age who had a visit with a PCP during the measurement period
- Children and Adolescent Access to Primary Care Practitioners (7-11 years): percentage of members 7-11 years old who had a visit with a PCP during the measurement period
- Children and Adolescent Access to Primary Care Practitioners (12-19 years): percentage of members 12-19 years old who had a visit with a PCP during the measurement period
- Well-Child Visits in the 3rd, 4th, 5th and 6th years: percentage of members 3-6 years of age who had one or more well-child visits with a PCP during the measurement year
- Lead Screening: percentage of children 2 years of age who had one or more capillary or venous lead blood test for lead poisoning by their second birthday

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Newly assigned Member PCP visit: Percentage of Members newly assigned to the PCP during the first 9 months of the measurement period (MP) and who were attributed for at least 60 days of the MP and who have a PCP visit within 60 days of assignment

1.2. MPIP Obstetricians and Gynecologists (OB/GYNs)

1.2.1. Provider Eligibility: Providers who are board certified in Obstetrics and Gynecology by the American Board of Obstetrics and Gynecology or the American Osteopathic Board of Obstetrics and Gynecology. Board certified OB/GYNs must also meet the following qualification levels:

1.2.2. PCMH Recognition (Weight = 25 percent): Recognition by one of the following organizations as a Patient-Centered Medical Home (PCMH):

- National Committee for Quality Assurance (NCQA)
- Accreditation Association for Ambulatory Health Care (AAAHC)
- The Joint Commission (JC)
- Utilization Review Accreditation Commission (URAC)

1.2.3. Quality Measures - HEDIS, HEDIS-Like and NQF Measures (Weight =75 percent if Provider is PCMH; 100 percent if Provider is Non-PCMH)

- Frequency of Ongoing Prenatal Care: Percentage of women with Medicaid deliveries who had 81 percent or more of expected prenatal visits (using HEDIS® 2017 specifications)
- Postpartum Care: Percentage of women who had a postpartum visit on or between 21 and 56 days after delivery (using HEDIS® 2017 specifications). Benchmark is 62 percent
- Overall Cesarean Section Rate: Percentage of single live born Medicaid births in a practice that were delivered via cesarean section (using 2017 Agency Specifications)
- First Prenatal care visit timeliness: Percentage of attributed members who received a prenatal visit within the first trimester or within 42 days of enrollment
- Preterm Birth Rate: Percentage of all attributed member deliveries where the delivery occurred less than 37 weeks gestation.
- Low Birth Weight Rate: Percentage of all attributed member deliveries where the birth weight of the newborn was less than 2,500 grams.
- Postpartum visit rate: Percentage of attributed members who received postpartum visits 21 to 56 days after delivery.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.3. MPIP Pediatric Subspecialists

Clear Health will reward certain pediatric specialties with the focus on lowering readmissions and ED utilization and will improve quality of care and services by choosing several measures endorsed by NCQA, NQF, and some developed internally by the plan. There will be two components of the program with the intent of ensuring the overall performance of the provider is accurately measured. We compare the final score for each provider to the national benchmarks for every provider specialty chosen for this incentive program.

1.3.1. Provider Eligibility: The eligible pediatric subspecialists include:

- Pediatric endocrinologists who are board certified by the American Board of Pediatrics or American Osteopathic Board of Pediatrics
- Pediatric neurologists who are board certified by the American Board of Pediatrics and American Board of Psychiatry and Neurology
- Pediatric cardiologists who are board certified by the American Board of Pediatrics
- Pediatric nephrologists who are board certified by the American Board of Pediatrics

1.3.2. Assignment Methodology

Clear Health will use the following methodology to identify the specialist as the treating and caring provider for a member.

We will look at the calendar year data, and based on the claims utilization for past 12 months, will assign members based on the following criteria:

- First choice will be the provider seen the most by the member for specific specialty
- Second choice will be if the provider seen the most has a gap greater than 90 days and a new provider is identified to have seen the member on a more recent basis

1.3.3. Performance Measures

Our MPIP will use a set of utilization measures developed internally to measure the use and avoidance of readmission (RA) and ED utilization. We will then compare the measure results to the national HEDIS® percentiles for the Plan-All Cause Readmissions (PCR) and ED measures as published by the National Committee for Quality Assurance (NCQA).

The next set of measurements used when evaluating the provider's performance will be a combination of HEDIS® or HEDIS-like measures or National Quality Forum (NQF) measures as described below. We will use the same methodology used for utilization-based measures for HEDIS® measures or the physician's peers within our organization if NQF measures are being used. Clear Health strongly feels that this mix of measures will provide for a full representation of the circle of care the member. We outline measures by domain in the following section.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.3.3.1. Utilization Measures (Weight = 50 percent)

Utilization measures for pediatric cardiologists, pediatric endocrinologists, pediatric neurologists, and pediatric nephrologists are:

- **Avoidance of Readmissions:** The percentage of members in the provider's panel/roster of care that stay in the coverage of the Plan for at least 6 months of enrollment prior to the Discharge date for a diagnosis for which the provider is responsible for and continuously enrolled for, at least, 30 days after the date of the discharge who are readmitted to an inpatient facility within 30 days for diagnoses related to the specific specialty .This is an inverse measure (lower score is better).
- **ED utilization:** The percentage of members in the provider's panel/roster of care that stay in the coverage of the Plan for at least 6 months of enrollment prior to the end of the measurement period and for who the Plan receives a claim for ED for diagnosis specific to the specialty within the measurement year. This is an inverse measure (lower score is better).
- **Percentage of Outpatient procedures Performed in the Hospital setting:** The percentage of procedures that are not on the plan's inpatient –only list performed at a hospital where the referring provider matches the provider in the measurement. This is an inverse measure (Lower rate indicates better performance).

1.3.3.2. Quality Measures - HEDIS®, HEDIS-Like, and NQF Measures (Weight = 50 percent)

1.3.4. Pediatric Endocrinologists

- **Comprehensive Diabetes Care (CDC):** the percentage of members 1-17 years of age with diabetes (type 1 and type 2) who had each of the following during the measurement year: Eye Exam (Retinal) performed, Lipid Profile, HbA1c Control (<8 percent), and Urine Micro albumin

1.3.5. Pediatric Neurologists

- **Adherence to Anti-epilepsy/Anti-Convulsion Drugs:** the percentage of members 1-17 years of age with a diagnosis of epilepsy/convulsions who remained on the medication for, at least, 80 percent of the percentage of days covered after the first fill.
- **Follow-up Care for Children Prescribed ADHD Medication (ADD):** the percentage of children newly prescribed attention-deficit/hyperactivity disorder (ADHD) medication that had at least three follow-up care visits within a 10-month period. (*Prescribing provider data will be included in this measure to decide who is treating the member and eliminate false positives for the provider).

1.3.6. Pediatric nephrologists

- **Monthly Hemoglobin Measurement for Pediatric Members:** the percentage of members 1-17 years of age with a diagnosis of chronic kidney disease, in-center hemodialysis, home hemodialysis, and peritoneal dialysis who have monthly measures for hemoglobin during the reporting period.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.3.7. Pediatric cardiologists

- No applicable HEDIS®, HEDIS-Like, and NQF Measures have been identified for pediatric cardiologists.
- Until such time as a reliable Quality Measure has been identified, pediatric cardiologist performance for incentive purposes will be 100 percent based on the Utilization Measures specified above

1.4. MPIP Adult Subspecialists

Clear Health will reward certain adult subspecialties with the focus on lowering readmissions and ED utilization and will improve quality of care and services by choosing several measures endorsed by NCQA, NQF, and some developed internally by the plan. There will be two components of the program with the intent of ensuring the overall performance of the provider is accurately measured. We compare the final score for each provider to the national benchmarks for every provider specialty chosen for this incentive program.

The eligible adult subspecialists include:

- Adult Endocrinologists who are board certified by the American Board of Medical Specialties
- Adult Neurologists who are board certified by the American Board of Medical Specialties
- Adult Cardiologists who are board certified by the American Board of Medical Specialties
- Adult Nephrologists who are board certified by the American Board of Medical Specialties
- Adult Pulmonologists who are board certified by the American Board of Medical Specialties
- Adult Gastroenterologists who are board certified by the American Board of Medical Specialties

1.4.1. Assignment Methodology

Clear Health will use the following methodology to identify the specialist as the treating and caring provider for a member.

We will look at the calendar year data, and based on the claims utilization for past 12 months, will assign members based on the following criteria:

- First choice will be the provider seen the most by the member for specific specialty
- Second choice will be if the provider seen the most has a gap greater than 90 days and a new provider is identified to have seen the member on a more recent basis

1.4.2. Performance Measures

Our MPIP will use a set of utilization measures developed internally to measure the use and avoidance of readmission (RA) and emergency department (ED) utilization. We will then compare the measure results for RA and ED to the national HEDIS® percentiles for the Plan-All Cause Readmissions (PCR) and ED measures as published by the National Committee for Quality Assurance (NCQA).

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

The next set of measurements used when evaluating the provider's performance will be a combination of HEDIS® or HEDIS-like measures or National Quality Forum (NQF) measures as described below. The same methodology used for utilization-based measures will be used for HEDIS® measures or the physician's peers within our organization if NQF measures are being used. Clear Health strongly feels that this mix of measures will provide for a full representation of the circle of care the member. We outline measure by domain in the following section.

1.4.2.1. Utilization Measures (Weight = 50 percent)

Utilization measures for pediatric cardiologists, pediatric endocrinologists, pediatric neurologists, and pediatric nephrologists are:

- **Avoidance of Readmissions (RA):** The percentage of members in the provider's panel/roster of care that stay in the coverage of the Plan for at least 6 months of enrollment prior to the Discharge date for a diagnosis for which the provider is responsible for and continuously enrolled for, at least, 30 days after the date of the discharge who are readmitted to an inpatient facility within 30 days for diagnoses related to the specific specialty This is an inverse measure (lower score is better).
- **Emergency Department utilization (ED):** The percentage of members in the provider's panel/roster of care that stay in the coverage of the Plan for at least 6 months of enrollment prior to the end of the measurement period and for who the Plan receives a claim for ED for diagnoses related to the specific specialty within the measurement year. This is an inverse measure (lower score is better).
- **Percentage of Outpatient procedures Performed in the Hospital setting:** The percentage of procedures that are not on the plan's inpatient-only list performed at a hospital where the referring provider matches the provider in the measurement. This is an inverse measure (Lower rate indicates better performance).

1.4.2.2. Quality Measures - HEDIS®, HEDIS-Like, and NQF Measures (Weight = 50 percent)

1.4.3. Adult Endocrinologists

- **Comprehensive Diabetes Care (CDC):** The percentage of adult members with diabetes (type 1 and type 2) who had each of the following during the measurement year:
 - Eye Exam (Retinal) performed
 - Lipid Profile
 - HbA1c Control (<8 percent)
 - Urine Micro albumin

1.4.4. Adult Neurologists

- **Adherence to Anti-epilepsy/Anti-Convulsion Drugs:** The percentage of adult members with a diagnosis of epilepsy/convulsions who remained on the medication for at least 80 percent of the percentage of days covered after the first fill.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.4.5. Adult Cardiologists

- Heart Failure - Use of ACE Inhibitor (ACEI) or Angiotensin Receptor Blocker (ARB) Therapy: the percentage of patients aged 18 and older with Heart Failure who are on an ACEI or ARB
- Heart Failure - Use of Beta Blocker Therapy: Patients with a current fill for beta blocker therapy who are diagnosed with congestive heart failure

1.4.6. Adult Gastroenterologists

- Screening Colonoscopy: For patients aged 50 – 75, colorectal cancer screening (FOBT yearly or colonoscopy every 10 years)

1.4.7. Adult Pulmonologists

- Chronic Obstructive Pulmonary Disease COPD: Inhaled Bronchodilator Therapy: Percentage of patients aged 18 years or older, with a diagnosis of COPD ($FEV_1/FVC < 70$ percent) who have an $FEV_1 < 60$ percent predicted and have symptoms who were prescribed an inhaled bronchodilator
- Pharmacotherapy Management of COPD Exacerbation: This measure assesses the percentage of COPD exacerbations for patients 40 years of age and older who had an acute inpatient discharge or ED encounter on or between January 1–November 30 of the measurement year and who were dispensed appropriate medications. Two rates are reported:

1. Dispensed a systemic corticosteroid (or there was evidence of an active prescription) within 14 days of the event

2. Dispensed a bronchodilator (or there was evidence of an active prescription) within 30 days of the event

Note: We base the eligible population for this measure on acute inpatient discharges and ED visits, not on patients. It is possible for the denominator to include multiple events for the same individual.

1.4.8. Adult Nephrologists

- Chronic Kidney Disease (CKD): Monitoring Calcium. To assure that members with chronic kidney disease (CKD), but who are not on dialysis, are monitored for blood calcium levels at least annually.
- Chronic Kidney Disease (CKD): Monitoring Parathyroid Hormone (PTH). To assure that members with chronic kidney disease are monitored for PTH levels at least once annually.
- Chronic Kidney Disease (CKD): Monitoring Phosphorus. To assure that members with chronic kidney disease (CKD) who are not on dialysis are monitored for blood phosphorus levels at least once annually.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Adult Kidney Disease: Laboratory Testing (Lipid Profile). Percentage of patients aged 18 years and older with a diagnosis of chronic kidney disease (CKD) (stage 3, 4, or 5, not receiving Renal Replacement Therapy [RRT]) who had a fasting lipid profile performed at least once within a 12-month period

2. QUALITY INITIATIVES THAT WILL RESULT IN REDUCING COSTS BY AVOIDING POTENTIALLY PREVENTABLE EVENTS

MMA SCR 1 defines potentially preventable events (PPEs) as potentially preventable hospital admissions (PPA) and readmissions (PPR), reduction in the use of the emergency department for non-emergent/urgent visits (PPV), and reduction in the use of unnecessary ancillary services during hospitalization and outpatient visits (UAS).

Through the combination of our MPIP and VBP programs and provider collaboration strategies, we encourage and engage our providers to promote continuous quality improvement. We will also promote enhanced access to care — seeing members when they need to be seen — because it is essential for improving clinical outcomes, providing a satisfying member experience, reducing potentially preventable events and reducing health care costs. In combination, our MPIP and VBP programs include the following quality measures that directly and indirectly target reductions in potentially preventable events:

- ED utilization rate
- Readmissions within 30 days of inpatient discharge
- New member PCP visit within 60 days of assignment
- Outpatient procedures performed in the hospital setting
- Frequency of PCP visits within the measurement period
- Seven-day follow-up visit after mental health inpatient discharge
- Thirty-day follow-up visit after mental health inpatient discharge
- Thirty-day BH-related readmission rate
- Sixty-day BH-related readmission rate
- Ninety-day behavioral health-related readmission rate
- Total Medical Expenses

We will provide an enhanced access toolkit that offers resources on streamlining the appointment process. This will help to offer more open scheduling and same-day appointments, as well as managing supply and demand through suggestions such as extending office hours, maximizing visits, and optimizing member involvement in their care as referenced in our Timely Access Standard Strategy in SRC 9.

**** RESULTS & SUCCESSES:** Clear Health Outperforms All Plans in Reducing Potentially Preventable Admissions (PPAs). We have the lowest rate of potentially PPAs and PPVs all the MMA plans. Our risk adjusted PPA rate per 1,000 enrollee is 1.30, compared to the statewide average of 2.14. ******

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

In addition to our MPIP and VBP programs, we have developed the following quality initiatives to support further reductions Potentially Preventable Events:

ED Diversion Program. To address the root causes of unnecessary, frequent ED use, our Case Management program helps members and their families or caregivers manage the member's symptoms in alternative settings. Managed Care Coordinators exchange information about ED "frequent flyers" with key hospitals, educate members on proper utilization of services, discuss the importance of primary and preventive care, provide information on nearby resources such as urgent care, and determine whether the member should be referred to additional Case Management programs.

Rising Star Program. This program focuses on continuity of care for members with complex physical or behavioral health conditions with frequent ED visits and multiple hospital admissions. We will facilitate improved collaboration and communication with providers by guiding the member to a single Home Hospital, Health Home, Home Psychiatrist, and Care Manager. Caring for our members at the same facility, with the same providers, promotes improved health, recovery, and more appropriate use of evidence-based practices, services, and social supports. It also reduces inpatient admissions, length of stay, readmissions, and ED visits, and improves provider satisfaction.

Transition of Care Program (TOC). The TOC is a cost of care and quality initiative to reduce controllable expenses associated with readmissions and to improve member health outcomes. Our Managed Care Coordinators work closely with hospital and skilled nursing facility staff and our members to assure readiness to re-enter the community and a seamless transition plan is in place before discharge, and follows the member into the community to assure adequate conditions and support for recovery.

3. QUALITY INITIATIVES THAT WILL RESULT IN IMPROVING PRENATAL CARE AND BIRTH OUTCOMES.

MMA SCR 2 defines Birth Outcomes as prematurity prevention, improve perinatal outcomes, and reduce unintended pregnancies.

Clear Health also incorporates quality measures designed to improve prenatal care and birth outcomes into our MPIP and other VBP programs our MPIP and VBP programs include the following quality measures that directly and indirectly target improvements in birth outcomes:

- First prenatal visit
- Frequency of ongoing prenatal care
- Overall C-section rate
- Preterm birth rate
- Low birth weight rate
- Postpartum visit rate
- Postpartum care

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

In addition to our MPIP and VBP programs, we have developed the following quality initiatives to further improve Prenatal Care and Birth Outcomes:

Taking Care of Baby and Me. Clear Health's comprehensive, Taking Care of Baby and Me program and focus on improving birth outcomes is working. In 2016, our rates for pre-term births, caesarian sections, and early elective deliveries were lower than the national average. We make every effort to provide accurate, actionable, and culturally appropriate information regarding these risks to help women make informed decisions about when and how they deliver their babies.

Maternal Postpartum Outreach Program (MPOP). Our Maternal Postpartum Outreach Program (MPOP) is an all-inclusive (member, provider, and data collection) outbound call outreach program focused on improving access to care and ensuring the timeliness of a mother's visits with a practitioner after delivery of her baby. Through MPOP, outreach is completed by providing experienced compassionate outreach care specialists and a state-of-the-art web based system to assist members with postpartum visits. MPOP employs a state-of-the-art web based system that identifies moms who have just delivered a baby and may need assistance with scheduling their postpartum visit and captures all components of the outreach process (appointments, mailings, outreach attempts, etc.). Experienced Outreach Care Specialists then attempt to contact new mothers assigned in the MPOP system to assist with appointment scheduling, appointment reminder (5 days prior to the mom's postpartum appointment), and appointment coordination and verification (contact OB provider to schedule an appointment for moms and verify mom kept her postpartum appointment).

Screening, Brief Intervention, and Referral to Treatment (SBIRT). We include SBIRT for screening of pregnant members to identify as early as possible if potential BH referral / consult is needed. We designed our maternal programs to identify existing health risks for pregnant members and similarly to prevent future health problems. For example, we have developed specific programs to integrated comorbid conditions such as diabetes, depression, hypertension and heart disease and SUD, including tobacco. We include a registered dietician/certified diabetes education in the members' multi-disciplinary care team who will assist (co-manage) these members.

Long-acting reversible contraceptives (LARCs). The CDC identifies long-acting reversible contraceptives (LARCs) as the most effective in preventing pregnancy. Clear Health includes LARCs as a benefit to members. In addition, we educate our members on LARCs through materials like brochures, as well as through our OB case managers who have training on LARC. Our LARC program reimburses providers for the actual cost of LARC and the full range of contraceptive services, as well as for immediate postpartum insertion of long-acting reversible contraceptives. We also remove administrative and logistical barriers to LARC contraception by removing pre-approval requirements and step therapy restrictions.

4. OTHER QUALITY INITIATIVES OR EFFICIENCIES RESULTING IN POTENTIAL COST SAVINGS.

Since its inception, Clear Health has actively promoted Patient-Centered Medical Home (PCMH) recognition and sought to contract with primary care providers that have been recognized PCMHs. Our PCMH incentive program supports the PCMH model of patient-centered primary care delivery. PCMHs get to know patients in long-term partnerships. They make treatment decisions together with patients based on individual needs and preferences. PCMHs help patients become

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

better engaged in their own healthy behaviors and healthcare. Everyone in the practice works as a team to coordinate care from other providers and community resources. This maximizes efficiency by ensuring that highly trained clinicians are not doing tasks lower level staff can do. They also avoid costly and preventable complications and emergencies by focusing on prevention and managing chronic conditions.

Clear Health Alliance has 65 PCMH practices with over 500 providers and over 900 members.

As an incentive for those practices pursuing NCQA, AAAHC, JC, or URAC PCMH recognition, we reimburse practices up to \$3,000 to pursue PCMH recognition, \$1,500 at the time of initial application and \$1,500 when they receive recognition. Together with our affiliates, we have more than 26 years of experience building provider networks that include PCMHs, health homes, and similar models that promote the delivery of services and follow-up care.

We designed our strategic approach to provider collaboration and network management to drive efficiencies and quality performance that results in potential costs savings. Our locally based Provider Network Managers are in the field offering ongoing support to providers, helping them improve the effectiveness and efficiency of their practices. For example, they will analyze quality metrics and reports for improvement opportunities; help providers create and implement action plans to improve cost and quality performance under our VBP programs, and provide ongoing training and education to assist in meeting their goals.

Our Quality-based Member Assignment Algorithm (QMAA), one of the components of our strategic network management and performance optimization strategy, drives performance resulting in cost savings related to Agency goals and improving member health outcomes. Our QMAA methodology incorporates quality and performance measures to drive member assignments to our highest performing PCPs. QMAA is designed to assure that the majority of our members are cared for by high-performing, engaged providers that collaborate with us. Our high-touch approach to provider collaboration focuses on quality and our competitive value proposition.

Our Pharmacy Provider Engagement Program provides an effective means of delivering important clinical information to our network prescribers, facilitating sound clinical decision-making that will translate into delivery of the highest quality medical care. The program provides an interactive clinical detailing platform, which employs the use of four clinical pharmacists that meet regularly with network physicians, on a “one-on-one” basis, to educate, inform, and review medication prescribing patterns, and to communicate best clinical practice guidelines. This “clinician-based” delivery model provides network providers with real time utilization metrics, comparative performance measures, educational materials, and additional critical information in a format that promotes quality-based and medically appropriate clinical decision-making.

** RESULTS & SUCCESSES: The Pharmacy Provider Engagement Program has been responsible for a combined 75 percent reduction in the incidence of polypharmacy over the past two years in two cohorts which have been consistently monitored for incidence of polypharmacy.
**

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

Evaluation Criteria:

1. The extent to which the respondent's proposal to improve quality can be tied to redirecting costs to pay higher physician rates.
2. The extent to which the respondent incorporates quality initiatives that will result in redirecting costs by reducing potentially preventable events.
3. The extent to which the respondent incorporates quality initiatives that will result in redirecting costs by improving prenatal care and birth outcomes.
4. The extent to which the respondent identifies other areas for quality initiatives or efficiencies that will result in potential cost savings.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

C. RECIPIENT EXPERIENCE

MMA SRC# 8 – Primary Care Providers (PCP) Assignment (Statewide):

The respondent shall describe its overall process of assigning enrollees to primary care providers (PCPs), including its assignment algorithm. The response shall include the quality and/or performance metrics used to determine high quality PCPs, and the timeframes associated with processing an enrollee's request to change PCPs.

Response:

Simply Healthcare Plans, Inc. D/B/A Clear Health Alliance (Clear Health's) Florida-specific Quality-based Member Assignment Algorithm (QMAA) is one of the components of our strategic network management and performance optimization strategy. QMAA maximizes the extent to which high quality providers receive enrollee (member) assignments. This assures high-performing, engaged providers that collaborate with us because of our high-touch approach to provider collaboration and support, our focus on quality, and our competitive value proposition regarding care for members. Our QMAA methodology incorporates quality and performance measures to drive member assignments to high performing providers. Our goal for the QMAA strategy is to improve performance related to Agency goals, member health outcomes, and overall network performance improvement.

1. DEFINING AND UTILIZING QUALITY AND/OR PERFORMANCE METRICS IN THE ASSIGNMENT PROCESS.

We assign members to identified high quality, high performance providers in our network within time and distance standards. QMAA places providers in a two tier scale based on performance and quality thresholds. It assigns a PCP with the highest performance rating within time and distance standards. Our assignment process assigns members to our red ribbon providers whenever possible. These are providers with specialized HIV/AIDS training designated by including a red ribbon beside their name in our provider directory, informing members of the provider's additional specialized HIV/AIDS care and treatment competency. Our red ribbon program is nationally recognized and is a testament to our patient-centered model of service and support.

The goal of our QMAA methodology is to steer the majority of membership to our highest performing PCPs as measured by a set of quality and performance metrics. By supporting high performing PCPs with targeted member assignment, we share a commitment to our members getting the best care possible by ensuring high quality care is being provided.

QMAA contains quality and performance ranking components. We base quality scoring for preferred providers on select HEDIS metrics compiled by Clear Health's Quality Performance Rating team. Each quarter, we calculate HEDIS rates for practices with at least 30 members in the Denominator of the measure. We target our measures to current State Performance Measures. We compare providers to their peers within the quarterly measurement period using percentiles as the comparison value. We then assign points based on percentile and standard

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

deviation placement. We combine quality and performance scores for each provider creating their profile and assigning a provider score that is utilized in the QMAA process.

The QMAA methodology establishes and applies internal and proprietary algorithms and criteria to evaluate providers based on various quality and efficiency measures. We apply our proprietary algorithms to all members that do not have a PCP assigned through Choice Counseling after the preferred provider assignment. We notify both the member and the provider once a member has received a PCP assignment.

2. ASSIGNMENT OF MEMBERS TO HIGH QUALITY PCPS

The first step in our assignment process is to assign a member to an identified quality provider. As described above, we select the preferred provider using both quality and performance ranking components, taking into account time and distance contract requirements.

Once we receive the 834 Enrollment File from the State, we will assign all members that have selected their PCPs. We then assign members who have not selected a PCP to a preferred provider using the QMAA algorithm. We assign members to high performing primary care providers within time and distance ratios.

Our proprietary assignment process helps identify PCPs that best meet the needs of members by examining continuity and quality of metrics, as well as convenience of location. Our methodology establishes and applies internal and proprietary algorithms and criteria to evaluate providers based on various quality and efficiency measures.

We calculate quality rankings based on performance against plan objectives and HEDIS® measures, including those related to access to care, behavioral health, diabetes, immunizations, respiratory issues, screenings, and other requirements such as BMI assessment, controlling high blood pressure, and annual monitoring for patients on persistent medications.

We assess providers on their percentile ranking within their specialty based on the members assigned to them. We also assign a performance ranking based on the provider's performance relative to other measured providers related to achieving performance targets. We incorporate those results into the assignment process to preferentially assign members to higher-scoring providers.

In addition, we assign our Clear Health members to a HIV/AIDS certified provider or Infectious Disease provider, referred to as our Red Ribbon providers. These providers have obtained plan credentialing in the treatment of members with HIV/AIDS.

Our member assignment process factors member preference/familiarity with providers into each auto-assignment, based on the following methodology:

- Members are assigned to a PCP from whom they receive or previously received services if that information is available, the PCP is in our provider network, and geographically accessible to the member.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Members are assigned a PCP who are within time and distance standards by AHCA for the specific region.
- Members are assigned to a PCP that best meets the cultural needs of the member using measures such as ethnicity and linguistics when available.
- When assigning a provider to multiple children in a household, we assign a PCP that can treat all children in the household regardless of the children's ages
- Our Case Managers (Managed Care Coordinators) assist our medically complex children with assignment of a PCP familiar with their condition.

3. PROCESSING REQUESTS FOR PCP CHANGES

We receive PCP change requests through our Member Services line from members. PCP changes are made effective the day of the request, unless the member has seen their existing PCP that day. The Customer Care Representative will ask the member if they saw their existing PCP that day; if the member has not seen their PCP on the date of the request, the change is effective the same day. If the member has seen their PCP on the date of the request, the change is effective the following day. In either case we meet or exceed the State's PCP change timeline of three business days and will continue to meet this requirement under the new Contract.

A provider's office may also call to request a PCP change while the member is at the office. The Customer Care Representative follows the HIPAA Verification and Authentication Chart for this type of call and completes validation. The Representative obtains the name and National Provider Identifier (NPI) of the PCP the member is requesting the change to and asks to speak with the member. The Representative makes the change with the member or member's representative using the standard PCP change process. After the change is completed, the Representative offers to send a confirmation fax to the provider's office. If we cannot complete the PCP change, the Representative advises the member and provider of the reason and offers to help find the member another PCP. If appropriate, the Representative follows the process for one-time-sick visit notification.

Members can also request to change their PCP through our Internal Voice Response (IVR) system. The change will be effective no later than the following day. Members can also change their PCP through the secure Member Portal, as well as request a copy of their Member ID card.

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

Evaluation Criteria:

1. The extent to which the respondent's description includes how quality and/or performance metrics are defined and utilized in the assignment process.
2. The extent to which the respondent's algorithm includes assignment of enrollees to high quality PCPs.
3. The extent to which the respondent can process requests for PCP changes within three (3) business days.

Score: This section is worth a maximum of 15 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 9 – PCP Timely Access Standards (Statewide):

The respondent shall describe the process and monitoring plan it uses to ensure compliance with the timely access standards as defined in **Exhibit B-1**, Managed Medical Assistance (MMA) Program, **Section VIII.**, Provider Services **Item A.**, Network Adequacy Standards, **Sub-Item 8.**, Timely Access Standards. The respondent shall also describe the process and methodology it uses for determining whether a PCP has the capacity to accept new patients.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health) monitors provider appointment accessibility to make sure members have timely access to services. We know that Clear Health members very often develop a very different type of relationship with their Primary Care Provider (PCP) compared to members enrolled in the MMA program. We monitor, track, and trend results of appointment access surveys in order to assure compliance with access standards, identify emerging patterns related to timely access to appointments, and support the deeper relationship members develop with their providers. We have also broadened our definition of PCPs to include infectious disease specialists to meet the needs of our members.

Clear Health's PCP network is integral to coordination of member care and providing access to preventive care. Members with HIV/AIDS may be reluctant to accept their diagnosis and may be wary of potential stigma related to their diagnosis. Trust is critical to our members with HIV/AIDS and this drives a deeper relationship between the member and the PCP. Our red ribbon providers have the training and experience necessary to support members living with HIV/AIDS. We provide ongoing support to make sure that our PCPs are successful in managing the unique health care needs of members.

We have developed an intimate understanding of the unique needs of members with HIV/AIDS and the providers needed in their treatment and care. We allow Family Practice, General Practice, Pediatrics, Internal Medicine, and/or Infectious Disease providers to serve as PCPs. An Obstetrician may also serve as a PCP for a pregnant member. This broader definition has allowed us to lower enrollee-to-provider ratio requirements to facilitate more frequent and more comprehensive interaction with the members as well as provide greater access and availability to specialized care.

In accordance with 42 CFR 438.206(c)(1), Clear Health takes action to assure network providers comply with timely access requirements, monitors regularly to determine compliance, and takes corrective action for noncompliance for both urgent and non-urgent services. Clear Health complies with all current contractual requirements related to monitoring timely access. We are in the process of aligning our operations to comply with new Contract provisions as identified in Attachment B, VIII Provider Services, A.8 Timely Access Standards related to appointment availability. This will include a quarterly review of a statistically valid sampling of providers and measuring timely access against revised standards.

Our provider agreements require network providers to abide by all AHCA appointment standards as indicated in Clear Health's contract, including standards for after-hours availability. We educate providers on these standards through initial and recurring provider training as well as the provider handbook, which we incorporate adherence by reference as part of the provider agreement. Our

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

provider newsletters supplement initial orientation training and serve as recurring reminders for timely scheduling of appointments and after-hours availability standards.

We are proud of our Primary Care Provider (PCP) performance related to meeting timely access standards. Appointment Accessibility Audit scores for PCPs were analyzed and reported individually for each of the legacy plans. As an example, 2016 PCP access results for legacy Simply include:

- 99 percent urgent care appointment (goal is 90 percent within one day)
- 100 percent routine sick care appointment (goal is 90 percent within one week)
- 100 percent well-care appointment (goal is 90 percent within one month)
- 94 percent after-hours care (performance standard is 24/7 coverage)

1.1. Appointment Accessibility Audit

Clear Health conducts wait time and after-hours surveys to monitor network accessibility in compliance with AHCA requirements. We conduct surveys of a statistically valid sample across our network to monitor network accessibility in compliance with AHCA requirements. Our Quality Management department contracts with an NCQA certified survey vendor to administer the Appointment Accessibility Audit. We conduct initial audits in the spring and re-audits of noncompliance in the fall.

We are in the process of increasing the frequency of our access audits to quarterly in preparation to meet the new compliance requirements with Attachment B, VIII Provider Services, A.8 Timely Access Standards. This will allow us the ability to broaden the scope of the survey and allocate additional resources to ensure appointment availability. Clear Health recognizes the primary objective of the study is to ensure our members can obtain care when needed.

The objectives of our Appointment Accessibility Audit program include:

- Helping improve the services provided to our members
- Providing quantifiable feedback regarding compliance with access and availability standards
- Assuring compliance with regulations set forth in our Contract with AHCA

We survey PCPs to determine the accessibility and availability of appointments for members for urgent care appointments, routine sick care appointments, well-care appointments, and after-hours care.

Using a Computer-Assisted Telephone Interviewing (CATI) methodology, we survey providers to determine the accessibility and availability of appointments for our members. We review results in our Gap Committee and Quality Management Committee (QMC) meetings. We review the results of the audit to make sure services comply with AHCA standards, and report PCP results to the AHCA as required in the format specified, in accordance with Section XIV, Reporting Requirements, and the Managed Care Plan Report Guide.

1.2. Other Methods Used to Monitor Compliance with Access Standards

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

We routinely monitor provider adherence to access standards through trending of member and provider complaint data. We accomplish this through communication and collaboration from Managed Care Coordinator/Case Manager to the Provider Relations team and review at workgroup meetings. We also use annual member satisfaction surveys and provider satisfaction survey data to monitor access standards. We also continually monitor and act on information obtained through our Provider Relations, Case Management, Quality Management, and Marketing departments. The forum to review the information from various departments is the Gap Committee, GAP Committee workgroups and QMC meetings.

The below reports/data are provided and analyzed by the GAP Committee which is used by its members to develop short and long term interventions.

- Member services data
- Quality of care and access concerns
- Administrative data
- Comprehensive analysis of access and availability
- Grievance and appeals data
- Member feedback
- Provider feedback

1.3. Gap Committee

Clear Health has a detailed and proactive process to promptly address network gaps because we know from experience that network gaps are high on the list of reasons for member dissatisfaction and voluntary disenrollment. Our Gap Committee is our frontline team responsible for monitoring gaps in the network and assuring that network deficiencies are resolved. The Gap Committee includes representatives from Member Services, Grievance and Appeals, Medical Management, Quality Management, Health Services, Provider Relations, and Delegation Oversight.

Each of these departments track and trend member or provider barriers obtaining access to covered services, whether it is appointment availability or a lack of a necessary specialty type in the network. We track and trend claims and encounter data for peaks and valleys that could indicate a provider is at capacity and identify those that are being under-utilized for special investigation into why Clear Health members are not being seen at expected rates for that provider type. We identify issues and determine root causes through the analysis of Quest Analytics data and review of the PNV files for ratio analysis.

Each department brings the results of their review of network issues, access challenges, and member and provider complaints to the Gap Committee meetings. We review, aggregate, and analyze data from all of these departments. We develop short- and long-term interventions and prioritize the implementation of each strategy based upon the number and type of members impacted, as well as the urgency of the need for the services/provider.

We maintain minutes of each meeting. Minutes document estimated resolution dates for the issue and the individual accountable to support for future follow-up. Each Gap Committee meeting results in a prioritization list that we assign to the Provider Relations department and a recruitment list is provided to each Provider Network Manager. Recruitment updates are reported back to the

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Gap Committee or to the workgroups by Provider Relations. We escalate recruitment difficulties in high-impact areas to our Regional Vice President of Provider Solutions for assistance.

The Gap Committee reports network findings, performance metrics, corrective action plans (CAPs), and all other pertinent information to the Quality Management Committee (QMC). Our QMC meeting, led by our Health Services and Quality departments, addresses potential access to care concerns. When members report access issues or complaints about providers, the source department tracks and trends these issues and reports them to the Gap Committee. The Gap Committee reports them to the Quality Management department (and these are included in the Provider's recredentialing review).

2. MITIGATION STEPS IF THERE IS A POTENTIAL ACCESSIBILITY ISSUE IDENTIFIED

2.1. Mitigation Steps if an Issue is Related to a Specific Provider

Clear Health's first priority is to make sure that members have timely access to quality care. For issues related to a specific provider we immediately contact the provider to inquire on the access constraints for the member. If the provider cannot serve the member, we help the member identify other available providers within the area to ensure the member gets timely care/service. Clear Health assures the member receives care as soon as we are made aware of the situation.

Any deficiencies in network access or findings of provider non-compliance with access and availability standards result in interventions focused on resolving any deficiencies. The Provider Network Manager informs individual providers of any deficiencies in writing and request an action plan to address issues within 10 days. Failure to address the issue will result in a corrective action plan and subject to termination if not remediated within established timeline. Provider Network Managers monitor and evaluates all action plans to make sure the provider completes the critical tasks according to schedule and re-audit as necessary to monitor continuous compliance. We give the provider training as well as practice management tips to assist in efficiently scheduling members

2.2. Mitigation Steps for Regional or Systemic Issues

If our analyses indicate that any component of our provider network is insufficient, our Provider Relations team will develop an action plan. The action plan will identify staffing, responsibilities, resources, and a timeline to correct the situation. Actions related to current network providers may include:

- Partnering with existing network providers to recruit and retain clinical staff, expand access through physician extenders, expand services in rural areas, offer additional services to address rural needs, and provide additional after-hours and weekend appointments
- Reviewing the directory and identifying referral pattern needs
- Coordinating transportation for members to see necessary providers outside their access area
- Collaborating with providers to open new practice sites

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Encouraging and supporting patient centered medical home (PCMH) practice models which utilize a patient-centered team-based practice approach. Through our efforts, we identify practices and provide incentives to apply and complete PCMH certification.
- Promoting innovations to expand access to care such as using mid-level practitioners, utilizing health workers, using behavioral health (BH) coaches to extend PCP capacity, and bundled Federally Qualified Health Center (FQHC) coding to promote integration
- Providing focused training and education in team-based care
- Encouraging primary care practices to participate in one of our incentive programs. Practices can use these resources to expand office hours or the use of physician extenders
- Educating providers on and encouraging the use of telemedicine

Actions focused on non-participating providers may include:

- Recruiting out-of-network providers to participate in our network through referral trends, PCP referrals, completed out-of-network single case agreements (SCAs), and new providers entering the market, and converting non-traditional managed care providers
- Leveraging relationships with independent practice associations and other provider organizations to recruit additional providers
- Coordinating members' care with out-of-network providers
- Contacting providers (through Network Development outreach efforts) who are not enrolled as Florida Medicaid providers and explaining the process for enrolling, answering any questions they have, and following up with them to check their progress. We also provide them with the appropriate link to the AHCA website and include the paper application.

3. DETERMINING IF A PCP HAS THE CAPACITY TO ACCEPT NEW PATIENTS

We measure PCP capacity against system entered limitation parameters to restrict providers based on panel size of 500 members. While this is lower than the ratio standard required by AHCA, given the increased needs of members with HIV/AIDS we feel this is an appropriate panel size. Our system has a preset panel limit which closes the panel if the threshold is met.

If the provider brings on additional allied providers, we extend the panel to accommodate a higher threshold as set forth by AHCA. We review panels for adjustment at the time the provider submits a new allied provider for credentialing. PCPs can also set their own limits and close or restrict their panels (for example to existing patients) per their practice needs and capabilities.

We evaluate PCP capacity by identifying PCPs with open panels and mapping them against our current membership. This allows us to measure access against AHCA standards. Our network includes more than 2,500 PCP's. More than 500 Clear Health PCPs are designated as red ribbon providers. These providers meet our stringent credentialing requirements to service members living in HIV/AIDS. Clear Health's network of PCPs is more than adequate to meet the needs of

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

our projected membership. Clear Health historically has a high rate of PCPs with open panels; our current rate stands at 95 percent.

We also use other mechanisms to monitor PCP capacity to accept new members including:

- Dedicated staff make outbound calls to PCPs requesting updated information for the provider directory which includes whether or not they are accepting new members.
- We send monthly fax blasts to PCPs requesting them to review their directory information and submit changes via fax, email, mail, or by informing their Provider Network Manager. This includes panel status.
- During the appointment access audits, we capture information about provider offices not accepting members and forward to Provider Network Managers for follow-up and updates to our system including directories.

In addition to evaluating PCP capacity, we evaluate the adequacy of our other provider types, including specialists, dental providers, BH providers, vision providers, pharmacies, and ancillary providers to accommodate the new membership.

Evaluation Criteria:

1. The extent to which the respondent's process and monitoring plan ensure that enrollees have access to urgent or non-urgent services within the timely access standards defined in **Exhibit B-1**, Managed Medical Assistance (MMA) Program, **Section VIII.**, Provider Services, **Item A.**, Network Adequacy Standards, **Sub-Item 8.**, Timely Access Standards.
2. The extent to which the respondent's monitoring plan includes specific mitigation steps it will take if there is a potential accessibility issue identified.
3. The extent to which the respondent's process and methodology for determining PCP capacity clearly outline the steps and data used for determining whether a PCP has the capacity to accept new patients.

Score: This section is worth a maximum of 15 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 10 – Transitions of Care (Statewide):

The respondent shall describe how it will address the transition of care between service settings, including transitions from hospital to nursing facility rehabilitation and from hospital or nursing facility rehabilitation to home. Identify specific methodologies for ensuring that transition planning ensures appropriate primary care and behavioral health follow up, where appropriate. Provide an example of an effective transition plan.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Simply brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). The unified Simply draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations.

Given the complexities of managing the HIV/AIDS disease processes and the unique co-morbidities of our members, Clear Health Case Managers (Managed Care Coordinators) closely monitor all inpatient admissions or rehabilitation stays and take a proactive role through transitions. Supporting our members through care transitions between service settings is essential in reducing potentially preventable events due to fragmented care and is fundamental to our case management model. Our Clear Health team works closely with all members of the treatment team, including Primary Care Providers (PCPs), specialists, ancillary providers, hospital and skilled nursing facility staff and our members to ensure readiness to re-enter the community and a seamless transition plan is in place before discharge. The Managed Care Coordinators follow the member into the new setting to ensure adequate conditions and support for recovery are provided. We use the strength of our combined plans to invest in on-the-ground infrastructure to promote engagement, coordination and continuity of care, and innovations that improve outcomes for our members.

1. TRANSITION OF CARE REQUIREMENTS

Clear Health has a robust and person-centered process for managing inpatient admissions, discharge planning and post-discharge periods to assure our members' needs are met and their conditions stabilized. We meet all Agency for Health Care Administration (AHCA) standards for transitions of care. Clear Health:

- Provides inpatient case management, including participation in rounds with our medical director to concurrently review and assess member' discharge needs and appropriateness of level of care settings
- Conducts face-to-face or telephonic visit with member or family when they are in the hospital or a facility
- Assesses member readiness for transition between settings
- Determines appropriate services are in place before discharge

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Provides follow-up contact by member services discharge team to conduct discharge assessment, order home delivered meals in accordance with physician orders, and coordinate any other immediate needs within 24 hours of discharge
- Provides follow-up by inpatient coordinators to ensure assignment of appropriate providers and delivery of any needed equipment, supplies, and/or home health services that were not previously ordered, within 24 hours of discharge
- Provides follow-up call or visit by Managed Care Coordinator within seven days of discharge
- Subsequent follow-up call or visit by Managed Care Coordinator 14, 21 and 30 days after discharge, at a minimum.

Clear Health Managed Care Coordinators follow members into the hospital and rehab facility and through transitions, working in collaboration with our Medical Director, Concurrent Review Nurses and other teams. They communicate with PCPs and specialists as well as Ryan White or Project AIDS Care (PAC) waiver case managers to engage their assistance when needed for follow up care. This continuity of care is especially important for our members with HIV/AIDS, using the trusting relationship, to assure member engagement through challenging times.

1.a. ASSESSMENT CRITERIA FOR MAKING SURE MEMBERS CAN BE SERVED SAFELY IN THE COMMUNITY

Discharge planning begins on the date of admission. Our case management staff are involved in all aspects of our member's hospital or nursing facility rehabilitation admission to assure continuity of care and the timely and comprehensive flow of information.

We receive notifications of admission through our daily census of members at network facilities, through our on-site review by Concurrent Review Nurses, routine review of claims and authorization data and forthcoming use of Event Notification Service (ENS), Florida's system for notification of inpatient and ER admissions and discharges. Once informed of the admission, our Concurrent Review Nurses and our Managed Care Coordinators engage with the member regarding barriers and goals and perform frequent reviews of the discharge plan with facility staff. For members who are difficult to reach or engage, their Managed Care Coordinators will perform a face-to-face visit when possible while members are inpatient to coordinate care and attempt to engage the member in broader case management services. Our clinical staff participate in Rounds and case reviews with Medical Directors to review previous and current clinical acuity including CD4 count and immune system functioning, medication regimen and history, functional status, relevant information about the home environment, services required and support structure, and member goals that may contribute to developing a robust and responsive discharge plan.

We work proactively with our hospital partners to ensure that discharges are appropriate and that the timing facilitates success in the step-down facility or community setting to reduce the risk of re-admissions. Members discharging from inpatient and subacute care facilities are assessed to ensure that they meet clinical criteria using a formalized discharge assessment tool and have a safe discharge plan that is based on evidence-based guidelines. We also assess caregiver support, member functional status and need and frequency of services in the community to promote safety. Since all our members have complex medical and often behavioral health co-

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

morbidities, all discharges are reviewed by our Medical Director to confirm transition to the safest level of care for the member. Members requiring services to be in place prior to discharge such as ventilators, oxygen, and feeding pumps remain in the hospital until services and/or equipment are confirmed to be immediately available in the new setting. Likewise, we hold discharges for members requiring a caregiver or Private Duty Nursing (PDN) services until those services are confirmed and the Nurse can meet the member at home. Our Inpatient team is trained to submit service authorizations so that post-discharge care and equipment requests are reviewed timely and services put into place as needed and discharge is not delayed. For members transitioning from a hospital to nursing facility, our Concurrent Review Nurses obtain the Pre-Admission Screening and Resident Review (PASRR) form and the Department of Children and Families (DCF) assessment as required to measure mental capacity and/or intellectual disability and to ensure placement in the most appropriate and least restrictive setting possible.

For children and youth who are being discharged from a State Inpatient Psychiatric Program (SIPP) facility, we actively participate with the member's treatment team to develop a comprehensive discharge plan that assures that progress made while in the facility continues after discharge. A dedicated SIPP BH Case Manager is assigned to the member at least 30 days prior to discharge. The BH Case Manager works closely with the SIPP provider's discharge planner and the member's family members, providers, and other identified supports when approved by the member. This assures all required services and supports are in place well before the actual discharge date.

1.b. COLLABORATION WITH FACILITIES, INCLUDING DISCHARGE STAFF

Our transitions of care process begins when the member is first admitted to the hospital or rehabilitation facility with acute medical or behavioral health needs. Upon notification of admission, our Concurrent Review Nurses and Clear Health Managed Care Coordinators access information about our members through our integrated Case Management System and initiate coordination with the facility. For example, our Concurrent Review Nurses convey to facility staff which HIV medication regimen the member is on, so they do not experience any interruptions in HIV treatment during in-patient care. We also provide information on HIV viral load and CD4 counts, vital information to ensure continuity of care through an admission. Our Concurrent Review Nurses support members in all Simply plans, including the MMA plan, the LTC plan and our specialty plan for an efficient use of combined best practices. Concurrent Review Nurses are local and assigned to work with a limited number of facilities in a region. This improves communication and familiarity between our staff and the facilities. We communicate about underlying health status of members, baseline functioning, caregiver support and current services in place. Clear Health Managed Care Coordinators also connect with behavioral health staff, including co-located staff at some facilities, to assure comprehensive responses to member needs during their inpatient stay and discharge planning process.

Throughout our members' inpatient stay, we remain in close communication with the care team to ensure collaboration and focus on achieving goals. Our Managed Care Coordinators and clinical staff participate in Rounds with the facility staff to remain current on members' changing status and develop an effective discharge plan. Our Managed Care Coordinators conduct face to face or telephonic visits with the member, caregivers, and facility staff to discuss the discharge plan. For members with frequent admissions, Managed Care Coordinators, Concurrent Review Nurses or Clear Health Physicians may visit the member while inpatient to discuss barriers, coping

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

mechanisms, and engage members in self-management. We focus on helping members understand their role in their own care. Prior to discharge, the Concurrent Review Nurse staff initiate authorization for necessary supports in the home and confirm that home health services are available immediately upon discharge.

For members transitioning from hospital settings to skilled nursing rehabilitation facilities, we work with facility staff, members, and their caregivers to secure appropriate placements and sufficient flow of information to ensure continuity of care. When appropriate, our Concurrent Review Nurses offer members' admission to preferred Skilled Nursing Facilities, identified for quality and alignment with our model of care. Our Managed Care Coordinators work closely with these rehabilitation facilities to coordinate care, proactively establish goals for the members' rehabilitation and follow-up on progress towards these goals. For members admitted for acute behavioral health crises or medical detoxification, we facilitate transitions to appropriate step-down facilities for continued rehabilitation, residential treatment, or intensive community detoxification services until transition to appropriate community settings are available.

For members under the age of 21, we work actively with AHCA and the Department of Children and Families to define the needs for long-term services following admissions. We participate in the Children's Multidisciplinary Assessment Team (CMAT) process as required to support our members.

1.c. REFERRAL AND SCHEDULING ASSISTANCE

Our Managed Care Coordinators are actively involved in making appointments for members' outpatient care during the transition from facility-based care to home, including visits with primary care, infectious disease specialists, behavioral health providers, specialty providers or physical therapy. We also make arrangements for home health or skilled nursing services, home care to assist members with daily living activities and meal support, as needed, to promote recovery. Managed Care Coordinators help to facilitate the processing of prior authorizations and utilization management reviews for necessary care during the transition period so that our members and providers experience a seamless transition.

Our Managed Care Coordinators routinely facilitate post-transition provider visits including scheduling appointments, arranging transportation, conducting reminder calls to the member or caregiver, and following up after the visit to review the treatment plan. The Managed Care Coordinators, working with Clear Health Clinical Pharmacists, review new orders and medications to ensure safety and that members and their families are confident in their treatment plan. Our Managed Care Coordinators arrange for at-home prescription delivery for members who cannot access pharmacies.

A primary goal of Clear Health Managed Care Coordinators is to reconnect our members to regular sources of care through all programs. And we incorporate post-discharge interventions as a key opportunity to make these links.

Clear Health Managed Care Coordinators work with our members and caregivers to implement an effective treatment plan. And our person-centered plan of care, defined as a part of the discharge plan, includes referral and scheduling assistance for primary and specialty health care visits, transportation to all necessary appointments and other service supports. We use the local

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

knowledge of our Managed Care Coordinators and our comprehensive provider directory to assist members and caregivers in selecting new service providers, considering language and cultural preferences, and scheduling timely post-discharge or initial visits. We determine the need for non-covered services and refer the member to the appropriate social service or other setting as required. We facilitate transfer of medical records as requested and authorized by our members. We document referrals and follow-ups in our integrated Case Management System.

1.d. COORDINATION WITH PCP AND BEHAVIORAL HEALTH PROVIDERS FOR APPROPRIATE FOLLOW-UP

Reconnecting members to their regular, outpatient providers is one of Managed Care Coordinators' four priorities in the time immediately following discharge. Closing information and care gaps is an effective strategy to promote stabilization, recovery, resiliency and prevent re-admissions. We work closely with our providers to share information when members are hospitalized and discharged. This includes our customized daily inpatient census and follow-up communication by Managed Care Coordinators regarding the discharge plan and medication changes. We facilitate communication between providers, engaging multiple specialties as needed, to generate a cohesive and comprehensive discharge or treatment plan that supports member goals.

Clear Health's Care Coordination templates and guideline documents provide staff with processes to achieve expectations of a follow-up appointment for the member, within seven (7) days of the discharge. Clear Health:

- Identifies each provider that the member must see, including specialists, from the inpatient facility
- Contacts each provider to ensure that timely follow-up appointments are scheduled, advocating for the member as needed to secure timely appointments
- Plans each provider visit with the member, including questions on treatment plan and medications
- Supports the follow-up visit by providing reminders before the visit, ensures transportation is scheduled and arrives, and reminds the member to take the member-centered health record and medication list to the visit
- Reviews the results of each follow-up provider visit with the member
- Works on empowering the member to schedule and keep subsequent follow-up appointments
- Assures that members receive ancillary care and durable medical equipment to support treatment plans
- Shares BH plans of care with Primary Care Physicians for cases with complex medical/behavioral conditions, as appropriate.

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

1.e. PROCESS TO PREVENT UNNECESSARY RE-ADMISSIONS

All Clear Health members transitioning out of hospital or rehabilitation stays are contacted by their existing Managed Care Coordinators to facilitate continuity of care. These Managed Care Coordinators are knowledgeable about locally-based resources and bring extensive experience managing the HIV/AIDS disease processes, evidence-based case management protocols and knowledge of providers and community resources. Our Managed Care Coordinators use the evidence-based Coleman model for post-discharge case management that emphasizes building skills and empowering our members to improve self-management of their conditions. We support members by engaging them in care through aggressive coordination and partnerships with inpatient and outpatient providers which results in reduced readmission rates and improved quality of care. Our Managed Care Coordinators emphasize four points with members to promote stabilization and reduce the risk of re-admission:

- Medication Reconciliation: ensuring that members are only taking medications prescribed at discharge. Managed Care Coordinators may engage our Clinical Pharmacists as needed for review of medications for patient safety or side effects concerns and to provide member education about medication regimens
- Red-flag Recognition: identifying the root cause of the admission with members and developing an action plan to deal with early warning signs
- Follow-up Care: ensuring members are reconnected to their outpatient providers for follow-up visits and to close gaps in care
- Member-centered Health Record: providing members with a comprehensive account of their medical history and discharge plan to support continuity of care

Members discharged home from facilities with home health care orders receive a phone call from the plan within 24 hours to ensure that needed services have commenced. Our Managed Care Coordinators contact the member once initial discharge plan of care is in place, with subsequent

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

contacts within 7, 14, 21 and 30 days after discharge to assure successful continued stabilization to prevent readmission. The goal of these visits is to assure that follow-up appointments are scheduled and that any services put in place as a part of the discharge plan have arrived. Prior to these communications, our Managed Care Coordinators often connect with the PCP or infectious disease specialist to update them on discharge instructions and to reconcile any medication changes. The Managed Care Coordinator conveys any important instructions or changes to the medication plan to the member and caregivers, as well as confirms follow-up medical appointments.

As a part of the post-discharge case management, the Managed Care Coordinator again confirms follow-up appointments and checks in with the member and caregiver about “red flags” indicating worsening conditions that may result in a readmission if not managed appropriately. Using motivational interviewing techniques, the Managed Care Coordinator engages the member and the caregivers in defining follow-up self-management strategies. The Managed Care Coordinator checks on self-reporting of clinical metrics, including daily weight checks or blood pressure readings, and schedules follow-up testing as defined by the discharge plan. They confirm receipt of supports in the home as needed to promote recovery. For members who are not adherent to the treatment plan or medication regimens, or who have a high likelihood of re-admission, the Managed Care Coordinator may discuss the case with the PCP, Clear Health Medical Directors and BH Case Management staff to define alternative strategies.

As a result of the proactive engagement from our Managed Care Coordinators, we have seen significant increases in member follow-up after discharge (HEDIS measures) and reductions in the re-admission rates.

- Follow-up for hospitalization for mental illness: 29 percent (up from 16 percent in 2015)
- All cause 30-day readmission rate: 28 percent (down from 31 percent in 2015)

While these rates may be higher than non-specialty plans the population has a concentrated mix of high co-morbidities, co-occurring disorders, and increased risk factors within social determinants of health. This is best understood when reviewed in conjunction with the rate of potentially preventable hospital admissions, which as per the AHCA Quarterly SMMC Report Spring 2017, show that CHA has the second lowest risk-adjusted PPA rates per 1000 for all Florida plans, including those that are non-specialty with healthier non-specialty populations.

1.f. EXAMPLE OF EFFECTIVE TRANSITION PLAN

Bill (name changed for privacy) is a 16 year-old Clear Health member with a complex medical history in addition to his HIV, acquired at birth. Following a string of incidents in 2015, psychiatrists evaluated the member and recommended residential-based placement due to the extent of mental state and potential harm to himself and others in the home at the time. Member was admitted to State Inpatient Psychiatry program (SIPP) for five month stay to address ongoing issues and acute psychiatric crisis.

Bill's Managed Care Coordinator, Marlen, visited Bill's parents routinely during his inpatient stay. Additionally, Marlen and Bill's parents participated in treatment team calls with Brian and the SIPP staff to assess his progress toward meeting goals that would facilitate a safe transition to the community or the preferred location. Our Managed Care Coordinator also spoke with facility staff

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

to assess progress and address any barriers in the treatment plan. For example, Marlen assured that Bill continued his treatment for HIV while in the SIPP, including daily anti-retroviral medications, and that routine testing did not show negative impacts on his CD4 count or other measures of control. Likewise, we confirmed his diet in the facility aligned with GI requirements to prevent flare-ups of his Crohn's Disease. With the parents' permission, the Managed Care Coordinator also connected with Bill's PCP, psychiatrist, pediatric HIV specialist and GI specialist throughout the admission to keep them informed of progress and concerns.

As Bill continued to make progress in meeting goals, he began expressing a desire to return to the community. His Managed Care Coordinator worked with a BH Specialist and in conjunction with Bill and his parents, began a transition plan including assessment of needs to live in the community safely and with support. Development of this plan began during the transition planning to the facility from the home (See Attachment MMA SRC# 10-1: Plan of Care for details on the transition plan from facility to home). In this case, Bill has strong natural supports in his family. The BH Specialist and the Managed Care Coordinator visited the home setting to determine safety and any barriers to transition and worked with the member and family to develop a plan of care to maintain healthy behaviors after discharge. This plan of care is attached, see Attachment MMA SRC# 10-2: Workflow for Transitions. Bill conducted two short-term home stays to test the plan of care before discharge.

Immediately following discharge, the Managed Care Coordinator contacted the family within 24 hours to determine how the transition was going. Marlen also made sure the member had a follow-up visit established with the psychiatrist. She visited 7 days after discharge to review the plan with the member and family and to discuss re-connecting with outpatient providers and other strategies to maintain the plan of care.

Bill's Managed Care Coordinator continued to visit Bill and his family weekly for the month following discharge and as needed afterwards to promote stabilization and re-connection to outpatient sources of care.

2. PROTECTING MEMBERS' PRIVACY

Protecting our members' privacy is among our highest priorities and is built into all policies and procedures for our staff. We comply with all legal responsibilities and the expectations of our members. All interactions begin with the three-point review of identity including confirming the name, date of birth, last four digits of the social security number and address of our members. We gain member consent before engaging them in case management and fully explain the coordination and information sharing aspects of our program at multiple points, including at enrollment and initiation of services. All staff, including Managed Care Coordinators and Customer Care Representatives, confirm members' contact preferences per our Telecommunications Policy and confirm whether member has agreed to be contacted by that phone number before making all outbound calls and leaving messages.

Managed Care Coordinators engaging in post-discharge follow-up comply with Clear Health's Telecommunications Policy to protect member privacy and communications preferences. Standard Operating Procedure requires Managed Care Coordinators to check our internal "Do Not Call" list – members who have indicated they do not wish to be contacted by the health plan staff -- before making outreach attempts and to honor those requests. Managed Care

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Coordinators and other health plan staff ensure that all disclosures of protected health information (PHI) for the purposes of case coordination across settings, discharge planning and utilization management is the minimum necessary information to effectively manage members' care. We also take great care to protect member privacy and reduce the chances of accidental disclosure of health information when sending information by mail or fax by ensuring no PHI is visible on the cover page. Our staff only communicate with members by email when consent to do so is obtained, and all emails with PHI are encrypted to protect from disclosure. All health plan staff are trained on these and other HIPAA-related policies and procedures at least annually during compliance trainings.

Given the special sensitivity to confidentiality for members with HIV/AIDS, Clear Health takes extra precautions to assure all communications from the plan do not reveal members status. In response to feedback from our members and concerns about confidentiality, we removed the HIV/AIDS red ribbon from all letterhead and envelope logos for member-facing communications, as well as all marketing materials. We take extra precautions in communicating with our members to protect their trust and confidentiality.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The extent to which the respondent's process and example address the following transition of care requirements:
 - (a) Assessment criteria for making sure the enrollee can be served safely in the community;
 - (b) Collaboration with providers' (e.g., hospitals, institutional settings, assisted living facilities, crisis stabilization unit, statewide inpatient psychiatric program) discharge planning staff;
 - (c) Referral and scheduling assistance;
 - (d) Coordination with PCP and behavioral health providers to ensure appropriate follow up has occurred; and
 - (e) Processes to prevent unnecessary hospital or nursing facility readmissions.
2. The extent to which the respondent's process and example ensures the protection of the enrollee's privacy consistent with confidentiality requirements.

Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Nursing Facility Transition Planning	
Member Name: Bill	Member ID: XXXXXXXXXX

*Transition FROM: Hospital Behavioral Health SIPP treatment facility: Daniel Kids Treatment	Transition TO: Home/Community Living
Facility Name, Address & Phone : SIPP Placement – Location Jacksonville, Florida	

1. TRANSITION ASSESSMENT SUMMARY

The Case Manager must complete their assessment of the member's needs prior to the completion of this section.

1. Member's physical needs can be met in the community

☒ Yes ☐ No

If no, please describe: Member diagnosed with HIV from birth, Crohn's Disease, anxiety and panic disorder post G-tube removal back in 12/2014. Member has HIV provider and GI specialist within the community setting.

2. Member's behavioral health needs can be met in the community

☐ Yes ☒ No ☐ N/A

If no, please describe: Member was (and still is) under psych care due to manipulative behavior, self-harmful thoughts and actions, and sexual aggression towards others including his sibling. In 2015, member was evaluated by psychiatry and recommendations were made for residential-based placement due to the extent of mental state and potential harm to self and others in the home at the time.

3. Member's has adequate natural supports available in the community

☒ Yes ☐ No

If no, please describe: Member's adoptive parents chose to adopt Bill and another male child born with HIV as young children. In addition to HIV, member was born premature, diagnosed with failure to thrive, and developed Crohn's Disease. The parents also adopted another child (female) with complex medical needs that requires PDN (child enrolled with another plan). Member has been in behavioral care services for a number of years due to G-Tube placement due to Crohn's Disease, his HIV and inappropriate sexual behavior towards siblings and parents. Adoptive father works in the mental health field and is aware of behavioral health resources for member. Parents have paid out of pocket for therapists who were not Medicaid providers in

search of help for their son. Parents have worked closely with the plan and the BH provider to help meet their son's needs but the child continued to engage in inappropriate sexual activity including internet searches for sex.

4. Member will have a safe home environment in the community

☐ Yes ☒ No ☐ N/A

If no, please describe: Please see above.

5. Is member homeless?

☐ Yes ☒ No

6. Member's social needs can be met?

☒ Yes ☐ No

If no, please describe: Member's parents are very involved. Member is seen by HIV pediatric specialist and her practice is devoted to the needs of children born with and living with HIV. In addition, Managed Care Coordinator has developed a wonderful rapport with family and member and suggested additional community resources to address HIV and sexual identity as well as provide peer-to-peer education re: consequences of unprotected sex (both legal and medical)

7. Member has adequate finances to maintain a safe home in the community

☐ Yes ☒ No

Member does not work and is dependent on parents for home.

8. Member will require assistance with (Check all that apply):

- | | |
|--|---|
| <input type="checkbox"/> Assistance with Utilities | <input type="checkbox"/> Food Stamps |
| <input type="checkbox"/> Monthly Rent Assistance | <input type="checkbox"/> Recreation Needs |
| <input type="checkbox"/> Transportation Needs | <input checked="" type="checkbox"/> Other |

If OTHER, please describe: Member required assistance with HIV and other meds as the SIPP facility was located in an area that the plan is not operating in (Region 4). The Care Coordination team worked with a pharmacy that agreed to mail the member's medications to the facility. The member's mother had been unable to provide the bottles for the medications because they use a lockbox system in their house due to the presence of two other children with special needs. As the medications were in zip lock bags, there was confusion from the nursing staff. All was coordinated between mother, plan, and pharmacy to ensure that the member did not experience any lapse in treatment due to the special circumstances described above. Communication between member's GI specialist, HIV specialist, Care Coordinator, Pharmacy, BH Provider, and parents was maintained throughout the 5-month stay in the SIPP. Member was successfully discharged 11.19.15 having voiced that he had benefitted from the program and would use the tools/information he learned from his stay in order to remain sexually safe. Appointments to specialists and to aftercare program in addition to continued mental health care thru his private provider prior to SIPP placement was arranged. Member to see GI specialist due to 2 lbs weight loss. One week after discharge, MCC was informed that member had adapted well to his family environment (no maladaptive behaviors). Member's mother was in the process of getting member set up as a volunteer in animal shelter or vet office. Member and family were going on a 3-week Holiday vacation to visit relatives in Colorado.

9. Other Potential Barriers to Transition to the Community

☒ Yes ☐ No

If yes, please describe barriers: Concerns that member will remain focused on his school and not re-engage in sexual maladaptive behaviors including soliciting sex via the internet, which had occurred in the past and had led to the arrest of an adult man who picked the member up and engaged in oral sex with him. In addition to the Managed Care Coordinator assisting the family and the member, the Plan assigned a Behavioral Health Specialist to help address the behavioral health needs of the member and to coordinate care between BH providers.

10. Member's needs can be safely and effectively met in the community ☒ Yes ☐ No
11. DME/Medical Supplies required? ☐ Yes ☒ No
If yes, DME/Medical Supplies details: _____
12. DME scheduled for delivery prior to discharge/transition? ☐ Yes ☐ No ☒ N/A
13. DME delivery date? 
14. Transportation for discharge required? ☒ Yes ☐ No
Member's father picked him up. Drove from Ft Lauderdale to Jacksonville, FL.
15. Transportation scheduled? ☐ Yes ☒ No
16. Member is a candidate for transition to community? ☒ Yes ☐ No
17. If NO, date member was notified: 
18. Case Reviewed with Manager/Medical Director, etc.: ☒ Yes ☐ No
19. Topics covered during discharge/transition planning visit (check all that apply):

20. Detailed Summary: Member was a good candidate for transition back to home after successful 5-month stay at the SIPP location that was specialized in dealing with this member's unique mental health issues. Supports were coordinated and in place at the time of the transitions to and from the SIPP facility. Managed Care Coordinator worked with BH provider and plan assigned behavioral health Case Manger to ensure smooth transitions and that member would have all resources in place. Member continued to receive support from plan to ensure that medication, specialty visits, and coordination of behavioral health services were continuous and uninterrupted. Member's social well-being was addressed as well with support of school and volunteer activities post SIPP stay. Family was very grateful for the support received and participated in a short film about the plan.
21. Just prior to release, the SIPP facility reported that member had shown tremendous progress with unsafe behaviors, conduct, aggression, OCD, and health issues. Member participated in Reactive Therapy. Member had two home passes. Member had not had any unsafe behaviors since July 2015 (entered SIPP in June of 2015). Member was working on understanding how he should act at home. Member was not aggressive with peers or staff. Member worked on coping mechanisms and followed facility rules. Member made good choices for 30 consecutive days per facility. Member had not demonstrated any inappropriate sexual behaviors towards self, peers, or staff. Member's therapist at the facility was concerned about what member might do when he went home but member met over 97% of his expectations. Member had had minimal behavior problems. Member expressed the ability to maintain behaviors of a healthy lifestyle.

Member compliant with medication. Plan Behavioral Health Case Manager agreed to follow up with Plan pharmacy to ensure medications were in place upon his return. Member in compliance with medical follow up. Member's father indicated that member had no instances of inappropriate behavior during his home passes. Member had alone time to watch television without incident. Per SIPP facility, member was a good candidate for transition home given individualized services and supports are in place upon transition to meet her identified needs, desires, and goals.

2. COMMUNITY LIVING PLACEMENT SETTING

Select the setting which the member will be/is transitioning to in the community (check all that apply):

- | | |
|---|--|
| <input type="checkbox"/> Adult Critical Care Home | <input type="checkbox"/> Assisted Living Facility |
| <input type="checkbox"/> Group Home | <input checked="" type="checkbox"/> Living with Family/Caregiver |
| <input type="checkbox"/> Member owned housing | <input type="checkbox"/> Rental (apartment) |
| <input type="checkbox"/> Other (provide detail via summary) | |

1. **Detailed Summary:** Member's living situation at home has presented challenges in the past due to member siblings are also medically complex and require specialized care. Member has had history of inappropriate sexual conduct and has not been allowed to use family computer or cellphones due to fear of solicitation of sex over the internet. Upon discharge, member was enrolled in a charter school, pursued volunteer opportunities with an animal shelter (member is interested in veterinary work) and had PCP appointment scheduled for 12/8/2015. Therapeutic appointments with private provider as well as Plan BH provider suggested community programs in place. Behavioral Health Specialist assigned to member by Plan to assist in all follow up services post discharge. Both member and parents expressed that he had a good visit with his family during his last pass for home weekend visit. Member stated that he never wanted to be "locked up" again and would use coping skills to not engage in unsafe behaviors. Member stated that he was thankful for his family and that he wanted an opportunity to go back to school and do better.

2.

3. CAREGIVER/NATURAL SUPPORTS INFORMATION

Please provide information regarding the member's caregivers/natural supports, their phone number, and their availability. This information should be used, as appropriate, in the development of the member's Plan of Care.

☐ **Not Applicable** - Member will not/does not have any available caregivers/natural supports.

<u>Name:</u>	<u>Phone #:</u>	<u>Availability</u>
1. Father	_____	Available most of the time and working in the mental healthcare field.
2. Mother	_____	Available all of the time as stay at home mom. Assists with all health care needs.
3.	_____	_____

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 11 – Provider Network – Network Development Plan (Regional):

The respondent shall submit a draft network development and management plan demonstrating how it will ensure timely access to the following services:

- Physical therapy (pediatric);
- Speech-language pathology services (pediatric);
- Occupational therapy (pediatric);
- Private duty nursing services (pediatric);
- Intermittent skilled nursing (pediatric and adult);
- Early intervention services;
- Compounding pharmacies; and
- Specialized therapeutic foster care.

The respondent's approach shall include at a minimum:

- a. Identification of network gaps (time/distance output reporting, after-hour clinic availability, open/closed panels, etc.);
- b. Strategies that will be deployed to increase provider capacity where network gaps have been identified;
- c. Strategies for ensuring timely access to services by measuring the time in-between when services are authorized and when they are received; and
- d. Strategies for updating the network development and management plan, including the data that will be used to inform improvements to increase access to services.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health's) comprehensive, contracted network of more than 26,852 providers was developed to meet the specific needs of our Florida enrollees (members). In Region 1, Clear Health Alliance has developed a network that consists of 1,293 Primary Care Providers (PCPs) and specialists. Clear Health maintains an annual network development and management plan (annual network plan), including policies and procedures for assuring covered services are available, accessible, and provided promptly. In our response we describe the various tools and methods we use to monitor our network and identify gaps, including time/distance standards, after-hours clinic availability, and closed panels.

1. IDENTIFYING AND RESOLVING BARRIERS AND NETWORK GAPS

Our network plan and corresponding policies and procedures are submitted to the Agency for Health Care Administration on an annual basis for approval. We make sure covered services are available and accessible for all members and develop and monitor network development plans

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

that assure the provision of covered services for the maximum number of members for each region.

Clear Health acknowledges that we have read and will comply with all contract provisions as identified in Attachment B, VIII Provider Services, B.2 Annual Network Development Plan. A draft network development and management plan is included as Attachment MMA SRC# 11-1: Network Development and Management Plan (Regional).

Private duty nursing (pediatric), intermittent skilled nursing (pediatric and adult), and early intervention services are all included in Clear Health's network. Physical therapy (pediatric), speech-language pathology services (pediatric), and occupational therapy (pediatric) are provided by our subcontractor Health Network One. Specialized therapeutic foster care is provided by our subcontractor Beacon Health Options. Compounding pharmacy services are provided by our subcontractor Express Scripts, Inc. (ESI).

We view subcontractors as valued partners in delivering the highest quality services to members, providers, and the Agency. We work hard to select top-level qualified subcontractors who can best serve our members through a comprehensive vetting process. Additional information on subcontractor oversight can be found below in our response to section 5, Delegation and Oversight of Provider Network Functions.

1.1. Regional Analysis

Region 1 includes Escambia, Okaloosa, Santa Rosa, and Walton Counties. Clear Health has 233 members living with HIV/AIDS in this region.

Clear Health reviews the market consistently and deploys network development to ensure the network meets requirements where the specialty exists. We contract with therapy providers who provide care to both adults and pediatrics and continue our efforts with active network development deployment in identifying and contracting pediatric specific therapy providers in anticipation of new membership assignment including contracting across state/county/regional lines when applicable. We have identified in Region 1 that the below specialties are available for membership within the region for the provider types identified above:

- Pediatric physical therapy: 39 providers
- Pediatric speech-language pathology services: 24 providers
- Pediatric occupational therapy: 26 providers
- Pediatric private duty nursing services: 57 providers
- Intermittent skilled nursing: 12 providers
- Early intervention services: 64 providers
- Specialized therapeutic foster care: 1 provider
- Compounding pharmacies: 1 provider

The plan continues its network development activities to enhance the region's therapy availability. Our network includes the following groups that provide therapy services: Baptist Hospital, Andrews Institute, and Arc Gateway. The plan continues to review the specialized therapeutic foster care option in region 1 and have found membership has access to care in the neighboring region (Region 2). The plan has also engaged with therapy providers and home health agencies

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

who are available (contracted) and willing to treat members requiring therapeutic care while living in foster care either at the member's home (via home health) or within the therapy provider's clinics.

Provider recruitment efforts are ongoing. We anticipate all available providers will contract with us prior to roll-out. We will continue to deploy innovative strategies in rural areas including encouraging providers to open additional locations, extend the hours of established practices, and encourage the use of mid-level practitioners, BH coaches, and other physician extenders to increase capacity. We will implement telemedicine solutions where appropriate to support the population. Below we describe our process for identifying and mitigating network gaps.

1.2. Early Intervention and Specialized Foster Care

Early intervention and specialized foster care can be accessed through Florida's Early Steps coordination. Clear Health network providers are experienced in providing early intervention and specialized foster care services. In fact, Clear Health network providers currently provide services through Florida's Early Steps System. They understand the needs of medically complex infants and toddlers.

Our network is capable of offering services to the family and child in the community and is designed to maximize participation and development. We are able to meet these specialized needs in the office or home through our provider network and home health services. Beacon offers specialized therapeutic services through Community Mental Health Centers. We continue to recruit additional providers to assure our network has all the necessary capabilities to meet the needs of this population.

1.3. Private Duty Nursing and Intermittent Skilled Nursing

Regionally there are no gaps for home health. The challenge faced in the more rural as well as in the rural territories of other regions is for home health nurses to be able to cover the travel distance between members.

We have collaborated with our home health partners to increase capacity to mitigate this issue. We have worked hard to establish ongoing, preferential relationships with home health providers. These relationships, which foster a higher level of service and availability, include frequent and open communication. In many cases it has resulted in enhanced levels of staffing at the home health agency. We offer home health providers additional compensation to support home health providers and to make sure members get the care they need when they need it.

1.4. Ongoing Network Monitoring

Clear Health knows that a network composed of high quality providers is key to improved member outcomes, positive member experience, and appropriate utilization of services. We review data from various sources and take action based on analysis of data as well as provider or membership changes. And while comprehensive network data plays an important role in the ongoing management of our network, our hands-on collaborative approach to provider engagement is also a critical source of information allowing us to best meet the needs of our members and providers.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

The Provider Relations department reviews future membership changes and our capacity to provide covered services by establishing ratios to guide growth. Provider Relations develops ongoing network recruitment strategies based on any identified gaps as well as enrollment modeling for future endeavors.

Adequacy reports are reviewed monthly, or ad hoc when a major network change has occurred. We also consider member services data, quality of care and access concerns, HEDIS® data, administrative data, comprehensive analysis of access and availability, grievance and appeals data, and satisfaction surveys.

In addition to our monthly review of adequacy reports, we perform a formal network analysis on an annual basis (Network Development Plan) based on estimated membership for the upcoming year. This annual analysis includes Quest Analytics reports, as well as reports by market from the Gap Committee, which identify network gap issues based on the tracking and trending that was done during the previous year. We immediately start recruiting to locate needed providers should we identify a gap. Network recruitment activities are ongoing until the gap is filled to we have determined that there are no providers available to add to the network. Only after we have exhausted all possibilities to fill the gap do we submit a Waiver Request to AHCA.

The Network Development Plan also takes into account the ease with which care is provided to the member by all providers (including those provided by our subcontractors) by monitoring the number of member and provider complaints, reviewing utilization data to assure members are being seen and assessing the willingness to work with the plan via interactions and meeting requests and correspondence.

1.4.1. Additional Data Sources

We routinely monitor provider adherence to access standards through trending of member and provider complaint data. We accomplish this through communication from managed care coordinator/case manager to the Provider Relations team and review at monthly staff meetings. We also use annual member satisfaction surveys and provider satisfaction surveys to monitor access standards. We also continually monitor and act on information obtained through our Provider Relations, Case Management, Quality Management, and Marketing departments. We discuss this information at Gap Committee and QMC meetings.

Additional methods we use to monitor access standards include:

- Member services data
- Quality of care and access concerns
- Administrative data
- Comprehensive analysis of access and availability
- Grievance and appeals data
- Member feedback
- Provider feedback

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.5. Gap Committee

Our Gap Committee is our frontline team responsible for monitoring gaps in the network and assuring that network deficiencies are resolved. The Gap Committee includes representatives from Member Services, Grievances and Appeals, Medical Management, Quality Management, Health Services, Provider Relations, and Delegation Oversight. Data from all of these departments is reviewed, aggregated, and analyzed. Short- and long-term interventions are developed and the implementation of each strategy is prioritized based upon the number and type of members impacted, as well as the urgency of the need for the services/provider.

1.6. Capacity to Accept New Patients

We evaluate capacity by identifying providers with open panels and mapping them against our current membership. This allows us to measure access against AHCA access standards. We also use other mechanisms to monitor capacity to accept new members including:

- Dedicated staff make outbound calls to providers requesting updated information for the provider directory which includes whether or not they are accepting new members.
- A monthly fax blast is sent to providers requesting them to review their directory information and submit changes via fax, email, mail, or by informing their Provider Network Manager.
- During the Appointment Accessibility Audit process, information about provider offices not accepting members is captured and forwarded to Provider Relations for follow-up.

Clear Health's network includes more than 3,435 PCPs, of which 393 are in Region 1. Our network of PCPs is more than adequate to meet the needs of our projected membership. Using a ratio of members to PCPs of 750:1, our current network can accommodate statewide membership growth.

1.7. Monitoring Access

Our provider agreements require network providers to abide by all AHCA appointment standards, including standards for after-hours availability. We educate providers on these standards through initial and recurring provider training and the provider manual, which we incorporate by referencing as part of the provider agreement. Our provider newsletters supplement initial orientation training and serve as recurring reminders for timely scheduling of appointments and after-hours availability.

Clear Health conducts wait time and after-hours surveys to monitor network accessibility in compliance with AHCA requirements. Our Quality Management department contracts with an NCQA certified survey vendor to administer the Appointment Accessibility audit. We conduct initial audits in the spring and re-audits of noncompliance in the fall. We will increase the frequency of our access audits to quarterly in compliance with Attachment B, VIII Provider Services, A.8 Timely Access Standards.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Results are reviewed in Gap and Quality Management Committee (QMC) meetings. We review the results of the audit to make sure services are in compliance with the referenced subsection, and report Primary Care Physician results to the Agency as required in the format specified, in accordance with Section XIV, Reporting Requirements and the Managed Care Plan Report Guide.

1.8. Strategies to Increase Capacity if an Accessibility Issue is Identified

Clear Health's first priority is to make sure that members have timely access to quality care. For issues related to a specific provider we immediately contact the provider to inquire on the access constraints for the member. If the provider cannot serve the member, we help the member identify other available providers within the area to be sure the member gets timely care/service.

Any deficiencies in network access or findings of provider non-compliance with access and availability standards result in interventions focused on resolving any deficiencies. We inform individual providers of any deficiencies and request an action plan. Provider Network Managers monitor and evaluate the action plan to make sure the provider completes the critical tasks according to schedule and that issues do not re-occur.

If our analysis indicates a systemic or regional issue such as a component of our provider network being insufficient, our Provider Relations team develops and implements an action plan. The action plan will identify staffing, responsibilities, resources, and a timeline to correct the situation. We will explore deploying telemedicine to mitigate gaps as a potential solution.

1.8.1. Waiver Requests

Clear Health is committed to providing a complete network for each region. Prior to submitting a waiver request, we confirm that there are no providers available to meet member needs. We review provider directories of other MCOs, Department of Health data, perform a Florida license search, and perform additional online searches. In addition, we perform a zip code analysis to determine the closest provider to the member. We check to see if the provider is in our network (and that they are listed appropriately in our provider directory) and outreach with an invitation to join the network if the provider is non-participating.

Next, we evaluate our participating PCPs to determine the pattern of care. Clear Health makes every attempt to accommodate the member with providers in adjacent regions/ counties and provide transportation when needed. We continue to monitor the region for any new providers or facilities that may be available to render services.

In certain situations, such as rural counties where providers may not be available, Clear Health imply submits a waiver request to AHCA. We will continue to work with AHCA to address access issues due to limited availability of some specialties. Our proven process for arranging for care from out-of-network providers through single-case agreements expedites access to medically appropriate care for our members should a service not be available in our network.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

2. MEETING MEMBER NEEDS WHEN A SERVICE IS NOT AVAILABLE WITHIN OUR PROVIDER NETWORK

We are committed to facilitating access to medically appropriate care for our members. While our comprehensive provider network offers an array of accessible and convenient options for members and in almost all cases exceeds required access standards, due to limited availability of some specialties within Florida we occasionally need to refer a member out-of-network for services. Our procedures foster timely access to out-of-network providers so that our members can access the full range of services quickly, regardless of network capacity.

We assure the needs of members are met and covered services are provided, even if we are unable to provide the service through our provider network. If we are unable to provide medically necessary services to a member with our network providers, we cover the services in a timely manner by using providers and services that are not in our network. Education is given to providers on how to interact with the health plan while the member is under their care. In addition, the plan also coordinates/facilitates transportation when needed.

We have a clear and consistent process to resolve these issues in an expedited manner. The process includes communication of issue and time requirements to resolve issue as well as an escalation process to senior management if it appears the issue will not be resolved prior to the deadline. Our Regional Vice President of Provider Solutions is held ultimately accountable for resolution in a timely manner.

2.1. Immediate Interventions

Our first priority is to make sure the needs of our members are met and covered services are provided, even if we are unable to provide the service through our provider network. When a network provider is not available to meet a member's needs, we refer that member to an out-of-network provider and execute a single case agreement. This process does not apply to emergent situations as no referral is required.

To resolve a gap or barrier using a short-term intervention, Provider Network Managers contact a qualified out-of-network provider/specialist in the county or region who can offer the services needed and negotiate a Letter of Agreement (LOA) or a single-case agreement. We verify provider licensure and confirm that the provider does not appear on any governmental exclusion lists. We provide education on how to interact with the health plan while the member is under the out-of-network provider's care. In addition to the measures taken to coordinate care for the member, Clear Health also coordinates transportation when needed.

2.2. Short-term Interventions

We attempt to contract with out-of-network providers used by our members to enhance access and continuity of care. Our Out-of-network Coordination Nurses encourage out-of-network providers to join our network while they are developing the single case agreement. If the provider is interested in joining, the Out-of-network Coordination Nurse coordinates with the Provider Network Manager to follow up with the provider for contracting. At this point, the Provider Relations team negotiates rates in an effort to expedite care and follows up with the provider in an attempt to contract the provider to enhance the participating physician network. As part of our

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

network recruitment strategy, we review all single case agreement patterns in our monthly and quarterly meetings in order to proactively engage providers not currently in network.

2.3. Long-term Interventions

A long-term intervention would consist of closing a gap and/or barrier by negotiating a contract with a qualified provider/specialist in the county or region able to offer the services needed.

We assure the needs of enrollees are met and covered services are provided, even if we are unable to provide the service within our provider network. If we are unable to provide medically necessary services to a member via our network providers, we will cover the services in an adequate and timely manner by using providers and services that are not in our network. Our standard process is used to resolve these issues in an expedited manner.

The process includes communication of the issue and time requirements to resolve issue to the team, as well as an escalation process to senior management if it appears the issue will not be resolved prior to the deadline. Our Regional Vice President of Provider Solutions is held ultimately accountable for resolution in a timely manner.

2.4. Telemedicine Solutions

Telemedicine services can play an important role in providing members with ready access to both physical health (PH) and behavioral health (BH) services. Telemedicine is used to support health care when the provider and member are physically separated. Telemedicine can also play an important role in expanding access for members in rural areas where certain specialties might not exist, as well as those in more urban areas of the State for after-hours access to care as an effective alternative to unnecessary use of the emergency department (ED), and for expanding access for members with limited mobility.

Clear Health will cover telemedicine consistent with State regulations and Medicaid program requirements with respect to the provision of services via telemedicine. We will administer our telemedicine program in accordance with the telemedicine coverage provisions specified in the AHCA Standard Contract, including but not limited to the requirements related to technical safeguards, HIPAA, provider training, member choice, and fraud and abuse. We will comply with the telemedicine requirements specified in Attachment B, and will follow Florida Medicaid billing and reimbursement policies, as well as limitations, and restrictions on the provision of telemedicine.

Clear Health's telemedicine strategy is multi-faceted and designed to increase access to care in the above specialties as well as other services that support achievement of the Agency's goals. Our objective is to provide quicker and easier access to primary care, BH, and specialty services through telemedicine, and to address barriers related to travel, thereby reducing potentially preventable events (PPEs) and improving member health outcomes. Our strategies are designed to provide a comprehensive telemedicine solution and include:

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Specialty Teleconsults. Through our strategic partnership with GlobalMed, we will address the lack of adequate access to specialty consultations in rural areas and regions with our innovative pediatric and adult specialty telemedicine consultation solution. We will offer access to telemedicine consultations with locally-based Florida-licensed in-network providers for primary care, and various specialties including cardiology, pulmonology, endocrinology, internal medicine, and licensed mental health clinicians and psychiatrists. We will use a two-way audio/video communication with a secure internet connection from a video-enabled device such as a computer, tablet, or smart phone and/or facilitated presentation site with integrated diagnostic equipment. Patients will have telemedicine access to specialist consultations from PCP offices and other provider-facilitated presentation sites. This capability will support multiple participants, allowing the patient, PCP, and specialist to all participate simultaneously in the telemedicine visit. The member could also engage in a provider visit from the comfort of their home making this process convenient for them. We will offer scheduling for specialty consultations at blocks of time during the week for various specialties and engage with our network providers and members to educate and create awareness of appointment availability. We will also establish strategically located and facilitated community-based outreach center (CBOC) presentation sites in rural regions and areas of the State where access to a PCP location is limited.

LiveHealth Online. Through LiveHealth Online, we will offer our innovative member-direct access solution for urgent care telemedicine. LiveHealth Online facilitates online access through two-way audio/video technology to Florida-licensed, board-certified physicians covering primary care specialties (such as family practice, general practice, pediatricians, internal medicine, and emergency medicine) for consultations on clinically appropriate conditions (such as a cough, fever, or flu). Members can access services through a secure internet connection or an application on their smart phone.

Telemonitoring. Through our strategic partnership with Telemedcare America (TMC) and First Quality Home Care (FQHC) we are developing a pilot to provide telehealth monitoring to members with the goal of reducing utilization and cost. The goals of this pilot program focus on improving outcomes and reducing costs for a selected group of 100 members who suffer from chronic conditions of congestive heart failure (CHF), chronic obstructive pulmonary disease (COPD), and diabetes, for a six month period. Members will be monitored on an integrated model of service facilitated by TMC and FQHC in order to reduce hospitalizations and maintain control of chronic diseases through specific protocols.

3. MEASURING THE TIME BETWEEN WHEN SERVICES ARE AUTHORIZED AND RECEIVED

Clear Health's Health Services department currently monitors reauthorizations. Health Services monitors when services are approved and authorizations are issued to assure members are seen in a timely fashion. If there is a concern with the length of time between when a service is authorized and when a member is seen, Health Services contacts Provider Relations. Provider Relations speaks with the provider and attempts to secure an earlier visit for the member. Each preauthorization remains open for 60 days. If services have not been received within 60 days a new preauthorization is required.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

We are adapting our process to monitor when services are approved and authorizations are issued to assure members receive services in a timely fashion. On a weekly basis, we will review a report which provides an aging of preauthorizations without a matching service provided. If there is a concern with the length of time between when a service is authorized and when a member is seen (we require that all members are seen within AHCA standards), Health Services will contact Provider Relations. Provider Relations speaks with the provider and attempts to secure an earlier visit for the member. We also confirm delivery of durable medical equipment (DME) items within three business days to make sure member needs are being met.

If the provider is unable to meet the member's need for any reason, and the member is in agreement, Clear Health assists the member in finding another provider with earlier appointment availability. The Provider Network Manager also reaches out to the member's preferred provider to remind them of their contractual obligations.

4. SOURCES INFORMING THE NETWORK DEVELOPMENT AND MANAGEMENT PLAN

4.1. Data Sources

Provider Relations staff diligently monitor network adequacy, anticipate future needs, and promptly identify gaps to make sure that members have access to care and verify we meet AHCA standards. We use our proven techniques to monitor and evaluate our network (including cardiologists, pulmonologists, endocrinologists, internists, psychiatrists, obstetricians/gynecologists, and licensed mental health clinicians) and seek input from various sources (members, providers, AHCA, and other stakeholders) to make sure our members have access to care when and where they need it. Data is reviewed and monitored in Gap Committee and QMC meetings.

We identify gaps in our provider network and collaborate with AHCA to improve access, including encouraging providers to enroll as Medicaid providers. We submit regular and ad hoc provider network reports in accordance with AHCA requirements.

4.1.1. Quest Analytics®

As described earlier in this response, adequacy reports and Quest maps are reviewed biweekly, and reported quarterly at Gap Committee and QMC meetings, and more frequently as an ad hoc report when a major network change occurs. Quest Analytics® is an industry-standard tool specifically designed to measure a member's access to care through a variety of analytical approaches.

A standard Quest report includes the following features:

- **Geographical Overview Maps:** Overview maps display the provider locations in the geographical area requested. We can shade the service area by ZIP code, county, or state for easier interpretation by the end-user.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- **Provider and Member Location Maps:** Provider/member maps plot members and providers of any or all specialty/specialties – or combinations of both. These maps overlay the provider network against the membership base, with the appropriate radius encompassing each provider to identify geographical coverage in the service area.
- **Member Accessibility Summary:** The Member Accessibility Summary is a data sheet that provides an overview of the entire analysis displayed in the report. It shows the number and percentage of members with or without access. In addition, the Summary displays the top 10 key geographic areas and summary information. The top 10 key geographic areas are determined by the greatest number of members in that area.
- **Access Standard Comparison:** The Access Standard Comparison graph demonstrates the point at which the percentage of members attains compliant status with the specified provider type and defined access standard. The information from this graph can provide a quick evaluation of the strength-of-network in conjunction with the membership.
- **Accessibility Detail:** The Accessibility Detail data sheet provides an in-depth look at the summary information contained on the Accessibility Summary Page. We assess this data on a ZIP code level and display counts of members with and without access to care under the defined access standards. The detail provides the total number of members and providers along with a member-to-provider ratio for the demographic/geographic area analyzed. Additionally, the report continues this detailed analysis of a member's choice of up to five providers and the average distance to achieve that access.

4.1.2. Other Data Sources Used to Monitor Access to Care

In addition to Quest Analytics reports, we use other data sources to monitor access to care and quality of services including:

- **Routine Appointment Waiting Times.** We survey a statistically sound sample across our network quarterly to identify appointment standards and access to services for PCPs, specialists, and behavioral health providers.
- **Member Services data** identifies potential compliance issues. For example, if we receive repeated calls regarding a provider's inaccessibility, we contact the provider to investigate.
- **Quality of Care and access concerns** are investigated as part of our Continuous Quality Improvement (CQI) Program. We review the outcomes of Quality of Care reviews, including Peer Review Committee actions.
- **HEDIS® scores.** The HEDIS hybrid process enables collaboration with providers to improve access and outcomes. Our staff reviews medical records for documentation, access to care, and quality of services during provider visits.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Administrative data review and annual comprehensive analysis of access and availability includes analysis of administrative complaints, after-hours availability, survey information, appointment access statistics, Provider Call Center reports, Quest Analytics reports, grievance and appeals data, and provider satisfaction survey results. Data from departments, such as Provider Contracting and Database Administration, Operations, Medical Management, and Quality Management are used in the analysis.
- Grievance and appeals data identify trends at an individual provider level.
- Member satisfaction surveys. Each year, our Quality Management Department engages a qualified organization to administer the most current version of the Consumer Assessment of Health Care Providers and Systems (CAHPS®) survey that queries members on access to care among other key questions.

Any findings of provider non-compliance with access and availability standards result in interventions, focusing on helping improve performance. Our assistance may include working with providers to extend their office hours or expand their practice, or we may recalibrate the member-to-PCP assignments to maximize our network capacity.

4.2. Gap Committee

The Gap Committee, described above, performs a formal network analysis annually and prepares a Network Development Plan based on estimated membership for the upcoming year. This annual analysis includes reports from the market directors. These reports reflect any new trend identified in the market, gaps, and the closure of any gaps or issues identified in the previous year's Network Development Plan.

Clear Health has a detailed and proactive process to promptly address network gaps because we know from experience that network gaps are high on the list of reasons for member dissatisfaction and voluntary disenrollment. Our Gap Committee is our frontline team responsible for monitoring gaps in the network and assuring that network deficiencies are resolved. The Gap Committee includes representatives from Member Services, Grievance and Appeals, Medical Management, Quality Management, Health Services, Provider Relations, and Delegation Oversight.

Each of these departments track and trend member or provider barriers obtaining access to covered services, whether it is appointment availability or a lack of a necessary specialty type in the network. We track and trend claims and encounter data for peaks and valleys that could indicate a provider is at capacity and identify those that are being under-utilized for special investigation into why Clear Health members are not being seen at expected rates for that provider type. We identify issues and determine root causes through the analysis of Quest Analytics data and review of the Provider Network Verification files for ratio analysis.

Each department brings the results of their review of network issues, access challenges, and member and provider complaints to the Gap Committee meetings. We review, aggregate, and analyze data from all of these departments. Short- and long-term interventions are developed and we prioritize the implementation of each strategy is prioritized based upon the number and type of members impacted, as well as the urgency of the need for the services/provider.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

We maintain minutes of each meeting that document estimated resolution dates for the issue and the individual accountable to support for future follow-up. Each Gap Committee meeting results in a prioritization list that is assigned to the Provider Relations department and a recruitment list is provided to each Provider Network Manager. Recruitment updates are reported back to the Gap Committee or to the workgroups by Provider Relations. Recruitment difficulties in high-impact areas are escalated to our Regional Vice President of Provider Solutions for assistance.

The Gap Committee reports network findings, performance metrics, corrective action plans (CAPs), and all other pertinent information to the Quality Management Committee (QMC). Our QMC meeting, led by our Health Services and Quality departments, addresses potential access to care concerns. When members report access issues or complaints about providers, the source department tracks and trends these issues and reports them to the Gap Committee. The Gap Committee reports them to the Quality Management department (and these are included in the Provider's recredentialing review).

5. DELEGATION AND OVERSIGHT OF PROVIDER NETWORK FUNCTIONS

Clear Health views subcontractors as valued partners in delivering the highest quality services to enrollees (members), providers, and the Agency. We work hard to select top-level qualified subcontractors who can best serve our members through a comprehensive vetting process.

5.1. Clear Health Is Responsible for Subcontractor Performance

Clear Health retains sole responsibility for fulfilling SMMC Contract requirements. We are fully accountable for our subcontractors' performance, and will continue our successful Subcontractor Oversight Program. Clear Health will continue to oversee, monitor, supervise, and enforce Contract compliance, as well as promote frequent, open, and effective communication that emphasizes delivery of quality services to members.

Our dedicated Florida-based Vendor Delegation Oversight Group (VDOG) oversees and monitors subcontractor performance. Led by our Staff VP of Operations and System Solutions, VDOG includes four full-time dedicated staff. The VDOG team has support from executive leadership and departments across Clear Health, including Provider Relations, Compliance, Regulatory, Operations, Utilization Management, Member Services, Grievance and Appeals, and Medical Management.

VDOG assigns an Account Manager to each subcontractor to conduct day-to-day management, as well as oversight and review of subcontractor performance using tools such as the monthly Key Performance Indicator (KPI) report.

The Account Manager works in conjunction with Provider Relations to monitor the subcontractor's network development and ongoing network management efforts to confirm continued compliance with AHCA access and availability requirements.

For example, we receive a weekly add/termed provider report from each subcontractor in addition to their monthly full roster submissions. The weekly add/terms provider reports allow us to update our systems to have the most updated provider directory for our members.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

In the event we have any concerns of gaps within the subcontractor networks, the VDOG team will immediately bring those gaps to the attention of the subcontractor and request for an updated roster to fill the gap or an action plan outlining efforts being taken to fill the gap. If the subcontractor is unable to fill the gap, we ask them to submit a waiver with all details of attempt to fill their gap.

Due to the unique nature of administering pharmacy benefits, the Pharmacy Performance Oversight Council will continue to monitor the performance of Clear Health's pharmacy subcontractor. This assures performance meets all regulatory and accreditation standards (such as NCQA, CMS, URAC, State and federal regulations).

Third Party Vendor standards are established and must be met to continue participation in our network. Monthly meetings are held with each subcontractor to address any issues at the time and/or develop intervention strategy to remedy the situation. VDOG addresses member complaints and grievances with all of the subcontractors in order to better serve the health plan population. Participation and support are items reviewed as part of our Network Development Plan on a yearly basis.

Clear Health engages our delegated subcontractors with any changes that are or will be implemented. Our delegated subcontractors are required to meet the same standards as the health plan including network adequacy and education. Our subcontractors have established a series of provider trainings as well as other initiatives to improve the communication and knowledge of their providers.

Clearly defined expectations and consistent monitoring of performance against them is a key component of our Subcontractor Oversight Program. Clear Health executes written agreements with each subcontractor that detail the specific scope of services required, performance standards, service level agreements, and reporting responsibilities. The agreements also specify the actions Clear Health will take to address inadequate or substandard performance, such as development of a CAP, use of sanctions, and termination. If at any time performance does not meet requirements, we take action and work closely with the subcontractor toward a resolution and a return to complete and ongoing compliance.

We outline specific service level agreements for each function we delegate to the subcontractor. service level agreements are never less stringent than those required by AHCA in the SMMC Program Scope of Services. If AHCA modifies a standard, we will amend the subcontractor agreement to reflect the change.

Clear Health also at times requires subcontractors to meet service level agreements for areas that do not have a corresponding AHCA requirement. For example, Clear Health requires our transportation subcontractors to meet a 95 percent on time performance metric, a standard that is not a current AHCA requirement.

5.2. Pharmacy Oversight Activities

Responsibility for regular PBM oversight lies with the national Pharmacy Services Compliance and Audit team. Although our pharmacy subcontractor is delegated network credentialing and management functions, Clear Health determines the strategy and makes all oversight decisions. We review pharmacy network adequacy reports to assure compliance with access standards.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

The team receives regular monthly and quarterly reports including data files from the PBM. Assigned business reviewers evaluate reports and data files to determine if the PBM's performance complies with requirements and service level agreements. They review each function either monthly or quarterly, depending on the function, and identify deficiencies or contractual gaps. Functions reviewed include:

- Claim processing accuracy
- Eligibility processing
- Network access
- Prompt payment
- State or federal provider exclusions/sanctions
- Call center performance
- Network audits
- Fraud, waste, and abuse activity
- Drug utilization review
- Delegated functions such as drug recalls

CAPs are implemented to address contractual issues, regulatory/compliance issues, or standing unresolved issues needing resolution. CAPs are formally requested and bi-weekly meetings are held with PBM to review CAP status and discussion of criteria for closure.

5.2.1. Compounding Pharmacies

In order to ensure members have access to compounded prescriptions when they need them, our pharmacy subcontractor's retail networks include many local pharmacies that have compounding capabilities. In addition Express Scripts has contracted with select sterile compounding pharmacies.

Our pharmacy subcontractor's supply chain team ensures that our retail networks continue to meet contract obligations, including the availability of compounding pharmacies. This team evaluates SMMC requests to add specific pharmacies to the network and can provide special reporting, such as identifying pharmacies that offer compounding services.

Our pharmacy subcontractor's Compound Management Program evaluates every ingredient within a compound prescription claim against a list of over 1,000 bulk powders that are targeted within this program, which represent over 95 percent of all compound medication spend. To determine whether a compound is covered or excluded from coverage, Express Scripts' program evaluates every ingredient within a compound prescription, cross matching it to our exclusion and inclusion list.

Our pharmacy subcontractor's highest priority is providing uninterrupted service to members. Their regional home delivery pharmacies provide complete back-up/contingency and redundant capabilities in the event of a disaster at any pharmacy site. Order routing capabilities allow the dispensing of medication from any pharmacy in the national network. In the event of a failure at one home delivery pharmacy, prescription information is easily routed to other pharmacies for fulfillment without significant processing interruption.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Their dispensing process allows automatic sorting and isolation of packages by destination ZIP code or shipping carrier, facilitating alternate delivery methods. Express Scripts' maintains relationships with several shipping carriers, reducing shipping carrier failures. The shipping carriers work closely with our pharmacy subcontractor during a natural disaster such as a hurricane, flood, or wildfire to determine alternate delivery or pick-up locations, minimizing delivery disruptions.

The Accredo pharmacy provides prescription compounding for specialty products in a limited capacity. The vast majority of our product portfolio does not require compounding. However, in the rare instance that a specialty medication requires compounding, we will evaluate to determine if we can compound in-house or coordinate with a pharmacy that can provide services.

5.2.2. Oversight Audits

Pharmacy subcontractor oversight includes conducting two formal audits each year. Audits help assure compliance with the Pharmacy Benefits Management (PBM) Services Agreement and State, federal, NCQA, URAC, and Medicaid regulations applicable to PBM functions. The team collaborates with other national business units, including the Reliability Team and pharmacy regulatory mandates subject matter experts, to determine the scope of the audit. Audits are conducted by national staff and/or an external auditing firm. Audit activities may include:

- Developing audit scope in collaboration with the business areas and receiving management approval
- Creating and/or revising audit tools
- Monitoring audit progress and PBM participation/cooperation
- Determining audit deficiencies and opportunities for improvement; if applicable, reaching an agreement with applicable business area and creating a final report
- Collaborating with legal on final audit report
- Collecting PBM documentation for audit deficiencies, tracking until resolution, coordinating information with applicable business and approval for closure, presenting to the Pharmacy Performance Oversight Council for closure

Oversight audit results and CAPs resulting from audits are reported to Clear Health's Compliance Officer.

5.2.3. Pharmacy Oversight Committees

Pharmacy subcontractor oversight and monitoring includes two main committees: the Pharmacy Performance Oversight Council and the Joint Compliance Committee (JCC).

The Pharmacy Performance Oversight Council monitors the overall performance of all delegated functions related to providing pharmacy operational/clinical service solutions and confirms that performance meets all applicable health plan, regulatory, and accreditation standards (such as

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

NCQA, CMS, URAC, State, and federal regulations). The Pharmacy Performance Oversight Council meets at least four times each year and includes representatives from key areas, including UM, Medical Directors, Clinical, Appeals/Grievances, Delegation, Finance, Pharmacy Operations, and EDOM). The Pharmacy Performance Oversight Council was established to:

- Review and analyze performance metrics and information
- Provide recommendations to improve member quality of care and service
- Review and approve PBM oversight audit reports
- Review and approve the PBM's annual UM program, UM work plan, and UM annual report
- Review and approve CAPs
- Supply quarterly reports maintaining linkage between service and clinical
- Assess activities to verify that contract, accreditation, and regulatory requirements are met

The JCC meets every two weeks with the pharmacy subcontractor to discuss new and existing mandates as well as legal, regulatory, and contractual requirements; approve implementation plans to comply with these requirements; and to discuss any legal, contractual, or compliance concerns with the subcontractor and their legal team. If agreement on or resolution to an issue cannot be obtained in the JCC, the issue is escalated.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The adequacy of the respondent's methodology for identifying and resolving barriers and network gaps; including ongoing activities or network development based on region-specific identified gaps and future needs projection.
2. The adequacy of the respondent's plan to meet the needs of enrollees if it is unable to provide the service within its provider network; including immediate, short-term and long-term interventions.
3. The extent to which the respondent's plan includes strategies for measuring the time in-between when services are authorized and when they are received.
4. The extent to which the respondent's update of its network development and management plan is informed by multiple data sources (including complaints, grievances, etc.).
5. The extent to which the respondent's draft network development and management plan addresses the delegation of provider network functions to subcontractors and the oversight of these operations.

Score: This section is worth a maximum of 25 raw points with each of the above components being worth a maximum of 5 points each.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

Annual Network Plan

The mission of Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health) is to expand and simplify access to coordinated health care services for enrollees (members) and beneficiaries in government-sponsored programs. We will enable members to achieve optimal health through an outstanding network of providers and high-touch, local customer service delivered with the highest level of respect and service.

As Florida's largest HIV/AIDS specialty plan, Clear Health has extensive experience and qualifications in contracting and servicing networks designed to meet the special needs of this population. We recognize that to develop and maintain a high quality network to serve the HIV/AIDS Medicaid population our company must have the respect and trust of the community.

We know from experience that an integrated provider engagement model is critical to ongoing success. Everyone at Clear Health shares responsibility for interacting with providers in a way that drives superior results and outcomes. All areas within our organization (such as Member Services, Utilization Management, Case Management, Pharmacy, Claims, Quality Management, HEDIS®, and Medical Economics) work with providers to make sure they have the information, tools, and ongoing support necessary to achieve the best outcomes for our members and reduce providers' administrative burden. Across Florida, we support providers with timely communications, effective and informative one-on-one training, user-friendly technical assistance, actionable data and analytical support, and proactive issue resolution to foster continuous improvement and high-quality care.

We understand that a network of high-quality providers is key to improved member outcomes, positive member experience, and appropriate utilization of services. We have designed our engagement model to move providers along the value-based continuum, providing support to advance them through the array of value-based services.

We have developed a provider recruitment strategy and message of inclusivity and collaboration, and have actively provided education and support for the providers who serve our population. Clear Health has built an extensive HIV/AIDS Medicaid network in Florida, establishing close relationships with primary care providers (PCPs), specialists, county health departments, Federally Qualified Health Centers (FQHCs), Regional Health Clinics (RHCs), and teaching institutions. We have been able to recruit PCPs and specialists in infectious disease, cardiology, dermatology, rheumatology, gastroenterology, and endocrinology who have experience in treating patients with HIV disease to become Medicaid providers and contract with us.

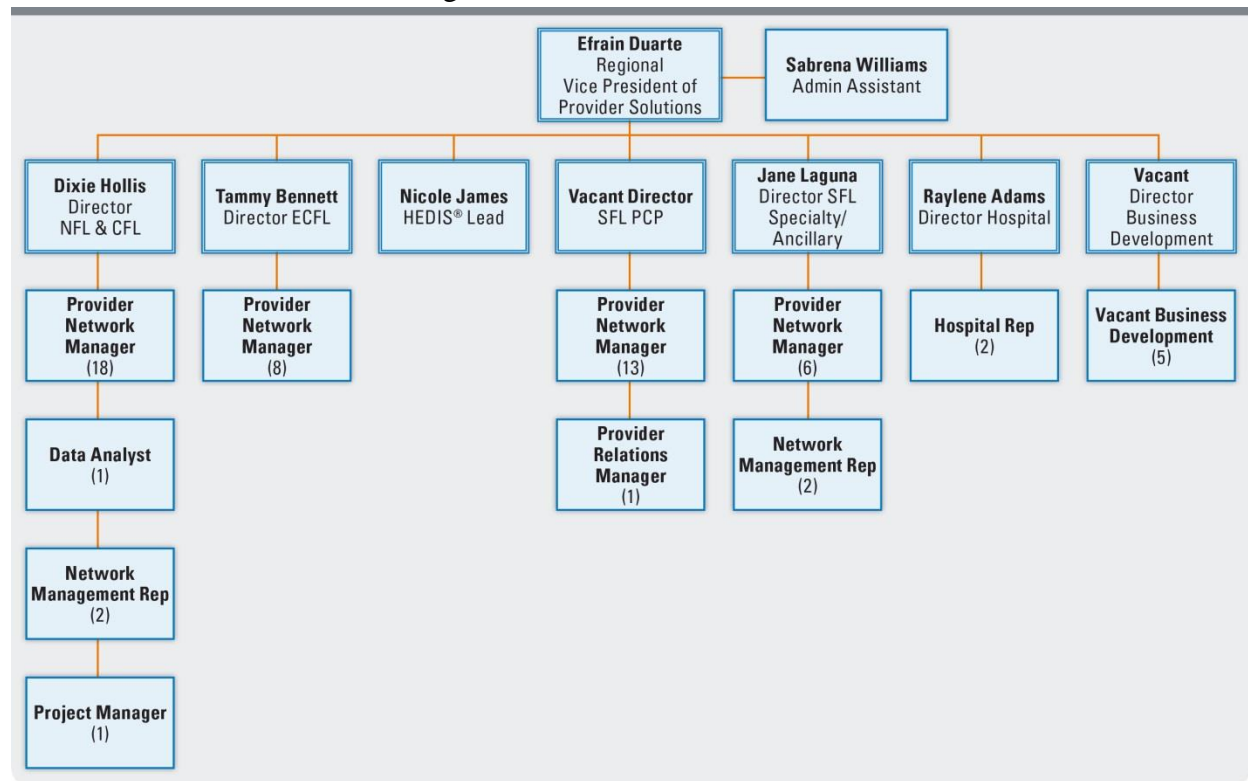

We have developed an intimate understanding of the unique needs of members with HIV/AIDS and the providers needed in their treatment and care. We allow family practice, general practice, pediatric, internal medicine, and infectious disease providers to serve as PCPs. An obstetrician may also serve as a PCP for a pregnant member, if that obstetrician meets criteria for HIV expertise and is willing to participate as a PCP. This broader definition has enabled us to lower member-to-provider ratio requirements to facilitate more frequent and more comprehensive interaction with the members.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

We provide an enhanced level of support to network providers we designate as red ribbon providers. They have specialized HIV/AIDS training and are designated by a red ribbon beside their names in our provider directory, which informs members of their additional specialized HIV/AIDS care and treatment competency. Our red ribbon program is nationally recognized and a testament to our person-centered model of service and support.

Clear Health has established a Network Development and Management Plan (“Annual Network Plan”). It demonstrates our processes for developing, maintaining, and monitoring the Medicaid provider network. We will continue to submit the plan to the Agency every year by September 1.

Our Florida Provider Relations organization chart is included below

FL_CHA_DeliverySysOrg_60_Org_1.1

Provider Relations Approach

Clear Health’s collaborative provider engagement strategy transforms health care delivery, creates an integrated system of care, and drives improved access and health outcomes for our members. Our success is anchored by our local, hands-on approach. We meet providers where they are and have been trusted partners through changes in programs, policy and benefits, demographics, cultural needs, and public health initiatives. Our provider engagement model brings us together with our providers by leveraging data, insights, and technology for a common objective – delivering the right care at the right time in the right place.

We embed Provider Network Managers in the regional communities, meeting face-to-face with providers to build trusting, open communication, and develop collaborative relationships. They

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

collaborate with providers to improve the effectiveness and efficiency of their practices and identify opportunities to improve care and service. By analyzing quality metrics, utilization trends, and reports for care opportunities, Provider Network Managers help providers coordinate care and create action plans to manage costs and improve quality, performance, and our members' experience while encouraging them to adopt practice management strategies that work for top-performing peers.

Our network management strategy, with its focus on reducing administrative burden and allowing providers more time to take care of our members, includes the following:

- On-demand technical assistance to help providers succeed, such as proactively contacting them if we identify possible submission errors through ongoing claims review
- Proactive education, delivered by a team of professionals focused on Medicaid products, that addresses the specific needs of providers in our network
- Assistance for providers at the point-of-care through actionable information using a variety of delivery methods to help manage members' care, including notifying providers of care gaps through online clinical alerts; providing periodic gaps in care reports for their assigned members; and providing access to our Case Management System that displays HEDIS[®] care alerts, prescriptions, lab results, and more to help identify and address barriers to care and services
- Sound reimbursement practices, including prompt and accurate claims payment and innovative incentive programs that reward providers for improvements in quality measures, leading to improved outcomes
- Practices to simplify and minimize administrative burden, including technology solutions such as online claims and prior authorization submission
- Ongoing collaboration with providers to improve member outcomes
- Educating PCPs on identifying members with behavioral health (BH) needs, including Screening, Brief Intervention, and Referral to Treatment (SBIRT)

Across Florida, we collaborate with network providers and support them with timely communications, effective and informative one-on-one training, user-friendly technical assistance, and proactive issue resolution to foster continuous improvement and high-quality care. Our regionally based Provider Relations staff is located in local communities throughout the state. They know their local communities and the providers in those communities, and they are able to meet face-to-face to build trust, open communication, and collaborative relationships.

A. Processes to Develop, Maintain and Monitor Network

Clear Health maintains an appropriate provider network sufficient to provide adequate access to all services covered under the SMMC MMA Contract. We build our network to reflect the health care needs of our Florida members and our development approach reflects our understanding of the population's unique characteristics as described below.

1. Development

- Clear Health considered the following elements (as required by 42 CFR 438.206) when we established the provider network:

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

1. The anticipated number of members
 2. The expected utilization of services, taking into consideration the characteristics and health care needs of the specific Medicaid population represented
 3. The numbers and types (in terms of training, experience, and specialization) of providers required to deliver the covered services
 4. The numbers of network providers who are not accepting new members
 5. The geographic location of providers and member, including distance
 6. Travel time, the means of transportation ordinarily used by members and whether the location provides physical access for Medicaid members with disabilities
- Clear Health developed our plan for each region by determining network gaps. We use various means to regularly monitor the network and identify any barriers and gaps in care. Our Gap Committee is the primary method for reporting identified gaps in the network and making sure they are resolved. Our Directors are responsible for resolving network gaps and are accountable for any delays. The Gap Committee meets quarterly with department representatives from Member Services, Medical Management, Quality Management, Health Services, Provider Relations, Grievances and Appeals, and Delegation Oversight
 - Each of these departments tracks and trends member or provider disputes with access to covered services, whether it is appointment availability or a lack of a necessary specialty type in the network. We also track and trend claims and encounter data to identify peaks and valleys that could indicate a provider is at capacity and identify those underutilized to investigate why Clear Health members are not seen at expected rates for that provider type. Data from all of these sources is aggregated and prioritized based upon the impact, number of affected members, and urgency of the requested services. Documented minutes of each GAP Committee meeting include accountable individual and estimated dates for issue resolution for follow-up. Gap Committee meetings result in a prioritized list for the Provider Relations department and, when necessary, a recruitment list for each Provider Network Manager. Provider Relations reports recruitment updates to the Gap Committee and difficulties in high-impact areas are escalated to the Regional Vice President of Provider Solutions for resolution assistance.
 - In addition, we consider the wishes of current providers in our network. When new providers join our network, we ask for their preferred referral specialists and providers and proactively add those to the recruitment list. This preserves the new provider's established referral patterns and supports continuity of care for assigned members. Additionally, as the Provider Network Manager meets regularly with providers, we continue to request information on referral specialists to keep current with changes and new providers who may have started practice in the community.

2. Maintaining

To maintain our network, Clear Health reviews data from various sources and takes action based on provider or membership changes, including:

- When members report access issues or complaints about providers, they are tracked and trended by the source department, reported to the Gap Committee and Quality Management (QM) department, and included in the providers' recredentialing review.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

- When Clear Health recognizes a network gap, we identify prospects in the affected area and work to close the gap and address the barrier by negotiating a contract with nearby providers of that specialty as a long-term intervention. During the contracting and negotiation process, we will execute a letter of agreement (LOA) or single-case agreement to meet the needs of members in that region who may require those specialty services. This is a short-term intervention, because our ultimate goal is to fully contract and credential the providers.
- Clear Health monitors any future membership changes and our capacity to provide covered services. We are also responsive to new gaps and adjust network recruitment strategies accordingly.

3. Monitoring

- Adequacy reports and Quest Maps are presented quarterly to the Gap Committee, and more frequently as an ad hoc report when a major network change occurs
- The Gap Committee performs an annual formal network analysis (Annual Network Plan) based on estimated membership for the upcoming year. This analysis includes reports from directors. Reports reflect any new trend identified in the market, gaps, and the closure of any gaps or issues identified in the previous year's Network Development Plan
- Clear Health takes into account the accessibility and availability of our contracted ancillary providers, such as Beacon (BH), DentaQuest (dental), ESI (pharmacy), EyeQuest (vision), contracted hospitals, and specialty providers. This is accomplished through the review of member and provider complaints, Quest Analytics access reports, and quality management and utilization reports
- In addition, Clear Health meets regularly with contracted ancillary providers to review their performance and service standards. Our Director of Statewide Ancillary Contracting and the Subcontractor Oversight Director are included in these meetings.
- The Subcontractor Oversight team is responsible for the contracts and service overviews of all subcontractors. Ancillary providers and subcontractors are held to the same standards that Clear Health is required to uphold. Compliance with standards is determined via pre-delegation audits and annual audits thereafter. Standards must be met to continue participation in our network. We hold monthly meetings with each subcontractor to address deficiencies, concerns, and issues, and discuss intervention strategies, as necessary, to remedy the situation.

Provider Relations employees diligently monitor network adequacy, anticipates future needs, and promptly identify gaps to make sure that members have access to care and we continue to meet AHCA standards. We use our proven techniques to monitor and evaluate our network and seek input from various sources (members, providers, AHCA, and other stakeholders) to make sure our members have access to care when and where they need it.

We identify gaps in our provider network and collaborate with the AHCA to improve access, encouraging providers to enroll as Medicaid providers. We submit regular and ad hoc provider network reports in accordance with AHCA requirements.

Other Data Sources Used to Monitor Access to Care

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

In addition to Quest Analytics reports, we use a number of other data sources to monitor access to care and quality of services including:

- **Secret shopper phone calls** are used to collect data from providers in our network regarding appointment availability and access to care, including hours of operation and after-hours availability. We document provider responses to confirm compliance, identify potential quality improvement opportunities, and make sure our system contains accurate information for the provider directory
- **Routine appointment waiting times.** We also consider routine appointment waiting times. Every quarter, we survey a statistically sound sample across our network to identify appointment standards and access to services for PCPs, specialists, and BH providers
- **Member services data** identifies potential compliance issues. For example, if we receive repeated calls regarding a provider's inaccessibility, we contact the provider to investigate
- **Quality of Care and access concerns** are investigated as part of our Continuous Quality Improvement (CQI) program. We review the outcomes of Quality of Care reviews, including Peer Review Committee actions
- **HEDIS® scores.** The HEDIS® hybrid process enables collaboration with providers to improve access and outcomes. Our staff reviews medical records for documentation, access to care, and quality of services during provider visits
- **Administrative data review and annual comprehensive analysis of access and availability** includes analysis of administrative complaints, after-hours availability, survey information, appointment access statistics, provider help line reports, Quest Analytics access reports, grievance and appeals data, and provider satisfaction survey results. The analysis includes data from various departments, such as Provider Contracting, Operations, Medical Management, and Quality Management
- **Grievance and appeals data** identify trends at an individual provider level
- **Member satisfaction surveys.** Each year, our Quality Management department engages a qualified organization to administer the most current version of the CAHPS survey that queries members on access to care and other key questions

Any findings of provider non-compliance with access and availability standards will result in interventions, focusing on helping improve performance. We may work with providers to extend their office hours or expand their practices, or we may recalibrate the member-to-PCP assignments to maximize our network capacity.

B. Network Design by Region and County for the General Population

Clear Health is a Medicaid Specialty Plan for people living with HIV/AIDS. Our network includes all Florida regions, except Region 4.

When developing and reviewing the network in each region, Clear Health considers the member population type, its culture, language needs, members' limited resources and education, as well as the availability of providers in the region and access to them. This member population is

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

composed of Medicaid-eligible children and adults of all ages, which include low-income families, persons with limited resources, Aged, Blind, and Disabled persons, and others.

The population requires specialty provider types with the education and experience serving and treating individuals diagnosed with HIV/AIDS, related disease complications, and co-morbidities. The population also requires BH providers with experience treating individuals with HIV/AIDS and Medicaid.

There are regions in Florida with limited access to certain providers, requiring Clear Health to develop strategies that include access to providers in adjacent regions. This may exceed travel time and distance access standards required in the Contract, and require transportation to these providers.

Clear Health currently serves approximately 9,500 members in our active regions (as of August 2017). The regions vary between very rural and urban areas, with some regions having a mix. The recruitment and contracting was a challenge in regions with rural counties and much easier for the larger urban areas. By having contracts with providers in the larger urban area, we identified patterns of care to enable a member to obtain services when none are available in their area.

Region 1

Region 1 includes Escambia, Okaloosa, Santa Rosa, and Walton Counties.

Our statewide network for the following identified providers includes:

- Cardiologists (pediatric and adult): 1,102 providers
- Pulmonologists (pediatric and adult): 402 providers
- Endocrinologists (adult): 244 providers
- Internists (adult): 1,043 providers
- Psychiatrists (pediatric and adult): 799 providers
- OB/GYNs (adult): 925 providers
- Licensed mental health clinicians (pediatric and adult): 1,880 providers

Our network for Region 1 also includes:

- Physical therapy (pediatric): 39 providers
- Speech-language pathology services (pediatric): 24 providers
- Occupational therapy (pediatric): 26 providers
- Private duty nursing services (pediatric): 57 providers
- Intermittent skilled nursing (pediatric and adult): 12 providers
- Early intervention services: 64 providers
- Specialized therapeutic foster care: 1 provider
- Compounding pharmacies: 1 provider

Provider recruitment efforts are ongoing. We anticipate contracting with all available providers prior to rollout. We will continue to deploy innovative strategies in rural areas, including

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

encouraging providers to open additional locations; extend the hours of established practices; and use mid-level practitioners, BH coaches, and other physician extenders to increase capacity. We will implement telemedicine solutions where appropriate to support the population. Below we describe our process for identifying and mitigating network gaps.

Early Intervention and Specialized Foster Care

Early intervention and specialized foster care are currently accessed through Florida's Early Steps System. Clear Health network providers are experienced in early intervention and specialized foster care services. In fact, our network providers currently render services through Florida's Early Steps System. They understand the needs of medically complex infants and toddlers.

Our network is capable of offering services to the family and child in the community and is designed to maximize participation and development. We are able to meet these specialized needs in the office or home through our provider network and home health services. Beacon offers specialized therapeutic services through Community Mental Health Centers CMHCs. We continue to recruit additional providers to make sure our network has all the necessary capabilities to meet the needs of this population.

Private Duty Nursing and Intermittent Skilled Nursing

Regionally, there are no gaps for home health. The challenge in the more rural areas is for home health nurses to be able to cover the travel distance between members.

We have collaborated with home health providers in our network to increase capacity to mitigate this issue. We have worked hard to establish ongoing, preferential relationships with home health providers. These relationships, which foster a higher level of service and availability, include frequent and open communication. In many cases, it has resulted in enhanced levels of staffing at the home health agency. We offer additional compensation to support home health providers and make sure members get the care they need when they need it.

Clear Health focuses on MMA provider training, network expansions, delivering member access to care, and provider encounter data collection and submission. This last year, we continued the focus on improving processes for measuring our provider network performance. With the availability of prior years' claims data experience and two full MMA years of HEDIS® data, Clear Health was better equipped to review collected encounter data and establish network provider performance measures. Using this data and provider-specific performance measures, we identified providers who performed better than their peers in care management, health outcome measures, HEDIS® quality measures, CHCUP scores, medical record reviews, and other measures such as re-admission rates, emergency department (ED) visits, and cost saving.

This past year, Clear Health set higher benchmarks and gave providers tools and strategy training aimed at improving health outcomes.

Inpatient Census Report. We learned that giving providers a daily inpatient report increased the rate of timely follow-up visits after admission, expedited and addressed the treatment of high-

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

risk conditions, and prevented readmission. Providers need to know when their members receive inpatient care. One successful initiative is the delivery of an inpatient census report that informed PCPs of a facility admission for members assigned to them. We found that keeping providers informed of inpatient care is critical to overall care of the member and improving health outcomes. Clear Health implemented the automatic delivery of the inpatient census report to high-volume PCPs and we are in the process of rolling this out to the remaining PCP network.

PCP Panel Report. Clear Health continued to deliver the PCP Panel report through our provider portal. This report provides PCPs a list of members in their panel and their contact information. We expect providers to perform outreach to all members and schedule an appointment for a health screening and evaluation.

HEDIS® Dashboard Report. Clear Health continued to send the HEDIS® Dashboard report, providing PCPs with their performance measure rates. This report helps providers identify the procedures to be rendered to the members on their panel.

PCP Capitation Reports. This year, Clear Health identified a gap between our fee-for-service and capitated providers. The percent of encounters received from capitated providers was very low. To mitigate the issue, we sent high-volume providers their capitation reports and checks together to make sure PCPs were aware of our members to improve the health of everyone in their panel.

While consistently maintaining our contractual network requirements, Clear Health strives to continue to foster close relationships with providers who demonstrate quality care, good utilization patterns, better quality outcomes, and cost savings.

Overall, the Clear Health network is very tightly knit because of the sensitivity in treating people with HIV/AIDS. Our case management team has developed relationships with community resources and clinics in each county and has thoroughly identified the pattern of care for each member. They communicate closely with organizations to identify new providers moving into the area that can deliver services to our members.

Section J of the Network Development and Management Plan provides additional details on network status.

C. Evaluation of Prior Year

Below is a description of the evaluation of the prior year's plan, including an explanation of the method used to evaluate the network and reference to the success of proposed interventions and/or the need for re-evaluation:

1. Clear Health uses Quest Analytics reports to determine availability and evaluate the network. The Quest Analytics Software includes the MMA Contract-defined access standards to make sure the network is reviewed against AHCA standards. We also conduct a PCP wait time survey for the purpose of accessibility analysis.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

2. Clear Health reviews individual provider performance measure data upon recredentialing, as well as member complaints, risk management issues, quality reviews, and other key indicators identified in credentialing policies and procedures.
3. Section J of the document provides details of the prior year and Section K provides supporting reports.

D. Description of the Current Status of the Network

1. How Members Access Services

Members receive covered Medicaid and expanded services through our network of providers, specialists, facilities, and ancillary providers. They are able to locate participating providers using the following methods:

- A printed directory available to each member at no charge by calling the Member Services line or accessing the member website
- A provider directory available on the member website, searchable by name, specialty type, county, and zip code
- A call to the Member Services line to request assistance or a printed copy of the directory
- A call to a Case Manager or Disease Manager (when enrolled in a case or disease management program) for help locating a provider and arranging care
- The ID card that identifies the name of members' PCPs and phone number to call should the member have any questions about accessing care
- New member welcome calls upon becoming Clear Health members, making sure they have a PCP, as well as explaining how to access care when needed. This process also helps us identify members who would benefit from case or disease management
- An after-hours Nurse help line where members can interact with a nurse who helps them with advice and recommendations for seeking treatment aided by decision support software
- Opportunities for members to communicate with us at all approved community outreach events, as well as through our Mobile Medical Units staffed by licensed providers

In addition, PCPs receive training and education during onboarding that reviews how members access services. PCPs also receive a list of specialty and ancillary providers so they may assist members in the selection, when necessary.

2. Analysis of Timely Access to Services

On an annual basis, Clear Health conducts PCP wait time and after-hours surveys to monitor network accessibility. We conduct initial audits in the spring and re-audits of noncompliance in the fall. For those in a Case or Disease Management program for medically complex cases, the Case Manager will help schedule the member's first visit. We also provide PCPs a monthly roster of new members they can use to initiate contact to schedule their first visit.

The status of the network is monitored quarterly through review of Quest Analytics reports and analysis of their trends and data. Reviews of Internal Ratio network reports and Agency Ratio network reports occur every other week to assure ongoing compliance with MMA contract

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

requirements. (In the annual submission to the State, we will include our Current Network Status report.)

3. Partners

Relationships between the various levels, focusing on provider-to-provider contact and facilitation for PCPs, specialists, hospitals, as well as BH providers, assisted living facilities (ALFs), and home health agencies.

During the recruitment and network maintenance process, determining the relationship between the PCPs, specialists, and facilities within an area is crucial to identifying patterns of care. As mentioned above, when a new physician joins our network, we request a list of preferred referral specialists and facilities and proactively add them to the recruitment list. Not only does this help maintain established referral patterns in the area, it also supports continuity of care for members. The local Provider Relations team meets regularly with network providers to stay current with changes in the area and facilitate relationships between all entities involved with the provision of care to our members.

4. Communication Tools

The assistance and communication tools provided to PCPs when they refer members to specialists and the methods used to communicate availability of this assistance to the providers.

We give all providers a provider handbook when they join the network. Clear Health has a website and provider portal, both used to furnish resources necessary for delivering care to our members. We send fax blasts and policy updates on an ongoing basis to communicate new information or remind providers of a process or change. These communications are typically also available on the website. We advise providers of all available resources during initial training, ongoing education, and through their assigned Provider Network Manager. Each year, we send providers a CD with updated documents for their review and a reminder to visit our websites.

E. Current Barriers and Network Gaps

1. The Methodology Used to Identify Barriers and Network Gaps

Clear Health uses various methods to regularly monitor the network and identify barriers and gaps in care. As mentioned earlier, the Gap Committee is the primary means of reporting identified gaps in the network and confirming that they are resolved. Directors are responsible for resolving the network gaps and held accountable for any delays. Experience has shown that network gaps are one of the primary reasons for member dissatisfaction and voluntary disenrollment. As a result, we have a detailed and proactive process to address network gaps with a heightened sense of urgency.

The quarterly Gap Committee meetings incorporate all departments that interact with network providers and members, such as Member Services, Health Services, Grievances and Appeals, and Provider Relations. The different departments bring results of their reviews of network issues, access challenges, and member and provider complaints to the meetings. We review, aggregate, and analyze data from all of these departments to identify issues and determine the root causes. We develop interventions to resolve issues and gaps and prioritize the

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

implementation of each strategy based upon the number of impacted members, as well as the urgency of need for the services or provider. Meeting minutes track anticipated completion dates, responsible parties, required follow-up, and final resolution of issues.

2. Accommodating Additional Members and Assuring Access Standards Compliance

If our membership exceeds our current network's capacity, we use several methods to deliver access to the services members need, including:

- Communication to current network providers about their ability to service more members
- Coordinating transportation for members to see necessary specialty providers that are not available in their area
- Recruiting out-of-network providers to participate in our network
- Referring members to out-of-network providers for care via a single-case agreement

3. Immediate Short-term Interventions to Address Network Gaps

To resolve a gap or barrier using a short-term intervention, Provider Network Managers outreach to a qualified provider or specialist able to offer the needed services and work to negotiate a letter of agreement (LOA) or a single case agreement. We provide education on how to interact with Clear Health while the member is under his or her care.

4. Long-term Interventions to Fill Network Gaps and Resolve Barriers

A long-term intervention would consist of closing a gap or barrier by negotiating a contract with a qualified provider or specialist in the county or region able to offer the services needed.

We make sure member needs are met and covered services are provided, even if we are unable to deliver the service within our provider network. We will cover medically necessary services in an adequate and timely manner by using providers and services that are not in our network. We maintain a standard process to resolve these issues in an expedited manner.

Our process includes communication of the issue and resolution time requirements to the team, as well as an escalation to senior management if it appears the issue will not be resolved prior to the deadline. The Regional Vice President of Provider Solutions is ultimately accountable for resolution in a timely manner.

Various departments may identify issues and each department has a method to escalate to the appropriate Provider Relations staff. The issue is communicated verbally and in writing. The Provider Relations Director assigns a representative to negotiate a single-case agreement or LOA, guaranteeing reimbursement of services to out-of-network providers while we are unable to provide the medically necessary covered services within our network. If it appears that the issue will not be resolved in a timely manner, it is escalated to the Vice President of Provider Relations for resolution. Issues that cannot be resolved are escalated to the President and CEO and Chief Medical Officer.

In addition to the measures taken to coordinate care for the member, we also coordinate and facilitate transportation when needed.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

5. Outcome Measures/Evaluation of Interventions to Fill Network Gaps and Resolve Barriers

We monitor and evaluate interventions using an interdisciplinary model that includes all necessary departments. All information is reported to the Gap Committee that develops performance measures and monitors progress until resolution. Each measure and outcome is specific to the issue, region/county, and line of business. The Gap Committee considers issue indicators when developing outcome measures, evaluation, and time frames.

6. Projection of Changes in Future Capacity Needs, by Covered Service

The Provider Relations department reviews membership changes, projects growth, and reviews our capacity to provide covered services using internal ratios and MMA contractual requirements to confirm compliance with network adequacy. The team is also charged with developing ongoing network recruitment strategies based on current gaps, as well as enrollment projections. The Gap Committee reviews adequacy reports quarterly or ad hoc when a major network change occurs. In addition, the Gap Committee performs a formal network analysis annually and prepares a Network Development and Management Plan based on estimated membership for the coming year. This annual analysis includes Quest Analytics reports that identify network gap issues from tracking and trending done during the previous year. The Network Development and Management Plan also takes into account the ease in which care is provided to members by network ancillary providers (such as BH, dental, and specialty providers) by monitoring the number of member and provider complaints, reviewing utilization data to confirm that members are being seen, and assessing willingness to work with the plan through interactions and meeting requests correspondence.

7. Ongoing Activities for Network Development Based on Identified Gaps and Future Needs Projection

Each Gap Committee meeting results in a prioritization list that is assigned to the Provider Relations department and a recruitment list for each Provider Network Manager. Provider Relations reports recruitment updates to the Gap Committee each month and escalates recruitment difficulties in high-impact areas to the Vice President for resolution.

F. Committees

The Gap Committee promotes communication and coordination among internal departments pertaining to network development and adequacy. The committee consists of representatives from Member Services, Quality Management, Health Services (including utilization, case, and disease management), Grievances and Appeals, and Provider Relations, with each presenting on behalf of his or her department. Issues are tracked and trended, and short- and long-term interventions are developed and monitored to completion. The Gap Committee reports network findings, performance metrics, corrective action plans (CAPs), and all other pertinent information to the Quality Improvement Committee and Compliance Committee.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

G. Description of Coordination with Outside Organizations

Clear Health maintains a community presence by working closely with local organizations. We support our relationships with these partners through frequent outreach and visits to offer pertinent health care information and resources. During these visits, we focus on methods to inform members of their health care options, provide educational materials, and offer updates of various community events. Our objective for outreach is creating an open forum to obtain feedback from the community in the form of questions, concerns, and suggestions pertaining to situations they may be encountering. This enables us to better address members' concerns and offer further support to our community.

Clear Health works closely with community organizations that also service our members. We contract with Rural Health Clinics (RHCs), FQHCs, and County Health Departments (CHDs). We also have an agreement with the Statewide Healthy Start Coalition to provide outreach and educational services to our pregnant members. In addition, we work closely with the Florida Assertive Care Teams (FACT) and the PAC AIDS Waiver programs to provide care for our most vulnerable members. We refer them to these and other identified community organizations to assist with the coordination of additional non-Medicaid covered and wrap-around services available to them.

While working with community organizations, we are also able to obtain leads on providers who serve the population for recruiting opportunities.

H. Continuity of Care Waiver

A. Per the MMA Contract, if Clear Health is able to demonstrate to the Agency's satisfaction that a region as a whole is unable to meet network requirements, the Agency may waive the requirement at its discretion in writing. However, as soon as additional service providers become available, we shall augment its network to include such providers in order to meet the network adequacy requirements.

Clear Health is committed to providing a complete network for each of its MMA regions. In certain situations, such as rural counties where providers may not be available, we will approach AHCA to request a waiver. We will also make all attempts to accommodate the member with providers in adjacent regions and provide transportation when needed.

In addition, following the implementation of the MMA Program, the Agency began issuing quarterly Facility/Group/Organization Waivers applicable to specific regions and counties. We monitor the providers, facilities, groups, and organizations in each region and county to make sure that we contact any new qualified entities that come into the market and add them to our network when possible.

B. If Clear Health is unable to provide medically necessary services to a member through its network, we will cover these services in an adequate and timely manner by using providers and services that are not in the Clear Health network for as long as needed to provide the medically necessary services.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

As mentioned previously in this document, we make sure the needs of members are met and covered services are provided, even if we are unable to provide the service within our provider network. In those cases, we will cover the services in a timely manner using providers and services outside of the network. We have a standard process to resolve these issues in an expedited manner.

Our process includes communication of issue and resolution time requirements to the team, as well as an escalation process to senior management if it appears the issue will not be resolved prior to the deadline. The Regional Vice President of Provider Solutions is ultimately accountable for resolution in a timely manner.

Issues may be identified within various departments and each has a method to escalate to the appropriate Provider Relations employee. The issue is communicated verbally and in writing. The Provider Relations Director assigns a representative to negotiate a single-case agreement or LOA, guaranteeing reimbursement of services to out-of-network providers while we are unable to provide the medically necessary covered services within our network. If it appears that the issue will not be resolved in a timely manner, the issue is escalated to the Regional Vice President of Provider Solutions. Issues that cannot be resolved are escalated to the President and CEO and Chief Medical Officer.

In addition to the measures taken to coordinate care for the member, Clear Health will also coordinate and facilitate transportation when needed.

I. Regional Network Change Requirements

A. Clear Health has procedures to address changes in the network that negatively affect members' ability to access services, including access to a culturally diverse provider network.

In the annual submission to the State, we will include our most recent policy for handling and reporting regional network changes.

B. Clear Health will provide the Agency documentation of compliance with access requirements at any time there has been a significant change in regional operations that would affect adequate capacity and services, including the following:

1. Changes in Managed Care Plan services
2. Enrollment of a new population

In the annual submission to the State, we will include our most recent policy for handling and reporting regional network changes.

**2017 ANNUAL NETWORK DEVELOPMENT AND
MANAGEMENT PLAN**

C. Clear Health will notify the Agency within seven business days of any adverse changes to its regional provider network. An adverse change is defined as follows: For MMA, adverse changes to the composition of the network that impair access standards as specified in the MMA Exhibit.

In the annual submission to the State, we will include our most recent policy for handling and reporting regional network changes.

D. Significant changes in regional network composition that the Agency determines negatively impact member access to services may be grounds for Contract termination or sanctions as determined by the Agency and in accordance with Section XI, Sanctions.

In the annual submission to the State, we will include our most recent policy for handling and reporting regional network changes.

If at any point during our regular network analysis we identify a change that affects the ability of members to access services, we will immediately notify the Agency. The notification will include information on how we will accommodate the members impacted by the change and make sure covered services will continue to be rendered, including access to a culturally diverse provider network and translation services. We report adverse changes to the Agency within seven days when the change causes more than five percent of members in the region to change their PCP or when there is a decrease in the total number of PCPs by more than five percent. We also provide an impact analysis to the Agency whenever changes in services are made, when there are adverse changes, and upon request.

J. Regional Network Analysis

1. Challenges and Barriers

Region 1- Hospital or Facility with Birth/Delivery Services and Hospice

Some of the major challenges and barriers involve sensitivity about the members we serve and how they impact other patients or clients. Providers in some of these areas feel they do not have adequate resources and time to handle our members. This issue is more evident in many of these rural counties since there are limited or no providers. There are many providers who have refused to contract with us because of the potential risk. We continue our efforts to contract with providers to develop and maintain a complete and comprehensive network.

Our network meets or exceeds the provider capacity ratios in all specialties except respiratory therapy (RT). Our network is currently lacking in RT therapy in each county. The cause of this gap, as has been described to the Agency in the past, is that therapists work for facilities and will not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and National Provider Identifier (NPIs) are not always available for this provider type. We continue efforts to contract respiratory therapists.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

(In the annual submission to the State, we will include our SMMC Network Waiver Request Report).

2. Out of Network Usage

Clear Health manages and reviews out-of-network usage on a monthly basis and reports trending analysis to the Gap Committee every quarter. A review of the first three quarters of 2017 demonstrates low utilization of out-of-network providers. With membership less than 5,000, we averaged 29.1 LOAs for the year. There was no identified trend of LOA providers because services were approved as needed for all members. Integrated Home Care Services, Inc., (IHCS) a durable medical equipment, infusion therapy and home health provider, accounting for over 50 percent of our LOA volume. This was a result of contractual changes between providers in our network and IHCS.

Clear Health adds data to previous months' data to identify any high or low indicators. (In the annual submission to the State, we will include our LOA Statistics Report as reported to the Gap Committee).

3. Network Adequacy

Region 1 includes Escambia, Okaloosa, Santa Rosa, and Walton Counties.

Our statewide network for the following identified providers includes:

- Cardiologists (pediatric and adult): 1,102 providers
- Pulmonologists (pediatric and adult): 402 providers
- Endocrinologists (adult): 244 providers
- Internists (adult): 1,043 providers
- Psychiatrists (pediatric and adult): 799 providers
- Obstetricians/Gynecologists (adult): 925 providers
- Licensed mental health clinicians (pediatric and adult): 1,880 providers

Our network for Region 1 also includes:

- Physical therapy (pediatric): 39 providers
- Speech-language pathology services (pediatric): 24 providers
- Occupational therapy (pediatric): 26 providers
- Private duty nursing services (pediatric): 57 providers
- Intermittent skilled nursing (pediatric and adult): 12 providers
- Early intervention services: 64 providers
- Specialized therapeutic foster care: 1 provider
- Compounding pharmacies: 1 provider

Clear Health uses Quest Analytics to determine time and distance network adequacy based on the ratio and time and distance requirements per specialty required under the Contract. Traditionally, ratio and time and distance analysis were generated from software called Geo Networks. Although Geo Networks and Quest perform the same functions, we could not replicate the Agency's result using Geo Networks. To adequately monitor contract requirements,

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

we purchased Quest Analytics, the same software currently used by the Agency and CMS, allowing consistent monitoring and reporting of our networks. We run analysis bi-weekly and reported every quarter to the Gap Committee and before a significant provider termination to confirm adequate coverage.

Requests for waiver are submitted to the Agency using the approved template, including detail around ratio and time and distance waiver requests and details on geographic and provider make-up of the area. (In the annual submission to the State, we will include our SMMC Network Waiver Request, Gap Committee Minutes, and Quest analysis).

4. Member Experience

The Grievance and Appeals department also provides analysis to the Gap Committee. A review of 2017 complaints and grievances did not identify trends specific to any provider type. The highest percentage of Medicaid grievances is for access to care at 36.9 percent, due partially because of dissatisfaction with Medicaid limits. This is consistent with the highest percentage of appeals, which are for Medicaid deny, and limit authorization. Unfortunately, although we educate members on the reasons for denial, it leads to grievances and perceived issues with quality of customer service.

Our Member Advisory committee (MAC) assures a mechanism is in place for obtaining member input into our QI Program and its priorities. This includes receiving member feedback on the provider network and their satisfaction with the network. In the past year, the MAC did not present any network concerns to the Gap Committee. The MAC meets at least annually for each line of business. (In the annual submission to the State, we will include our Medicaid Grievance and Appeals Log).

In addition, Clear Health makes sure that National **Standards** for Culturally and Linguistically Appropriate Services in Health and Health Care (CLAS) measures are met for the member population with emphasis on languages. Clear Health currently meets the language requirements for our population. Our monitoring and results report provides information over the past year. (In the annual submission to the State, we will include our Cultural Competency report.)

The MAC assures provider offices are maintained in line with facility requirements. Providers must receive a passing site visit prior to initial credentialing and maintain compliance, which is verified no less than every three years.

5. Provider Complaints

Provider complaints are presented and analyzed each quarter at our Gap Committee. Depending on the issue, short- or long-term interventions are discussed.

A review of the provider complaints received in the second quarter of 2017 demonstrated an increase in the number of complaints related to claims payment and service authorizations. A review of the complaints did not reflect any significant trends as to the cause of this increase, because there were multiple complaint types. We continue to monitor provider complaints related to claims and authorizations. (In the annual submission to the State, we will include our monthly Provider Complaint report.)

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

6. Provider Survey

Clear Health greatly improved our provider satisfaction survey method in 2016. We increased distribution of surveys by 70 percent with the help of a new subcontractor, Morpace. This allowed us to obtain valuable and actionable data to create effective action plans. We list a few of the initiatives below, and we include action plans as part of our supporting documents.

The survey was distributed to 1,000 providers. We conducted the annual survey using a mixed mode methodology (mail, telephone, and Internet). The initial mailing in March 2017 consisted of a cover letter, self-addressed envelope, and survey. The letter informed providers of the option to complete the survey online. A second survey was mailed in April 2017 to all providers who had not returned the original survey. In May 2017, provider offices that had not responded to the survey were called and the survey conducted telephonically. Two hundred and fifty-seven surveys were completed for a response rate of 25.7 percent. Morpace conducted a key driver analysis that identified items with the most significant impact on provider satisfaction and dissatisfaction. The results were presented to the Gap Committee who used the key driver analysis identify items needing an action plan.

The provider satisfaction survey tool measures the following:

- Claims processing and provider reimbursement
- Utilization Management
- Quality Management
- Disease Management
- Provider services
- Communication and technology
- Continuity and coordination
- Provider help line
- Complaint resolution
- Provider enrollment process

The results and analysis of the surveys were shared with the Provider Relations, Health Services, Claims, and Credentialing departments. Results were also presented to the Gap Committee, Quality Improvement Committee, and Board of Directors.

Strengths

Strengths are those items that have a high impact on providers' satisfaction and small room for improvement. The following five measures received the highest satisfaction ratings in the 2017 Provider Satisfaction Survey:

- Satisfaction with provider orientation and training process
- Satisfaction with the timeliness of information to coordinate care
- Satisfaction with the knowledge of the Provider help line staff
- Satisfaction with the helpfulness of the complaint resolution staff
- Satisfaction with the accuracy of information to coordinate care

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

Opportunities

Opportunities are areas that have the highest impact on the provider's overall satisfaction with and have the highest room for improvement. These items include:

- Rate the quality and effectiveness of general provider communications
- Rate the quality and effectiveness of the provider handbook
- Rate the quality and effectiveness of the provider newsletters
- Rating of the quality of case management services regarding continuity and coordination of care

We created a detailed action plan to address opportunities for improvement. (In the annual submission to the State, we will include our Provider Satisfaction Action Plan.)

7. HEDIS®

Clear Health prepares a full set of HEDIS® measures annually using the analysis and reporting of data collected through medical record review, claims, and encounter data (such as laboratory, pharmacy, and health care utilization). Network providers share health care data with us so that we can generate accurate and complete reports. As part of this annual data collection, the Quality Improvement department requests access to medical records and charts to abstract specific HEDIS® information.

Following NCQA technical specification, the HEDIS® Roadmap is the tool used to describe how information collection practices affect HEDIS® data reporting. The Roadmap provides preliminary information for the contracted auditor to conduct the audit.

We contract with a CMS and AHCA approved NCQA-certified HEDIS® audit firm or auditor.

HEDIS® reports are certified by the HEDIS® auditor, and the auditor must certify the actual file submitted to AHCA and CMS. The HEDIS® auditor is responsible for ensuring the HEDIS® production process adheres to the regulatory agencies requirements and specifications. The auditor is available to assist with the HEDIS® Roadmap development and completion. Onsite visits by the auditor to Clear Health occur at least annually.

Clear Health annually evaluates the HEDIS® and CAHPS results to determine the effectiveness of the Quality Improvement Plan, the quality of our network providers, and to identify opportunities for improvement, implement corrective actions and interventions such as provider and member education and outreach, and development of Performance Improvement and Quality Improvement projects.

We report the results of the evaluation and any interventions to the Quality Management Committee and Board of Directors.

Clear Health collects, analyzes, and reports quality performance measures as defined by the Agency. We also collect internal service performance data that measures the quality of service delivered to all members and providers. This includes data related to Member Services line phone metrics and problem resolution timeframes, member and provider complaints, grievances and appeals, utilization rates, authorizations, referrals, and claims processing time standards.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

These measures are reported, tracked, and trended through our quarterly Quality Improvement Committee meetings.

Clear Health also collects the following information:

- Access to care (such as Quest Analytics reports, appointment availability surveys, service and benefit utilization rates, and timeliness of referrals or treatment)
- Improvement in the member's health status such as quality of life indicators, depression scales, or chronic disease outcomes
- Comprehensive health assessment that includes accuracy of acuity stratification, safety indicators, or timeliness of initial assessments or annual reassessments
- Implementation of an individual plan of care (rate of participation by multi-disciplinary team members and beneficiaries in care planning)
- Use and adequacy of a provider network having targeted clinical experience via claims review, pharmacy claims, and diagnostic reports
- Delivery of add-on services and benefits that meet the specialized needs of the most vulnerable members (such as frail, disabled, or near the end-of-life)
- Provider use of evidence-based practices and or nationally recognized clinical protocols
- Effectiveness of communication, such as call center utilization rates, rates of beneficiary involvement in plan of care development, analysis of member or provider complaints

In the event of an ongoing failure by a provider to meet our health information standard, the provider-specific data is incorporated into the provider re-credentialing and re-contracting processes (or earlier, if necessary). During the HEDIS® session, 90 percent of providers were able to provide records to support the required measures. Please refer to the Provider Interventions section below that illustrates the steps taken by our Provider Relations team to outreach to the providers about required metrics and importance of capturing data.

We evaluate the results of the HEDIS® and CAHPS annually to determine the effectiveness of our disease management programs and case management activities. This evaluation process is part of a comprehensive system to track all quality improvement data and results to track member outcomes and experience of care.

We will develop and apply strategies to address the results. We may implement quality improvement strategies that include feedback to providers, regular prioritization of measures, and goals to ensure that the quality measures are appropriate for the member population.

The results of the evaluation and any interventions implemented are reported to the QMC and Board of Directors.

To allow members to be able to perform a reliable comparison of performance among different managed care plans, we publish HEDIS® measures results on our website.

(In the annual submission to the State, we will include our Quality Evaluation.)

An intervention process was identified to send providers their scores; it is currently being rolled out to the network.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

8. Provider Specific Performance Monitoring

Clear Health monitors the quality and performance of each network provider. At the beginning of the Contract period, we will notify all network providers of the metrics we use to evaluate performance and determine continued participation in the network.

We monitor the quality and performance of participating providers, including the use of nationally accepted performance measures (HEDIS®) and use certified software to extract data and develop provider profiles by provider and measure.

In addition to HEDIS®, we use other measures of access to care and services, disease management and monitoring measures, as well as preventive services. We also address provider performance issues, including contract termination, when necessary.

Clear Health performs ongoing activities to monitor and improve provider performance, promote education, as well as promote improvements in the quality of care and services delivered by providers in our network.

We maintain two essential provider monitoring processes: Peer Review and Medical/Case Record Review.

In addition to the Peer Review and the Medical/Case Record Review, we perform the following provider monitoring activities:

- Provider profiling using HEDIS® accredited performance measures
- “Secret shopper” calls to providers
- Investigation and tracking potential Quality of Care concerns through complaint and occurrence reporting
- Monitoring access, availability, and cultural competence
- Monitoring continuity and coordination of care
- Monitoring appropriate utilization of services
- Promoting member safety
- Monitoring of subcontractors
- Member satisfaction survey and complaint analysis

9. Provider Interventions

Each month QM provides the Provider Relations department with a list of members who have not had a child health check-up in compliance with the periodicity schedule, sorted by enrollment date. Provider Network Managers discuss results from this report with providers, focusing on providers who have large lists of non-compliant members. We encourage providers to contact non-compliant members and attempt to schedule well-child visits.

We include provider education on CHCUP and dental screenings in the provider handbook and newsletters, as well as performed during onsite visits by Provider Network Managers and medical record reviewers. We send fax blasts to providers to remind them about non-compliant members and correct CHCUP coding requirements.

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

10. Appointment Access Times and After Hours

We conduct an Appointment Availability Survey quarterly and submit results to the Agency by February 1. The QI department audits using calls to PCP offices to verify compliance and provides the Provider Relations department with providers who need intervention or education because they are not meeting one or more standards. Failure to comply when re-audited may result in termination.

Providers were audited to determine the accessibility and availability of appointments for members. The Appointment Availability Survey was administered in two waves: PCPs and BH providers (8/17/16 through 8/30/16) and pediatricians (9/8/16 through 9/19/16). The following appointments types were assessed:

- (1) Urgent care
- (2) Routine sick care
- (3) Well care
- (4) Initial visit routine care
- (5) Follow-up routine care
- (6) Non-life threatening emergent care
- (7) Wait time

Interviewers utilized a prepared script that identified Clear Health during the call. The script included scenarios for each type of appointment and was tailored for the type of provider.

Interviewers listed multiple choice response options to help guide schedulers' answer format. Morpace compared the response to Clear Health's standards to determine compliance for each appointment type.

Telephone calls were placed during normal business hours: 8:30 a.m. to 5:30 p.m. EDT.

After-hours Surveys were conducted 8/17/16 through 8/26/16 weekdays between 5:30 p.m. and 9:00 p.m. Morpace surveyed a random sample of providers in the Florida providers in our network. Noncompliant providers from 2015 may be included in the random sample. Noncompliant providers from 2015 were re-surveyed in 2016, either as a part of the random sample or through census dialing all remaining noncompliant providers after the random sample quotas was achieved. Prior to dialing, Morpace "cleaned" the database so that there would be only one record for each phone number even though other providers shared the same number. After the survey was conducted, Morpace extrapolated the After-hours Survey data collected to all remaining providers at the same number. Because of this extrapolation, the total number of providers after extrapolation is greater than the actual number of surveys conducted.

In 2016, the Provider Appointment Access and After Hours Survey results performance standard of greater than 90 percent was met. (In the annual submission to the State, we will include analytics from a Gap presentation.)

11. Delegated Vendors

Clear Health retains sole responsibility for fulfilling SMMC Contract requirements. We are fully accountable for our subcontractors' performance, and will continue our successful Subcontractor Oversight Program. Clear Health will continue to oversee, monitor, supervise, and enforce

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

Contract compliance, as well as promote frequent, open, and effective communication that emphasizes delivery of quality services to members.

Our dedicated Florida-based Vendor Delegated Oversight Group (VDOG) oversees and monitors subcontractor performance. Led by our Staff Vice President of Operations and System Solutions, VDOG includes four full-time dedicated staff. VDOG has support from executive leadership and departments across Clear Health, including Provider Relations, Compliance, Regulatory, Operations, Utilization Management, and Medical Management.

VDOG assigns an Account Manager to each subcontractor to conduct day-to-day management, as well as oversight and review of subcontractor performance using tools such as the monthly Key Performance Indicator (KPI) report.

The Account Manager works in conjunction with Provider Relations to monitor the subcontractor's network development and ongoing network management efforts to confirm continued compliance with AHCA access and availability requirements.

For example, we receive a weekly add/termed provider report from each subcontractor in addition to their monthly full roster submissions. The weekly add/terms provider reports allow us to update our systems to have the most updated provider directory for our members.

In the event we have any concerns of gaps within the subcontractor networks, VDOG will immediately bring those gaps to the attention of the subcontractor and request for an updated roster to fill the gap or an action plan outlining efforts being taken to fill the gap. If the subcontractor is unable to fill the gap, we ask them to submit a waiver with all details of attempt to fill their gap.

Due to the unique nature of administering pharmacy benefits, the Pharmacy Performance Oversight Council will continue to monitor the performance of Clear Health's pharmacy subcontractor. This assures performance meets all regulatory and accreditation standards (such as NCQA, CMS, URAC, State, and federal regulations).

Subcontractor standards are established and must be met to continue participation in our network. Monthly meetings are held with each subcontractor to address any issues at the time or develop an intervention strategy to remedy the situation. Participation and support are items reviewed as part of our Annual Network Plan.

Clear Health engages our subcontractors with any changes that are or will be implemented. Our subcontractors are required to meet the same standards as network providers including network adequacy and education. Our subcontractors have established a series of provider trainings as well as other initiatives to improve the communication and knowledge of their providers.

Clearly defined expectations and consistent monitoring of performance against them is a key component of our Subcontractor Oversight Program. Clear Health executes written agreements with each subcontractor that detail the specific scope of services required, performance standards, service level agreements (SLAs), and reporting responsibilities. The agreements also specify the actions Clear Health will take to address inadequate or substandard performance, such as development of a CAP, use of sanctions, and termination. If at any time performance

2017 ANNUAL NETWORK DEVELOPMENT AND MANAGEMENT PLAN

does not meet requirements, we take action and work closely with the subcontractor toward a resolution and a return to complete and ongoing compliance.

We outline specific SLAs for each function we delegate to the subcontractor. SLAs are never less stringent than those required by AHCA in the SMMC Program Scope of Services. If AHCA modifies a standard, we will amend the delegation agreement to reflect the change.

Clear Health also at times requires subcontractors to meet SLAs for areas that do not have a corresponding AHCA requirement. For example, Clear Health requires our transportation subcontractors to meet an on-time performance metric, a standard that is not a current AHCA requirement. In addition, Clear Health sent subcontractors a survey to make sure they were addressing and reporting Access and Availability according to Contract requirements. All subcontractors explained their process and addressed compliance requirements. We will use the document in upcoming audits as part of the subcontractors' annual review.

We requested the following information:

1. Explain how you identify network gaps time/distance standards and availability when panels are closed
2. What strategies will you deploy to increase provider capacity to meet member needs where network gaps have been identified?
3. Describe how you ensure members receive timely access to services by measuring the time from when services are authorized to when they are received
4. What recruitment strategies and retention efforts are planned for each provider type and include quality and performance metrics used to determine provider's success?
5. What methodology is used to identify and resolve barriers for network gaps? Please also include strategies used to support ongoing monitoring activities for your provider network
6. How do you meet the needs of the member if you are unable to provide the service within your provider network? Please include your approach for long-term and short-term solution
7. What is the average wait time for an urgent appointment?
8. What is the average wait time for a routine appointment?

(In the annual submission to the State, we will include information on our vendors/subcontractors).

12. Telemedicine

Telemedicine services can play an important role in providing members with ready access to both physical health (PH) and behavioral health (BH) services. Telemedicine is used to support health care when the provider and member are physically separated. Telemedicine can also play an important role in expanding access for members in rural areas of Florida where certain specialties might not exist, as well as those in more urban areas of the state for after-hours access to care as an effective alternative to unnecessary use of the emergency department (ED), and for expanding access for members with limited mobility.

Clear Health will cover telemedicine consistent with Florida state regulations and Medicaid program requirements with respect to the provision of services via telemedicine. We will

**2017 ANNUAL NETWORK DEVELOPMENT AND
MANAGEMENT PLAN**

administer our telemedicine program in accordance with the telemedicine coverage provisions specified in the AHCA Standard Contract, including but not limited to the requirements related to technical safeguards, HIPAA, provider training, member choice, and fraud and abuse. We will comply with the telemedicine requirements specified in Attachment B, and will follow Florida Medicaid billing and reimbursement policies, as well as limitations, and restrictions on the provision of telemedicine.

Clear Health's telemedicine strategy is multi-faceted and designed to increase access to care in the above specialties as well as other services that support achievement of the Agency's goals. Our objective is to provide quicker and easier access to primary care, BH, and specialty services through telemedicine, and to address barriers related to travel, thereby reducing potentially preventable events (PPEs) and improving member health outcomes. Our strategies are designed to provide a comprehensive telemedicine solution and include:

Specialty Teleconsults. Through our strategic partnership with GlobalMed, we will address the lack of adequate access to specialty consultations in rural areas and regions with our innovative pediatric and adult specialty telemedicine consultation solution. We will offer access to telemedicine consultations with locally-based Florida-licensed in-network providers for primary care, and various specialties including cardiology, pulmonology, endocrinology, internal medicine, and licensed mental health clinicians and psychiatrists. We will use a two-way audio/video communication with a secure internet connection from a video-enabled device such as a computer, tablet, or smart phone and/or facilitated presentation site with integrated diagnostic equipment. Patients will have telemedicine access to specialist consultations from PCP offices and other provider-facilitated presentation sites. This capability will support multiple participants, allowing the patient, PCP, and specialist to all participate simultaneously in the telemedicine visit. The member could also engage in a provider visit from the comfort of their home making this process convenient for them. We will offer scheduling for specialty consultations at blocks of time during the week for various specialties and engage with our network providers and members to educate and create awareness of appointment availability. We will also establish strategically located and facilitated community-based outreach center (CBOC) presentation sites in rural regions and areas of the state where access to a PCP location is limited.

LiveHealth Online. Through LiveHealth Online (LHO), we will offer our innovative member-direct access solution for urgent care telemedicine. LHO facilitates online access through two-way audio/video technology to Florida-licensed, board-certified physicians covering primary care specialties (such as family practice, general practice, pediatricians, internal medicine, and emergency medicine) for consultations on clinically appropriate conditions (such as a cough, fever, or flu). Members can access services through a secure internet connection or an application on their smart phone.

Telemonitoring. Through our strategic partnership with Telemedcare America (TMC) and First Quality Home Care (FQHC) we are developing a pilot to provide telehealth monitoring to members with the goal of reducing utilization and cost. The goals of this pilot program focus on improving outcomes and reducing costs for a selected group of 100 members who suffer from chronic conditions of congestive heart failure (CHF), chronic obstructive pulmonary disease

**2017 ANNUAL NETWORK DEVELOPMENT AND
MANAGEMENT PLAN**

(COPD), and diabetes, for a six month period. Members will be monitored on an integrated model of service facilitated by TMC and FQHC in order to reduce hospitalizations and maintain control of chronic diseases through specific protocols.

K. Reports

In our submission of our Annual Network Plan to the State, we will include the most recent versions of reports and policies.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

D. PROVIDER EXPERIENCE

MMA SRC# 12 – Provider Credentialing (Statewide):

The respondent shall describe its proposed process to credential and recredential providers (including subcontractors' processes, if applicable), including credentialing timeframes, internal continuous quality improvement initiatives for recredentialing, transparency for providers on their application status and the steps the respondent or its subcontractors will take to ensure the respondent and the Agency have accurate provider demographic information in-between credentialing cycles.

Response:

Credentialing network providers is an important component of our contracting and quality management process. We use it to confirm that all our contracted providers and organizations are qualified to provide services and deliver the best possible care to our enrollees (members). We have the systems, employees, and policies and procedures in place to accurately and promptly credential and re-credential the full spectrum of providers in compliance with AHCA. While all providers are required to undergo credentialing, we give particular focus to providers serving in the primary care role for our members with HIV/AIDS. We include an Education/Training Attestation for participation as an HIV/AIDS PCP as part of the credentialing packet to assure competence with treating the population.

While we understand the importance of a thorough credentialing process, we also understand the importance of minimizing providers' administrative burden and providing clear communication during the credentialing process. Our turnaround time statistics and provider satisfaction ratings are evidence of our success. Simply Healthcare Plans, Inc. D/B/A Clear Health Alliance (Clear Health) significantly exceeds the industry standard of credentialing in 120 days with consistent performance of 95 percent of clean credentialing files completed within 45 days. In 2016, they received a satisfaction rating of 93 percent when providers were asked to rate our provider credentialing process.

1. CREDENTIALING AND RECREDENTIALING PROCESS

Clear Health retains sole responsibility for fulfilling Contract requirements. Our Florida team is fully accountable for meeting all credentialing requirements and will continue to oversee, monitor, supervise, and enforce Contract compliance locally. Our Provider Network Managers will continue to provide hands-on support to providers through the entire credentialing process; it is a best practice we will be bringing forth to our combined organization.

We received feedback from our providers that credentialing was an issue for them and that they often felt lost in the process once they submitted their application. In response to our providers, we implemented a process that has resulted in our high satisfaction scores. A Provider Network Manager supports the provider through the entire credentialing process.

Providers submit their credentialing packets directly through mail, email, or in person to a Provider Network Manager. The Provider Network Manager reviews the packet against a standard

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

checklist and follows-up with the provider to rectify any incomplete items prior to submission. This step has resulted in an 85 percent increase in processing clean credentialing applications. The Provider Network Manager maintains contact and provides updates to the provider throughout the process so that the provider's credentialing process is transparent.

Providers can submit our proprietary application or a Council for Affordable Quality Healthcare (CAQH) application. The Provider Network Manager reviews the information for completeness and accuracy. For example, if a provider submits documentation into the CAQH Universal Credentialing DataSource® and attests to its accuracy, we are able to review the application for completeness or ask for additional information if the provider failed to fully complete the application. We also help non-traditional providers complete credentialing applications as we typically credential beyond the required provider types to include any provider who provides direct care and services and is not facility- or hospital-based.

We regularly review and update our comprehensive credentialing policies and procedures in accordance with NCQA standards, federal, and Agency requirements. We continually refine our processes and incorporate new resources and tools to simplify and expedite the credentialing and re-credentialing process to make sure it is as easy as possible for providers by reducing their administrative burden. We have streamlined the credentialing and contracting processes through our participation with the Council for Affordable Quality Healthcare (CAQH) Universal Provider DataSource® initiative. Clear Health is enrolled with CAQH's various products including primary source verification and ongoing monitoring. We will continue to collaborate with CAQH and support its efforts to integrate additional solutions that simplify the credentialing application processes.

Our regionally based Florida Provider Relations team makes onsite visits to providers' offices to review and assist them through the credentialing process. Our goal is to facilitate transparency in the credentialing process to providers, assisting providers and office managers in navigating the process and assuring a point of contact to reach out to for questions/concerns. We also provide other resources to assist providers, such as our Credentialing Quick Tips, documents which provide clear and concise instructions on each step of the process.

1.1. Preventing Discrimination in Provider Selection

Our credentialing policies and processes comply with 42 CFR 438.214(c), and we do not discriminate against a health care professional solely on the basis of license or certification or a health care professional who serves high-risk populations or who specializes in the treatment of costly conditions. Clear Health partners with providers who serve high-risk populations as demonstrated through our Clear Health Alliance product to find effective cost and clinical methods to treat patients.

1.2. Credentialing Committee

Our Chief Medical Officer (CMO), in conjunction with the National Credentialing Committee, is responsible for setting clinical competence and conduct criteria for the entire provider network via this policy making body. Our CMO is a member of Anthem's (our ultimate parent company) national Credentials Committee. Locally, we have a Florida Credentialing Committee, which includes no less than two participating Florida licensed physicians, one of whom practices in the

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

specialty type most frequently used by members. These physicians also operate within the scope of the credentialing program.

1.3. Types of Providers Credentialed and Re-credentialed

We credential and re-credential individually licensed providers who are contracted in our provider network to provide services. We credential or re-credential facilities or organizational providers who have oversight of staff working within such place of service. The organizational provider is responsible for credentialing and re-credentialing all network providers in accordance with NCQA, federal, and Agency standards.

Our credentialing and re-credentialing processes meet and exceed NCQA accreditation requirements, as well as federal and Agency credentialing guidelines. For example, we credential and re-credential organizational facilities extending beyond NCQA requirements, such as renal dialysis centers and nursing home facilities. Our credentialing and re-credentialing processes monitor quality of care and patient safety for providers and facilities and make sure our provider network is qualified and able to provide the best care possible to our members by eliminating preventable potential quality of care issues.

1.3.1. Red Ribbon Providers

Participation as an HIV/AIDS red ribbon designated PCP requires that the provider attest that they meet the criteria to care for our members in one of the following ways:

- AAHIVM HIV specialist credentialed by the American Academy of HIV Medicine
- Board certified in the field of infectious disease and, if not certified in the past year through the American Board of Medical Specialties, has clinically managed a minimum of 25 patients in the preceding 12 months and successfully completed a minimum of 10 hours of continuing medical education (CME), with at least five hours related to antiretroviral therapy in the past year.
- Recognition by the Florida/Caribbean AIDS Education and Training Center as having sufficient clinical experience and additional on-going training in HIV/AIDS to be considered a specialist
- Meet the criteria of an HIV-qualified physician as defined by the HIV Medicine Association (HIVMA) of the Infectious Diseases Society of America or demonstrates experience as an HIV qualified provider set by AHCA standards

If a provider chooses the last option listed above, they must complete a questionnaire that demonstrates continuous professional development by meeting defined qualifications as follows: in the immediately preceding 36 months, provided continuous and direct medical care or direct supervision of medical care to a minimum of 25 patients with HIV AND in the immediately preceding 36 months, successfully completed a minimum of 40 hours of Category 1 continuing medical education addressing diagnosis of HIV infection, treatment for HIV disease and co-morbidities, and/or the epidemiology of HIV disease, and earned a minimum of 10 hours per year, OR in the immediately preceding 12 months, completed recertification in the subspecialty of infectious diseases with self-evaluation activities focused on HIV or initial board certification in infectious diseases.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

In the 36 months immediately following certification, newly certified infectious diseases fellows should be managing a minimum of 25 patients with HIV and earning a minimum of 10 hours of category 1 HIV-related CME per year, OR providers must demonstrate experience as an HIV-qualified provider by showing evidence of continuous development through clinical, behavioral, or case management of at least 20 HIV-infected patients in the past two years with a minimum of eight contact hours annually of HIV-specific continuing medical education (CME) that includes information on the use of antiretroviral therapy.

We identify providers meeting criteria in our directories with a red ribbon and designation that "Provider is an HIV PCP" as a footnote on each page.

1.4. Initial Professional Provider Credentialing

Our credentialing process uses our proprietary application or the Uniform Credentialing/Re-credentialing Provider Application through the CAQH Universal Provider DataSource® to capture all required data elements. It is compliant with NCQA and consistent with federal and Agency requirements.

We conduct Primary and Secondary Source Verification on the information submitted by the provider in accordance with NCQA accrediting standards and federal and Agency requirements. Policies and procedures guide our credentialing process. The process includes assessment of the applicant's training and education to training requirements established by the Credentialing Committee. If a practitioner fails to meet training requirements, we notify the provider of the educational requirement, advise the provider of the committee decision, and thank the provider for their application. We query and obtain information from the following:

- The National Practitioner Databank to determine if any disciplinary actions have been taken against the applicant in addition to any settled/closed malpractice cases
- The Health and Human Services Office of Inspector General List of Excluded Individuals/Entities (LEIE) database
- System for Award Management (SAM) — the official federal system that consolidates the capabilities of EPLS, CCR/FedReg, and ORCA
- Various Florida Department of Health Licensing Boards as applicable
- Equivalent licensing boards for out-of-state providers and other applicable licensing entities
- Hospital Privileges
- Provider Identifiers
- Quality Competence

Our requirements meet and exceed NCQA standards, providing us an excellent framework to assess the clinical competence of each network provider and to make sure we apply standards consistently. We conduct site visits as required for any facility that does not have an accreditation

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

or Medicare survey or that is identified on the Health Resources and Services Administration shortage designation list. In addition, Clear Health makes sure providers are eligible to participate in the Medicaid program.

Our policies and procedures comply with Florida and federal laws and regulations, including 42 CFR 438.214 and 42 CFR 1002.3.

Our credentialing process also includes a site visit for several provider types. Site reviews are required for all PCPs (which include Family Practice, General Practice, Pediatrics, Internal Medicine, and Infectious Disease PCPs), Women's Health Care Providers, OB/GYNs, Assisted Living Facilities, Adult Family Care Homes, and Adult Day Health Care Providers. Beacon, our Behavioral Health subcontractor, performs site visits for High Volume Behavioral Health Providers.

Once our Credentialing department receives a provider's credentialing application, a Provider Network Manager will schedule an office site visit. The provider must have a review score of 100 percent to pass the review for the initial credentialing application process. In the event the provider does not receive a passing score, Clear Health implements a corrective action plan. We work with the provider to develop the plan and resolve issues. The Provider Network Manager will revisit the provider within 60 days to make sure all deficits have been corrected. Failure to comply will result in termination.

1.5. Exclusion and Debarment Screening

Clear Health has established processes to make sure excluded providers are not included in our network. Clear Health frequently processes the lists of providers currently excluded by state and federal governments. Our subcontractors and providers must comply with all federal requirements (42 CFR 1002) on exclusion and debarment screening as well. Clear Health requires that all tax reporting provider entities billing or receiving Medicaid funds through our Contract screen all owners and employees against the federal exclusion databases such as OIG, LEIE, and SAM.

To support credentialing standards during credentialing and between re-credentialing cycles, we have an ongoing monitoring program to verify continued compliance with credentialing standards. Clear Health utilizes this method to assess and address any issues of substandard professional conduct or competence, including fraud, waste, and abuse issues, for providers and facilities/hospitals. We review our providers initially, monthly, and during re-credentialing against OIG, LEIE, and SAM. Provider contracts also contain language indicating any individual employed under the provider involved in providing services to the member must not be sanctioned by any state or federal databases. As part of the federal requirements, we also screen any individual identified as having five percent or greater interest in the provider practice monthly as documented on the Disclosure of Ownership Form. The Program Integrity department reviews reports from various sources, including:

- OIG, LEIE, and SAM
- Federal Medicare/Medicaid Reports
- Office of Personnel Management
- Office of Contracting and Procurement
- State Licensing Boards/Agencies

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- State Exclusion List
- Medicare Opt-out Lists
- CAQH Ongoing Monitoring
- Health plan functional areas, as appropriate

We also consider any other verified information received from appropriate sources.

Monthly screening assures a timely response to sanctions or actions. Clear Health immediately takes action to remove the provider from our network. If we identify this sanction or action at the time of receipt of the initial credentialing application, we notify the provider that he or she is ineligible to participate in our network.

When we identify a network provider by these sources, we use formal criteria to assess the appropriate response, which may include review by the Credentialing Committee, by the CMO, and/or legal counsel. If Clear Health identifies any potential quality of care issues via its various departments, we report practitioners to the appropriate authorities.

1.6. Reporting

Policies and procedures guide our process for reporting serious quality deficiencies resulting in suspension or termination of a practitioner to the appropriate Florida and federal authorities, including the Secretary of Health and Human Services and the Inspector General of Health and Human Services, National Practitioner's Database, and state agencies. Internally we utilize weekly and monthly reporting and tracking tools via Bridger, which is a software utilized to review sanctions received from various exclusion websites. The review is nationwide; each state receives monthly updates with actions taken and notices sent to providers.

1.7. Re-credentialing

Our re-credentialing program complies with the federal, State, and NCQA standards. Our process includes re-verification of required elements including re-verification of licensure(s), sanctions, certifications, clinical privileges, and competence, as reviewed by malpractice history and license history, as well as health status that could affect the practitioner's ability to serve our members. We conduct re-credentialing at a minimum every 36 months, unless an event triggers a re-review — such as a medical director request following a quality of care complaint. The process follows the initial credentialing process outlined above and includes other information such as a review of member and provider complaints and medical records quality. We present additional information on re-credentialing in our response to Section 4 below. We review and incorporate the following performance information into the re-credentialing process, as applicable:

- Member grievances and appeals
- Member satisfaction surveys regarding provider experience
- Results of quality reviews
- Utilization management
- Quality improvement and medical management activities
- Other plan-specific data as available and applicable, including medical record audits
- Re-verification of hospital privileges and current licensure, if applicable
- Provider Complaints

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

2. TIMEFRAME FOR PROCESSING CREDENTIALING APPLICATIONS

Clear Health significantly exceeds the industry standard of credentialing in 120 days with consistent performance of 95 percent of clean credentialing files completed within 45 days. We are able to achieve reduced turnaround time due to our efficient system integration with various primary data sources that allow downloading of data from industry leading solutions such as CAQH and alleviate the data entry delay, while making sure all documents are primary and/or secondary source-verified according to established standards. We leverage our contract and credentialing software system to assist in the data collection process, review, and tracking. In addition, we have implemented a series of operational processes such as checklists, business rules, and administrative form improvement to assure we receive complete documentation at the time of credentialing. We assist providers by streamlining our process and simplifying administrative process to expedite credentialing process.

Clear Health has developed the Provider Administration department, geared toward assisting the Provider Network Manager to complete the credentialing packets. Provider Network Managers also serve as the liaison to our national organization to make sure of proper and timely follow-up. We review all credentialing applications for completeness within four business days. The Credentialing staff then completes a checklist that identifies the missing information and forwards that to the assigned Provider Network Manager to contact the provider to obtain the missing information. Provider Relations leadership and Provider Network Managers receive a weekly report notifying them of pending documentation for each provider. If we do not receive additional documentation from the provider or the Provider Network Manager within 45 days, we deactivate the file and send it back to the Provider Network Manager for closure. The provider can reapply, but they must complete a new credentialing application for the verifications and attestations to be timely per our standards.

3. KEEPING PROVIDERS INFORMED THROUGHOUT THE CREDENTIALING PROCESS

As described above, a Provider Network Manager supports the provider through the entire credentialing process. This enhanced level of support for providers throughout the credentialing process reduces administrative burden as it means less rework and resubmission of applications on the provider end. Clear Health offers a toll-free Provider Services line in which the Provider can call to inquire about their credentialing status. The provider may also communicate with the Provider Administration department via email. Additionally, our high-touch model between the Provider Network Manager and the Provider facilitates lines of open communication and allows the provider to reach out to their Provider Network Manager for status as well.

4. INCORPORATING ADDITIONAL INFORMATION INTO THE RE-CREDENTIALING PROCESS

Our re-credentialing program complies with the Code of Federal Regulations, NCQA, and AHCA standards. Our process includes re-verification of required elements including re-verification of licensure(s), sanctions, certifications, clinical privileges, and competence, as reviewed by malpractice history and license history, or health status that could affect the practitioner's ability to serve our members.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

We report quality deficiencies as well as disciplinary actions from hospitals, other health care entities and governmental agencies or notice of impairment of a provider to the Quality Management department, which in turn initiates the process of Peer Review. In cases where the patient's health is not subject to imminent danger or the provider's ability to practice has not been curtailed by the Board of Medicine, prior to initiating the suspension/termination process, the Peer Review and Quality Improvement committees take action and place the provider on a Corrective Action Plan to improve the provider's performance. Actions to improve performance include education, supervision, curtailing member assignments, ability to meet data-based targets determined by infraction, and reduction of privileges. We initiate the suspension/termination process when efforts to improve performance have not brought about the desired effect. We forward recommendations from the Peer Review and Quality Management to the Credentialing Committee for review and action on the participating status of the provider.

We track providers due for re-credentialing electronically as our system assists with monitoring and tracking. A re-credentialing packet is sent to identified providers approximately eight months prior to the re-credentialing due date. This packet requests standard information and a copy of the provider's most current State licensure(s), professional liability insurance, and other applicable supporting information, including an updated Disclosure of Ownership Form. We ask providers to respond to this written request within 30 days, and we make no fewer than three attempts to each provider asking for this information. If we do not receive information from the provider, we make a second attempt by phone and fax. After an unsuccessful second attempt is made by the Credentialing department, a Provider Network Manager supplements this outreach effort through direct contact with the provider and office staff in order to facilitate the process.

While we close a provider's file for failure to respond after three attempts, our Provider Network Managers will continue to attempt to remove any barriers to completion of the re-credentialing application. For example, if the provider is on leave of absence, we have policies to temporarily close the provider's current credentialing status, update the provider's record in our system so that the provider does not show as available to members, and set a reminder to reach out to the provider upon return from leave of absence.

We conduct primary-source verification in accordance with NCQA and AHCA requirements once we receive all information and provide the information to the CMO and/or Credentialing Committee. After reviewing the information and supporting documentation received, we include an assessment of any available provider performance criteria. The elements we select for review may vary by provider type and the availability of information.

Any historical recommendations from the Peer Review Committee and other departments are included in the re-credentialing process and discussed by the Credentialing Committee. The Credentialing Committee reports to the Quality Management Committee, which in turn reports to the Board of Directors. We provide regular reports to both committees for oversight.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

The Credentialing Committee may make a recommendation including but not limited to reducing privileges, providing education and mentoring, suspending privileges, instituting a probationary period for another re-credentialing event; or recommending termination from the network. Our Legal department is notified of any adverse actions against a provider for the proper notification to the National Provider Database, the Office of the Inspector General, Medicaid Program Integrity, and AHCA. Our Legal department reports to the State Board of Medical Examiners as applicable.

5. INCORPORATING THE AGENCY'S STREAMLINED CREDENTIALING CAPABILITY

Clear Health Provider Network Managers are available to assist providers at each stage of the process of joining our network. Florida requires providers to register with the State prior to including them in our network (online directory and PNV submission to the State). As they meet with potential providers, Provider Network Managers explain how easy it is to register with the State and walk them through the process, explaining all required elements including the submission of prints for background screening via the State's Limited Enrollment Process and Provider Enrollment process. The Provider Network Manager follows up with the provider and provides guidance as they move through the State's process as well as on how to contact the State for resolution of any issues. Once the State registration process is complete, the Provider Network Manager continues to support the provider throughout the credentialing application process.

We are incorporating information on the Limited Enrollment Process into trainings that potential providers can access for instructions on how to enroll with the State. We have previously sent fax-blast to non-participating providers received through claims data for further promotion of this capability. We have also incorporated a bulletin into the Explanation of Payment (EOP) remittance notice that is sent to all providers which references the Agency's website and various methods to enroll.

5.1. Delegated Entities

At times, we elect to delegate credentialing and re-credentialing activities to another entity to reduce provider administrative burden. We delegate credentialing to our subcontractors including Beacon Health Options (BH), Health Network One (therapy services), DentaQuest (dental services), EyeQuest (optometry and ophthalmology services), AIM Specialty Health (radiology), HearUSA (audiology and hearing services), and Chiro Alliance Corporation (chiropractic services). We also delegate credentialing to several of the larger health systems in the State.

We include a description of our delegation oversight responsibilities and an overview of the delegation process in our quality improvement program as well as our policies and procedures. All delegates undergo an initial pre-delegation audit, complete with file audit and policy and procedures review, followed by a committee review and recommendation. Once delegated, each must submit weekly updates (additions, terminations, and changes) and undergo annual re-assessments. We document activities and responsibilities associated with delegated activities in the subcontractor's written agreement. The agreement requires the subcontractor and medical groups to provide reports related to the performance of their delegated activities and other obligations under the agreement, including training. We comply with NCQA standards for delegation oversight.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

6. PROVIDER DEMOGRAPHIC OR PARTICIPATION STATUS CHANGES

Provider data is the foundation for many critical program processes, including our Provider Directory, claims processing/payment, and encounter data submission to the Agency. Clear Health will continue to leverage the established and proven systems, processes, and best practices currently employed in Florida as well as those used by our affiliates to create and maintain accurate provider data. Clear Health utilizes various vendors, such as Availity and Morpace, to assist in making sure accurate provider demographic information.

We capture and maintain in our system sufficient information on SMMC Providers to support Provider payment. We also maintain information to do the following:

- Generate IRS 1099 forms (including maintaining the provider's name, address, and federal identification number)
- Meet all federal and Agency reporting requirements through capturing, storing, and maintaining comprehensive, current, and accurate provider data
- Review re-credentialing data for updates
- Cross-reference State and federal identification numbers and maintain multiple numbers for the provider to support processes to identify and report excluded providers via Bridger. Our exclusion processes use Tax Identification and Social Security Numbers, National Provider Identifier (NPI), name, date of birth, and state Medicaid ID number

Prior to and during the implementation process, we will review all available documentation (the ITN, our Proposal, and report formats) and document all provider data requirements. A thorough understanding of the output requirements for provider data (required fields, field formats, and field values) will continue to guide configuration of data entry validations and quality review checks to promote ongoing compliance with AHCA requirements and quality measures.

6.1. Maintaining Provider Data

Clear Health's Core Operations System maintains comprehensive information on all of our program network providers. Provider data is fully integrated with other system components to support activities such as claims processing/payment, compliance reporting, and Provider Directory management. Maintaining a single, integrated source of provider information enables us to deliver data integrity and consistency. We continually assess the quality of our provider data and have active outreach programs designed to verify the information in our systems. Working closely with our Florida Provider Relations team, our national Provider Data Management (PDM) department will maintain accountability for ongoing data accuracy of Provider information. PDM tightly controls changes to Provider data to protect its accuracy and maintain compliance with Contract requirements. PDM has established teams, systems, and processes to support Clear Health in creating and maintaining complete, accurate provider data for our SMMC Program. Clear Health is able to leverage national initiatives around data (such as Availity) in addition to local plan initiatives, assuring we receive the most up to date information. In addition, Clear Health assures the following:

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Accurate Provider Set-Up. Strict processes and Provider data edits and audits validate accurate set-up in our system and accurate entry of changes
- Regular Data Audits and Inspection. Review activities confirm ongoing data accuracy and reliability
- Identification and Reporting of Inaccurate/Outdated Information. We use multiple methods to capture inaccurate/outdated information from members, providers, and employees
- Claims Support. PDM reviews claims that pend because of provider data validation. PDM uses a document management workflow system to accept, route, and track requests, including adding providers, modifying their information (such as address, phone, languages spoken, office hours, office accessibility, and panel status), and terminating them. Workflow logic routes requests to work queues based on factors, including market and complexity, enabling an employee with the required skills and expertise to respond quickly and accurately
- Weekly monitoring of the Provider Master List (PML) for Medicaid ID's

6.2. Accurate Provider Set-Up and Entry of Changes

To complete the provider set-up in our system, our Florida Provider Relations team will collaborate with the PDM. The Provider Relations team submits completed service forms through our workflow system and PDM enters these into our system, taking steps to assure completeness and accuracy of provider entry and set-up in our system.

Based on specific AHCA requirements documented in the Contract, we customize desk-level procedures and checklists by provider type to make sure that we capture all required information during the application process. For new providers, PDM returns forms missing required information (according to business rules). Entry screens apply a series of data entry edits designed to prevent keying errors in fields such as telephone number, NPI, and Medicaid ID number. Edits also flag potential duplicate providers for review. Changes to provider data will follow a similar process.

Each month, the PDM Quality team audits a random sample of provider data (entry of new providers and changes to existing ones). The process validates keying accuracy as well as adherence to processes. Employees promptly correct any identified issues and take steps, such as modifying documentation or educating and training staff, to prevent a recurrence. In addition, Morpace sends out a survey requesting demographic information updates from our provider network, which our PDM department processes.

For all new providers and existing providers with changes to identification numbers and license status, PDM Quality checks the exclusion/sanction databases using the new information. This check is in addition to the exclusion database checks that we perform every 30 days to confirm that excluded providers are not in our network.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

6.3. Regular Data Audits and Inspection

Clear Health performs provider data accuracy review using NCQA guidelines as well as federal and State requirements. PDM proactively monitors the ongoing accuracy of data so that it is available to operational processes (such as claims processing), as well as our members through our Provider Directory. Ongoing activities to confirm data accuracy and completeness include the following:

- **Third-Party Evaluation.** PDM performs a periodic evaluation of provider information using a third-party tool, ProviderPoint from LexisNexis, that specializes in provider data accuracy. ProviderPoint uses advanced analytics to mine a vast data repository compiled from their clients, public sources, subscriptions, and outbound provider calls. ProviderPoint evaluates provider data against the repository and returns suggested changes accompanied by a confidence level. PDM updates our systems when suggested changes of certain data elements (telephone and fax numbers, license and DEA number date ranges, and gender) have a 90 percent or greater confidence level.
- **Provider Relations Data Review.** Our Florida Provider Relations team also plays a critical role in validating the integrity and accuracy of provider data, especially that which affects our online Provider Directory or claims payment. The team leverages the best practices of our affiliates to implement a regular data review program, using methods such as verification sheets during Provider visits, mailings, or online survey tools. They evaluate and update the approach (including frequency and methods) as necessary to maintain a high level of provider data accuracy.

PDM regularly evaluates audit practices to identify opportunities to strengthen the integrity and accuracy of Provider data.

6.4. Identifying and Reporting Incorrect/Outdated Provider Information

Clear Health encourages members, providers, and employees to identify and report incorrect or outdated Provider Directory information. In addition to internal quality checks, PDM accepts data change requests from a variety of sources, including:

- Florida Provider Relations employees through day-to-day interactions with providers or regular data quality checks
- Florida Case Management and Care Coordination employees identify incorrect provider services while coordinating care
- Self-service tools on our provider portal, enabling Providers to update demographics and practice information
- Provider calls to our Provider Services line
- Member calls to our Member Services line to report provider data problems

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Changes that come from providers or Provider Network Managers go to PDM for entry. Changes entered through the provider portal will be updated directly in our system, with some exceptions. We route provider data issues reported by members to the PDM Quality team for research and outreach to the provider as necessary. We complete changes submitted to PDM within 30 days.

6.5. Monitoring Subcontractors

Our Delegation Oversight Department has processes in place to assure that our subcontractors report provider demographic or participation status changes to us in-between credentialing cycles. We require our subcontractors to submit information on new and terminated providers weekly. We also require them to submit a roster of all providers monthly. We use this information to monitor providers in our subcontractor's networks and to identify those who are not qualified such as sanctioned or ineligible providers. Should we identify non-qualified providers, we contact our subcontractor and request they be removed from the network. Subcontractor providers must meet the same credential requirements as Health Plan providers, including the requirements that they are eligible to render services to Medicaid members.

Evaluation Criteria:

1. The adequacy of the respondent's description of its credentialing and recredentialing criteria, certified credential verification organization processes, and utilization of a third party credentialing vendor.
2. The extent to which the respondent's timeframes for processing credentialing applications is more expeditious than the industry standard processing timeline of one hundred twenty (120) days.
3. The adequacy of the respondent's approach to providing transparency to providers throughout the credentialing and recredentialing processes, including how providers will be informed at each step of the application process.
4. The extent to which the respondent uses information from provider complaints, monitoring, and recommendations from its Quality Improvement Committee in its recredentialing process.
5. The extent to which the respondent and its subcontractors incorporate the Agency's streamlined credentialing capability (via promotion of limited enrollment) in its credentialing and recredentialing processes.
6. The extent to which the respondent outlines steps the respondent and its subcontractors will take to ensure provider demographic or participation status changes are reported to the plan in-between credentialing cycles.

Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 5 points each.

MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 13 – Value Based Purchasing (Regional):

- a. The respondent shall describe the continuum of value-based purchasing (VBP) contractual arrangements available for providers, delineated by primary care, specialty care and hospital-based care.
- b. The respondent shall describe the volume of contracts it expects to implement or maintain through a VBP arrangement each year for each of the next five (5) Contract years, delineated by primary care, specialty care and hospital-based care.
- c. The respondent shall include specific outcomes it expects to see throughout the life cycle of the VBP continuum, delineated by primary care, specialty care and hospital-based care.
- d. The respondent shall describe specific VBP arrangements it intends to implement and/or maintain in an effort to promote the Agency's goals, delineated by primary care, specialty care and hospital-based care.

Evaluation Criteria:

1. The extent to which the respondent has provided the continuum of value-based purchasing arrangements available to network providers, delineated by primary care, specialty care and hospital-based care.
2. The extent to which the respondent has provided specific percentages of overall contracts, delineated by primary care and specialty care and hospital-based care, that it intends to implement or maintain through some type of VBP arrangement for each of the five (5) Contract years, including a rationale for the intended percentages.
3. The extent to which the respondent describes how its VBP arrangements incentivize quality improvement, including specific outcomes it expects at each stage on the continuum.
4. The extent to which the respondent describes how its VBP arrangements incorporate goals or incentives for reduction of potentially preventable events.
5. The extent to which the respondent describes how its VBP arrangements incorporate goals or incentives for improvement of birth outcomes.
6. The extent to which the respondent provides a breakdown of specific VBP strategies employed with its current network of primary care providers.
7. The extent to which the respondent describes the approach in sharing specific data elements with providers under a VBP arrangement and the level of respondent support offered to providers to ensure progression along the continuum of VBP arrangements.

Score: This section is worth a maximum of 35 raw points with each of the above components being worth a maximum of 5 points each.

MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

E. DELIVERY SYSTEM COORDINATION

MMA SRC# 14 – General HEDIS Performance Measures Experience (Statewide):

The respondent shall describe its experience in achieving quality standards with populations similar to the target population described in this solicitation. Include in table format, the target population (TANF, ABD, dual eligibles), the respondent's results for the HEDIS measures specified below for each of the last two (2) years (CY 2015/ HEDIS 2016 and CY 2016/ HEDIS 2017) for the respondent's three (3) largest Medicaid Contracts (measured by number of enrollees). If the respondent does not have HEDIS results for at least three (3) Medicaid Contracts, the respondent shall provide commercial HEDIS measures for the respondent's largest Contracts. If the Respondent has Florida Medicaid HEDIS results, it shall include the Florida Medicaid experience as one of three (3) states for the last two (2) years.

The respondent shall provide the data requested in **Exhibit A-4-b-2**, MMA Performance Measurement Tool (10-2-2017) to provide results for the following HEDIS measures:

- Childhood Immunization Status (Combo 3);
- Well-Child Visits in the First 15 Months (6 or more);
- Immunizations for Adolescents (Combo 1);
- Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life;
- Adolescent Well Care Visits;
- Frequency of Ongoing Prenatal Care ($\geq 81\%$ of expected visits); and
- Timeliness of Prenatal Care.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Simply brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). The unified Simply draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations.

Based on the ITN requirements, we have submitted HEDIS data for Amerigroup, the Simply legacy plan in Florida with the largest Medicaid membership. Additionally, Amerigroup's membership is more comparable to that of the population from which the Medicaid 50th percentile is derived than the HEDIS® results for Clear Health. Because of its specialized nature, Clear Health is not one of Simply's largest three contracts by membership. In addition, we are reporting results for our two largest affiliate Medicaid contracts, New York and Texas, based upon the number of Medicaid members served by each contract.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1. EXPERIENCE ACHIEVING QUALITY STANDARDS

Simply and our affiliate health plans currently serve more than 6.5 million beneficiaries of state-sponsored health plans in 19 states and the District of Columbia. We collect and report HEDIS® and state performance measures in each of these states. Simply has collected and reported HEDIS® and state performance measures in Florida since we began operations there over 14 years ago, and today we collect and report all required measures to the National Committee for Quality Assurance (NCQA) and Agency for Health Care Administration (Agency).

Simply is further sharpening our focus on quality by bringing together the best practices and innovative solutions of three Florida health plans that have recently merged to become one entity. Our Chief Medical Officer and Quality Management leadership spearhead our Quality program, bringing more than 40 years of combined experience in performance improvement programs and HEDIS® reporting. As a result of this experience, we continue to achieve high marks for performance, as demonstrated in our HEDIS® 2016 and 2017 scores described below and in Exhibit A-4-b-2.

**** RESULTS & SUCCESSES:** Simply's legacy plan, Amerigroup, scored well above the statewide average for HEDIS® 2016 across all 11 components of the Keeping Kids Healthy Quality Indicator and all three components of the Pregnancy-related Care Quality Indicator published in Florida's Medicaid Health Plan Report Card on the State's website, FloridaHealthFinder.gov. Quality of Care Indicators are a set of measures used to report the performance of health plans. Data for these measures came from HEDIS® and were designed for use by Medicaid consumers. ******

Health plan ratings, shown as stars, are assigned to each health plan for each indicator based on the plan's score for the indicator. Plans are assigned between one and five stars, based on the health plans ratings for the associated measure. The designation of stars is denoted below:

- 5 stars – Best: at or above 50 percent of all Medicaid health plans' scores
- 4 stars – Good: better than at least 40 percent of all Medicaid health plans' scores
- 3 stars – Fair: better than at least 25 percent of all Medicaid health plans' scores
- 2 stars – Poor: better than at least 10 percent of all Medicaid health plans' scores
- 1 star – Very Poor: worse than 90 percent of all Medicaid health plans' scores

**** RESULTS & SUCCESSES:** For HEDIS® 2016 scores, we were one of three plans to receive the highest number of 5 stars (seven in total) on 11 components of the Keeping Kids Healthy Quality Indicator and one of three plans to receive a 5-star rating for each component of the Pregnancy-related Care Quality Indicator. We were the only plan to score this well in both Quality Indicators (combined). ******

Per the directions, the following is our experience focusing on the seven HEDIS® measures in this submission requirement.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.1. Florida Experience Achieving Quality Standards

In the HEDIS® 2016 and 2017 submissions, Simply's legacy plan, Amerigroup, led the state at the NCQA Quality Compass 90th percentile for Frequency of Ongoing Prenatal Care (≥ 81 percent of expected visits) and exceeded the Medicaid 60th percentile for HEDIS® 2016 in all but one measure (Immunizations for Adolescents (Combo 1)).

Childhood Immunization Status (Combo 3) rates of 77.08 percent for HEDIS® 2016 and 80.09 percent for HEDIS® 2017, which exceeded the National Medicaid 75th percentile for HEDIS® 2016 scoring, and the National Medicaid 90th percentile for HEDIS® 2017. For HEDIS® 2016, we reported higher rates (ranging up to 15 percentage points) than all other health plans reporting this measure.

Our Well-Child Visits in the First 15 Months (six or more) rates for HEDIS® 2016 (72.43 percent) and HEDIS® 2017 (71.30 percent) exceeded the Medicaid National Mean (2016) and the Medicaid 75th percentile in both reporting periods. We performed higher than any other health plan reporting HEDIS® 2016 (except our legacy plan, Better Health, which was 1 percentage point higher).

Our Immunizations for Adolescents (Combo 1) rates (72.92 percent and 72.69 percent) exceeded the Medicaid National Mean for HEDIS® 2016, exceeded the Florida Medicaid Mean for HEDIS® 2017, and Amerigroup was the third highest scoring plan that reported on this measure for HEDIS® 2016.

Our Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life rate for HEDIS® 2016 (78.78 percent) and HEDIS® 2017 (76.16 percent) exceeded the Medicaid National Mean in both reporting periods. We were at the Medicaid 60th percentile for HEDIS® 2017, exceeded the Medicaid 75th percentile for HEDIS® 2016, and, along with one other plan, had the fourth highest score in the state on this measure for HEDIS® 2016.

Our Adolescent Well Care Visits rate for HEDIS® 2016 (55.75 percent) exceeded the Medicaid National Mean and the National Medicaid 60th percentile. In 2017, the score for this measure improved by more than 4 percentage points (59.72 percent) and is at the National Medicaid 75th percentile. We had the third highest score of the 12 Florida health plans reporting this measure for HEDIS® 2016.

Frequency of Ongoing Prenatal Care (≥ 81 percent of expected visits) rate 76.24 percent in HEDIS® 2016, exceeded the statewide average (60 percent), the Medicaid National Mean, and the 90th percentile. Compared to other health plans, we led the state, performing better than all other health plans reporting for HEDIS® 2016. We also exceeded the HEDIS® 2017 statewide average (61 percent), the Medicaid National Mean, and the 60th percentile for HEDIS® 2017.

Timeliness of Prenatal Care rates improved slightly between HEDIS® 2016 (86.12 percent) and 2017 (86.54 percent). We exceeded the Medicaid National Mean, the 60th percentile for HEDIS® 2016, and the 50th percentile for HEDIS® 2017. We had the third highest score of the Florida health plans reporting on this measure for HEDIS® 2016.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.2. New York Experience Achieving Quality Standards

Our affiliate's Medicaid contract with New York began in January 2005 and currently serves 380,224 members. The most recent contract was executed in March 2014 and extends through February 2019. The current contract covers the TANF, ABD, and Medicaid expansion populations. For measurement year 2016, New York met 20 out of 41 state-specified targets and earned more than \$16 million in performance-based incentives.

Childhood Immunization Status (Combo 3) rates (76.39 percent and 73.09 percent) exceeded the Medicaid National Mean and the Medicaid 75th percentile for HEDIS® 2016. The rate for HEDIS® 2017 exceeded the Medicaid National Mean and Medicaid 50th percentile for HEDIS® 2017.

Well-Child Visits in the First 15 Months (6 or more) rates for HEDIS® 2016 (66.30 percent) and 2017 (63.95 percent) exceeded the Medicaid National Mean and Medicaid 60th percentile for HEDIS® 2016 and exceeded the Medicaid National Mean and 50th percentile for HEDIS® 2017.

Immunizations for Adolescents (Combo 1) rates (72.92 percent and 71.30 percent) exceeded the Medicaid Florida Mean in both reporting years and the National Medicaid mean in HEDIS® 2016.

Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life rates (86.03 percent and 85.81 percent) for HEDIS® 2016 and 2017 respectively exceeded the Medicaid National Mean and 90th percentile for HEDIS® 2016 and 2017.

Adolescent Well Care Visits rates for HEDIS® 2016 and 2017 (68.68 percent and 70.41 percent) exceeded the Medicaid National Mean and 90th percentile in both reporting years.

Frequency of Ongoing Prenatal Care (≥ 81 percent of expected visits) rates (65.19 percent and 63.10 percent) exceeded the Medicaid National Mean and Medicaid 60th percentile in HEDIS® 2016 and 50th percentile for HEDIS® 2017.

Timeliness of Prenatal Care rates improved slightly between HEDIS® 2016 (87.38 percent) and 2017 (89.82 percent). Rates exceeded the Medicaid National Mean each year and the 75th percentile for each reporting year respectively.

1.3. Texas Experience Achieving Quality Standards

Our affiliate's current contract for Texas Medicaid was executed in September 2011 and extends through August 2018 (currently serving 646,398 members). The initial Medicaid contract with Texas began in 1996. The current contract covers the TANF, CHIP and ABD populations. Texas Medicaid reports by product within the contract and has currently suspended their quality-related withhold program due to methodological concerns. The state of Texas aspires to the Medicaid 75th percentile as the goal for comparison of Texas rates.

Childhood Immunization Status (Combo 3) rate (72.45 percent and 74.54 percent) exceeded the Medicaid National Mean during both reporting years and the Medicaid 50th percentile for HEDIS® 2016 and the Medicaid 60th percentile for HEDIS® 2017.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Well-Child Visits in the First 15 Months (six or more) rate for HEDIS® 2017 (62.50 percent), improved almost 11 percentage points, exceeding the Medicaid National Mean and the Medicaid 50th percentile.

Immunizations for Adolescents (Combo 1) rates (83.91 percent and 82.64 percent) exceeded the Medicaid National Mean in both reporting years, and exceed the 75th percentile for HEDIS® 2016 and the 60th percentile for HEDIS® 2017.

Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life rates for HEDIS® 2016 (78.78 percent) and 2017 (81.48 percent), exceeded the Medicaid National Mean and the Medicaid 75th percentile for both reporting years.

Adolescent Well Care Visits rates for HEDIS® 2016 (70.05 percent) and HEDIS® 2017 (69.95 percent) exceeded the Medicaid National Mean by more than 20 percentage points in 2016 and achieved the Medicaid 90th percentile in both reporting years.

Frequency of Ongoing Prenatal Care (≥ 81 percent of expected visits) rates (78.77 percent and 75.23 percent) exceeded the Medicaid National Mean both reporting years and achieved Medicaid 90th percentile for HEDIS® 2016 and 75th percentile for HEDIS® 2017.)

Timeliness of Prenatal Care rates (87.97 percent for HEDIS® 2016 and 83.56 percent for HEDIS® 2017) exceeded the Medicaid National mean both reporting years and Medicaid 75th percentile and 50th percentile respectively.

2. THE EXTENT THE RESPONDENT EXCEEDED THE NATIONAL MEAN AND APPLICABLE REGIONAL MEAN FOR EACH QUALITY MEASURE.

See Attachment MMA SRC# 14-1: Exhibit A-4-b-2 MMA Performance Measurement Tool. This MMA Performance Measurement Tool shows our calendar year 2015 and 2016 rates for each of the seven HEDIS® measures requested in this solicitation.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The extent of experience (e.g., number of Contracts, enrollees or years) in achieving quality standards with similar target populations, for the HEDIS performance measures included in this submission requirement.
2. The extent to which the respondent exceeded the national mean and applicable regional mean for each quality measure reported and showed improvement from the first year to the second year reported.

Score: This section is worth a maximum of 70 raw points with component 1 worth a maximum of 10 points and component 2 worth a maximum of 60 points as described below:

Exhibit A-4-b-2, MMA Performance Measurement Tool (10-2-2017), provides for forty-two (42) opportunities for a respondent to report prior experience in meeting quality standards (seven (7) measure rates, three (3) states each, two (2) years each).

For each of the seven (7) measure rates, a total of 5 points is available per state reported (for a total of 105 points available). The respondent will be awarded 1 point if their reported plan rate exceeded the national Medicaid mean and 1 point if their reported plan rate exceeded the applicable regional Medicaid mean, for each available year, for each available state. The respondent will be awarded an additional 1 point for each measure rate where the second year's rate is an improvement over the first year's rate, for each available state.

An aggregate score will be calculated and respondents will receive a final score of 0 through 60 corresponding to the number and percentage of points received out of the total available points. For example, if a respondent receives 100% of the available 105 points, the final score will be 60 points (100%). If a respondent receives 95 (90%) of the available 105 points, the final score will be 54 points (90%). If a respondent receives 10 (10%) of the available 105 points, the final score will be 6 points (10%).

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

EXHIBIT A-4-b-2
MMA SRC# 14 - MMA PERFORMANCE MEASUREMENT TOOL (10-2-2017)

INSTRUCTIONS:

Respondents should submit calendar year 2015/HEDIS 2016 and calendar year 2016/ HEDIS 2017 performance measure data for the selected HEDIS measures for the respondent's three (3) largest Medicaid contracts (measured by number of enrollees).

If the respondent does not have HEDIS results for at least three (3) Medicaid Contracts, the respondent shall provide commercial HEDIS measures for the respondent's largest Contracts. If the Respondent has Florida Medicaid HEDIS results, it shall include the Florida Medicaid experience as one (1) of three (3) states for the last two (2) years.

The performance measures that respondents are required to report on can be found on the Performance Measure Group B tab.

Use the drop-down box to select the state for which you are reporting and enter the performance measure rates (to the hundredths place, or XX.XX) for that state's Medicaid population for the appropriate calendar year.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 15 – Failure to Meet HEDIS Measures (Statewide):

In addition to providing HEDIS measure data, describe any instances of failure to meet HEDIS or Contract-required quality standards for the measures listed below and actions taken to improve performance. Describe actions taken to improve quality performance when HEDIS or Contract-required standards were met, but improvement was desirable.

- Childhood Immunization Status (Combo 3);
- Well-Child Visits in the First 15 Months (6 or more);
- Immunizations for Adolescents (Combo 1);
- Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life;
- Adolescent Well Care Visits;
- Frequency of Ongoing Prenatal Care ($\geq 81\%$ of expected visits); and
- Timeliness of Prenatal Care.

Response:

Clear Health has an established Quality Management (QM) program and staff with experience in improving quality performance in a meaningful way for Medicaid enrollees (members) with HIV/AIDS in Florida. Our QM program includes internal monitoring to evaluate ongoing performance and effectiveness of delivery of services for this population and addresses any issues identified. By investing in the data tools that support the reporting and monitoring of performance, as well as in the design and application of strong interventions to successfully remediate all improvement opportunities, our organization is able to reach and exceed performance standards. Our experience and strict discipline with performance monitoring provides the best opportunity and positions us to continue to improve quality for our members in the most meaningful way. Through our annual evaluation of program trends and demands, we assess case/disease management effectiveness, service delivery (for example, monitoring preventive screenings), member and provider complaints, and satisfaction survey results. Implementing these and other indicators of current performance allows us to identify areas of service and operations that require immediate corrective action plans as well as areas where we meet standards but continued improvement is desired, ultimately improving the quality and health outcomes for members.

Quality is fundamental to everything we do. Achieving better member outcomes is not the responsibility of one program or specific employee, but is the result of quality being infused throughout all departments in our organization. These outcomes are a culmination of efforts of our Customer Care Representatives who offer support and resources to our members, Provider Network Managers who provide actionable data and targeted education to providers, Claims Processors who ensures providers are paid in a timely and accurate manner, Utilization Management (UM) and Case Management (CM) teams who ensure our members are offered appropriate support, and our Pharmacy team who proactively meets with providers to discuss best practices in prescribing. Additionally, we have developed a Performance Ratings team responsible for overseeing the accuracy of data, understanding and identifying trends, and communicating data gaps throughout the organization and to providers in our network to make sure we successfully remediate all performance measures not being met and improve those that are at or above the desired benchmark.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1. ABILITY TO IMPROVE QUALITY AND SUCCESSFULLY REMEDIATE WHEN PERFORMANCE MEASURES ARE NOT MET

Clear Health carefully monitors all measures benchmarked under the 50th percentile (the Agency for Health Care Administration's (Agency) expected minimum standard). We submit Performance Measurement Action Plans to the Agency presenting how all metrics below the State thresholds will be remediated. We analyze the prior year's results to identify root cause barriers to performance, as well as to track current members via monthly year-to-date HEDIS® monitoring.

Because Clear Health is a Specialty Plan designed for members with a diagnosis of HIV or AIDS, the risk profile of our members is significantly different from the overall Medicaid population. Therefore, comparing our membership's rates of many clinical measures to the overall (healthier) Medicaid population does not accurately reflect the quality results our Clear Health plan has achieved. As noted in the Agency's Report Card, viewers are cautioned when reviewing the ratings for Specialty Plans, because these plans serve people with certain diagnoses or conditions, and the ratings compare performance to plans that may be serving healthier people. In addition to these issues, several of our performance measures have historically been negatively affected by the algorithm assigning non-eligible Medicaid enrollees into our Specialty Plan and associated delays in disenrollment. While our case management and Member Services staff are well equipped to assist and support members without an HIV/AIDS diagnosis, these members are reticent (and often refuse) services as a way to prevent any association with an HIV/AIDS-related plan and the stigma associated with an implied diagnosis of HIV/AIDS. This is particularly true when the members are children.

Based on the ITN requirements for MMA SRC 14 and MMA SRC 15, we have submitted HEDIS® data for the legacy Simply plan in Florida with the largest Medicaid membership, which is Amerigroup. Additionally, Amerigroup's membership is more comparable to that of the population from which the Medicaid 50th percentile is derived than the HEDIS® results for Clear Health. Clear Health is not one of Simply's largest three contracts by membership due to its specialized nature.

Although the ITN instructions precluded submission of Clear Health's specific HEDIS® results, we recognize the Agency's intention to learn about quality improvement interventions and capabilities present in our Clear Health Specialty Plan. Therefore, in this SRC response, interventions utilized by the unified Simply will be described as such, and interventions relevant solely to our Clear Health plan will be clearly identified as applicable. Interventions related to all measures are described below and in Table 15-1 Performance Improvement Intervention Matrix in Attachment MMA SRC# 15-1. Our Simply legacy plan reported year-over-year improvements for six of the seven measures identified above, ranging from 1.31 percentage points to 23.98 percentage points. Five of the seven measures identified above did not score above the 2016 Quality Compass 50th percentile in HEDIS® 2016. Subsequently, four out of the five measures that had not scored above the 50th percentile made significant improvements compared to the previous year, resulting in three measures achieving the 75th percentile, two measures achieving the 60th percentile, and two measures remaining below the 50th percentile.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

The following focuses on the five measures that did not score above the 50th percentile in HEDIS® 2016 and our actions to improve performance:

- Childhood Immunization Status (Combo 3)
- Immunizations for Adolescents (Combo 1)
- Adolescent Well Care Visits
- Frequency of Ongoing Prenatal Care (≥ 81 percent of expected visits)
- Timeliness of Prenatal Care

Similarly, in our Clear Health membership, five of the seven measures listed for which year-over-year data exists (two measures failed to have sufficient numbers of eligible members) did not meet the target rate of the NCQA 50th percentile in HEDIS® 2016. While four of the five measures improved between HEDIS® 2016 and HEDIS® 2017, only one exceeded the 50th percentile.

1.1. Interventions Targeting Access to Preventive Care

As part of our overall strategy to improve access to care for all members, we engage with members who are overdue for a preventive visit and their assigned Primary Care Providers (PCP). Members are contacted through multiple initiatives to encourage them to obtain preventive care services, immunizations, and follow-up care from their PCP. As soon as a Florida Medicaid enrollee becomes a Clear Health member, we begin tracking services received and gaps in care to promote the timely and effective completion of services. Our tracking tools enable us to closely monitor access to preventive services and adherence to medications. We use this information to send reminders about upcoming or missed screenings to members and targeted education to providers. Interventions are described below and in Table 15-1 Performance Improvement Intervention Matrix in Attachment MMA SRC# 15-1.

1.1.1. Member Outreach

We acknowledge the importance of providing members with frequent preventive care information through a variety of mechanisms. Our new member welcome packet includes information about their PCP, the importance of developing a relationship with their PCP, and how to access a Customer Care Representative for assistance selecting, changing, or making an appointment with their PCP. In the case of a Clear Health member, they might select an infectious disease specialist as their PCP. Additionally, we utilize this opportunity to encourage and assist members to access preventive services. Information about well-child visits and immunizations is included in our new member welcome packets for members between birth and the age of 18. We also send members annual birthday reminders. Within 45 days of a members' birthday, we send member households an annual Preventive Health Reminder about recommended, age-appropriate, well-care and preventive services. The reminder card also instructs the family to call the toll-free Member Services line with any questions or needs for assistance in scheduling an appointment.

Upon enrollment, all members or their parents or guardians receive a welcome call that includes an initial health risk assessment. If the member is not current on well-child visits or vaccinations, or their parent or guardian does not know the immunization status, we provide information on the recommended immunizations for the age of the child and offer to help schedule a PCP appointment. We also remind callers to our toll-free Member Services line and Nurse help line about the importance of preventive services, and we assist members to obtain needed care. For

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

our Clear Health members, we have designated Customer Care Representatives to assist these members. These representatives have been provided additional training to ensure they are able to assist our members with HIV/AIDS efficiently and effectively.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1.1.5. Alternative Service Locations

We are committed to removing barriers to care and we design strategies to overcome them by meeting the members where they are. We have found that offering designated office hours and alternative service locations is the best way to help members access preventive services. We support them through targeted initiatives such as school-based clinic services, Clinic Days, mobile clinics, and our mobile units. In addition to these options, we contract with home visiting physician providers who can provide preventive care visits to members who are homebound.

School-based Clinic Services: We currently partner with providers of school-based services in three counties (Orange, Pinellas, and Miami-Dade) and we are the only health plan collaborating with schools in the Miami-Dade area. Our outreach focuses on connecting our adolescent members with well-child and immunization services in the school-based setting.

Mobile Clinics: We collaborate with providers with mobile clinics who will go into the neighborhoods where our members reside. The mobile clinics are staffed by practitioners who have a practice in the member's community and can serve as the member's PCP. The mobile clinics are an extension of the PCP's main office, usually a Federally Qualified Health Center or academic medical center. A wide array of services is provided to the members, including well-child visits, immunizations, adult well-care visits, and any prescriptions needed for chronic illnesses such as asthma. We understand children's dental services will not be covered by the health care plans in the coming Contracting period; however, we think it is important to note that our mobile dental clinics have been very successful closing dental gaps in care for our members. Additionally, we use this opportunity to educate and connect members to their PCPs for well-child exams and immunization gaps in care.

Mobile Units: Simply owns and operates mobile units currently used at community events to provide educational information. Our mobile units distribute educational information about a number of health-related topics, including adult well-care visits, immunizations, well-child exams, mental health and substance abuse, bullying, domestic violence, and many other topics.

See Table 15-1 Performance Improvement Intervention Matrix in Attachment MMA SRC# 15-1 for a summary of all interventions.

** RESULTS & SUCCESSES: In 2016, we served more than 1,500 members through our combined alternative service location initiatives that addressed medical service needs and more than 230 members' dental service needs. In 2017, we have already provided medical care to more than 1,000 members and dental care to almost 400 members through alternative service locations. **

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.2. Improved Well-child Visit Rates

Through the numerous strategies described above, Simply demonstrated year-over-year improvement between HEDIS® 2016 and 2017 for two of the three Well-Child measures that did not achieve the 50th percentile in HEDIS® 2016. In HEDIS® 2017, Simply's rates for the Adolescent Well-Care Visits measure improved over 16 percentage points achieving the 75th percentile, and the rates for the Childhood Immunization Status (Combo 3) improved over 1.3 percentage points exceeding the National Mean but falling just below the 50th percentile. Despite our ability to increase the rate of adolescents who received a well-child visit, our score for Immunizations for Adolescents did not improve and remained somewhat below the 50th percentile.

1.3. Interventions Targeting Birth Outcomes

Clear Health understands that early and ongoing prenatal care is essential to improving birth outcomes. Early identification of pregnant members is vital to providing timely prenatal care. An analysis by Florida Medicaid's Bureau of Medicaid Data Analytics of 169,375 pregnant women aged 10 to 60 (cohort) in Florida's Medicaid program between August 1, 2014 and July 31, 2015 found that the majority of women (76 percent) obtained their first prenatal visit in the same month or the month following their first service identifying the member was pregnant. Only eight percent waited longer than two months past identification. While guidelines recommend that women begin prenatal visits as early as possible and at least seven months prior to delivery, 70 percent of the cohort had their first prenatal care visit later than the recommended seven months prior to delivery (published Autumn 2016). Once women are aware of their pregnancy, the majority seek prenatal care in a timely manner.

Analyses completed by the Family Data Center within the University of Florida's College of Medicine, and presented in the Florida Medicaid Maternal & Child Health Status Indicators Report (2011-2015) consistently (five-year trend) shows that women eligible for Florida Medicaid due to pregnancy (SOBRA) have lower rates of inadequate prenatal care compared to women eligible for Florida Medicaid through all other eligibility avenues/criteria. Women eligible through SSI have the highest rates of inadequate prenatal care. These findings have led us to seek strategies to identify and engage pregnant members as soon as possible.

1.3.1. Member Outreach

As part of our overall strategy to identify pregnant members within the first trimester and promote compliance with medical guidelines for frequency and timeliness of prenatal and postnatal visits, we employ a variety of measures to identify pregnant members. In addition to using the enrollment file that identifies women as eligible for Medicaid through SOBRA, we have implemented a bi-directional data sharing agreement with the Healthy Start Coalition to enable the expeditious identification of pregnant members.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

At times, locating members can be a challenge. For this reason, we utilize our close working relationship with the Healthy Start Coalition, referring members for outreach. As additional measures, and in recognition of the special risks for pregnant women with HIV, we engage our Managed Care Coordinators and Outreach Care Specialists from our Member Outreach Team for any ongoing efforts as needed. This reduces duplication while ensuring that all avenues are exhausted to bring these members into care.

- **Maternal Postpartum Outreach Program (MPOP):** MPOP is an all-inclusive (member, provider, and data collection) outbound call outreach program focused on improving access to care and ensuring the timeliness of a mother's visits with a provider after delivery of her baby. Outreach is completed by providing experienced compassionate outreach care specialists and a state-of-the-art web-based system to assist members with postpartum visits, refer at-risk members to care providers and community resources, and educate members about recommended newborn check-ups and Early and Periodic Screening, Diagnostic and Treatment (EPSDT). Program components include:

- **MPOP System:** A state-of-the-art web-based system that identifies moms who have just delivered a baby and may need assistance with scheduling their postpartum visit, and captures all components of the outreach process (appointments, mailings, outreach attempts)

- **Outreach Care Specialists:** Experienced Outreach Care Specialists attempt to contact new mothers assigned in the MPOP system to assist with appointment scheduling, appointment reminder (5 days prior to the mom's postpartum appointment), and appointment coordination and verification (contact OB provider to schedule an appointment for moms and verify mom kept her postpartum appointment)

Upon identification of a pregnant member, an obstetrical (OB) risk screening tool is completed by either the automated My Advocate program, or the OB Case Manager to determine the member's need for further assessment for OB case management services. All pregnant members with HIV/AIDS are stratified as high-risk for OB case management. While the OB Case Manager is primary, a Managed Care Coordinator will co-manage as needed. Frequency of contact is, at minimum, monthly, and focuses on adherence to antiretroviral therapy (ART) in addition to normal high-risk OB protocols.

An OB Case Manager follows all pregnant members from initial identification through all phases of their pregnancies. The OB Case Management program involves coordination of pregnancy monitoring (laboratory testing, utilization of emergency services and hospitalizations, and use of medications), self-management, support, and provider services.

- **OB Practice Consultants** - Provider education and collaboration efforts are enhanced by OB Practice Consultants, who are Registered Nurses who meet regularly with providers to build and maintain a coordinated approach to caring for women before, during, and after pregnancy. OB Practice Consultants also provide information on providers' HEDIS® performance for measures that focus on maternity care. Our OB Practice Consultants are based out of Miami, Orlando, and Tampa.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

**** REAL STORY:** High-risk OB Case Management Helps Mother Deliver Healthy Baby Girl
When Carmen, our OB Case Manager, offered 36-year-old new member Krysten high-risk OB case management services based on her HIV status, she was reluctant to discuss her status, but she accepted help managing her pregnancy. Happily, although Krysten had not sought prenatal care in the first months of her pregnancy, she welcomed Carmen to coordinate services and referrals for her, including to WIC, Healthy Start, and an OB/GYN. Carmen also worked with the Orange County Department of Health Ryan White case manager to coordinate education on prenatal and post-partum care, nutrition, baby feeding, and the signs and symptoms of preterm labor and post-partum depression.

Carmen was there for Krysten throughout her pregnancy, answering her questions, providing support, and reinforcing the importance of medication, lab work, and appointment compliance to keep her and her baby healthy. By keeping her appointments and taking her medications, Krysten avoided complications including preterm labor and transmitting the virus to her full-term baby girl, Andrea. In addition, she kept her OB/GYN follow-up and pediatrician appointments too. Krysten expressed her gratitude to Carmen. ******

Ensuring we are able to connect with our pregnant members who are homeless requires additional effort. We have recently secured access to the Homeless Management Information System (HMIS), a local information technology system that collects client-level data and data on the provision of housing and services to homeless individuals and families, and persons at risk of homelessness. This system enables us to use the client tracker, a valuable application that helps us locate members experiencing homelessness. This application identifies shelters and other organizations that are currently providing services or that recently provided services to a member. Through the HMIS client tracker, we will monitor our membership characteristics and service needs, and use the system to help us locate members experiencing homelessness on a timely basis. We will use service need information collected through the HMIS as another source of information to help us identify services currently being provided to our members who are or have been homeless, so that we can identify and fill service gaps and make sure that member needs are being met.

1.3.2. Programming and Tools

The Taking Care of Baby and Me® program addresses maternal and newborn health risks by ensuring members have access to the information, care, and support needed to stay healthy before, during, and after pregnancy. The program assures that our members have access to appropriate obstetrical, medical, and behavioral health care services. We engage members in care management as advocates for their own health care and by assisting with the essential elements of personal responsibility and health care that lead to a healthy pregnancy and newborn.

- My Advocate – To effectively screen for risk factors and engage our members during and after pregnancy, Simply employs My Advocate, a multi-channel communication program that provides health education by phone, text message, smartphone app, or online to pregnant members. In addition to promoting healthy habits, My Advocate:
 - Allows members to complete our High-Risk OB Screener by phone or online to determine level of risk and need for case management or care coordination services

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

- Alerts OB Case Managers and Managed Care Coordinators to reach out to members when they experience a change in risk level
- Allows members to ask questions and get a prompt callback from an OB Case Manager

1.4. Improved Performance Related to Birth Outcomes

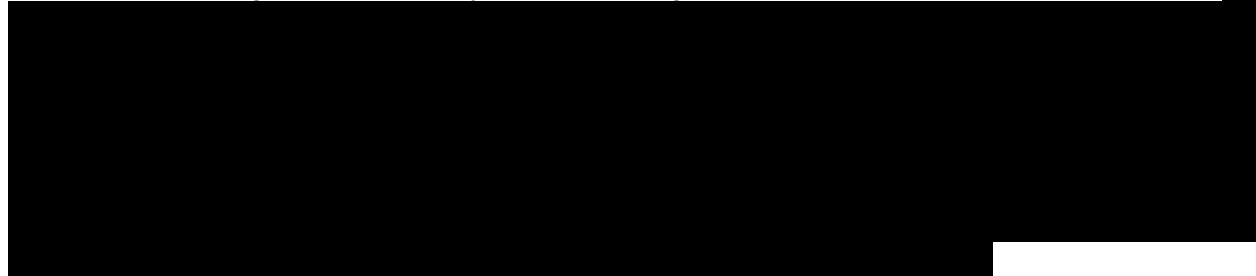

Simply demonstrated significant year-over-year improvement for both measures related to birth outcomes described in this Submission Requirement Component. Our rates for the Frequency of Ongoing Prenatal Care measure improved over 23 percentage points, and our rates for the Timeliness of Prenatal Care improved over 14 percentage points between HEDIS® 2016 and HEDIS® 2017. These improvements resulted in both scores achieving the 60th percentile in HEDIS® 2017.

2. ABILITY TO IMPROVE QUALITY WHEN STANDARDS WERE MET

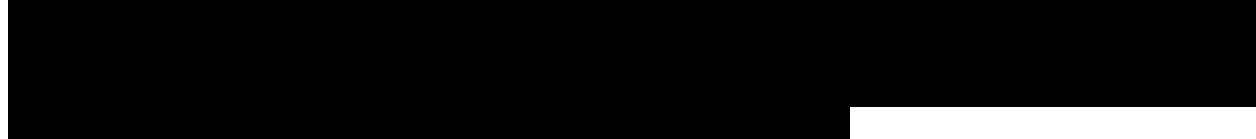

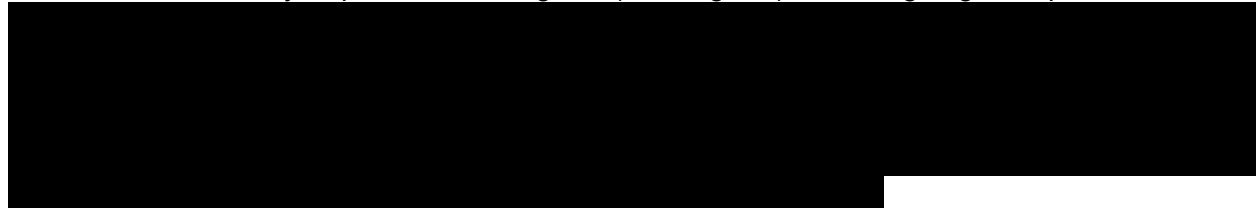

Clear Health is committed to excellence in the quality of care and services provided to members, and to the competence of our provider network. We are dedicated to improving member satisfaction, improving the health status and quality of care for our members, providing expanded

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

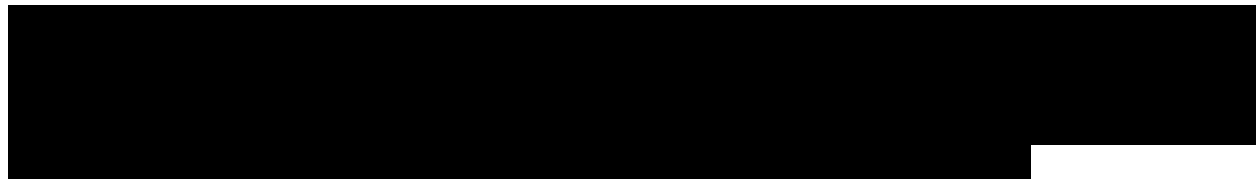

benefits, improving member safety, and assuring member access to medical services.

Clear Health's Quality Improvement Program (QI Program) is an ongoing, comprehensive, and

The following focuses on the two measures that scored above the 50th percentile in HEDIS® 2016 but where improvement was still desired:

- Well-Child Visits in the First 15 Months (6 or more)
 - Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life
- 
- 

2.1.1. Member Outreach

We provide members with frequent preventive care information through a variety of mechanisms:

- New member welcome packet including information about their PCP, the importance of developing a relationship with their PCP, how to access an appointment with their PCP, and information about well-child visits and immunizations is included in our new member welcome packets for members between birth and the age of 18.

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

- Annual birthday reminders. Within 45 days of a member's birthday, we send member households an annual Preventive Health Reminder about recommended, age appropriate, well-care and preventive services.
- Welcome call. Upon enrollment, all members or their parents or guardians receive a welcome call that includes an initial health risk assessment, information on the recommended immunizations for the age of the child, and assistance scheduling a PCP appointment (as needed).
- Member Services line and Nurse help line. We remind callers of our toll-free Member Services line and Nurse help line and the importance of preventive services, and assist members as needed to access care.

2.2. Continued Improvement of Well-child Visit Rates

Simply achieved the 50th and 75th percentile for the measures Well-Child Visits in the First 15 Months (6 or more) and Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life, respectively, in HEDIS® 2016. Between HEDIS® 2016 and 2017 we demonstrated year-over-year improvement of more than 7.5 and 2 percentage points (respectively), yielding achievement of the 75th percentile for both measures in 2017.

Evaluation Criteria:

1. The extent to which the described experience demonstrates the ability to improve quality in a meaningful way and to successfully remediate all failures for the HEDIS performance measures included in this submission requirement.
2. The extent to which the described experience demonstrates the ability to improve quality in a meaningful way even when HEDIS or Contract-required standards were met, but improvement was desirable, for the HEDIS performance measures included in this submission requirement.

Score: This section is worth a maximum of 10 raw points with each component worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 16 – HEDIS (Data Sources) (Statewide):

The respondent shall describe:

- a. The extent to which it has used the following standard supplemental data sources for its HEDIS and other performance measures:
 - Laboratory result files;
 - Immunization data in State or county registries;
 - Transactional data from behavioral healthcare vendors; and
 - Current or historic State transactional files in a standard electronic format.
- b. The extent to which it has used supplemental data from electronic health record vendor systems and data from certified eMeasure vendors for HEDIS and other performance measures.
- c. The extent to which it has experience reporting HEDIS measures collected using Electronic Clinical Data Systems.

Response:

Clear Health uses the national expertise and resources of our Health Care Analytics (HCA) Data Management team and the local expertise of our Florida-based Business Intelligence team to collect, analyze, measure, and report HEDIS®, CAHPS®, and any locally-defined performance measures. Our national office's support enables us to invest in and use industry-leading hardware and software with economies of scale. Our Florida-based team makes sure that State-specific data (such as immunization records and local laboratory data) and data required for Florida-specific measures is collected and used in the calculation of performance measure rates. Clear Health's Business Intelligence team has more than 10 years of HEDIS® management experience and is fully dedicated to collecting, calculating, and reporting HEDIS® and Agency-required performance measures. Our ultimate parent company, Anthem, Inc. (Anthem) makes more than 150 HEDIS® submissions, annually, to the National Committee for Quality Assurance (NCQA). This is one of the largest contributions of data in the country. Anthem submits data for 20 Medicaid markets including Florida and multiple entities, including separate reporting for Florida's Medicaid and Florida Healthy Kids programs. We routinely use supplemental data sources in all health plan types to calculate performance measure rates.

1. EXPERIENCE AND ABILITY TO USE STANDARD SUPPLEMENTAL DATA SOURCES FOR HEDIS® AND OTHER PERFORMANCE MEASURES.

Clear Health understands the success of the Statewide Medicaid Managed Care (SMMC) program is largely measured by the quality scores of contracted health plans. Clear Health has the experience, expertise, and proven ability to earn top quality scores. We are committed to collecting and using all available data sets required to calculate and report performance measures that reflect the quality of care provided through the SMMC program. We collect and use all standard supplemental data sources needed for HEDIS®, Child and Adult Core Set measures requested by CMS, and Agency-defined performance measures according to standards specified in the most recent version of NCQA's HEDIS® Technical Specifications

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

(such as Data Collection Methods and Data Sources), the Agency Report Guide, and the Agency Performance Measure Specifications Manual. We use supplemental data for all measures for eligible population identification and compliance measurements. The Health Care Analytics (HCA) Data Management team has process ownership and assists the health plan's Business Intelligence team in planning and executing annual data collection. The process defines the reporting population, the hybrid or administrative measure project design, year-round data management, and year-round enrollee (member) and provider outreach. Data collected from these efforts is imported into the HEDIS® warehouse, proofed, and pulled into the certified software vendor warehouse. Audited data is used in administrative measures, medical record projects, and CAHPS® sample generation.

Clear Health uses a HEDIS® certified software vendor (Inovalon) to load and store all data used for HEDIS® reporting and auditor approval, including NCQA certified national auditors and state/federal regulatory auditors for all data extraction processes. Our HEDIS® warehouse contains information from paper and electronic claims, encounter data, enrollment, and provider files maintained in our transaction systems or internal data warehouses. Data sources are inclusive of medical records from chart review, electronic medical record data feeds, paper/electronic claims and encounter data, subcontractor data (e.g., vision, dental, pharmacy, behavioral health, and laboratory result data), state pharmacy files and state registries (maintained in multiple repository sites), and state Fee-for-Service/historical encounter files.

We have automated lab data exchanges with national providers, including Quest Diagnostics (Quest), Laboratory Corporation of America (Labcorp), and Bio-Reference Laboratories, and carry out extensive efforts at the local level to collect additional lab data to enhance completeness. To verify that we are obtaining sufficient supplemental data from local repositories, we conduct a Florida-specific data utilization analysis, then implement data acquisition and/or sharing agreements accordingly. Additionally, as a part of our overall quality improvement processes, the HEDIS® data team works closely with our certified HEDIS® audit firm to make sure all data sources are collected and used accurately to identify services and eligible members. This process assures the resulting performance measure rates accurately reflect our high performance.

In Florida, we receive laboratory files from our laboratory service provider (Quest) and behavioral health (BH) files (837 claims data encounter files) from our BH subcontractor (Beacon Health Options) daily and complete a validation process to determine if the files have already been received. If a file is deemed new, we flag the data appropriately (e.g. EMR data is flagged as supplemental data) and validate the row count and consolidate the member ID with our Core Operations System (COS). Files that pass the validation process are stored in our Florida-based data warehouse until they are sent to our HEDIS® software vendor (monthly in one single file per subcontractor). We have a comprehensive process to clean data from each data source. The certified HEDIS® software is used to calculate all HEDIS® scores. The process includes de-duplicating data about the same service from multiple data sources and using data from the correct source based on NCQA's specified hierarchy (for instance, claims data overrides supplemental data for the same service) and purpose (for instance, auditor reviewed and approved supplemental data is only allowed to be counted as numerators and exclusions).

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Clear Health shares immunization data with the Florida's State Health Online Tracking System (SHOTS) immunization registry on a quarterly basis. Immunization encounter data is sent to the Florida Department of Health (DOH) in the State-specified format via a Secure File Transfer Protocol (SFTP) site. Clear Health also requests immunization data from the DOH periodically. Toward the end of the year, we match immunization data more frequently to accurately track important immunization-related measures (such as Childhood Immunization Status, Immunizations for Adolescents) and take action to close gaps in care in partnership with members and providers. When Clear Health receives data from the Florida SHOTS registry indicating a vaccination was received, we submit it to our HEDIS® software vendor to be reconciled with members who meet criteria to be included in one or more measures.

We receive historic State transactional files in standard electronic format on a daily basis. After validating the data, we consolidate the member ID with data in our COS and store the data in our Florida-based data warehouse. We send all historical data to our HEDIS® software vendor monthly. Historic data provides immunization and screening data not found in other registries and is one of many sources used to calculate rates for Childhood Immunization Status, Lead Screening in Children, and Immunizations for Adolescents. It also helps complete our members' records on care received before their enrollment with Clear Health, which otherwise would be represented as a gap. For instance, newborns and pregnant women may not become Clear Health members until several weeks or months after enrolling in Florida Medicaid. State-provided historical claims and encounter data enable us to capture services rendered prior to enrollment in our health plan, including the first Well-Child Visit and/or prenatal visits. These are vital for the Well-Child Visits in the First 15 Months of Life and Timeliness of Prenatal Care HEDIS® measures. We are able and willing to collect additional data from supplemental data repositories, to calculate and report additional performance measures as directed by the Agency.

As depicted in Figure 16-1 HEDIS® Data Flow in Attachment MMA SRC# 16-1: Data Sources, we use all available data sources to collect, maintain, and utilize data to generate HEDIS®, Adult and Child Core Set Measures, and Agency-defined measures. We use sophisticated tools, data review processes, and policies and procedures to verify data accuracy and completeness.

2. EXPERIENCE AND ABILITY TO USE SUPPLEMENTAL DATA FROM ELECTRONIC HEALTH RECORD VENDOR SYSTEMS AND FROM CERTIFIED EMEASURE VENDORS.

The HEDIS® Data Management team began incorporating Electronic Health Record (EHR) data from provider groups in 2014 and currently has more than 100 provider groups participating throughout the nation. Supplemental data from these provider EHRs has been incorporated into our HEDIS® process and we are able and willing to implement this with our Florida providers.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

To make the EHR linkage process more efficient and scalable, we are exploring opportunities to use data aggregators. Additionally, we are creating a national supplemental data management team to streamline the process for data intake from provider groups. We use advanced technology such as Alteryx to ensure we have a comprehensive data quality review from data intake to data processing and feeding to the HEDIS engine. This initiative will also ensure we have a scalable work flow to process a significant increase in volume of EMR data sources from provider groups. Our national data management team, comprised of staff with diverse expertise, will centralize operations, improve efficiency, and make sure the same high quality standards are applied consistently. The centralization will also benefit providers by reducing their administrative reporting burdens. The new process will enable network providers who see members in Medicaid, Medicare, and commercial products to submit data once rather than separately. We are also in the process of engaging new technology to automate data loading and quality processes.

We support NCQA's eMeasure Certification (eMC) program for organizations that develop, license, and sell quality-measure reporting software that calculates electronic clinical quality measures (eCQMs). eCQMs help organizations track and monitor the quality of care delivered by providers who use electronic data. We understand that certified data, in the approved Quality Reporting Document Architecture (QRDA) format, can be used as supplemental data and used for calculating HEDIS® measures at the health plan level. Additionally, health plans can use eMCs to reduce the number of costly chart reviews and after 2019, patient centered medical homes (PCMHs) will be required to submit measurement data from NCQA-certified sources through the eMC program.

One of our national data management team's goals will be aligning our supplemental data collection and management processes with those of NCQA's EHR initiatives, including eCQMs.

3. EXPERIENCE AND ABILITY TO REPORT HEDIS® MEASURES USING ELECTRONIC CLINICAL DATA SYSTEMS (ECDS).

Per NCQA, Electronic Clinical Data Systems (ECDS) are plan-based networks of data containing a member's personal health information and experience records (such as screening tool results) within the health care system. ECDS also support other care-related activities through various interfaces that include evidence-based decision support, chronic disease management, and outcome reporting. These data are structured to consistently execute automated quality measurement queries and provide results to the team responsible for members' care. For example, scores from depression screening tools (such as the Patient Health Questionnaire (PHQ-9)) can be used to track members' experience over time. Health plans that establish a network of interoperable ECDS foster a person-centered, team-based approach to improving health care quality.

ECDS is a relatively new domain of measurement and is not currently being reviewed by NCQA auditors during pilot testing. While testing ECDS, we learned that structured data on quality from EHRs, clinical registries, HIEs, administrative claims systems, and other sources are intended to be made available to clinicians at the point of service to enable better management. The design is best suited for integrated delivery systems.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Our New York affiliate health plan partnered with the New York state Medicaid agency to pilot ECDS and test these new capabilities. The targeted measure involved use of the PHQ-9 screening tool for clinical depression. Repeating the PHQ-9 over time and entering scores into the ECDS makes it possible to track whether a member's depression is improving or worsening. We identified all Medicaid members within the state who had the diagnosis to qualify for the measure, and providers conducted PHQ-9 screening as appropriate. The plan shared results with the state after the pilot concluded at the end of 2015. As is the case with some pilots, the state did not elect to continue ECDS development in the New York Medicaid program. Clear Health, with the experience and support of our national team, is willing and able to consult with the Agency on a potential pilot for use of ECDS systems in Florida.

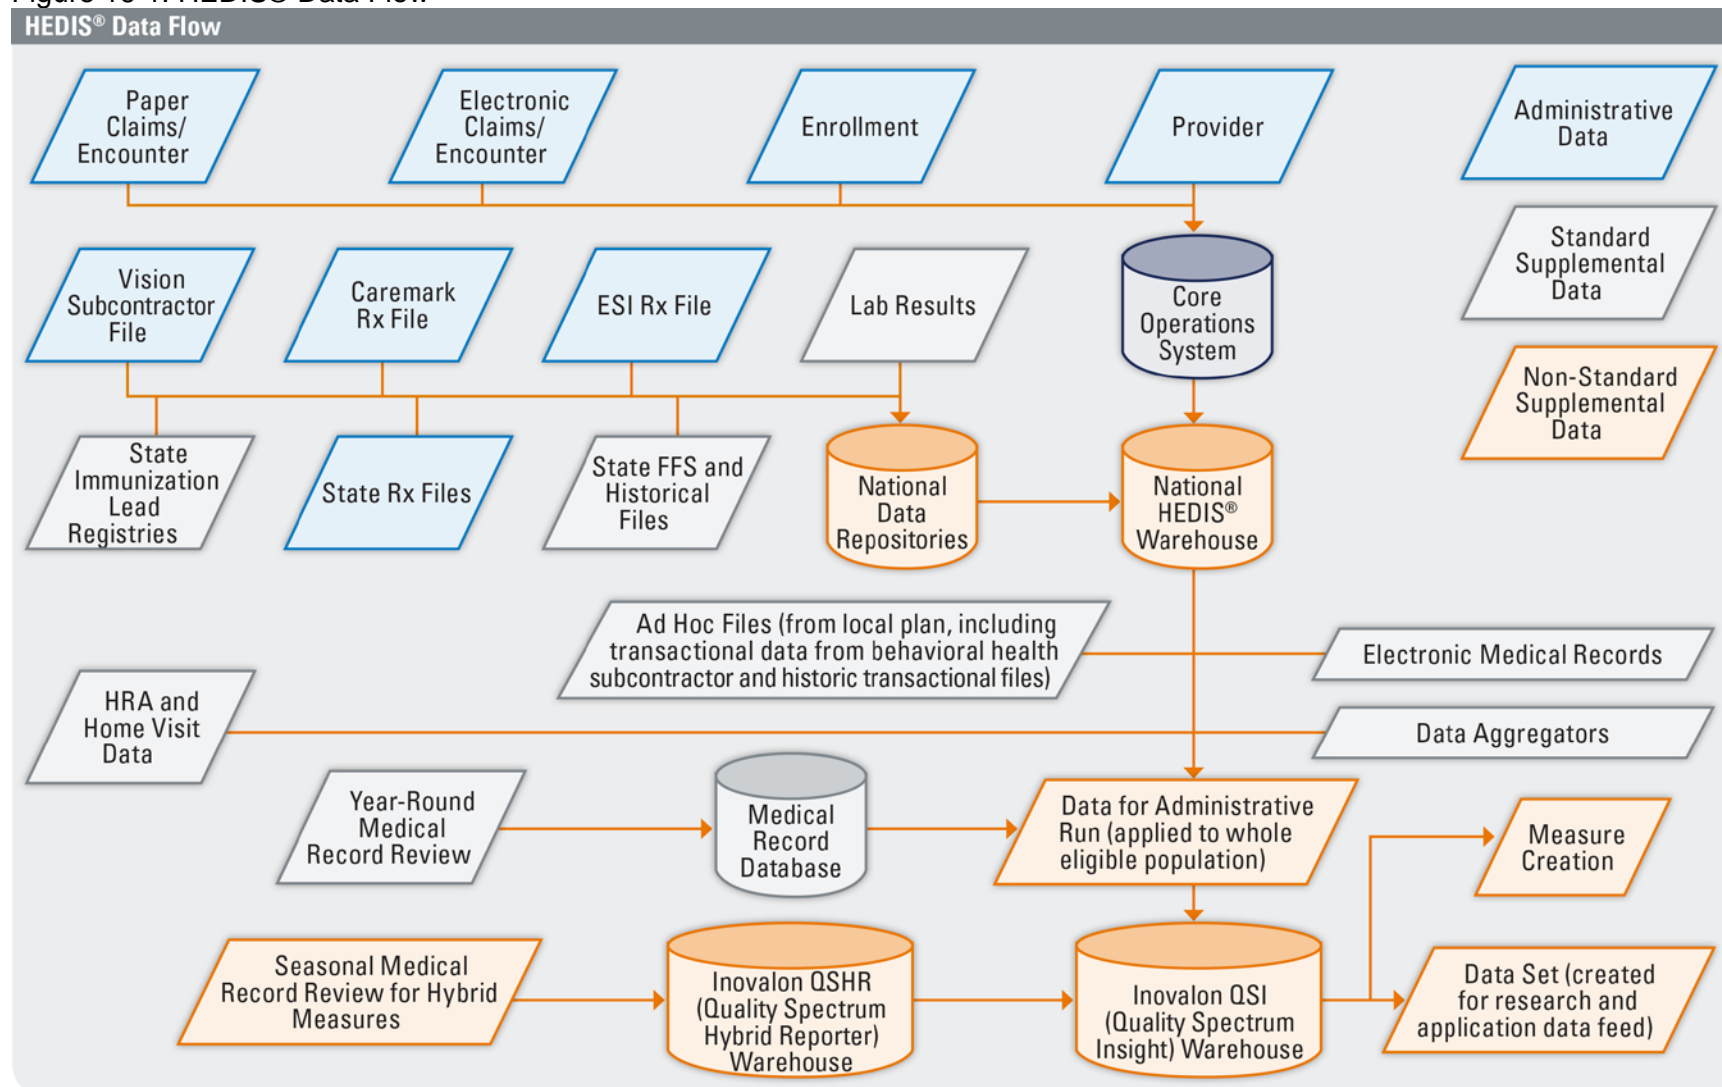

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The extent to which the described experience demonstrates the ability to use standard supplemental data sources (lab result files; immunization data in State or county registries; transactional data from behavioral healthcare vendors; and current or historic State transactional files in a standard electronic format) for HEDIS and other performance measures.
2. The extent to which the described experience demonstrates the ability to use supplemental data from electronic health record (EHR) vendor systems and data from certified eMeasure vendors for HEDIS and other performance measures.
3. The extent to which the described experience demonstrates the ability to report HEDIS measures collected using Electronic Clinical Data Systems (ECDS).

Score: This section is worth a maximum of 15 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 17 – Coordination of Carved Out Services (Statewide):

The respondent shall describe its approach to coordinating services that are not covered by the respondent, but are covered by Florida Medicaid either through the FFS delivery system (e.g., behavior analysis services, prescribed pediatric extended care) or through a prepaid dental plan.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Clear Health brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). Clear Health draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations while maintaining our unique community-based approach to addressing the specific needs of members with HIV/AIDS.

Clear Health is committed to working proactively with our enrollees (members), providers, sub-contractors, and AHCA to assure members receive all their covered services to promote their health and quality of life. Our deep experience in communities and understanding of local agencies, programs, and community resources facilitate our partnerships and streamline reciprocal referral processes so that we all work toward common goals. We will continue to leverage our role and relationship with members, caregivers and providers to promote engagement in all appropriate programs and advance recent gains in access.

1. PROCESS FOR RECIPROCAL REFERRAL FOR NEEDED SERVICES

Proactive identification and coordination of carved-out services is built into the standard operating procedures of our case management program for Clear Health. All members are assigned a Case Manager (called a Managed Care Coordinator to differentiate from the case management services of partner organizations) who collects information on current services, participation in additional programs, and physical and behavioral health (BH) needs through a comprehensive assessment process and builds a person-centered plan of care. The plan identifies the need for any non-covered or carved-out services and referrals for additional assessment or service provision in the appropriate setting. Our experience teaches us that in most situations these services are offered by community-based organizations, State agencies, and providers, including those administering carved-out benefit programs. Throughout the member's enrollment with Clear Health, the Managed Care Coordinator will continually assess eligibility for additional programs to serve member needs. Our staff coordinates referrals to facilitate access to all needed care and services, including those that address the social determinants of health our members may be facing.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

With member or representative permission, the Managed Care Coordinator will collaborate directly with service providers to assure the plan of care is cohesive and complementary and the member is receiving all appropriate benefits in a coordinated fashion. The Managed Care Coordinator may also facilitate the application process for these services by providing assistance to the members or caregivers, such as support to identify and gather all required information, counseling them on how to talk to their providers about service needs, and calling to make appointments for additional services if appropriate.

For example, we have a reciprocal referral process for members who need additional sedation for carved-out dental services in an outpatient setting: the dental benefits manager helps to identify and coordinate the services with the dental provider and our Managed Care Coordinator who then coordinates with the the medical facility to complete authorization for the sedation. Likewise, our Managed Care Coordinators coordinate with vision services to deliver appropriate ophthalmology services when providers refer for cytomegalovirus retinitis follow-up to prevent blindness in immune-compromised members. For pediatric members with Prescribed Pediatric Extended Care (PPEC) services, our Pediatric Managed Care Coordinators collaborate closely with the PPEC service providers to identify and arrange wraparound services as appropriate, including private duty nursing, transportation, and home care services to improve member health and quality of life. We also coordinate closely with Medicaid Certified School Match Programs for pediatric members with medical needs, integrating school-based services into the overall plan of care. For all carved-out services, Managed Care Coordinators continually monitor enrollment, member compliance with scheduled appointments, progress, and outcomes, and document them as a part of our integrated Case Management record.

Clear Health Customer Care Representatives also actively support members to access carved-out services. As noted below, our staff receives comprehensive training on the Florida Medicaid benefits and carved-out services and uses that information to address member questions and concerns when they call. For members who require or express an interest in pursuing a carved-out benefit, it is standard operating procedure for the Customer Care Representatives and Managed Care Coordinators to make a referral to an appropriate agency and assist the member, as needed, to make the appointment or secure the benefit. Clear Health staff facilitate access to carved-out services, including arranging transportation when appropriate. If our staff have difficulty arranging an appointment for a service carved out of managed care, we will contact Florida Medicaid's Recipient and Provider Assistance to find a solution to meet the member's needs.

We are committed to continuing to partner with AHCA to maintain high levels of access and utilization of pediatric dental care among our members during the transition to a carved-out service. We will proactively communicate to our member families about the importance of routine preventive dentistry for adults and children during welcome calls and other opportunities, and will make connections to the State program to facilitate access. We plan to build on the success of our Mobile Dental pilot with Miami-Dade Health Department, including expanding from four to six locations in Miami and adding proactive outreach to adults and kids needing dental care. This year, the Mobile Dental Clinics (on a Department of Health vehicle) provided dental care to 65 of our members and services were reimbursed by DentaQuest.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

2. ENGAGING AND EDUCATING ENROLLEES IN UNDERSTANDING THE DIFFERENCES IN BENEFITS IN MEDICAID DELIVERY SYSTEMS

We work hard to assure that our members are aware of the comprehensive benefits available through our plan, as well as benefits that they may be eligible for through other programs in Florida Medicaid. This includes communication of benefit information at enrollment through the welcome call, the introductory member packet, and via the member website. We list all our plan benefits in the member information, as well as additional program and benefits for which they may be eligible. Members can also contact our Customer Care Representatives or Managed Care Coordinators at any time with questions about benefits. When members express confusion about carved-out benefits, the case is referred to our case management department for follow-up. Our team members will contact the member to understand the point of confusion, offer clarity on the benefit packages, and assist with coordination of the services or claims processes as needed to make sure our member receives all necessary services without delay.

Another way to assure that our members are given the correct information about benefits and receive all covered services without delay is to educate providers about them. Our Provider Relations team works with network providers to promote clarity on covered benefits and other services available to our members through the MMA plan and other Florida Medicaid programs. Our new provider orientation includes an overview of the benefit package for our Medicaid beneficiaries, as well as an overview of benefits available through other Medicaid programs. For example, when orienting PCPs to our program, we discuss the Vaccines for Children program, provide education on maintaining an adequate vaccine supply, and provide instructions to bill Medicaid Fee-for-Service (FFS) directly for immunizations. We will work with DentaQuest and contracted dental providers to see that they are clear on services available through the pediatric dental carve-out and the billing procedures to prevent delays in care for our pediatric members.

3. PROCESS FOR ENSURING OUR STAFF AND SUBCONTRACTORS ARE AWARE OF BENEFITS AVAILABLE IN OUR PLAN AND OTHER FLORIDA MEDICAID PROGRAMS

Training for all staff at member- and provider-facing departments and subcontracted entities is an important part of our strategy to assure that there is comprehensive understanding about benefits in the Medicaid programs and processes to secure appropriate services to support members.

3.1. Training for Clear Health Staff on Benefits

All new Clear Health employees undergo a comprehensive classroom training program upon hire, developed in partnership with instructional designers on our Organizational Development team. The classroom program includes training on our benefits, the benefits of other Florida Medicaid programs available to our members, and processes for obtaining those benefits. Staff in our Member Services, Provider Relations, Case Management, and Utilization Management departments receive additional training on the utilization management process, criteria and their application, as well as strategies to support members through benefits management processes.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

We also offer refresher trainings on benefits annually, with additional training on State program updates through employee handbooks, transmittals, and fee schedule changes. Our Case Management System contains the most up to date information on benefits and carved-out services and is updated regularly. Information on benefits is at the fingertips of all member facing staff, including Grievance and Appeals Associates, Customer Care Representatives, Utilization Management Associates, and Managed Care Coordinators.

3.2. Training on Benefits by Subcontracted Entities on Benefits

As a part of our Subcontractor Oversight Program, Clear Health will assure compliance with training requirements on covered and carved-out benefits to promote clarity, accurate communication with members and providers, and to confirm that there is no inappropriate cost-shifting or duplication of services. We will confirm that each Subcontractor has a robust training program for staff in place that reviews covered benefits and carved-out services in the Florida Medicaid program, including review of the training curriculum as a part of our routine oversight process. For example, DentaQuest, our dental network and utilization management subcontractor, has processes in place to train staff and providers initially and on an on-going basis on benefits included in different programs, including Medicaid and Florida Healthy Kids. Their Customer Services Representatives easily identify member and provider participation in plans, assuring they provide accurate information in response to questions.

All member- and provider-facing materials will be approved by AHCA and Clear Health to assure compliance with carved-out benefit training expectations.

Evaluation Criteria:

1. The extent to which the respondent describes effective and efficient processes for reciprocal referral for needed services.
2. The adequacy of the respondent's approach to engage and educate enrollees in understanding the difference in benefits covered by the respondent and those that are available through other Medicaid delivery systems.
3. The extent to which the respondent's description includes a process for ensuring respondent's staff and subcontractors are aware of and effectively communicate the appropriate information on services available through other Medicaid delivery systems.

Score: This section is worth a maximum of 15 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 18 - Vignette (Statewide):

The respondent shall review the below case vignette, which describes potential Florida Medicaid recipients. Note: The vignette included below is fictional.

Jose is a 15-year old male. He is diagnosed with bipolar disorder and is currently hospitalized under the Baker Act; this is his third psychiatric admission under the Baker Act in the past year. Up until six (6) months ago, Jose lived with his mother and two younger siblings, but he moved in with his father after his behavior declined and his mother was unable to protect herself and his siblings from Jose's angry outbursts and verbal and physical aggression. His father is physically disabled from a work injury, and he is concerned about managing Jose upon release, as Jose's behavior at home and school has significantly declined. At school, Jose is currently failing and has a notable number of absences and office referrals for altercations. Jose was diagnosed two months ago, during his second psychiatric admission, with bipolar disorder. Jose has been prescribed a low dose of Seroquel daily, but he does not take it consistently because of the side effects. He experiences drowsiness, dry mouth, and nausea. In his current admission, his laboratory testing results showed evidence of thyroid dysfunction. The hospital social worker assisted the family in completing and submitting a referral for Statewide Inpatient Psychiatric Program (SIPP) services, but the SIPP provider informed the social worker that authorization was denied. Jose's father has called the plan's enrollee help line for assistance with completing an expedited appeal. Jose was involved in outpatient therapy for the past six weeks. There have not been any adjustments to his medications to date. Jose has been enrolled in Medicaid since he was 5-years old. He has been enrolled in his health plan since July 2014.

The respondent shall describe its approach to coordinating care for an enrollee with Jose's profile, including a detailed description and workflow demonstrating notable points in the system where the respondent's processes are implemented:

- a. New Enrollee Identification;
- b. Health Risk Assessment;
- c. Care Coordination/Case Management;
- d. Service Planning;
- e. Discharge/Transition Planning;
- f. Disease Management;
- g. Utilization Management; and
- h. Grievance and Appeals.

Where applicable, the respondent should include specific experiences the respondent has had in addressing these same needs in Florida or other states.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan. Clear Health recognizes that enrollees (members) and their families may experience crisis situations, and need rapid, intensive support to help them navigate the health care system. Our staff is qualified and well-trained to quickly intervene and provide one-on-one

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

support to members, their families, and others on the multidisciplinary care team. We are flexible in how we engage members and always place them at the forefront. Our person-centered approach engages members based on where they are in recovery and recognizes them as the primary contributors of their care, including identifying goals, motivations, and driving development of their plans of care to address their physical, behavioral, social, and spiritual needs. We use trauma-informed approaches and embrace strategies such as motivational interviewing. We team with our providers, local government resources, community resources, and faith-based partners to wrap supports around members.

**** Addressing the Needs of Members and Their Families in Crisis ****

When Jose's father contacts our Member Services line, he receives assistance from a Customer Care Representative and files an expedited appeal, which is upheld the following day. Given Jose's history of HIV via perinatal transmission, he has already been assigned a Managed Care Coordinator, Lorenzo, since enrollment. Lorenzo is a licensed social worker with experience working with children and adolescents who have behavioral health conditions, is bilingual in Spanish, and has worked closely with SIPP and the Psychiatric Facility, as well as the Child and Adolescent Crisis Unit (less restrictive level of care) in Jose's area. Lorenzo has closely worked with the behavioral health (BH) community available to Jose and is familiar with the supports that might be recommended. He has received extensive training on HIV/AIDS as part of his past work experience and more recently through his employment with Clear Health. Having worked primarily with Jose's mother, Lorenzo reaches out to Jose's father (Jose's new legal guardian following his move) to discuss his recent request for SIPP and case management, and to arrange a face-to-face meeting the following day near where Jose's father works.

When they meet, Lorenzo talks to Jose's father at length about Jose's current admission, the appeal and decision, and the available options for discharge. He listens to Jose's father talk about his experience and the challenges the family has faced in addressing Jose's condition and in coping with his outbursts, even though Jose has been in outpatient therapy for the past six weeks prior to admission. He relates that Jose has not had any changes to behavioral medications to date and was born with HIV and confirms that the family has been receiving services through the Children's' Diagnostic and Treatment Center, a leading provider of primary care services for women and children living with HIV/AIDS, since shortly before his birth.

Through the case management program, Lorenzo is aware that Jose's HIV is under control as he and his mother are both compliant with medical appointments and labs, and Jose is taking antiretroviral therapy as prescribed. Lorenzo acknowledges the stressful situation, conducts a caregiver assessment and applauds Jose's father for taking the step to meet him and to work together to help Jose and his family get the services and supports they need. Lorenzo talks to Jose in detail about the options and alternative levels of care as well as the community resources available that may help Jose leave the facility as that is his primary concern at this time. Lorenzo also plans to provide Jose's father with emotional support options during the next meeting.

Lorenzo encourages Jose's father to consider therapeutic BH on-site services (TBOS), discussing in detail what these services entail and explaining that the purpose of these services is to help adolescents under 21 who have complex needs, like Jose. Lorenzo makes sure that Jose's father fully understands all the choices he has. Lorenzo reviews Jose's plan of care, and Jose's father agrees to consider TBOS.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Lorenzo scheduled a peer-to-peer discussion with Jose's treating provider, a Plan Medical Director, to review the case and treatment options. After the conversation, everyone was in agreement that TBOS along with comprehensive case management, and community resources was not only a reasonable option but preferable. The treating provider acknowledged that he would stay engaged with Jose's care and follow the progress using this treatment plan. The provider was appreciative of Lorenzo's dedication to Jose's wellbeing and complimented the outpatient approach that was suggested.

Lorenzo explains that he will help with Jose's discharge by making sure his medications are in place and Jose's labs, thyroid dysfunction results and medications are reviewed by Jose's PCP (an HIV specialist) and his BH providers to make sure everything is in place before Jose leaves the hospital. Lorenzo assures Jose's father that Jose will have a follow-up appointment within seven days of his discharge with his providers, and that Lorenzo will help arrange transportation. Lorenzo talks to Jose's father about the need to develop a crisis plan for Jose. Lorenzo also makes sure Jose and his family have important contact information, including how to call Lorenzo and how to contact Clear Health's Member Services line, the Mental Health Crisis phone number, and local mental health provider clinic information.

Before the end of their meeting, Lorenzo arranges to meet with Jose and his father within five days (on the anticipated discharge date) to complete the comprehensive health assessment. He explains this process in detail to Jose's father and talks to him about what he wants to accomplish, his hopes for Jose's health, and the goals he'd like to achieve. Lorenzo explains to Jose's father how they'll work together to make sure Jose's preferences, goals, and desired health outcomes are met and that the plan of care will help identify the key supports structure, services, and care coordination to facilitate a safe transition for Jose.

During the next few days, Lorenzo reviews Jose's history and current admission in Clear Health's Integrated Rounds to obtain input regarding Jose's medical concerns, such as his adverse reaction to his medication and his thyroid dysfunction. The pediatric medical director explained that a common side effect of Seroquel is thyroid dysfunction and suggests a consultation between PCP and psychiatrist for possible medication adjustments and potential changes to the treatment plan. The team reviews strategies and approaches that Lorenzo can use to engage Jose, his father, and other family members. They also identify anticipated challenges and risks, and how to mitigate them. Using the feedback from this team, including Clear Health's pharmacist, pediatrician, and pediatric psychiatrist, Lorenzo develops a revised plan of care for Jose and his father to review in their next meeting. The plan of care helps ease Jose's whole-person transition through identification of services and social supports.

Lorenzo consults with the BH provider Jose sees for outpatient therapy, his current inpatient providers, and reaches out to other community agencies involved, such as the community mental health center that administer TBOS. Lorenzo also provides Jose's father with information about local National Alliance on Mental Illness programs, such as the Family Support Group and Family-to-Family program, a 12-week course for family and friends of individuals with mental illness, to assist them in caregiving, coping and problem-solving. Jose's father agrees to consider these but would like to hold off. Lorenzo also contacts Jose's PCP and with him, identifies an endocrinologist based on the family's preferences (location and language) to evaluate any potential thyroid issues contributing to Jose's symptoms.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Lorenzo monitors Jose's admission and transition from the inpatient facility with his Clear Health care team members so that he will be able to determine if any adjustment is needed to Jose's care plan. Lorenzo remains in touch with Jose's father throughout the admission and transition to confirm that all services and follow-up appointments are coordinated (PCP, Psychiatrist, Endocrinologist, and TBOS) and to address any other issues that arise.

Jose is discharged in five days and Lorenzo meets with Jose and Jose's father to complete the assessment. He listens very closely to Jose and Jose's father discuss their situation and to understand Jose's personal goals, strengths, what is important to him, with whom he is connected in his community, and his readiness for change (as reflected on his Patient Activation Measure). Lorenzo makes sure to talk to Jose and his father about any cultural concerns and preferences they have and to discuss any issues or perceived stigmas related to Jose's bipolar diagnosis in addition to his HIV. Jose expresses interest in attending weekly support groups for teens with HIV at the Children's Diagnostic Center and this is added to his plan of care. Jose's father agrees to take him for his first group in two weeks. Lorenzo also reached out to Jose's mother to follow up with her and Jose's siblings. He let them know there are great family therapy resources available if the needed help as well.

Throughout the assessment process, Lorenzo is respectful of Jose's choices and provides information that he and his family can understand and use to inform his choices. Lorenzo explains that Jose and his father may choose a multidisciplinary team supplemented with Clear Health clinicians and supports, who help identify the care and services needed to meet Jose's goals. Together they collaborate to finalize the plan of care and Lorenzo ensures their understanding of all follow-up appointments scheduled and transportation available.

With Jose and his father's informed consents, Lorenzo schedules a time to meet again and review progress on Jose's plan of care. Throughout this process, as well as after the plan of care has been developed, Lorenzo continues to stay in close contact with Jose and his father, and helps them understand Jose's rights as a member and enhance his ability to manage his personal health information.

Lorenzo makes sure the person-centered plan of care is finalized, understood and approved by Jose and his father, and updated within 5 days of the initial meeting. He also sees that all services are authorized, coordinated, and initiated as soon as necessary. Throughout this process, Lorenzo works with Jose and his father to help Jose tell his own story and develop a recovery plan in his own voice, sharing important information about himself and his recovery goals. Lorenzo requests permission to include Jose's recovery plan in his plan of care for use by the multi-disciplinary team. With the correct signed consent in place, Lorenzo gives providers information on Jose's diagnoses, medication history, side effects, strategies that have or have not worked, and person-centered components of his plan of care, including strengths, motivations, and recovery goals.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.a. IDENTIFY MEMBERS WHO NEED CARE COORDINATION

In addition to member self-referral, Clear Health uses a multimodal approach to identify members who have complex conditions, need care coordination, and who may benefit from interventions. Through initial screeners, the comprehensive health Assessment, provider referrals, our Utilization Management team, and predictive modeling; we identify members, no matter where they live, who may benefit from any of our clinical programs – including our Case Management and Disease Management programs. In addition, our predictive modeling tool, the Chronic Illness Intensity Index (CI3) helps us proactively monitor and mine utilization data to identify members with high rates of utilization who may be at risk for ED, inpatient, medication adherence issues, and other key health factors. Among our suite of predictive modeling tools, we will identify members who need more intensive support, such as when a member has three ED visits within a 60-day period.

Previously, at the time of Jose's initial enrollment and his two prior admissions, Clear Health Case Management contacted Jose's mother (guardian of record) to offer care coordination and case management services that Jose's mother accepted. At the time of each of the admissions, Lorenzo as well as a member of our field-based Case Management team attempted to meet Jose's mother, face-to-face, but she declined. Lorenzo reached out to Jose's providers to provide care coordination and review Jose's benefits throughout these outreach attempts and admissions. Jose's case was coordinated for utilization management, transition services in the community, and discharge planning. Clear Health continued to monitor Jose's utilization and reached out regularly to offer enhanced case management and support services, but Jose's mother preferred to try to keep his care within her family support system at the time. With the most recent admission, Jose's father, his new legal guardian, submitted a request for SIPP services to Clear Health; the request was denied due to lack of medical necessity and Jose's father was notified of his right to appeal. Lorenzo reaches out to Jose who is made aware of how to reach backup case management during regular business hours as well as on evenings and weekends.

Lorenzo also contacts the Clear Health Transition Case Manager assigned to Jose's current facility to obtain updated information about Jose's transition plan. Lorenzo will share this information with Jose's father and will use this information in developing Jose's plan of care to help decide with his outpatient BH provider for a rapid post-discharge appointment and incorporates this information in Jose's personal health care record.

1.b. THE ASSESSMENT PROCESS

Our comprehensive health assessments target each member's physical, behavioral, cognitive, functional, and social needs for case management and care coordination services. Information obtained from assessments includes screening and assessment of current and past substance use, as well as questions regarding healthy behaviors, physical and behavioral health, history of medical and behavioral health, comorbidities, depression screening, and treatment history (including interventions that the member found to be effective and those that were not helpful). We have also developed a specialized recovery-oriented health risk assessment for members who have a serious mental illness that includes evaluation for co-occurring disorders.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

This information is maintained in the member's personal health record within our Case Management System. This system also includes all of Jose's utilization (ED visits, outpatient and inpatient services, authorization data, pharmacy), plans of care, and notes and interactions with Jose's Case Manager, Lorenzo. Lorenzo also attaches information gleaned from Jose's Individualized Education Plan, provided by his father during the assessment, as well as treatment plans from the inpatient facility, discharge plans and information gathered from coordination with Jose's current treating providers (such as results of psychosocial assessments), and information from the most recently submitted SIPP application.

To assure the development of a comprehensive, person-centered plan of care, Lorenzo arranges a face-to-face meeting with Jose and his father to conduct an assessment and capture their goals, preferences, and desired health outcomes. Following Jose's father's approval, Lorenzo initiates the tasks identified in the plan of care.

Lorenzo reviews the following sources of data/information as part of the assessment process to inform Jose's plan of care:

- School- and family-based support structures in place, including Jose's family dynamics and stability related to the current changes in his home situation (moving from his mother's house to his father's)
- Review of school issues, including the numerous recent absences and altercations that have occurred
- Review of the Individual Education Plan to identify barriers or needed changes
- Current or past involvement in the legal system, including Department of Juvenile Justice
- Transportation needs to get to school and medical and behavioral care appointments

Lorenzo also assesses Jose's ongoing BH and support needs, including his anger issues and reluctance to attend school or take his recently prescribed psychiatric medication, Seroquel. Lorenzo evaluates compliance with Jose's participation to identify barriers, challenges to care, and requests a review of current medications and side effects by the Clear Health pharmacist to identify alternative solutions. Lorenzo also looks for any evidence in Jose's treatment record that medication side effects have been discussed and planned for, to identify BH or substance use disorders in his family history, and to assess his intellectual functioning, including autism and Asperger's Syndrome.

As discussed above (1.a.) the timeframes for assessments and follow ups. The Plan follows NCQA or AHCA guidelines, whichever is more stringent.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.c. RISK STRATIFICATION PROTOCOL

Clear Health uses our proprietary Chronic Illness Intensity Index (CI3) for risk stratification. Its predictive modeling algorithms show the relative-risk ranking of members regarding their likelihood to consume significant medical service resources in the future. These members often have complex medical issues, high service utilization, intensive health care needs, and have higher IP and/or ED usage. All clinical data is entered into a reporting system, where it is synthesized to identify and stratify members by severity and risk level. Once stratified, our clinical team accesses the information to identify opportunities for outreach, education, enhanced access, and care coordination to identify members with comorbid medical or mental health and substance use disorders, assess their conditions, and implement interventions. Utilization and chronic condition data are claims-driven and based on the prior 12-month history.

Given Jose's past BH and medical history (with his HIV under control), he was originally classified as moderate risk. With these recent admissions, he is elevated to high risk. As part of our case management risk stratification protocol, our CI3 predictive model measures clinical risk and the likelihood of inpatient admission or emergency services use. Jose has a high score on all predictive models, indicating his risk for continued or new admissions and ED usage.

While predictive modeling puts Jose in the highest risk stratification, Lorenzo may also modify this level upon review of information obtained during the assessment process, such as social determinants of health influences, including ongoing school issues, legal system involvement, environmental concerns, substance use (if any), and any other medical problems noted. Because this information supports Jose's increased risk stratification, Lorenzo keeps the high-risk stratification in our Case Management System.

1.d. IDENTIFYING SERVICE NEEDS AND MAKING REFERRALS

Clear Health's guiding principle is and will continue to be person-centered care and service planning across the member's system of care, optimizing but never duplicating services. Our Care Coordinators coordinate personalized care and service supports across the full continuum of care to address the member's needs holistically (across physical health, behavioral health, and social supports).

While Jose is inpatient, Lorenzo uses the facility's and Clear Health's discharge plans to see that recommended services, including outpatient follow-up care, is assessed and coordinated, and that medication and BH authorizations are in place. Outpatient services recommended for Jose include TBOS or targeted case management. Lorenzo reviews both options with Jose and his father. He explains that these services will help Jose learn problem-solving skills, BH strategies, normalization activities, and other services that will help maximize his strengths and reduce behavior problems related to his mental health condition. Jose's BH challenges are significantly impacting his ability to interact and live within his family home and community. His challenges at school and at home — which led to his third admission to a psychiatric facility under the Baker Act — has likely put him under greater distress, which may evoke greater challenges upon his discharge. Lorenzo also verifies and makes referrals for any non-covered services identified (such as school-based programs) and works with community providers to coordinate them.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Lorenzo also checks with the pharmacy benefit manager regarding discharge medications and to obtain a one-time medication prior authorization and coordinates with the treating provider on necessary prior authorizations going forward. Lorenzo also closely coordinates with our Utilization Management staff to make sure prior authorization is obtained for TBOS and targeted case management services and included in our Case Management System.

Jose needs a service array to help him manage his health issues. To assist in the transition, and promote long-term best health outcomes, Clear Health provides the following wrap-around services:

- Case Management — Lorenzo serves as Jose's Managed Care Coordinator and coordinates care, provides access to resources, and develops and oversees implementation of a person-centered plan.
- Therapeutic Behavioral Onsite (TBOS) Services — TBOS for children and adolescents are designed to assist high-risk children to prevent a more intensive and restrictive behavioral health placement. Coverage must include the provision of these services outside of the traditional office setting.
- Crisis Stabilization — This acute care service, offered 24/7, provides brief, intensive mental health residential treatment services. This service meets the needs of individuals who are experiencing an acute crisis and who, in the absence of a suitable alternative, would require hospitalization.
- Outpatient BH services — A continuum of services, including peer support services and teen HIV support groups, designed to offer the least restrictive level of treatment to each patient. The program offers a structured therapeutic setting to individuals who have had an acute exacerbation of their psychiatric illness which severely interferes with multiple areas of their daily functioning including vocational, social and/or educational functioning.
- Medical services – PCP referral to coordinate laboratory evaluation of thyroid condition and potential referral to pediatric endocrinologist and potential of (a) make sure that bipolar diagnosis is correct in the context of thyroid dysfunction; (b) make sure that management with Seroquel is the best option considering thyroid dysfunction; and (c) coordination for the management of the thyroid dysfunction and the BH condition. In addition, the member will be screened periodically for drug-induced diabetes.
- School-based services (non-covered) — Lorenzo refers Jose and his father to the Broward County School system, which can assist them with development and implementation of an IEP and 504 plan.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1.e. INTERVENTIONS AND STRATEGIES TO FACILITATE COMPLIANCE WITH THE PLAN OF CARE

Through regular, monthly contact (or more frequent as gaps are needed or as identified by the member) our Managed Care Coordinators reach out to members and review their progress towards the goals they've identified. The Managed Care Coordinator uses the member's personal health record, which is updated daily with utilization and claims data and identification of upcoming preventive screenings or changes in risk stratification, to remain current with the member's utilization and care gaps.

To assure compliance with Jose's plan of care and consistent with his and his father's desired outreach (telephonic vs. face-to-face, given their privacy concerns), Lorenzo conducts follow-up calls with them to remind them of post-discharge follow-up appointments. He verifies that Jose has transportation to and from the appointments, and that he and his father know what information to bring to these appointments, and helps them prepare a list of questions to ask the providers. Lorenzo also makes sure that Jose has access to needed well-child visits and that an appointment is scheduled with the endocrinologist Jose and his father select with input from his PCP to further evaluate Jose's thyroid issues.

For Jose and others like him who are living with HIV and behavioral diagnoses, the teenage years can be some of the most challenging as they develop social networks, find their first jobs, and eventually move out on their own. Lorenzo reviews the benefits of peer support programs with Jose and his father and, following their agreement, works to connect Jose with a peer support group that meets in a nearby town to help encourage him to adhere to his treatment plan and achieve his goals.

Our case management processes assure that Managed Care Coordinators have appropriate training, support, tools and supervision to make sure that each member receives the right care, at the right time and right place. As part of the collaborative case management process, Lorenzo consulted with his supervisor to verify and make sure the plan of care for Jose considered and addressed all barriers.

1.f. DISCHARGE AND AFTERCARE PLANNING PROTOCOLS

Discharge planning begins upon notification of an acute inpatient, observation status, rehabilitation or skilled nursing facility admission. Early identification and planning of the member's transition of care needs is essential in providing quality discharge needs and in making sure that the member is discharged to the appropriate level of care to prevent readmissions and unscheduled transition of care. Clear Health's Transition of Care team works with the member, Clear Health Concurrent Review nurses, attending physician, hospital staff, and all ancillary service providers to complete all discharge needs for members and identifies any ongoing care needs to coordinate with the designated Managed Care Coordinator.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Prior to discharge, Lorenzo discusses the prepared discharge and treatment plans (hospital, Clear Health, and provider) with Jose and his father using evidence-based motivational interviewing techniques. He reviews the recommended follow-up care, peer support, and community-based resources available to Jose post-discharge, and makes sure that Jose has post-discharge access to the services he needs, including necessary medication authorizations, and that TBOs and targeted case management services are scheduled.

Jose's transition (discharge) plan is initiated at the point of his admission. The Clear Health Transition Case Manager assigned to his hospital determines that he is a Clear Health member and, upon review of his personal health record in the Clear Health Case Management System, notes that his mother had refused pediatric case management and support services during the past admissions. The Transition Case Manager works closely with the facility staff and has frequent contact to evaluate member progress. Maintaining this close working relationship with hospital team members enables proactive identification of needs, supporting care, and service coordination planning for Jose's transition. The Transition Case Manager works with the hospital to develop a comprehensive plan that considers Jose's recovery goals, as well as medical, behavioral, social supports, strengths and addresses risks to prevent readmission.

Lorenzo and the Clear Health Transition Case Managers make sure Jose understands his transition plan and condition, and knows that the appropriate supports and services are in place (including medications, transportation, and any other barriers identified).

1.g. COORDINATION WITH OTHER INSURERS, PROVIDERS, AND COMMUNITY PARTNERS FOR NON-COVERED SERVICES

Through our care planning processes, we identify and address our members' care and service needs across the full continuum of care (physical health, behavioral health, functional, and psychosocial). We recognize that members sometimes have needs that may not be met through our existing provider network or may not be a covered service. To help these members remain in the community, we engage all existing community resources to provide solutions. Because our Managed Care Coordinators know the local area, they access community supports and actively engage community-based organizations, advocacy groups, faith-based organizations, and other community resources to develop creative solutions for services that are not a covered benefit.

Based on the assessment, Lorenzo determines that Jose is not comfortable with his current BH provider. Lorenzo works with Jose and his father to identify another provider who has an established relationship with his PCP and speaks Spanish.

With Jose's and his father's permission, Lorenzo contacts the new BH provider for an appointment and provides a copy of Jose's plan of care. Lorenzo also makes sure that Jose's new BH provider is identified in the Clear Health systems. As the primary contact for Jose's care, Lorenzo coordinates all his follow-up appointments and services, making sure he has access to his PCP, an endocrinologist or other specialist referrals (as identified by his treating providers), and supporting coordination of non-covered services. Lorenzo also coordinates with the regional Managing Entity to assure seamless care across all of Jose's BH needs.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Lorenzo works to make sure Jose's school-based needs are addressed and appropriate accommodations made. He works with Jose's school to assure completion of a new Functional Behavior Assessment to update his current Individual Education Plan/504 plan. Lorenzo also identifies local community-based resources that could benefit Jose and discusses them with Jose and his father, including the local Boys and Girls Club for after-school activities.

Lorenzo makes sure all of these actions and coordination activities across providers and referral services are documented in Jose's personal health record, including any follow ups resulting from the referrals. All services and care coordination are conducted in accordance with Jose's preferences and goals.

If Jose had other insurance, such as coverage through his mother's commercial policy, the Plan would confirm what services were covered under that policy and coordinated services such as targeted case management, which is a Medicaid-covered service unlikely to be covered under a commercial plan.

1.h. PROVIDER CAPACITY ASSESSMENT

Lorenzo, through care coordination, identifies network providers Jose and his father can select for referred care and services. If Lorenzo is unable to find a network provider, he will work with the provider network team to identify others for a single case agreement to connect Jose with his necessary services.

Clear Health's Provider Relations team makes sure that providers in the plan of care are credentialed accordingly and have the capacity to serve the member. Upon making a referral for service, the Clear Health Case Management team communicates Jose's needs with service providers he has identified to see that they are able to meet his needs. All referrals include Jose's detailed symptoms and behaviors at the time of referral to facilitate the best pairing. Should referral applications not be available, Lorenzo calls providers directly to see that Jose's needs can be met in a timely, and sufficient manner. Our expansive provider network includes providers that have enhanced training to meet the needs of specialty population such as those with behavioral health conditions. Our network also includes providers that are diverse and meet different cultural and linguistic needs as well.

1.i. STRATEGIES THAT PROMOTE MEMBER SELF-MANAGEMENT AND TREATMENT ADHERENCE

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

To promote self-management for Jose's care, Lorenzo works to:

- Engage directly with Jose if he is intellectually able, and with his father's permission, to empower him to take control in his ongoing care needs
- Make sure that prescribing clinicians are aware of and work to address barriers to medication adherence for his psychotropic medications, and thyroid medication if needed, as well as monitor side effects that may deter medication adherence, including educating his family regarding higher risk of suicidal ideations for young adults on certain psychotropic medications.
- Discuss with Jose and his father the importance of medication adherence, and the benefits of appropriately taking prescribed medications for all of his medical conditions
- Refer Jose to age-appropriate support groups to discuss his HIV and other conditions with peers or other professionals
- Refer Jose's father and other family members to support groups (through NAMI and Federation of Families)
- Identify community organizations in addition to his Ryan White HIV/AIDS care provider that are related to Jose's interests in sports or other activities in order to increase engagement in positive, prosocial, structured activities

1.j. APPLICATION OF UTILIZATION MANAGEMENT PROTOCOLS

Clear Health's comprehensive Utilization Management (UM) program includes well-defined protocols for UM activities that are tailored to meet the needs of our members. We promote the delivery of care and services in a culturally competent manner within the context of members' cultural beliefs, behaviors, practices, disabilities, and language preferences. We use the guidelines and protocols to provide a framework for decision making that also considers social determinants, geographic location such as rural versus urban, and how those circumstances may impact access to care.

Our fully integrated UM program is compliant with NCQA standards and includes defined protocols for the following components:

- UM program structure and responsibilities
- UM staff qualifications and training
- Medical necessity criteria and Level of Care Guidelines including selection, approval, adoption, and resulting implementation
- Medical necessity review procedures (prospective, concurrent, and retrospective)
- Integrated care rounds
- Service authorization, adverse determination, and appeals procedures

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

- Transition planning and coordination (initial and continued stay)
- New technology assessment
- Integrated pharmacy management
- Quality committee structure and responsibilities
- Quality oversight and improvement activities

Clear Health applies our Level of Care Guidelines to make sure members receive the most clinically effective, appropriate, and least restrictive services based on their unique needs, goals, and circumstances to support their recovery and community living. We recognize that the care continuum is fluid and members may enter treatment at any level then move to more or less intensive settings or levels of care. At each level of care, our goal is to provide access to individualized treatment. Our Utilization Management (UM) guidelines reflect evidence-based treatment protocols for children, adolescents, and adults. We use our BH policy, BH clinical guidelines, as well as guidelines from the American Society of Addiction Medicine, in conjunction with State coverage policy, to assess medical necessity of services.

To complement these guidelines, we conduct UM and Case Management rounds. For members, such as Jose, we include the participation of pediatric psychiatrists in these rounds to assure the clinical team (both physical and behavioral health) are aware of Jose's progress, impending discharges, and any community-based issues prior to admission and discharge. The coordination across teams and the participation of pediatric psychiatrists provides an opportunity for the Managed Care Coordinator to seek clinical/medical input in real time to support Jose's changing needs. The combination of coordinating care based on our medical necessity criteria and constant evaluation of Jose's current circumstances will best promote continuity in care and make sure it is fluid enough to meet his changing needs.

In supporting Jose, TBOS and TCM will require authorization. Clear Health utilizes a multi-layered approach to ensure members' information is secure, services are authorized accurately, and the member receives supports and services as quickly as possible. Decisions on authorizations are made within seven days, but an expedited authorization may be filed and a decision rendered within two days. Clear Health uses medical policy and clinical guidelines in conjunction with State coverage policy to assess medical necessity of services. Lorenzo monitors these authorizations and sees that they are completed in a timely fashion.

To assure continuity of care, Lorenzo works closely Jose's multi-disciplinary team and our Medical Directors to develop and implement a plan to effectively support his complex needs through the transition from the hospital to his father's house. Lorenzo uses our well-defined continuity of care processes to coordinate proactively with community partners as needed, so that Jose's services and supports work in concert with ongoing medical or behavioral health care to improve clinical and functional status, and to make sure he can remain safely remain in the community.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1.k. STRATEGIES TO INTEGRATE MEMBER INFORMATION ACROSS THE PLAN AND SUBCONTRACTORS

Jose's information is integrated across the Plan's data platforms and the plan has data exchange processes to assure that each delegate has needed information, balancing compliance with HIPAA regulations while providing the vendor with the minimum necessary information needed to provide care. All delegates receive enrollment files and other pertinent medical data relevant to their delegated functions. For example, we regularly share with our delegated pharmacy benefits manager member diagnosis data to allow them to auto-adjudicate authorizations. Further, the PCP, has access through the provider portal to the utilization and case management history for the member.

Beacon, our subcontractor for BH utilization management and network management of our BH providers, is responsible for authorizing Jose's BH services. Lorenzo works closely with the Beacon UM nurse co-located in the Clear Health Case Management department to see that authorizations are entered and to find network providers for BH services to meet Jose's needs. All authorizations and providers are included in our Care Management System with timely data feeds. Throughout Jose's care planning, Lorenzo works closely with Beacon to see that his care is integrated in the necessary systems to assure continuity of care. He monitors that services are authorized and communicates frequently with Beacon to assure fully coordinated care.

2. WORKFLOW

As illustrated in our workflow, provided as Attachment MMA SRC# 18-1: Workflow, Clear Health meets all State-required time frames across the care planning process.

3. INNOVATIVE AND EVIDENCE-BASED PROCESSES TO ENHANCE COMMUNICATION AMONG SERVICE PROVIDERS AND SUBCONTRACTORS

Clear Health supports providing access to actionable medical and BH information to our multi-disciplinary team through our Case Management System. We support a shared plan of care approach where clinicians work together, through access to a member's physical and BH assessments, service authorizations and other clinical data, claims history, and gaps in care, to support coordination of all members' care and service needs. The system includes an online dashboard emphasizing utilization of wellness and emergency services that is available to all providers. Providers can send us secure referrals and information by email or fax. They can also send a provider-to-provider secure email (if their system permits) or transfer information among providers in a secure manner. Clear Health's Case Managers make sure that participating providers have the appropriate signed consents in place to coordinate care.

Lorenzo uses Clear Health's Case Management System to track Jose's plan of care and his and his family's engagement in services. The system is used to view Jose's use of health, pharmacy, and emergency services. The information helps inform ongoing activities to support Jose in his recovery.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

4. APPROACHES THAT SUPPORT CARE DELIVERY IN THE MOST APPROPRIATE AND COST-EFFECTIVE SETTING AND AVOIDS UNNECESSARY OR ED USE

Our program uses industry best practices, such as screening in health care settings and schools, motivational interviewing and engaging Peer Support Specialists, to supplement traditional clinician outreach. Our Managed Care Coordinators work to address the health status, health literacy, and engagement of members through targeted interventions and case management, education, self-management principles, and harm reduction. We engage providers, community partners, and others (such as Peer Supports) to make sure members have frequent in-person contact. During conversations with members, we determine their readiness to change, encourage them to identify strengths and needs from their own perspective, and participate in the development of their plan of care. This evidence-based and person-centered engagement methodology enhances the probability that members will develop self-directed plans of care with achievable goals. Our fully integrated program takes every aspect of a member's life into account. We work with members to address social determinants of health and support needs, such as housing, employment, commitment to preventive care, and needs in other life domains that can compromise sustained recovery. Following the processes resulted in redirection of Jose from SIPP to community-based services that keep him at home.

5. EXPERIENCE SERVING ENROLLEES WITH COMPLEX MEDICAL NEEDS AND IMPROVING HEALTH OUTCOMES

To proactively identify members with complex needs, we use a predictive modeling system that synthesizes member demographic and claims data, such as diagnoses, pharmacy, hospitalizations, ED encounters, and expenditures, to predict future outcomes. This enables us to identify and prioritize outreach to members with mental health, SUD, and other chronic health conditions, including those with the greatest need for ongoing services and likelihood to be admitted to the hospital in the near future. Using this information, we will identify a designated Managed Care Coordinator who is 'matched' to the member's primary needs, PH, BH or LTSS, based on training and licensure and is located in their geographical area whenever possible. All of our staff has received extensive cross-training to be able to provide for the member's needs, and has access to the full clinical support team in Clear Health, with expertise in pediatrics, adolescents, infectious disease, nutritional, disease management, and physical, LTC and behavioral health needs.

Studies have found that half of the individuals who develop serious mental illness had symptoms by age 14, and children are more at risk of relapse and readmission than adults. Our guiding principle for children with serious mental illness or serious emotional disturbance is they are best served at home, going to school, and participating in other age-appropriate activities whenever possible. Helping a child with serious mental illness or emotional disturbance is difficult for the entire family, so supporting the family is critically important. In our work with members, we understand the importance of supporting the family and the child's natural supports with education, community support, and respite options. We work with pediatricians to make sure they have the tools and training needed to provide screening and brief intervention to identify children and adolescents with serious mental illness, emotional disturbance, or SUD. We encourage providers to make referrals so children have timely access to wraparound and other community and/or faith-based services and supports. Likewise, we consider it important to team with local organizations working with the schools to promote screening and prevention activities and assure

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

community collaboration. Families may lack access to important diagnostic services that are the foundation for development of effective service plans and Individual Educational Plans (IEPs). We support access to psychological testing to help identify appropriate interventions and facilitate access to services from the Developmental Disabilities Administration. Clear Health offers providers training on evidence-based practices in working with children and adolescents who have serious mental illness or emotional disturbance, and help them connect parents to relevant educational materials.

Our integrated, strengths-based, person-centered case management program considers the specialized needs of our members who have complex needs, including their physical, behavioral health (mental health and substance use disorder), pharmacy, and social and community support needs. We have extensive experience in the development of tailored complex case management programs for members with unique, complex, chronic, and co-occurring needs who require higher levels of interventions such as Jose. Our integrated approach provides access, responsiveness, and effectiveness in the system of care by supporting the following:

- 1) Identification of members with potential or current specialized or complex health care needs through early screening, comprehensive assessments, and predictive analytics
- 2) Risk stratification for each member based on a multi-faceted consideration of information
- 3) Placement of members into case or disease management programs based on needs assessment
- 4) Development of an integrated plan of care that addresses physical, behavioral health/substance use disorder, pharmacy, social, and home- and community-based needs for members as they transition across all settings and incorporates both covered Medicaid benefits and services as well as those not covered by Medicaid that would benefit the member
- 5) Reciprocal referrals and information sharing with PCPs/specialists and community based Ryan White providers with HIV expertise
- 6) Formation of multidisciplinary treatment team for members in complex case management as needed to support them and provide consistency and continuity of contact with their familiar support system, as well as the expertise of a broader team of specialists as their needs evolve
- 7) Care coordination support to improve member access to needed services, including scheduling appointments, arranging transportation, conducting appointment reminder calls, following up to verify service initiation and member progress, and making appropriate service adjustments and incorporating those into the plan of care
- 8) Ongoing evaluation of our case management program, including reviewing, tracking, monitoring, adjusting, and analyzing for outcomes, quality metrics, and improvement
- 9) Emphasis on disease prevention, chronic condition management, and increasing member engagement with recommended treatment protocols
- 10) Establishment of community-based relationships

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

11) member education to enhance understanding of health care conditions and prescribed treatment

12) Encouragement for members to develop their capacity to self-direct their care

13) Collaboration with other state and community entities to ensure truly integrated care and prevent duplication of service.

6. COORDINATED HEALTH CARE INTERVENTIONS DESIGNED TO ACHIEVE COST SAVINGS

Our members in case management frequently identify as having two or more conditions. In fact, throughout our health plan, 62 percent identify as having three or more. Achieving cost savings while optimizing health outcomes requires a member-centric, integrated approach. Our members work closely with qualified and trained Case Managers (Managed Care Coordinator) to make sure they are receiving the most appropriate level of care. Our model has proven successful. In a 2016 case study, we found that after receiving case management services for at least 90 days, members used health resources more efficiently and required less emergent care, thus reducing costs while improving outcomes. One such outcome was significantly greater: reduction in avoidable ED visits and inpatient admissions. Overall, members demonstrated a 39 percent reduction in non-emergent ED visits.

We recognize that members, like Jose, can often experience a range of physical health issues that can adversely affect their health, have co-occurring physical health and behavioral health diagnoses, and experience significant life changes or move across different systems of care. Together, these factors can create challenges to accessing the appropriate integrated care and services needed. Our Managed Care Coordinators deeply understand the Florida health care system and know how to link members with the providers, community resources, and stakeholders they need to support their safety, permanency, and wellbeing. Our tiered model of clinical interventions address the care continuum from birth to end of life. It is both flexible and responsive to changes in support needs, such as increasing or decreasing intensity or complexity. We collaborate with local and State-based stakeholders, including members and their families, advocates, network providers, community-based organizations, and State agencies to assure access to and coordination of the full continuum of care. Regardless of age, ability, or need, we emphasize care connections – our Case Management System helps us connect our members with the right providers to get the right care at the right time at the most appropriate level of care. This approach brings high quality, cost effective care to each member.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

7. INNOVATIVE AND EVIDENCE-BASED STRATEGIES TO INTEGRATE INFORMATION ACROSS ALL SYSTEMS/PROCESSES INTO ITS WORKFLOWS

Our care coordination/case management workflows use a variety of innovative, evidence-based strategies to integrate information across all processes and systems, beginning with our members' real-time personal health record. Through our advanced Case Management System, each member's personal health record contains updated utilization and claims history along with any "red flags" to alert our Managed Care Coordinators about upcoming or overdue preventive health screenings. All of our health plan staff who interact with the member have access to this system, so they can offer seamless, integrated assistance in coordinating care and making sure the members' needs are addressed (such as scheduling appointments or arranging transportation). Our system also allows individuals who are part of care management or care coordination to enter tasks, send letters, or connect directly with members based on the information in the personal health record.

As part of our medical necessity reviews, our Case Management System incorporates Clear Health's evidence-based criteria and Level of Care guidelines and enables our clinical and Utilization Management staff to document medical necessity reviews of preauthorization requests. UM reviewers can easily access critical information and use it to make the most appropriate Level of Care determinations. The system captures the exact criteria used in a clinical decision, the date and time of the review, and the updated information in the member's personal health record systematically so that all information stays up-to-date to promote integrated care. Our Case Management System is also connected to our calendar system so that our Managed Care Coordinators can easily schedule screenings, assessments, and follow-up meetings with the multi-disciplinary team.

Another key part of our clinical workflows is our comprehensive assessments. These include innovative branching logic, which guides our Managed Care Coordinators into areas for deeper details or to conduct additional assessments, such as high-level behavioral health screening (which might trigger an additional behavioral health assessment) or comorbid chronic conditions that will trigger additional disease-specific assessments. All of this information is retained with our Case Management System, allowing our Managed Care Coordinators to fully address a member's total health care needs.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The adequacy of the respondent's approach in addressing the following:
 - a. Identification processes for enrollees with complex health conditions or who are in need of care coordination;
 - b. Description of the sources of data/information that would be utilized in the assessment process, including timeframes for completion;
 - c. Application of the respondent's case management risk stratification protocol;
 - d. Identification of service needs (covered and non-covered) and a description for service referral processes that the plan has in place;
 - e. Description of the interventions and strategies that would be used to facilitate compliance with the plan of care, including use of incentives, healthy behavior programs, etc.;
 - f. Application of discharge and aftercare planning protocols that facilitate a successful transition;
 - g. Application of coordination protocols utilized with other insurers (when applicable), primary care providers, specialists, other services providers, and community partners particularly when referrals are needed for non-covered services;
 - h. Description of the assessment of provider capacity to meet the specific needs of enrollees;
 - i. Identification of strategies that promote enrollee self-management and treatment adherence;
 - j. Application of utilization management protocols (i.e., identification of the criteria that will be utilized, processes to ensure continuity of care, etc.); and
 - k. Application of strategies to integrate information about the enrollee across the plan and various subcontractors when the respondent has delegated functions.
2. The extent to which the respondent's workflows/narrative descriptions include timeframes for completion of each step in the care planning process.
3. The extent to which the respondent demonstrates innovative processes that it has in place to enhance communication among all service providers and subcontractors (for delegated functions).
4. The extent to which the respondent describes an approach that supports care delivery in the most appropriate and cost-effective setting and avoids unnecessary institutionalization (i.e., hospital or nursing facility care) or emergency department use.
5. The extent to which the respondent demonstrates experience in providing services to enrollees with complex medical needs and provide evidence of strategies utilized that resulted in improved health outcomes.
6. The extent to which the respondent demonstrates a holistic system of coordinated health care interventions designed to achieve cost savings through the organized and timely delivery of high quality services.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

7. The extent to which the respondent describes innovative strategies to integrate information across all systems/processes (e.g., prior authorization data synching up with the claims system) into its workflows.

Score: This section is worth a maximum of 85 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Table 18-1. Workflow

Day	Description
	Jose has been a member since July 2014. Lorenzo is his assigned Managed Care Coordinator. Given Jose's past BH and medical history (with his HIV under control), he was originally classified as moderate risk. With these recent admissions, he is elevated to high risk. At the time of each of his recent admissions Lorenzo reached out regularly to offer enhanced case management and support services, but Jose's mother preferred to try to keep his care within her family support system at the time and refused. Jose has recently moved in with his father since his decline in behavior.
July 2017	Jose has shown behaviors indicating he may be a danger to himself or others and is hospitalized a third time under the Baker Act.
Day 1	The hospital social worker assists Jose's father in completing and submitting a referral for Statewide Inpatient Psychiatric Program (SIPP) services.
Day 2	Jose's SIPP request was denied based upon lack of medical necessity. The UM coordinator notes Jose's file and the recent repeated attempts to engage in enhanced case management and support services and discusses the case to Lorenzo, a Managed Care Coordinator who lives in Jose's community.
Day 2	Jose's SIPP denial also triggers a Transition Behavioral Health (BH) Managed Care Coordinator to be assigned to his case immediately. The Transition Managed Care Coordinator contacts Jose's father to begin the process of getting Jose wraparound services in the community. Jose's father expresses discontent with the denial. The Transition BH Managed Care Coordinator notes Jose's personal health record and indicates that Lorenzo, will be contacting him. Later that day Jose's father calls the Member Services line to inquire about filing an expedited appeal. The Customer Care Representative explains that he can verbally file an expedited appeal, completes the request, and informs Jose's father that he will hear back within 72 hours on the results of his expedited appeal.
Day 2	Member Contact: Lorenzo calls Jose's father to review the SIPP denial and alternative options available for Jose and his father. He reviews the benefits of therapeutic BH on-site services (TBOS) with Jose's father, who is agreeable. Lorenzo schedules a face-to-face meeting with Jose and his father near where Jose's father works at a time and date requested by Jose's father. During the call, Lorenzo also informs Jose's that while the results of the appeals process are pending, there are alternatives treatment options. Lorenzo also reviews the alternative level of care recommendation that was provided with the denial, which Jose's father declines pending the outcome of the appeal. Lorenzo stresses to the father the urgency to meet regarding Jose's situation, regardless of the result of the appeal, and Jose's father agrees to meet the following day as planned.
Day 3	The expedited appeal is reviewed by a BH Medical Director who was not involved in the original decision and upheld. The member is contacted on the same day by telephone to notify of the outcome. An appeals resolution letter is sent explaining all further member rights.
Day 3	Comprehensive Health Assessment: Lorenzo meets with Jose's father to discuss the current admission, the appeal and decision as well as Jose's treatment and available options including Therapeutic Behavioral On-site Services (TBOS). Lorenzo reviews Jose's plan of care and Jose's father agrees to consider TBOS. Lorenzo explains that he will help with Jose's discharge by making sure his medications and his BH providers are in place before Jose leaves the hospital. Lorenzo assures Jose's father that Jose will have a follow-up appointment within seven days of his discharge, and that Lorenzo will help arrange transportation. Lorenzo talks to Jose's father about the need to develop a crisis plan for Jose. Lorenzo conducts a caregiver assessment and also makes sure Jose's father has important contact information, including how to call Lorenzo and how to contact Clear Health's Member Services line, the Mental Health Crisis phone number, and local mental health provider clinic information. Before the end of their meeting, Lorenzo arranges to meet with Jose and his father in five days to complete the comprehensive health assessment with Jose and his father together.

Day	Description
Day 4	Care Coordination/Case Management: Lorenzo discusses Jose's case during internal rounds, with participation from a Clear Health pediatric medical director who suggests a consultation between PCP and psychiatrist for possible medication adjustments and potential changes to the treatment plan to help address Jose's needs. The team reviews strategies and approaches that Lorenzo can use to engage Jose, his father, and other family members. They also identify anticipated challenges and risks, and how to mitigate them. Using the Lorenzo develops a revised plan of care for Jose and his father to review in their next meeting.
Day 5	Care Coordination/Case Management: To address Jose's medication compliance, Lorenzo has a Clear Health psychiatrist review Jose's case with his PCP. After running labs, they determine that the Seroquel prescription should be replaced with a medication that is long acting and has fewer side effects. Lorenzo consults with the BH provider Jose sees for outpatient therapy, his current inpatient providers, and reaches out to other community agencies involved, such as the community mental health center that administer TBOS. Lorenzo also calls Jose's father with information about local National Alliance on Mental Illness programs, such as the Family Support Group and Family-to-Family program, a 12-week course for family and friends of individuals with mental illness, to assist them in caregiving, coping and problem-solving.
Day 6	Care Coordination/Case Management: Lorenzo identifies endocrinologists in Jose's area for Jose and his father to select to evaluate any potential thyroid issue.
Day 8-20	<p>Care Coordination/Case Management: Lorenzo participates in Jose's transition from the facility and assures that all activities are integrated with Jose's plan of care. Lorenzo meets with Jose and his father to complete a comprehensive health assessment. They discuss Jose's short- and long-term goals, concerns about reintegrating in the community, his issues with prescribed medications, and his current providers. They discuss his family, living situation, education, and friends. He also refers to school system to develop a new Individualized Education Plan for Jose who would like to try virtual learning.</p> <p>Additional alternative providers and supports that are available to Jose and his father are also discussed. Throughout the assessment, Lorenzo helps Jose and his father to identify service providers that they would like to see incorporated in his plan of care. Lorenzo obtains Jose and his father's approval and together they finalize the plan of care with Lorenzo arranging to return to review progress towards plan of care goals and they identify a time and date that works for Jose's father in two-weeks. The plan is shared with multi-disciplinary team members agreed on by Jose and his father.</p> <p>Lorenzo calls Jose's father on day 13 (within 5 days of discharge) to confirm PCP, endocrinologist and new BH provider appointments were attended.</p> <p>Lorenzo visits again on day 20 (two-week post discharge follow-up) and finds that Jose is improving and engaged in therapy (TBOS).</p>
Day 29	Care Coordination/Case Management: Lorenzo follows up with a call and discusses with Jose's father compliance with medications and treatment and is told he is really doing well since his medications have been adjusted and thyroid medication added. Also the IEP has been completed and he has returned to school with special services.
Day 30 and Ongoing	Care Coordination/ Case Management: Lorenzo calls to follow up on Jose's health status and provides appointment reminders. He will continue to follow up with the family monthly as Jose is still considered high risk.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 19 - Vignette (Statewide):

The respondent shall review the below case vignette, which describes potential Florida Medicaid recipients. Note: The vignette included below is fictional.

Jane is a 57-year old female with Type II diabetes mellitus and hypertension. Jane is compliant with her treatment plan, which consists of the following prescribed drugs: Insulin and Lisinopril. She is also compliant with her follow-up appointments with her specialists. She lives alone, but receives support from her eldest daughter who lives nearby. Jane thought she timed her follow-up visit with her endocrinologist adequately to allow sufficient time to receive a new prescription for all drugs; however, Jane realizes she only has enough insulin to last through the doses for tomorrow. Her appointment with Dr. Seem, her endocrinologist, is in two weeks. Jane calls her doctor's office who informs her that they have no availability to see her today or tomorrow and Dr. Seem will not write a new prescription without examining Jane since it has been four months since her last appointment. Jane decides to call her health plan's member hotline for assistance.

The respondent shall describe the approach for handling Jane's call and how the respondent would help Jane obtain her medication.

Response:

Simply Healthcare Plans, Inc. D/B/A Clear Health Alliance (Clear Health) understands the importance of access to prescribed medications for members like Jane, to help them better self-manage their chronic conditions. In the response below, we present how our Case Management processes and staff work to make sure Jane has access to the services and support to address her needs, goals, and preferences.

Following Jane's story, we outline our activities to meet each of the Evaluation Criteria.

**** Obtaining Required Medication In A Timely Fashion ****

After Jane realizes she's out of insulin and not able to see her endocrinologist soon, she finds the number to Clear Health's Member Services line and calls. Andrea, one of our qualified and trained Customer Care Representatives, answers and talks to Jane to see how she can help. Andrea asks Jane questions to find out how much insulin Jane has left and how Jane typically gets her supply of insulin. She asks Jane where her pharmacy of choice is located and also makes sure Jane has the means to get there. Andrea checks the Case Management System to verify the status of prescriptions and sees that Jane does not have any refills on her insulin authorized.

Fully understanding the issue, Andrea gets to work right away to help Jane get the insulin she needs. First, Andrea calls Jane's endocrinologist, Dr. Seem. Jane speaks directly to Dr. Seem, explaining the current situation and requesting a new, temporary prescription to meet Jane's immediate insulin needs until the office can see Jane for an appointment (in two weeks). Andrea also asks if there is any way to get Jane in sooner. Dr. Seem reiterates what he told Jane, that cannot write a new prescription, but says he is willing to issue a temporary one. He also agrees to fit Jane in to the schedule for an appointment in one week.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Next, Andrea follows up with Jane's other specialist and pharmacy to verify the prescription has been processed. Once all of this is in place, Andrea calls Jane back to let her know her prescription is ready and can be picked up. Andrea double checks to make sure Jane wants to pick up her prescription (rather than home delivery) and has the transportation to get there before her supply is fully depleted.

Andrea takes the time to talk to Jane about the benefits and services available that may help her. She tells Jane how to get assistance with making appointments and the various options available for prescriptions (including home delivery). Since Jane is not currently receiving case management, having declined previously, Andrea also discusses this option with Jane, explaining how a designated Case Manager (Managed Care Coordinator) could be a valuable partner in helping Jane manage her health.

Andrea talks to Jane about the other options available, for future need, such as refill reminder options as well as the assistance that Andrea or another Representative can do to help assist Jane in making appointments, if needed. Jane really likes the idea of a Managed Care Coordinator to help her stay on track and agrees to be enrolled in case management to assist with her chronic health conditions, including well controlled HIV Disease. Andrea lets Jane know a Managed Care Coordinator will be in touch within 48 hours or two business days. Andrea notates this in the Case Management System and sends an electronic referral.

Based on Jane's history and condition, she is assigned the Managed Care Coordinator, Tom, for active case/disease management who can best assist her. The following day, Tom calls Jane to introduce himself and talk to Jane about case management. He talks at length with Jane about her situation and asks questions to understand her preferences, goals, and any barriers she feels exist to managing her condition. He also explains the comprehensive health assessment process and schedules a time to complete one with Jane that is convenient for her. Once the assessment is complete, Tom identifies several areas where Jane can use her benefits to help with her current self-management. Together, they create a plan of care with steps to help her meet her goals:

- Tom enrolls Jane in the Clear Health HIV/AIDS Case Management program to assist her with accessing resources and education that may reduce health risks. He develops and oversees implementation of a person-centered plan addressing all of her chronic health conditions including HIV Disease, Type II diabetes mellitus, and hypertension.
- Tom educates Jane by providing her with informational materials and reminders in the mail about her current medical conditions. These materials will help her strengthen her self-management skills and identify and prevent any complications that may arise, such as increased risk of heart attack, stroke, and complications from poor circulation.
- Tom provides information on healthy habits Jane can adopt, such as maintaining a blood pressure target of less than 130/80 mmHg to reduce her cardiovascular risk and delay progression of possible kidney disease, as well as a healthy diet and the need for daily foot checks.
- Tom arranges for Jane to meet a Clear Health Nutritional Case Manager to explore dietary changes she could make to help control her diabetes.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

- Tom arranges automatic mail order through a Clear Health subcontractor for Jane's testing supplies; he explains how to order these in the future to her.
- Tom enrolls Jane in the Clear Health Healthy Behaviors program for Weight Management as she has identified this as one of her goals.

- Tom provides Jane his direct phone number and gives her information on how to reach Clear Health's case management department in the event that she has an urgent need.

1.a. TRAINING FOR CALL CENTER STAFF AND INTERNAL ESCALATION PROCESS

In Clear Health's experience, cases like Jane's are typically quickly resolved in our Member Services department and referred to case management for identification purposes and ongoing support. Our Customer Care Representatives are available 24/7. They are thoroughly trained through our comprehensive orientation process and ongoing training to address high-impact and urgent inquiries, such as Jane's need for insulin or other diabetic supplies and medications. Member Services training includes specific protocols to follow for resolution, including proactive escalation, coordination with case or utilization management, and how to effectively partner with primary care providers (PCPs), specialists, and pharmacies. Training focuses on making sure the representatives are especially sensitive to any calls regarding medications, serious medical conditions, and medical needs of minors. Our continuous training programs incorporate the use of recorded calls to coach team members and use real-life scenarios as case studies so that our representatives are well prepared to handle these types of calls.

We use a layered internal control process to help our Customer Care Representatives best support members like Jane and reduce the risk of future urgent or emergency care. First, in concert with the high-level of training already discussed, all Clear Health representatives are supported by a network of Operations Experts and Managers who can assist them in identifying the best course of action for a member's specific situation. Second, Clear Health's call tracking and reporting system has the functionality to identify urgent calls, and route them to a senior representative or manager for review. In this case, due to Jane's urgent need for critical medication, her call is routed automatically to a Manager. If the Manager determines that the initial representative is unsuccessful in resolving the issue (for instance, the provider stated he would phone in a prescription, but it is not yet shown as filled), the case is referred to Clear Health's Resolution team.

The Resolution team handles complex issues for members and seeks to resolve them as quickly as possible. In Jane's case, this means following up with Jane's specialist and pharmacy to make sure the prescription is called in and processed without issue, and confirming the best way for Jane to receive her prescription in a timely manner (either by picking it up, arranging transportation for her, or coordinating home delivery options).

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1.b. SUPPORTING CARE DELIVERY IN THE MOST APPROPRIATE AND COST-EFFECTIVE SETTING AND AVOIDING UNNECESSARY OR ED USE

Our Managed Care Coordinators work to address the health status, health literacy, and engagement of members through targeted interventions and case management, education, self-management principles, and harm reduction. During conversations with members, we determine their readiness to change, encourage them to identify strengths and needs from their own perspective, and participate in the development of their plan of care. This evidence-based and person-centered engagement methodology enhances the probability that members will develop self-directed plans of care with achievable goals, and avoid unnecessary emergency department use. To make sure members can thrive in their home or setting of choice, our fully integrated program takes every aspect of a member's life into account. We work with members to address social determinants of health and support needs, such as housing, employment, commitment to preventive care, and needs in any of life's domains that can compromise sustained recovery.

For every member, we tailor our approach and interventions to fit his or her needs, recognizing that each individual is unique. In Jane's case, we use approaches to support her and make sure she has the services she needs to maintain her health and avoid unnecessary emergency room use, such as the following:

- Making sure the Jane is fully informed about her condition and understands the impact that exercise, food, and daily insulin have on her blood sugar levels.
- Reviewing Jane's current tools for monitoring her blood glucose and determining if a new device is needed.
- Coordinating a referral from Jane's physician to her Durable Medical Equipment (DME) provider to arrange for test strips to be shipped to Jane at her home for the next 12 months.
- Following up after visit her physician visit and again after receiving her new prescription, to make sure she has a prescription and resources in place for the next 12 months to receive insulin.
- Arranging additional appointments and transportation as needed. For example, Tom notices Jane has not had an annual eye exam for her diabetic retinal exam (DRE) and helps set this up for her.

Our members in case management frequently identify as having two or more conditions. In fact, throughout our health plan, 62 percent identify as having three or more. Achieving cost savings while optimizing health outcomes requires a member-centric, integrated approach. Our members work closely with qualified and trained Case Managers (Managed Care Coordinators) to make sure they are receiving the most appropriate level of care. Our model has proven successful. In a 2016 case study, we found that after receiving case management services for at least 90 days, members used health resources more efficiently and required less emergent care, thus reducing costs while improving outcomes. One such outcome was significantly greater: reduction in avoidable ED visits and inpatient admissions. Overall, members demonstrated a 39 percent reduction in non-emergent ED visits.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1.c. INNOVATIVE AND EVIDENCE-BASED PROCESSES TO ENHANCE COMMUNICATION AMONG DEPARTMENTS AND SUBCONTRACTORS

We integrate member information through our robust data platform and our established data exchange processes, so that all parties involved have access to the necessary information to fully coordinate care. We balance this by using strict safeguards to maintain HIPAA compliance and to only provide necessary information to those who need it. This is an especially sensitive issue for our member living with HIV/AIDS.

All delegates receive enrollment files and other pertinent medical data relevant to their assigned functions. For example, we regularly share with our delegated Pharmacy Benefits Manager member diagnosis data to allow them to auto adjudicate authorizations. Further, our provider portal allows primary care and specialty providers access to the member's utilization and case management history to better coordinate care. Each member has a personal health record, which is accessible by all Clear Health staff engaged in case management and care for that member.

Our care coordination/case management processes incorporate a variety of innovative, evidence-based strategies to integrate information across all systems and communicate easily with all involved, beginning with our members' real-time personal health record. Through our advanced Case Management System, each member's personal health record contains updated utilization and claims history along with any "red flags" to alert our staff about upcoming or overdue preventive health screenings. For instance, Andrea (our Customer Care Representative) notices a red flag alert in the system that Jane may have missed an annual checkup with her PCP, which prompts Andrea to ask Jane about this and help her make an appointment.

All of our health plan staff who interact with the member have access to this system, so they can offer seamless, integrated assistance in coordinating care and making sure the members' needs are addressed (such as scheduling appointments or arranging transportation). Our system also allows individuals who are part of case management to enter tasks, send letters, or connect directly with members based on the information in the personal health record. As part of our medical necessity reviews, our Case Management System incorporates Clear Health's evidence-based criteria and level of care guidelines and enables our clinical and utilization management staff to document medical necessity reviews of pre-authorization requests. UM reviewers can easily access critical information and use it to make the most appropriate level of care determinations. The system systematically captures the exact criteria used in a clinical decision, the date and time of the review, and the updated information in the member's personal health record so that all information stays up-to-date to promote integrated care.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Another key part of our clinical workflows is our comprehensive health assessments. These include innovative branching logic, which guides our Managed Care Coordinators into areas for deeper details or to conduct additional assessments, such as high-level behavioral health screening (which might trigger an additional behavioral health assessment) or co-morbid chronic conditions that will trigger additional disease-specific assessments. All of this information is retained with our Case Management System, allowing our Managed Care Coordinators to fully address a member's total health care needs. In Jane's case, the comprehensive health assessment will include additional questions related to her diabetes and hypertension, to make sure we identify any knowledge gaps and education opportunities.

Our Case Management System is also connected to our calendar system so that our Managed Care Coordinators can easily schedule screenings, assessments, and follow-up meetings with the multi-disciplinary team.

Evaluation Criteria:

1. The adequacy of the respondent's approach in addressing the following:
 - (a) Training for call center staff that illustrates the ability to triage cases of this nature, including the internal escalation process available to call center staff.
 - (b) Description of the interventions and strategies that would assist Jane in avoiding a visit to urgent care or the emergency department to receive a new prescription.
 - (c) Evidence of the integration between and among all relevant departments, including subcontractors if applicable, to facilitate a seamless resolution.

Score: This section is worth a maximum of 15 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 20 – Vignette (Statewide):

The respondent shall review the below case vignette, which describes potential Florida Medicaid recipients. Note: The vignette included below is fictional.

Emma is four-years old. She currently lives in a pediatric nursing facility. At the age of two she was admitted to PICU following a respiratory arrest during an acute illness. A further complication of her condition led to her requiring a tracheostomy to support her breathing. Following an acute exacerbation of her condition, she is now unable to breathe without the support of her ventilator when she is tired, asleep, or unwell. She is fully ventilated overnight. Her difficulties are compounded by complex seizures. Emma's doctor says Emma needs to have nurses or health care assistants with her at all times to monitor her ventilation. Emma's most recent developmental screening indicates the presence of an intellectual disability. Emma's condition has stabilized, but her mother is concerned about agreeing to bring her home permanently. Her mother is the sole income for their home, which includes three older siblings and Emma's maternal grandmother. Emma's grandmother is retired, and her ability to help the family is limited by severe rheumatoid arthritis.

To be discharged to her home, Emma's physician has ordered a custom wheelchair that must be individually fabricated and assembled. Her physician also ordered an electronic tablet to provide cognition exercises for Emma. The tablet has a cognition exercise application that reduces the likelihood for any seizure activity that may occur with other similar tablets. Florida Medicaid does not cover the tablet nor the wheelchair, which includes a part that will make it easier for Emma to hold the tablet. Her mother is unable to bear the costs for these special service items. Further orders for Emma's transition to home care are:

- *Continuous pulse oximetry monitoring.*
- *Apnea monitor when she is not on the ventilator.*
- *A backup generator for the ventilator if the power goes out in the home.*

Emma is a new enrollee. Prior to her enrollment, all services were provided through the Medicaid FFS delivery system.

The respondent shall describe its approach to coordinating care for an enrollee with Emma's profile, including a detailed description and workflow demonstrating notable points in the system where the respondent's processes are implemented:

- a. New Enrollee Identification;
- b. Health Risk Assessment;
- c. Care Coordination/Case Management;
- d. Service Planning;
- e. Discharge/Transition Planning;
- f. Disease Management;
- g. Utilization Management; and
- h. Grievance and Appeals.

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

Where applicable, the respondent should include specific experiences the respondent has had in addressing these same needs in Florida or other states.

Response:

Emma is a four-year-old female who requires a person-centered plan of care and is a new member to Simply Healthcare Plans, Inc. D/B/A Clear Health Alliance (Clear Health). Clear Health is dedicated to assuring continuity of care for our pediatric members with complex conditions. Our Pediatric Case Managers are well versed in partnering with providers and family members to support a holistic approach to maintaining the comprehensive coordination of medical, nursing, behavioral health, community resources, services and interventions needed to support these children and their families in their setting of choice. These specialized staff, known as Managed Care Coordinators, are distinct from the Case Managers that many of our members may have through Ryan White-funded HIV/AIDS service organizations. Our goal is always to restore, maintain, and promote the health status of the child through partnership with the child's providers, family, and caregivers through a personalized plan of care that will address member- and family-identified service needs, coordination, and treatment of the child's chronic and severe conditions, functional limitations, and the child's physical, behavioral and psychosocial health needs.

**** Providing Care and Support for our Most Vulnerable Members ****

Clear Health receives notification of Emma's transition from Medicaid Fee-for-Service (FFS), through a continuity of care call from the Medicaid FFS Case Manager. Emma is assigned a Managed Care Coordinator, Barbara, based on Emma's age, location (pediatric nursing facility), and Barbara's extensive background working with children with complex needs including the HIV Disease that Emma was born with. Barbara reviews Emma's history and plan of care with the Medicaid FFS Case Manager in preparation for Emma's transition to Clear Health. She notes Emma has multiple physical health needs and services, including tracheostomy care, ventilator care, 24-hour Private Duty Nursing, mobility needs, continuous pulse oximetry, apnea monitor, complex seizure disorder, and an intellectual disability that will require a specialized team of health care professionals to assist her.

Barbara calls Emma's mother to introduce herself, welcome her, get to know more about Emma's current situation, describe the case management process, and initiate the comprehensive health assessment. During the call, Barbara explains Emma's benefits and schedules a time to complete the comprehensive health assessment within the week. Emma's mother asks for the visit to be conducted at the facility in two days, after her work hours so that

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

it does not interfere with her job. She requests that Emma's favorite nurse and aide both be present for the assessment.

Emma's personal health record includes all information that has been received to date including pharmacy information and initial authorization data. Barbara supplements this with the information she has obtained from the nursing facility, from her initial outreach, and the information obtained from the Medicaid FFS Case Manager. Barbara contacts Emma's PCP and specialists to introduce herself as Emma's Managed Care Coordinator and ask for dates and times of availability in anticipation of the need for a multi-disciplinary team meeting.

Barbara meets Emma's mother as previously scheduled and conducts a comprehensive health assessment designed for pediatric members. Through the assessment process, Emma's mother discusses Emma's long term health goals, her desired outcomes, and preferences for her care. Barbara discusses Emma and her mother's psychosocial, spiritual, and cultural preferences and communication options for Emma. Throughout this process, Barbara verifies information that she has already obtained to determine if the current care is optimal, and to establish of Emma's plan of care at the nursing facility, and for a safe transition home.

Emma's mother shares her concerns about caring for Emma, as well as her three older siblings, so Barbara also discusses placement choices at length with Emma's mother, making sure that Emma's mother fully understands the residential options that may be available for Emma. She discusses the Freedom of Choice form with Emma's mother and obtains her signature, once she indicates she prefers to transition Emma home rather than to a group home or remaining in the nursing facility. Barbara explains that she will complete the person-centered plan of care for Emma's mother's review within the next week, and that she has already authorized the continuation of Emma's current services. As agreed upon, Barbara also shares the plan of care with the nursing facility for their feedback, and reaches out to Emma's providers to obtain their feedback as well.

Barbara and Emma's mother spend time discussing Emma's anticipated care needs, her concerns, and the responsibilities of continuing care for Emma during her current stay, her transition home, and post transition in the home. Barbara coordinates and convenes a multi-disciplinary team meeting to develop a transition plan and to discuss placement alternatives to be discussed with Emma's mother. Barbara communicates available options that Emma's mother will have to support Emma's care and service needs, reviewing the benefits of each option carefully and making sure that Emma's mother understands what each entails. Emma's mother reviews this information with Barbara and the multi-disciplinary team, and together they identify a transition plan that will help Emma and her family to feel confident in her safe transition home and continued care and service needs in the home.

Once the comprehensive health assessment is completed and Emma's health and services needs are identified, Barbara completes the development of the person-centered plan of care and coordinating the multi-disciplinary team review of the document. Emma's mother, PCP, specialists, and pediatric nursing facility staff review Emma's plan of care, which includes Emma's current services and support needs, any Medicaid reimbursable services she may need, as well as non-covered benefits that will need to be coordinated.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

To encourage her ongoing participation, Barbara shows Emma's mom's how she can access, review and provide feedback on Emma's plan of care through Simply's online platform. Barbara will discuss the plan of care as part of her regular contact with Emma's mom, which will begin as daily exchanges for the first week that Emma is home, followed by weekly contacts for the next month.

Following Emma's mother's approval, Barbara initiates the tasks identified in the plan of care. To ensure a successful transition to Emma's family home, Barbara works with the pediatric nursing facility discharge staff, Emma's assigned nursing facility nurse, Emma's mother, Emma's PCP and specialists, subcontractors, and service providers identified in Emma's plan of care to finalize her transition.

Barbara works closely with the Nursing Facility Discharge Planner to review all orders and clinical documentation and includes the Clear Health Utilization Management (UM) department for authorization of service. For those items that are not covered through Emma's Medicaid benefits, but are ordered by her provider as medically necessary, Barbara facilitates a review of Emma's case and care needs with the Clear Health Medical Director. This includes reviewing the equipment recommended by her provider that is not covered under Florida Medicaid, such as the custom wheelchair and tablet. Barbara makes sure that all documentation necessary for Medical Director review, including a Functional Mobility Assessment (FMA) for the proposed custom wheelchair, is included in Emma's case file.

After gathering all of the information for each of the requested services, Barbara is able to approve all the Medicaid covered services for Emma's transition based on Medicaid Coverage Policies and Clear Health Medical Policies and Clinical Guidelines. All requested Medicaid non-covered services are sent to the Pediatric Medical Director for review of medical necessity as per Early and Periodic Screening, Diagnostic and Treatment (EPSDT) protocols. The Medical Director reviews all clinical information and associated medical policies and guidelines for medical necessity and approves the custom wheelchair for Emma as medically necessary regardless of coverage by Medicaid. The Medical Director has a question regarding the medical necessity of the tablet ordered and places a call to the ordering physician to obtain a better understanding of its use as part of the treatment of cognitive deficits and minimization of seizure activity. The pediatric neurologist explains the clinical rationale for the request. Our Medical Director determines that in this specific case, it is medically necessary, approves the request and documents the conversation with the pediatric neurologist, including the rationale for medical necessity, in the medical record.

Barbara provides Emma's mother with a list of community resources, including sponsor programs or foundations that offer community outreach assistance for children with complex needs and their family/caregivers. Emma and her mother are already enrolled in a Ryan White-funded agency providing services to women and children with HIV/AIDS and Barbara is in touch with the pediatric infectious disease provider that has been following Emma there as well. Barbara gives Emma's mother information on accessing our expanded benefit, Community Resource Link, which provides a reliable source of information about the wide range of programs and services available for members. The online tool is easy to use and promotes increased personal responsibility and self-management by educating members about all locally available supplemental supports and services they may not be aware of. Barbara uses her Clear Health iPad to demonstrate this benefit to Emma's mother.

**EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)**

As part of the transition plan, Emma's mother participates in caregiver training at the facility. Caregiver training for Emma consists of management of the home ventilator and respiratory circuit, suctioning, responding to ventilator alarms, interpretation of pulse oximetry, understanding symptoms of seizure and administration of anti-epileptic medication, positioning, transferring from bed to chair, skin care, and other tasks required to maintain Emma's health and well-being at home. Universal precautions are followed at all times. Emma's mother performs return demonstration of all required tasks prior to discharge. She is also educated in the importance of adherence with medication, physician follow-up visits, routine tracheostomy changes and ventilator maintenance.

1.a. IDENTIFICATION PROCESSES FOR ENROLLEES WITH COMPLEX HEALTH CONDITIONS

In addition to member self-referral, Clear Health uses a multi-modal approach to identify members who have complex conditions, need a person-centered plan of care, and who may benefit from interventions. Through initial screeners, the comprehensive health assessment, provider referrals, our Utilization Management (UM) team, and predictive modeling; we identify members, no matter where they live, who may benefit from any of our clinical programs – including our case management and disease management programs. In addition, our predictive modeling tool, the Chronic Illness Intensity Index (CI3) helps us proactively monitor and mine utilization data to identify members with high rates of utilization who may be at risk for ED, inpatient, medication adherence issues, and other key health factors. Among our suite of predictive modeling tools, we will identify members who need more intensive support, such as when a member has three ED visits within a 60-day period.

Clear Health maintains enhanced case management processes for enrollees (members) like Emma, who are under 21 and receiving services in a skilled nursing facility. The health plan would receive notification of Emma's transition from Medicaid FFS, though a continuity of care call from the Medicaid FFS Case Manager. In the event that the Case Manager from Emma's previous plan does not call, she would be identified through the indicator on the Provider Network Verification file from the state. As a failsafe, if the Provider Network Verification

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

indicator is missing, Clear Health has developed a weekly report to identify members under the age of 21 years living in a nursing facility or receiving Private Duty Nursing services. Upon identification, Emma would be immediately enrolled in our Enhanced Care Coordination program.

1.b. THE ASSESSMENT PROCESS

During the first 30 days of enrollment the member receives a new member welcome packet that includes an HRA form. Welcome calls are also made to the member during this period which includes discussion of the HRA form, the opportunity to complete the form on the phone or mail it back to the plan.

Once referred to case management – either through the CI3 predictive risk modeling score, member or provider request, or Member Services referral – the Managed Care Coordinator reviews all of the member's information available and makes an initial member contact attempt within 72 hours. During the first 14 days of the referral, at least three contact attempts must be made and a "please contact us" letter to engage members, like Emma and her mother, in case management.

During the initial contact, the Managed Care Coordinator completes the comprehensive assessment. If a member is unable to complete the assessment, our Managed Care Coordinator schedules one at the member's earliest convenience, not to exceed 14 days from the first contact.

Clear Health uses a variety of information to assess the member's total health care needs (physical, behavioral, functional, cognitive, social, and occupational). Using structured tools, Managed Care Coordinators conduct the in-depth clinical assessment in which we gather information, including:

- General health
- Emergency department use and hospitalizations
- Medications
- Health care utilization
- Functional capacity
- Preventive care history

Our comprehensive assessment comprises more than 20 potential clinical areas that help Managed Care Coordinators, like Barbara, identify potential risk factors and areas of need. It also includes specialized assessment modules for each member's specific conditions (including physical, behavioral, functional, social, and psychological health) using branching logic.

Due to her experience with these complex members, Barbara reviews all of the information in Emma's personal health record and transition plan with an eye on what might be missing, noting provider names, services currently being utilized, and identifying other service or care needs that Emma may have. Through the Clear Health Case Management System, all of this information is captured in Emma's personal care record. Barbara incorporates all additional information and questions in the tools and notes attached to Emma's case. Barbara uses this information and incorporates it in her discovery process to avoid redundancy and confirm accuracy of information throughout the process.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

When Barbara conducts the comprehensive health assessment, she will utilize an assessment that has specifically been designed for pediatric members. Her trauma-informed training will help her communicate with Emma's family as they have likely experienced a great deal of trauma related to Emma's health and service needs, including her HIV infection as well as her most recent hospitalization, and there may be adjustment issues once Emma is home. Barbara will be sure to include the service and care providers that Emma's mother identified to address her concerns about supporting Emma at home as well as caregiver supports that they approved in the plan of care. Barbara will also encourage Emma's mother to remain adherent with her own HIV treatment and plan of care during this time. Barbara will also arrange for a home assessment to be conducted prior to Emma's discharge in order to identify modifications necessary to facilitate Emma's safe transition home; these services will also be included within the plan of care.

1.c. RISK STRATIFICATION PROTOCOL

Clear Health uses our proprietary Chronic Illness Intensity Index (CI3) for risk stratification. Its predictive modeling algorithms show the relative-risk ranking of members regarding their likelihood to consume significant medical service resources in the future. These members often have complex medical issues, high service utilization, intensive health care needs, and have higher IP and/or ED usage. All clinical data is entered into a reporting system, where it is synthesized to identify and stratify members by severity and risk level. Once stratified, our clinical team accesses the information to identify opportunities for outreach, education, enhanced access, and case management to identify members with co-morbid medical or mental health and substance abuse disorders, assess their conditions, and implement interventions. Utilization and chronic condition data are claims-driven and based on the prior 12-month history.

Members under the age of 21 living in a skilled nursing facility or receiving Private Duty Nursing services are automatically enrolled into the Clear Health enhanced plan of care program as one of our highest risk populations. Emma is categorized as Risk Level 3 (the highest level) and is enrolled in this program due to her medical complexity, age, current and previous level of care, and ongoing support needs. Emma's mother receives ongoing contact, at least monthly but often more frequently during changes in the member's condition or change in service needs, and support to make sure she receives individualized, coordinated care equal to her medical and support needs.

1.d. IDENTIFYING SERVICE NEEDS AND MAKING REFERRALS

Clear Health's guiding principle is and will continue to be person-centered care planning and service across the member's system of care, optimizing but never duplicating services. Our Managed Care Coordinators coordinate personalized care and service supports across the full continuum of care to address the member's needs holistically (across physical health, behavioral health, and social supports).

We incorporate algorithms and clinical practice guidelines into our Case Management System and tools that can assist Barbara in developing Emma's plan of care. These tools help identify preventive screenings and treatment for Emma's complex medical condition. Once the comprehensive health assessment is completed and Emma's health problems and needs are identified, Barbara begins the process of developing the person-centered plan of care and

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

coordinating the multi-disciplinary team review of the document. Emma's mother, PCP, HIV and other specialists, and pediatric nursing facility staff review Emma's plan of care, which includes Emma's current services and support needs, any Medicaid reimbursable services she may need, as well as non-covered benefits that will need to be coordinated. Using the data and information collected during the assessment, Barbara works with Emma's mother to review and finalize the person-centered plan. Following Emma's mother's approval, Barbara initiates the tasks identified in the plan of care.

Emma's complex medical support needs will require a highly coordinated, comprehensive plan of care and services to make sure she is able to lead a meaningful life at home with her family. Clear Health is well positioned to serve Emma with our robust Medically Complex Pediatrics program, which was recognized as a finalist for the Dorland Health Case in Point Platinum Award in 2016 under Simply Healthcare Plans (of which Clear Health is D/B/A).

Through the comprehensive health assessment, Barbara noted that Emma's natural home environment has both emotional and financial stressors. She identifies care activities and service coordination for Emma's family to consider in order to safely transition both Emma and her family, including arranging in-home Private Duty Nursing. She also notes that Emma's mother is reluctant to bring the child home permanently given her concerns for Emma's continued safety and her own health. She knows that this transition will require careful planning with the pediatric nursing facility and Emma's family in order to meet Emma's medical care and service needs.

Barbara contacts the pediatric nursing facility, with whom she has established relationships to discuss Emma's transition and discharge planning. She asks for Emma's plan of care, current status, PASRR I and PASRR II forms and the DCF form filed upon Emma's admission, and updates Emma's personal health record with this information. She also creates a follow up task for herself to assure the DCF forms are similarly submitted upon Emma's discharge from the facility. She verifies that the services identified on the PASRR assessments are included in Emma's plan of care and being provided while in the facility. Barbara authorizes continuation of Emma's stay at the facility in order to assure continuity of care.

Barbara's also reviews Emma's Freedom of Choice form and makes a note to herself to review this with Emma's mother prior to Emma's transition to a less acute setting or her home.

Given Emma's and her family's recent desire to transition care settings, as well as the other potential risks to her physical and behavioral health, Emma will receive an array of services, including:

- Private Duty Nursing – Emma has complex physical health needs, including tracheostomy care, utilization of a ventilator, and seizures. Emma is unable to perform Activities of Daily Living/Instrumental Activities of Daily Living (ADLs/IADLs) on her own. Due to Emma's medical complexity, she requires 24/7 Private Duty Nursing.
- Durable Medical Equipment (DME) – Emma will require the following pieces of durable medical equipment:
 - Ventilator and supplies

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

- Custom wheel chair (non-covered)
 - Tablet for cognitive development, enhanced to minimize risk of seizure activity (non-covered)
 - Apnea monitor
 - Continuous pulse oximetry
 - Back-up generator
- Speech & Occupational Therapy – Speech and occupational therapy will assist Emma in improving motor, cognitive, sensory processing, communication and play skills.
 - Assistance with scheduling well-child visits, specialist visits, dental visits and coordinating the visits with the siblings' visits. Sedation dentistry is available for Emma if deemed necessary. Barbara will need to coordinate the dental services through the State's subcontractor for dentistry as pediatric dental services are provided through Medicaid FFS.
 - Explore options on how to meet Emma's educational needs with Emma's mother including home schooling and Prescribed Pediatric Extended Care (PPEC).
 - Transportation – Transportation services will allow Emma to attend medical appointments, and to accommodate the potential equipment needs she has during transport.

1.e. INTERVENTIONS AND STRATEGIES TO FACILITATE COMPLIANCE WITH THE PLAN OF CARE

Through regular, monthly contact (or more frequent as gaps are needed or as identified by Emma's mother) our Managed Care Coordinators reach out to members and review their progress towards the goals they've identified. The Managed Care Coordinator utilizes the member's personal health record which is updated daily with utilization and claims and identification of upcoming preventive screenings or changes in risk stratification, to remain current with the member's utilization and care gaps.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Barbara will demonstrate use of and assist Emma's mother in accessing Emma's plan of care through our on-line platform, which allows users to securely review and provide feedback on the plan of care thereby encouraging ongoing participation in the plan of care. She advises Emma's mom that they will discuss the plan of care as part of their regular contacts. Barbara also suggests daily contacts for the first week that Emma is at home, followed by weekly contacts for 3-4 weeks. She explains that as Emma's mom becomes more comfortable and feels that the plan of care is sufficient, they can decrease the contact to monthly which they will maintain unless there is a change in the member's condition or Emma's mom feels the plan of care requires an adjustment.

1.f. DISCHARGE AND AFTERCARE PLANNING PROTOCOLS

Discharge planning begins upon notification of an acute inpatient, observation status, rehabilitation or skilled nursing facility admission. Early identification and planning of the member's transition of care needs is essential in providing quality discharge needs and in making sure that the member is discharged to the appropriate level of care to prevent readmissions and unscheduled transition of care. Clear Health's Transition of Care team works with the member, Clear Health Concurrent Review nurses, attending physician, hospital staff, and all ancillary service providers to complete all discharge needs for members and identifies any ongoing care needs to coordinate with the designated Managed Care Coordinator.

To assure a successful transition to Emma's family home, Barbara works Emma's multi-disciplinary team, which includes the pediatric nursing facility discharge staff, Emma's assigned nursing facility nurse, Emma's mother, Emma's PCP and HIV specialists, subcontractors and service providers identified in Emma's plan of care to finalize a comprehensive, coordinated transition plan 30 days prior to Emma returning home. The transition plan will include all services and supports necessary for continuity of her current care and services, as well as required care and services for post transition in her home. Barbara also incorporates the services and supports identified as a result of the home safety assessment.

Barbara arranges a multi-disciplinary team meeting to review the transition plan and Emma's plan of care, make any required modifications and approve the final plan of care with the agreement of Emma's mother.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1.g. COORDINATION WITH OTHER INSURERS, PROVIDERS, AND COMMUNITY PARTNERS FOR NON-COVERED SERVICES

Through our case management processes, we identify and address our members' care and service needs across the full continuum of care (physical health, behavioral health, functional, and psychosocial). We recognize that members sometimes have needs that may not be met through our existing provider network or may not be a covered service. To help these members remain in the community, we engage all existing community resources to provide solutions. Because our Managed Care Coordinators know the local area, they access community supports and actively engage community-based organizations, advocacy groups, faith-based organizations, and other community resources to develop creative solutions for services that are not a covered benefit.

The multi-disciplinary team meeting, as described above, brought the PCP and specialists together with Emma's mother and will continue to meet every six months or more often, as needed, based on any significant changes in Emma's condition or significant life changes. Barbara walks the mother through the process of registering Emma on the special needs registry of the local office for emergency operations center.

1.h. PROVIDER CAPACITY ASSESSMENT

Clear Health's Provider Relations department continuously monitors our provider network to make sure that all contracted providers in the plan are credentialed accordingly and have the capacity to serve our members. Upon making a referral for service, the Clear Health case management team communicates the member's needs with service providers they have identified to see that they are able to meet his needs and have available appointments. All referrals include the member's detailed symptoms and behaviors at the time of referral to facilitate the best pairing. Our expansive provider network includes providers that have enhanced training to meet the needs of specialty population, such as those with HIV. Our network also includes providers that are diverse and meet different cultural and linguistic needs.

Clear Health assess provider capacity and member satisfaction with the services our providers deliver. In Emma's case, services will include home health, DME, and access to our network of specialists, including pediatric pulmonologist and neurologist that can meet her unique needs. Barbara makes sure that Emma has an emergency plan in place, which will identify specific providers. Barbara works in tandem with Provider Relations to make sure Emma's services and care needs are addressed with the appropriate providers who can meet her needs (and will verify the appropriate authorizations are in place). Barbara makes sure that everything is ready for Emma prior to and after her provider visits.

In Emma's circumstance, she was established with specialists through Medicaid FFS and continued with her providers through her transition period. Emma's pediatric neurologist was not in-network with Clear Health. Clear Health's Provider Network Manager contacted the neurologist to initiate a single case agreement at the rate he is currently being paid. In addition, the representative requested a meeting to discuss contracting with the Clear Health provider network.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1.i. STRATEGIES THAT PROMOTE MEMBER SELF-MANAGEMENT AND TREATMENT ADHERENCE

As part of developing the person-centered plan of care, our Managed Care Coordinators include health education to improve upon member health literacy, build member advocacy and self-management skills, and to encourage treatment adherence. For example, families of members like Emma, receive care education using evidence-based guidelines, including coaching by the Managed Care Coordinator as well as printed materials and access to online resources.

As part of the transition plan, Emma's mother participates in caregiver training for Emma at the facility. Caregiver training consisted of management of the home ventilator and respiratory circuit, suctioning, responding to ventilator alarms, interpretation of pulse oximetry, understanding symptoms of seizure and administration of anti-epileptic medication, positioning, transferring from bed to chair, skin care, and other tasks required to maintain Emma's health and well-being at home. Emma's mom performs return demonstration of all required tasks prior to discharge.

Emma's mother is instructed in the importance of adherence with medication, physician follow-up visits, routine tracheostomy changes and ventilator maintenance. Further, Emma's mother is educated to notify the Managed Care Coordinator immediately upon any missed home health visits or changes in treatment plan. The Plan calls the HHA weekly to make sure there were no home health visits missed.

In order to provide optimal support for ventilator home management, Clear Health has contracted with a home ventilator tele monitoring subcontractor. This subcontractor offers home support through tele monitoring of various ventilator parameters which trigger alerts for interventions. Interventions include, but are not limited to: physician notification, reeducation of caregivers, and emergency response. This remote ventilator monitoring program also includes a 24/7 RN hotline, RN-based case management, and a proven algorithm that reduces unnecessary hospital readmissions.

1.j. APPLICATION OF UTILIZATION MANAGEMENT PROTOCOLS (I.E., IDENTIFICATION OF THE CRITERIA THAT WILL BE UTILIZED, PROCESSES TO ENSURE CONTINUITY OF CARE, ETC.)

Clear Health's comprehensive Utilization Management (UM) program includes well-defined protocols for UM activities that are tailored to meet the needs of our members. We promote the delivery of care and services in a culturally competent manner within the context of members' cultural beliefs, behaviors, practices, disabilities, and language preferences. We use the guidelines and protocols to provide a framework for decision making that also considers social determinants, geographic location such as rural versus urban, and how those circumstances may impact access to care.

As reflected in our responses above, Clear Health applies State criteria, the Plan's medical policy and its clinical utilization guidelines to assess medical necessity of requested services. EPSDT requirements are satisfied by assessing all services (both covered and non-covered) for medical necessity for children under the age of 21. Services are never denied solely on the grounds of non-coverage.

EXHIBIT A-4-b MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Upon enrollment with our health plan we make sure of continuity of care by providing a 60-day continuity of care period and honoring all authorizations provided by previous plans. Services may be continued beyond the 60-day continuity of care period when members are participating in an active treatment plan. We will engage in single case agreements with out-of-network providers at the rate they were previously paid to manage the member. We also attempt to contract with these providers based on network needs.

Barbara will work closely with the Nursing Facility Discharge Planner to review all discharge orders and clinical documentation; she includes the Utilization Management Department to coordinate necessary authorizations for service. For those items that are not covered through Emma's Medicaid benefits, but are ordered by her provider and are medically necessary, Barbara will facilitate a review of Emma's case and care needs with the Clear Health Medical Director. This includes reviewing the equipment recommended by her provider that is not covered under Florida Medicaid, such as the custom wheelchair and tablet. Barbara makes sure that all documentation necessary for Medical Director review is included in Emma's case file.

After gathering all of the information for each of the requested services, Clear Health's UM Department is able to approve all the Medicaid covered services for Emma's transition based on Medicaid Coverage Policies and internal Medical Policies and Clinical Guidelines. However, all requested Medicaid non-covered services are sent to the Pediatric Medical Director for review of medical necessity as per EPSDT protocols. The medical director reviews all clinical information and associated medical policies and guidelines for medical necessity and approves the custom wheelchair for Emma as medically necessary regardless of coverage by Medicaid. When Medical Directors have a question regarding the medical necessity of the Tablet ordered, they will directly place a call to the ordering physician to obtain a better understanding of its use as part of the treatment of cognitive deficits and minimization of seizure activity. In Emma's case, the pediatric neurologist will explain the clinical rationale for the request. The Clear Health Medical Director will then determine that in this specific case, it is medically necessary, and will approve the request and document the conversation with the pediatric neurologist, including the rationale for medical necessity, in the medical record.

1.k. INTEGRATING INFORMATION ABOUT THE ENROLLEE ACROSS THE PLAN AND VARIOUS SUBCONTRACTORS WHEN THE RESPONDENT HAS DELEGATED FUNCTIONS

Emma's information is integrated across our data platform, and we have data exchange processes to assure that each delegate has the necessary information, balancing compliance with HIPAA regulations while providing the information needed to provide care. All delegates receive enrollment files and other pertinent medical data relevant to their delegated functions. For example, we regularly share with our delegated Pharmacy Benefits Manager member diagnosis data to allow them to auto adjudicate authorizations. Further, the PCP has access through the provider portal to the utilization and case management history for the member. In addition, each member has a personal health record, which is accessible by all Clear Health staff engaged in the plan of care and service coordination for that member.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Our pharmacy subcontractor, Express Scripts (ESI) can also identify missed prescription fills through reporting. Barbara can view Emma's medication history as part of her routine case management activities. If she sees that Emma's caregiver is not filling her medications she will work with her to resolve any barriers. In Emma's case, transportation was a challenge due to her ventilator dependence. Barbara arranges for Emma to be transported by ambulance to attend all provider visits.

2. WORKFLOWS/NARRATIVE DESCRIPTIONS.

As illustrated in our workflow, provided as Attachment MMA SRC# 20-1: Workflow, Clear Health meets all State-required time frames across the case management process.

3. INNOVATIVE AND EVIDENCE-BASED PROCESSES TO ENHANCE COMMUNICATION AMONG SERVICE PROVIDERS AND SUBCONTRACTORS

Clear Health supports providing access to actionable medical information to our multi-disciplinary teams. We support a shared plan of care approach where clinicians work together, through access to a member's physical and behavioral health assessments, service authorizations and other clinical data, claims history, and gaps in care, to support coordination of all members' care and service needs. The system includes an online dashboard emphasizing utilization of wellness and emergency services that is available to all providers. Providers can send us secure referrals and information by email or fax. They can also send a provider-to-provider secure email (if their system permits) or transfer information among providers in a secure manner.

Barbara uses Clear Health's shared plan of care to track information and input from the multi-disciplinary team, obtain information and share input with Emma's mother, and maintain family engagement. The system is used to view Emma's use of health, pharmacy, and emergency services. The information helps inform all involved of ongoing activities to support Emma in her transition to living in the community with her family.

4. SUPPORTING CARE DELIVERY IN THE MOST APPROPRIATE AND COST-EFFECTIVE SETTING AND AVOIDS UNNECESSARY OR EMERGENCY DEPARTMENT USE

Our program uses industry best practices to supplement traditional clinician outreach. Our Managed Care Coordinators work to address the health status, health literacy, and engagement of members through targeted interventions and case management, education, self-management principles, and harm reduction. We engage providers, community partners, and others (such as Peer Supports) to make sure members have frequent in-person contact. During conversations with members, we determine their readiness to change, encourage them to identify strengths and needs from their own perspective, and participate in the development of their plan of care. This evidence-based and person-centered engagement methodology enhances the probability that members will develop self-directed plans of care with achievable goals. Our fully integrated program takes every aspect of a member's life into account.

Emma's transition to home includes wraparound services designed to support Emma and Emma's caregivers to prevent unnecessary hospitalization, ED visits, and to assure that Emma stays at home, which is her family's preference.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

5. EXPERIENCE IN PROVIDING SERVICES TO ENROLLEES WITH COMPLEX MEDICAL NEEDS AND PROVIDING STRATEGIES THAT IMPROVE HEALTH OUTCOMES

To proactively identify members with complex needs, we use a predictive modeling system that synthesizes member demographic and claims data, such as diagnoses, pharmacy, hospitalizations, ED encounters, and expenditures, to predict future outcomes. This enables us to identify and prioritize outreach to members with mental health, SUD, and other chronic health conditions, including those with the greatest need for ongoing services and likelihood to be admitted to the hospital in the near future. Using this information, we will identify a designated Managed Care Coordinator who is 'matched' to the member's primary needs, PH, BH or LTSS, based on training and licensure and is located in their geographical area whenever possible. All our staff has received extensive cross-training to be able to provide for the member's needs, and has access to the full clinical support team in Clear Health, with expertise in pediatrics, adolescents, infectious disease, nutritional, disease management, and physical, LTC and behavioral health needs.

In May 2016 Simply Healthcare Plans (d/b/a Clear Health) was recognized for our work with medically complex children by Decision Health. This award recognizes professionals and organizations that demonstrate success in the overarching healthcare continuum. Honoring programs such as the medically complex children program that best educate and empower individuals, improve adherence and wellness, manage quality of care, and contain healthcare costs. We have been serving medically complex children in Florida since the Plan's inception both in the home and the skilled nursing facility setting. Additionally, through our affiliates, we serve medically complex children across 19 other state Medicaid programs.

6. COORDINATED HEALTH CARE INTERVENTIONS DESIGNED TO ACHIEVE COST SAVINGS

Our integrated, strengths-based, member-centered Case Management program considers the specialized needs of our members who have complex needs, including their physical, behavioral health (mental health and substance abuse disorder), pharmacy, and social and community support needs. We offer tailored complex case management programs for members with unique, complex, chronic, and co-occurring needs who require higher levels of interventions. Our integrated approach provides access, responsiveness, and effectiveness in the system of care by supporting the following:

- 1) Identification of members with potential or current specialized or complex health care needs through early screening, comprehensive assessments, and predictive analytics
- 2) Risk stratification for each member based on a thorough consideration of information
- 3) Placement of members into case or disease management programs based on needs assessment
- 4) Development of an integrated plan of care that addresses physical, behavioral health/substance abuse disorder, pharmacy, social, and home- and community-based needs for members as they transition across all settings and incorporates both covered Medicaid benefits and services as well as those not covered by Medicaid that would benefit the member

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

- 5) Reciprocal referrals and information sharing with PCPs/specialists and community based Ryan White providers with HIV expertise
- 6) Formation of multi-disciplinary treatment teams for members in complex case management as needed to support them and provide consistency and continuity of contact with their familiar support system, as well as the expertise of a broader team of specialists as their needs evolve
- 7) Case management support to improve member access to needed services, including scheduling appointments, arranging transportation, conducting appointment reminder calls, following up to verify service initiation and member progress, and making appropriate service adjustments and incorporating those into the plan of care
- 8) Ongoing evaluation of our case management program, including reviewing, tracking, monitoring, adjusting, and analyzing for outcomes, quality metrics, and improvement
- 9) Emphasis on disease prevention, chronic condition management, and increasing member engagement with recommended treatment protocols
- 10) Establishment of community-based relationships
- 11) Member education to enhance understanding of health care conditions and prescribed treatment
- 12) Encouragement for members to develop their capacity to self-direct their care
- 13) Collaboration with other state and community entities to establish truly integrated care and prevent duplication of service
- 14) Co-management of physical and behavioral health issues.

Our members in case management frequently identify as having two or more conditions. In fact, throughout our health plan, 62 percent identify as having three or more. Achieving cost savings while optimizing health outcomes requires a member-centric, integrated approach. Our members work closely with qualified and trained Case Managers (Managed Care Coordinators) to make sure they are receiving the most appropriate level of care. Our model has proven successful. In a 2016 case study, we found that after receiving case management services for at least 90 days, members used health resources more efficiently and required less emergent care, thus reducing costs while improving outcomes. One such outcome was significantly greater: reduction in avoidable ED visits and inpatient admissions. Overall, members demonstrated a 39 percent reduction in non-emergent ED visits.

We recognize that members, like Emma, can often experience a range of physical health issues that can adversely affect their health, have co-occurring physical health and behavioral health diagnoses, and experience significant life changes or move across different systems of care. Together, these factors can create challenges to accessing the appropriate integrated care and services needed. Our Managed Care Coordinators understand the Florida health care system and know how to link members with the providers, community resources, and stakeholders they need to support their safety, permanency, and well-being.

EXHIBIT A-4-b

MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Clear Health's programs support members at every age and every stage. Our tiered model of clinical interventions address the care continuum from birth to end of life. It is both flexible and responsive to changes in support needs, such as increasing or decreasing intensity or complexity. We collaborate with local and State-based stakeholders, including members and their families, advocates, network providers, community-based organizations, and State agencies to assure access to and coordination of the full continuum of care. Regardless of age, ability, or need, we emphasize care connections – our Case Management System helps us connect our members with the right providers to get the right care at the right time.

In 2014, Clear Health implemented a unique, evidence-based, high-touch program to manage medically complex children in collaboration with a board-certified pediatrician and case management experts. The program featured enhanced identification with predictive modeling analytics with enhanced engagement with the member. In 2016, as part of the integration of the Anthem Florida plans this best practice was implemented across the merged entity. This resulted in close to \$300,000 per month in savings across the combined entity from reduced admissions, readmissions, avoidable hospitalizations and other avoidable ancillary costs.

7. INNOVATIVE STRATEGIES TO INTEGRATE INFORMATION ACROSS ALL SYSTEMS/PROCESSES

Our case management workflows use a variety of innovative, evidence-based strategies to integrate information across all processes and systems, beginning with our members' real-time personal health record. Through our advanced Case Management System, each member's personal health record contains updated utilization and claims history along with any "red flags" to alert our Managed Care Coordinators about upcoming or overdue preventive health screenings. All of our health plan staff who interact with the member have access to this system, so they can offer seamless, integrated assistance in coordinating care and making sure each member's needs are addressed (such as scheduling appointments or arranging transportation). Our system also allows individuals who contribute to case management to enter tasks, send letters, or connect directly with members based on the information in the personal health record.

As part of our medical necessity reviews, our Case Management System incorporates Clear Health's evidence-based criteria and level of care guidelines and enables our clinical and UM staff to document medical necessity reviews of pre-authorization requests. UM reviewers can easily access critical information and use it to make the most appropriate level of care determinations. The system captures the exact criteria used in a clinical decision, the date and time of the review, and the updated information in the member's personal health record systematically so that all information stays up-to-date to promote integrated care. Our Case Management System is integrated with our Core Operations System where all authorization data is synched in order to make sure accurate claims payment. Our Case Management System is also connected to our calendar system so that our Managed Care Coordinators can easily schedule screenings, assessments, and follow-up meetings with the member and/or caregiver.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Another key part of our clinical workflows is our comprehensive assessments. These include innovative branching logic, which guides our Managed Care Coordinators into areas for deeper details or to conduct additional assessments, such as high-level behavioral health screening (which might trigger an additional BH assessment) or co-morbid chronic conditions that will trigger additional disease-specific assessments. All of this information is integrated and maintained in our Case Management System, allowing our Managed Care Coordinators to fully address a member's total health care needs.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The adequacy of the respondent's approach in addressing the following:
 - a. Identification processes for enrollees with complex health conditions or who are in need of care coordination;
 - b. Description of the sources of data/information that would be utilized in the assessment process, including timeframes for completion;
 - c. Application of the respondent's case management risk stratification protocol;
 - d. Identification of service needs (covered and non-covered) and a description for service referral processes that the respondent has in place;
 - e. Description of the interventions and strategies that would be used to facilitate compliance with the plan of care, including use of incentives, healthy behavior programs, etc.;
 - f. Application of discharge and aftercare planning protocols that facilitate a successful transition;
 - g. Application of coordination protocols utilized with other insurers (when applicable), primary care providers, specialists, other services providers, and community partners particularly when referrals are needed for non-covered services;
 - h. Description of the assessment of provider capacity to meet the specific needs of enrollees;
 - i. Identification of strategies that promote enrollee self-management and treatment adherence;
 - j. Application of utilization management protocols (i.e., identification of the criteria that will be utilized, processes to ensure continuity of care, etc.); and
 - k. Application of strategies to integrate information about the enrollee across the plan and various subcontractors when the respondent has delegated functions.
2. The extent to which the respondents' workflows/narrative descriptions include timeframes for completion of each step in the care planning process.
3. The extent to which the respondent demonstrates innovative processes that it has in place to enhance communication among all service providers and subcontractors (for delegated functions).
4. The extent to which the respondent describes an approach that supports care delivery in the most appropriate and cost-effective setting and avoid unnecessary institutionalization (i.e., hospital or nursing facility care) or emergency department use.
5. The extent to which the respondent demonstrates experience in providing services to enrollees with complex medical needs and provide evidence of strategies utilized that resulted in improved health outcomes.
6. The extent to which the respondent demonstrates a holistic system of coordinated health care interventions designed to achieve cost savings through the organized and timely delivery of high quality services.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

7. The extent to which the respondent describes innovative strategies to integrate information across all systems/processes (e.g., prior authorization data synching up with the claims system) into its workflows.

Score: This section is worth a maximum of 85 raw points with each of the above components being worth a maximum of 5 points each.

G. STATUTORY REQUIREMENTS

MMA SRC #21 – Provider Network Agreements/Contracts Statewide Essential Providers (Statewide)

The respondent shall submit **Exhibit A-4-b-3**, Provider Network Agreements/Contracts Statewide Essential Providers, to demonstrate its progress with executing agreements or contracts with Statewide Essential Providers by submitting **Exhibit A-4-b-3**:

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health) has submitted Attachment MMA SRC# 21-1: Exhibit A-4-b-3, Provider Network Agreements/Contracts Statewide Essential Providers, which demonstrates our progress with executing agreements or contracts with Essential Providers across Florida. We partner with Essential Community Providers because they maintain the appropriate geographic presence, the established trust of our enrollees (members), a keen awareness of the diverse needs of the population, and access to key local resources available within their communities.

Essential Community Providers are at the core of our network development strategy due to our like-minded focus on serving low-income and underserved populations. We collaborate with Essential Community Providers because we actively support their role in caring for these most vulnerable members of the population—and because this support is so clearly linked to improving the health outcomes of our members.

We are confident of our ability to contract with all Essential Community Providers as we already have current contracts with 22 of 23 (95.7 percent) of the Essential Community Providers identified by AHCA., including:

- Tampa General Hospital
- Shands Teaching Hospital
- Shands-Jacksonville
- Jackson Memorial Hospital, Jackson Health System
- Sacred Heart Hospital
- Winnie Palmer Hospital at Arnold Palmer Medical Center, Orlando Health
- NEO: All Children's Hospital OB: Bayfront Medical Center St. Mary's Medical Center
- OB: Bayfront Medical Center
- St. Mary's Medical Center
- Broward General Medical Center
- Memorial Regional Medical Center
- Lee Memorial Health System
- University of Florida College of Medicine
- University of Miami School of Medicine
- University of South Florida College of Medicine
- University of Central Florida College of Medicine
- Nova Southeastern University College of Osteopathic Medicine
- Florida International University College of Medicine

RESPONDENT NAME: Simply Healthcare Plans, Inc. D/B/A Clear Health Alliance

A. RESPONDENT BACKGROUND/EXPERIENCE

SPECIALTY SRC#1 – Specialty Experience (Statewide):

The respondent, including respondent's parent, affiliate(s) or subsidiary(ies), shall provide a list of all current and/or recent (within five (5) years of the issue date of this solicitation [since July 14, 2012]) contracts for managed care for the proposed specialty population. If the respondent does not have experience with the provision of managed care to the proposed specialty population, the respondent shall not submit a response to this SRC. The respondent shall provide the following information for each identified contract:

- a. The specialty population served;
- b. The name and address of the client;
- c. The name of the Contract;
- d. The specific start and end dates of the Contract;
- e. A brief narrative describing the role of the respondent and scope of the work performed, including covered populations and covered services;
- f. The use of administrative and/or delegated subcontractor(s), their scope of work;
- g. The annual contract amount (payment to the respondent) and annual claims payment amount;
- h. The scheduled and actual completion dates for contract implementation;
- i. The barriers encountered that hindered implementation (if applicable) and the resolutions;
- j. Accomplishments and achievements;
- k. Number of enrollees, by health plan type (e.g., commercial, Medicare, Medicaid); and
- l. Whether the contract was capitated, fee-for-service or other payment method.

For this SRC the respondent shall not include subcontractor experience.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Simply brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). The unified Simply draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations.

We are excited to bring our collective knowledge and resources to the important and highly successful work of Clear Health in providing comprehensive, person-centered care to our specialty population – individuals with HIV/AIDS.

Through a Medicaid contract with AHCA, Clear Health first began managing a comprehensive provider network serving HIV/AIDS enrollees (members) in February 2012. In our five years serving HIV/AIDS members, Clear Health has become a national leader in managed medical assistance to individuals with a diagnosis of HIV/AIDS. We currently serve more than 9,300

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

members across Florida making us the largest HIV/AIDS specialty plan in the state and the nation. Services include integrated behavioral health and physical health care, dental, vision, pharmacy, and transportation services.

In developing this HIV/AIDS specialty plan, Clear Health worked closely with the University of Miami, a renowned expert in HIV/AIDS care and research. The University helped develop protocols for quality, compliance, and care, and provided an introduction to former NBA basketball star, Earvin “Magic” Johnson (Magic), who was so impressed by our commitment to not only the HIV/AIDS members but also the TANF, ABD, and dual eligible populations, that he became a plan spokesperson and an active participant in setting strategic direction for the program. Magic chairs Clear Health’s Strategic Advisory Group, which makes recommendations regarding improvements to quality, operations, and community partnerships in conjunction with our Member Advisory Committee and the broader HIV/AIDS community and research experts.

Magic recently served as keynote speaker at the 17th Annual Center for AIDS Research Scientific Symposium. The symposium was sponsored by the University of Miami and organized by Dr. Margaret Fischl, a Clear Health provider and nationally renowned AIDS researcher. Through his direct input, leadership, and the efforts of the Magic Johnson Foundation, Magic has provided invaluable insight and an entrée to minority populations and communities that have historically been difficult to reach. Moreover, in his role as plan ambassador and community advocate, Magic visits with students in local schools, pastors in local churches, network providers, and our associates. In May of this year, he met with Florida lawmakers in Tallahassee, expressing support for our innovative efforts to serve Medicaid and Medicare members.

With our experience serving individuals with HIV/AIDS, we have become acutely aware of the need for and benefits of an HIV/AIDS specialty health plan. For instance, Clear Health offers a targeted, intensive case management outreach model designed to meet the unique needs and challenges of individuals with HIV/AIDS. Our integrated team approach, including providers, case managers (managed care coordinators) and clinical pharmacists, facilitates coordinated care with community-based organizations, Ryan White agencies, federally qualified health centers (FQHCs), and health departments. Our specialty health plan structure also includes a dedicated Clear Health member service unit and comprehensive provider network, including contracted infectious disease practitioners serving as primary care physicians (PCPs). In addition, we place a special emphasis on privacy and confidentiality for Clear Health members, given the stigma around HIV/AIDS that still exists in the community. Positive member outcomes and satisfaction, as described below, make the strongest case for our specialized approach to service delivery.

The net result is that Clear Health has become a national model and thought leader in the area of managed, specialized HIV/AIDS care. In addition to working with such providers as Dr. Margaret Fischl, who pioneered treatment through her work in helping to get the first HIV/AIDS drug approved, we continue to work on a consulting basis with Thomas Liberti. Mr. Liberti was the Bureau Chief for HIV/AIDS at the Florida Department of Health from 1997 to 2012, and spearheaded the design and implementation of one of the nation’s most comprehensive public health responses to the HIV/AIDS epidemic. With our experience, we serve as an expert resource to our affiliate plans in 19 other markets across the country and our other Florida contracts.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

Furthermore, we have become a highly-trusted source of tailored specialty health care among members and a reputable and dependable partner among providers and other stakeholders. Our Clear Health CAHPS® scores reflect high member satisfaction. In our 2016 member survey, 98 percent of respondents reported they were treated with respect, 95 percent were helped with their health services, and 95 percent stated that we helped them better understand their health.

In addition, and perhaps most importantly, our member health outcomes reflect our effectiveness in building a care model that is reflective of our commitment to developing comprehensive, specialized care for individuals with HIV/AIDS:

- In 2014, we initiated an innovative CD4 program focused on improving medication regimen compliance for members with low CD4 counts. Of the 716 members tracked since program inception, 250 are actively in monitoring and intervention, and 178 have stabilized or improved.
- HEDIS measures continue to improve for our members. For the Comprehensive Diabetes Care (CDC) measure, we observed a 12.7 percent increase in HbA1c testing from 2016 to 2017, a nine percent increase in diabetes retinal eye exams, and a 9.5 percent increase in medical attention for neuropathy. For the same time period, Clear Health fostered a 10.7 percent improvement in the Controlling Blood Pressure (CBP) measure, a 5.3 percent increase in Cervical Cancer Screening (CCS), and a 13.5 percent increase in Annual Dental Visits (ADV).
- Through an outreach partnership with Beacon Health Options, our behavioral health subcontractor, we increased behavioral health utilization among members. This resulted in reduced substance use disorder-related hospital admissions from approximately 14.0 admits per 1,000 members in January 2015 to less than 5.0 admits per 1,000 members in December 2016. We have also improved in the HEDIS measures related to follow-up visits 7 and 30 days after mental illness hospitalizations.

We recognize that the care and treatment of individuals with HIV/AIDS is multi-dimensional and to be successful it is critical to partner inside and outside the health care community. We foster affiliations with community-based organizations with aligned goals for education, improved access to care and health outcomes, and reduction of HIV transmission, and we are committed to removing barriers to service. For example, we recently partnered with county health departments to improve adherence to preventive dental care among members less than 21 years of age. A mobile dental clinic will be used to improve access to these dental services.

As the needs of our members evolved, we adjusted our HIV/AIDS specialty care. For instance, we increased our nursing capacity as we continue to serve more and more members who are frail and aging, as well as individuals with associated co-morbidities and complex polypharmacy needs. Today, more than half of the current staff is comprised of nurses.

In addition, we continue to add expertise to our experienced and skilled HIV/AIDS team. Many staff members, both nurses and non-nurses, have come to Clear Health with direct experience serving individuals with HIV/AIDS. We also contract with industry experts to reach the most difficult to engage members and to provide training and expert review to our staff and Medical Directors. Our manager for our HIV/AIDS Care Coordination Program, Ms. Alina Orozco, has more than 25 years of experience working with this population. Clear Health was recognized for its HIV program and asked to speak on using multidisciplinary interventions and predictive

SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA**

modeling for clinically challenged Medicaid populations at the 8th Annual Care Coordination Summit in 2016.

1. MEDICAID POPULATION SERVED BY THE MANAGED CARE CONTRACTS IS SIMILAR TO THE SPECIALTY POPULATION PROPOSED

Medical Assistance (MMA) services to individuals with HIV/AIDS as a specialty population in all 11 Florida regions (adding Region 4 to our existing service area in the 10 other Florida regions). Clear Health has been serving individuals with HIV/AIDS in Florida since February 2012, and as of August 1, 2017, we coordinate care for 9,365 individuals with HIV/AIDS under an AHCA contract.

In addition to serving individuals with HIV/AIDS in our existing Clear Health contract, Simply serves members with HIV/AIDS in our other Florida contracts, including our SMMC, Medicare Advantage, and Florida Healthy Kids (FHK) contracts. Within these contracts, we provide comprehensive managed medical assistance to more than 1,000 members with HIV/AIDS.

2. NUMBER AND SIZE OF MANAGED CARE CONTRACTS ACTIVE IN THE LAST FIVE (5) YEARS

As stated above, Clear Health has been providing HIV/AIDS specialty care through its AHCA contract since February 2012. This contract is described in detail below.

While our affiliate health plans currently do not have any specialty contracts exclusive to the HIV/AIDS population, they do coordinate specialized care programs for more than 13,000 individuals with HIV/AIDS in 14 other states. Our Clear Health efforts and achievements inform the HIV/AIDS specialty care offered through our affiliates, even as they refine their own service delivery models. For instance, when a member with HIV/AIDS enrolls with our affiliate in Indiana, continued services with a special emphasis on pharmaceuticals are immediately authorized. Members are enrolled in complex care management, and an individualized care plan is created. Outreach is conducted to previous providers and care managers, if applicable, to obtain past treatment records. Efforts go beyond treatment of the illness and address the holistic needs of the member, such as behavioral health care needs, housing and food security, and psychosocial support needs.

a. The specialty population served: Individuals with HIV/AIDS

b. The name and address of the client: Florida Agency for Health Care Administration, 2727 Mahan Drive, Tallahassee, FL 32308

c. The name of the contract: Statewide Medicaid Managed Care (SMMC) Managed Medical Assistance (MMA) Program Contract FP030

d. The specific start and end dates of the contract: February 3, 2014 – December 31, 2018

e. A brief narrative describing the role of the respondent and scope of the work performed, including covered populations and covered services:

EXHIBIT A-4-d
SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA

Role: Clear Health establishes and manages the provider and subcontractor network for the provision and authorization of services, case and disease management, member services, and quality management, among other clinical and administrative services.

Scope of work: Clear Health is responsible for the provision of integrated physical and behavioral health services, dental, vision, pharmacy, and transportation. Provided below is a listing of services offered:

- Advanced registered nurse practitioner
- Ambulatory surgical center services
- Assistive care services
- Behavioral health services
- Birth center and licensed midwife services
- Clinic services
- Chiropractic services
- Dental services
- Child health check up
- Immunizations
- Emergency services
- Emergency behavioral health services
- Family planning services and supplies
- Healthy Start services
- Hearing services
- Home health services and nursing care
- Hospice services
- Hospital services
- Laboratory and imaging services
- Medical supplies, equipment, prostheses and orthoses
- Optometric and vision services
- Physician assistant services
- Physician services
- Podiatric services
- Prescribed drug services
- Renal dialysis services
- Therapy services
- Transportation services

Clear Health also offers the following expanded services to members:

- Primary care visits (non-pregnant adults)
- Home health care (non-pregnant adults)
- Physician home visits
- Prenatal/perinatal visits
- Outpatient services
- Over-the-counter (OTC) medication/supplies
- Adult dental services
- Waived copayments
- Vision services

EXHIBIT A-4-d
SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA

- Hearing services
- Newborn circumcision
- Adult pneumonia vaccine
- Adult influenza vaccine
- Post discharge meals
- Nutritional counseling
- Medically related lodging and food
- Home and community based services

f. The use of administrative and/or delegated subcontractor(s) and their scope of work:

- AIM Specialty Health – Utilization management, including radiology
- Anthem, Inc. – Administrative/support services, including utilization management
- Audiology Distribution, LLC D/B/A HearUSA, Inc. – Audiology and hearing services
- Beacon Health Options – Behavioral health services (utilization management and network)
- Chiro Alliance Corporation – Chiropractic services
- DentaQuest of Florida, Inc. – Dental services
- DentaQuest of Florida, Inc. D/B/A EyeQuest – Vision services
- Express Scripts, Inc. – Pharmacy services
- Health Network One, Inc. – Therapy services, including occupational, physical, and speech
- LogistiCare Solutions LLC – Non-emergent medical transportation (Regions 1 – 9)
- MCT Express, Inc. – Non-emergent medical transportation (Regions 10 and 11)
- Ride2MD, Inc. – Non-emergent medical transportation (All regions)

g. The annual contract amount (payment to the respondent) and annual claims payment amount:
Annual contract amount: \$272 million; annual claims amount: \$228 million.

h. The scheduled and actual completion dates for contract implementation: Scheduled dates of implementation: Regions 1, 7 and 9 by August 1, 2014; Regions 2 and 3 by May 1, 2014; Regions 5, 6 and 8 by June 1, 2014; Regions 10 and 11 by July 1, 2014; all implementations were timely and as required.

i. The barriers encountered that hindered implementation (if applicable) and the resolutions:

Clear Health encountered no barriers that hindered the timely implementation of this contract; however, there were challenges related to provider availability and resistance to managed care that we resolved prior to and during implementation. These were not unique to Clear Health.

Clear Health encountered reluctance on the part of providers already providing services to HIV/AIDS patients to contract with Clear Health as a Specialty Medicaid HMO. Our first concern was the potential impact this could have on member continuity of care due to the clinical imperative of adherence to a treatment regimen. Prior to implementation, our Provider Relations team identified providers already treating potential Clear Health members and secured letters of agreements from the non-participating providers to ensure coverage for this population. Extensive effort was made at the grass roots level to work with providers and advocacy groups to provide information and gain their trust in Clear Health. This resulted in the development of a comprehensive network that includes an extensive list of primary and specialty providers with expertise in the treatment of HIV/AIDS.

EXHIBIT A-4-d
SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA

i. Accomplishments and achievements:

Clear Health is extremely proud of the progress made in partnership with AHCA since initiating its HIV/AIDS specialty plan in 2012. We learned a great deal in this time and applied lessons learned to improve member outcomes and satisfaction. For instance, by combining our original Ryan White approach with our Medicare SNP model, we placed increased emphasis on initial contact and early assessment. Following triage, each member is assigned to a group to receive targeted interventions, communications, and outreach. We monitor engagement of care and CD4 counts as indicators of success. This approach resulted in system efficiencies and improved member outcomes:

- Decline in per member per month (PMPM) costs with improved Highly Active Anti-Retroviral Therapy (HAART) compliance. We reduced our pharmacy costs by \$100 PMPM since the inception of the contract. We attribute this to improved medication regimens, which specifically target overutilization and the elimination of multiple prescribers for individual members, among other strategies.

- Low potentially preventable admissions (PPA). Clear Health is the best performing HIV/AIDS plan related to PPA, as reported in the AHCA Quarterly Statewide Medicaid Managed Care Reporting, Spring 2017.

- Reduced all-cause 30-day hospital readmissions. Our readmission rate decreased from 31.0 percent in 2015 to 28.4 percent in 2016. We have also realized a reduction in substance abuse admissions per 1,000, which we attribute to providing appropriate outpatient services for members with substance abuse issues and follow-up after inpatient treatment utilizing intensive outpatient programs to enhance successful treatment and sobriety.

- Successful behavioral health HEDIS outcomes. Between 2015 and 2016, there was a 5.0 percent increase in Anti-Depressant Management Acute Phase (AMM) and a 6.7 percent increase in Follow up After Mental Health Hospitalization. These improvements in clinical management and follow-up coincided with decreases in preventable inpatient behavioral health services. For instance, in February 2016 there were 93.6 admits per 1,000 Clear Health members and 352.5 in-patient days per 1,000. By November 2016, there was a marked decrease in hospital utilization: 75.9 admits per 1,000 members and 239.8 days per 1,000 for behavioral health inpatient care.

- Over the past three years, we worked closely with behavioral health prescribing physicians in Region 11 to encourage generic prescriptions for members with serious mental illness (SMI). We have seen an annual increase in the generic prescribing rate of two percent, translating to a 26 percent reduction in the cost per prescription and PMPM for anti-psychotic drugs.

- In 2015, we submitted a three-year performance improvement project (PIP) to AHCA with the goal to increase HIV-related medical care visits and reduce the percentage of enrolled members with no medical visits during the measurement period. We are extremely pleased with our progress: a 17 percent improvement in HIV-related medical visits and a 49 percent reduction in members with no visits. In addition, compliance with HAART improved by 64 percent, reaching a rate of 94 percent in 2016.

- We expanded our provider network from 8,058 providers in 2014 to 11,199 providers in 2016 – a 39 percent increase.

EXHIBIT A-4-d
SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA

Provided below is a summary of other achievements and accomplishments under this Contract:

- Awareness and trust in the community

In the five years since its inception, Clear Health has become a highly-trusted source of HIV/AIDS health care in Florida communities. This trust was earned through consistent outreach, education, and engagement of members, providers, and subcontractors. In 2013, we approached NBA great Earvin "Magic" Johnson, arguably the most credible and well-known spokesperson for people living with AIDS, to represent Clear Health. He has since become an ambassador for the program, as well as an active participant in setting strategic direction for Clear Health. Importantly, he has helped us connect with and establish a trusting relationship with racial/ethnic minority communities disproportionately impacted by HIV/AIDS.

We have identified the needs and developed a specialty plan uniquely structured to manage care, treatment and expanded benefits that make a difference in the lives of the members we serve using a multi-disciplinary model that keeps the member in the center with the providers, plan, and the care coordinators collaborating to deliver high quality care and improved outcomes. We developed and continue to build strong relationships with health departments, teaching institutions, community-based centers including initiatives with district commissioners, leaders in the urban communities where the epidemic is widespread, and with the LGBTQ (Lesbian, Gay, Bi-sexual, Transgender, and Queer) community where infection rates continue to be the highest. Our team at Clear Health is multi-ethnic, multi-lingual, multi-lifestyle, and we have both professional and personal experience with HIV disease. We take pride in representing and reflecting the community we serve, and we are proud to be the leader in the HIV/AIDS Specialty Plan arena in Florida.

- An accessible and multi-disciplinary provider network

Clear Health has built an extensive HIV/AIDS Medicaid network in Florida, establishing close relationships with PCPs, specialists, health departments, FQHCs, and teaching institutions. With an expert staff and strong clinical leadership, (including physicians, pharmacists, nurses, and social workers) and our public health experience specific to HIV/AIDS, coupled with our strong relationship with advocacy groups, we have been able to recruit and contract with PCPs and specialists in infectious disease, cardiology, dermatology, rheumatology, gastroenterology, and endocrinology who have experience in treating patients with HIV disease. We have developed a provider recruitment strategy and message of inclusivity and collaboration and actively provided education and support for the providers who serve our population.

In addition, we have expanded our definition of primary care physicians to include infectious disease specialists. This allows these physicians to coordinate member care across disciplines, and this broader definition has allowed us to lower member-to-provider ratio requirements to facilitate more frequent and comprehensive interaction with the members. Providers with specialized HIV/AIDS training are designated with a red ribbon beside their name in the provider directory, informing members of their additional specialized HIV/AIDS care and treatment competency. This "Red Ribbon" program is nationally recognized and a testament to our patient-centered model of service and support.

EXHIBIT A-4-d
SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA

- Engaging and retaining members in care

We have seen steadily increasing enrollment since our program's inception as well as declining disenrollment. Of all the members who were able to disenroll (and enroll with another Medicaid program, if eligible), 66 percent of these elected to enroll (or stay) with Clear Health. We believe this is a result of our strong performance and the personal commitment of the Clear Health staff to the members we serve.

- Experience in our Leadership Team

Simply's Leadership Team, including Ms. Lourdes Rivas, President and CEO, Dr. Vincent Pantone, CMO, Ms. Suzanna Roberts, COO, Ms. Holly Prince, CFO, and Ms. Judi Peterson, Staff Vice President, have provided strong oversight, vision, and direction to Clear Health since its inception in 2012. For its part, Clear Health's management team has extensive experience in serving the targeted population as well as in the managed care industry:

— The Simply Medical Director, Dr. Vincent Pantone, has 13 years of clinical experience as a physician leader in the health care industry. Since his training at Montefiore Medical Center in New York City, he has retained a strong interest in improving access and coordination of care to underserved populations, including Medicaid-eligible individuals with HIV.

— The director for our HIV/AIDS Health Management Services, Ms. Elizabeth Ellsworth, CCM, has over 20 years of experience working with Medicaid programs. As a certified coach for motivational interviewing, she has developed many of the policies and programs that have enhanced the Clear Health case management model. She led the design of Simply's three Medicare Advantage special needs plans whose models of care were each recently awarded a perfect score by CMS. Many of the best practices from these models of care are shared with our HIV/AIDS case management.

— Our manager for our HIV/AIDS Care Coordination Program, Ms. Alina Orozco, RN has more than 25 years of experience working with this population, and our case management and care coordination team has 424 cumulative years of experience. The team operationalizes this experience and expertise by continuously developing and enhancing HIV/AIDS training and looking for new opportunities to educate community partners, in-house staff members, and others in topics such as co-occurring conditions and motivational interviewing.

— Dr. Alex Borges, PharmD is Staff Vice President of Pharmacy, Sales and Account Management at Simply. He has been a member of the Simply d/b/a Clear Health team since 2012 with over 12 years of experience serving the Florida Medicaid Community, including people living with HIV/AIDS. Dr. Borges has been crucial in designing an effective pharmacy program for our specialty population and worked closely with the team to develop appropriate interventions to increase medication adherence to anti-retroviral therapy.

k. Number of enrollees, by health plan type: 9,365 enrollees in Medicaid

l. Whether the contract was capitated, FFS or other payment method: Capitated

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

3. RELEVANT EXPERIENCE OF MANAGED CARE CONTRACTS, OR OTHER CONTRACTS, ACTIVE IN THE LAST FIVE (5) YEARS

Since February 2012, Clear Health has had a contract with AHCA to provide HIV/AIDS specialty care to members in 10 of the 11 Florida regions (except Region 4). Through this contract, we have developed a service network offering geographically accessible, culturally competent physical and behavioral health services, dental care, vision, pharmacy, and non-emergency medical transportation. We currently have 9,365 members in this program, making us the largest HIV/AIDS specialty plan in Florida and in the nation. In addition, our ultimate parent company, Anthem, Inc., through its 14 other markets, provides specialized HIV/AIDS care to an additional 13,000 individuals.

4. ACCOMPLISHMENTS AND ACHIEVEMENTS SIGNIFICANT AND RELEVANT TO THE SPECIALTY POPULATION PROPOSED

Simply is proud of its progress in coordinating care for individuals with HIV/AIDS under its current HIV/AIDS specialty plan contract with AHCA. With this ITN, we propose to expand this care to all Florida regions (adding Region 4 in this bid).

The many accomplishments and achievements outlined in Section 2j above speak to our ability to create an effective and comprehensive network of care for individuals with HIV/AIDS. These accomplishments and achievements have led to positive health outcomes for our members, also referenced in Section 2j.

Evaluation Criteria:

1. The extent the Medicaid population served by the managed care contracts is similar to the specialty population proposed.
2. The number and size of managed care contracts active in the last five (5) years.
3. The extent to which managed care contracts, or other contracts, active in the last five (5) years, provided relevant experience.
4. The extent to which listed accomplishments and achievements are significant and relevant to the specialty population proposed.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-d
SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA

B. AGENCY GOALS

Specialty SRC#2 - Care Coordination and/or Case Management (Statewide):

The respondent shall propose care coordination and/or case management activities to meet the unique needs of the specialty population being proposed for this solicitation, including specific disease management interventions or special condition management relevant to the specialty population. The respondent (including respondents' parent, affiliate(s) or subsidiary(ies)) shall describe its experience in providing care coordination/case management for populations similar to the specialty population being proposed, including experience with disease management or other special condition management. The respondent shall describe proposed interventions, evidence-based risk assessment tools, self-management practices, practice guidelines, etc., relevant to the specialty population proposed. The respondent shall identify specific staff qualifications, training and/or experience for case management personnel related to the specialty population proposed. The respondent shall describe any other care coordination/case management activities the respondent proposes to meet the needs of the specialty population proposed.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Simply brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). The unified Simply draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations.

Clear Health's care coordination and case management activities are vast and are tailored to the specific needs of each enrollee (member). Originally designed based on the Ryan White Act/Project AIDS Care (PAC) community program approach in a health care setting, the model evolved to embed an enhanced medical component and multidisciplinary approach. Our model ensures full coordination for all aspects of a member's care to include access to medical and specialty providers as well as expanded benefits (meals, transportation, eye care, and over-the-counter medications) and community resources. Through a multi-disciplinary team approach, members have access to the full range of services and supports they need to stay healthy.

1. EXPERIENCE PROVIDING CARE COORDINATION/CASE MANAGEMENT

Clear Health has been offering case management and care coordination services to members with HIV/AIDS since February 2012. We serve more than 9,300 members, many of whom receive case management services across 60 counties. We hold a Medicaid contract with AHCA with an HIV/AIDS specialty designation. In addition, we bring the combined experience of our merged entities; we have provided case and disease management services to Florida Medicaid members for more than 14 years. Our disease management programs address many disease states, including HIV/AIDS, recognizing that there is a wide range of health and social services coordination needs that are unique to this population. Our goal is to assure our

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

members' continuity of care, promote self-management and health literacy, and to enhance their quality of life. Together, our Clear Health staff brings a combined 424 years of experience in care coordination and case management.

As the largest HIV/AIDS specialty plan in the state, Clear Health brings a team of medical experts and case management professionals who serve individuals diagnosed with HIV/AIDS. With their expertise and local knowledge, our clinical team understands the challenges, barriers, and needs of people and their communities, and the programs and education needed to inform and serve individuals and their families about how to live successfully with the disease and limit its spread.

Over the years serving this population, we have built upon the experience of staff in place from program outset and added more nurses and clinician support to serve an increasingly older population who have co-morbidities and multiple medications. Today, over half of our current staff are licensed nurses. Our Manager of Managed Care Coordination, Alina Orozco, is a licensed registered nurse with more than 25 years of experience working with individuals who have HIV/AIDS. In addition to case management, her experience includes HIV/AIDS treatment education, counseling and testing, as well as development of HIV prevention programs and training on a state and national level. Our Medical Director, Dr. Francisco Hernandez also brings 30 years of experience and our original Medical Director, Dr. Brian Palmer, continues to serve as a consultant (leading specific initiatives designed to reach the most challenging to engage members) as well as continuing to provide training and expert review to staff and our current Medical Directors.

In addition to the expert guidance and support of our Medical Director, our Managed Care Coordinators often consult with our in-house pharmacy team on drug formulary issues and identification of inappropriate, incomplete, or potentially adverse treatment regimens. Managed Care Coordinators and our Medical Director work with the pharmacy team to engage and discuss medications with the member and Primary Care Provider (PCP) as part of care coordination.

2. EXPERIENCE EFFECTIVELY PROVIDING CARE COORDINATION/CASE MANAGEMENT TO THE POPULATION PROPOSED

Our care coordination and case management staff (managed care coordinators) are not just highly qualified; many have dedicated a huge portion of their lives to improving the health of people living with HIV/AIDS. Our team at Clear Health is multi-ethnic, multilingual, and multi-lifestyle – they know this disease professionally and personally. Many have also been personally affected by the disease, while others have worked for community agencies or other organizations that see Clear Health members. We take pride in the fact that our staff reflects the community we serve. We were the first managed care plan in Florida to exclusively serve the HIV/AIDS population, and have worked extensively with the community, providers, teaching institutions, federally qualified health centers, renowned researchers, specialty pharmacies, and State agencies to develop best practices and partnerships that enable us to effectively provide care coordination and case management.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

Our care coordination and case management activities demonstrate results. We have low potentially preventable admissions and were the best performing specialty plan in this area, as reported in ACHA's Quarterly Statewide Medicaid Managed Care Report, Spring 2017.

From our experience, we know that one of the biggest risks for members with HIV/AIDS is remaining in care. These members often experience challenges related to mental health issues, substance use or addiction, unstable housing, and food insecurity in addition to chronic comorbidities and access to care. We designed our staffing model and our care coordination/case management model to both address the psychosocial and clinical challenges of these members as well as toward a vision of their future needs. A crucial component of this is our staff developing a deep level of trust with our members and truly understanding and empathizing with their experience. Our efforts to engage members and their families have shown results. For example, in 2015, Clear Health focused on a new three-year performance improvement project that focused on increasing compliance with HIV-related medical care visits and reducing the percentage of enrolled members with no medical visits during measurement period. HEDIS Highly Active Anti-Retroviral Treatment (HAART) improved 64 percent, with a 2016 rate of 93.85 percent in 2016. Results also found a 17 percent improvement in HIV-related medical visits and 49 percent reduction in members with no visits.

We have built a multi-disciplinary model that keeps members at the center; with providers, our Managed Care Coordinators, and others at our plan working collaboratively to deliver what we promise. We continue to build strong relationships with health departments, teaching institutions, and community-based centers (including initiatives with district Commissioners, leaders in African American churches where the epidemic is widespread and with the Lesbian, Gay, Bi-sexual and Transgender community, where the infection rates continue to be the highest).

To make sure our staff can effectively provide care coordination/case management to this population, they receive new hire training as well as ongoing training to stay up-to-date on HIV/AIDS treatment and community services available. New employees must complete a 12-hour course, developed by the University of North Carolina at Chapel Hill, on HIV/AIDS. It offers students an online learning course on HIV etiology, immunology, epidemiology, and impact on individuals and society. All Managed Care Coordinators must complete Motivational Interviewing techniques training to assist members through the stages of change and the nine-module course from the University of South Florida on Co-occurring Disorders. This training offers a comprehensive overview for counselors on topics related to assessing and treating individuals with co-occurring disorders – including prevalence, assessment issues, treatment guidelines and models – creating a continuum of care, adolescents, women, older adults, and persons within the justice system.

Our clinical staff subscribe to and regularly review top HIV treatment resources to remain abreast of new developments in care and treatment issues as well as to educate our members and refer them to reliable sources for information and support. Further, our staff stay highly engaged with the communities and members we serve. In 2015, Clear Health held the first Member Advisory Committee, and we've had these quarterly ever since. We have held over 20 meetings across the state, with over 300 Clear Health members attending in total.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

3. CARE COORDINATION/CASE MANAGEMENT ACTIVITIES RESPONSIVE TO THE SPECIALTY POPULATION PROPOSED

Our care coordination/case management activities are designed to improve the health status of our members with HIV/AIDS, as demonstrated through the following program objectives: increased knowledge of the disease process and associated complications; increased self-management; increased compliance with recommended clinical practice guidelines; and decreased utilization of services for hospital, emergency, and urgent care. Whenever possible, we engage individuals in case management and encourage them to be the active driver of their health care.

To assure we continue to provide care coordination and case management activities relevant to the members we serve, we routinely (at least annually) examine our top inpatient and outpatient diagnoses as well as the top 25 medical diagnoses. We use this data to make sure we are targeting prevalent issues in our programs and addressing chronic, co-morbid, and/or medical or behavioral health needs of our members. When we identify an area of need through these reviews, we quickly take steps to address it. For example, we recently hired a Nurse CM with experience in oncology to help address the increasing rates of cancer reported for members living with HIV/AIDS.

All members have access to our Member Services and Case Management telephone lines to request assistance when needed. We assign all members to a Managed Care Coordinator, who engages and assesses new members, seeks out those who are unable to be reached or challenging to contact, and monitors potential care coordination needs for those who have opted out of case and disease management. For those agreeing to participate in our case and disease management program, our Managed Care Coordinators comprehensively assess members and identify barriers to care to collaborate and develop an individualized plan of care with measurable goals toward improving health outcomes. They assist members with the coordination of medical, dental, and behavioral services as needed as well as coordination of services with Ryan White and other community based organizations. Although the PAC Waiver programs end this year, we will continue to collaborate with many of these agencies to serve persons living with HIV/AIDS, including on strategies to engage members who are homeless.

Our Managed Care Coordinators engage members and encourage their participation in their health care to improve self-management skills, keep their medical appointments, and adhere to their treatment plan. Our Managed Care Coordinators stay closely connected to members via ongoing telephonic and/or face-to-face communication. Our clinical team assists all members in achieving quality health outcomes using interventions, evidence-based risk assessment tools, self-management practices and practice guidelines, including the following:

- Assessing the acuity level and service needs of each member. The primary tool used to perform this assessment is our evidenced based HIV/AIDS Health Risk Assessment. In addition, we use disease specific, cultural, behavioral, caregiver assessments, and other assessments as applicable.
- Assuring that the member is assigned to an appropriate PCP
- Assuring that the member is assigned to an HIV specialist physician (as defined by the

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

American Academy of HIV Medicine (AAHIVM) or recognized by the Florida/Caribbean AIDS Education and Treatment Centers (AETC), unless the member's PCP is an HIV specialist physician

- Developing in collaboration with member, PCP/specialists and/or others as requested by member, an individualized Plan of Care describing education, disease management, interventions, coordination, services to be provided and desired health goals
- Coordinating care through all levels of practitioner care (primary to specialist)
- Engaging in regular communication with members, their care providers, family and/or community agency case managers as needed via phone, mailing of educational materials, referrals to community programs, and home/hospital visits (members have access to a 24-hour triage service to avoid unnecessary emergency room and acute care services.)
- Coordinating referrals to behavioral health providers for members with mental health and/or substance abuse disorders
- Providing education to assist members in better management of their disease(s), as well as transmission prevention, risk-reduction services, and secondary prevention of associated conditions and illnesses
- Monitoring and promoting member adherence to physician treatment regimen, including medication compliance, recommended immunizations, tracking of CD4 count and other labs or readings as applicable (e.g., A1C, BP)
- Communicating and collaborating with members' PCPs, specialists and Ryan White and/or former PAC Waiver agency case managers to facilitate services not available through the regular Medicaid program and to request assistance with members that may be non-compliant/lost to care
- Providing outreach to locate and/or re-engage members who have been lost to care, including calls, letters, and referrals to an HIV-experienced outreach coordinator who specializes in locating these individuals and relinking them with services
- Communicating with Hospitalists, Concurrent Review Nurses, Social Workers, and others on behalf of our hospitalized members to assist with follow up care post discharge including home health, durable medical equipment, and home-delivered meals
- Coordinating support services (support groups, counseling, clinical trials, housing, substance abuse) with Ryan White and PAC Waiver case managers as well as other public or private organizations that provide services to HIV/AIDS clients, their families, and caregivers

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

**** REAL STORY: Connecting Hard-to-reach Member to Services and Supports Improves Health and Quality of life**

Sometimes it helps when you have a history with someone. That's what Shay, our Managed Care Coordinator, thought when she saw Natalie's name on the new member roster. She had been Natalie's case manager under the Ryan White program at The Village in Miami, and knew she had a history of chronic homelessness, substance use, mental health issues, stroke, and criminal justice system involvement, in addition to HIV. Shay learned Natalie had been intermittently filling medications and attending medical appointments and could not be reached. As before, Natalie was hard to locate, so Shay referred her to one of our Outreach Care Specialists who located her at a women's shelter. By rekindling this trusted relationship, Shay was able to engage Natalie to take renewed interest in rebuilding her health and strength. She educated Natalie about her benefits, coordinated appointments with a PCP and psychiatrist, connected her to physical therapy, and helped her get approval for a motorized scooter. Natalie also began attending a support group at the clinic where her PCP and community case manager are located, is taking her HIV and mental health medications more consistently, and is accessing a local food bank to help meet her nutritional needs. Her health and quality of life have improved dramatically, and best of all, Natalie is now living in her own apartment with financial aid from a housing program for persons living with AIDs (HOPWA). **

To make sure our members receive the best possible care, we also offer a 24-hour Nurse help line and a focused outreach program to reach individuals who have not engaged in care after 60 days. We understand the importance of maintaining a steady drug-regimen for treatment effectiveness, and we also understand that the psychosocial factors of living with HIV/AIDS and related issues, such as poverty, can create barriers to treatment compliance. Our Managed Care Coordinators are committed to working with members on all their needs for improved outcomes.

We provide each member with care coordination/case management services, including HIV Disease education, treatment adherence support, coordination of plan health care services, and transportation. Managed Care Coordinators collaborate with local community resources that may assist members with special needs for additional supportive care such as food banks, legal, or housing assistance. Members are referred to HIV-experienced PCPs and specialists.

Each pregnant member will have an assigned OB Case Manager (primary), who with support from the Managed Care Coordinator, follows the member from pregnancy through birth and at least three months post-partum. The Managed Care Coordinator continues the relationship and case management when this period has ended with full insight into the care that has been provided and the member/baby's health status. The goal of the OB program for Clear Health Alliance members is to promote healthy pregnancy and delivery of HIV negative babies through the early identification of potential risk complications with appropriate referral and intervention.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

While the population of children within our health plan is small (under three percent) due to the improvements in therapy that significantly decreased rates of vertical transmission from mother to child, Clear Health still has a good number of children enrolled, who do not have HIV, but other serious illnesses, such as leukemia, or transplants. For these members, we provide our pediatric complex case management program, which consists of assessment, care planning, implementation, coordination and monitoring specific health care needs and includes components such as skilled nursing facility, private duty nursing, and home visits as appropriate.

Evaluation Criteria:

1. The extent of experience (e.g., number of contracts, enrollees or years) in providing care coordination/case management to similar target populations, including disease or special condition management.
2. The extent to which the described experience demonstrates the ability to effectively provide care coordination/case management to the population proposed.
3. The extent to which the care coordination/case management activities proposed are relevant to the specialty population proposed.

Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 10 points each as described below:

- (a) 10 points if the component is excellent;
- (b) 8 points if the component is above average;
- (c) 6 points if the component is average;
- (d) 4 points if the component is below average;
- (e) 2 points if the component contained significant deficiencies;
- (f) 0 points if the component was not addressed.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

Specialty SRC#3 – Quality Measures (Statewide):

The respondent shall propose quality management activities to address the needs of the specialty population(s) being proposed for this solicitation, including specific quality measures relevant to the specialty population(s). The respondent (including respondents' parent, affiliate(s) or subsidiary(ies)) shall describe its experience in quality management for population(s) similar to the specialty population(s) being proposed for this solicitation. Include experience with standardized measures, such as HEDIS and Contract-required measures, relevant to the specialty population(s) proposed. Identify specific quality measures relevant to the specialty population(s) the respondent proposes to collect and report to the Agency. Describe any other quality management activities the respondent proposes to improve performance. Describe any instances of failure to meet HEDIS or Contract-required quality standards and actions taken to improve performance. Describe actions taken to improve quality performance when HEDIS or Contract required standards were met, but improvement was desirable.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Simply brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). The unified Simply draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations.

Clear Health's goal is to ensure access, engagement, and quality of care for the Medicaid eligible population living with HIV/AIDS across all regions in the state. Our multi-disciplinary teams (MDTs) review each enrollee's (member's) individualized plan of care to determine the appropriateness and best care options to improve the member's health outcomes. We apply a comprehensive suite of quality measurements, including both HIV-specific indicators as well as dozens of cost-cutting measures focused on other aspects of our members' health and well-being. Clear Health focuses our resources on solving the issues that are most important to achieving high-quality health outcomes in partnership with members.

1. EXPERIENCE ACHIEVING QUALITY STANDARDS WITH SIMILAR TARGET POPULATIONS, INCLUDING HEDIS® OR CONTRACT REQUIRED MEASURES.

Since May 2014, we have provided services to people living with HIV/AIDS enrolled in our Clear Health plan across all of Florida with the exception of Region 4. We currently serve more than 9,300 members under Clear Health and more than 13,000 people living with HIV/AIDS across 14 of our affiliate plans. Clear Health has been using focused measures for people living with HIV/AIDS since 2012. Our Quality Management team regularly reviews our portfolio of quality measures, recommends quality measures specific to the needs of individuals with HIV/AIDS, and uses national best practice standards such as HEDIS® and Agency for Health Care Administration (AHCA) defined population specific measures to assure a full health spectrum in our quality program for people living with HIV/AIDS.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

Clear Health's MDTs use a multitude of strategies to engage members, such as motivational interviewing, person-centered planning, and Trauma Informed Care (TIC) models. Our Case Managers (Managed Care Coordinators) are locally based, familiar with the communities where our members reside, and educated to address issues including stigma, cultural considerations, race/ethnicity, age, poverty, behavioral health (BH), and homelessness. As part of our efforts to match members to the provider(s) who can make them feel comfortable and best meet their needs, we identify preferences and foster strong relationships within our provider network. For example, a member may prefer a provider of a particular gender or one who is knowledgeable about the LGBTQ community. By considering these factors and working closely with our members, we increase engagement and ultimately improve health outcomes.

**** INNOVATION:** Clear Health has enlisted Earvin "Magic" Johnson, HIV/AIDS advocate and NBA legend, as a spokesperson to educate the community and reduce stigma around HIV/AIDS. He has participated in 14 Clear Health events since 2012, with six of those in 2016 alone. He has brought his personal story and celebrity presence to an illness that calls for heightened community recognition. ******

We have the following four HIV-specific measures in place as part of our quality management activities and propose to continue them under the new contract:

- **HIV Visits (HIVV):** This measure is an important quality indicator because it demonstrates how well our members are engaged in ongoing treatment. Regular provider visits support medication adherence, monitoring of clinical indicators such as viral load, and better overall outcomes. Our Quality Department and Managed Care Coordinators work hard to improve HIVV rates through member outreach and assistance navigating the provider directory.

To help our members obtain care through the most appropriate provider type, we have a "Red Ribbon" designation on our provider directory that identifies the providers who have an Infectious Disease specialty. Even through these "Red Ribbon" providers are specialists in nature, for our Clear Health population they are considered Primary Care Providers (PCPs).

**** RESULTS & SUCCESSES:** The 2016 Clear Health Performance Improvement Project (PIP) on HIVV illustrates that a majority of members (76.39 percent) had at least two medical visits within the measurement year, an increase of 117 percent from the baseline measurement period. ******

- **Highly Active Antiretroviral Therapy (HAART)** – Medication regimen is a primary strategy for managing HIV, so this measure is key to understanding if our members are accessing HAART as recommended. Clear Health has developed highly detailed mechanisms to report and improve quality related to medication adherence.

**** RESULTS & SUCCESSES:** Our rate of HAART compliance is excellent, with 94 percent success in 2016-2017, a dramatic improvement in compliance from 57 percent in the prior year. ******

- **Retention in Care:** As part of the continuum of care for HIV/AIDS, we routinely measure the rate of our members continuing care, which is vitally important for maintaining good health and adherence to treatment.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

**** RESULTS & SUCCESSES:** The Clear Health model of member engagement has proven successful, as evidenced by 75.19 percent of our members being in care in 2016. This is an increase compared to the prior year in our own membership (64.43 percent) as well as significantly outperforming the Florida average (58 percent) and the national average (41 percent) on this metric. ******

- **CD4 Count:** A CD4 count is a blood test to determine the strength of the immune system as measured by the presence of a type of white blood cell. The normal range for CD4 cells is between 600-1500, while a CD4 count of less than 200 cells/mL indicates a severely compromised immune system and a clinical diagnosis of AIDS.

**** RESULTS & SUCCESSES:** Since it began in 2014, Clear Health's CD4 Project has stabilized or improved outcomes for 42 percent of the members not lost to follow-up (due to disenrollment, death, or inability to contact). Currently, approximately 250 members are being tracked and assisted through the CD4 Project. ******

We also track the following cost-cutting measures in our quality management program and will continue to do so under the new Contract:

- **Tobacco Cessation –** Tobacco use is well understood to be harmful, and its negative effects are magnified for people living with HIV. Clear Health has a Healthy Behaviors program with incentives that target smoking cessation. The program is newly supported by a texting feature to encourage completion of tobacco cessation milestones, and rewards members upon completion. We expect these new features to increase participation in the smoking cessation program.

**** RESULTS & SUCCESSES:** Clear Health member participation rates in our Smoking Cessation program increased from 15 percent in 2015 to 18 percent in 2016. ******

- **Follow-Up After Mental Health Hospitalization –** Serious behavioral health (BH) conditions are more common in Clear Health's membership than in the general Medicaid population, so we take special interest in connecting members to continued care once they leave a facility for mental health treatment. Specifically, addiction-related diagnoses and mental health disorders each affect more than 30 percent of Clear Health enrollees. The Clear Health MDT reviews every member who is admitted using comprehensive information obtained from the member, BH provider, labs, health records, Concurrent Review Nurse Case Managers, Managed Care Coordinators, and Outreach Care Specialists. The MDT follows members through treatment and provides support to address all issues that might impact their health with consideration for perceived stigma, culture, race/ethnicity, age, poverty, BH, and homelessness. This extended care has helped realize a significant shift away from inpatient BH services, reducing inpatient BH admissions as well as inpatient days per thousand. Please see Miguel's story at the end of this section.

**** RESULTS & SUCCESSES:** In 2016, Clear Health reduced inpatient behavioral health admissions per thousand from 93.6 to 75.9. Similarly, inpatient days per thousand decreased from 352.5 to 239.8. ******

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

- **Plan All-Cause Readmission** – We track readmissions of all types very closely, since these represent opportunities for better coordination of care. To improve readmission rates, Clear Health implemented a telephonic and field-based transition of care (TOC) program and a field-based intensive case management program for individuals at highest risk for readmission. The member's Managed Care Coordinator contacts the member shortly before or after discharge to discuss the discharge plan they were given, ensure they understand and agree with the discharge plan, and explain the role of the TOC Managed Care Coordinator Nurse (TOC Nurse). The TOC Nurse calls or visits members to conduct assessments and uses a multidisciplinary approach to develop an ongoing plan of care with the member/family. Members are also screened for BH issues as part of our integrated care approach to improve outcomes. The Clear Health TOC Program incorporates best practices including the Coleman Model of care transitions. After the initial assessment, members at risk are encouraged to opt-in to the ongoing program as appropriate. If they agree, the field-based TOC Managed Care Coordinator Nurse will make additional home visits as needed and manage issues that would impact readmission or have a negative impact on the member's health. In addition to the TOC Nurse, members benefit from the continued support of their assigned Managed Care Coordinator who will continue to assist in the management of issues that may have a negative impact on the member's health or risk of readmission. Please see Renee's story at the end of this section.

**** RESULTS & SUCCESSES:** Our strategies have successfully reduced readmissions from 31.0 to 28.4 percent from 2015-2016 with increased support. ******

- **HEDIS®**

Clear Health and Simply's legacy organizations have dedicated an extensive amount of time and effort to improving clinical processes and outcomes as indicated by the dozens of individual measures in the NCQA HEDIS® set. Most HEDIS® indicators are not specific to HIV/ AIDS and/or may not be relevant to this population because of the nature of the measures (e.g. children measures, where the denominators are low and not reportable) but are important for general health. Clear Health Alliance achieved numerous year-over-year improvements from 2016 to 2017.

**** RESULTS & SUCCESSES:** Our HEDIS® successes at Clear Health include numerous year-over-year improvements, including Comprehensive Diabetes Care (CDC): HbA1c Testing (12.7 percent increase), CDC: Retinal Eye Exam (nine percent increase), and CDC: Medical Attention for Nephropathy (9.5 percent increase), Controlling Blood Pressure (10.7 percent increase), Annual Dental Visit (13.5 percent increase) and Follow-up After Mental Health Hospitalization (6.7 percent increase). ******

- **CAHPS®** – The Consumer Assessment of Healthcare Providers and Systems (CAHPS®) is the most widely used survey tool in the industry for monitoring member experience. We conduct CAHPS® surveys of our adult members annually and carefully analyze the results. In addition to the core survey, we include items MH1 through MH4 (related to Behavioral Health) and H.17 through H.20 (related to medical assistance with smoking and tobacco cessation) from the CAHPS® Health Plan Survey – Supplemental Items for the Adult Questionnaires. Clear Health's results indicate high levels of ongoing satisfaction with our health plan.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

**** RESULTS & SUCCESSES:** Clear Health achieved exceptionally high CAHPS® scores in 2017, indicating high levels of member satisfaction. Our results indicate 3 scores that matched the 100th percentile (Getting Care Quickly, Discussing Smoking Cessation Medications, and Flu Vaccine), 19 scores that exceeded the 90th percentile, and 6 scores that exceeded the 75th percentile. ******

**** SPOTLIGHT ON:** Supporting and Educating Member Leads to Medication Compliance
Fifty-six-year-old Robin became a Clear Health member in August 2014. Despite our encouragement and outreach, she was in denial of her condition and not taking her HIV medications. This led to frequent admissions and readmissions with a CD4 counts as low as 2. Her Managed Care Coordinator, Christina, worked with her, communicating in a non-judgmental way and establishing a rapport that helped build trust over time. When Robin was admitted with a CD4 count of 33, Christina talked with her about the benefits of enrolling in our Low CD4 Project, and Robin agreed.

Through continued education about the importance of medication compliance and the risk of opportunistic infections associated with not taking her medications, along with assistance in finding new providers, Robin slowly began to take her HIV medications as directed. The improvement to Robin's immune system has been dramatic, her last CD4 count was 756 with an undetectable viral load, and she has had only one hospital admission during 2017. ******

2. RELEVANCE OF QUALITY MEASURES TO THE SPECIALTY POPULATION(S)

We designed our QM program to improve the quality and safety of health care and services delivered to Clear Health members and promote an overall culture of quality throughout the organization. As Clear Health is a specialty plan for people living with HIV/AIDS, special attention is given to make sure quality activities and initiatives are specifically relevant to this population. For example, we use the four HIV-specific quality measures described above to track clinical indicators that are meaningful for people with HIV/AIDS.

We conduct both clinical and non-clinical Quality Improvement (QI) projects on an ongoing basis. We monitor and report core quality indicator metrics quarterly, with accountability generated by our quality committee structure. Our Quality Management Committee (QMC) reviews all measures and activities to ensure they are substantially relevant to improving the health, wellness, and quality of life for people living with HIV/AIDS. All rates deemed to be outliers are reviewed by the QMC and assigned a corresponding action plan to address issues identified. The QMC will follow up until the issue has been successfully resolved. Other specialized committees may take up specific issues, such as utilization management, that relate to improving quality.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

Clear Health currently performs four Medicaid Agency-approved Performance Improvement Projects (PIPs) for our population, but may change them as goals are reached or per contract requirements. This consists of a state-mandated collaborative PIP and additional PIP topics proposed and submitted by Clear Health for AHCA approval. All PIPs are designed to achieve, significant improvement to the quality of care and service delivery in areas that are expected to have a favorable effect on health outcomes and member satisfaction that are especially relevant to those living with HIV/AIDS. Topics for Clear Health's current PIPs include Preventive Dental Services for Children, HIV Medical Visit Frequency, Behavioral Health Screenings in Primary Care, and Member Satisfaction.

- Our HIV Medical Visit Frequency (HIVV) PIP aims to improve the percentage of members receiving two or more HIV-related outpatient visits at least 182 days apart within the calendar year. As discussed above, engagement in outpatient care is necessary for effective management of HIV. Since the implementation of the HIVV PIP in 2014, there has been significant improvement across all HIV measures, increasing the percentage of members with two or more visits, including the sub-measure that tracks visits with 182 days apart from zero in 2014 to 53.6 percent in 2016. There were improvements in all four categories measured.
- Clear Health is also working to increase rates of BH screenings by PCPs. The presence of several mental health and substance abuse diagnoses are known to be common among people living with HIV/AIDS. The relative frequency of these diagnoses in Florida appears lower than has been found in published studies. This suggests that members with mental health and substance abuse conditions may not be getting screened and diagnosed, or are not being diagnosed accurately, and therefore are not being referred for services that could improve their quality of life and enhance the effectiveness of medical treatment. In order to determine if screenings were being done but not coded correctly, we scheduled focus MRR reviews on BH screenings, which proved our hypothesis to be correct. Our interventions focus on provider education regarding accurate coding, member education regarding the importance of discussing BH with a provider, and system improvements to enhance internal reporting.
- Another PIP focuses on improving overall member satisfaction in the Clear Health population. The goal for this PIP is to increase the percentage of members who answer with an 8 or higher on the CAHPS® 5.0 Survey question, "Using any number from 0 to 10, where 0 is the worst health plan possible and 10 is the best health plan possible, what number would you use to rate your health plan"? Hearing from our members in face-to-face meetings throughout Florida has been instrumental in shaping our program so that it is both meaningful and effective for members. Clear Health's strong 2017 score on this measure places us in the top 20 percent of health plans nationally.

For each of its PIPs, Clear Health establishes a multi-disciplinary workgroup comprising internal staff, providers, and delegated vendors as applicable. We follow a formal QI process and all workgroup participants receive training on the QI process. Clear Health uses the PDCA (Plan-Do-Check-Act) cycle as its formal process. The core concept of the PDCA cycle is the use of short cycles of change to accelerate the rate of improvement. All PIPs achieve, through ongoing measurements and intervention, significant improvement to the quality of care and service delivery, sustained over time. We measure improvement by comparing a baseline measurement and an initial re-measurement following application of an intervention. Change must be statistically significant at a 95 percent confidence level and must be sustained for a period of

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

two additional re-measurements for us to consider it a success. PIPs that have successfully achieved sustained improvement, as approved by the Agency, are considered completed. In such cases, we will continue to monitor the performance indicators as part of the QI program and select a new PIP topic for Agency approval.

In addition to measures embedded in PIPs, Clear Health will continue to monitor and improve a full complement of clinical and non-clinical quality measures that are specific to our members living with HIV/AIDS. Our approach includes HEDIS®, CAHPS®, utilization indicators, and operational metrics that are relevant to the population. Indicators are developed and compared to external benchmarks and/or internal performance goals. A broad range of indicators are established for essential departments and clinical programs.

For example, in analyzing 30-day hospital readmissions, Clear Health identified a link between BH diagnoses and members who are readmitted to the hospital within 30 days of a previous discharge. Workgroup efforts and interventions were then designed to address the specific needs of this specialty population. In response, Clear Health's Managed Care Coordinators hold complex case rounds monthly. The primary focus is on members who present complex and/or challenging care coordination issues, such as high risk due to BH conditions. The team discusses suspected barriers to treatment, co-occurring medical conditions, and identifies potential social and/or treatment limitations and potential solutions. Participation is cross-departmental and includes Managed Care Coordination staff, Medical Director(s), BH representation, and Clinical Liaison, providers, and BH Managed Care Coordinators.

3. QUALITY MANAGEMENT ACTIVITIES THAT IMPROVE QUALITY FOR THE POPULATION(S) PROPOSED IN A MEANINGFUL WAY

Our QI program was designed with the understanding that people living with HIV/AIDS have complex medical and social needs and encounter unique barriers to achieving optimal health. In response to our members, we operate many initiatives and activities specifically targeted to improve quality. Our approach is collaborative and we encourage active participation and input from providers, members, and employees to accomplish our quality improvement activities. We understand that the unique barriers to care among people living with HIV/AIDS may include HIV-related stigma, distrust of the health care system, homelessness/transience, difficulty accessing transportation, and limited knowledge about available services. Clear Health has developed a specific set of interventions to address our members' complex barriers to care and improve clinical outcomes.

Clear Health's additional QM activities relevant to the HIV/AIDS population include:

- All Clear Health members that accept case management – opt-in are assigned a Managed Care Coordinator who works directly with each member to engage and understand the member's needs and strengths. We also have a group of specially trained Customer Care Representatives to take calls from Clear Health members. This specialized staff has completed additional training in HIV/AIDS, cultural sensitivity, and potential comorbidities. The same team performs welcome calls to new Clear Health members so there is a sense of community and a cohesiveness to the member experience.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

- Accreditation: Clear Health is currently accredited by the Accreditation Association for Ambulatory Health Care (AAAHC). AAAHC is a private, non-profit organization formed in 1979 to assist ambulatory health care organizations in improving the quality of care provided to patients. It accomplishes this by establishing, reviewing, and revising standards, measuring performance, and providing consultation and education. Clear Health is in the process of seeking NCQA accreditation.

**** RESULTS & SUCCESSES:** Clear Health received AAAHC accreditation spanning from January 30, 2016 to January 30, 2019. ******

- Multicultural Healthcare and Cultural Competency Plan (CCP) and Evaluation: In accordance with 42 CFR 438.206, Clear Health develops and implements a comprehensive written Cultural Competency Plan (CCP) describing our process to ensure that services are provided in a culturally competent manner to members. The CCP describes how Clear Health providers, employees, and systems effectively provide services to people of all cultures, races, ethnic backgrounds, sexual orientations, gender identities, socioeconomic status, disabilities and religions in a manner that recognizes values, affirms and respects the worth of the individual member, and protects and preserves the dignity of each. This is vitally important to the effective engagement and treatment of our members living with HIV/AIDS as culture plays a tremendous part in how they accept their diagnosis and participate in treatment. This Plan is updated annually and submitted to the Agency for approval each contract year. A summary of our CCP is available on our provider website and a hard copy is available to all by request.

**** TESTIMONIAL – Spotlight on NCQA Multicultural Health Care Distinction**
Part of the unified Simply, Amerigroup and our 15 affiliates are proud to hold NCQA Multicultural Health Care Distinction. “Earning Multicultural Health Care Distinction shows that an organization is making a breakthrough in providing excellent health care to diverse populations. I congratulate any organization that achieves this level of distinction. Eliminating racial and ethnic disparities in health care is essential to improving the quality of care overall.” - Margaret E. O’Kane, NCQA President ******

- We have a Disease Management (DM) Program for the entire Clear Health population. It is a system of coordinated health care intervention and communication. Our DM Program supports the provider/member relationship and plan of care; emphasizes prevention of exacerbations and complications using evidenced-based practice guidelines and empowerment strategies with the goal of improving the overall health of our members. The Program addresses co-morbid conditions and considers the whole health of the member. We develop and use a plan of treatment for each Program participant that is tailored to the individual member. Clear Health includes measurable goals and outcomes and sufficient information to determine if these goals are met. Clear Health members, with their Managed Care Coordinator, are regularly reviewing and updating each treatment plan at least annually.

- We provide Complex Case Management services to members who have experienced a critical event or diagnosis that requires the extensive use of resources and who need help in navigating the system to facilitate appropriate delivery of care and services. Our goal is to help members regain optimum health or improved functional capability, in the right setting and in a cost-effective manner with comprehensive assessment of the member’s condition; determination of available benefits and resources; and development and implementation of a case management

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

plan with performance goals, monitoring and follow-up. This focused management of a member's care has returned improved quality scores and better health outcomes for our members.

- Our Clear Health Member Advisory Committee (MAC) meetings are well attended by members. Staff from multiple departments attend MAC meetings to address member issues on the spot whenever possible, and the MAC also makes systemic recommendations to the health plan. For example, after listening to feedback from our members, we recognized the need for additional Clear Health MACs across the state. Various departments present at each meeting, such as QM, Member Services, Provider Relations, and Grievance and Appeals. Behavioral Health is a standard agenda item at all these meetings, as this is an important issue for our Clear Health members. The MAC membership also brings region-specific issues to these individual meetings, which resulted in mobile units being deployed to provide dental care in some of the areas where it was difficult for members to access those services. The MAC reports all feedback and results from the meetings to the QMC.

- Dress for Success: Clear Health partners with community resources that we know will benefit our members' efforts to achieve or sustain wellness, including supports for employment like Dress for Success. We partner with Dress for Success Palm Beaches to serve women from Palm Beach, Martin, St. Lucie, Hendry, and Northern Broward Counties through a mobile outreach unit. These counties account for nearly 5,000 square miles, and the total population of these areas is nearly 3 million, with women accounting for 51 percent of the overall population. Despite an improved unemployment rate, low-income single mothers continue to struggle to provide the basic necessities for their households and their children. With an historical rate of 57 percent employment for women utilizing Dress for Success' full scope of services, this mobile unit will provide outreach for suiting and training to women entering or re-entering the workforce who are not able to access services from Dress for Success' main location.

Dress for Success Worldwide provides a full continuum of services to offer long-lasting solutions that enable women to break the cycle of poverty. In addition to suiting and on-site coaching programs, Dress for Success Palm Beaches offers two distinct 10-week job readiness courses for women based on their age group. They also recently launched their new WAGE (Women Achieving Growth in Employment) program, geared toward enhancing job retention and growth for women already working.

Sponsoring Dress for Success Palm Beaches in their efforts to offer a Mobile Career Center will enable the next logical step in the life cycle of their organization, and bring job readiness and job retention programs into the community, with Clear Health members having access to priority appointments and training. Clear Health will work closely with Dress for Success Palm Beaches to bring the Mobile Career Center to approved venues, such as health fairs or other community events that may be accessible to our members.

- Clinical Practice Guideline (CPG) and Preventive Health Guideline Development and Review are adopted based on the health care needs of the member population and opportunities for improvement identified through the QM Program. These guidelines are reviewed, revised, and approved annually using nationally recognized evidenced-based literature. We adopt the latest antiretroviral regimen and treatments recommended by the U.S. Department of Health and Human Services and expert opinions from nationally recognized societies and organizations

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

such as the American Diabetes Association, American Psychological Association, American Congress of Obstetricians and Gynecologists and National Heart Lung and Blood Institute. The guidelines are disseminated to members and providers via newsletter articles and via our website. We maintain written policies and procedures that reflect the current standards of medical practice and clinical guidelines adopted. As new practice guidelines are published and accepted by our Committees, the Medical Director introduces them and trains staff to ensure we are using the most up to date practice guidelines throughout our organization.

**** INNOVATION:** Clear Health has shared training and tools to help our infectious disease providers better understand the complex issues facing our members with HIV/AIDS and where standard treatment options may not be the best solution for this population. These trainings and tools are updated as needed to provide the most current information available. ******

- Our Early and Periodic Screening Diagnosis and Treatment (EPSDT) program strives to improve Child Health Check-Up (CHCUP) rates for children and adolescents in the Clear Health membership. We operate multiple concurrent improvement strategies: 1) Contacting providers who have the highest number of members missing visits or services, 2) Phone outreach and mailing to all new members to discuss the importance of child health check-ups and dental services and to offer assistance in making an appointment, 3) Managed Care Coordinators track engagement efforts and results with time dedicated each week to member outreach for children and adolescents who are overdue for services, 4) Managed Care Coordinators conduct home visits for members who can't be reached by phone or mail to complete assessments, schedule appointments, provide education, and coordinate other resources such as transportation, 5) Medical home visits are arranged for members who would like to complete a CHCUP visit but who cannot attend an office visit.

- Clear Health developed an HIV Cultural Competency training for our Managed Care Coordinators to help them understand how to best engage, educate, and monitor our members and address the indicators specific to this population. The training is offered on a regular basis to reinforce these important principles and updated as needed to provide the most current information available to best serve our members. Additionally we conduct annual training and highlight new guidelines, regimens, and strategies for caring for our members.

- Clear Health is supported by dedicated staff in QM who understand HIV/AIDS measurement issues and use best practices to address them. If necessary to improve quality, a workgroup or task force will be created in order to conduct a Root Cause analysis and implement the Plan-Do-Check Act model. The workgroup or task force will report its progress to the QMC until the resolution of the issue is achieved.

- Clear Health has appointed an experienced HIV/AIDS specialist to serve as a liaison between members and our Quality department. The HIV/AIDS Liaison reviews performance measures to determine what steps are needed to improve performance and to ensure Managed Care Coordinators meet required standards. The HIV Liaison and Quality team follow ER and hospital admissions dashboard reports in real time and look at all measures to actively intervene when any decline is indicated. Our Liaison is responsible for leading HIV/AIDS QI projects for Medicaid as well as coordinating and managing HIV/AIDS QI workgroups. The Clear Health HIV Liaison also coordinates the Member Advisory Meetings, training on cultural competency, HIV updates, and childhood wellness.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

- Clear Health is responding to the challenges of aging members with HIV/AIDS and other comorbid conditions. Older patients with HIV face higher rates of cardiovascular disease, diabetes, hypertension, impaired cognitive function, cancer, frailty, and behavioral health disorders. They may also face these issues at an earlier age than the general population. We have adapted our strategies to capture more clinical, social, and pharmacological interventions. We have focused on offering ongoing education to our infectious disease providers to enhance understanding of clinical guidelines and management of conditions that can be more complicated for people with HIV/AIDS, such as hypertension and high cholesterol.

- BH Care Services monitoring and improvement are integrated into the overall QMC and encompass state regulatory requirements as applicable. Areas of focus include access and availability of services, coordination of care (including coordination between medical and BH providers), disease management and case management services, and assessment of member experience with behavioral health care and services to ensure an integrated model of care. Clear Health uses BH HEDIS® measures and methodology as performance indicators for clinical improvement. Integrated operations include both behavioral health and medical personnel. Integration is further accomplished by BH practitioner representation on quality-related committees.

- Social Determinants of Health and Complex Needs: We incorporate data from multiple sources, including utilization data, health risk assessments, state agency aid categories, demographic information, Health Department epidemiology reports, and various other sources to ensure identification of members with complex health needs. This information helps drive program development, member, and provider education, and outreach programs. For example, according to The North America Housing & HIV/AIDS Research Summit Series, homelessness is both a cause and an effect of HIV infection. People coping with homelessness are at greater risk of becoming infected with HIV, and people living with HIV/AIDS experience higher rates of housing loss and instability. Clear Health tracks the percentage of members who were homeless or unstably housed during the measurement year. This data was collected through a review of Health Risk Assessments and members' addresses in the state eligibility file. It is important to note that homelessness is not easily captured – while some members' addresses are listed as Homeless or Shelter, others are identified by searching for specific shelter names and/or addresses, so although we capture most of those members who are homeless, housing status is still considered somewhat incomplete. In order to assist members who have been identified with unstable housing, the Clear Health Care Coordination team has developed relationships with community agencies that receive funds from The Housing Opportunities for Persons with AIDS (HOPWA) program and/or the Federal Emergency Management Agency (FEMA). They use a collaborative approach to assist members. Although AHCA no longer includes housing as a required performance measure, Clear Health still monitors the number of members with unstable housing and is currently participating in an initiative led by Anthem that focuses on specialty populations' non-clinical measures and their impact on health outcomes.

**** INNOVATION:** Clear Health will utilize our partnerships with key community organizations such as the former PAC waiver entities to facilitate our process of locating Clear Health's new members identified as homeless – as well as members that we have difficulty locating, contacting, and engaging in care. The PAC waiver entities we partner with will also work closely with our Managed Care Coordinators to be our local “feet on the street” – personally working with our members to help engage them in care. Our Managed Care Coordinators will continue

**EXHIBIT A-4-d
SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA**

to monitor member engagement and gaps in care, and will coordinate with these PAC waiver entities to further support our HEDIS® initiatives – helping us engage our homeless and/or difficult to contact members to make sure timely care and services are arranged and received.

**

- Grievances and Appeals (2016 – Q1 2017): Since, 2016 all Clear Health Grievance and Appeals processes are in compliance with AHCA Service Level Agreements (SLAs). The Compliance Committee monitors and consistently reports to the QMC. There have been no EPSDT complaints or grievances presented to QMC. All Grievance and Appeals are resolved and trended to identify systemic issues that are then addressed at a higher level to prevent reoccurrence.
- Critical Incident Reporting for critical and adverse incident identification, tracking, analysis, and reporting to address/eliminate potential and actual quality of care and/or health and safety issues, in accordance with s.39.201 and Chapter 415, F.S. We report suspected unlicensed ALFs and AFCHs to the Agency and require providers to do the same pursuant to 408.812 F.S.
- Healthy Behaviors program: We encourage and reward healthy behaviors. Pursuant to Florida Statute 409.973(3), effective October 1, 2014, we have medically approved programs for Smoking Cessation, Weight Management, and Alcohol and Substance Abuse recovery. We have developed two additional programs for Maternity and Well Child Visits. We have a process in place to identify eligible members for these 5 programs and to secure the members' commitment to participation in these programs. We report on the Healthy Behaviors program in accordance with Section XIV, Reporting Requirements, and the Managed Care Report Guide. Data is submitted quarterly on each Healthy Behavior program, caseloads, and the amount and type of rewards/incentives provided for the Clear Health program.

In summary, Clear Health's quality management activities demonstrate meaningful improvement for members on a variety of measures. We have successfully reduced hospital readmissions from 31.0 percent to 28.4 percent from 2015-2016, reduced inpatient BH admissions per thousand from 93.6 to 75.9, and decreased inpatient days per thousand from 352.5 to 239.8. Our members' rate of HAART compliance is excellent with 94 percent success in 2016-2017. Several HEDIS® indicators have improved more than 10 percentage points year-over-year, including HbA1c Testing, Controlling Blood Pressure, and Annual Dental Visits. As our population consists of people with HIV/AIDS, one of our most significant improvements is the increased percentage of members with two or more HIV visits per year from 56 percent in 2014 to 76.39 percent in 2016. Lastly, Medicaid Health Plan Report Card for 2016 showed that Clear Health improved in two of the six categories followed for Quality of Care.

4. THE EXTENT TO WHICH THE RESPONDENT MET QUALITY MEASURE TARGETS, SUCCESSFULLY REMEDIATED ALL FAILURES OR ACHIEVED IMPROVEMENT TO OVERALL PERFORMANCE.

For the 2017 reporting year, Clear Health met or exceeded the State's goal on 12 out of 25 HEDIS® measures reported. Additionally, 19 of the measures showed year-over-year improvement from 2016 to 2017. Among the 12 measures for which Clear Health successfully exceeded the state's target of the NCQA 50th percentile are 7 measures that achieved the 90th

EXHIBIT A-4-d
SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA

percentile or higher, a significantly higher benchmark. Clear Health's 12 measures with strong performance include:

- Antidepressant Medication Management – Acute Phase
- Initiation and Engagement of Alcohol or Other Drug Dependence Treatment – Initiation Total
- Well-Child Visits - Ages 3-6
- Adult Access to Preventive Ambulatory Care
- Adult BMI Assessment
- Cervical Cancer Screening
- Child Access to PCP – Ages 12 to 24 months
- Chlamydia Screening
- Comprehensive Diabetes Care: HbA1c Testing
- Comprehensive Diabetes Care: Medical Attention for Nephropathy
- Medication Management for People with Asthma
- Annual Monitoring for Patients on Persistent Medication

Five of the requested measures were not reported due to insufficient denominators; all of these were measures focused on children and adolescents and the Clear Health enrollment in this age group is small. Fewer than three percent of Clear Health members are younger than 20 years of age.

Of the 13 reported measures where Clear Health did not achieve the State's goal, nine improved from the prior year's rates. One measure that progressed toward the state's target of the NCQA 50th percentile from 2016 to 2017 is Follow Up After Hospitalization for Mental Illness (7 - Day), which improved from 21.5 percent to 28.2 percent in 2017. One remediation strategy for this measure is our field-based Transition of Care (TOC) program, described above. All Clear Health members released after a BH hospitalization are assigned a TOC MCC Nurse. The member's Managed Care Coordinator will contact the member shortly after discharge to discuss the discharge plan they were given, ensure they understand and agree with the discharge plan, and explain the role of TOC Nurse. The TOC Nurse will visit members to conduct home assessments and use a multidisciplinary approach to develop an ongoing plan of care with the member/family. The Clear Health TOC Program incorporates best practices including the Coleman model of care transitions. In addition to the TOC Nurse, members benefit from the continued support of their assigned Managed Care Coordinator who will continue to assist in the management of issues that would have a negative impact on the member's health or risk of readmission.

Additionally, Clear Health observed improvement in the following measures:

- Adolescent Well Care: Improved from 45.5 percent to 46.0 percent in 2017.
- Annual Dental Visit: Ages 2 – 21: Improved from 26.7 percent to 40.2 percent in 2017.
- Breast Cancer Screening: Improved from 52.1 percent to 58.1 percent in 2017.
- Child Access to PCP: Ages 7 - 11: Improved from 0 percent to 66.7 percent in 2017.
- Postpartum Care: Improved from 43.6 percent to 48.8 percent in 2017.

EXHIBIT A-4-d
SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA

- Frequency of Prenatal Care: Improved from 44.5 percent to 47.7 percent in 2017.
- Comprehensive Diabetes Care: Eye Exam: Improved from 33.3 percent to 42.3 percent in 2017.
- Controlling High Blood Pressure: Improved from 32.6 percent to 44.3 percent in 2017.

Our Healthy Behaviors program addresses all measures listed above, encouraging members to seek preventative care or ongoing chronic health care monitoring. This is an evidenced-based program that is part of our overall strategy to connect members to Primary Care Providers or other consistent sources of care. We contact Clear Health members through multiple modes of communication to encourage them to obtain both preventive and follow-up services. Invitations to participate in the Healthy Behaviors program are provided to all newly enrolled members and annually as a part of our Preventive Health Reminder outreach efforts through each member's Managed Care Coordinator.

As soon as a Florida Medicaid member becomes a Clear Health member, we begin tracking services received and gaps in care to promote the timely, effective completion of services. Our tracking tools enable us to closely monitor access to preventive service and adherence to medications. We assign a Managed Care Coordinator to each member, who reminds them about upcoming or missed screenings as well as informing them about the Healthy Behaviors program that offers incentives for their efforts in meeting these goals.

Through participating in the Healthy Behaviors program, members can earn points that they can use to redeem a range of health-related gifts. The program includes milestones that are based on HEDIS® measures. Completion of each milestone currently earns the member a set number of points up to a total value of \$50 per program, which can be redeemed for items from an AHCA-approved list.

The four measures that did not show improvement from the previous year were:

- Child Access to PCP - Ages 25 Months - 6 Years
- Child Access to PCP - Ages 12 - 19 Years
- Timeliness of Prenatal Care
- Comprehensive Diabetes Care: HbA1c <8

As previously discussed, the enrollment of pregnant women, children, and adolescents in Clear Health is small (fewer than three percent of members are younger than 20) and this could have a statistical impact on these measures. The smaller a measure's denominator population, the more likely that change in the rate is due to chance instead of a true underlying change in care patterns. Moreover, the Infectious Diseases Society of America has recommended individualization of HbA1c targets for people living with HIV, meaning that eight percent may not be an appropriate threshold for all members. Some adverse consequences of more intensive glucose control have been observed in clinical trials, including increased severe hypoglycemia. Tighter control is more appropriate for younger, healthier patients, whereas looser control may be more appropriate for older patients with multiple comorbidities who are prone to hypoglycemia (Monroe, Glesby, Brown, 2014). The CDC also states that some HIV medications

EXHIBIT A-4-d
SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA

also predispose individuals to diabetes and dyslipidemia, while treatment options may be limited due to interactions with the agents used to treat co-occurring conditions.

Despite the methodological weaknesses in these metrics, Clear Health is committed to improving our rates and strives to meet the state's targets for all measures. Recently released results of the HEDIS performance data for 2016, which will appear in the fourth annual Medicaid Health Plan Report Card, show that Clear Health improved in two of the six categories – Pregnancy-related care and Living with Illness. A third measure, Keeping Kids Healthy was found to be not measurable/too small a population.

Our strategies for continued improvement include the Healthy Behaviors program, described above, and its incentives for members to receive preventive visits, engage in prenatal care, and manage diabetes. Additionally, each Clear Health member has a Managed Care Coordinator who ensures the member is aware of these important services and the resources available to them to support wellness and improved outcomes. For example, enrollment in one of our NCQA-accredited disease management programs may be beneficial for members with diabetes and/or members who are pregnant. To increase rates of children completing primary care visits, we will continue to execute our outreach and education efforts for parents/guardians and increase access through Clinic Days, school-based health centers, and telemedicine.

Clear Health's Managed Care Coordinators, in partnership with our Quality Management team and our specially trained Customer Care Representatives, will focus on improvement in these four areas while maintaining performance levels for other measures. We will review progress monthly to identify additional steps needed to make the necessary improvements.

Evaluation Criteria:

1. The extent of experience (e.g., number of Contracts, enrollees or years) in achieving quality standards with similar target populations, including HEDIS or Contract required measures.
2. The extent to which the quality measures proposed are relevant to the specialty population(s) being proposed for this solicitation.
3. The extent to which the quality management activities proposed demonstrate the ability to improve quality for the population(s) proposed in a meaningful way.
4. The extent to which the respondent met quality measure targets, successfully remediated all failures or achieved improvement to overall performance.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

C. RECIPIENT EXPERIENCE

Specialty SRC#4 Eligibility and Enrollment (Statewide):

The respondent shall propose detailed and specific criteria (age, medical condition and/or diagnoses) for the specialty population proposed in response to this solicitation. The respondent shall include proposed methods for identifying the specialty population proposed, including any data sources/system, specific medical codes for procedures (e.g. Current Procedural Technology (CPT), Healthcare Common Procedure Coding System (HCPC), International Classification of Diseases (ICD-10)) or diagnoses (e.g. ICD-10, Diagnosis Related Groups (DRG), American College of Gastroenterology (ACG)) associated with the population, clinical assessment and/or referral protocols required. The respondent shall identify the estimated number of recipients meeting the criteria for the specialty population proposed, along with the source or methodology for such an estimate.

Response:

Simply Healthcare Plans, Inc. (Simply), D/B/A Clear Health Alliance (Clear Health), is our HIV/AIDS specialty plan and is the respondent to this ITN. Simply brings together the best practices and innovative solutions of three Florida health plans that recently merged to become one entity. The merged entities are the original Simply, Better Health, Inc. (Better Health), and AMERIGROUP Florida, Inc. (Amerigroup). The unified Simply draws on the strength of each legacy organization's experience to elevate the performance of every area of our operations.

1. A CLEARLY DEFINED AND READILY IDENTIFIABLE TARGET POPULATION

Our HIV/AIDS specialty plan receives members who are either HIV positive, but asymptomatic, individuals with symptomatic HIV disease or individuals with CDC-defined AIDS identified via the State's HIV/AIDS algorithm. We propose using ICD-10 diagnosis codes available through claims data as the primary criteria to confirm the diagnosis for those individuals that were enrolled into the HIV/AIDS specialty plan.

The primary diagnosis codes clearly identifying individuals with a HIV/AIDS diagnosis include Z21 (asymptomatic HIV infection), B20 (symptomatic HIV infection and AIDS), and B97.35 (HIV-2 infection, rare in the US.) These diagnosis codes received from claims and encounter data or other sources are the primary mechanism for members to receive the appropriate designation of HIV/AIDS. In addition to the primary codes described, we use the State's HIV/AIDS algorithm, with data elements that include additional diagnosis codes, laboratory procedure codes commonly used with persons who have HIV/AIDS, and medications used to treat the condition to further verify diagnosis.

We recommend that the HIV/AIDS designation not be dropped once it is confirmed, even if no claims appear for an extended period. Since many factors can affect Medicaid eligibility and some members may temporarily leave the state or drop out of care voluntarily, the designation of HIV positive status should remain permanently; that is, never dropped from the client's record. Once confirmed, the HIV or AIDS diagnosis is not reversible.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

Upon review of the State's algorithm to determine HIV or AIDS status, we also believe that HIV medications to make the designation should be used as a secondary issue. Not all HIV positive individuals have current claims for HIV medications for various reasons (for example, participation in clinical trial), and some persons who are HIV negative may be taking components of an HIV regimen that is FDA approved for Hepatitis B or as an approved pre- or post-exposure prophylaxis. We recommend a review of all members with claims that include HIV medications. If there is not a diagnosis code associated with the client, additional investigation will be initiated by Clear Health. We have found that some members had the HIV/AIDS designation incorrectly because codes (in original or subsequent algorithms) related to exposure, testing, or medications did not accurately determine status. Because some members could have potential exposure requiring serial testing and possible use of antiretroviral medications for post exposure prophylaxis without the subsequent sero-conversion; there remains the possibility of designating the member inappropriately. Clear Health currently reports any member found not to have HIV to the state on a monthly basis as a contractual requirement of the MMA.

As part of a current review, Clear Health also recommends certain changes to the existing algorithm, including additional review for pediatric members who may have received designation inappropriately due to exposure (without subsequent infection). We do not recommend using prescription drug claims data to identify potential members for the specialty plan because some of these medications may be used to treat or prevent other conditions. We recommend that the HIV/AIDS designation, once created based on these specific diagnoses codes, remain the status for these members.

Clear Health has collaborated with the Medical Director of the Bureau of HIV/AIDS for the Florida Department of Health as well as our Medical Directors to review this criteria of identifying individuals with HIV/AIDS in an effort to streamline, improve, and clearly identify members with HIV/AIDS so they could be enrolled in the specialty plan. We value our partnership with the Agency, and will continue to work collaboratively to refine the State's HIV algorithm, as needed, so that it accurately identifies the potential members who are HIV positive and who are eligible to receive Medicaid services under the specialty plan.

In addition, we recommend that Medicaid Options enroll an individual who, self identifies with a diagnosis of HIV/AIDS and expresses a desire to be enrolled in the specialty plan. Upon enrollment, the individual will be assigned to the HIV/AIDS specialty plan and the plan will confirm with the member's PCP the HIV/AIDS diagnosis following the completion of the comprehensive health assessment. Our experience has shown that providers may not submit diagnosis codes in a manner that would enable those living with HIV/AIDS to be appropriately flagged in the State's system.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

Clear Health complies with the AHCA contractual requirement under Managed Medical Assistance (MMA) to report members who we find do not have a diagnosis of HIV/AIDS based on assessment/claim review/provider attestation. We developed a utilization management policy and procedure for verifying eligibility to assure timely reporting of ineligible members. To date, we have reported over 600 members to the State via this monthly report. These members are reported monthly to the Compliance department for submission to the Agency via the Plan's Agency Contract Manager. In the case of minors, we will report members without the HIV or AIDS condition if the parent or legal guardian confirms via self-report that the member does not meet the criteria for enrollment in the specialty plan. We make every effort to review medical and pharmacy claims that may contradict the self-report of the parent or legal guardian. Absent such a claim, we will include the member on the Non-HIV Report for submission to AHCA. The report will include the Plan's name and Medicaid provider number; and members' full name, date of birth, and MID number.

2. A SPECIALTY POPULATION THAT DOES NOT EXCEED 10 PERCENT OF THE TOTAL POPULATION OF MMA ELIGIBLE RECIPIENTS.

Based on data available from the Agency, HIV/AIDS eligibles do not exceed 10 percent of the total Medicaid eligible population in any of the eleven regions.

As another data point, the prevalence of Persons Living with HIV/AIDS (PLWHA) by region and by county is available through the Florida Department of Health. In 2016, approximately 135,986 persons were living with HIV in the state of Florida. Estimates of individuals enrolled in Florida Medicaid at this time approaches 18,000 from available resources. The total Medicaid program has more than three million members. Therefore, the overall percent of MMA members eligible for the HIV specialty plan is less than one percent.

EXHIBIT A-4-d
SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA

Evaluation Criteria:

1. The extent to which the proposed criterion produces a clearly defined and readily identifiable target population.
2. The extent to which the proposed criterion results in a specialty population that does not exceed ten percent (10%) of the total population of MMA eligible recipients.

Score: This section is worth a maximum of 40 raw points as indicated below.

For Item 1:

- (a) 20 points if the proposed criterion produces a clear target population that is data driven and not dependent on assessment or referral;
- (b) 10 points if the proposed criterion produces a clear target population that is in any way dependent on assessment or referral;
- (c) 0 points if the proposed criterion does not produce a clear target population that can readily be identified.

For Item 2:

- (a) 20 points if the estimated size of the specialty population does not exceed ten percent (10%) of the estimated total population of MMA recipients;
- (b) 0 points if the estimated size of the specialty population exceeds ten percent (10%) of the estimated total population of MMA recipients.

AND EVALUATION CRITERIA

E. DELIVERY SYSTEM COORDINATION

Specialty SRC#5 - PROVIDER NETWORK (Regional):

The respondent shall propose provider network standards that meet the needs of the specialty population(s) being proposed for this solicitation, including specific provider access ratios that exceed MMA standards for provider types relevant to the specialty population(s). The respondent (including respondents' parent, affiliate(s) or subsidiary(ies)) shall describe its experience in managing provider networks for population(s) similar to the specialty population(s) being proposed for this solicitation, including experience with provider contracting and performance measurement relevant to the specialty population(s) proposed. Identify specific requirements for provider contracts, credentialing, provider handbooks, etc., the respondent proposes for network providers serving the specialty population(s) proposed. Describe any additional provider services the respondent proposes to make available to the provider network serving the specialty population(s).

Response:

Simply Healthcare Plans, Inc. D/B/A Clear Health Alliance (Clear Health) has managed a provider network serving the HIV/AIDS Medicaid population within the Region for four years. Clear Health alliance currently serves 233 enrollees (members) with 1,257 providers in Region 1. We focus our relationships with HIV clinics within the regions that are primarily Federally Qualified Health Centers (FQHCs), Rural Health Clinics (RHCs), County Health Departments (CHDs), and/or community health centers. These clinics have an integrated model of behavioral health and primary care services.

1. EXPERIENCE SERVING THE PROPOSED POPULATION

Clear Health has been managing our provider network serving members with HIV/AIDS since February 2012. Clear Health has a Medicaid contract with the Agency with an HIV/AIDS specialty designation. We currently serve more than 9,300 people living with HIV/AIDS in 10 regions.

As Florida's largest HIV/AIDS specialty plan, Clear Health has extensive experience and qualifications in contracting and servicing networks designed to meet the special needs of our HIV/AIDS population. We recognize that to develop and maintain a high quality network to serve the HIV/AIDS Medicaid population, our company must have the respect and trust of the community. We began a very grass roots approach to engaging with providers in the community. This approach has been effective and as a result we have been able to engage not only providers who historically have been treating people living with HIV/AIDS, but we also were successful in engaging non-traditional providers like Medicare and Commercial to join our network. Our management team has a combined 105 years of experience serving the Florida Medicaid community and are experts in the industry.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

Former NBA superstar, Earvin “Magic” Johnson, arguably the most credible and well known advocate for people living with HIV/AIDS, is a spokesperson for Clear Health. His passion for helping individuals with HIV/AIDS contributes to the bench strength of our organization. Adding to our experience in serving this population, we have partnered with a world-renowned HIV/AIDS research and teaching institution, the University of Miami, a Statewide Essential Provider.

To assure our network of Primary Care Providers (PCPs) meets member needs, we have expanded our definition of PCP to include family practice, general practice, pediatrics, internal medicine, and infectious disease providers. We designate providers with specialized HIV/AIDS training with a red ribbon beside their name in the provider directory, informing members of the provider’s additional specialized HIV/AIDS care and treatment competency. This “Red Ribbon” program is nationally recognized and testament to our patient-centered model of service and support. Other provider types may also specialize in HIV/AIDS.

Based on our experience in providing services to the specialty population proposed, we have identified that the following specialties are critical due to the most commonly seen comorbidities in the HIV/AIDS population: Infectious Disease, Cardiology, Hematology/Oncology, Dermatology, Pulmonology, Endocrinology, Gastroenterology, and Behavioral Health. We meet the required access standards in all regions for all of these specialties. Our experienced provider relations team recognizes the need to partner with FQHCs, CHDs, RHCs, and other key providers to serve these members.

Care and treatment of HIV/AIDS is multi-dimensional, and a big part of our success in this program has been our collaboration with more than just medical providers. Clear Health has created strong community partnerships and continues to foster relationships with the HIV/AIDS community. As a specialty plan, we foster affiliations with community-based organizations with aligned goals for education, empowerment, improved access to care and health outcomes, reduction of HIV transmission, and removing barriers to services.

Clear Health is proud of our strong performance including:

- Steady increases in enrollment since program inception
- Improvements in key HEDIS® scores, including HIV medical visits, 2015-2016
- Steady decline in pharmacy PMPM costs, substance abuse inpatient days/1000, all cause readmissions (PCR), 2015-2016
- Increased direct member contacts, completed assessments, and multi-disciplinary team meetings, percentage of members accessing behavioral health services
- Stable performance in general medical and mental health hospital admissions/1000, average length of stay for medical and behavioral health hospitalizations
- Key member and provider satisfaction rating dimensions improved, 2015-2016
- Internal case management satisfaction survey scores improved, 2015-2016

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

2. DEMONSTRATED EXPERIENCE MANAGING A PROVIDER NETWORK RELEVANT TO THE SPECIALTY POPULATION

Clear Health has built an extensive HIV/AIDS Medicaid network in Florida, establishing close relationships with PCPs, specialists, CHDs, FQHCs, RHCs, and teaching institutions. We have been able to recruit PCPs and specialists in infectious disease, cardiology, dermatology, hematology/oncology, behavioral health, gastroenterology, and endocrinology who have experience in treating patients with HIV disease to become Medicaid providers and contract with us. We have developed a provider recruitment strategy and message of inclusivity and collaboration and actively provided education and support for the providers who serve our specialty population.

Our ongoing recruitment efforts specifically target specialists who are experienced in working with people living with HIV/AIDS. It is our practice to work closely with our PCPs and determine who they most commonly refer members to so we can make every attempt to include those providers in our network. We have been successful in contracting with most physicians who have traditionally not accepted Medicaid enrollees from other plans and/or direct MediPass recipients.

Our proven experience demonstrates our ability to manage an HIV/AIDS network:

Our approach to provider engagement has changed the dynamics of traditional provider/health plan relationships by developing lasting provider partnerships. Leadership seeks out provider feedback and responds rapidly to improve both our network and internal processes. We support our high-performing network with value-based payment agreements. This provider engagement model supports increased high quality scores, improved member outcomes, and solid performance.

We provide an enhanced level of support to our red ribbon providers. These are providers with specialized HIV/AIDS training designated by including a red ribbon beside their name in our provider directory, informing members of the provider's additional specialized HIV/AIDS care and treatment competency. Our red ribbon program is nationally recognized and is a testament to our patient-centered model of service and support.

Our regionally based Provider Network Managers live and work in their local communities and have developed strong relationships with providers in each region. Our local and innovative approach, focused on supporting providers' growth capabilities and capacity to optimize member outcomes allows us to leverage our local presence to develop and refine strategies that address our members' needs. Our Provider Network Managers have extensive experience meeting the needs of providers servicing members with HIV/AIDS due to our experience across Florida. Our Provider Network Managers in Regions 1, 2, 3, 8, and 9 focus solely on meeting the needs of Clear Health providers. In our other regions, specifically 5, 6, 7, 10 and 11 we cross-train our Provider Network Managers to leverage the volume of our membership and the diversity of our products to manage an experienced network across all lines of business.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

- We currently manage an extensive HIV/AIDS Medicaid network in Florida. We have identified, developed, and managed this unique specialty plan, building and maintaining strong relationships with CHDs, FQHCs, RHCs, teaching institutions, community-based centers, and leaders in the urban communities where the epidemic is widespread.
- Our management team has more than 105 years of experience in developing and maintaining Florida Medicaid networks. These networks, which include FQHCs, CHCs, and RHCs, all have experience with HIV/AIDS patients. Clear Health partners with the FQHC Escambia Community Clinics, which manage 27 percent of the region's Clear Health Alliance membership, and County Health Department Okaloosa. We have contracted with 20 FQHCs and 10 RHCs locations within the region. Clear Health also partners with Ryan White Programs and CHD Walton, an HIV specialty clinic, as options for our membership.
- Our management team has the trust and respect of HIV/AIDS providers and community organizations. We target providers to include in our network based on their involvement in the community working with HIV/AIDS. We continue to identify opportunities to partner with new HIV/AIDS specialty clinics to include in the network. For example, the Lee County Health Department just opened a new HIV/AIDS clinic and we contracted with them immediately upon their opening.
- Clear Health benefits from Simply's extensive Medicaid provider network throughout Florida.

3. PROVIDER CAPACITY RATIOS ASSURE THE ADEQUACY OF THE PROVIDER NETWORK

We propose a provider network standard of 1:750 for primary care providers (PCPs). This meets the MMA standard of 1:750 for PCPs and 1:6,250 for infectious disease specialists. Based on our experience in working with the specialty population, we recognize the importance of having a broader understanding of their unique needs and the providers they need in our network for their treatment and care.

We propose that providers from the following areas of medicine serve as PCPs: Family Practice, General Practice, Pediatrics, Internal Medicine, and Infectious Disease. We encourage providers who are not credentialed by the American Academy of HIV Medicine (AAHIVM) or recognized by the Florida/Caribbean AIDS Education and Treatment Centers (AETC) to do so, given our close working relationship with Dr. Jeffrey Beal, the Principal Investigator and Clinical Director for AETC. We have been successful in contracting with most providers who have traditionally not accepted Medicaid members from other plans or direct MediPass recipients.

An OB/GYN may serve as a PCP for a pregnant member if she meets criteria for HIV expertise and is willing to participate as a PCP. We view pregnancy as an emergent condition, and pregnant members receive the highest level of intervention and coordination. OB/GYNs in our network must understand the importance of mother-to-child transmission of HIV/AIDS and have experience in administering the protocols to reduce the likelihood of transmission.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

We work to make sure that all pregnant women who are infected with HIV are offered the latest antiretroviral regimen recommended by the Department of Health and Human Services. OB/GYNs in our network must follow the Recommendations for Use of Antiretroviral Drugs in Pregnant HIV-1-Infected Women for Maternal Health and Interventions to Reduce Perinatal HIV Transmission in the United States.

Based on our experience with our specialty population, we know that making certain specialties available in our network is critical due to the most common comorbidities in the HIV/AIDS population: Infectious Disease, Cardiology, Hematology/Oncology, Dermatology, Pulmonology, Endocrinology, Gastroenterology, and Behavioral Health. We meet the required access standards in all regions for each of these specialties. Our ongoing recruitment efforts specifically target specialists who are experienced in working with people living with HIV/AIDS. It is our practice to work closely with network PCPs and determine to whom they most commonly refer members, so we can make every attempt to include those specialists in our network.

In Region 1, we have 141 PCPs and nine infectious disease specialists (two infectious disease specialists have elected to act as PCPs) in our network who meet our stringent credentialing requirements for our 216 members living with HIV/AIDS in this region. We have administrative service agreements with the University of South Florida and the University of Miami and contract with their specialized PCP and specialist network, including infectious disease, serving our HIV/AIDS adult, adolescent, and pediatric members. We also have partnerships with two clinics specializing in HIV/AIDS.

Our network in Region 1 meets or exceeds the provider capacity ratios in all specialties except respiratory therapy (RT). Our network is currently lacking in RT in each county. The cause of this gap, the same as has been described to the Agency in the past, is that therapists work for facilities and will not contract independently with health plans. As they are considered part of medical staff, Medicaid ID and NPIs are not always available for this provider type. We continue efforts to contract respiratory therapists.

4. PROVIDER REQUIREMENTS PROPOSED ARE RELEVANT TO THE PROVIDER NETWORK SERVING THE SPECIALTY POPULATION

When bringing providers into our network, we look specifically for those who work with HIV/AIDS and have additional training in treating this population. We credential network providers and verify their status and additional training to confirm they have experience with this population. Once confirmed, we include the provider in our directory with a red ribbon beside their name. All red ribbon providers serve as a PCP for this population. We also permit infectious disease specialists to act as a PCP, and notate this with a red ribbon in our directory.

As mentioned previously, we have expanded our definition of PCPs to include Family Practice, General Practice, Pediatrics, Internal Medicine, and Infectious Disease. Based on our experience, we believe that these providers have the best understanding of the underlying condition of the member. We have lowered member to provider ratio requirements to allow for more frequent and more comprehensive interaction with members.

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

We credential and recredential providers in our network according to established criteria, which meet the Medicaid participation standards. While all providers are required to undergo credentialing, we give particular focus to providers serving in the primary care role for our members with HIV/AIDS. We require an Education/Training Attestation for participation as an HIV/AIDS PCP as part of the credentialing packet that includes the qualifications described below.

Participation as an HIV/AIDS-designated PCP requires that the provider attest that they meet the criteria to care for our members in one of the following ways:

- Be credentialed as an HIV specialist by AAHIVM
- Be board certified in the field of infectious disease. If not certified in the past year through the American Board of Medical Specialties, the provider must have clinically managed a minimum of 25 patients in the preceding 12 months and successfully completed a minimum of 10 hours of continuing medical education (CME), with at least five hours related to antiretroviral therapy in the past year
- Clear Health provides access to the Clear Health Training Academy. Our Training Academy is a powerful vehicle that fosters a robust, consistent, compliant, and comprehensive approach and provides a multitude of expert-developed, customized trainings, accommodating various formats, media, and schedules while offering providers the opportunity to earn CMEs and CEUs, allowing the provider to achieve a Red Ribbon status at no cost.
- Be recognized by the AETC as having sufficient clinical experience and additional ongoing training in HIV/AIDS to be considered a specialist
- Meet the criteria of an HIV-qualified provider as defined by the HIV Medicine Association (HIVMA) of the Infectious Diseases Society of America or demonstrates experience as an HIV qualified provider set by AHCA standards. If they choose this option, they must complete a questionnaire that demonstrates continuous professional development by meeting defined qualifications. In the immediately preceding 36 months, the provider must have provided continuous and direct medical care, or direct supervision of medical care, to a minimum of 25 patients with HIV.

Also, in the preceding 36 months, the provider must have successfully completed 40 hours of Category 1 CMEs addressing diagnosis of HIV infection, treatment for HIV disease and co-morbidities, or the epidemiology of HIV disease, and earning 10 hours per year. Alternatively, in the preceding 12 months, the provider must have completed recertification in the subspecialty of infectious diseases with self-evaluation activities focused on HIV or initial board certification in infectious diseases. In the 36 months following certification, newly-certified infectious diseases fellows should be managing a minimum of 25 patients with HIV and earning a minimum of 10 hours of category 1 HIV-related CME per year; or providers must demonstrate experience as an HIV-qualified provider by showing evidence of continuous development through: clinical, behavioral or case management of at least 20 HIV-infected patients in the past two years with a minimum of eight contact hours annually of HIV-specific CMEs that includes information on the use of antiretroviral therapy.

EXHIBIT A-4-d

SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

5. ADDITIONAL PROVIDER SERVICES ARE RELEVANT TO THE PROVIDER NETWORK SERVING THE SPECIALTY POPULATION

Our Provider Network Managers are available to provide additional training on claims, billing, and procedural issues as needed. Providers, particularly PCPs, who serve a large volume of our members, receive more frequent on-site visits for enhanced support. We refer providers who require additional training on HIV/AIDS to our partner, the AIDS Education and Training Center (AETC), which conducts targeted, multidisciplinary education and training programs for health care providers treating persons living with HIV/AIDS. We partner with Dr. Jeffrey Beal, Principal Investigator and Clinical Director for AETC, to provide direction and education to providers who need or who would like to improve their HIV/AIDS treatment expertise.

Clear Health engages frequently with providers in our network to assure they provide access to care that meets our high quality standards and those that meet the needs of our members with HIV/AIDS. We collect and analyze performance measurement data regarding the services provided to our members, and we implement member and provider interventions if needed to exceed benchmark quality performance. Using provider profiles, we are able to identify providers who do not meet goals for adult immunizations, annual PCP visits, the percentage of members prescribed antiretroviral therapy, hospitalizations, and emergency department visits. We also monitor the clinical status of every member, including viral load and CD4 count, which are indicators that treatment is effective. If patterns of utilization or concerns about individual members emerge, our Provider Relations or Case Management staff or our Medical Director or Pharmacist reaches out to the provider to provide additional education. All Clear Health employees are available to support providers with technical assistance, consultation, and coordination of ancillary services and referrals to ensure timely access to services.

In addition, our pharmacy detailing program uses HIV/AIDS specialized Clinical Pharmacists to engage with provider outliers one-on-one at their office or via web conference. As drug costs rise, pharmacy benefits become more complex, over-utilization of high-risk medications increase, and polypharmacy and adherence issues impact member safety, we recently recognized the need to identify and alter unfavorable provider prescribing practices.

The program generates monthly and quarterly reports to identify medication outliers, frequent denials, providers who have not responded to previous interventions, and therapeutic areas of concern. Based on our analysis of the reports, our Clinical Pharmacists develop educational material targeted to specific providers and the latest therapeutic areas of concern. Our Clinical Pharmacists meet one-on-one with the provider to present our report analysis, comparative utilization metrics, educational materials, and list of specific interventions. These meetings complement more traditional pharmacy drug utilization review activities. In the meetings, the pharmacist also talks about members' medication history and prescriptions written by other prescribers. Our goal is to encourage and assist physicians in making medically appropriate and cost-effective clinical decisions.

For example, we encourage meaningful and actionable interventions by identifying:

- Brand to generic conversion opportunities
- Formulation optimization opportunities
- Member polypharmacy issues

EXHIBIT A-4-d SPECIALTY SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA

- High-risk medication utilization
- Instances of non-adherence or therapeutic duplication

We also close the drug pricing knowledge gap by educating the physician on market drug pricing and therapeutic claims comparisons. To reinforce our recommended interventions, we identify potential quality improvements and cost savings if the intervention is implemented.

Our Provider Network Managers focus on educating providers on our benefits, services, policies, and procedures to assure the provider and staff understand how to get access to care for their patients and provide continuity of care. All providers, including physicians and ancillary providers, and their staff receive training when contracted. We give them a provider handbook and training materials on CD to educate new staff and refer to it as needed. The provider manual includes the requirements for providing care in accordance with the most recent clinical practice guidelines for HIV/AIDS treatment. The manual also states that the provider must follow the Guidelines for the Use of Antiretroviral Agents in HIV-1 Infected Adults and Adolescents developed by the HHS Panel on Antiretroviral Guidelines for Adults and Adolescents – A Working Group of the Office of AIDS Research Advisory Council (OARAC). The manual also includes The Laboratory Monitoring Schedule for Patients Prior to and after Initiation of Antiretroviral Therapy, and policies and procedures on referring members for services in- and out-of-network. Referral guidelines for behavioral health and substance abuse services are also included. Beacon, our behavioral health vendor, includes most FQHCs and Community Mental Health Centers in our network. These providers are experienced in working with people living with HIV/AIDS.

We encourage all providers to attend the sensitivity training that we provide on how to work effectively with people living with HIV/AIDS.

All provider manual information is available to providers on the Clear Health website. We also offer a provider portal on the site, which providers can use to access member eligibility, claim status, referrals, and authorizations. Network providers may call the call center as needed for any questions they have.

EXHIBIT A-4-d
SPECIALTY SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA

Evaluation Criteria:

1. The extent of experience (e.g., number of Contracts, enrollees or years) managing a provider network serving the proposed population(s).
2. The extent to which the described experience demonstrates the ability to manage a provider network relevant to the specialty population(s) proposed.
3. The extent to which the provider capacity ratios proposed ensure the adequacy of a provider network relevant to the specialty population(s) proposed.
4. The extent to which the provider requirements proposed are relevant to the provider network serving the specialty population(s) proposed.
5. The extent to which the additional provider services proposed are relevant to the provider network serving the specialty population(s) proposed.

Score: This section is worth a maximum of 25 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-9
REGIONAL PREFERENCE HIERARCHY

RESPONDENT NAME: SIMPLY HEALTHCARE PLANS, INC. D/B/A CLEAR HEALTH ALLIANCE

The Agency shall award one (1) additional Contract in a region to each successful respondent who receives a Region 1 or 2 Contract award. The Agency shall award the additional Contract in the respondent's highest desired region of preference in which the respondent submitted a responsive reply and negotiates a rate acceptable to the Agency.

Respondents shall complete the Regional Preference Hierarchy Table below, to indicate its preference for receipt of additional Contract awards.

If the Regional Preference Hierarchy Table is left blank, the respondent indicates that it does not desire any additional region awards.

Respondents shall indicate the region(s) in hierarchy order (highest desire being 1 and lowest desire being 10).
