Humana has an ongoing partnership with Florida Introduces Physical Activity and Nutrition to Youth (FLIPANY), an organization that educates and empowers youth and adults through nutrition and physical activity programs while advocating for policy changes that benefit low-income families. FLIPANY has been a stalwart partner by participating in two (2) educational health initiatives, the Children's Nutrition and Women's Health Campaigns events, at which they have provided nutritional education to our enrollees and community members. Humana sponsors FLIPANY's annual charity event and participates in many of its initiatives. For example, Humana provides preventive health education at FLIPANY's annual Fun Run Marathon.

HOLIDAY FOOD DRIVES
Many families depend on free and subsidized school lunches for their children. When schools close for holiday breaks, many children experience food insecurity. Over Thanksgiving break in 2016, Humana partnered with the Miami-Dade Police Department to support the Little Haiti Turkey Drive, a local event to address food insecurity over the holidays. Held at a local community center, Humana volunteers helped distribute more than 500 turkeys to families in need at the event. The event helped families avoid food insecurity over the holiday break.

(2) EMPLOYMENT

Employment is a critical social determinant of health. Studies have shown that unemployment tends to lead individuals to practice poor health habits such as smoking and excess drinking, and to adopt overly sedentary lifestyles. Mortality rates and susceptibility to various long-term diseases also increase in the unemployed population.

Given this, reducing unemployment is a clear priority. By working with local job boards and organizations that interact with populations more prone to dealing with unemployment, we aim to educate enrollees about employment opportunities and to provide access to more resources for individuals seeking employment.

COMMUNITY PARTNERS PROMOTING STABILITY AND EMPLOYMENT
Humana's North Florida Medicaid Community Engagement Team works with the following organizations to address both employment and housing stability:

- Crisis Center of Tampa Bay: The Crisis Center of Tampa Bay is a twenty-four (24) hour-a-day, three hundred sixty-five (365) days-a-year facility that helps individuals with various crises they

may face, including situational problems such as unemployment, medical emergencies, and domestic violence.

- Salvation Army: The Salvation Army is a faith-based organization that works to help communities and individuals facing issues, including addiction, hunger, and homelessness, all common effects resulting from unemployment and instability.

- Metropolitan Ministries: Metropolitan Ministries cares for the homeless and individuals or families at risk of becoming homeless. This organization provides individuals with crisis stabilization services and aims to improve longer-term prospects regarding housing stability, employment, and education.

- 90Works: 90Works aims to educate and help people overcome unemployment, homelessness, and other issues by teaching self-sufficiency.

URBAN LEAGUE EMPLOYMENT INITIATIVES
In 2015, the Humana Foundation contributed three hundred thousand dollars ($300,000) to the Urban League of Broward County. The mission of the Urban League movement is to enable African Americans to secure economic self-reliance, parity, power, and civil rights. Its key areas of service are jobs, education, housing, and health. Through training, career building, and job placement services, the Urban League equips individuals with skills needed to enter or re-enter the workforce. In addition to engaging with the Humana Foundation on a separate grant initiative, the Urban League of Broward County is also an active member of Humana's Bold Goal Health Advisory Board. It is evident that the Urban League's employment initiatives present Broward County residents and SMMC enrollees with strong opportunities for employment, education, and self-improvement.

CAREER FAIRS
The Humana Medicaid Community Engagement Team has both sponsored and participated in the South Florida City of West Palm Beach Annual Young Adult Job and Resource Fair. The event provides an opportunity for employers to help young adults find job opportunities in their community, encouraging employers to focus on hiring adults ranging in ages from seventeen (17) to twenty-five (25) years old, particularly during the summer months. We also participated at the 2017 Career and Resource Fair, sponsored by the West Palm Beach VA Medical Center, in September. This event introduced veterans to community partners and organizations that will provide information on jobs and community services. These career fairs help young adults and veterans find gainful employment, which can set a foundation for a stable life and improve overall well-being.

(3) HOUSING STABILITY

Housing stability is a critical social determinant, impacting mental, social, and physical health. According to Johns Hopkins University, housing is also the greatest recurring expense for Americans. Stable housing supports education for children and employment for adults. It also helps case managers (CMs) maintain communication and support for individuals in need. We help enrollees build trusting relationships with their primary care providers (PCPs) over time, but without stable housing individuals may need to change providers frequently. Humana has built partnerships with many local shelters and organizations that help individuals in need of stable

housing. Humana offers financial support to underfunded organizations that are fighting to end homelessness, and we work closely with these organizations to help our enrollees and their families find and maintain a stable home.

FINANCIAL SUPPORT TO END YOUTH HOMELESSNESS

In 2014, the Humana Foundation made a three hundred fifty-thousand dollar ($350,000) grant to Starting Right Now. Humana's partnership with Starting Right Now reflects our strong support for its mission to end youth homelessness. Starting Right Now provides a stable home for young homeless individuals and provides one-on-one mentoring focused on educational achievement, obtaining employment, life skills, and financial literacy. Through this partnership the Humana Foundation aims to improve housing stability so that individuals can ultimately achieve their well-being goals.

COMMUNITY ENGAGEMENT EVENTS

Humana finds opportunities to support our enrollees by interacting with community through participation at local health fairs and other community engagement events. For example, we organized a health fair in October 2016 in coordination with Central Florida Healthcare and Lakeland Primary Care. We invited more than one thousand (1,000) enrollees to attend the fair, with education booths hosted by community organizations representing food pantries, family resources, dentists, transportation organizations, homeless coalitions, and more. Two (2) particularly resonant stories stand out from the event:

- An enrollee approached the Homeless Coalition's table searching for help. Her son had been homeless for months, living in the wooded area of rural Polk County. By the end of the day, we had arranged for a safe pickup and temporary housing for the young man.

- An enrollee and her two (2) young children had been involved in a domestic violence issue earlier in the week, and were looking for support and a safe place to stay. The Homeless Coalition connected the family with a shelter specializing in domestic violence cases.

AFFORDABLE HOUSING DEVELOPMENT

Humana's Medicaid Community Engagement Team has sponsored and supported Housing Opportunities, Mortgage Assistance, Effective Neighborhood Solutions, Inc. (HOMES) over the last three (3) years. More specifically, we have supported their annual Funky Fun Run, a fundraising event that attracts public participation from the surrounding neighborhoods. HOMES has used fundraising from the event to build four (4) housing projects for at-risk teens transitioning into adulthood. Local businesses say these developments have contributed to a reduction of crime in the surrounding neighborhoods.

FUNDRAISING FOR EMERGENCY, TRANSITION, AND PERMANENT HOUSING

Humana provides continued financial support to Camillus House through its annual fundraising galas. Camillus House provides fully integrated services through various programs including: Continuum of Housing (emergency, transitional, and permanent housing), Compassionate Healing (substance abuse and mental health treatment), Compassionate Hospitality (food, clothing, showers, outreach, case management, rent assistance), and Camillus Health Concern (providing primary health care services to adults and children).

FLORIDA COALITION FOR THE HOMELESS

Humana will exhibit at the 2017 Florida Institute on Homelessness and Supportive Housing Conference, sponsored by the Florida Coalition for the Homeless (FCH). The FCH's mission is

to work collaboratively with chapter organizations throughout the State to prevent and end homelessness in Florida. It uses a Continuum of Care model that systematically provides training and resources to all its member organizations, with designated lead agencies in each region.

(4) EDUCATION

Education is both a key social determinant of health and a critical factor in an individual's overall socioeconomic well-being. Many Medicaid beneficiaries have lower levels of educational attainment than the general population. They also face significant socioeconomic obstacles as a result, and greater challenges in returning to education. Humana helps enrollees overcome these barriers through education support initiatives.

FINANCIAL SUPPORT FOR LOCAL EDUCATION FOUNDATIONS
The Humana Foundation seeks to improve community health and well-being by supporting non-profit partners that address social determinants of health, such as education. Since 2013, the Humana Foundation has contributed thirty thousand dollars ($30,000) and twenty-five thousand dollars ($25,000) to the Pinellas Education Foundation and the Hillsborough Education Foundation, respectively. The Pinellas Education Foundation is composed of community leaders who undertake initiatives to improve the quality of public education, while the Hillsborough Education Foundation works to bring vital resources not funded by taxes to students in the form of scholarships, grants, and supplies. The Foundation's contribution will positively impact the area's children's likelihood of greater educational achievement.

BACK TO SCHOOL EVENTS
For the second year in a row, Humana engaged the community by participating in five (5) back to school events in Hillsborough County. In partnership with the Back to School Coalition, we assisted families in need of school supplies, resources, and immunizations during each event. This year, we collected donations of school supplies so every child who attended these events went home with a backpack containing the school supplies necessary to successfully begin his or her first day of school. Humana also provides health benefits to Hillsborough County and Pinellas County school district employees. Additionally, we coordinated individual volunteer opportunities for associates to participate in organizing and distributing supplies.

EDUCATION SESSIONS ON HEALTH AND SOCIAL DETERMINANTS
Humana supports the local partners below by regularly visiting them to lead health education presentations. Presentation topics include asthma, nutrition, access to care, oral health, bullying, summer safety (sun, swimming, etc.), medicine safety, and poison control. Humana supports and partners with the following organizations and their respective health education programming:

- The Aylstock, Witkin, Kreis, and Overholtz (AWKO) Justice Foundation

- At Hungry for Justice, a community project impacting hungry children in the community at monthly events, we showcase how to make healthy meals. Each family leaves with the ingredients to make the meals at home.

- Marcus Pointe Food Pantry and Schools – Humana leads recurring presentations on varied health education topics.
- Woodland Heights, Cobb, Fricker Centers and Boys and Girls Club – at after school programs, Humana hosts health education sessions.

- Family Fundamentals and Success by Six – Humana collaborates on community-wide events focused on health disparities. Events include: “Ready, Set, Learn,” Santa's Workshop, and Storybook Adventure.

- Devereux – Humana leads presentations on topics designed to foster positive parent-child relationships.

- Beth-El Farmworker Ministry – We tailor Humana’s health education presentations specifically to the needs of migrant workers.

(5) EXPOSURE TO CRIME/VIOLENCE.

Exposure to crime and violence has been proven to significantly impact individuals’ lives in both very specific and very broad ways. Domestic violence, abuse, gang-related activity, and other forms of crime and violence create insecurity within households and communities, which has a direct negative impact on overall health. Humana supports local organizations working to reduce crime and violence in communities, as well as organizations that offer support for families that have been victims of abuse.

PARTNERSHIPS WITH LOCAL SHELTERS AND SAFE HAVENS
The Spring of Tampa Bay provides sanctuary and services to abused adults and their children. The Spring’s programs and services help victims of domestic violence rebuild their lives and raise awareness to prevent domestic violence from occurring. Humana partners with The Spring to help enrollees suffering from domestic violence find a safe place to live, counseling and support, and more. The Spring also offers an accredited onsite school for resident children.

FINANCIAL SUPPORT FOR YMCA
In 2016 the Humana Foundation contributed more than fifty-seven thousand dollars ($57,000) to the YMCA of South Palm Beach County. This YMCA allows all community residents to participate in its programs, regardless of their ability to pay fees. They offer programs for all ages, from child care to teen fitness clinics to senior wellness classes. This is part of the Foundation’s efforts to support organizations that give young people a safe, positive environment. Separate from the Humana Foundation’s grant contribution to the YMCA of South Palm Beach County, Humana Inc.’s Bold Goal Health Advisory Board includes active participation from the following YMCA regional chapters: YMCA of St. Petersburg, YMCA of the Suncoast, YMCA of South Florida, and First Coast YMCA.
PARTICIPATION IN EVENTS TO PREVENT CRIME AND VIOLENCE
In support of the North Miami Police Department’s North Miami Police Athletic League (PAL) Families and Communities Together (F.A.C.T) Festival, the Medicaid Community Engagement team participated at this educational event for families and children. The event’s purpose was to provide the community awareness of various community social services while bringing neighboring families together to prevent and curb crime and juvenile violence. Held at the police station with more than four hundred (400) attendees, the event included dental, chiropractic,

and other health providers in attendance. Families received a meal and school supplies for their children.

CRIME WATCH SPONSORSHIPS
The Community Engagement Team is sponsoring the Citizens' Crime Watch of Miami-Dade through its Forty-Second (42nd) Annual Awards Ceremony honoring crime watchers and law enforcement. This program educates residents in various housing systems regarding crime watch and prevention, building strong working relationships with the local police departments.

==========
c. Participation in both grass-roots and grass-tops provider initiatives.
==========

GRASS-ROOTS PROVIDER INITIATIVES

With decades of experience building highly-engaged relationships with Florida providers, Humana regularly participates in grass-roots provider initiatives to deliver preventive health services and education in settings that improve enrollees' engagement and experience. Humana identifies and supports these initiatives through ongoing provider engagement, as well as Medicaid Advisory Panels.
ONGOING PROVIDER ENGAGEMENT
Humana continually learns from its provider partners and builds upon our longstanding provider relationships in Florida. For the SMMC program, we have developed a robust and comprehensive provider network capable of meeting enrollees' needs across the care spectrum. To most effectively serve our providers, our Provider Engagement team regularly meets with them to gauge their concerns about the SMMC program, Humana, and our enrollees. Moreover, by aligning the incentives of enrollees, providers, and community resources, Humana offers SMMC enrollees and providers a differentiating level of service coordination. Humana has aligned incentives through a continuum of value-based payment (VBP) models. We understand providers are at different stages in VBP readiness. As a result, we can meet providers where they are and help them grow in our VBP spectrum. Today, Humana has more than eight-hundred thousand (800,000) Florida enrollees, nearly two hundred thirty thousand (230,000) of whom are Medicaid-eligible, attributed to providers engaged in VBP arrangements. These arrangements have improved health outcomes for our enrollees and increased reimbursement for providers while reducing avoidable costs.

MEDICAID ADVISORY PANELS
Humana hosts Medicaid Advisory Panels to share new initiatives with key stakeholders in the community and to receive feedback from these organizations on how best to serve our enrollees. Our regional Medicaid Advisory Panels are comprised of medical service organizations, hospitals, non-profit organizations, and community agencies that serve the Medicaid population. For example, our South Florida Medicaid Advisory Panel includes representation from:

- Healthy Mothers Healthy Babies
- Sant La
- Goodman JFS of Broward
- Beacon Value Options

- Holtz Children's Hospital
- Broward Health
- Doctor's Medical Center
- Pediatric Associates

The provider partnerships forged through ongoing provider engagement and Humana's Medicaid Advisory Panels create opportunities for Humana to participate and support both grass-roots and grass-tops provider initiatives. Humana has many examples of programs borne out of these provider partnerships, including:

- Health Education Sessions at Provider Offices
- Humana Storks
- Children's Dental Clinics in Escambia Schools
- Provider-Hosted Health Fairs

HEALTH EDUCATION SESSIONS AT PROVIDER OFFICES

Humana's Community Engagement teams lead education sessions at local provider offices aimed at promoting awareness of general health education, chronic condition management, and understanding social factors' impacts on health. The provider groups at which we conduct these education sessions include: Escambia Community Clinic, Genesis OBGYN, Healthmark Clinic, Dr. Guentzel Internal Medicine, Sacred Heart, Destin Family Medical, Garcia Medical, Santa Rosa Community Clinic, Cantonment Family Practice, Central Florida Health Centers, Tampa Family Health Centers, Big Bend Pediatrics, Pediatric Associates of Tampa Bay, and Heart of Florida Regional Medical Center. Presentation topics include:

- Asthma
- Nutrition (Diabetes, Healthy Eating)
- Oral Health
- Bullying
- Summer and Swimming Safety
- Medicine Safety and Poison Control
- Holiday Safety (Gifts, Choking, and Fireworks)

HUMANA STORKS

In 2016, we launched the Humana Storks program in collaboration with several Memorial Healthcare System hospitals to improve the health and well-being of new mothers and their babies. When one of our Medicaid enrollees gives birth, we deploy a Member Advocate to the hospital with the purpose of educating the new mother regarding how to access health services that will ensure the best outcomes for herself and her newborn. The Member Advocate brings a care delivery package for the new mother, including a diaper bag, diapers, and a toy for the baby – see Attachment 34-1 for a photo of the care delivery package. The care package also includes health education information regarding the importance of scheduling timely appointments for dental and medical services, lead screenings, and vaccinations.

Response to this initiative has been very positive. One of our advocates recalls a recent Storks visit. The new mother stated, "I can't believe my insurance is bringing me a gift!" The Humana Member Advocate reviewed information regarding the hospital discharge, health education for new babies, and details for our MomsFirst case management program. MomsFirst program helps mothers with all aspects of their postpartum care, including finding pediatricians,

scheduling appointments, arranging transportation, and finding classes on parenting and childcare. The new mother immediately asked, "How soon can I sign up my baby?" By pairing an in-person, high-touch visit with the new mother care package, the Humana Storks program increases engagement in MomsFirst, which improves the health of new mothers and babies.

CHILDREN'S DENTAL CLINICS IN ESCAMBIA SCHOOLS

Escambia Community Clinics (ECC) is a federally qualified health center (FQHC) that includes pediatric, dental, and family practice providers. One of our Regional Community Engagement Leaders sits on the local parent-teacher association (PTA) board. In a meeting she held with ECC, they discussed children in underserved communities who were not receiving critical preventive dental care. This conversation led to a school-based collaboration with ECC, which included building a mobile dental clinic. Our community engagement leader worked with the local school district to help children obtain convenient access to dental services at their schools, including oral health exams and sealants. The results of this collaboration have been impressive: More than one thousand one hundred forty (1,140) children have received approximately two thousand six hundred (2,600) total services since August 2016.

Through Humana's support, more than twenty (20) schools have participated in the initiative, including: Gibson Head Start Center, Myrtle Grove Head Start Center, Lincoln Park Head Start Center, Sherwood Head Start Center, OJ Semmes Head Start Center Global Learning Academy, NB Cook, CA Weis, Lincoln Park, Ferry Pass, Pleasant Grove, Myrtle Grove, West Pensacola, Scenic Heights, Cordova Park, McArthur, Ensley, Oakcrest, Montclair, OJ Semmes, and Sherwood.

Humana is building on the success of this collaboration with ECC by expanding into additional schools. We are also partnering with community centers in these areas that offer free programs including after-school day care, summer camps, and more.

PROVIDER-HOSTED HEALTH FAIRS

Humana has partnered with many providers to launch a series of seasonal family-oriented health fairs to improve health access and literacy and close Health Effectiveness Data Information Set (HEDIS) care gaps at select high-volume provider offices. To share some examples, we have hosted holiday parties for children to visit Santa as well as Hawaiian-themed luaus. These events foster goodwill within the community by creating an experience that allows the health plan to give back to families in need. These events target dozens of HEDIS measures related to preventive healthcare, including adult body mass index (BMI) assessment, breast cancer screening, children and adolescent access to primary care, diabetes care measures, and well child measures.

In 2016, Humana led these events across eleven (11) provider locations. Campaign partners included Boca Pediatric Group, Continucare, Doctor's Medical Center, Independent Living Systems, and Pediatric Associates. Through these events, more than eight hundred (800) Medicaid enrollees and their families visited their PCPs, closing nearly five hundred (500) HEDIS gaps as a result. Enrollees and providers alike have had very positive responses to the events.

"Having the opportunity to work with Humana was a very positive experience for our office and patients. Our patients really enjoyed the many fun, entertaining, and interactive activities provided, especially photos with their favorite Superheroes! Due to the outreach provided, our

office was successful in scheduling and providing quality care to many of our Humana enrollees. This Humana event was well organized, fun, and productive. We look forward to working with Humana in the future," said Suzanne Kayal of Boca Pediatric Group.

"We are happy to be partnering with Humana. I have seen our HEDIS scores improve and I believe that is largely due to the enrollee campaign events," said Barbara Ensenat of Continucare.

GRASS-TOPS PROVIDER ENGAGEMENT

In addition to working with individual providers and practices, Humana participates in grass-tops provider initiatives in collaboration with Statewide provider associations. Humana engages provider associations across the State to better understand their key concerns and participate in collaborative solutions. In 2017 we met with many stakeholders whose relationships play a key role in the Florida Medicaid system to help us gather feedback, including:

- Florida Medical Association
- Florida Hospital Association
- Obstetric and Gynecological Society, Florida Chapter
- American Congress of Obstetricians and Gynecologists, Florida Chapter
- American Academy of Pediatrics, Florida Chapter
- Home Care Association of Florida
- Florida Alliance of Home Care Services
- Florida Health Care Association
- LeadingAge
- Florida Assisted Living Association
- Florida Council for Community Mental Health Centers
- Florida Council on Aging
- Florida Alcohol and Drug Abuse Association

For example, we've learned about initiatives to reduce unnecessary Caesarean sections (C-sections) and unintended pregnancies through our partnership with the Florida chapter of the American Congress of Obstetricians and Gynecologists (ACOG). ACOG is a charter member of the Florida Perinatal Quality Collaborative (FPQC), which leads multiple initiatives to advance high-quality, evidence-based perinatal care. Through our grass-tops engagement with ACOG, Humana participated in several of these initiatives:

- Humana is excited to help promote FPQC's "Promoting Primary Vaginal Deliveries" (PROVIDE) Initiative. The goal of the PROVIDE Initiative is to improve maternal and newborn outcomes and reduce unnecessary C-section deliveries by applying evidence-based interventions to promote primary vaginal deliveries at Florida delivery hospitals. We are emailing the FQPC alerts to the managed care departments of our participating hospitals and promote the initiative through our other communications with the hospitals.

- We have also promoted FPQC's Long-Acting Reversible Contraception (LARC) Initiative, sending out FPQC LARC alerts to our participating hospitals. The goal of the LARC Initiative is to reduce unintended pregnancies by working with participating Florida hospitals to improve hospital policies, procedures, and collaboration to increase rates of postpartum LARC usage.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana is committed to continuing to collaborate with Statewide initiatives to achieve our shared goal of reducing the number of unintended pregnancies.

Grass-top provider initiatives like these contribute to our goals of investing in and partnering with local community health resources, addressing social determinants of health, increasing access to care, and improving health outcomes.

Evaluation Criteria:

1. The extent to which the respondent provides details on how their local community partnerships, activities and initiatives support the local system of care.

2. The extent to which the respondent has senior executive leadership staff who will be assigned to the resulting Contract who also participate on local health and human service related boards, councils, and commissions.

3. The extent to which the respondent has partnerships with local agencies that focus on addressing social determinants of health.

4. The extent to which the respondent jointly develops and incorporates change from grassroots and grass-tops provider initiatives.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

Attachment 34-1: Humana Storks

Launched in 2016, the Humana Storks program aims to improve the health and well-being of new mothers and their babies. When one of our Medicaid members gives birth, a Member Advocate is deployed to the hospital with the purpose of educating the new mother regarding how to access health services that will ensure the best outcomes for herself and her newborn. The Member Advocate brings a care delivery package for the new mother, including a diaper bag, diapers, and a toy for the baby. Health education information regarding the importance of scheduling timely appointments for dental and medical services, lead screenings and vaccinations is also included in the care package.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 35 – Organization Commitment to Quality (See Section 409.966, Florida Statutes) (Statewide):

The respondent shall describe its organizational commitment to quality improvement, including active involvement by the respondent's medical and administrative leadership, and document its achievements with two (2) examples of completed quality improvement projects, including description of interim measurement and rapid cycle improvement processes, and a summary of results.

Response:

CORE COMMITMENT TO QUALITY IMPROVEMENT

"Focusing on quality means taking an enterprise-wide view of whatever we do, going beyond our own areas of expertise to understand the effect of our decision-making on our organization and those we serve." - Bruce Broussard, Humana President & CEO

At Humana, our commitment to quality improvement is a core value that guides our day-to-day behaviors, decisions, and actions. We understand and appreciate that high-level management engagement in the Quality Improvement Plan (QIP) is essential to maintaining a robust and centralized company-wide approach to quality. Our organizational commitment to quality improvement starts at the highest executive level and flows throughout our operations, integrating input from management and associates to directly serve our enrollees.

Our performance and experience meeting quality standards in Florida demonstrate our commitment to quality:

- Humana ranked second in quality among Florida's Medicaid plans, according to the National Committee for Quality Assurance (NCQA) [1].

- Humana's Florida Medicaid plan has been NCQA-accredited since 1994. We are in the process of seeking an additional NCQA certification for Long-term Care (LTC) Case Management.

- We have devoted significant resources to support enterprise-wide Medicaid compliance and quality improvement. Our QIP associates work within Florida and at the corporate level to develop, implement, and maintain a successful program.

HUMANA QIP ASSOCIATES' EXPERIENCE (AS OF AUGUST 2017)

- Total Quality Full-Time Equivalents (FTEs) – one hundred eighty-seven (187) associates

- Percent clinical (MD, RN, LPN) – seventy-five percent (75%)

- Percent with quality certifications – twenty percent (20%)

- Average number of years in managed care quality – nine (9) years

- Average years in clinical – twenty-eight (28) years

- Total combined number of years in Humana managed care quality – one thousand five hundred forty-two (1,542) years

- Total combined years in clinical – three thousand six hundred fifty-five (3,655) years

QUALITY IMPROVEMENT PROGRAM (QIP) OVERVIEW

HUMANA'S QUALITY MISSION STATEMENT
To provide our diverse Medicaid population with coordinated quality care and the necessary tools and information to enable enrollees to improve their health and achieve lifelong wellbeing.

Our QIP monitors, analyzes, evaluates, and facilitates improvements in the delivery, quality, and appropriateness of healthcare services for Humana enrollees, including those with special needs. The overarching goals of our program are to:

- Achieve Excellence in Quality Compliance and Accreditation

- Enhance Cultural Competency, Enrollee Safety Programs, and Continuity and Coordination of Care

- Promote Best Practices and Process Innovation; and

- Create a Work Environment that Exemplifies Humana's Values

Our QIP provides the framework for integrated organizational activity in pursuit of enrollee health outcome and service experience improvements, setting the stage for lifelong well-being. It defines the structure, policies, processes, and methods we use to determine meaningful activities and influence desired outcomes in areas related to the delivery of care.

We base our QIP structure upon state and federal regulations, state contract requirements, accreditation standards, national healthcare agency guidelines, and organizational values and priorities. It aligns with the Centers for Medicare and Medicaid Services (CMS) Quality Strategy, which incorporates the Institute for Healthcare Improvement's Triple Aim, the current National Quality Strategy (NQS), and the National Prevention Strategy (NPS). By incorporating the CMS Quality Strategy into the program, Humana supports delivering consistent high-quality care and promoting efficient outcomes in the healthcare system.

Key program components include, but are not limited to:

- Written policies and procedures for Quality Improvement (QI), Utilization Management (UM), and Continuous Quality Improvement (CQI) that we periodically assess for effectiveness

- Health Information System that supports the collection, integration, tracking, analysis, and reporting of data

- Designated associates with expertise in QI, UM, and Care Management

- Monitoring clinical outcomes

- Reports that we evaluate, indicated recommendations that we implement, and feedback we provide to providers and enrollees

- Conducting and maintaining provider profiling

- Reports to the Quality Improvement Committee (QIC) and AHCA on results, conclusions, recommendations, and implemented system changes

- Annual Performance Improvement Projects (PIPs)

- Integration of the results from annual PIPs, performance measure rate monitoring, and compliance with federal and state standards

- Evaluating the impact of the QIP.

Humana's approach to program deployment reflects our CQI philosophy. We employ the four-step method of PDSA (plan-do-study-act) for the management and control of key processes and indicators. When applying this model, we:

- Use sound management and measurement methodologies to conduct quality measurement and evaluate pertinent data;

- Institute meaningful corrective action that addresses identified barriers; and

- Measure the results, evaluate the effectiveness of actions, and modify the approach as needed.

We confirm objectives annually and provide guidance for achieving quality and improving performance. Collaboration and coordination of resources at both Humana's corporate and local Florida levels helps us accomplish our QIP goals. This collaboration includes the following:

1. QIP policy and procedure development;

2. QIP data collection and preliminary analysis;

3. Healthcare Effectiveness Data and Information Set (HEDIS) process compliance oversight, data collection, and reporting;

4. Consumer Assessment of Healthcare Providers and Systems (CAHPS) process compliance oversight, data collection, and reporting;

5. Clinical and medical necessity review criteria development and maintenance;

6. Predictive modeling construct deployment and refinement;

7. Over- and under-utilization monitoring;

8. Clinical practice guideline development and maintenance;

9. Enrollee and Patient Safety Program development and maintenance, with local markets contributing state-specific initiatives as appropriate;

10. Clinical Disparities and Cultural Diversity Program development and maintenance;

11. Enrollee and provider incentive program development and maintenance; and

12. Credentialing, re-credentialing and peer review activities, with local markets providing input as appropriate.

==========
1. The extent to which the respondent's description demonstrates that the medical director has substantial oversight in the assessment and enhancement of quality improvement activities, and the Chief Executive Officer is actively involved in quality management.
==========

QUALITY IMPROVEMENT LEADERSHIP AND OVERSIGHT

Our Florida Medicaid Medical Director is responsible for all clinical aspects of our Florida QIP. He leads and oversees day-to-day operations, directs performance improvement initiatives, conducts quality of care reviews, and monitors overall plan performance.

The Medicaid Medical Director serves as Chairperson of the Florida Medicaid Quality Improvement Committee (QIC). The QIC is a multidisciplinary committee that includes our Chief Medical Officer (CMO) and our President, Florida Medicaid Operations (i.e. our plan CEO), who oversees our Florida Medicaid program. The QIC meets quarterly and provides oversight of the QIP activities and clinical recommendations for our Florida Medicaid plan. The CQIC and Internal Board and Executive Committee delegate this authority to the QIC.

The Medicaid Medical Director also chairs the Peer Review Committee (PRC), which is responsible for reviewing potential quality of care issues, determining the severity of the issue, and recommending appropriate quality improvements or corrective actions. The PRC is responsible for developing individual provider quality improvement plans, where indicated, and reviewing progress toward resolution. Physicians and other healthcare professionals participate on the PRC, but only physicians have voting privileges. The PRC reports to the local Florida Quality Management Committee (QMC), which the Medicaid Medical Director also chairs. The QMC is responsible for reviewing Florida-specific preventive health and clinical study initiatives and focused studies. We also report peer review functions in the QMC.

QIP IMPLEMENTATION

Our President, Florida Medicaid Operations and our Florida Medicaid Medical Director lead and oversee quality improvement initiatives, attending various meetings on ongoing initiatives to improve quality across our Florida Medicaid operations. Our President of Florida Medical Operations is involved in daily operations of our Florida Medicaid program, including the promotion and support of quality programs that we must integrate across our organization to truly make an impact on enrollee care outcomes. Our Presidnet of Florida Medical Operations participates in the following meetings:

- CAHPS Intervention Meeting
- Florida Child Health Check Up (CHCUP) Corrective Action Plan (CAP) Task Force
- Antidepressant Medication Management PIP Intervention Team Meeting
- Pediatric Dental Services PIP Intervention Team Meeting
- Postpartum Care and Well-Child Visit PIP Intervention Team Meeting
- Electronic Health Record (EHR) PIP Intervention Team Meeting

Our Medicaid Medical Director is a member of the CQIC, and has oversight and approval of all activities of the QIC and QMC, providing seamless oversight of the development of our QIP methodology at both the national and local Florida level.

Attachment 35-1 contains an excerpt of our CAHPS, CHCUP, and PIP meeting attendee list. As illustrated by the highlighted yellow portion, our Florida Medical Director, as well as our President, Florida Medicaid Operations, is involved in all clinical functions across our QIP initiatives.

In addition, the President, Florida Medicaid Operations, and Florida Medicaid Medical Director are voting members at our Florida comprehensive QIC meetings.

==========

2. The adequacy of the respondent's approach to incorporating quality improvement activities into the culture and operations of the organization.

==========

"Quality is everyone's responsibility and therefore requires everyone's involvement through enterprise-wide collaboration, personal accountability and speaking up when quality does not meet our standards." - Bruce Broussard, Humana President & CEO

At Humana, we measure quality improvement throughout all operational areas, as evidenced by our NCQA accreditation and the quality scores we have achieved from NCQA and CMS, which require that a comprehensive, organization-wide commitment to quality measurement and continuous quality improvement demonstrably occurs.

We strive to ensure a cohesive and effective enterprise-wide approach to quality improvement through the following:

- Comprehensive approach to quality improvement, monitoring, and analysis of medical, behavioral, and LTC services quality of care

- Our President, Florida Medicaid Operations, and Medicaid Medical Director lead and manage the ongoing quality improvement process

- Cohesive corporate and local plan quality management structure, enhancing our Florida QIP with our nationwide QIP's robust support and resources

- Quality Committee structure incorporating cross-department input and feedback

- Robust quality data analytics capabilities, enabling us to monitor, track, and improve quality of care for our enrollees.

Our multidisciplinary program integrates all business units to promote enrollee safety, quality of care, and effective service delivery including departments involved in clinical care (utilization management, case management, and disease management), as well as all other non-clinical operational functions (enrollee services, provider relations, claims processing, compliance and reporting, marketing, and outreach).

We have built our QIP structure and infrastructure upon our corporate-local model described in the following narrative.

COMPREHENSIVE QUALITY IMPROVEMENT PROGRAM INFRASTRUCTURE

THE HUMANA ADVANTAGE
We combine the experience, resources, and scalability of a National Quality Program with our local Florida experience and insight to deliver a uniquely robust QI Program customized for Florida Comprehensive enrollees.

Corporate leadership on the CQIC, delegated by the Board of Directors, provides operational oversight for QIP activities and recommends policy decisions by planning, analyzing, and evaluating quality improvement activities. On an on-going basis, the local market QIC reports accomplishments, barriers, and improvement initiatives. We have a strong and dedicated committee structure that:

- Involves executive leadership by assessing and identifying improvement opportunities stemming from QIP activity and communication to appropriate owners;

- Promotes ongoing integration of quality activities throughout the organization;

- Engages actively practicing network providers in the QIP and process by bringing first-hand recommendations geared to assist providers and motivate enrollees; and

- Uses clinical and non-clinical teams to develop, implement, and monitor QIP initiatives to identify successes and failures.

The quality committee structure and program encompasses all levels of management and associates (executive, middle, and front-line), provider partners, community groups, and

enrollees. The committees identify opportunities and develop and implement interventions with the goal of improving the health and well-being of our enrollees.

Please see Attachment 35-2, which is an organizational chart illustrating Humana's departments and committees involved in quality improvement.

CORPORATE OVERSIGHT OF FLORIDA COMPREHENSIVE QI PROGRAM

Our corporate Internal Board and Management Team (the Board), which has ultimate responsibility for the QIP, has delegated oversight authority to the CQIC. Humana's President and Chief Executive Officer has direct involvement in the Board of Directors and is intimately involved in quality issues presented to the Board.

The Chairperson of the CQIC presents reports to the Internal Board and Management Team in person on behalf of the Committee once per quarter. Following approval, we house the reports on the Quality Operations Compliance and Accreditation (QOCA) SharePoint site.

Members of the Internal Board and Management Team include:

- President and Chief Executive Officer
- Executive Vice President and Chief Operating Officer
- Senior Vice President and Chief Medical Officer
- President, Employer Group Segment, and Government
- Senior Vice President and Chief Consumer Officer
- President – Clinical Care Services
- President – Humana Pharmacy Solutions
- Senior Vice President and Chief Strategy Officer
- Senior Vice President and Chief Human Resources Officer
- Senior Vice President and Chief Financial Officer
- Senior Vice President and Chief Innovation Officer
- Senior Vice President and Chief Information Officer
- Senior Vice President and Chief of Quality
- Senior Vice President, Corporate Affairs
- Senior Vice President, Medicare Operations
- Senior Vice President and General Counsel
- President, Retail Segment

OFFICE OF THE CHIEF MEDICAL OFFICER (OCMO) QUALITY TEAM
The Quality team of the OCMO is responsible for identifying opportunities to improve clinical quality. The team develops and executes strategies to improve clinical quality and collaborates with leaders to ensure we align clinical quality goals and metrics across the organization. The team also supports various programs throughout Humana by providing clinical insight and thought leadership for quality initiatives, including identifying quality measures. The OCMO Quality team facilitates the Clinical Quality Metrics Alignment Governance team.

THE CLINICAL QUALITY METRICS ALIGNMENT GOVERNANCE TEAM manages and maintains meaningful measures that affect enrollees while reducing variability in measure selection, collection burden, and cost. Objectives include:

- Maintaining a manageable repository of meaningful clinical quality measures that matter across the enterprise through an ongoing review process that includes research, assessment, and redesign

- Monitoring industry and enterprise trends and priorities, regulatory and compliance guidelines, specialty metrics, value-based reimbursement strategies, and national quality strategy to continuously evolve metrics and ensure alignment

- Determining the framework, methodology, governing principles, and criteria for key quality metrics

- Reviewing new and existing clinical quality metrics the business and work teams present; using a methodology to ensure we ground measures in evidence-based medicine and credible organization support, ultimately resulting in improved health outcomes.

THE CORPORATE CHIEF OF QUALITY has ultimate responsibility for the oversight of the overall Corporate QIP and is accountable for the following aspects including, but not limited to:

- Chairs Clinical Quality Measure Alignment Committee (CQMA) on Enterprise-wide quality measure alignment, standardization, and simplification of quality measures

- Chairs the CQIC

- Chairs the Corporate Recommendation Review Committee (CRRC)

- Chairs the Physician Clinical Practice Guideline Committee.

CORPORATE COMMITTEES

THE CORPORATE QUALITY IMPROVEMENT COMMITTEE (CQIC) oversees the quality improvement program, as delegated by the Internal Board and Management Team. The CQIC uses a centralized approach to the QIP by forming one corporate committee that assumes the responsibility for the QIP of Humana. Chaired by the Corporate Chief of Quality, the CQIC reports to the Internal Board and Management Team on a quarterly basis.

The CQIC oversees the establishment and integration of the QIP across all departments and measurement of quality activities on a regular basis. It also provides operational oversight for the QIP activities and recommends policy decisions. The CQIC provides a forum for members to engage in review, coordination, and direction of the Quality Improvement program. Organization-wide representation of the CQIC includes representatives from:

- Accreditation
- Appeals and Grievances
- Behavioral Health
- Claims
- Clinical Policy
- Clinical Programs

- Clinical Strategy
- Commercial Product UM
- Compliance
- Consumer Messaging
- Credentialing
- Customer Care
- Disease Management
- Medicare/Medicaid Product UM
- National Network Operations
- Pharmacy
- Provider Communications
- Provider Contracting
- Quality Operations, Compliance and Accreditation
- Risk Management
- Specialty Benefits
- Medicaid Improvement

THE CORPORATE CREDENTIALING COMMITTEE is responsible for review and assessment of practitioners using appropriate standards for credentialing, recredentialing, and de-credentialing. The committee presents credentialing and recredentialing data to the CQIC, and is responsible for maintaining a high-quality network of providers.

The Humana Medical Director chairs the Credentialing Committee, which meets monthly. It includes credentialing representatives and practicing network physicians.

CORPORATE RECOMMENDATION REVIEW COMMITTEE (CRRC) has a direct role in the quality of care our network providers deliver to enrollees. The CRRC makes the final decision for Humana on provider termination recommendations for quality of care received through the peer review process. The CRRC may affirm, modify, or reverse the recommendation, or remand the matter back to the Peer Review Committee for additional evidence. The Corporate Chief of Quality chairs the CRRC, which is mostly composed of physicians and reports to the CQIC. Members may include:

- Corporate Chief of Quality
- Humana Medical Directors
- Director of Quality Operations, Compliance, and Accreditation
- Director of National Network Operations or Vice President of Provider Center of Excellence

CLINICAL OPERATIONS UTILIZATION MANAGEMENT COMMITTEE provides oversight of clinical compliance activities impacting Clinical Operations. This committee supports more effective collaboration between leaders of all Clinical Services Programs performing utilization management and includes representatives from Risk, Legal, and Compliance. The Committee conducts review and analysis of clinical compliance-related metrics, nurse inter-rater reliability assessment activities, Corrective Action Plans (CAPs), regulatory updates, compliance-related process and workflow changes, and quality monitoring and evaluation of effectiveness of the program. The committee reports to CQIC.

CLINICAL PRACTICE GUIDELINE PHYSICIAN COMMITTEE (CPGC) is chaired by the Corporate Chief of Quality and is comprise of Humana physicians specializing in cardiology,

family practice, OB/GYN, oncology, and behavioral health, among other specialties. The CPGC reviews selected guidelines and presents its recommendations to the CQIC for annual approval.

HEALTH SERVICES ORGANIZATION (HSO) NATIONAL UTILIZATION MANAGEMENT COMMITTEE is accountable for facilitating a process for monitoring the care that hospitals, skilled nursing facilities (SNFs), home health, and ancillary services provides. The committee reviews utilization data and related statistics to identify trends and recommend improvement strategies. The committee also reviews and approves the HSO Policies and Procedures at least annually and when needed as changes occur.

PHARMACY AND THERAPEUTICS (P&T) COMMITTEE is responsible for reviewing and making decisions about the appropriate use of drugs, biologicals, and select non-drug pharmacy-related products. The P&T Committee reviews policies that guide exceptions and other utilization management processes, including Drug Utilization Review program, QIP, quantity limits, generic substitution, and therapeutic interchange. This charge may be relevant in many contexts including, but not limited to, clinical edits, drug utilization review, consumer programs, contracting, and networks. Ultimately, the goal of the Committee is to confirm that we make proper decisions regarding drug access and the overall value of the benefit as it pertains to drugs, biologics, and select non-drug products.

PROTECTED HEALTH INFORMATION AND VENDOR ETHICS (PHIVE) COMMITTEE is a corporate committee created to protect the privacy of Humana enrollees and direct the ethical behavior of subcontractors. The PHIVE Committee reviews the handling of identifiable and de-identifiable enrollee data and monitors interaction with subcontractors to promote the highest ethical standards. The PHIVE Committee meets monthly and reports to the CQIC. Members of the PHIVE Committee may include representatives from:

- Privacy Officer (chair)
- Pharmacy Solutions
- Physician Review
- Market Vice President
- Law Department
- Regulatory Implementation
- National Network Operations
- Technical Services Group
- Clinical Programs and Services
- Risk Management

THE MEDICAL PIPELINE COMMITTEE'S charter is to discover and research new and emerging medical technologies with the purpose of developing a strategy, determining the expected financial impact around these new technologies, and distributing information to other departments throughout Humana. Medical technologies include, but are not limited to, medical devices, professional society recommendations, CMS coverage updates, and laboratory and genetic testing. The committee currently refers information to the following departments: Technology Assessment Forum, Provider Contracting, Lab Pay Zero Initiative [2], Quality Operations, Compliance and Accreditation, Pharmacy, Healthcare Economics, Claims, Product Development, and Medicare. The committee meets at least quarterly and publishes an update of activities we distribute throughout the company. The Committee also issues alerts around

technologies that may be of an urgent nature and result in high utilization or high financial impact. Medical Pipeline Committee members may include representatives from:
- Clinical Policy Development
- Technology Assessment Forum
- Healthcare Economics
- Genetic Guidance Program
- Additional representatives as appropriate

LOCAL OVERSIGHT OF FLORIDA COMPREHENSIVE QIP

FLORIDA COMMITTEE STRUCTURE
Humana's Florida QIP leverages the longstanding, robust experience of the Corporate Quality Improvement Committee (CQIC). The CQIC provides oversight for the Florida committees using the Quality Improvement Status Report. Our Florida program incorporates both clinical and service activities into the Quality Improvement process and has clinical committees that perform peer review and analysis of market-specific data and initiatives.

FLORIDA MEDICAID QUALITY IMPROVEMENT COMMITTEE (QIC) provides oversight of the quality improvement program activities and clinical recommendations for the Florida Medicaid plan. The CQIC and the Internal Board and Executive Committee delegate authority to the QIC.

The Florida QIC facilitates comprehensive integration of operational processes across medical and LTC services by planning, analyzing, and evaluating quality improvement activities. The Committee promotes objective and systematic monitoring and evaluation of consumer and client health services and facilitates compliance with regulatory requirements. The Florida QIC meets quarterly and reports to the CQIC through the legal entity report.

The Florida Medicaid Medical Director serves as Chairperson and presides at meetings of the Florida Comprehensive QIC. Illustrating cross-functional participation, the following departments are represented at QIC meetings:

- Case Management and Disease Management
- Utilization Management
- Network Development and Operations
- Provider Relations
- Florida Medicaid Medical Director
- Quality Operations Compliance and Accreditation
- Customer Care
- Performance Improvement
- Quality Improvement
- Finance
- Pharmacy
- Risk Management
- Compliance
- Grievances and Appeals
- Vendor Performance Delegation

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

QUALITY MANAGEMENT COMMITTEE (QMC) is responsible for recommending, reviewing, and evaluating aspects of preventive and clinical care of our Florida program. The QMC reviews Florida-specific preventive health and clinical study initiatives, and/or focused studies. The committee also handles peer review functions. Humana has empowered the QMC to develop appropriate corrective actions and quality improvement interventions. A Humana Medical Director or a physician designee chairs the QMC, which includes physician members who are actively practicing in the provider network. The QMC meets three (3) times per year, or as often as needed. Members of the QMC may include representatives from:

- Medical Director (chair)
- Quality Operations, Compliance, and Accreditation
- Clinical Programs
- Practicing Network Physicians
- Additional representatives as appropriate

PEER REVIEW COMMITTEE (PRC) is responsible for reviewing potential quality of care issues, determining the severity of the issue, and recommending quality improvements or corrective actions as appropriate. The PRC is responsible for developing individual provider quality improvement plans, where indicated, and reviewing progress toward resolution. Physicians and other healthcare professionals participate on the PRC, but only physician members have voting privileges. A Humana Medical Director chairs the PRC. It meets as needed to complete timely reviews of clinical quality concerns. The PRC reports to the local Florida Quality Management Committee. Members of the PRC may include:

- Humana Medical Director
- Quality Operations, Compliance, and Accreditation Divisional Director or manager and support associates
- Practicing Network Physicians (e.g., primary care and specialties)
- Additional representatives as appropriate.

DELEGATION COMMITTEE is responsible for coordination and review of Florida delegated activities related to quality management or improvement, credentialing, claims payment, enrollee rights and responsibilities, and utilization as appropriate. Responsibilities of the Delegation Committee include review and approval of reports from delegated entities and recommendations for corrective actions as necessary. The Delegation Committee meets at least quarterly, and we report all delegation activities annually through the CQIC.
Members of the Delegation Committee may include:

- Humana Medical Director
- Representative, Network, or Provider Relations
- Representative, Quality Operations, Compliance, and Accreditation
- Representative, Utilization Management
- Representative, Customer Care
- Representative, Compliance
- Representative, Delegation Oversight

RISK MANAGEMENT AND SAFETY COMMITTEE has oversight of the Risk Management Program. It identifies corrective measures needed to eliminate or control recognized safety and health hazards and recommends improvements. The committee acts upon referrals for risk

issues generated both internally and externally. The Manager of Risk Management is the Chair of the Risk Management Committee, which meets a minimum of three (3) times a year, or more frequently as needed. The committee reports quarterly to the Humana Internal Board and Management Team. Members of the Risk Management/ Safety Committee may include representatives from:

- Quality Operations, Compliance, and Accreditation
- Human Resources
- Health Services
- Workplace Solutions

QI PROGRAM CONTENT

Humana bases its QIP on the concept of Continuous Quality Improvement (CQI), whereby we execute a planned sequence of systematic and documented activities aimed at both resolving identified variances and improving processes. The program includes the following elements:

- Performance Improvement Projects (PIPs)

- Over-utilization and under-utilization measures

- Annual analysis of plan demographics including clinical, geographical, and cultural to identify high-risk populations, areas of network need, enrollee education opportunities, and performance improvement opportunities

- Access and availability issues including after-hours availability of Primary Care Physicians (PCPs)

- Quality and appropriateness of care furnished to children with special health care needs

- Continuity and coordination of care

- HEDIS measures including CAHPS surveys, as required by state, federal, or other agencies

- Annual effectiveness review of QIP

- Other non-clinical areas of performance (such as Customer Care call statistics and other enrollee services functions, marketing and outreach, claims processing timeliness and accuracy, provider satisfaction)

PERFORMANCE MONITORING FEATURES OF THE QIP

PERFORMANCE MONITORING AND EVALUATION PROCESSES ACROSS THE ORGANIZATION

The QIP is broad in scope to monitor and evaluate the quality of care and service our enrollees receive. The annual Quality Improvement Work Plan (QIWP) delineates targeted goals and objectives based on the strengths and weaknesses we identify in the previous year's Annual

Evaluation report. From there we establish goals and benchmarks using nationally recognized data, such as NCQA Quality Compass or State Medicaid identified goals. The QIC reviews continued follow-up and trending at defined frequencies captured in committee minutes, the annual QI Evaluation, and QIP Status Reports that we submit quarterly to the CQIC. Approved annually by the QMC, the QIC and the CQIC, we update the QIWP as needed to assess progress of initiatives. The QIWP includes:

- Specific activities to take and key indicators to monitor in the upcoming year, with data tracked and trended monthly, quarterly, or annually

- Opportunities for improvement identified from root cause analysis findings, enabling recognition of meaningful interventions

We complete a formal evaluation of the previous year's QIP annually as an assessment of the program's effectiveness. The evaluation outlines accomplishments, includes limitations or barriers to meeting objectives, and provides conclusions and recommendations for the upcoming year. The evaluation addresses the structure and functioning of the QIP, processes in place, and the outcome or results of QI activities. The QIC and the CQIC approve the evaluation.

KEY QIWP CLINICAL METRICS:
- Performance Measures including HEDIS, Agency for Healthcare Research and Quality (AHRQ), Child Health Check-Up, Agency-Defined
- CAHPS Surveys
- Performance Improvement Projects
- Provider Outcome Data
- Clinical Program Outcomes
- Performance Assessment Report
- Practice Guidelines Monitoring
- AHRQ Patient Safety Indicators

KEY QIWP OPERATIONAL METRICS:
- Customer Care Metrics
- Claims Timeliness and Accuracy
- Grievance and Appeals Management
- Assessment of Enrollee Complaints
- Under/Over-Utilization
- Health Services Organization Medical Management Metrics
- Subcontractor Performance

The Quality Improvement Work Plan prioritizes activities, assisting in determining resource needs. It also serves as a foundation for ongoing management of the QI process. We report the results, re-measures, actions taken, assessment, analysis, and barriers in the Florida QIC and in the Quality Improvement Evaluation (QIE).
Work plan requirements include:

- Approval by the Florida QIC and the QMC

- Updates as often as necessary and at least annually based on conclusions and recommendations identified in the preceding year's QIE

- Serving as a working document, which we update as priorities and projects change

- Including input and reflecting activities from all operational areas

- Facilitating continuity of previously identified issues, particularly those of the prior year

The QI Work Plan includes the following:
- Program scope
- Quality of clinical care
- Quality of service
- Safety of clinical care
- Enrollees' experience
- Yearly objectives
- Yearly planned activities
- Timeframe within which each activity is to be achieved
- The associate responsible for each activity
- Monitoring previously identified issues
- Evaluation of the QI program

We have included an excerpt from our QI Work Plan in Attachment 35-3.

==========
3. The extent to which the respondent describes proactive processes and strategies that are utilized to recognize and solve problems before they occur or are exacerbated.
==========

Humana has established mechanisms within our QIP to identify potential issues before they arise and to address any problems immediately.

PROACTIVE PROCESSES AND STRATEGIES TO MONITOR QUALITY

PERFORMANCE MONITORING
Ongoing performance monitoring is the key to assessing the quality of services and measuring the effectiveness of our QIP, which ultimately improves the health and well-being of our enrollees. Humana proactively monitors our performance relating to quality of care using the following mechanisms:

- Ambulatory Medical Record Review
- Continuity of Care Studies
- Assessment of Satisfaction
- Case Management
- Communication and Collaboration on Behavioral Health Issues
- Enrollee Satisfaction Surveys
- HEDIS – Clinical and Preventive Health Initiatives
- Peer Review Process

- Performance Improvement Projects (PIPs)

AMBULATORY MEDICAL RECORD REVIEW: Humana clinical associates conduct annual medical record audits in randomly selected physician offices using a standard chart review tool. We also conduct medical record audits of facility provider sites every two (2) years. The Quality Operations Compliance and Accreditation department takes further actions as warranted. At a minimum, the record should comply with the standards set forth by AHCA and any federal regulatory standards.

Humana conducts an annual review of medical records for a sample of providers that provided Healthy Start services to our Medicaid enrollees. We use a standardized Humana Medical Record Documentation Review Tool (MRDR) for OB provider records, obstetrical delivery records, pediatric provider records, and hospital/birthing center records to complete the reviews. Practice sites include individual offices, clinics, multi-provider practices, and facilities.

The purpose of the review is to evaluate compliance with specific medical record documentation components, as delineated in the Provider Administration Manual and supported by CMS and the State of Florida. We communicate the outcomes and scores to the provider, along with any recommended corrective actions to improve performance. The purpose of the audit is to ensure our Medicaid providers comply with the guidelines set forth by the AHCA's contracted services as well as the requirements and recommendations made in Humana's Provider Manual.

Humana conducts medical and case record reviews of all provider sites that have a pattern of complaints or poor-quality outcomes. We conduct medical record audits at any provider sites with more than five (5) quality of care referrals in the last six (6) months.

CONTINUITY OF CARE STUDIES: Humana strives to facilitate medical care delivered seamlessly across a multitude of delivery sites and throughout the course of the disease process. We analyze data to determine areas where opportunities exist to improve continuity and coordination between settings of care, and in transitions of care from one provider to another.

Humana has corporate medical continuity and coordination of care (COC) studies that we complete for all NCQA-accredited states that include Medicare, Medicaid, and Dual Eligible enrollees. These studies include:

- Post-discharge survey – Improving rate of follow up appointment with physician
- Post-discharge survey – Improving ease of obtaining medications
- Post-discharge survey – Improving coordination of home health care services
- Post-discharge survey – Increasing understanding of discharge plans and instructions

Humana's Florida Medicaid CMO is NCQA-accredited and completes two (2) medical COC studies.

- Improving Coordination between Hospital and Primary Physicians for enrollees with an inpatient stay (hospital discharge)

- Improving Communication of Mammogram Results to the Primary Physicians.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

ASSESSMENT OF SATISFACTION: We conduct annual provider and enrollee satisfaction surveys to measure performance and compare survey results with the prior year to identify opportunities for improvement.

CASE MANAGEMENT
Case Management is a proactive method to identify quality issues before they arise. Through regular communication with enrollees and providers, Case Managers (CMs) can assess the quality and level of care being provided, and address any issues preemptively or immediately upon identification. We also provide case management programs for enrollees with chronic health care issues or complex care coordination needs for Medicaid enrollees diagnosed with asthma, congestive heart failure, diabetes, HIV/AIDS, hypertension, and dementia and Alzheimer's who have verbally agreed to participate in a Disease Management program. The program's aim is to provide enrollees with holistic care through telephone-based or, when available, in-person consultations by case managers. We have designed the program to keep enrollees' well-being at the forefront in many ways, including:
- Optimizing utilization of their healthcare benefits
- Improving their self-case management skills
- Preventing unnecessary hospital stays and emergency room visits

COMMUNICATION AND COLLABORATION ON BEHAVIORAL HEALTH ISSUES: Humana collaborates with two (2) behavioral health delegates to monitor and improve care coordination between medical care and behavioral health care. Analyses includes, but is not limited to, preventive behavioral health screening opportunities, HEDIS results, and management of co-existing medical and behavioral health disorders.

ENROLLEE SATISFACTION SURVEYS:
CONSUMER ASSESSMENT OF HEALTHCARE PROVIDERS AND SYSTEMS (CAHPS): We conduct CAHPS and CAHPS simulation surveys for our Florida enrollees. We base improvement actions upon individual market survey results and incorporate them into corporate improvement initiatives.

HUMANA ENROLLEE EXPERIENCE SURVEY: We are exploring developing a specialized Medicaid Enrollee Experience Survey for our Florida Medicaid program. Currently, Humana Medicare and dual eligible members are eligible to receive an Experience Survey following a visit in the prior sixty (60) days to any PCP or other advanced primary care provider.

The survey has thirteen (13) questions in total: Seven (7) of those core questions relate to topics on the CAHPS survey and six (6) relate to topics on the Health Outcomes Survey (HOS). After they complete those questions, the survey asks the enrollee to rate the likelihood that they would recommend the provider they saw to a friend or family member on a zero to ten (0-10) scale. We keep all enrollee responses confidential and share the aggregated survey data with provider groups to create a better enrollee experience.

TOPICS COVERED IN THE SURVEY QUESTIONS:

OFFICE EXPERIENCE
1. Ease of scheduling your appointment
2. Your wait time in the office today

3. Ease of getting a referral for specialist care

GETTING MEDICATIONS, TESTS, AND OTHER CARE
4. Ease of getting doctor-prescribed medications through your drug plan
5. Ease of getting doctor-recommended treatments and care through your health plan

COORDINATION OF CARE
6. Physician reviewed medications with you
7. Physician discussed specialist care you've received since your last visit

PHYSICIAN-ENROLLEE DISCUSSION
8. Physician or health provider discussed balance and risk falling in your home
9. Physician or health provider gave you treatment options for balance or risk of falling
10. Physician, nurse, or health provider discussed urine leakage
11. Physician, nurse, or health provider discussed options to treat urine leakage
12. Physician or health provider recommended exercise program
13. Physician or health provider discussed mental or emotional health issues like stress, depression, or anxiety

HEDIS – CLINICAL AND PREVENTIVE HEALTH INITIATIVES: We develop clinical quality initiatives to improve preventive care rates and to address specific conditions relevant to the population and as a result of review from specific areas of concern. There are many efforts underway to improve the HEDIS measure rates, including two (2) components to improve the final scores:
- Guiding the enrollee or physician to secure appropriate recommended services
- Facilitating production of accurate data produced that captures services we measure

PEER REVIEW PROCESS: Monitoring and identifying important aspects of care and resolving potential quality concerns are key to achieving desired health outcomes. The Quality Operations, Compliance, and Accreditation Department reviews potential quality concerns and refers concerns to a Humana Medical Director Peer Review Committee (PRC), as appropriate. We may identify potential quality concerns through enrollee complaints and grievances, ambulatory medical record review, external agency review requests, Humana clinical program referrals, in-patient medical record review, under-utilization reports, claims-based reports of certain safety indicators, and Utilization Management (UM) review. We implement improvement actions as warranted by the case findings.

PERFORMANCE IMPROVEMENT PROJECTS (PIPS): With guidance and approval from AHCA and the External Quality Review Organization (EQRO), Humana has developed PIPs for Medicaid enrollees. We create PIPs when we identify opportunities for improvement as well as in collaboration with AHCA and the EQRO. Upon data collection and analysis, we implement provider and enrollee-focused interventions.
Humana currently conducts the follow PIPs under the guidance of AHCA and the EQRO:

1. Improving Timeliness of Prenatal Care and Well-Child Visits in the First Fifteen (15) months of Life – Six (6) or More Visits

2. Preventive Dental Services for Children

3. Electronic Health Record with Meaningful Use

4. Integrating Primary Care and Behavioral Health in Antidepressant Medication Management medication review

5. Person-Centered Care Planning

ONGOING PROCESSES AND STRATEGIES TO IDENTIFY QUALITY OF CARE ISSUES

EVALUATION AND TRENDING
The QIP's broad scope enables us to monitor and evaluate enrollees' quality of care and service. We track, monitor, and take action on the following:

- Trending data monthly, quarterly, and annually as delineated in the QIWP and baseline measurements established

- Opportunities for improvement and barriers, conducting root cause analysis as needed

- Interventions to select and implement as appropriate

- Continued follow-up and trending through committee minutes, the annual QIE, and QIP Status Reports submitted quarterly to the CQIC

DATA SOURCES
Our information systems collect, analyze, integrate, and maintain data to support our QIP. We proactively review data including, but not limited to: UM data, HEDIS measures, encounter data, and enrollee and provider satisfaction data to identify areas where potential quality of care issues may arise. Humana achieves systematic measurement and assessment of performance using multiple data systems. We evaluate these systems annually to verify that we have adequate resources to meet the needs of the program. Our data resources and current analytics capabilities enable Humana to assess quality of care and ensure enrollees receive the right care, at the right place, at the right time. Attachment 35-4 depicts how we use multiple data sources to find insight and inform actions.

Our integrated system resources enable focus on promoting the overall health of our enrollees, while closing care gaps and improving quality care outcomes. Attachment 35-5 illustrates our dynamic approach to improving health outcomes for our enrollees.

ROOT CAUSE ANALYSIS
Root cause analysis (RCA) is a process through which an auditor can identify why an issue occurred, versus only identifying or reporting on the issue itself. RCA benefits the organization by identifying the underlying causes of an issue. This provides the basis to resolve the true issue that could impact the organization again in the future.

We see RCA as a crucial part of our quality improvement process. As an internal auditing process, RCA allows us to fully understand an issue in our organization and create a comprehensive solution to resolve the issue and prevent recurrence. Our QMC reviews trends identified in committee data at each meeting, and conducts root cause analysis on the trends.

Following this discussion, we present a high-level variance summary report to the CQIC that includes topics requiring further discussion, recommendation, and resolution. The CQIC then adapts operational policies to fit the solutions created through this analysis.

Using a nationally recognized, standardized approach, Humana applies the four (4)-step management method of PDSA (plan-do-study-act-adjust) for the monitoring, control, and continuous improvement of processes. Detailed steps include, but are not limited to:
- Monitoring system-wide issues
- Identifying opportunities for improvement
- Determining the root cause of problems identified
- Exploring alternatives and developing a plan of action
- Activating the plan, measuring the results, evaluating effectiveness of actions, and modifying the approach as needed

We have extensive experience using data and analytics to identify opportunities for improvement, and to monitor, evaluate, and improve quality of care and services to Medicaid enrollees. The Humana analytics team in conjunction with the QI department is experienced in data collection and monitoring. We provide a series of defined dashboard reports that allow analysis and trending of data to guide in formulating appropriate and meaningful PIPs to undertake.

PIPs help us measure performance, apply interventions to improve performance, evaluate performance, and conduct periodic follow-up to measure effectiveness of interventions and outcomes. We select projects based on high volume and high-risk conditions prevalent in this population and that have the potential for significant impact on health outcomes. We report the status and results of PIPs using the Agency's EQRO-required tools and processes. PIPs include the following components:

- Assessment of performance improvement
- Data collection and analysis
- Ongoing interventions and measurement of performance
- System interventions, including establishment or alteration of practice guidelines
- Systematic and periodic follow-up on the effect of the interventions
- Performance assessment using quality indicators that are:

-- Able to achieve demonstrable improvement

-- Based on systematic ongoing collection and analysis of valid and reliable data

-- Capable of measuring outcomes such as changes in health status, functional status and enrollee satisfaction, or valid proxies or those outcomes

-- Objective, clearly, and unambiguously defined, and based on current clinical knowledge or health services research

Both PIPs and Corrective Action Plans (CAPs) play important roles in Humana's efforts to drive performance improvement in targeted areas. We can resolve many quality issues through specific actions such as outreach to a provider, dissemination of information to the enrollee, or other such corrective actions.

We develop PIPs with guidance from AHCA, the EQRO, and internal guidance upon identification of opportunities for improvement. When we identify an opportunity for system-wide improvement because of a negative trend or the like, we implement PIPs and CAPs as a structured and formal mechanism for resolving the situation.

Depending on the issue, we may implement CAPs with a provider who is failing to meet standards, or as part of QI initiatives designed to improve contract performance.

==========

4. The extent to which the respondent provides two examples of completed quality improvement projects that incorporated a data-driven quality improvement cycle.

5. The extent to which the respondent provides data on the results of the quality improvement projects that demonstrates the efficacy of the interventions.

6. The extent to which one of the quality improvement projects described by the respondent is related to reducing potentially preventable events or improving birth outcomes.

==========

Humana has vast experience identifying areas for improvement and developing and implementing successful initiatives to improve outcomes. When implementing our quality improvement initiatives, we follow the PDSA data-driven improvement cycle to track performance, identify areas for improvement, perform root cause analysis, implement interventions, and reassess performance following the interventions.

The results from our quality improvement initiatives below illustrate the efficacy of our interventions and our ability to meaningfully improve quality. Following are two examples of our Florida Medicaid Plan's completed quality improvement projects:

- South Florida Real-Time Emergency Department Initiative
- Field Case Manager HIV/AIDS Initiative

COMPLETED QUALITY INITIATIVE #1: SOUTH FLORIDA REAL-TIME EMERGENCY DEPARTMENT INITIATIVE

BACKGROUND AND INITIATIVE DETAILS

Reducing unnecessary emergency department utilization improves the quality and continuity of care for enrollees while reducing unnecessary costs. As a state-defined potentially preventable event, unnecessary or inappropriate emergency department utilization increases costs for the Florida's Medicaid Program and affects health outcomes for Florida Medicaid enrollees.

In 2013 we identified a need for up-to-date, real-time emergency department data to more effectively monitor and track enrollee emergency department utilization. Real-time data enabled us to conduct timely outreach to enrollees who use the emergency department, engaging them in care management, disease management, or accessing care in the most appropriate setting.

Our clinical team worked with our provider network and IT teams to contract with the following facilities:
North Shore: 2/1/2013
Palmetto: 6/17/2013
All Tenet Facilities: 6/9/2014
All Broward Health Facilities: 10/24/2014
Pediatric Associates (from the Memorials): 8/3/2015
All Memorial Facilities: 9/15/2015

INTERVENTIONS
- Receive, assign, and process daily, real-time emergency department information from various sources including paper referrals, daily reports, and an electronic encounter queue in our clinical platform Clinical Guidance eXchange (CGX)

- Notify PCPs of enrollee emergency department visits, verifying contact information and obtaining enrollees' permission to schedule follow-up appointments

- Provide discharge instructions via fax to PCP when accessible (North Shore, Palmetto)

- Contact, assess, and educate enrollees concerning disease management, prevention, and the most appropriate place for effective treatment

- Engage Provider Relations as necessary to address barriers

- Refer to Case Management and/or disease management, and behavioral health services, as needed for comprehensive care management

OUTCOMES
The outreach highlighted in the following results includes contacting, assessing, and educating enrollees to improve their quality of care.

Initial Outcomes Noted (Early 2014)
- North Shore Hospital:
-- Pre-outreach ED visits: 996
-- Post-outreach ED visits: 516
-- Indicates a forty-eight percent (48%) decrease in utilization with enrollees reached.

- Palmetto Hospital:
-- Pre-outreach ED visits: 401
-- Post-outreach ED visits: 147
-- Indicates a sixty-three percent (63%) decrease in utilization with enrollees reached.

Outcomes (2015)
- All Participating Facilities:
-- Pre-outreach ED visits: 4,829
-- Post-outreach ED visits: 867
-- Indicates an eighty-two percent (82%) decrease in utilization with enrollees reached.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

ONGOING INITIATIVES

Following the success of the South Florida Real-Time Emergency Department Initiative, we built upon our experience reducing unnecessary emergency department visits by partnering with AHCA in the Event Notification System (ENS). The ENS provides real-time electronic exchange of hospital utilization data, including emergency department visits.

COMPLETED QUALITY INITIATIVE #2: FIELD CASE MANAGER HIV/AIDS INITIATIVE

BACKGROUND AND INITIATIVE DETAILS

Using nurses in the field for home visits can help close gaps in engaging Florida enrollees with HIV/AIDS in our Disease Management (DM) program. Meeting enrollees at their homes helps facilitate conversations that help enrollees build trust with Humana, openly discuss the disease, and break down barriers they have in educating them on disease management.

Analyzing claim, utilization, and clinical outcome data, Humana identified a need to engage our HIV/AIDS enrollees more effectively, seeking more active participation in our HIV/AIDS DM program. While we had moderate success engaging members into this DM program using our telephonic approach, we had feedback from many enrollee and the nurses performing the telephonic outreach that because of the sensitive nature of the diagnosis, many members were reluctant to engage over the phone. We developed our Field Case Manager (FCM) HIV/AIDS Initiative to address this need.

Our FCMs contact the enrollee telephonically, requesting permission to meet face to face. If the enrollee agrees, the FCMs conduct a “drive-by” within the community so they can make in-person introductions and begin the enrollee engagement process. We meet enrollees at the place of their choosing, such as their home or PCP’s office.

INTERVENTIONS

- Find enrollee in the community
- Meet with enrollee at his or her home or PCP’s office
- Introduce enrollee to the DM Program and describe its benefits
- Complete a General Survey
- Address any immediate medical needs
-- Set up PCP appointment or provide enrollee with information to call
- Address immediate educational needs
-- Medication education regarding the importance of adherence
-- Assist enrollee with filling medication pill boxes to help enrollee take medication on time
- Address any immediate social needs
-- Link into care with social workers
- Address any immediate behavioral needs
-- Link into care with behavioral health (BH) services
- Identify any other immediate enrollee needs
- Introduce Disease Management Nurse who will be taking over the care telephonically
-- Link the enrollee via telephone to the DM Nurse for a quick introduction
-- Provide enrollee with DM Nurse information on a business card for future contact
-- Schedule next meeting with enrollee to hold by telephone with the DM Nurse

OUTCOMES
We have had success reaching and engaging enrollees via the FCM HIV/AIDS initiative. The following data illustrates enrollee engagement for the first and second years.

6/1/15 through 5/31/16
Eligible: 315
Unable to Contact: 109
Reached: 206
Reach Rate: 65.40%
Participating: 171
Engagement Rate: 83.01%
Participation Rate: 54.29%

6/1/16 through 5/31/17
Eligible: 336
Unable to Contact: 105
Reached: 231
Reach Rate: 68.75%
Participating: 204
Engagement Rate: 88.31%
Participation Rate: 60.71%

We were better able to manage enrollees' condition and improve outcomes through successful enrollee engagement, guiding them to the appropriate care setting and enrolling them in DM. Better management and improved outcomes led to improved health and well-being for the participating enrollees as well as an average per member per month (PMPM) forty-eight percent (48%) cost reduction.

[1] http://healthinsuranceratings.ncqa.org/2017/search/Medicaid/FL

[2] Through the Lab Pay Zero Initiative, a provider agrees that payment for in-office laboratory services rendered to members is limited solely to those specified on Humana's National Lab Table 2988. Medical Pipeline Committee identifies emerging point-of-care tests and notifies Lab Pay Zero about these emerging tests.

Evaluation Criteria:

1. The extent to which the respondent's description demonstrates that the medical director has substantial oversight in the assessment and enhancement of quality improvement activities, and the Chief Executive Officer is actively involved in quality management.

2. The adequacy of the respondent's approach to incorporating quality improvement activities into the culture and operations of the organization.

3. The extent to which the respondent describes proactive processes and strategies that are utilized to recognize and solve problems before they occur or are exacerbated.

4. The extent to which the respondent provides two examples of completed quality improvement projects that incorporated a data-driven quality improvement cycle.

5. The extent to which the respondent provides data on the results of the quality improvement projects that demonstrates the efficacy of the interventions.

6. The extent to which one of the quality improvement projects described by the respondent is related to reducing potentially preventable events or improving birth outcomes.

Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 5 points each.

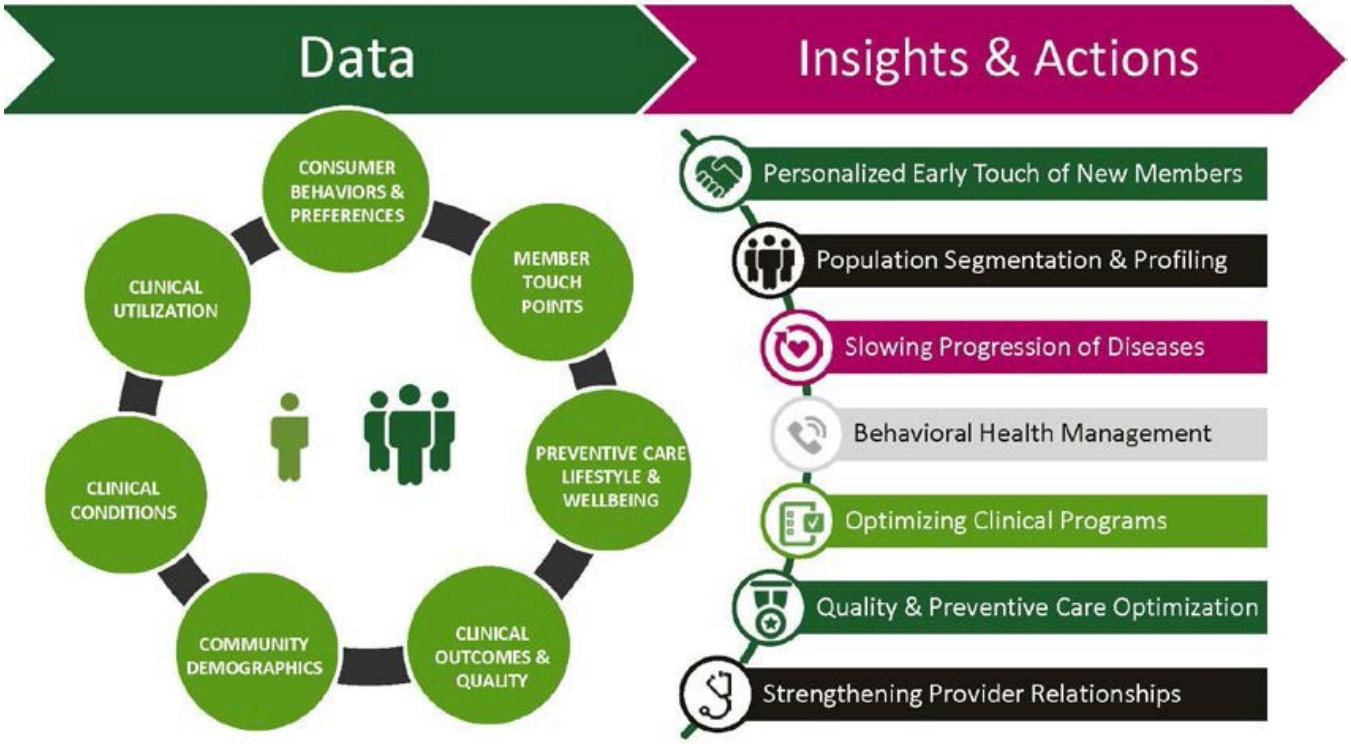
Attachment 35-4: Quality Improvement – Data Initiating Insights and Actions

Humana has information systems that are designed to collect, analyze, integrate, and maintain data to support the quality improvement program. Humana measures and promotes quality throughout all operational areas, as evidenced by our NCQA Commendable Accreditation status and our quality rankings. The graphic below depicts how we utilize multiple data sources to feed our insight and actions.



Attachment 35-5: Enabling Population Health through Integrated Quality & Data Processes

Our integrated system resources enables focus on promoting the overall health of our enrollees, while closing care gaps and improving quality care outcomes. The graphic below illustrates our dynamic approach to improving health outcomes for our enrollees.

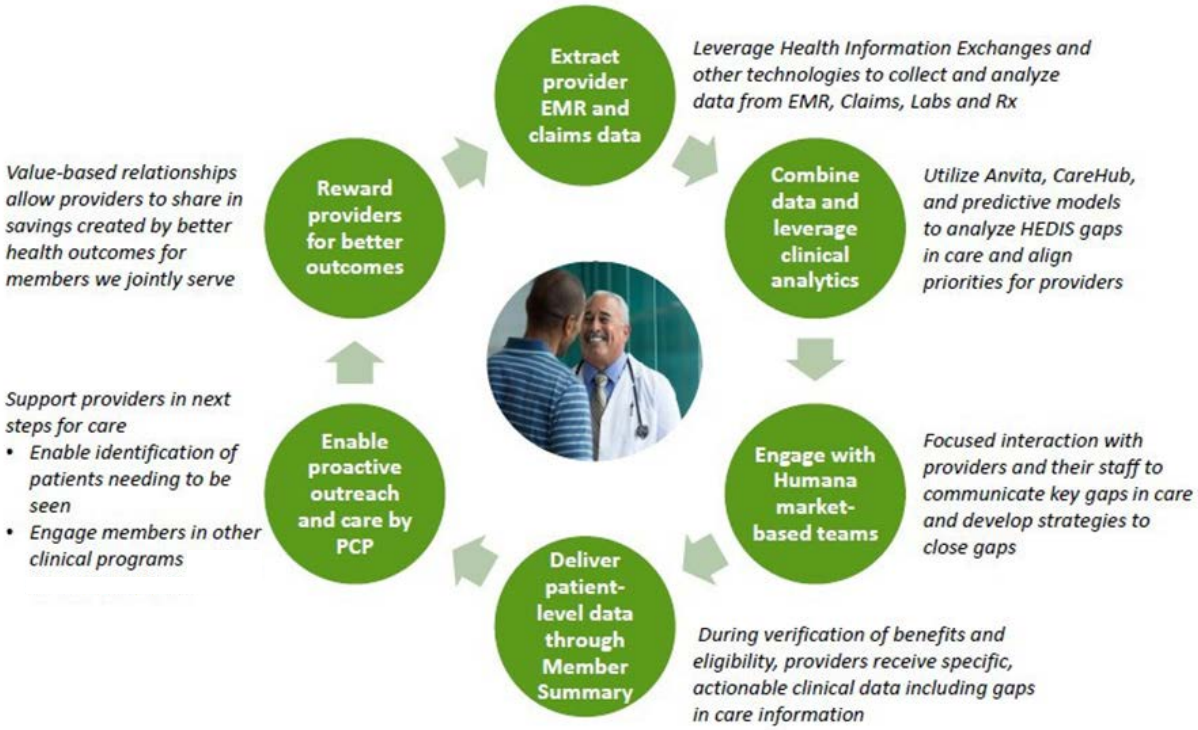


EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 36 – Health Plan Accreditation (See Section 409.966, Florida Statutes) (Statewide):

The respondent shall specify its current accreditation status by a nationally recognized accrediting body. This shall include the name of the accrediting body, the most recent date of certification, the effective date of the accreditation, the type and/or level of accreditation, and the status of accreditation (i.e., provisional, conditional, etc.). The respondent shall attach documentation that supports this information.

Response:

Humana Medical Plan, Inc.'s (HMP) Florida Medicaid HMO currently holds National Committee for Quality Assurance's (NCQA) full, three-year accreditation from October 26, 2016 to October 26, 2019. HMP's accredation status is at the level of Accredited. We bring our longstanding experience and commitment to quality in our Florida Medicaid operations and will continue to improve the quality of care for our enrollees across the state of Florida. Please refer to Attachment 36-1 for a copy of our most recent NCQA accreditation certificate issued August 31, 2017. HMP has been NCQA accredited for twenty-three (23) years.

In our most recent NCQA health plan accreditation survey, HMP received perfect scores one hundred percent (100%) in the standard categories of Credentialing and Recredentialing as well as Members' Rights and Responsibilities. We scored ninety-eight percent (98%) or higher in the Quality Management and Improvement, Utilization Management, Member Connections, and Network Management standard categories.

Humana brings more than fifty-five (55) years of experience caring for Medicare and Medicaid enrollees. Our experience and compassion for these populations are rooted in our commitment to provide the highest quality care to our enrollees. We strive to meet and exceed nationally recognized standards to ensure our enrollees receive the most effective care and support to meet their individual needs.

Evaluation Criteria:

1. Evidence that the respondent has:

(a) Full health plan accreditation by a nationally recognized accrediting body; e.g., full three (3) year accreditation for the National Committee for Quality Assurance (NCQA), full three (3) year accreditation for Utilization Review Accreditation Commission (URAC), or full three (3) year accreditation for Accreditation Association for Ambulatory Health Care, Inc. (AAAHC); or

(b) Partial/conditional health plan accreditation (e.g., provisional for NCQA, conditional or provisional for URAC, or one (1) year or six (6) months for AAAHC); or

(c) No health plan accreditation or denied accreditation.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Score: This section is worth a maximum of 5 raw points as outlined below:

(a) 5 points for full health plan accreditation.

(b) 3 points for partial/conditional health plan accreditation.

(c) 0 points if health plan accreditation denied or no accreditation.

AND EVALUATION CRITERIA (10-2-17)

RESPONDENT NAME: Humana Medical Plan, Inc.

A. RESPONDENT BACKGROUND/EXPERIENCE

No SRCs in this Category for MMA.

B. AGENCY GOALS

MMA SRC# 1 – Potentially Preventable Events (Regional):

The respondent shall describe its organizational commitment to quality improvement as it relates to reducing potentially preventable events. More specifically, the respondent shall describe its overall approach and specific strategies that will be used to ensure a reduction in potentially preventable hospital admissions and readmissions, a reduction in the use of the emergency department for non-emergent/urgent visits, and a reduction in the use of unnecessary ancillary services during hospitalization and outpatient visits. The respondent's approach shall also include:

- A description of the respondent's assessment (using available data sources) of hospital utilization rates and the potential for improvement;
- A description of performance benchmarks for each area of focus;
- A description of incentives that will be implemented for providers and enrollees aimed at diverting care to more appropriate and cost-effective settings; and
- A description of evidence-based interventions and strategies that will be used to target super-utilizers, particularly related to pain management and behavioral health conditions.

Response:

Humana's goal to improve the overall health and well-being of enrollees and their communities drives our commitment to quality improvement. We use a wide range of locally driven clinical programs and quality improvement initiatives to reduce preventable emergency department visits, hospital admissions, and readmissions. Clinical data analytics inform these initiatives to improve the exchange of data between providers. We improve engagement using incentives for both providers and enrollees. Our ability to successfully reduce preventable events requires tailored programs based on a deep understanding of regional barriers and opportunities.

OPPORTUNITIES TO REDUCE PREVENTABLE EVENTS IN REGION 1
As a current Statewide Medicaid Managed Care (SMMC) Comprehensive Plan in Region 1 serving more than fifty-four thousand (54,000) enrollees, Humana has developed a specialized understanding of its populations. The greatest opportunities for improvement related to reducing potentially preventable events include a few areas of focus. Specifically, given the generally rural nature of Region 1, access to providers, particularly level three (3) or four (4) medical centers, is a major issue. Humana has noticed that our enrollees in Region 1 often seek care in other regions, such as Region 2, or out of state in Alabama, because of provider availability. These dynamics lead to an increased number of out-area-authorizations for these enrollees, increasing the need for intensive case management and care coordination to manage the

increased health needs of these individuals. Enrollees in more rural areas often delay seeking care because of barriers such as provider access and lack of transportation. We have learned that close collaboration with local health centers in Region 1 is essential to ensure necessary preventive and primary care for our Region 1 enrollees. Increasing access for these more rural populations require innovative strategies to bring care to enrollees where they are, encourage them to actively engage in primary care, and devise out-of-network care options to meet the needs of the population.

- The large farming industry in Region 1 also presents a unique challenge in the form of a higher number of migrant workers. These individuals work seasonally across the region and throughout the State, creating a challenge in terms of case management and care coordination.

- Region 1 also has a high incidence of readmissions because of behavioral health (BH) conditions. A BH condition is the number one (1) cause for potentially preventable readmissions in the region. [1]

We have organized the remainder of our response as follows, addressing the specific needs and challenges in Region 1:

- Identifying high-risk enrollees and super-utilizers
- Data analytics used to monitor and reduce potentially preventable events
- Humana's Foundation for Reducing Potentially Preventable Events: Strong Provider Partnerships
- Reducing preventable hospital admissions and readmissions in Region 1
- Reducing preventable emergency department visits in Region 1
- Reducing the use of unnecessary ancillary services during hospitalization and outpatient visits in Region 1
- Strategies targeting BH conditions and pain management

IDENTIFICATION OF HIGH-RISK ENROLLEES AND SUPER-UTILIZERS
The first step to reduce preventable events is identifying at-risk enrollees before they inappropriately access care or immediately following a preventable event occurrence. Humana's process for identifying and monitoring high-risk enrollees integrates data analytics with specialized care coordination protocols. This approach allows us to proactively identify high-risk enrollees, preventively address emerging health issues, and immediately contact enrollees identified as accessing care inappropriately.

We use a variety of quantitative and qualitative measures to identify high-utilizer and high-risk enrollees, which allows us to create a full picture of enrollee utilization and potential emerging risk-factors. These sources include:

- Predictive modeling data
- Utilization and cost data
- Health Risk Assessments (HRAs) and survey tools
- Clinical assessments
- Multidisciplinary Team (MDT) meetings
- Specialist physicians
- Enrollee self-identification

- Caregiver identification
- Program referrals (e.g., Physicians, Care Managers, Utilization Managers, BH, Pharmacy, or Medication Therapy Management (MTM), etc.)

We assign an initial acuity level for each enrollee based on clinical and utilization data available in our Clinical Guidance eXchange (CGX) clinical management system. CGX is a proprietary system used by our medical management team to capture authorization and case management activities.

We use proprietary predictive modeling tools and care management hierarchy algorithms to identify enrollees who would benefit from enrollment in our case management programs, with the goal of optimizing quality outcomes in the delivery of healthcare services. We include more on our predictive modeling capabilities later in this response.

==========

Humana's Data Analytic Capabilities used to Monitor and Reduce Potentially Preventable Events

==========

Humana collects and analyzes data from various sources, including clinical reviews, aggregate claims, encounter and authorization data, and provider communications to reduce preventable events. The Utilization Management (UM) department develops indicators for identifying potentially inappropriate over- and under-utilization, which the UM and Quality Management Committees (QMC) approve. The Utilization and Case Management unit regularly reviews reports to provide feedback and tracking in reference to utilization activities.

Humana builds data into operational metric dashboards for leaders to track and trend clinical activities. One of the most critical metrics for clinical program success, particularly for Medicaid enrollees, is the timeliness of the intervention and effective engagement with highest-risk enrollees. Dashboards allow leaders to drill down to specific segments and time periods to closely monitor clinical operational performance. Dashboards include comparisons between clinical teams in different markets to identify region-specific best practices and lessons learned, which helps drive ongoing improvement of existing initiatives. Below is a list of Humana's operational metric dashboards and reports.

- Inpatient Census Report - Daily detailed account of all acute and sub-acute inpatient facility admission cases

- Inpatient Clinical Dashboard - Weekly reporting of key operational metrics, such as time from receipt of authorization to nurse receipt, time for clinical decisions, discharge plan documentation, enrollees contacted for post-discharge follow-up, clinical program reach and engagement rate.

- Early Indicator Report (EIR) - A monthly reporting of key utilization metrics such as admission rates by utilization type (Acute, Skilled Nursing Facility (SNF), Rehabilitation, Long-Term Acute Care Hospital (LTACH)), length of stay, and rate of emergency department utilization.

- Provider Utilization Profiling - Quarterly provider-level report of claims and encounter data to analyze under- and over-utilization and provide peer-to-peer analysis

- Predictive Model Reporting - Severity Score reports, Readmission Model reports, and emergency department Predictive Model reports integrated into CGX to trigger referrals for clinical programs

- Authorization Timeliness Report - Monthly market specific summary of authorization timeliness

At the enrollee-level, Humana also conducts routine reporting to drill down for root cause analysis in cases of under- or over-utilization. Examples of these reports include:

- Readmissions by Provider - Monthly tracking of fourteen (14) and thirty (30)-day readmission rates for acute admissions

- High Utilizer Report - Drill down into individual enrollees with high utilization by service type, e.g., emergency department and inpatient care

- Inpatient Drill Down - Inpatient services by provider, type, and major diagnostic category

At the population level, Humana has established a logic-driven process to monitor, identify, and respond to patterns of over- and under-utilization. These processes identify potential aberrations in service utilization by comparing the approved services and the enrollees' needs documented in the plan of care (POC) with utilization parameters. We analyze data sets for medical, BH, and pharmacy utilization. We also review frequency of selected procedures, emergency department visits, inpatient measures from Health Effectiveness Information Data Set (HEDIS), and certain Consumer Assessment of Healthcare Providers and Systems (CAHPS) enrollee satisfaction information to monitor for over or under UM trends. We select unique utilization indicators to monitor for each enrollee. Examples include but are not limited to the following:

- Acute care admissions per one thousand (1,000) enrollees per year
- Inpatient days per one thousand (1,000) enrollees per year
- Readmission rates within thirty (30) days
- Emergency department visits per one thousand (1,000) enrollees per year
- Observation days per one thousand (1,000) enrollees per year
- Post-discharge care coordination referral call

By continuously re-evaluating these data sets, we can uniquely assess each enrollee for risk factors and proactively take steps to prevent emerging health issues that may lead to unnecessarily high utilization of services as well as poor outcomes. These data sets also facilitate discussions with our clinical leaders and provider partners by benchmarking regional provider data relative to peer groupings.

==========

Humana's Foundation for Reducing Potentially Preventable Events: Strong Provider Partnerships

==========

ENGAGEMENT OF PRIMARY CARE PHYSICIANS (PCPS)

Humana's provider engagement model places PCPs at the forefront of managing enrollees' care while subsequently controlling over-utilization of emergency department, inpatient, and outpatient services. Our PCPs guide Humana enrollees' care management in conjunction with Humana case managers (CMs); this leads to effective case management, coordination of care, and the reduction of duplicative services. Our PCPs also communicate with inpatient physicians during an inpatient stay to avoid duplication of ancillary services.

REWARDING HIGH-QUALITY CARE
In Florida, Humana is deeply committed to improving outcomes through highly engaged value-based purchasing (VBP) provider models in our Medicaid, Medicare, and commercial plans. We now have more than eight hundred thousand (800,000) Florida Medicaid and Medicare enrollees attributed to local VBP-engaged PCPs. We support our providers using data analytics and in-person assistance from our Provider Relations representatives and others to improve results among our Florida Medicaid enrollees, including the reduction of potentially preventable events.

Our engaged PCPs in Region 1 receive monthly reports on their enrollee utilization patterns. Humana's Provider Relations Representatives and providers review the high-risk enrollees and centers that need additional support regarding performance, utilization patterns, preventable emergency department visits (percent of non-urgent), and inpatient and outpatient utilization.

Humana's Florida Medicaid providers in full-risk arrangements outperform their non-risk counterparts in quality, outcomes, and cost. In 2016 the risk providers had significantly higher quality scores on metrics related to preventive health, well-child visits, and diabetes management. As a result of their strong performance, these providers also have strong outcomes: Humana's Florida Medicaid risk providers average twenty-five point three percent (25.3%) fewer emergency department visits per one thousand (1,000) enrollees and seventeen point four percent (17.4%) fewer inpatient admissions per one thousand (1,000) enrollees. By reducing preventable events like these and helping enrollees access care in appropriate settings, Florida risk providers have fourteen point seven percent (14.7%) lower inpatient medical expenses and have reduced pharmacy expenses by eleven point four percent (11.4%).

Our strong provider partnerships are at the foundation of the approaches to preventing potentially preventable events we discuss throughout the remainder of this response.

==========
Humana's Approach to Reducing Potentially Preventable Hospital Admissions and Readmissions

Assessment of hospital utilization rates and the potential for improvement;
==========

According to AHCA's Spring 2017 Quarterly SMMC Report, the top three (3) reasons for potentially preventable admissions in Region are: 1) Chronic Obstructive Pulmonary Disease (COPD), 2) Congestive Heart Failure (CHF) and 3) Other Pneumonia. An effective case

management program can manage these types of conditions. [and regular contact with a PCP and specialists]. Humana has robust and innovative strategies to manage high-need enrollees with chronic, comorbid conditions.

The top three (3) reasons for a potentially preventable readmission in Region 1 are: 1) Bipolar Disorders, 2) COPD, and 3) Pancreas Disorders. These diagnoses present an opportunity to more effectively manage BH conditions as well as better manage chronic conditions.

==========
Humana strategies to reduce potentially preventable hospital admissions and readmissions.
==========

Humana takes a proactive approach to reducing potentially preventable hospitals admissions and readmissions. We begin the process of reducing readmission rates at the time of the initial admission and continue throughout the enrollee's transition out of the hospital. We begin to assess and plan for discharge needs upon notification of an admission. Humana has the second lowest potentially preventable admission rate (PPA) among SMMC standard plans in admissions per one thousand (1,000) enrollees. [2] (Attachment MMA 1-1)

The narrative below describes how we use the following strategies, initiatives, and data to reduce PPAs and readmissions.

- Predictive Modeling and Case Management
- Proactive Healthcare
- Chronic obstructive pulmonary disease (COPD) and Congestive Heart Failure (CHF) Disease Management Program
- Early Indicator Report
- Utilization Management Prospective Review of Inpatient Admissions
- Telemedicine
- Utilization, Claims and Encounter data
- Transition Planning and Enhanced Transition Planning for High-Risk Enrollees
- Post-Discharge Follow-up
- In-Home Provider Visits Post-Discharge
- Frequently Admitted Member (FAM) Program
- Field Case Manager and Field Social Worker Pilots
- Innovations with Home Health Providers
- Neonatal Intensive Care Unit (NICU) CM Program.
- Enhanced Care Coordination for Enrollees Under Age Twenty-One (21)
- Mail-order Pharmacy
- Medication Reconciliation Pilot
- Medication Refill Concierge
- Discharge-to-Encounter Monitoring

PREDICTIVE MODELING AND CASE MANAGEMENT

Humana takes a proactive approach to reducing preventable admissions using innovative predictive models. Our proprietary predictive modeling tools and care management hierarchy

algorithms identify enrollees who would benefit from enrollment in our case management programs, with the goal of optimizing quality outcomes and preventing admissions. Using predictive modeling tools to guide case management activities, we can identify high-risk enrollees. We have included descriptions of one predictive model we use in our Florida Medicaid program below.

MEDICAID HIGH SEVERITY PREDICTIVE MODEL
Identifies the highest-risk, highest-cost, or highest-need Medicaid enrollees to prioritize outreach and care coordination efforts. We group the individuals based on characteristic profiles such as SSI, Temporary Assistance for Needy Families (TANF), and Long-Term Services and Supports (LTSS), and then develop a separate model for each of these groups tailored to the needs of that cohort.

Using our Medicaid Severity Score Predictive Model, we incorporate a severity score generated from medical, BH, and pharmacy claims into monthly reports identifying enrollees with high costs and clinically complex health conditions. The severity score is a predictor of future medical and pharmacy costs. This data allow Humana to identify enrollees with changing care needs, refer them to case management, move them between acuity levels, or alter their case management interventions.

We stratify the severity scores into complex, high, moderate, and low categories, which allows CMs to identify the enrollees at greatest risk for an admission. Prioritizing case management interventions ensures that enrollees identified as complex or high-risk receive interventions to avoid preventable events. Attachment MMA 1-2 includes case management protocols based on enrollee acuity level.

PROACTIVE HEALTHCARE

Humana has identified unique healthcare needs exist for two (2) specific cohorts of our Medicaid population:

- Enrollees in their twenties because of a lack of preventive healthcare during their teenage years

- Pregnant women, whose compliance with prenatal care is sometimes lacking, contributing to high risk pregnancies and NICU admissions

We can mitigate both circumstances with improved proactive healthcare centered on positive provider-enrollee relationships. By focusing on effective healthcare proactively in childhood, Humana believes we can address the health of these cohorts before our enrollees reach adulthood.

One way that Humana currently addresses this is using PCP visits conducted by our provider network team and Quality Improvement Nurses (QINs). We encourage PCPs to reach out to their enrollees without a documented child health checkup visit to schedule an appointment. We review detailed claims and encounter data reports to track and trend child visits to verify improvement by PCPs.

Below are some additional Humana initiatives to encourage proactive healthcare:

- Initiating a Healthy Kids outreach campaign to parents with school-aged children without a PCP visit

- Offering children a fifteen dollar ($15) store gift card (e.g., Apple Store and Amazon) when they visit their doctor for Well-Child Visits

- Identifying women's obstetrician/gynecologist (OB/GYN) during the welcome call, asking when their last visit was, and helping women connect with a CM to discuss OB/GYN care, as needed.

- Partnering with Pediatric Associates using its case management outreach program to contact enrollees who have not had a recent PCP visit.

EARLY INDICATOR REPORT (EIR)

Humana's sophisticated Early Indicator Report (EIR) includes key utilization indicators. The EIR incorporates claims data as well as data from the authorization system to enable early recognition of key clinical trends and schedule early interventions that reduce preventable events. We leverage authorization information from CGX to prevent any claims processing noise (e.g. inventory build-up and provider billing delays) from introducing excess restatements. Where authorizations exist, we have studied historical authorizations-versus-claims relationships to assess provider compliance in reporting authorizations. We base utilization projections for those incurred periods off the compliance-adjusted estimate of admission authorizations.

With the EIR, users can see overall performance at a glance, and can drill down to specific data elements to quickly analyze data and identify root causes. For example, if overall admits per one thousand (1,000) enrollees is unusually high, the drill down capability allows the user to view by market segments and by age of the population. This report informs clinical decision-making from analysis of month-to-month as well as year-over-year trended data

Attachment MMA 1-3 contains an example of drill-down capability for current Medicaid reporting on EIR report.

Existing utilization data help us establish metric targets. Tracking and trending to goals are also part of ongoing EIR analysis. If a metric appears to be unusually high or low, the actuarial team will drill down to root causes. We will then complete a gap analysis and return to the UM committee with strategic and tactical recommendations.

UTILIZATION MANAGEMENT (UM) PROSPECTIVE REVIEW OF INPATIENT ADMISSIONS

Humana UM performs real-time reviews of medical necessity criteria for inpatient admissions to divert potentially preventable admissions to a lower level of care when appropriate. When an enrollee presents at the emergency department, instead of immediately admitting them for an

inpatient stay, the UM team conducts a review of the medical necessity criteria prior to the inpatient admission either onsite at the facility or telephonically. We approve enrollees who do not meet medical necessity criteria for observation level of care, which is an outpatient service level, and place them in the appropriate level of care based on their presentation in the emergency department. If the enrollee's condition deteriorates while under observation, he or she is approved for an inpatient admission. After admitted, our UM Team performs discharge planning to ensure the enrollee connects with their PCP following discharge, as well as to ensure any supports the enrollee needs are in place.

TELEMEDICINE

HEALTH FIRST NETWORK PILOT

To increase access in Region 1, Humana is partnering with Health First Network (HFN) to initiate a pilot to serve HFN's high-risk and high-need enrollees. HFN has identified that eighty percent (80%) of its spend is attributed to eight hundred (800) out of thirty thousand (30,000) enrollees. HFN recognized an opportunity to support these enrollees with home-based and telemedicine services, and launched a pilot that began July 2017.

UTILIZATION, CLAIMS AND ENCOUNTER DATA

Humana monitors data from various sources to identify enrollees that are at high risk for hospital admissions or readmissions, and would benefit from case management or disease management. Our powerful CareHub platform, Humana's innovative enterprise solution for complete program integration for our provider community and enrollees, integrates all sources of identification and referral, from predictive modeling to claims data and lab results. We show this in Attachment MMA 1-4.

The CareHub CGX clinical workflow system supports an integrated approach to utilization and case management. As a fully integrated approach, this enterprise solution provides enhanced capabilities to identify candidates for programs, document gaps in care, automate care planning, monitor plan compliance, and identify undesirable outcomes for further intervention. The CareHub infrastructure uses technology solutions such as Atlas and Anvita clinical rules engines to drive timely and actionable data into an enterprise workflow. This includes automated processes to route enrollees to specific clinical programs and CMs and creation of Care Alerts that consist of evidence-based medicine Gaps-in-Care, HEDIS, and drug-to-drug disease interaction alerts.

Functionality includes:

- Management of automated referrals to clinical programs
- Assessments to evaluate an enrollee's condition and identify opportunities for improvement
- Plan of care (POC) to manage an enrollee's problems, goals, and clinician interventions
- Documentation of all contact with enrollees and providers and subsequent outcome of these contacts
- Management of medications, allergies, and immunizations for an enrollee

We use our data analytic capabilities to identify gaps in care and to identify those enrollees who would benefit from enhanced engagement either through case management or disease management. For enrollees not in case management, we can identify specific gaps in care that may lead to unnecessary admissions or readmissions, and work with providers to close those gaps. Once in case or disease management, Humana associates can help enrollees proactively address care needs in advance of an event that may lead to an unnecessary admission or readmission to the hospital.

DISEASE MANAGEMENT PROGRAMS

Empowering enrollees with chronic diseases to care for themselves on a daily basis is critical to minimizing the impacts of these illnesses. Routine and consistent self-care, monitoring change in condition, and enrollee-initiated rapid response when an impending exacerbation is detected will help control the condition, avert medical emergencies, and forestall disease progression. Thus, enrollee self-management in collaboration with the disease management (DM) and healthcare team ultimately reduces or prevents the need for unnecessary admissions and readmissions. In total, Humana offers thirteen (13) DM programs for our enrollees. Below is a brief description of two (2) of our DM programs directly related to the top three PPAs and PPRs in Region 1.

Chronic Obstructive Pulmonary Disease (COPD)

Through our COPD DM program, RN DM case managers help enrollees gain an understanding of the early warning signs of COPD exacerbation and the importance of following their medication regimen, routine blood work, proper diet, PCP follow-up, and influenza and pneumonia vaccines. Enrollees participate in goal setting around appropriate lifestyle modifications, often related to exercise and smoking cessation.

Congestive Heart Failure (CHF)

DM Case Managers help enrollees in our CHF program adhere to disease-specific, individualized treatment plans and medication regimens. The CHF DM program encourages enrollees to have active communication with doctors and specialists (e.g., cardiologist, pulmonologist) and are given ongoing education with helpful tips to manage their condition. Key components also include following appropriate nutritional and exercise plans and participating in a smoking cessation program.

TRANSITION PLANNING

Humana uses a Readmission Predictive Model (RPM) to assess the probability of an enrollee being readmitted into a facility within thirty (30) days. The RPM is a predictive modeling process with inputs from more than fifty (50) variables including demographics such as the enrollee's age and gender; previous medical and pharmacy claims including physician visits, admissions, days since last admission, Charlson Comorbidity Index, and number of medications; as well as information regarding their current admission (procedure, diagnosis, bed type, length of stay, and discharge disposition). The process generates a numerical RPM score, which we use for stratification and prioritization based on the risk of all-cause readmission within thirty (30) days.

UM nurses facilitate interaction and coordination with hospital staff to ensure continuity of care while enrollees are in the inpatient setting, and to coordinate post-discharge activities. We employ a mixed telephonic/onsite UM model based on each enrollee's needs. UM nurses collaborate by telephone with the facility for early identification of any gaps or barriers to

transition of care, and will go onsite for high-risk enrollees. They collaborate daily with hospital case managers and discharge planners on the discharge plan for hospitalized enrollees, promoting effective, safe, timely, and appropriate planning. UM nurses are responsible for identifying and collaborating with all community resources that will be involved at discharge and thereafter and for making post-discharge arrangements. Additionally, upon discharge the UM nurses coordinate services and the transition of care with the primary care physician.

The enrollee's CM and/or BH CM also serve as important components of the Transition Planning team for enrollees already engaged in a case management program. Case Management Assistants (CMAs), under the CM's guidance, support post-discharge planning to ensure the enrollee's necessary supports and services are in place. The CMA also ensures the enrollee receives the appropriate education to facilitate a smooth transition to home and prevent medically unnecessary emergency department visits or hospital readmission.

The effectiveness of our transition planning processes is evident in our outcomes. In both 2015 and 2016, we significantly surpassed our readmission rate goal for enrollees in case management:

- Readmit Rate Goal - 30% or less
- 2015 Readmit Rate - 23%
- 2016 Readmit Rate - 16%

ENHANCED TRANSITION PLANNING FOR HIGH-RISK ENROLLEES
We are focused on effective transitions for all our enrollees, but understand that certain populations require enhanced transition planning. CMs closely monitor high-risk enrollees post-discharge and on an ongoing basis to ensure safe transitions and to reduce readmissions. CMs coordinate care for high-risk enrollees by:

- Setting goals that promote coordinated care
- Scheduling appointments with providers
- Educating the enrollee regarding their disease or condition, their benefits, and Humana's clinical programs
- Coordinating care within and across treatment settings
- Giving enrollees and families one point of contact
- Creating a process through which healthcare providers can communicate with one another
- Making enrollee preferences known and accessible to all healthcare providers

POST-DISCHARGE FOLLOW-UP

Humana's post-discharge transition activities focus on identifying and addressing gaps in care post-discharge and preventing readmissions. We make post-discharge outreach to all enrollees discharged to home. The specific outreach is based on the enrollee's risk level, as determined by the enrollee's Readmission Predictive Model score.

- Complex and High-risk enrollees: Route directly to a CM for post-discharge outreach. The CM administers the Post-Discharge Screening Tool, which identifies gaps in care and documents

interventions to close those gaps, and identifies enrollees eligible for Humana case management or disease management programs.

- Medium-risk enrollees: Route to a CMA for an abbreviated post-discharge screening. If we identify potential gaps or the enrollee requests to speak with a nurse, a CM follows up within twenty-four (24) hours.

- Low-risk enrollees: Receive calls from a Humana nurse or social worker explaining Humana's Post-Discharge Management program, asking whether the enrollee is interested in further follow up. Enrollees who request follow up route to a CMA for the abbreviated post-discharge screening.

Humana's goal is to complete the post-discharge call to the enrollee within three (3) business days following discharge. We make at least three (3) attempts, on different days and at different times, to reach the enrollee. Upon reaching the enrollee, the CM or CMA requests permission to obtain a Protected Health Information (PHI) consent form, verifies the enrollee's name and date of birth, and notifies the enrollee that we are recording the call. The CM or CMA then asks a series of questions with the enrollee or caregiver to ensure the following items are in place:

- Enrollee received discharge instructions and fully understands their conditions and post-discharge care

- Enrollee is in a safe environment and their support system can adequately provide post-discharge support

- Enrollee obtained all post-discharge medications and understands how to take them, can identify side effects and complications, and knows when to report concerns. Additionally, if the enrollee cannot afford medications, then the case management team works with the enrollee on obtaining medications from community resources, pharmaceutical companies, or they contact the physician's office for assistance

- Home health services and durable medical equipment (DME) are in place, if needed

- Follow-up doctor's visits and outpatient care are arranged according to post-discharge instructions.

-- Enrollee has required transportation for follow-up visits, and understands their transportation benefit

-- No complications or new problems have occurred without being reported to the physician.

-- Enrollee understands when to report any complications to their physician and when to seek medical care.

At the end of the call, we remind the enrollee that there is a phone number on the back of their enrollee identification (ID) card to schedule transportation, and a phone number for the twenty-four seven (24/7) Nurse Advice Line.

The goal of post-discharge intervention is to identify and close any gaps in care that may lead to complications or readmissions. Internal studies, which suggest that the closer the post-discharge intervention follows the discharge, the more likely the intervention will have a positive impact on quality of care and reduce readmissions, inform our post-discharge activities.

Our goal for contact is at least thirty-five percent (35%) within a three (3)-day period for our Medicaid enrollees. We exceeded this goal in both 2015 (fifty-one percent (51%)) and 2016 (fifty-five percent (55%)), and realized a significant improvement over that period. Our ten (10)-day post-discharge contact rate also exceeded the goal of fifty-eight percent (58%) in both years and improved in 2016 over the prior year: seventy-three percent (73%) in 2015 and seventy-seven percent (77%) in 2016.

IN-HOME PROVIDER VISITS POST-DISCHARGE

To address provider access issues in Region 1, Humana offers in-home clinical visits for our most complex and vulnerable enrollees to bring care into enrollees' homes and help prevent readmissions. We typically use these services to address needs of enrollees with a "homebound" status. We contract with subcontractors and providers to provide high-quality in-home medical care while focusing on educating enrollees on their disease state, and about the importance of compliance with their treatment plan, medication adherence, understanding signs and symptoms that require immediate reporting to the PCP, and the importance of regular PCP visits.

FREQUENTLY ADMITTED MEMBER (FAM) PROGRAM

Humana recognizes that high-utilizing, medically complex enrollees drive a significant portion of utilization and spend in Medicaid populations. We developed the FAM Program to identify, engage, and manage high-utilizing enrollees in Region 1 to improve clinical and financial outcomes. On an ongoing basis, Humana analytics and clinical teams work together using real-time data to identify enrollees with the most acute facility inpatient admissions. We assign each FAM enrollee a designated UM nurse and supporting technician who follow these enrollees on all admissions. Having a consistent concurrent review nurse allows the UM team to build trust and a relationship with the enrollee, in addition to the relationship the enrollee has developed with their CM. Our transition team follows these enrollees for eight (8) weeks post-discharge. We have observed a fifty percent (50%) reduction in readmission rates for enrollees targeted by this program in a twelve (12)-month period.

FIELD CASE MANAGER AND FIELD SOCIAL WORKER PILOTS

Humana is currently conducting pilots involving Field Case Managers and Field Social Workers to reduce inappropriate utilization, reduce barriers to close gaps in care, and improve engagement of identified enrollees with complex needs. A Field Case Manager and a Field Social Worker conduct enrollee visits at the hospital, PCP, or the enrollee's home. We identify eligible enrollees through a variety of sources, including the following:

- Complex Acuity
- High-Utilizer Enrollee (as identified via Frequent Admitter Report)
- CM Referrals (Non-compliance with plan of care, complex needs, knowledge deficit with psychosocial barrier)
- UM Nurse Referral (high risk for readmission)
- Regional Medical Directors
- Physician Referral

We may expand this pilot to Region 1 to engage enrollees in more rural areas who do not regularly visit their PCP, as well as to engage those enrollees with more complex needs with the goal of preventing an out-of-area hospital admission.

INNOVATIONS WITH HOME HEALTH PROVIDERS

Opportunities exist to direct some traditionally high-cost, inpatient services to low-cost settings. For example, Humana currently partners with home health providers to move traditionally inpatient services, such as infusion therapy and wound care, into the home. We also partner with home health agencies that specialize in specific conditions. Their specialized expertise provides more effective in-home management of specific conditions to reduce emergency department visits and admissions.

MAIL-ORDER PHARMACY

We provide mail-order pharmacy delivery for enrollees who are actively engaged in case management or disease management, and who have physical or socioeconomic barriers to going to a pharmacy. Frail, elderly, or chronically ill enrollees may be homebound and have difficulty accessing a physical pharmacy location. Additionally, enrollees with socioeconomic barriers to accessing a pharmacy, such as lack of transportation or time off work, can benefit from having their medications delivered to their home. We provide up to a thirty-four (34)-day supply for most prescriptions, while filling a select few prescriptions for chronic conditions, such as diabetes and hypertension, for up to a one hundred (100)-day supply. Active engagement with a CM ensures that all enrollees participating in mail-order pharmacy are adherent with their medications, and that they have a resource for any questions regarding their regimen.

MEDICATION RECONCILIATION PILOT

We implemented a Medication Reconciliation Pilot in August 2017 for high-risk enrollees engaged with a Field Case Manager (FCM) in South Florida. During the post-discharge home visit, the FCM works with the Humana pharmacy team to conduct medication reconciliation. The pilot incorporates a pharmacist via telephone into the FCM's medication reconciliation process to ensure the enrollee gets the most out of his or her medications and to avoid medication-related problems that put enrollees at risk for adverse effects or readmission. We share information from these visits with the enrollee's PCP and upload it in the enrollee's electronic medical record (EMR).

If successful, we could expand this program to Region 1 to improve post-discharge care following an admission to ensure enrollees understand their medication regimen.

MEDICATION REFILL CONCIERGE

Humana's Medication Refill Concierge program is an enrollee outreach program that strives to improve adherence with specific medications. Interventions include live or voice activated technology (VAT) outbound calls to facilitate the next refill of a diabetes, hypertension, or hyperlipidemia medication. Increased adherence with medication, particularly for chronic conditions, helps reduce potential admissions and readmissions because of a lack of chronic care management.

NEONATAL INTENSIVE CARE UNIT (NICU) CASE MANAGEMENT PROGRAM

The NICU CM program provides utilization review and case management to reduce readmissions for infants with a NICU stay. Nurses with extensive NICU experience follow each case throughout the NICU stay and for thirty (30) days post-discharge. The nurses provide authorizations and medical necessity approvals, discharge planning, and support and education for families of the infants. For high-risk infants, the NICU nurses transfer the case to the Medicaid pediatric team for longer-term outreach for up to one (1) year to educate and support the caregiver to decrease unnecessary utilization.

ENHANCED CARE COORDINATION FOR ENROLLEES UNDER AGE TWENTY-ONE (21)

To reduce ED visits and hospital admissions, Humana offers enhanced care coordination for enrollees under age twenty-one (21) who are in nursing facilities and meet criteria for transition to their homes. A CM works collaboratively with the enrollee's MDT to transition the enrollee safely from the facility to the community, developing the transition plan within thirty (30) days prior to discharge. The transition plan includes all services and supports the enrollee needs to successfully reside in the community. During the first six (6) months following discharge from the nursing facility, the CM contacts the enrollee or enrollee's authorized representative at least twice per month, with at least one (1) of those meetings being face-to-face. For those enrollees who receive private duty nursing services (PDN), we conduct quarterly face-to-face visits. After the initial six (6)-month transition period, the CM continues to maintain monthly contact with the enrollee.

DISCHARGE-TO-ENCOUNTER MONITORING

Humana encourages timely PCP follow-up following discharge to improve enrollee outcomes and reduce readmissions. As a part of our monitoring of post-discharge follow-up, we:

- Provide timely appointments for post-discharge enrollees from all levels of care
- Monitor secure mailbox for discharge summaries to enhance coordination of care

- Provide follow-up appointments for all enrollees receiving Home Health to reduce readmission within thirty (30) days
- Ensure PCPs submit all claims and encounters on a timely basis
- Improve coordination with specialists following discharge

We have also developed a specific discharge-to-encounter report as part of our strategy to reduce readmissions and promote continuity of care. We use this reporting internally and deliver it to providers to monitor the following metrics by provider:

- Readmissions within thirty (30) days
- Readmissions within thirty (30) days with the same diagnosis
- Readmissions within thirty (30) days for the same diagnosis group
- Average number of days between discharge from the facility and when enrollee visits PCP office
- Rate of enrollee with an office visit within seven (7) days of discharge

Attachment MMA 1-5 includes an example of the discharge-to-encounter report from one of our MSO providers. We can modify and replicate this report for our Region 1 providers.

==========
A description of performance benchmarks for each area of focus;
==========

Humana relies upon MCG® utilization benchmarks for the Southeast Region as a guide from which to compare our performance. We use these benchmarks for the following indicators for admissions and readmissions:

- Acute care admissions per one thousand (1,000) enrollees per year
- Inpatient days per one thousand (1,000) enrollees per year
- Readmission rates within thirty (30) days

We use the benchmarks above as a guide to determine how Humana network providers perform relative to their peers. These indicators help identify areas where we can improve.

==========
Humana's Approach to Reducing the use of the Emergency Department for Non-Emergent/Urgent Visits

Assessment of hospital utilization rates and the potential for improvement;
==========

The top three (3) reasons for a potentially preventable emergency department visits in Region 1 are: 1) upper respiratory infections, 2) abdominal pain, and 3) gastrointestinal/vomiting. [3] These diagnoses indicate that enrollees in Region 1 access the emergency department for conditions treatable in primary care settings. The most effective means to reduce avoidable emergency department visits is to promote primary care and lower levels of care, such as urgent care centers.

Humana's internal utilization data show there is a substantial opportunity to improve emergency department visits per one thousand (1,000) enrollees. In 2016 there were one thousand fifty-one (1,051) ED visits per one thousand (1,000) enrollees, which indicates inappropriate use of the emergency department for urgent and non-emergent conditions.

In the narrative below, we discuss in detail our strategies for reducing potentially preventable emergency department visits, and how these strategies led to a three percent point (3%) reduction in emergency department use between 2016 and 2017 for Humana enrollees in Region 1.

==========
Humana strategies to reduce potentially preventable emergency department visits
==========

Reducing inappropriate use of the emergency department is an ongoing goal for Humana in Region 1, and a priority for our partnership with the Agency for Health Care Administration (AHCA). We understand that diverting care from emergency departments to more appropriate settings not only decreases costs, but also improves enrollee outcomes. Our current strategies to reduce the use of the emergency department for non-emergent/urgent visits include the following initiatives:

-Emergency department Predictive Model
- Humana's participation in the Event Notification System (ENS)
- Doctor on Demand (DoD)
- Transition Healthcare
- Expanded Urgent Care Network
- Enrollee education on appropriate care settings
- Nurse Care Line

EMERGENCY DEPARTMENT PREDICTIVE MODEL

The Humana Future Emergency Department Utilization Predictive Model quantifies the likelihood of future emergency department utilization for each enrollee. The model creates a comprehensive profile of each individual, which includes cost and utilization for different clinical, behavioral, and functional conditions as well as socioeconomic profiles. It enables Humana to identify and target high-risk enrollees for clinical interventions that reduce emergency department visits.

Past case management efforts related to emergency department use were solely retrospective; we intervened with enrollees after emergency department visits occurred. Humana's emergency department Predictive Model prospectively identifies enrollees likely to use emergency departments non-emergent reasons, which creates the following benefits:

- Opportunity for proactive enrollee engagement and education to mitigate barriers to optimal health management

- Referrals to clinical programs and alignment with support services

- Prevention of repeated emergency department visits as a substitute for primary care, often detrimental to enrollees with chronic conditions, which also helps create a stronger patient-physician care partnership.

HUMANA'S PARTICIPATION IN AHCA'S EVENT NOTIFICATION SYSTEM (ENS)

Humana currently contracts with AHCA for the Florida Health Insurance Exchange's (HIE) ENS and receive daily emergency department visit information from facilities in Regions 9, 10, and 11.

Daily reports of emergency department encounters reduce the months-long notification lag to one (1) day. Timely outreach to enrollees to close gaps and notification to physicians has reduced unnecessary emergency department utilization. Humana leverages direct connect technology to send reports to physicians on a daily basis, which report the prior day's emergency department encounters for their patients.

Humana's UM system integrate HIE ENS notifications for timely tracking and reporting, which we use in conjunction with our emergency department Predictive Model to identify high-risk enrollees. emergency department CMs reach out to high-risk enrollees, complete an assessment to identify needs, close gaps, ensure there is timely physician follow-up scheduled, and educate enrollees on appropriate settings of care.

We are in the process of expanding our use of the ENS and are committed to using this system in regions upon contract award.

DOCTOR ON DEMAND (DoD)

Humana is launching a telemedicine partnership with DoD to encourage telemedicine as a means to limit out-of-network utilization and enhance non-emergency emergency department diversion. DoD is a platform that provides enrollees with access to physicians twenty-four (24) hours a day, seven (7) days a week from the enrollee's phone or computer. The platform allows enrollees to instantly see and talk to a physician from their homes using video chat technology. Additionally, the platform allows an enrollee to upload medical history, send images if necessary, and obtain prescriptions.

- As DoD directly employs its associates, they can exchange enrollees' medical records and easily transition between specialists.

- For medical care, DoD is available twenty-four (24) hours, seven (7) days a week, three hundred sixty-five (365) days a year. In less than five (5) minutes an enrollee and doctor can be face to face via video.

INNOVATIVE APPROACHES FOR HOMELESS ENROLLEES
Humana understands that frequent emergency department users are often homeless individuals who use the emergency department as primary care, as well as a safe place to spend the night.

We continually seek innovative and often unconventional solutions to prevent emergency department visits as well as readmissions for our homeless enrollees, who present unique challenges. We have taken our enrollees to doctor appointments post-discharge, and have even paid for hotel stays for homeless enrollees who required post-discharge wound care.

TRANSITION HEALTHCARE EMERGENCY MEDICAL SERVICES (EMS)

This community paramedic program provides in-home services such as prescription administration, echocardiograms (EKGs), blood and urine tests, respiratory treatment, intravenous (IV) therapy, and wound care to prevent non-urgent emergency department visits. The paramedics complete home safety assessments, medication reconciliation, care coordination, community resource navigation, and transport to a healthcare facility when necessary. We have found that bringing care into the enrollees' homes makes them much more likely to engage in preventive services, and less likely to use the emergency department unnecessarily.

We are currently piloting this program in Regions 10 and 11, and if successful, we will implement the program in Region 1.

EXPANDED URGENT CARE NETWORK

Humana recently expanded our urgent care network to include twenty-three (23) urgent care centers to expand access to appropriate care settings. Instead of visiting the emergency department for a non-emergent condition, we educate enrollees on using urgent care centers as a more appropriate care setting. We include information on urgent care centers in the new enrollee materials, the network provider list, provider and enrollee portals, and through the Nurse Care Line.

ENROLLEE EDUCATION ON APPROPRIATE CARE SETTINGS

Humana understands the importance of educating our enrollees to access care in the most appropriate setting; it is our job to help our enrollees access the right care, in the right place, at the right time. We educate enrollees on the importance of preventive care from the time of enrollment. New enrollee materials include a notification on how to access care in the most appropriate setting. Our CMs work with enrollees to guide them to the right care setting for their needs and to understand the available community resources. When an enrollee accesses care in an inappropriate setting, we follow up with education to change enrollee behavior in the future.

NURSE CARE LINE

Humana offers enrollees a twenty-four (24)-hour nurse care line. Enrollees may call in with any clinical question to receive advice from a registered nurse (RN). We encourage our enrollees to use the nurse care line as the first step in determining whether they need immediate care. The

nurse can assess symptoms over the phone and determine whether the enrollee may need to go to urgent care or wait for an appointment with their PCP instead of visiting the emergency departmenr. While the enrollee is on the phone, the nurse educates the enrollee on how to access care in the most appropriate setting, including the importance of preventive PCP visits and other clinically relevant information related to the enrollee.

==========
A description of performance benchmarks for each area of focus
==========

Humana relies upon MCG® utilization benchmarks for the Southeast Region as a guide to compare our performance. We use the Milliman benchmarks for the following indicators for emergency department visits:

- Emergency Department visits per one thousand (1,000) enrollees per year

==========
Humana's Approach to Reduce of the use of Unnecessary Ancillary Services during Hospitalization and Outpatient Visits

A description of the respondent's assessment (using available data sources) of hospital utilization rates and the potential for improvement
==========

Humana understands that unnecessary testing and delivery of ancillary services exists within the SMMC program in Florida. We assess how our providers prescribe ancillary services both during an inpatient stay and in the outpatient setting using our integrated clinical platform, CGX. We can see authorizations and claims for Managed Medical Assistance (MMA) and Long-term Care (LTC) services, providing us a full picture of the ancillary services of each enrollee. We use CGX as a common database through which we can investigate outliers in prescribing patterns, and we educate providers regarding the appropriate care guidelines for Florida Medicaid enrollees.

==========
Humana strategies to reduce the use of unnecessary ancillary services during hospitalizations and outpatient visits
==========

Humana uses the following strategies to reduce the use of unnecessary ancillary services during hospitalizations and outpatient visits:

- Care Decision Insights (CDI)
- Prior Authorization List
- Collaboration with Hospitalists
- In-home Nurse Visits

CARE DECISION INSIGHTS (CDI)

Independent research clearly supports the premise that certain specialists consistently have superior clinical outcomes, higher quality of care, and lower costs. [4] Humana is currently evaluating provider performance across its lines of business. We provide information to our physicians to help identify the top opportunities to improve their patients' care by utilizing specialists that demonstrate high efficiencies and effectiveness. Through our innovative CDI platform, we give PCPs information about the most efficient and effective specialists in Humana's network. We create efficiency ratings using three (3) steps:

1. Distilling data, Humana uses claims data to build episodes of care. We:

- Bundle all claims for a specific individual's case to create an episode of care
- Separate claims into conditions based on various clinical codes
- Categorize episodes by severity, geography, product, and age band
- Attribute each episode to appropriate providers who make up a subset of professional costs
- Adjust for outliers (e.g., heart transplants and other high-cost procedures)

2. Compare cost of the episodes with peers.

3. Assign a Performance Index.

Effectiveness ratings match known interventions with care received
- Measured by adherence to recommended, evidence-based care guidelines
- Determined with specialty-specific metrics measured over time

We also share information with PCPs and specialists about the sites of service to which they are referring Humana-covered patients for certain procedures. We help them identify the top opportunities to improve their patients' care by using sites of service that demonstrate high efficiency and effectiveness.

We also share new fee schedules with ambulatory surgery centers and outpatient hospitals for moving certain current inpatient procedures to outpatient settings.

Humana is currently modifying CDI to include Medicaid data and provider information. We will use CDI in Region 1 under the forthcoming contract period. Attachment MMA 1-6 contains examples of reports generated for PCPs using the CDI platform.

PRIOR AUTHORIZATION LIST (PAL)

Humana currently monitors procedures and services in Region 1 that may be inappropriately prescribed, or may be delivered in a lower-cost setting. Our prior authorization program promotes quality of care and optimal treatment options for enrollees while controlling costs to the healthcare delivery system. Ongoing review of utilization, financial, and quality data determines services that require prior authorization for payment. We implement a PAL in our current Florida operations.

Using the PAL for authorization of ancillary services allows us to manage utilization more effectively and efficiently, ensuring that enrollees do not receive and providers do not request unnecessary services.

COLLABORATION WITH HOSPITALISTS

Humana currently collaborates with hospitalists to develop best practices to help them avoid repetitive testing and to help them use specialists in the most appropriate manner. In Region 1, hospitalists work with the adult population PCPs to seamlessly coordinate care and ensure usage of only necessary services. Key responsibilities for the contracted hospitalist include:

- On behalf of the PCP, hospitalists accept, coordinate, and provide oversight for all inpatient healthcare services

- Ongoing communication throughout the hospitalization to reduce duplication and unnecessary ancillary services, and to prepare for a safe transition to a lower level of care

- Communication with the primary care physician upon admission to obtain a detailed medical history

- Conferring with discharge planners, utilization review nurses, Humana, Medical Service Organization (MSO)/Humana Medical Directors and others as necessary, and take all appropriate action to deliver reasonable and necessary medical care while avoiding medically unnecessary services or length of stay

- Returning the assigned enrollee's medical care to the assigned PCP for continuing care that the PCP determines is medically necessary after discharge from the facility.

- Providing a discharge notification to MSO/PCP to include:
-- Discharge instructions
-- Enrollee disposition
-- Discharge diagnoses
-- All pertinent diagnoses
-- Follow-up recommendations, referrals, and tests
-- Medications

We conduct outlier rounds, which include hospitalists and the Humana Medicaid Medical Directors examining cases where there is an abnormal amount or duration of services prescribed. We also conduct peer-to-peer conversations with hospitalists to discuss prescribing patterns and best practices. We are also working with hospitalists to help them better manage DME and home health providers to increase outpatient management of disease.

IN-HOME NURSE VISITS

We use in-home nurse visits to prevent unnecessary use of ancillary services both during an inpatient stay and in an outpatient setting. For the adult population, Humana authorizes in-home

nurses to help enrollees with medication administration (e.g. insulin, home IV antibiotics) and home health aides for services such as colostomy care.

In the pediatric population, Humana makes every effort to keep children in a community setting by providing skilled services in enrollees' homes. We use PDN and personal care services for medically fragile or medically complex children, children with a short-term acute need, and children with special needs. Our pediatric CMs routinely meet with families and other enrollees of the child's healthcare team to ensure that we meet the child's needs. Some children need help only with activities of daily living (ADLs), while others require private duty nurses capable of caring for technology-dependent children. We provide these services until they are no longer medically necessary.

In-home nurses educate families on enrollees' illnesses, and can work with ancillary providers to learn the necessary services and perform those services, including occupational therapy, physical therapy, and medication administration, in the home without an outpatient visit. These in-home nurses also help administer assessment tools for physicians in the home. The nurse can convey in real-time what is happening in the home, which prevents the child from undergoing unnecessary testing or seeking an inappropriately higher level of care.

==========
A description of performance benchmarks for each area of focus
==========

Humana takes a provider-based approach to benchmarks for ancillary services. We use claims and encounter data to examine prescribing patterns and to ensure enrollees receive medically necessary services. We compare providers to their peers to determine whether they prescribe the appropriate amount and duration of ancillary services. Humana's enrollee-centric approach to service delivery ensures we err on the side of the enrollee when reviewing authorized services, and that we work with providers to ensure they deliver the most appropriate care.

==========
A description of incentives that will be implemented for providers and enrollees aimed at diverting care to more appropriate and cost-effective settings.
==========

Humana has developed provider incentive programs to encourage our network providers to direct their patients to the most appropriate, high-quality level of care for their needs. Separately, our enrollee incentive programs promote access to preventive services and encourage behavior change on the part of the enrollee.

PROVIDER INCENTIVES

VALUE-BASED PURCHASING (VBP)
To incentivize our providers to deliver the highest quality of care in the most appropriate setting, we have developed a custom-tailored continuum of VBP programs for Florida Medicaid providers that we currently implement in Region 1, and will maintain under the next contract. Best practices inform this continuum from Humana's nationwide experience and expertise, but it

is driven by the needs and capabilities of Florida providers and the enrollees they serve. Humana's value-based continuum for Florida Medicaid PCPs includes four (4) VBP programs. Two (2) of these programs – MPIP and Full-Value – extend to our specialists as well:

1. Quality-Cap Bonus: Our Quality-Cap Bonus program offers our Florida Medicaid providers a variation of our nationwide Star Rewards model. PCPs that exceed National Committee on Quality Assurance (NCQA) benchmarks across a series of HEDIS quality metrics related to access to primary care, immunizations, well-child visits, cancer screenings, and disease management can receive quarterly bonuses. The bonuses offered through this program incentivize providers to implement interventions that improve HEDIS measures related to reducing preventable events. Over $3 million was paid out in 2016 to Florida Medicaid providers.

For example, we offer bonuses to providers with strong performance on the Adults' Access to Preventive/Ambulatory Health Services (AAP) HEDIS measure to increase the percentage of our enrollees who visit their PCP for regular, preventive care. Among adults, regular PCP visits for preventive health services are essential for detecting and treating minor illnesses before they cause serious problems, for delivering preventive services, and for encouraging behavior change, such as smoking cessation and physical activity. By tying PCP visits to quality rewards, PCPs are motivated to ensure that their enrollees come in for regular visits. These regular interactions encourage enrollees to go to their PCP first for treatment of acute illnesses rather than the emergency department.

As another example, our Quality-Cap Bonus model incentivizes our PCPs to increase their rates of breast cancer and cervical cancer screening, leading to improved rates of early detection and greater access to specialist treatment for these conditions. The outcomes we expect to see from these incentives include reduced hospitalizations and overall lower morbidity related to these conditions as a result of early detection and treatment.

PCPs also play an important role in chronic condition management. For this reason, we include measures related to diabetes control in our Quality-Cap Bonus program, including HgbA1c Testing and HgbA1c Control. By incentivizing providers to help our enrollees manage these conditions, we expect to see a subsequent reduction in diabetes-related emergency department visits and inpatient admissions.

2. MMA Physician Incentive Program (MPIP): We operate an enhanced version of MPIP, the VBP program established by AHCA that rewards Medicaid providers who achieve quality targets with Medicare reimbursement rates. Higher Medicare reimbursement rates offer an incentive for MPIP providers to proactively drive quality improvement and achieve tangible gains related to their target measures, leading to better preventive care, improved health outcomes, and lower overall costs. Humana's program includes family practitioners, general practitioners, and pediatricians who see children aged zero (0) to twenty (20), as well as OB/GYNs and pediatric specialists. Each provider type has a tailored set of quality metrics related to positive health outcomes for their scope of services.

In collaboration with AHCA, Humana has added data-driven metrics that focus on reducing preventable events. Pediatric PCPs in our network can elect to use the Enrollee Encounter Rate and emergency department Utilization as a benchmark, or to use HEDIS measures, including

those related to well-child visits and access to primary care. OB/GYNs reimbursements tie to quality metrics related to prenatal care, Caesarean section (C-section) rates, and postpartum care. In recognition of the unique provider landscape in each region, we have established region-specific benchmarks for each metric.

By tying higher reimbursement rates to PCPs' performance in MPIP metrics related to well-child visits and children and adolescents' access to primary care, we expect to see a reduction in emergency department visits for preventable childhood illnesses. Parents and children who have developed a strong relationship with their PCP are more likely to visit the PCP for acute conditions rather than the emergency department. In addition, through early detection of childhood illnesses or developmental delays during well-child visits, we can ensure early access to care and treatment that will ultimately reduce admissions, reduce the incidence of acute conditions, including those that are vaccine-preventable, and lower costs.

Among board-certified family practitioners and general practitioners participating in MPIP, we incentivize preventive health services and PCP engagement through metrics related to well-child visits and the enrollee encounter rate. By emphasizing appropriate medical utilization, including preventive care, PCPs can better detect and treat acute conditions and manage chronic conditions, thus decreasing the need for inpatient admissions or emergency department visits.

3. Shared Savings: Humana rewards Florida Medicaid PCPs who reduce overall medical costs while maintaining performance standards across quality metrics, with a portion of the cost savings realized by Humana. The potential to receive shared savings while assuming no risk incentivizes PCPs to take steps that reduce preventable events, better manage chronic conditions, and lower costs, such as establishing care coordination and integration processes. Shared savings also help providers develop population health management capabilities that are essential to success in Full Value arrangements.

Therefore, we expect to see PCPs make referrals to specialists and assist enrollees with finding the most appropriate setting of care. For example, PCPs participating in this arrangement educate enrollees about seeking appropriate care, including when it is appropriate to call their PCP, visit an urgent care center, or go to the ED.

By tying payments to their performance on a broad swath of HEDIS quality metrics and overall cost savings, our Shared Savings program incentivizes PCPs to improve the health outcomes of our enrollees, such as the reduction of recurring, costly events like emergency department visits and hospital readmissions. Through improved rates of well-child visits and improved access to the PCP for adolescents and children that result from our program, we expect to see reductions in the number of children who require difficult and costly treatment for conditions that a PCP can prevent or detect. This includes the prevention of childhood diseases, including those that are vaccine-preventable, and the early detection and treatment of conditions with potentially serious effects, including elevated blood lead levels. Additionally, through a focus on nutrition and physical activity counseling for children, we expect to see lower levels of children who are treated for Type II diabetes.

Among adults, we include metrics related to breast and cervical cancer screening and adult well-visits. Through the inclusion of these metrics, tied with the potential to obtain a portion of

cost savings, we expect to see early detection and treatment of breast and cervical cancers through higher rates of screening. In addition, it reduces the risk of passing infection to an infant during delivery. Furthermore, by encouraging regular PCP visits for adults, we expect to see higher rates of screening and detection of common conditions, including diabetes, hypertension, and heart disease. Detection of these conditions and early entry into treatment can reduce future complications or disease.

4. Full Value (Global Risk): In our Florida Full Value model, we pay PCPs and specialists, including BH providers, on a per member per month (PMPM) basis to manage enrollee care. In this arrangement, providers accept full risk for the services enrollees use each month and their outcomes. When the cost of an enrollee's services is lower than a Full Value provider's monthly capitated rate to manage their care, the provider receives the cost savings surplus. The financial link with enrollee outcomes and service usage incentivizes providers to establish practices that ensure the best outcomes for enrollees, such as employment of care coordinators and social workers, integrated care teams, EHRs, and an emphasis on engaging enrollees in care.

By promoting shared accountability, the Full Value model incentivizes PCPs to address all aspects of the enrollee's care that might affect outcomes. With an emphasis on metrics that address potentially preventable events, Full Value VBP arrangements will improve outcomes that reflect more integrated care and attention to social determinants of health, including reduced emergency department visits, inpatient admissions and readmissions, and unnecessary ancillary services.

Providers operating under the Full Value model have both the incentive and resources to ensure that our enrollees receive preventive care, including engagement of unable-to-contact enrollees. Better attention to screening, immunizations, and well visits will help us see early detection of diseases, engagement in treatment, and fewer vaccine-preventable infections, such as influenza and varicella. Additionally, providers in our Full Value arrangements are often patient-centered medical homes (PCMHs), which promote comprehensive care through a team of providers, including PCPs, specialists, and support staff. By investing in integrated care and coordination with specialists, including BH providers, we expect to see fewer admissions and emergency department visits, better post-discharge follow-up care, and greater medication adherence through a more team-focused approach to the management of chronic conditions.

Additionally, through investments in the employment of CMs and social workers, our providers operating under the Full-Value model are better equipped to address the social determinants of health that can affect our enrollees' outcomes. By supporting our enrollees in all aspects of their lives, such as helping them navigate the healthcare system, adhere to their medications, use non-emergency transportation for provider visits, and access a safe living environment and healthy foods, we expect to see fewer preventable diseases, better management of chronic diseases, and fewer emergency department visits.

Humana's Florida Medicaid providers in Full Value risk arrangements outperform their non-risk counterparts in terms of quality, outcomes, and cost. In 2016 the risk providers had significantly higher quality scores on metrics related to preventive health, well-child visits, and diabetes management. As a result of their strong performance, these providers also have strong outcomes. Humana's Florida Medicaid risk providers average twenty-five point three percent (25.3%) fewer emergency department visits per one thousand (1,000) enrollees, and seventeen

point four percent (17.4%) fewer inpatient admissions per one thousand (1,000) enrollees. By reducing preventable events like these and helping enrollees access care in appropriate settings, Florida risk providers have fourteen point seven percent (14.7%) lower inpatient medical expenses and have reduced pharmacy expenses by eleven point four percent (11.4%).

ENROLLEE INCENTIVES

HEALTHY BEHAVIORS PROGRAM
Humana offers many incentives through our Healthy Behaviors program intended to encourage enrollees to participate in primary care rather than waiting for an urgent or emergent condition and seeking care in the emergency department.

- Smoking Cessation: Completion of our Smoking Cessation program entitles enrollees to a thirty dollar ($30) gift card, or a fifty ($50) gift card for those enrollees completing the program using medicine from their doctor.

- Substance Abuse: In our Substance Abuse program, we reward enrollees with a ten dollar ($10) gift card for joining the program, a twenty ($20) gift card for staying sober for ninety (90) days in the program, and another twenty dollar ($20) gift card for staying sober for one hundred eighty (180) days in the program.

- Baby/Well-Child Visits: Our Baby Well-Visit program is available to babies between zero (0) and eighteen (18) months of age who have been an enrollee of our Plan since birth. We educate parents or guardians about the importance of well visits at one (1), two (2), four (4), six (6), nine (9), twelve (12), fifteen (15), and eighteen (18) months of age, and provide a ten dollar ($10) gift card for each visit completed, up to three (3) visits.

- MomsFirst Prenatal Program: To encourage participation within the program, Humana offers an incentive card to encourage enrollees to receive appropriate prenatal and postpartum care. Enrollees who engage in the MomsFirst program and complete all of their prenatal and postpartum visits are eligible for a thirty dollar ($30) Babies“R”Us gift card.

- Humana Family Fit Program: Enrollees eighteen (18) years or older may join the Humana Family Fit program, which includes:

-- A personal health coach
-- Information on healthy eating
-- A weight scale
-- A walking kit: includes a steps counter, drawstring backpack, water bottle, and towel.

Once an enrollee joins the Health Family Fit Program, and then receives a check-up from their PCP, they receive a twenty-five dollar ($25) gift card.

Once the enrollee completes the Humana Family Fit program, and visits their primary care doctor, Humana rewards the enrollee with another twenty-five dollar ($25) gift card. (Maximum of two (2) gift cards per year, per enrollee).

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

==========

A description of evidence-based interventions and strategies that will be used to target super-utilizers, particularly related to pain management and behavioral health conditions.

==========

STRATEGIES TARGETING BEHAVIORAL HEALTH CONDITIONS AND PAIN MANAGEMENT

Given that one of the leading causes of readmissions in Region 1 is bipolar disorders, there is an opportunity to bring innovative strategies around behavioral health management to the region. Humana, in conjunction with our BH subcontractor, Access Behavioral Health (ABH), prioritizes enrollees in need of care coordination and targeted interventions by risk and enrollees' healthcare needs. ABH currently operates as our BH subcontractor in Region 1, and is well-versed in the population as well as the provider landscape in the region. ABH has multiple initiatives helping enrollees identified as frequent users of high-end services to meet AHCA's goals of a) Reducing potentially preventable inpatient and outpatient hospital events and unnecessary ancillary services; and b) Rebalancing LTSS systems by increasing the percentage of enrollees receiving services in the community instead of an institution.

The ABH Diversion Projects combine intensive, unique, and specialized services designed to disrupt the cycle of high-cost utilization and divert into more traditional modalities of outpatient service provision.

A. COMMUNITY-BASED WRAP-AROUND TEAM is a multidisciplinary team designed to provide assertive mental health, substance abuse, and care coordination services to the population of enrollees that disproportionately use the most intensive and highest-cost services as their primary care. We collaborate with the local Federal Qualified Health Center (FQHC) to provide medical care, and it has agreed to embed physical healthcare providers into the team. The objectives are to:

- Increase ongoing compliance with medical and behavioral health treatment
- Reduce the number of emergency department visits, crisis stabilization, and hospital admissions
- Decrease incarcerations and law enforcement interactions
- Promote psychosocial rehabilitation skills development
- Provide crisis interventions as well as ongoing support

B. MEDICAL TEAM OF THE FQHC also provides home visit interventions to provide psychiatric intervention, medication checks, or therapeutic injections. The team provides overall care coordination to connect to outpatient medical, mental health, and substance abuse, as well as transportation to these services. It also connects these enrollees to other supports such as housing, food stamps, and other social services as needed by the individual.

C. OPIOID SERVICES EXPANSION: ABH participates in a region-wide task force that includes the BH community, law enforcement, the medical community, the faith community, and a range of BH and substance abuse providers to define collaborative ways to address the pain management and opioid concerns in Region 1.

D. WOMEN ONLY INTENSIVE OUTPATIENT PROGRAM (IOP): This program targets high-risk women in the population with moderate to severe substance use disorders by using The Matrix Model, an evidence-based intensive outpatient treatment model program. The aim of this program is to address early recovery and to develop and use relapse prevention skills. At a minimum, group enrollees attend nine (9) hours of group treatment per week. The IOP Therapist provides individual therapy sessions on an as-needed basis or at the client's request. The client is a parent referred through Dependency Court, FFN/WISE, Department of Children and Families. The program provides drug screens on a weekly basis.

E. WOMEN ONLY SUBSTANCE ABUSE GROUP: Designed specifically for women who are pregnant, postpartum, or involved with DCF/FFN, this group addresses the specific needs of women substance users with an emphasis on understanding the unique needs of women overcoming a substance use disorder. Emphasis includes increasing awareness and recognition of substance use patterns; exploring life patterns and relationships and how substance use has impacted relationships; understanding co-occurring disorders; and using effective coping strategies for pain management. This group meets once per week for three (3) hours for sixteen (16) weeks. It provides individual sessions on an as-needed basis or at the request of the client, and provides urinary analysis testing on a monthly basis.

F. ALTERNATIVE-TO-HOSPITALIZATION TREATMENT OPTIONS include assessment and observation areas within a centralized secure area, residential respite beds, short-term residential treatment, day programs, and intensive outpatient services.

G. STRENGTH-BASED DIVERSION NEEDS ASSESSMENT conducted collaboratively with the enrollee to determine which supports and services would benefit the enrollee.

H. ENROLLEE-CENTERED TREATMENT PLANNING and treatment planning review as a means of using the enrollee's strengths to divert from higher-end services.

I. INDIVIDUAL, FAMILY, AND GROUP THERAPY USING EVIDENCE-BASED MODALITIES in the home, school, or other community settings depending on enrollee need.

J. DIVERSION CASE MANAGEMENT SERVICE PROVISION to include referrals, linking and coordinating services, ongoing monitoring of the enrollee and services provided, follow-up with the enrollee to determine effectiveness of services and service plan, teaching the enrollee to advocate for needed services, and transition and discharge planning.

K. CHILD AND FAMILY TEAM STAFFING: When we consider a child or adolescent enrollee for residential treatment, a Child/Family Team meeting with the parents, the treatment team, and in some cases enrollees of the Department of Children and Families occurs to ensure that we have exhausted all outpatient services before placing them in a higher level of care.

L. CAFÉ PERC- ABH launched Café PERC (Peer Education Resource Community) at Lakeview Center in 2012 as a clubhouse-model, peer-support service organization (PSSO) where consumers of behavioral health services share information, socialization, and recreational activities with their peers. The café serves as a safe place where guests interact with one another in a comfortable, low-stress environment without fear of stigma or judgment. Lakeview's Behavioral Health Division assumed responsibility for Café PERC the following year, and ABH

continues active involvement. ABH associates facilitated training in Region 1 for Peer Recovery Certification, which is a designation for behavioral health consumers to become trained to act as support and advocates for other behavioral health consumers. Currently, these associates work at Café PERC.

TELEHEALTH

ABH currently offers telemedicine as well as individual, group, and family therapy via telehealth. This improves doctor/patient ratios as well as access to services for those who live in rural areas in Region 1, which subsequently reduces inpatient services for those enrollees. ABH credentials BH providers and practitioners who conduct telemedicine with the proper interactive electronic systems to protect the confidentiality of client information, and audio and visual data transferred during the provision of telemedicine services. Currently the ABH network has psychiatrists in three (3) provider organizations, or sixty percent (60%) of Organizational Provider Network, who conduct telemedicine services: Lakeview Center, Inc., Chautauqua Healthcare Services, and Children's Home Society of Florida. However, one hundred percent (100%) of psychiatrists and licensed mental health clinicians are eligible to provide telemedicine services as soon as they implement the required technology. There are no limitations on telemedicine services as long as providers and practitioners who conduct telemedicine have the proper interactive electronic systems that protect the confidentiality of client information, and the enrollee consents to telemedicine services.

REPORTING CAPABILITIES
ABH uses a variety of internal reports to assist Humana and ABH's sub-capitated network providers in managing high-cost cases:

1. Daily Inpatient Census Reports – Hospital inpatient census reports go to Humana and ABH sub-capitated providers daily. Humana CMs reference these reports for cases requiring medical case management where an enrollee may be hospitalized for behavioral health needs. ABH's sub-capitated providers use these reports to identify enrollees currently hospitalized to ensure that discharge and post-hospitalization follow up planning begins at admission.

2. Weekly Inpatient Discharge Reports –Weekly hospital discharge reports provide both Humana and ABH's sub-capitated providers a list of those enrollees discharged the previous week. In addition to discharge date and diagnosis, the report includes the provider, date, and time of the scheduled follow-up appointment. ABH providers use these reports as a guide for sending appointment reminders.

3. Weekly Readmission Reports - Inpatient hospital readmission reports sent weekly to ABH's sub-capitated network providers identify those enrollees with a hospital readmission occurring within thirty (30) days of a previous inpatient discharge. ABH sub-capitated network providers use these reports to assess the outpatient services provided to these enrollees requiring repeated hospitalizations. We initiate additional wrap-around services and address the enrollee's psychosocial situation for barriers to keeping outpatient appointments or medication compliance.

4. Weekly Customer Care Center Reports – ABH sends weekly reports to Customer Care Center associates; this report summarizes the total calls received for the week, abandonment rate, and the average speed of answer for enrollee and provider calls. In addition, a historical heat map, calculated in thirty (30)-minute increments, highlights the busiest times of the day to help us identify areas for improvement.

2015-2017 YTD STATISTICS FOR RECIDIVISM PROGRAMS

The percentage of readmissions within seven (7) days and thirty (30) days of hospitalization for ABH's enrollees has trended below the benchmark and maintained the goal since 2015. The rates remained steady in 2016, but in the current year they have decreased by two (2) percentage points for both the seven (7)-day and thirty (30)-day rate. This is a marked improvement from previous years, which we attribute to ABH Gap Reports and interventions, such as ensuring the correct contact information follows the enrollee from hospital to outpatient services. Attachment MMA 1-7 contains data on ABH's reduction in mental health readmission rates from 2015-2017.

CONTINUING EFFORTS TO REDUCE MENTAL HEALTH-RELATED ADMISSIONS

Integrating behavioral health and medical care is critical to the overall health and well-being of enrollees. In continuing efforts to improve integration, Humana will:

- Create a mental health provider scorecard showing mental health-related admissions, readmissions, and length of time from discharge to follow-up care visits (PCP or mental health provider).

- Analyze which providers offer effective care and where there is an opportunity for our nurses, QINs, and BH subcontractors to educate and offer support by looking at Early Indicator Report (EIR) data for behavioral health to understand utilization by provider. Pairing these data with our medical data, including claims and encounters, to create a comprehensive report card will help us see a full picture of the enrollee's health.

- Uncover areas of opportunity based upon analysis of our encounter data by tying in mental health utilization of the enrollee included within the encounter data submitted by our BH providers with all medical utilization to create a predictive model around potential preventable admissions and emergency department visits. We will include this information in our Joint Operating Committee (JOC) meetings to discuss providers with best practices, and suggest alternative models.

- Collaborate on BH discussions by holding regional bi-annual grand round meetings hosted by Humana Inc., inviting mental health providers and top MSOs (based on PCPs with the most mental health-utilizing enrollees) to discuss best practices and current challenging issues.

Evaluation Criteria:

1. The extent to which the respondent identified specific localized opportunities for improvement in achieving a reduction in potentially preventable events and subsequent steps the respondent will implement to overcome any barriers across and within different systems of care (i.e., medical, behavioral health).

2. The extent to which the respondent describes specific care coordination protocols, including a description of the risk stratification algorithm used to identify super-utilizers.

3. The extent to which the respondent describes strategies to improve data exchanges and communications between practitioners to improve care coordination efforts for high-risk enrollees, using specific local examples.

4. The extent to which the respondent plans to include the use of the Agency's Event Notification System as a means to extract relevant data from hospitals.

5. The adequacy of the respondent's description of specific indicators or measures that will be used to evaluate the effectiveness of evidenced-based programs and interventions that target super-utilizers.

6. The extent to which the respondent describes financial and non-financial provider and enrollee incentives that are aimed at diverting care to more appropriate and cost-effective settings (e.g., incentives for primary care providers that agree to extended or after-hours clinic care for their Medicaid patients).

7. The extent to which the respondent proposed local performance benchmarks for:

- **(a)** Reducing potentially preventable hospital admissions and readmissions;
- **(b)** Reducing use of the emergency department for non-emergent/urgent visits; and
- **(c)** Reducing the use of unnecessary ancillary services during hospitalization and outpatient visits.

Score: This section is worth a maximum of 45 raw points with each of the above components being worth a maximum of 5 points each.

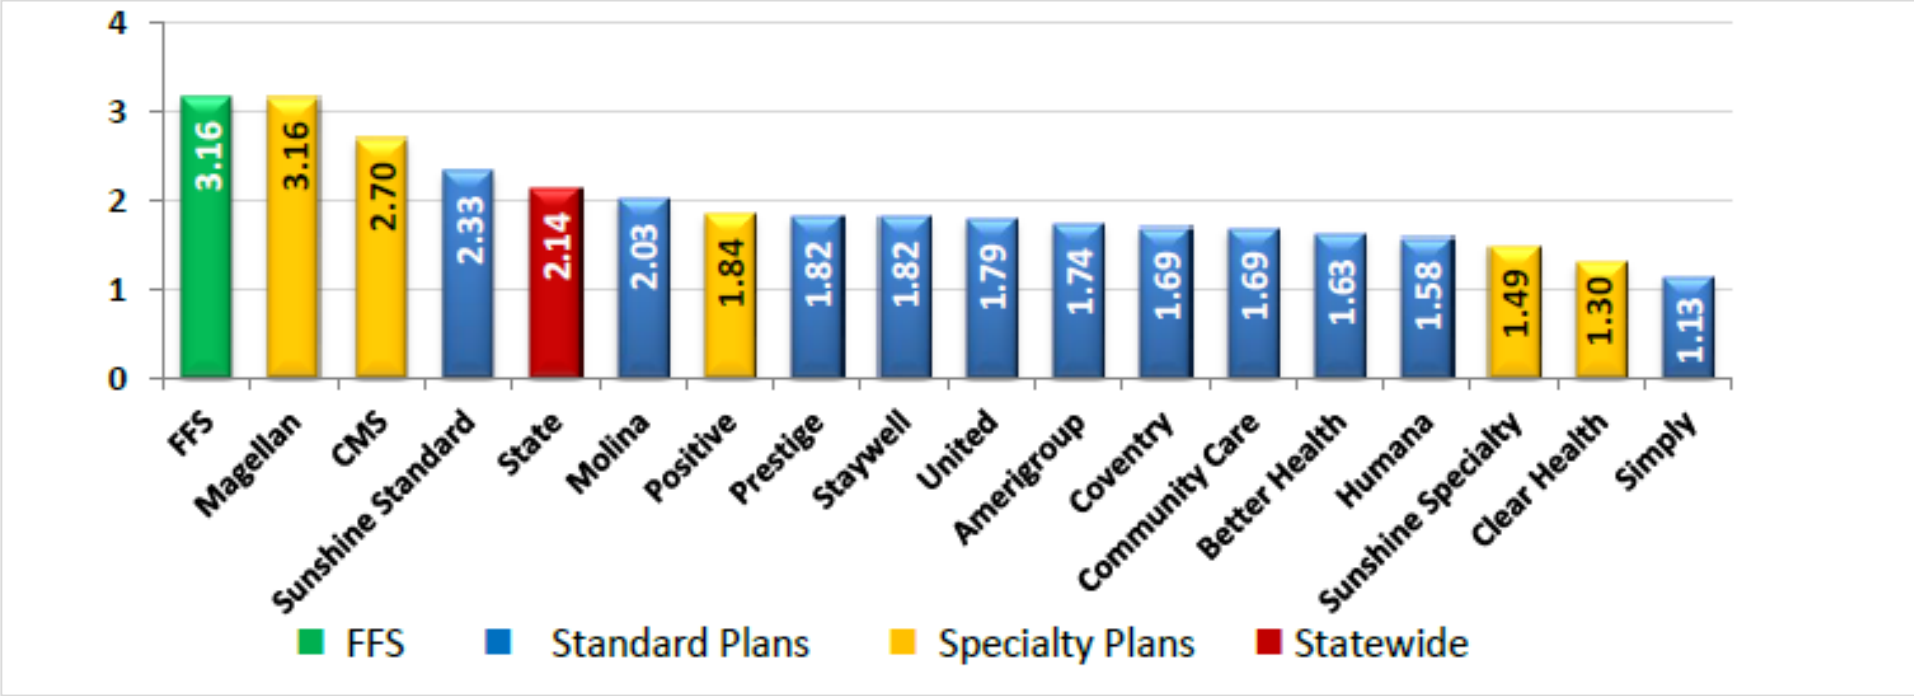
AND EVALUATION CRITERIA (10-2-17)

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Attachment MMA 1-1: Risk Adjusted PPA Rates per 1,000 Enrollees Month by Plan, August 2014-July 2015

Humana has the second lowest potentially preventable admission rate (PPA) among SMMC standard plans in admissions per one thousand (1,000) enrollees.



Humana

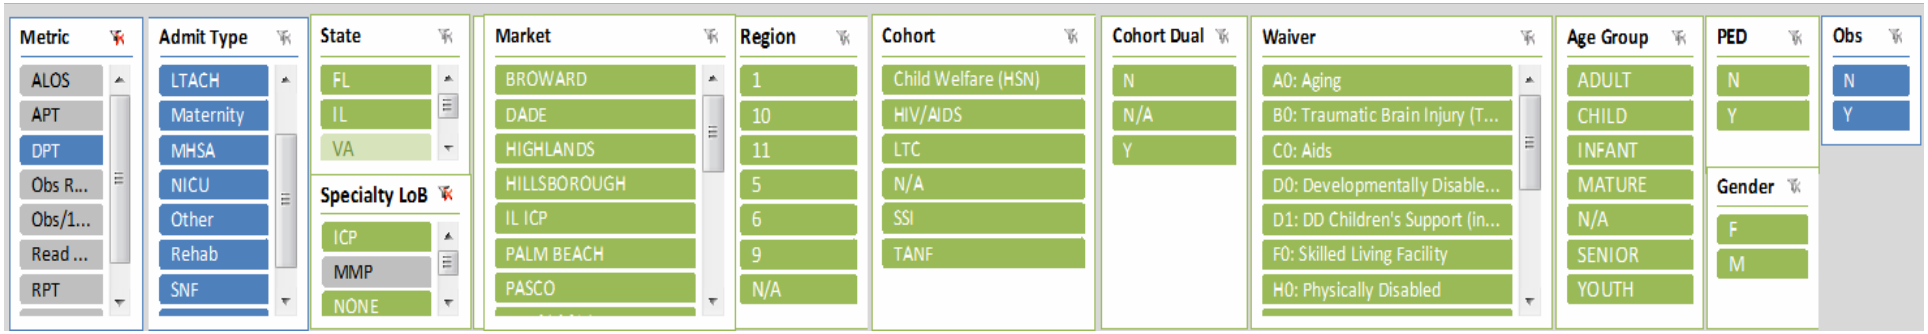
Attachment MMA 1-2: Humana Case Management Protocols based on Acuity Level

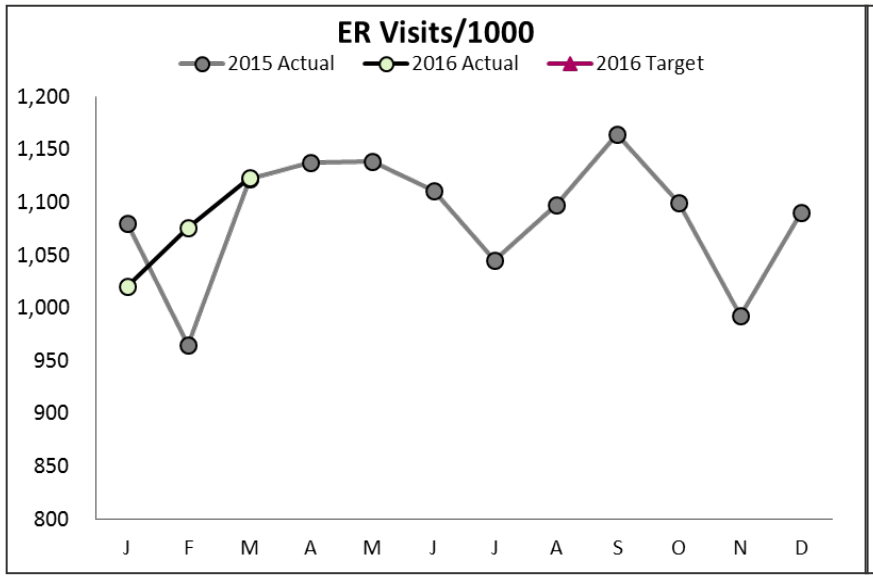
We stratify severity scores into complex, high, moderate, and low categories, which allows CMs to identify the enrollees at greatest risk for an admission. Prioritizing case management interventions ensures that enrollees identified as complex or high-risk receive interventions to avoid preventable events.

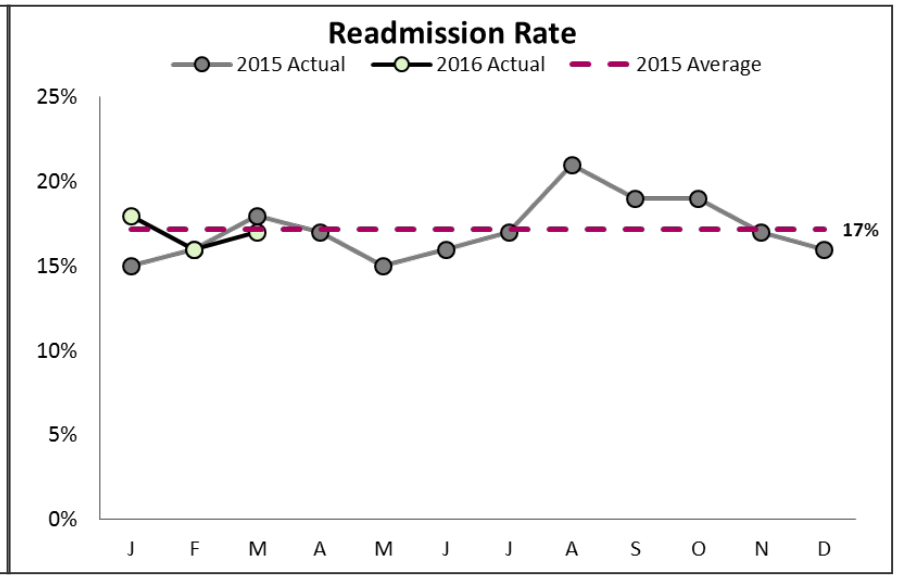
Risk Level	Definition	Outreach Frequency
Complex	• At least 2 hospitalizations w/in 30 days • Medical, educational and psychosocial barriers that lead to emergency department visits /readmissions • Collaboration w/interdisciplinary teams and Associate Medical Directors • Present during monthly MDT call • Complex needs for care coordination	Weekly
High	• At least 2 hospitalizations within the last 3 months • Medical, educational and psychosocial barriers that lead to emergency department visits /readmissions • Ongoing needs for care coordination	Monthly
Medium	• At least 2 previous hospitalizations within the last 6 months • Provide reinforcement about plan of care • Barriers to educational and self-healthcare management	Every other month
Low (short-term, episodic clinical management, and participation)	• No hospital admissions, but has emergency department utilization greater than 2 per 30 days • Knowledge deficit of the use of emergency department vs. urgent care and PCP visits for follow up care and sick visits	Every three months
Low (nonclinical monitored and pending High Utilizer Report monitoring status) Case Management Assistant	• No hospital admission within last 6 months • Stable with mild or no symptoms • Understands their disease and plan of care, but desires a case manager for follow up. Follow up every 6 months • Comply with their plan of care and do not require assistance with care coordination	Every six months

Attachment MMA 1-3: Example of Early Indicator Report (EIR)

Humana's sophisticated Early Indicator Report (EIR) incorporates claims data as well as data from the authorization system to enable early recognition of key clinical trends and schedule early interventions that reduce preventable events. With the EIR, users can see overall performance at a glance, and can drill down to specific data elements to quickly analyze data and identify root causes. This report allows analysis of month-to-month trends as well as year-over-year.





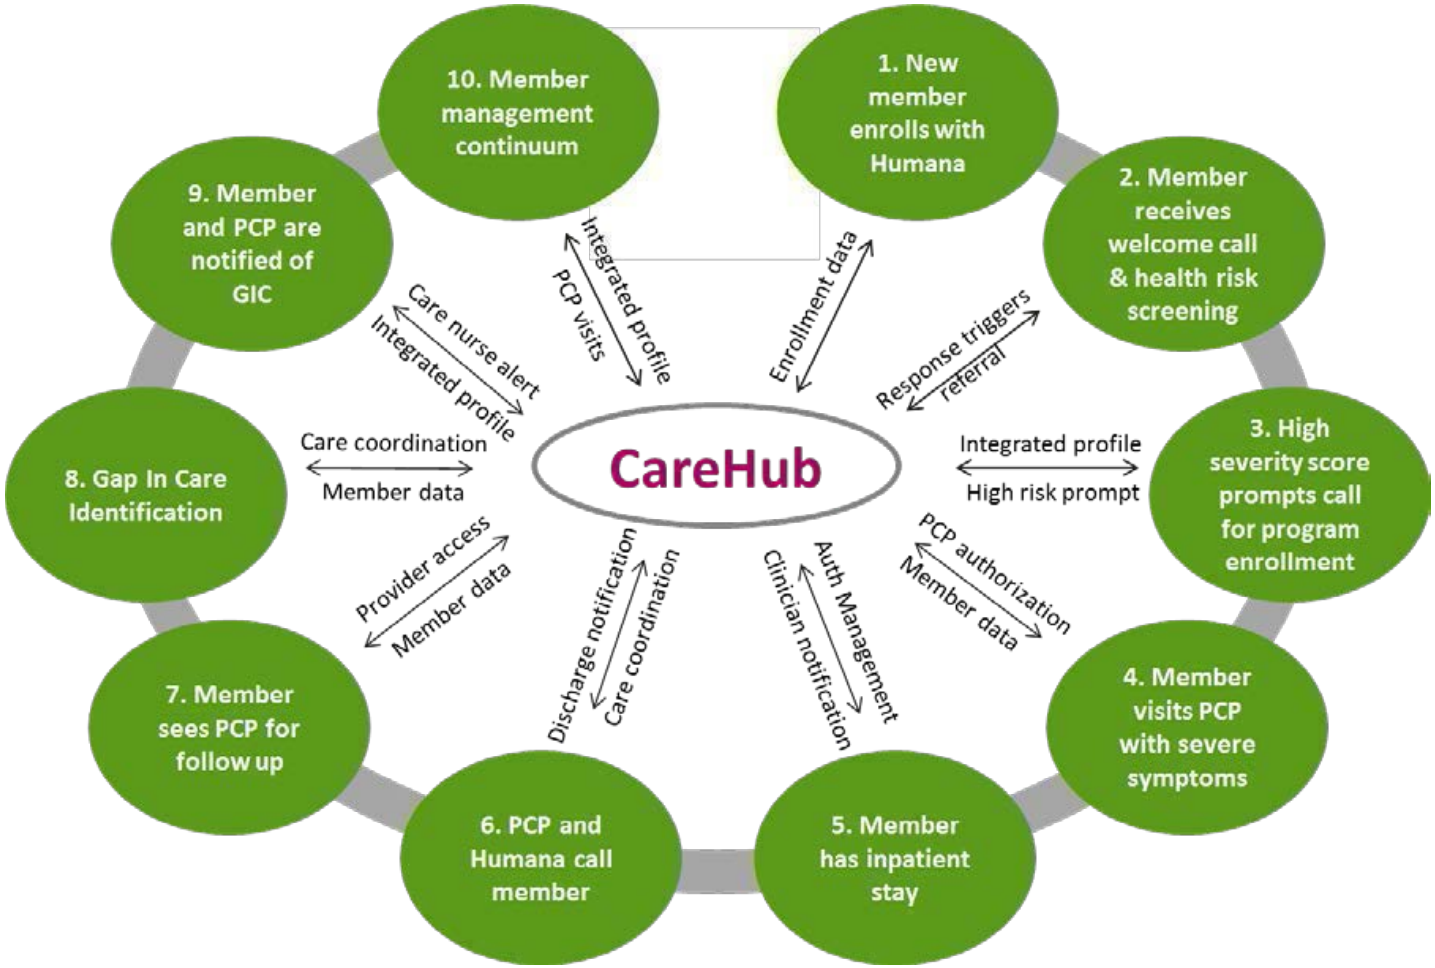


Humana

Attachment MMA 1-4: Humana's CareHub Platform

CareHub is Humana's enterprise solution for complete program integration for our provider community and enrollees. The CareHub Clinical Guidance eXchange (CGX) workflow system supports an integrated approach to utilization and care management. All of the various sources of identification and referral – from Predictive Modeling to claims data and lab results – are integrated into our powerful CareHub platform, as seen below.

Humana CareHub is the heart of our clinical analytics and engagement model



Humana

Attachment MMA 1-5: Discharge-to-Encounter Report

We have developed a specific discharge-to-encounter report as part of our strategy to reduce readmissions and promote continuity of care. We use this reporting internally and deliver it to providers to monitor metrics by provider.

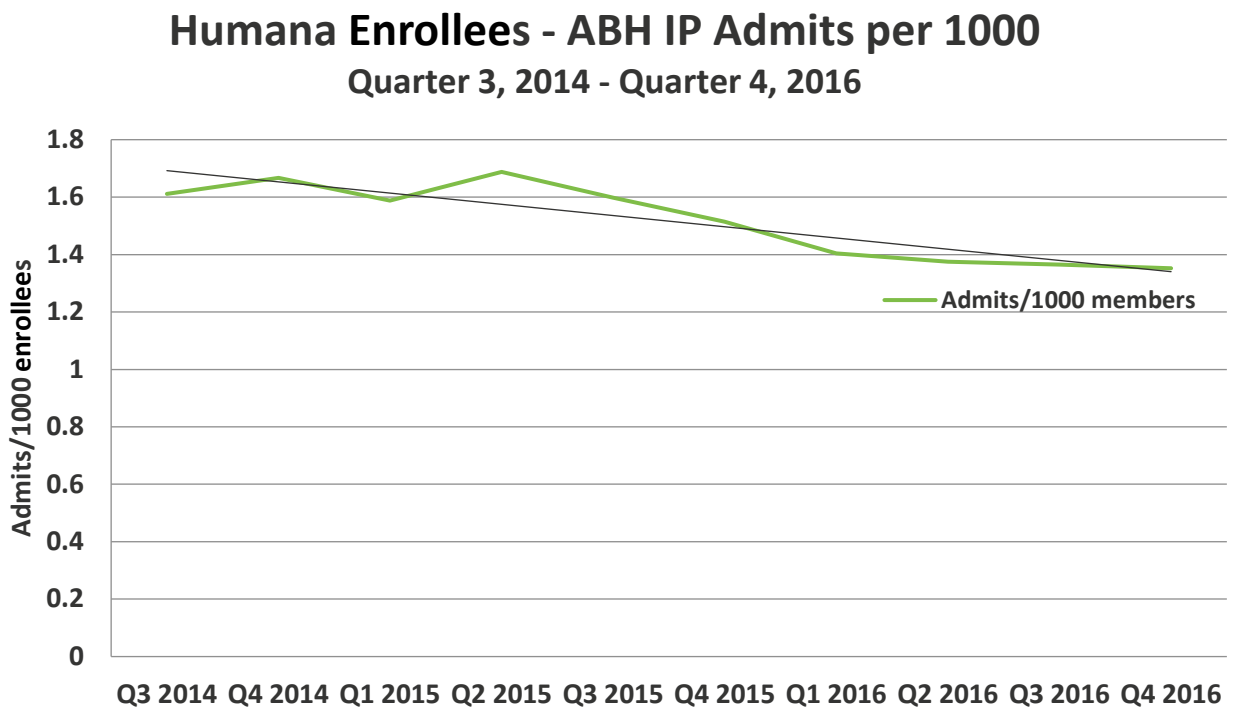
Attachment MMA 1-7:
Access Behavioral Health's Reduction in Mental Health Readmissions 2015–2017

The percentage of readmissions has trended below the benchmark and maintained the goal since 2015. This is a marked improvement from previous years, which we attribute to ABH Gap Reports and interventions, such as ensuring the correct contact information follows the enrollee from hospital to outpatient services.

Agency Defined Hospital Readmission Rates:

Measure	Goal	2015	2016	2017 YTD
7-day Mental health readmission rate	Below 9%	6%	7%	4%
30-day Mental health readmission rate	Below 22%	18%	18%	16%



MMA SRC# 2 – Birth Outcomes (Statewide):

The respondent shall describe its organizational commitment to quality improvement as it relates to pregnancy and birth outcomes. More specifically, the respondent shall describe its overall approach, and specific strategies, that will be used to address prematurity prevention, improve perinatal outcomes, and reduce unintended pregnancies, including:

- A description of performance benchmarks for reducing non-medically indicated cesarean sections and early elective deliveries;
- A description of incentives that will be implemented for providers and enrollees aimed at improving birth outcomes; and
- A description of strategies to decrease unintended pregnancies (e.g., increase in the use of long acting reversible contraceptives).

Response:

Quality improvement related to pregnancy and birth outcomes is among Humana's principal goals, due in large part to the significance of the proportion of Medicaid recipients it impacts. According to the Agency for Health Care Administration (AHCA) 2017 Comprehensive Quality Strategy, Florida Medicaid covered sixty-three percent (63%) of births in the State in calendar year 2015. In 2016, we identified nineteen thousand one hundred twenty-three (19,123) pregnancies among our enrollees and had twelve thousand eight hundred twenty-three (12,823) deliveries within our plan. The clear impact of birth outcomes on infants' health long after delivery and often well beyond their first year of life means that quality improvement in these areas will greatly benefit enrollees over their lifetime.

Because of the significant potential for quality improvement from current baselines, this issue is particularly important to Humana. Poor birth outcomes, unintended pregnancies, and non-medically indicated cesarean sections (C-sections) are prevalent throughout the State:

- The Florida Medicaid program covered fourteen thousand eight hundred thirty-seven (14,837) babies who started out in Neonatal Intensive Care Units (NICUs), many because they were born pre-term and/or with low birthweight.

- According to the Guttmacher Institute, in 2010, fifty-nine percent (59%) of all pregnancies in Florida, or two hundred seven thousand (207,000), were unintended. The unintended pregnancy rate in Florida is among the highest in the country: Fifty-eight (58) per one thousand (1,000) women aged fifteen to forty-four (15-44), versus a low of thirty-two (32) per one thousand (1,000) in New Hampshire and a high of sixty-two (62) per one thousand (1,000) in Delaware.

- Florida has some of the highest cesarean section (C-section) rates in the country, according to Consumer Reports rankings. Florida hospitals performed C-sections on thirty-two percent (32%) of low-risk pregnancies in 2014, second only to Washington, D.C. The national average was twenty-six percent (26%). Non-medically-indicated C-sections contribute to both unnecessary cost and unnecessary risk.

While these statistics are concerning, we are confident this is an area with significant potential for quality improvement, and committed to continuing to take a lead role in working with AHCA and other stakeholders to achieve that potential. We will continue to take steps to improve quality and outcomes through discussions and initiatives with providers, through prenatal and birth-related services to all pregnant enrollees to address the various factors associated with poor birth outcomes, through appropriate postpartum and postnatal care for the mother and the infant, and through a broad array of strategies to decrease unintended pregnancies.

In the remainder of this response, we discuss our overall approach and those specific strategies we use in each of the following areas:

- Improving birth outcomes
- Reducing non-medically indicated C-section and early elective deliveries
- Decreasing unintended pregnancies

==========

2. The extent to which the respondent describes specific care coordination protocols, including a description of the risk stratification algorithm used to identify high-risk pregnancies (including enrollees with co-occurring behavioral health conditions).

==========

IMPROVING BIRTH OUTCOMES

AHCA's August 2016 Quarterly Statewide Medicaid Managed Care (SMMC) Report focused on a cohort of pregnant women to establish a baseline for assessing the adequacy of women's access to prenatal care in the Managed Medical Assistance (MMA) program. Key findings included:

- 70% of women with a delivery had their first prenatal visit later than the recommended seven (7) months prior to delivery.

- 21% of women with a delivery had only late-occurring prenatal care in the third trimester or no prenatal care.

- The majority of women with a delivery, 85%, received prenatal visits for fewer than the recommended seven (7) consecutive months prior to delivery.

While most attention to pregnancy care focuses on the nine (9) months of pregnancy, postnatal care is important as well. The postnatal period lasts six (6) to eight (8) weeks, beginning immediately after birth. During this period, the mother goes through many physical and emotional changes while learning to care for her newborn. Postnatal care involves getting proper rest, nutrition, and vaginal care. Postnatal care for the newborn is, of course, equally critical.

Clearly, perinatal services are integral to positive birth outcomes. To this end, we have developed an array of clinical programs focusing on perinatal services that are crucial to keeping mothers and children healthy. The Humana Florida plan's Healthcare Effectiveness

Data and Information Set (HEDIS) rates for prenatal care and postpartum care have shown improvement between 2015 and 2016 measurement years. These 2016 rates are more favorable than the "Calendar Year 2015 Weighted Mean for Florida Medicaid Plans," as reported in AHCA's Comprehensive Quality Strategy, 2017 (see below). We continually seek additional opportunities for improvement in achieving benchmarks.

PRENATAL AND POSTPARTUM CARE

TIMELINESS OF PRENATAL CARE (percentage of deliveries with a prenatal care visit in the first trimester or within forty-two (42) days of enrollment)
- Humana 2016 86.37%
- Humana 2015 85.82%
- Weighted Means, FL Plans CY 2015 83%
- MPIP Year 2 Benchmark 69.54%

POSTPARTUM CARE (percentage of deliveries with a postpartum visit on or between twenty-one (21) and fifty-six (56) days after deliver)
- Humana 2016 70.07%
- Humana 2015 67.53%
- Weighted Means, FL Plans CY 2015 69%
- MPIP Year 2 Benchmark 60.93%

We discuss our strategies for facilitating and coordinating adequate prenatal and postnatal care for our enrollees in the remainder of this section.

MOMSFIRST OB CASE MANAGEMENT PROGRAM
Because we recognize the importance of continuous care within the perinatal period, we make every effort to identify pregnant enrollees as early as possible and to address the challenges they may face in obtaining adequate prenatal and postpartum care. To facilitate this, we invite all identified pregnant enrollees to participate in MomsFirst, Humana's OB Case Management Program, unless they have opted to enroll in the Healthy Start case management program. We coordinate our case management efforts with the local Healthy Start care coordinator/case manager to prevent duplication of services.

We use a number of sources to identify and refer pregnant women to MomsFirst, including:

- Daily Hospital Census
- Monthly Prenatal Pharmacy report
- Medicaid Education Satisfaction Unit/Welcome Calls
- Customer Care Calls
- Health Risk Assessment (HRA)
- Utilization Management (UM) and/or Nurse Liaisons
- Case Management
- Obstetrics (OB) Provider partnerships and incentives
- Self-Referrals

Our Performance Improvement Project, "Improving Timeliness of Prenatal Care & Well-Child Visits in the First 15 Months of Life – 6 or more visits," currently ongoing, also uses the Health

Information Exchange-Event Notification System (HIE-ENS) to alert us of pregnancies and allow us to reach out to enrollees sooner. Humana has also established a file sharing relationship with Healthy Start, which assists in early identification of pregnant enrollees.

We have established a phone queue for the OB team to facilitate warm transfers from various locations. Calls into the OB Phone Queue can come from the following sources:

- Medicaid Administration Education and Satisfaction Unit (ESU) when transferring new enrollees identified as pregnant
- OB Specialists with an enrollee who has expressed interest in the program on the phone
- Providers who are referring enrollees and/or have questions for OB Case Managers
- Enrollees who are pregnant and interested in the program
- Customer Care Specialists (CCSs) who have received specific calls from enrollees regarding OB services

Upon verification of a pregnant enrollee, the MomsFirst OB case manager (CM) conducts an initial welcome call to explain the MomsFirst program, begin enrollee engagement, and obtain the enrollee's consent for enrollment in OB Case Management. We prioritize outreach using our High Risk Pregnancy Model that uses claims and pharmacy data, survey information, and other data inputs to assign an initial acuity level. The case manager makes an initial outreach attempt within ten (10) business days for enrollees at highest risk, and all enrollees receive an initial outreach attempt within thirty (30) days. If the case manager is unable to contact a pregnant enrollee in two (2) attempts, he or she refers the case to an Unable to Contact (UTC) CCS within Humana's ESU, who will begin the process of locating her in the most effective and timely manner possible. Once located, we notify the case manager and update our clinical information system to include best time to call, alternative numbers, and other pertinent information.

When we have gained the enrollee's consent to participate in MomsFirst, the OB case manager completes a comprehensive case management assessment. The additional information gathered through the assessment, which involves direct communication with the enrollee, enables the case manager to make a final determination on acuity using the MomsFirst OB Case Management Program Acuity Levels grid (please see Attachment MMA 2-1) as guidelines. With all factors in mind, including predictive model scores and information gathered prior to and during the comprehensive assessment, the case manager assigns acuity based on clinical judgment. We then manage all enrollees based on their assigned acuity level (complex, high, or low), which may change throughout the duration of their pregnancy and we reassess monthly. Using our High Risk Pregnancy Model, we also alert the case manager of potential changes in condition that require reassessment. For example, we may initially assign an enrollee low acuity and later receive a pre-eclampsia diagnosis, which would trigger a task to the OB case manager alerting that the mother's risk may have increased and to investigate further.

Our MomsFirst program provides regular contact during the enrollee's pregnancy as well as follow-up contact during the six (6)-week postpartum period. We tailor contact to the enrollee's acuity level as well as their contact preferences. At minimum we call weekly for complex acuity enrollees, monthly for high acuity enrollees, or once per trimester for low acuity enrollees, with frequency based on enrollee need. The Multidisciplinary Team (MDT) includes enrollees deemed as complex in its case management rounds on a monthly basis. Humana contracts for in-home specialized services to those enrollees whom providers have identified as having a

medical need. Some of these in-home services include home management of nausea, hydration, coagulation disorders, diabetes, and hypertension by nurse administration of subcutaneous and continuous peripherally inserted central catheter (PICC) medication, peripheral intravenous (IV) hydration, and insulin injection. The contracted nurse may also administer Makena or 17P injections to the in-home enrollee to help prevent preterm labor. The nurse completes a comprehensive assessment and contacts the OB case manager to advise of enrollee issues and progress.

Using our Physician Finder Plus tool, the MomsFirst OB case manager also assists with identifying appropriate OB providers for the enrollee. If the enrollee has any difficulties scheduling an appointment, the case manager makes the appointment and calls the enrollee with appointment time and date. The case manager also helps to reduce transportation barriers, child care barriers, and other barriers that may exist by linking the enrollee to the non-emergency transportation broker and to appropriate community resources.

MomsFirst offers a wide array of prenatal and birth-related services to all pregnant enrollees to address the various factors associated with poor birth outcomes, including nutrition, breastfeeding, parenting, childbirth, and tobacco cessation support. A key aspect of our program is to evaluate the enrollee's support system and to encourage the involvement of the enrollee's identified partner in the process. The OB case manager provides education to the enrollee and identified partner on doctor visits, good dental health during pregnancy, Women, Infants and Children (WIC) programs, nutrition, family planning, delivery, postpartum care, and infant pediatrician selection. Case managers also make efforts to ensure that our pregnant enrollees and their chosen partners have access to childbirth education and parenting classes offered at convenient times; in locations that are accessible, convenient, and comfortable; and in languages spoken by the enrollees, with on-site oral interpretation services if necessary. Local health clinics and hospitals, community centers, and OB practices often have such resources available.

To drive participation within the program, Humana offers an incentive card that encourages enrollees to receive appropriate prenatal and postpartum care. Enrollees who engage in the MomsFirst program and complete all their prenatal and postpartum visits following engagement are eligible for a thirty dollar ($30) Babies"R"Us gift card.

POSTPARTUM OUTREACH

Whether a mother enrolls in MomsFirst or not, our case managers will make postpartum outreach calls to all enrollees who have delivered to ensure they complete a postpartum visit within twenty-one (21) to fifty-six (56) days. The case managers address any barriers that enrollees identify regarding lack of motivation, lack of transportation, childcare needs, and other issues that might prevent them from attending their postpartum appointment as scheduled. We have recently embedded postpartum case managers in seven (7) hospitals throughout Broward County. Nurses see enrollees in the hospital after delivery, conduct surveys at bedside, follow up once the enrollee is home to make sure mom and baby are settling in well, and follow up again within five (5) to six (6) weeks to ensure they have scheduled a postpartum visit. We are confident this program will increase engagement and compliance with postpartum visits and will yield positive health outcomes for mothers and babies. We plan to expand this program to Dade and Palm Beach counties.

We also place strong emphasis on recognizing and addressing postpartum depression and related conditions that may interfere with attaining the best possible health outcomes for mother and baby. Our OB case managers, knowledgeable about the signs of postpartum depression, connect our enrollees with needed behavioral health support when they identify enrollees at risk. (Please see Attachment MMA 2-2 for an example of Beacon Baby Blues and Postpartum Depression materials we share with new moms.)

NEONATAL INTENSIVE CARE UNIT (NICU) CASE MANAGEMENT

The NICU CM program provides utilization review and case management for infants who are inpatient in the NICU. Nurses with extensive NICU experience follow each case throughout the NICU stay and for thirty (30) days post-discharge. The nurses provide authorizations and medical necessity approvals, discharge planning, and support and education for families of the infants. For high-risk infants, the NICU nurses transfer the case to the Medicaid pediatric team for longer-term outreach to educate and support the caregiver in an effort to improve outcomes and decrease unnecessary utilization.

TRANSITION OF CARE PROCEDURES

Humana maintains and follows a Transition of Care (TOC) Policy and Procedure to provide a process for Clinical Advisors to review ongoing services to reduce the potential for an interruption in treatment or therapy. Our policy establishes the formal process by which the transition is directed for all new enrollees. This creates a bridge for the enrollee at the time of enrollment to promptly identify health status and necessary medical services, and facilitate early entry into appropriate Clinical Intervention Programs. Humana communicates with the enrollee, primary care physician (PCP), and provider(s) of service, both verbally and in writing, regarding the details of the TOC determination. Additionally, the TOC letter informs all parties of the need for care to transition to a participating provider.

A new pregnant enrollee seeing a non-participating OB/GYN is one example of a case appropriate for TOC. Humana encourages continuous care with the same physician throughout the pregnancy, even if the physician is not contracted. Pregnant women transitioning from fee-for-service (FFS) or another health plan, will have transition needs to ensure continuity of care and promote recommended prenatal care. Those who are actively receiving prenatal or postnatal care from a non-participating provider should continue seeking care from that provider for the entirety of the perinatal period, through six (6) weeks postpartum. Our priority is to facilitate the receipt of prenatal care, not disrupt it. This process includes our contacting the OB/GYN to provide the details and process for them to bill Humana and be paid. We also seek to enroll pregnant women into MomsFirst, as described above.

While we strongly seek to preserve continuity of care, it is also important to note that situations exist where a switch of provider may be in a new enrollee's best interests. Such situations may include ensuring cultural competency, geographic proximity to facilitate appropriate prenatal care, and provision of care by an OB/GYN specialist. In these situations, we assess the enrollee's interest in continuing with her existing provider and, if she desires, helping her identify alternatives. When provider switches occur, we work to ensure a complete transition of information to the new provider. Humana shall have adequate network capacity such that any new enrollee who is pregnant is able to have an initial visit with her provider within fourteen (14) calendar days of enrollment.

ADDRESSING CULTURAL DIVERSITY

Humana has a strong commitment to addressing cultural diversity and providing cultural competency training; to building a network and providing supports such as translation services that minimize barriers to care resulting from language and cultural barriers; and to disseminating culturally and linguistically appropriate materials to our enrollees. These efforts are particularly important to maximize the appropriate utilization of prenatal and postpartum services, as cultural values and beliefs related to pregnancy and linguistic isolation, often contribute to an individual's hesitancy to access services. Our materials are culturally and linguistically appropriate, and through our OB case management program described above, we ensure that our enrollees know about and can link to the translation services and community resources they need to facilitate their care throughout pregnancy.

EDUCATION AND OUTREACH

Humana includes information regarding how to obtain prenatal and postpartum care in new enrollee materials and articles on perinatal care in our newsletters. We conduct tailored education and outreach to our pregnant enrollees via postcards, our enrollee portal, and telephonic outreach, according to the enrollee's preferences and confidentiality requirements. We also participate in and sponsor community events such as urban and rural health fairs, and March of Dimes activities such as March for Babies community walks.

Humana partners with our OB providers and delivery facilities to provide enrollee access to educational classes available, including childbirth education classes and parenting education classes. Our MomsFirst case managers guide enrollees to community resources and transportation as necessary to help them attend classes.

We also develop and implement enrollee campaigns to address and promote timely health care. We have conducted a Women's Health Campaign that included education to pregnant enrollees about the critical importance of prenatal and postnatal care, and we are currently conducting a campaign targeting well-child visits.

Finally, and as noted above, education on a range of topics is a key component of our MomsFirst OB case management program. The following are just a few examples of the subjects included in case manager discussions with pregnant and post-partum enrollees:

- Sample discussion topics for pregnant enrollees:
-- Tobacco Usage
-- Smoke Cessation Counseling
-- Nutritional Assessment and Counseling
-- Referral to Women, Infant, and Children (WIC) for Potential Enrollment
-- Breast Feeding Benefits
-- Family Planning
-- HIV Status
-- Hepatitis B Surface Antigen (HBsAG) Status
-- Behavioral Health Issues
-- Immunization Programs
-- Home Preparation
-- Pediatrician Selection
-- Preterm Labor Signs and Symptoms

- Sample discussion topics for post-partum enrollees
-- Vaginal Discharge After Delivery
-- Need to Report Any Swelling or Redness
-- Suture Care
-- Monitoring for Mood Changes
-- Behavioral Health Issues
-- Episiotomy
-- Bathing
-- Nutrition
-- Physical Activity
-- Hormones
-- Breast Care
-- Nipple Care
-- Family Planning
-- Various Birth Control Methods
-- Routine Infant and Well-Child Visits

ADDITIONAL INITIATIVES TO IMPROVE BIRTH OUTCOMES
Humana offers other benefits and resources to pregnant and postpartum enrollees, including but not limited to the following:

- Humana's nutrition counseling benefit is available to all of our enrollees, and is of particular value to pregnant enrollees and new moms. The benefit gives enrollees needed guidance and support to make sound dietary choices and positive lifestyle changes aimed at reducing symptoms of disease or condition and improving their overall health. The benefit includes a detailed telephonic nutritional assessment with five (5) one-on-one telephonic sessions with a Registered Dietitian throughout the benefit year. Follow-up sessions include goal-setting and assessment of the nutritional care plan. We email or mail educational materials to the enrollee's home.

- Humana's expanded benefits also include post-discharge meal delivery of up to ten (10) frozen, precooked meals to the enrollee's home after discharge from inpatient hospital once per year and with the case manager's approval. This is a valuable nutritional benefit to many of our postpartum enrollees, who may otherwise neglect their own nutrition during their early weeks at home with their newborn. In addition, good nutrition for the mother is important to breastfeeding.

- As another aspect of Humana's commitment to quality improvement related to birth outcomes, our Enrollee and Community Engagement team is focused on improving Healthcare Effectiveness Data and Information Set (HEDIS) compliance through the Humana Storks program, which we developed to provide quality resources and support to new mothers at network hospitals resulting in better health outcomes through medical appointment adherence. For this pilot initiative, Enrollee Advocates visit enrollees who have given birth at two (2) hospitals within the Memorial Healthcare System to educate the new mother on how to access health services that will ensure the best outcomes for herself and her newborn. They share information on the importance of scheduling timely appointments for dental and medical services, lead screenings, and vaccination. Humana Storks also provides a care delivery

package with baby supplies including diapers, baby bottles, a bib, a tee-shirt, educational materials, and a list of urgent care centers.

"I was stopped at the nurse's station and was asked to explain the program. They wanted to view what was in the bag. I let them explore what I was bringing to the new moms and they were amazed…they said all insurance companies should do that. The moms and their families all seem to be happy to see me. I mentioned to the new mom I visited today that my purpose was to make sure she followed up with her physician and case manager and she said that she would." - Maria Kesti, Enrollee Advocate, Humana Storks Program

By pairing an in-person, high-touch visit with the new mother care package, the Humana Storks program increases engagement in MomsFirst, which improves the health of new mothers and babies.

==========

3. The extent to which the respondent describes strategies to improve data exchanges and communications between practitioners to improve care coordination efforts for pregnant enrollees that are determined to be high-risk.

==========

Effective data exchange and communication among providers is essential to providing seamless, coordinated care to all our enrollees and is one of the key objectives of our care coordination programs. Humana's strategies to improve data exchanges and communications between practitioners are a mixture of "high tech" and "high touch" solutions. We have summarized key examples below.

TECHNOLOGY STRATEGIES FOR IMPROVING DATA EXCHANGE AND COMMUNICATION

CAREHUB

At the center of our case management strategy is CareHub, Humana's enterprise solution for complete program integration of our provider community and enrollees. The CareHub Clinical Guidance eXchange (CGX) workflow system supports an integrated approach to utilization and case management. As a fully-integrated approach, this enterprise solution provides enhanced capabilities to identify candidates for programs, document gaps in care, automate care planning, monitor plan compliance, and identify undesirable outcomes for further intervention.

Through the use of various web portals (e.g., Availity Care Profile), messaging channels (e.g., e-mail, fax, postal mail, etc.), and the CareHub CGX clinical workflow system, we generate Care Alerts to distribute to MDT members involved in the care of high-risk pregnant enrollees. The CareHub infrastructure uses technology solutions such as Atlas and Anvita clinical rules engines to enable integration, collaboration, and data sharing throughout the healthcare delivery system. These Care Alerts consist of evidence-based Gaps-in-Care, HEDIS, and drug-to-drug/disease interaction alerts.

AVAILITY

Our network providers in Florida have access to the Availity web-based platform. Availity is one of the leading health information networks in the country, optimizing information exchange

between multiple healthcare stakeholders through a single, secure network. The Availity Health Information Network encompasses business and clinical services, and supports nationwide real-time and batch electronic data interchange via the Web and through business-to-business integration.

The Availity Care Profile includes claims information associated with office visits and hospitalizations, diagnoses and associated procedures, prescription history, lab event history, radiology event history, immunization history, and clinical messaging. This information is critically important when a first-time enrollee presents, or during an emergency department visit, post hospital discharge, or natural disaster. Use of the Availity Care Profile also improves enrollee safety, can eliminate duplicate or unnecessary procedures, and improves coordination and continuity of care. This allows us to more rapidly close gaps in care for enrollees, provide greater opportunity for preventative care services, and help manage chronic conditions.

HIGH-TOUCH STRATEGIES FOR IMPROVING DATA EXCHANGE AND COMMUNICATION

MOMSFIRST CASE MANAGER
For high-risk pregnant enrollees in our MomsFirst OB Case Management program, the OB case manager serves as the single point of contact between enrollees and Humana's various providers involved in the enrollee's care. The OB case manager is responsible for helping enrollees navigate the health care system, for ensuring they meet with the necessary providers, and for facilitating information-sharing among practitioners. Case managers may schedule visits to OB providers or facilities to ensure optimal management of OB enrollees and to facilitate provider relationships and communication.

COMPLEX CASE CONFERENCES
The MDT receives complex acuity cases on a monthly or more frequent basis, as needed, so the team can develop effective plans of care and treatment goals through shared responsibility and collective decision-making. The team may also evaluate non-complex cases deemed to have medically complex needs or challenging issues.

MEDICAL/BEHAVIORAL CLINICAL COLLABORATION
For our pregnant and post-partum enrollees with co-occurring behavioral health conditions, our behavioral health (BH) subcontractor's case managers engage in ongoing collaboration with the enrollee's medical providers and OB case manager. This collaboration includes:

- Attendance at Humana Case Management meetings, as requested, to review goals and interventions, and to re-evaluate and update the enrollee's comprehensive care plan across physical and behavioral health issues.

- Updates on enrollee adherence with treatment and aftercare plans for both behavioral and medical conditions.

- Updates between BH case management staff, MomsFirst case management staff, and enrollee's health care provider(s) on a regular basis. During the initial referral process, the referring party can indicate how often they would like updates on the enrollee's case.

- Regular clinical rounds between the BH leadership teams and the Humana Case Management team occur monthly, or as needed, to discuss complex cases, which may include complex OB cases.

IN-HOME SERVICES CONTRACTOR REPORTS TO PROVIDERS
As noted earlier in this response, Humana contracts for the provision of specialized in-home services, as needed. The contracted nurse submits reports on services provided and issues noted to the enrollee's PCP and OB.

==========

5. The extent to which the respondent describes financial and non-financial provider and enrollee incentives for evidence-based practices that will contribute to hitting the benchmarks.

==========

INCENTIVES FOR ENROLLEES AIMED AT IMPROVING BIRTH OUTCOMES

Above we described key incentives for enrollees aimed at improving birth outcomes, including the Babies"R"Us gift card associated with our MomsFirst program. We offer several other Healthy Behaviors programs that are targeted more broadly, but certainly include the improvement of birth outcomes as an important goal. In particular:

- Smoking cessation is particularly important to improving birth outcomes. Completing our Smoking Cessation program entitles enrollees to a thirty-dollar ($30) gift card, or a fifty-dollar ($50) gift card for those enrollees completing the program using medicine from their doctor

- In our Substance Abuse program, we reward enrollees with a ten-dollar ($10) gift card for joining the program, a twenty-dollar ($20) gift card for staying sober for ninety (90) days in the program, and another twenty-dollar ($20) gift card for staying sober for one hundred eighty days (180) days in the program

- Our Baby Well-Visit program is available to babies between zero (0) and eighteen (18) months of age who have been enrolled in our Plan since birth. We educate parents or guardians about the importance of well visits at one (1), two (2), four (4), six (6), nine (9), twelve (12), fifteen (15), and eighteen (18) months of age. Enrollees receive a ten-dollar ($10) gift card for each visit completed, up to three (3) visits.

INCENTIVES FOR PROVIDERS AIMED AT IMPROVING BIRTH OUTCOMES

Approved by AHCA, Humana's Managed Medical Assistance (MMA) Physician Incentive Program (MPIP) targets three (3) performance measures for OB providers aimed at improving birth outcomes:

FREQUENCY OF ONGOING PRENATAL CARE
Percentage of women with Medicaid deliveries who had eighty-one percent (81%) or more of expected prenatal visits (using HEDIS 2017 specifications)
November 6, 2015 - November 5, 2016

69.54%

POSTPARTUM CARE
Percentage of women who had a postpartum visit on or between twenty-one (21) and fifty-six (56) days after delivery (using HEDIS 2017 specifications)
November 6, 2015 - November 5, 2016
60.93%

FLORIDA MEDICAID CESAREAN SECTION RATE
Percentage of single live born Medicaid births in a practice that were delivered via cesarean section (using 2017 Agency Specifications)
January 1, 2016 - December 31, 2016
<35%

Physicians who are board-certified in obstetrics and gynecology by the American Board of Obstetrics and Gynecology or the American Osteopathic Board of Obstetrics and Gynecology (board-certified OB/GYNs), who are practicing within a group within the specified region and have had at least ten (10) Medicaid deliveries for the measurement period, and whose group has achieved all of the above standards for the Plan's Medicaid enrollees will be paid an equivalent to the appropriate Medicare Rate, as established by the Agency. For the first year of our OB MPIP, ninety-eight (98) of our OBs met all three (3) criteria. As of July 2017, we have one hundred fifteen (115) OBs qualified for and receiving the enhanced payment.

==========
1. The extent to which the respondent identified opportunities for improvement in achieving the benchmarks and subsequent steps the respondent will implement to overcome any barriers across and within different systems of care.

6. The adequacy of the respondent's proposed performance benchmarks for reducing nonmedically indicated cesarean sections and early elective deliveries.

7. The extent to which the respondent describes its experience implementing successful strategies that resulted in a reduction in non-medically indicated cesarean sections and early elective deliveries. In order to receive all points for this component, the respondent must include outcome data on specific performance metrics.
==========

REDUCING NON-MEDICALLY INDICATED CESAREAN SECTIONS AND EARLY ELECTIVE DELIVERIES

As noted in the introduction, Florida has among the highest C-section rates in the country. While some C-sections are medically necessary, non-medically indicated C-sections carry risks and downsides, including the following [1]:

- Women with low-risk pregnancies undergoing their first C-section were three (3) times more likely to die or suffer serious complications compared with women delivering vaginally, according to a fourteen (14)-year analysis of more than two (2) million women in Canada

published in 2007 and cited by the American College of Obstetricians and Gynecologists (ACOG) guidelines.

- Having a C-section increases the likelihood that a woman will deliver via C-section for future births. Currently in the United States, the chance of having another C-section after the first is ninety percent (90%).

- With every additional C-section, the risk of a difficult delivery increases. Studies have found that the rate of difficult delivery can rise as much as five point one percent (5.1%), and that the risks increase most dramatically after a third C-section.

- The mother's recovery after a C-section is usually longer than recovery after a vaginal birth.

- Vaginal delivery for low-risk pregnancies may also be better for babies. Babies are less likely to suffer breathing problems such as transient tachypnea, and more likely to breastfeed, as it is easier to start breastfeeding when mothers are not recovering from major surgery.

- C-sections cost almost thirty percent (30%) more than vaginal births.

Obstetricians, health economists, and other experts cite many reasons for the high rate of C-sections in Florida and the nation, including unrealistic expectations that every birth should take place without complications, doctors practicing defensive medicine or chasing higher payment rates, and patient preference.

Early elective deliveries (EEDs) also compromise quality and positive birth outcomes. Tampa OB-GYN Robert Yelverton, state chair for the American Congress of Obstetricians and Gynecologists (ACOG), stated in a news release that "studies have shown that deliveries that are scheduled for non-medical reasons may increase harm to infants, increase health care costs, and worsen medical outcomes." Fortunately, this is an area where Florida has made much progress. A 2014 March of Dimes multi-state, hospital-based quality improvement program pilot was remarkably effective at reducing early elective deliveries of babies. The program, which included six (6) Florida hospitals, reduced the rate of early delivery from twenty-seven point eight percent (27.8%) to four point eight percent (4.8%).

Below we present our performance benchmarks for reducing nonmedically indicated C-sections and EEDs, and our strategies to achieve these benchmarks.

HUMANA'S BENCHMARKS

Humana's benchmark for EEDs is no early elective deliveries before thirty-nine (39) weeks. As noted above, strategies throughout the state to reduce the rate of EEDs have been quite successful. We include our C-section rate benchmark of thirty-five percent (35%) or less in our MMA Physician Incentive Program (MPIP). Qualified providers with at least ten (10) deliveries of single live born Medicaid births during the measurement period must meet the benchmark, as well as other birth outcomes measures discussed earlier in this response, in order to receive the quality incentive payment. For the first year of the MPIP, one hundred seventeen (117) OBs out of two hundred forty-two (242) qualified OBs achieved the C-section benchmark.

HUMANA'S STRATEGIES FOR REDUCING NON-MEDICALLY INDICATED C-SECTION RATES AND EARLY ELECTIVE DELIVERIES

Humana engages in a wide array of strategies to improve C-section and EED rates, which we summarize below. However, we recognize that this is a broad and difficult issue that requires the active involvement of all stakeholders if we are to truly move the needle in the State of Florida.

Humana is not only committed to being an active participant in tackling this issue, but we would also like to take the lead in partnering with AHCA and the Florida Association of Health Plans to reduce the rate of medically unnecessary C-sections throughout the State. A symposium involving multiple health plans, ACOG, hospitals, Federally Qualified Health Centers (FQHCs), and the news media is a potential first step to consider to embark on the necessary steps to change ingrained practice patterns and care-seeking behaviors that contribute to the problem we face in the State. Such joint efforts have proven effective elsewhere, including in South Carolina. They have also proven effective in reducing EEDs; health plan and hospital partnerships with the March of Dimes "It's Worth the Wait" program have had outstanding results. The broad partnership around C-sections we envision would focus both on educating enrollees on the risks presented by unnecessary C-sections, and on developing strategies directed toward hospitals. Such strategies might include creating hospital benchmarks and incentives, a single hospital payment rate regardless of type of delivery, and requiring authorizations for scheduling of operating rooms (ORs) for deliveries. We look forward to working with AHCA to put this idea in motion.

Below we summarize our current efforts related to C-section rates.

- IMPROVING EFFECTIVENESS OF BENCHMARKS. We are currently exploring mechanisms for enhancing the effectiveness of our C-section rate benchmarks. Given the wide variability of C-section rates across the State, using one (1) single benchmark (C-section rate of thirty-five percent (35%) or less) is less than optimal. For instance, in Regions 1, 6, and 9, our average rates are below the benchmark (thirty-one percent (31%), thirty-four percent (34%), and thirty-four percent (34%), respectively), while in Regions 10 and 11, average rates exceed the benchmark (forty-two percent (42%) and forty-three percent (43%), respectively). In areas where the rate is below the benchmark, we continue to engage and promote our provider network and work toward the national average of twenty-eight percent (28%). In areas where the rate exceeds the benchmark – and especially in areas where it far exceeds the benchmark – we do not rely solely on the incentive payment to achieve reduction. Rather, we understand that achieving the benchmark will happen only in a gradual approach. As described below, we engage in meetings and peer-to-peer counseling with provider groups whose rates exceed the benchmark, and we continually review their progress toward meeting the benchmark. We are also exploring the possibility of isolating and targeting the primary C-section rate, as reducing that rate is essential to reducing the overall rate. A recent analysis showed that of the C-sections performed in the first half of 2017, fifty-five point eight percent (55.8%) were primary C-sections, and forty-four point two percent (44.2%) were secondary.

- PARTNERING WITH QUALITY PROVIDERS. Related to the C-section benchmark, last year our Clinical Department team prepared performance report cards for our contracting OB/GYNs based on C-section rates. Based on the results, we terminated eighteen (18) providers in Region 11 who were not aligned with our quality strategy. Those terminations became effective

in February and March 2017. We also held meetings with twelve (12) additional groups of providers whose C-section rates and/or EEDs were of concern. Participants at these meetings included staff from our MomsFirst program, our Quality Department, and our Medical Director, who engaged in peer-to-peer counseling. We shared data with the groups on their C-section rates, as well as educational articles from ACOG. We have just embarked on an additional set of meetings with different groups of providers.

- MOMSFIRST OB CASE MANAGEMENT PROGRAM. A key component of our MomsFirst program, as described in detail under "Improving Birth Outcomes," is enrollee education on a range of topics, including the importance of bringing the pregnancy to term and the risks that may be associated with non-medically indicated C-sections and EEDs.

- PRIOR AUTHORIZATION FOR ELECTIVE C-SECTIONS. Elective C-sections require preauthorization for approval, allowing medical necessity review, which includes review of gestational age.

- PREGNANCY NOTIFICATION/C-SECTION WEBINAR. We sent letters to our participating OB/GYNs inviting them to participate in this webinar, hosted by the Manager of our MomsFirst program and other clinical team members. The webinar included education on C-section management, including use of the new Medicaid Prior Authorization for Elective C-section form, the need to make a clear case for surgery in "Clinical Findings," and avoiding basing requests for elective C-sections on convenience or relief of symptoms in the final stages of pregnancy. Since implementation of this required authorization, we have identified providers who require additional and ongoing education on the importance of medical necessity.

- PARTNERING WITH THE FLORIDA PERINATAL QUALITY COLLABORATIVE (FPQC). Humana is excited to help promote FPQC's initiative "Promoting Primary Vaginal Deliveries" (PROVIDE). We are emailing the FPQC alerts to the managed care departments of our participating hospitals and are promoting the initiative through our other communications with the hospitals. (Please see Attachment MMA 2-3 for FPQC Promotion.)

- PARTNERING WITH MARCH OF DIMES. Humana works with and supports the March of Dimes in tackling the C-section rate in Florida, with the aim of achieving the same success that March of Dimes has achieved with EEDs in Florida. Our Florida Medicare/Medicaid Chief Medical Officer serves on the South Florida March of Dimes Board of Directors, and Humana has held multiple meetings with March of Dimes leadership recently to discuss and work toward our shared objectives. In addition, Humana participates in March of Dimes activities, such as the March for Babies community walks, and March of Dimes is a selected Humana charity.

As a result of our strategies, we are seeing a decline in our C-section rate in each region in which we currently operate our MMA program, as shown below in the Florida MMA C-Section Rate by Region (2015- May 2017):

Region 1
2015 35.5%
2016 32.3%
May year-to-date (YTD) 2017 31.1%

Region 6
2015 35.9%
2016 33.8%
May YTD 2017 33.7%

Region 9
2015 36.4%
2016 35.4%
May YTD 2017 34.0%

Region 10
2015 43.0%
2016 43.4%
May YTD 2017 41.7%

Region 11
2015 48.0%
2016 46.2%
May YTD 2017 42.8%

Totals
2015 40.5%
2016 39.1%
May YTD 2017 37.0%

==========

4. The adequacy of the respondent's description of specific evidence-based programs and interventions that will be used to decrease the number of unintended pregnancies and the associated indicators or measures that will be used to determine their effectiveness.

==========

DECREASING UNINTENDED PREGNANCIES

Throughout Florida, unintended pregnancies comprise almost sixty percent (60%) of all pregnancies. An article recently published by the Guttmacher Institute described the very significant role Medicaid plays in funding family planning, outlined the strong protections the program has historically included for the coverage of family planning services, and specified some of the barriers that continue to exist – notwithstanding these protections – to obtaining these services, particularly within a managed care delivery system [2]. These barriers include, for example, inappropriate coverage limits, inadequate networks, and patient concerns about confidentiality. Humana is committed to reducing barriers to access, and engages in innovative solutions in a number of areas to do so, as described in this response.

ENROLLEE-FOCUSED INITIATIVES

OUTREACH TO WOMEN WHO HAVE RECENTLY GIVEN BIRTH

Nationally, the proportion of pregnancies that are unwanted increases with each subsequent child: sixteen percent (16%) for the first child, twenty-five percent (25%) for the second child, and thirty-five percent (35%) for the third child in the overall population, with these figures likely far higher within the poverty population [3]. Humana proactively seeks to educate and support women who have recently given birth in achieving their desired spacing between their recent birth and any subsequent desired pregnancy, and in avoiding a future unwanted pregnancy. Mothers addressing the challenges of taking care of a new infant can be particularly receptive to accessing family planning support. For enrollees participating in MomsFirst, the OB case manager discusses family planning with the pregnant enrollee, pre-and postpartum, and develops an enrollee-specific care plan approach to support the mother's family planning objectives. Areas of focus include appropriate methods of contraception including long-acting reversible contraceptives (LARC), counseling, and services available for family planning to all women and their partners, as well as resources for pregnancy prevention programs. The case manager encourages additional family planning and counseling for the enrollee and partner, and ensures that they both understand the behavioral and clinical drivers essential to their family planning objectives.

We also seek to engage all of our enrollees who have given birth as quickly as possible after delivery. This includes notifications directly to the mother via phone and email and, in those facilities where we have embedded postpartum case managers, a face-to-face visit prior to discharge from the hospital. We also send a congratulatory postcard and attempt to call all of our enrollees who have recently given birth, including those who have opted out of MomsFirst. This type of outreach includes information on family planning services and counseling at the most critical time: directly after delivery.

Because immediate postpartum LARC offers several benefits, including effective protection from unintended pregnancy immediately after birth and added convenience for patients, we are exploring developing a process for informed consent for postpartum LARC, which will address the timing, content, and ethical considerations associated with obtaining informed consent. We plan to implement a postpartum LARC informed consent process in the near future.

EDUCATING ENROLLEES ABOUT THE BENEFIT OF SEEKING FAMILY PLANNING SERVICES

Educating enrollees about the benefit of seeking family planning services is a core responsibility of the enrollee's PCP and OB/GYN. The Humana Provider Manual, which is an extension to the provider contract, instructs providers as follows:

- Any Medicaid provider can provide family planning services to a Medicaid enrollee without receiving preauthorization for such services.

- Medicaid providers should make available and encourage all pregnant women and mothers with infants to receive postpartum visits for the purpose of voluntary family planning, which may include a discussion of all appropriate methods of contraception, counseling, and services for family planning.

- Providers furnishing such family planning services to enrollees must document the offering and provision of family planning services in the enrollee's medical records.

We check for documentation of family planning counseling in our PCP chart audits.

Humana's enrollee education and outreach activities, including enrollee education materials, education provided as part of the MomsFirst program, health fairs, community events and campaigns, also include specific education on the importance of family planning and on birth spacing. We work with local and community resources, aligning initiatives to prevent duplication of services and to maximize educational opportunities. We collaborate with community agencies and our OB/GYN providers to develop positive family-planning education, practices among our enrollees. We meet with our contracted OB/GYN partners at a minimum quarterly to discuss the potential benefits of LARC, and working with the groups to alleviate any barriers.

INFORMING ENROLLEES OF THEIR RIGHT TO OBTAIN FAMILY PLANNING SERVICES FROM OUT-OF-NETWORK PROVIDERS
Irrespective of our provider network's depth regarding family planning services, our enrollees may obtain care from any Florida family planning provider, including out-of-network providers. Humana informs our enrollees of this right, both through the new enrollee materials and via recurring enrollee communications, emphasizing that they may self-refer to a qualified family planning provider not in our network. Our communications clearly inform enrollees that we cover the full scope of family planning methods, services, counseling, and follow-up care, when needed, whether delivered by in-network or out-of-network providers. We will also consider publishing in our provider directory a listing of qualified family planning service providers not in our network, as well as those in our network, to help enrollees select their preferred provider and as another means of reinforcing the enrollee's understanding of their right to obtain family planning services from out-of-network providers.

As we do in all markets, we also collaborate with associations such as ACOG and the American Academy of Family Physicians (AAFP). These relationships will help ensure that family planning service providers are aware of our payment policies and practices.

PROVIDER-FOCUSED INITIATIVES
Humana's provider initiatives aimed at decreasing unintended pregnancies focus on general education, revising and educating providers on relevant reimbursement policies and procedures, simplifying processes for providers to obtain contraceptive devices, and collaborating with statewide initiatives. Examples of our activities in each of these areas include:

- General Education. Our Lead Medical Director, MomsFirst case managers, Quality Improvement Nurses (QINs), and Provider Relations representatives all play an important role in keeping our providers abreast of AHCA and Humana initiatives to reduce the number of unintended pregnancies. (Please see Attachment MMA 2-4, a LARC Letter to our OB/GYNs.)

- Education on Relevant Reimbursement Policies and Procedures. Historically, there have been a number of barriers that have hindered the goal of increasing the use of LARC. First, LARC insertion was bundled into the global delivery payment, so there was little incentive for immediate postpartum LARC insertion in the hospital. Similarly, there were reimbursement and claims issues that acted as barriers to LARC insertion and removal in the physician's office. Recently, the Florida Medicaid program unbundled immediate postpartum LARC placement from delivery reimbursement, allowing hospitals to recover the cost of the device and associated services for immediate postpartum LARC placement. Humana also reimburses physicians for

insertion and removal of LARCs, including intrauterine devices (IUDs) and contraceptive implants. The letter in Attachment MMA 2-4 informed providers of the new payment policies, and encouraged them to discuss the option of choosing a LARC immediately postpartum. Attachment MMA 2-5 presents an "IUD Reimbursement Tip Sheet" we sent to providers last year. The Tip Sheet informed them that insertion and removal of an IUD is reimbursable in addition to a family planning new or established visit, and it provided the procedure codes to use when billing.

- Obtaining Contraceptive Devices. We have made it easy for our providers to obtain IUDs from Humana's Specialty Pharmacy. Providers may have the IUDs delivered to their offices or may have the enrollee bring it with them during their next visit with the provider.

- Collaborating with Statewide Initiatives. As we have done with FPQC's "Promoting Primary Vaginal Deliveries" initiative, we have also promoted FPQC's LARC initiative, sending out FPQC LARC alerts to our participating hospitals. Humana is committed to continuing to collaborate with statewide initiatives to achieve our shared goal of reducing the number of unintended pregnancies.

TRACKING FAMILY PLANNING METRICS
To monitor our overall effectiveness in facilitating and promoting access to family planning services, Humana tracks service utilization on an ongoing basis and measures changes in family planning utilization over time. We have isolated pharmacy and durable medical equipment codes associated with LARC, and are monitoring utilization trends by month and by region. Between 2015 and 2016, we saw an increase in LARC utilization of approximately twelve percent (12%), with the average number of enrollees per month receiving a LARC insertion by their OB/GYN increasing from one hundred twenty-two (122) to one hundred thirty-eight (138). We also monitor whether there are upticks in service utilization following implementation of specific initiatives such as a community event, a Humana-sponsored health fair, or an educational mailing. Such monitoring helps us to determine which types of strategies are most effective and which we should continue, as well as those that require revision or discontinuation.

[3] Center for Disease Control, National Health Statistics Reports, #55, Intended and Unintended Births in the United States: 1982–2010, June 2012, William D. Mosher, Ph.D.; Jo Jones, Ph.D.; and Joyce C. Abma, Ph.D.

Evaluation Criteria:

1. The extent to which the respondent identified opportunities for improvement in achieving the benchmarks and subsequent steps the respondent will implement to overcome any barriers across and within different systems of care.

2. The extent to which the respondent describes specific care coordination protocols, including a description of the risk stratification algorithm used to identify high-risk pregnancies (including enrollees with co-occurring behavioral health conditions).

3. The extent to which the respondent describes strategies to improve data exchanges and communications between practitioners to improve care coordination efforts for pregnant enrollees that are determined to be high-risk.

4. The adequacy of the respondent's description of specific evidenced-based programs and interventions that will be used to decrease the number of unintended pregnancies and the associated indicators or measures that will be used to determine their effectiveness.

5. The extent to which the respondent describes financial and non-financial provider and enrollee incentives for evidence-based practices that will contribute to hitting the benchmarks.

6. The adequacy of the respondent's proposed performance benchmarks for reducing non-medically indicated cesarean sections and early elective deliveries.

7. The extent to which the respondent describes its experience implementing successful strategies that resulted in a reduction in non-medically indicated cesarean sections and early elective deliveries. In order to receive all points for this component, the respondent must include outcome data on specific performance metrics.

Score: This section is worth a maximum of 35 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Attachment MMA 2-1: MomsFirst OB Case Management Program Acuity Levels

Humana manages all enrollees based on their assigned acuity (complex, high, or low), which may change throughout the duration of their pregnancies. All OB Case Management cases start as HIGH acuity. Some of the qualifying conditions for complex or high case management include diabetes, high blood pressure, history of miscarriage, AIDS, epilepsy, co-occurring behavioral health conditions, substance abuse, and multiple pregnancies. Please see sample charts below.

Complex Acuity (Weekly Contact)	
Cardiac/Pulmonary	**Psych/Social**
• Preeclampsia • CHF • SVT (HR greater than 100) • Cardiac Surgery within 6 months pregnancy • Congenital Cardiac Anomaly (VSD, ASD)	• Substance Abuse (Current) • Suicidal Ideations • Anorexia • End of Life • Bedridden
Preterm Labor	**Medications**
• Complete Bed Rest	• Digoxin
Endocrine/Diet	**Anatomy/Urinary**
• Insulin Dependent Diabetic (Brittle/Uncontrolled- Grade determination) • Hyperthyroidism/Crisis • Severe Hyperemesis (IV Fluids, IV medications, PICC, TPN)	• Placenta Previa with complications • Placenta Percreta, Increta, Accreta with complications - PTL • Renal Failure
Immune Disorders/STI's	**Neuro**
• Cancer • AIDS (Noncompliant)	• Active Seizure activity within 6 months of pregnancy and during pregnancy
Fetal	**Blood Disorders/Liver**
• Intrauterine Fetal Surgery • Cardiac Arrhythmia	• End-Stage Liver Disease • DVT
Utilization	
• 2 unplanned admissions within 30 days • 3 pregnancy-related visits to ER/Triage in 30 days (Not routine Physician referral)	

Attachment MMA 2-1: MomsFirst OB Case Management Program Acuity Levels

High Acuity (Monthly Contact)	
Existing Health Conditions	**Other**
• Severe Asthma (uncontrolled) • Epilepsy • Hepatitis B/C • Sickle cell • Severe Anemia (symptomatic) • AIDS (compliant) • Anti-phospholipid syndrome • Clotting Disorders (ALL) • Mental Health Disorders (CM will evaluate stability and diagnosis)	• HX of Miscarriages X 3 or more prior to 16 weeks and currently less than 24 weeks gestation • Extreme BMI over 45 or greater Class III obesity/ BMI less than 18 based BMI • Pregnant with Multiples, Multiple large Fibroids (greater than 5cm) • Active Mental Health Diagnosis/Unstable/Medication • Cerclage, Incompetent Cervix • 2 or more Chronic diseases or co-morbidities • HTN • Current Fetal Demise >20 weeks • HX Preterm Spontaneous Labor/Delivery less than 35 weeks • Active STD/ Syphilis/Herpes Outbreak in Pregnancy • Hx of PTL or pregnancy related issues • Current Smoker in Pregnancy • Active Marijuana/Substance Use/Abuse • 2 or more pregnancy related ER visits after 24 weeks

Low Acuity	
• Uneventful pregnancy- No diseases/No co-morbidities • Pregnancy between ages 18- 42 with no complications • Social needs • Pregnancy over the age of 42 without complications • Stable Mental Health/ Counseling • Thyroid Disease • Anemia with Hgb>8 and on iron supplements • No Disease risk factors • Member Compliant with visits • Resolved UTI • Pregnancy before age 18	• HIV • Diabetes Diet Controlled • Previous Fetal Demise if due to Cord Accident only • One (1) ER visit for non-emergent diagnosis (CM to follow up for teaching) • Resolved Bleeding in 1st trimester • GBS positive • Migraines • Treated STD/BV resolved with current pregnancy • Controlled Asthma • Smoking Cessation with Pregnancy

Attachment MMA 2-2: Beacon Baby Blues and Postpartum Depression

We place emphasis on recognizing and addressing postpartum depression and related conditions that may interfere with the attainment of the best possible health outcomes for a mother and baby. Our OB case managers are knowledgeable about the signs of postpartum depression, and they connect our enrollees with needed behavioral health support when they identify enrollees at risk. Below is a sample of material we share with our new moms relative to postpartum depression.

beacon
health options

BABY BLUES AND POSTPARTUM DEPRESSION

What are the Baby Blues?

After the baby is born some women have mood swings. One minute they feel happy, and then they feel sad, or start to cry.

Some women have a hard time thinking, or trouble sleeping.

This could be the baby blues.

The baby blues usually go away within seven to ten days after having the baby.

What If I Feel Worse?

Some women have worse symptoms, or symptoms that last longer.

Some women begin feeling worse a few weeks after the baby is born, and may think about hurting their baby.

These may be signs of Postpartum Depression, which should not be ignored.

It can cause needless pain or death if you don't get help.

How Do I Get Help?

There are safe and effective treatments that may include taking medication, and talking to a therapist.

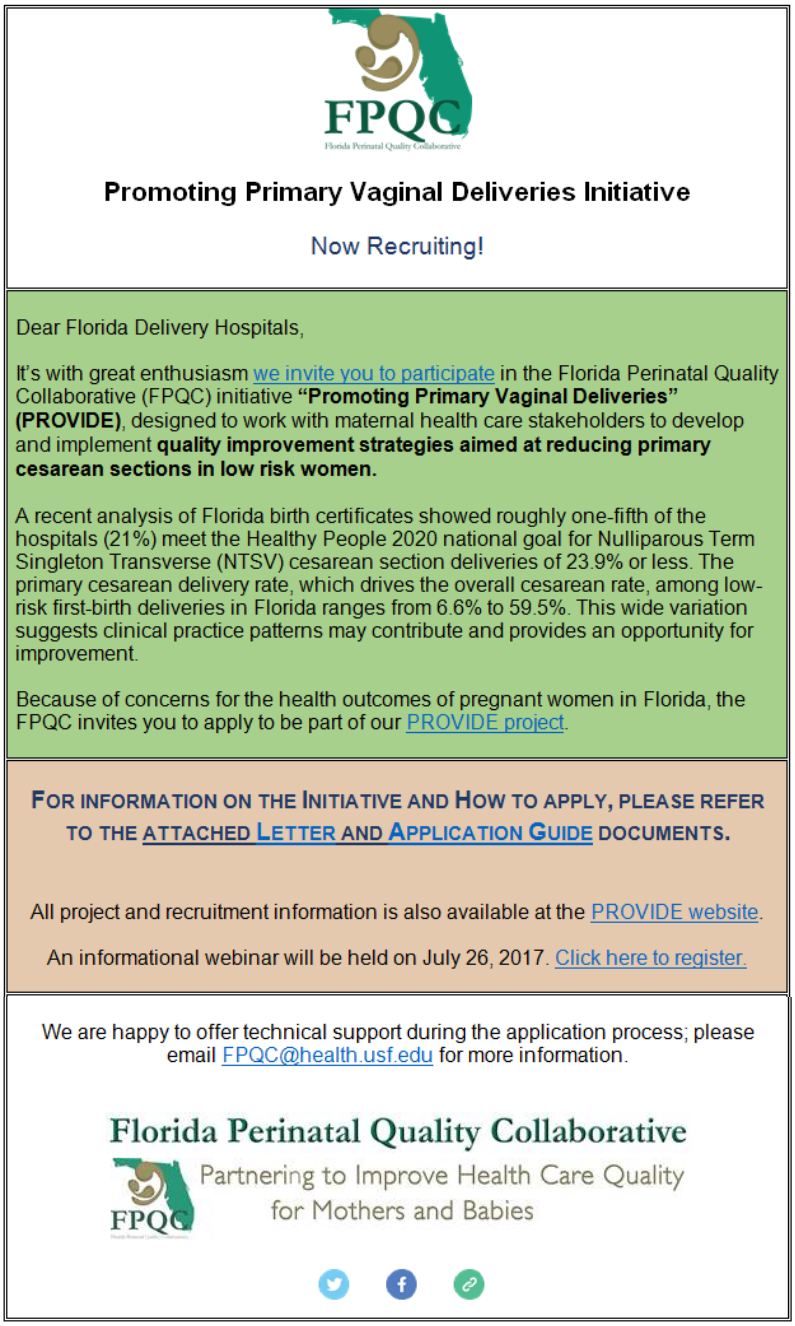
Don't ignore the symptoms. Talk to your doctor.

You owe it to yourself and your baby to get help.

If you don't have a doctor, please call Beacon at (800) 221-5487 to get an appointment.

Attachment MMA 2-3: Florida Perinatal Quality Collaborative Promotion

Humana helps promote Florida's Perinatal Quality Collaborative Promotion (FPQC) initiative "Promoting Primary Vaginal Deliveries" (PROVIDE). We email FPQC alerts, like the one below, to the managed care departments of our participating hospitals and promote the initiative through our other communications with the hospitals.



FPQC
Florida Perinatal Quality Collaborative

Promoting Primary Vaginal Deliveries Initiative

Now Recruiting!

Dear Florida Delivery Hospitals,

It's with great enthusiasm we invite you to participate in the Florida Perinatal Quality Collaborative (FPQC) initiative **"Promoting Primary Vaginal Deliveries" (PROVIDE)**, designed to work with maternal health care stakeholders to develop and implement **quality improvement strategies aimed at reducing primary cesarean sections in low risk women.**

A recent analysis of Florida birth certificates showed roughly one-fifth of the hospitals (21%) meet the Healthy People 2020 national goal for Nulliparous Term Singleton Transverse (NTSV) cesarean section deliveries of 23.9% or less. The primary cesarean delivery rate, which drives the overall cesarean rate, among low-risk first-birth deliveries in Florida ranges from 6.6% to 59.5%. This wide variation suggests clinical practice patterns may contribute and provides an opportunity for improvement.

Because of concerns for the health outcomes of pregnant women in Florida, the FPQC invites you to apply to be part of our PROVIDE project.

FOR INFORMATION ON THE INITIATIVE AND HOW TO APPLY, PLEASE REFER TO THE ATTACHED LETTER AND APPLICATION GUIDE DOCUMENTS.

All project and recruitment information is also available at the PROVIDE website.

An informational webinar will be held on July 26, 2017. Click here to register.

We are happy to offer technical support during the application process; please email FPQC@health.usf.edu for more information.

Florida Perinatal Quality Collaborative

FPQC

Partnering to Improve Health Care Quality for Mothers and Babies

Attachment MMA 2-4: LARC Letter to our OB/GYNs

Our Medical Director, MomsFirst Case Managers, Quality Improvement Nurses (QINs), and Provider Relations representatives all play an important role in keeping our providers abreast of Agency for Healthcare Administration (AHCA) and Humana initiatives to reduce the number of unintended pregnancies. Below is an example of our educational outreach.

Humana.

August 10, 2017

Dear Provider,

In Florida, as many as 59% of pregnancies are either unwanted or mistimed. Long Acting Reversible Contraceptives (LARCs), including Intrauterine devices (IUDs) and contraceptive implants are highly effective and can play a significant role in reducing unplanned pregnancies, and recent evidence has shown that providing LARC methods during the immediate postpartum period is safe and is supported by clinical evidence and guidelines (1).

Humana members can now receive LARC placement immediately following delivery in the hospital. In 2016 the Florida Medicaid program unbundled immediate postpartum LARC placement from delivery reimbursement, allowing hospitals to recover the cost of the device and associated services for immediate postpartum LARC placement. Humana reimburses physicians for insertion and removal of LARCs, including IUDs and contraceptive implants.

Humana understands that many women find it difficult to return to their physician's office for their postpartum visits and insertion of an IUD or contraceptive. Therefore, we are asking you to let your patients know that they have the option of choosing a LARC immediately postpartum. Additionally, please speak with the hospitals where you have privileges about LARC to ensure they have the devices available for your patients.

If you have additional questions please call your Humana Provider Contracting Representative.

Thank you for your continued care of our patients.

Sincerely,

Ian Nathanson, M.D.
Medical Director

1 Florida Perinatal Quality Collaborative (FPQC)

Attachment MMA 2-5: IUD Reimbursement Tip Sheet

Humana reimburses physicians for insertion and removal of long-acting reversible contraceptives (LARCs), including Intrauterine Devices (IUDs) and contraceptive implants. Below is an "IUD Reimbursement Tip Sheet" sent to providers last year informing them that insertion and removal of an IUD is reimbursable and providing the procedure codes to use when billing.

Humana.

Intrauterine Device (IUD) Reimbursement
Tip Sheet

June 2, 2016

Dear Provider,

Insertion and removal of an IUD is reimbursable in addition to a family planning new or established visit or an evaluation and management visit if all components of an evaluation and management visit are met and documented in addition to the IUD service.

Reimbursement for the IUD device is covered using the IUD specific HCPCS code. Additionally, you will need to submit a valid NDC number on the claim. The NDC number can be found on the product that is being administered to the recipient. Medicaid utilizes the 11 digit format, and this may require insertion of leading zeros if they do not appear on the package. Procedure code 99070 is not an appropriate code and cannot be reimbursed for an IUD.

You may also choose to order the IUD from Humana's Specialty Pharmacy and have the member bring it with them during their next visit with you.

There are many ways to get started with Humana Specialty Pharmacy:

Online:
https://www.humanapharmacy.com/Specialty

Phone:
Give us a call at 1-800-486-2668 (TTY: 711)
Monday through Friday from 8 a.m. to 8 p.m.
Saturday from 8 a.m. to 6 p.m. Eastern time

ePrescribe your prescription to us.

Fax:
Complete the prescription form and fax to 1-877-405-7940.

If you have additional questions please call your Humana Provider Contracting Representative.

Thank you

MMA SRC# 3 – Patient Centered Medical Homes (Regional):

The respondent shall describe its experience with patient centered medical homes (PCMHs) including the respondent's efforts toward the solicitation of PCMH-recognized practices to improve access, facilitate care integration and improvement in quality measures. Specifically, the respondent shall describe programs and initiatives utilizing PCMHs to promote the Agency's goals.

Response:

Humana has long been involved and invested in the evolution of the patient-centered medical home (PCMH) model. In 2008, Humana began one of the earliest medical home pilots in the country, and continues to support provider efforts to secure PCMH recognition today. We have continued to expand our program and enhance and refine the ways we support our providers based on our lessons learned. In our Medicaid, Medicare, and Commercial markets in Florida, Humana contracts with one hundred ninety-four (194) PCMHs, serving more than one hundred thousand (100,000) Humana enrollees.

The PCMH model is built on a philosophy of delivering comprehensive, whole-person, and patient-centered care through primary care providers. PCMHs deliver accessible care with an emphasis on safety and quality and through a team-based approach that facilitates integrated and coordinated care for enrollees across the care spectrum. The model is designed to meet enrollee needs and deliver care in the appropriate setting, at the right time, and in a way that meets the enrollee's individualized goals and needs (see Attachment MMA 3-1).

PCMHs offer extended office hours, same day appointments, a twenty-four seven (24/7) clinician telephonic support line, effective care management programs and additional supports to enhance enrollee access to care. PCMHs in Humana's network use our robust data analytic tools, as well as their electronic medical records (EMRs) to identify enrollees with care gaps and needed services to manage the care of our enrollees. PCMHs provide our enrollees with education, including family planning services and information, refer our enrollees to the appropriate specialists, including behavioral health, OB/GYNs and early intervention providers, and manage enrollees' postpartum care. These features of PCMHs are designed to achieve quality outcomes, including prenatal and birth outcomes, by closing care gaps to reduce the rate of potentially preventable events.

We recognize and appreciate the role PCMHs play in improving access to care, facilitating care integration, and improving enrollee health outcomes. Moreover, Humana views PCMHs as well-positioned for Value Based Purchasing Arrangements. By transforming their practices to support the necessary infrastructure and capabilities needed to achieve PCMH accreditation, PCMHs are in a position to succeed in Humana's Shared Savings and Full Value VBP arrangements, creating financially aligned partnerships that make large strides towards our common goal of improving health and well-being outcomes for enrollees.

In our existing regions (1, 6, 9, 10, and 11), approximately seventy percent (70%) of PCMHs are in value-based purchasing arrangement.

==========

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1. The extent to which the respondent's description demonstrates experience that includes contracts with patient centered medical homes in the network serving populations similar to the target population of this solicitation and demonstrates:

(a) Enhanced access;
(b) Coordinated and/or integrated care; and
(c) Achievement of improved quality outcomes.

2. The extent to which the respondent's description of recognizing PCMHs addresses the reduction of potentially preventable events for enrollees assigned to a PCMH for their PCP.

3. The extent to which the respondent's description of recognizing PCMHs addresses methodologies and processes to improve prenatal care and birth outcomes for enrollees assigned to a PCMH as their PCP.

==========

Humana's MMA network has five (5) PCMH groups with one hundred forty-seven (147) providers across twenty-one (21) locations in Region 1. See Attachment MMA 3-2 for map of PCMHs. Humana requires PCMHs to obtain certification from National Committee on Quality Assurance (NCQA), The Joint Commission, or Accreditation Association for Ambulatory Health Care (AAAHC) to be designated as a PCMH. These accreditations have rigorous requirements and guidelines to ensure that PCMHs have the resources and support in place to achieve overall improved health outcomes.

With a significant percent of Medicaid emergency department visits related to acute visits that could have been treated in a primary care setting, we recognize the importance of ensuring PCMHs are proactive in working with enrollees to receive care in the right setting. The primary goals of the PCMH model are to enhance access to care and to deliver integrated care in a manner which facilitates improved health outcomes and reduces potentially preventable events. Below we describe how PCMHs incorporate these goals in transforming their practices to deliver patient-centered care and deliver:
- Enhanced access to care
- Increased care integration
- Improved quality outcomes

ENHANCED ACCESS TO CARE

The PCMH model is structured to provide a variety of access points to PCPs, including a twenty-four (24) hours a day, seven (7) days a week clinician support line, extended office hours, telemedicine series and enhanced transportation services.

- All one hundred ninety-four (194) PCMHs in Humana's network have a twenty-four seven (24/7) clinician support line, providing our enrollees with timely clinical advice and guidance.

- One hundred seventeen (117) PCMHs offer expanded evening and weekend hours, which allows our enrollees to access care outside of work and school hours, increasing primary care

utilization and reducing potentially harmful, costly delays in seeking care. Humana has developed a strategy to further incentivize PCPs to offer increased after-hours coverage through enhanced reimbursement. PCMHs also keep appointment slots open for same-day availability for urgent visits.

- Some PCMHs offer telemedicine services. For example, Pediatric Associates, which is a PCMH serving fifty-six thousand (56,0000) Humana enrollees statewide under a value-based arrangement, has recently initiated a telemedicine program to increase access to care in the appropriate care setting. Humana and Pediatric Associates have agreed to partner together to expand their program for all Humana pediatric and adult enrollees statewide.

- Eighty-nine (89) PCMHs offer enrollees enhanced transportation services, in addition to the transportation offered through Humana's vendor, to mitigate barriers encountered in accessing timely care.

INCREASED CARE INTEGRATION
In order for a PCMH to achieve delivery of comprehensive care, a PCMH must invest in the resources and capabilities to support increased care integration, including:

- PCMHs have completed infrastructure changes, including the use of care coordinators, case management, and social workers, inside the practice to coordinate enrollee care.

- All PCMHs are required to implement an EMR system to seamlessly integrate enrollee care information. PCMHs leverage their EMR systems to identify enrollee clinical gaps, and send alerts to patients with these gaps. Using EMRs, providers are able to engage with enrollees to provide the care they need prior to a major health occurrence.

-- We require the EMR to be connected to the State's Health Information Exchange (HIE) to incorporate real-time and comprehensive health information into the data they are delivering.

-- Our enrollees are able to contact PCMH providers for clinical advice and guidance, using secure messaging available through the provider's EMR. Our providers are able to access and respond to these messages remotely, further encouraging our enrollees to seek care in the appropriate setting instead of unnecessarily accessing the emergency department or urgent care clinics.

-- Providers are able to make referrals to specialists and track clinical information, such as progress notes, clinical summaries, and lab and diagnostic results.

-- Many EMRs have patient portals which allow patients to communicate with their provider at any time. For example, a caregiver or parent may send a secure message through the portal conveying that their child has a fever as a result of a recent vaccination. The physician will be able to access the patient's health record remotely and provide advice accordingly.

- The PCMH model recognizes behavioral health as a primary factor impacting an enrollee's overall health outcomes and reducing potentially preventable events. Between August 2014 and July 2015, twenty percent (20%) of potentially preventable events in the Florida Medicaid program were related to a continuation of a mental health or substance abuse condition

following an initial hospitalization. During this same timeframe, forty-eight point eight percent (48.8%) of initial admissions were related to three behavioral health conditions: schizophrenia, bipolar depression, and major depression. PCMHs integrate and coordinate the delivery of behavioral health and primary care by identifying and screening patients for behavioral health conditions, as well as helping enrollees maintain and adhere to their behavioral medications and treatment.

-- PCMHs use standardized tools (i.e., PHQ-9, PHQ-2 and Edinburgh Postnatal Depression Scale) to identify patients with behavioral health conditions. This information is gathered during a comprehensive health assessment and is updated at least yearly. If a patient has a positive depression screening they are referred to behavioral health providers where a more comprehensive assessment is conducted. The PCMH's goal is to address and manage the condition at the practice level to avoid a psychiatric admission.

-- If an enrollee is hospitalized for a behavioral health condition, a case manager from our behavioral health vendor will reach out to the PCMH to coordinate care with information such as the enrollee's diagnosis, plan of care, and medication history.

-- Ninety-two (92) of the PCMHs in our network have co-located behavioral health case managers.

- PCMHs integrate behavioral health, dental, specialty and social services into the care delivered to enrollees. As the medical team leader, the PCMH is able to work with specialists, such as behavioral health providers and OB/GYNs, to ensure enrollees attend appointments and services are being rendered. Additionally, through this model, PCMHs are able to identify and mitigate barriers that may exist in accessing specialist services.

-- All PCMHs in our network have aligned with a dental clinic within a ten (10) mile radius of the practice to facilitate coordination of care and improve access to dental homes.

-- Our PCMHs have also established a robust referral department to conduct outreach and coordinate care with network specialists. PCMHs have enhanced relationships, communication, and experience working with their specialist partners.

- Our PCMHs offer education, prevention screenings, vaccinations, and family planning to improve compliance with preventive care.

-- We support PCMH providers in initiatives aimed at decreasing unintended pregnancies with a strong focus on prevention education for our enrollees. Our PCP contracts require PCMH providers to deliver voluntary family planning information and services, and HIV testing and counseling for enrollees of childbearing age. From January through August 2017, for example, approximately seventy (70) of our pediatric PCMH centers prescribed contraceptives.

-- Additionally, we require PCMHs to support care transitions and coordinate care through pregnancy and post-natal care, ensuring seamless care delivery for our enrollees.

-- We have made it easy for our PCMHs to obtain IUDs from Humana's Specialty Pharmacy. Providers may have the IUDs delivered to their office or may have the enrollee bring it with them during their next visit with the provider.

- Many PCMHs have affiliated OB/GYNs and midwives to better serve our enrollees and ensure continuity of care following an enrollee's pregnancy. These providers may be integrated into the same practice or located in the same building. For example, many of our federally-qualified health centers and rural health centers have attained PCMH recognition. Nearly all of these facilities have an affiliated OB/GYN, and approximately seventy (70) of these facilities have midwives available to our enrollees. The PCMH PCP can internally refer an enrollee to the OB/GYN, promoting a seamless transition of care and improving the quality of care for the enrollee through an early referral process. The PCMH is then easily able to follow up with the enrollee and OB/GYN to ensure the enrollee is attending prenatal appointments and receiving comprehensive prenatal care.

-- Following the delivery, our PCMHs continue to focus on postpartum care for assigned enrollees, as well as on pediatric services for the newborn. This includes screening for postpartum depression and any postpartum complications.

- Pediatric PCMHs play an important role in improving birth outcomes through Child Health Check-Ups (CHCUP). As the CHCUP periodicity schedule calls for ten (10) health check-ups within the first thirty (30) months of an infant's life, the Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) benefit gives our pediatric PCMHs frequent checkpoints to both identify and facilitate treatment of any health problems that may have resulted from adverse birth outcomes. Additionally, these visits provide an opportunity for the pediatric PCMH to observe family interactions. If the provider notes any potential concerns in these interactions or if the family expresses any issues at home or in the community, the provider can then facilitate a direct referral to the in-house social workers for follow-up.

IMPROVED QUALITY OUTCOMES
Enhanced access to care and care integration are fundamental components driving PCMHs' ability to deliver quality outcomes and assist them in becoming successful population health managers. Below is a case study that represents improved quality outcomes that a PCMH can achieve by employing the fundamental PCMH components.

PCMH QUALITY ACHIEVEMENT CASE STUDY: POTENTIALLY PREVENTABLE EVENTS

Through the comprehensive approach PCMHs take for care coordination and integration, we have seen positive results in increasing preventive care and reducing potentially preventable events after we assist our providers with achieving PCMH certification. For example, we successfully worked with Doctor's Medical Center in Regions 9, 10, and 11 to assist them in achieving NCQA PCMH certification. This PCMH has ten thousand five hundred (10,500) Humana enrollees through a value-based agreement. Following this collaboration, we observed these results:

- Annual dental visit measure increased by 5%
- Cervical cancer screening measure increased by 12%

- Childhood immunizations combo 3 measure increased by 12%
- Emergency department weekday visits reduced by 8%

Additionally, we observed the below results for Pediatric Associates, a PCMH with over fifty-six thousand (56,000) Humana enrollees:

- 4% improvement in annual dental visit rate
- 39% improvement in child well visits in the first fifteen (15) months
- 7% emergency department visit reduction related to pharyngitis
- 10% emergency department visit reduction related to fevers

HUMANA'S PCMH PROVIDER SUPPORT

Humana has supported and will continue to support Florida providers in attaining PCMH recognition. Humana assists providers in achieving PCMH certification by providing appropriate education, tools, and individualized support to assist in provider transformation. Humana has a PCMH provider outreach program that helps our network PCPs identify gaps preventing their practices from achieving PCMH recognition. Please see Attachment MMA 3-3 for letters of support from PCMHs. Below are the descriptions of the two components of this program, the PCMH Provider Liaison and Humana communication tools.

PCMH Provider Liaison

Humana recognizes the PCMH Certification Process requires significant operational and philosophical changes. There is often resistance due to changes to the culture of the practice and the amount of work required to achieve and maintain PCMH certification. To assist with this transformation, we have a dedicated PCMH liaison who works with providers during their PCMH application process. By assisting with the drafting of policies and procedures, the compilation of data, and the assembling of the required documentation, we provide a valuable service to mitigate the burden these practices often encounter in performing these tasks on their own. Additionally, our provider liaison may support the provider during calls with EMR vendors and ensure PCMHs are connected to the HIE.

Communication Tools

Additional support is provided via communication tools such as webinars, educational workshops, and other initiatives to deliver technical assistance on PCMH topics for the practices in the program. One specific example of a communication tool is our Health Literacy program which is an important component of PCMH certification. This is an ongoing initiative to educate providers on how to integrate health literacy protocols within their practice. Humana conducted a series of webinars for both PCMH-certified providers and those who were in the process of becoming certified.

Beyond PCMH recognition, Humana empowers and supports PCMHs in areas such as care coordination support, front line assistance through Provider Relations Representatives, pharmacy services, technology support, data support, and Humana leadership support through Joint Operating Committees. We use our provider engagement model, along with our data analytics, to help support our PCMH providers in identifying and reaching out to enrollees. We utilize a variety of quantitative and qualitative measures to help providers identify potential high-utilizer and high-risk enrollees, which our Provider Relations Representatives review with our PCMHs monthly. Our Quality Improvement Nurses also meet with providers monthly to review

utilization data, including inpatient and outpatient hospitalizations, emergency room visits, pharmacy utilization, and HEDIS-related information. Our data sources allow us to create a full picture of enrollee utilization and potential emerging risk-factors. This data allows PCMHs to improve health outcomes and reduce potentially preventable events. These sources include, but are not limited to:

- Predictive modeling data
- Utilization and cost data
- HRA and survey tools
- Clinical assessments
- Multidisciplinary Team (MDT) members
- Specialist physicians
- Enrollee self-identification
- Caregiver identification
- Program referrals (Physician, Care Coordinators, Utilization Managers, Behavioral Health, Pharmacy or Medication Therapy Management, etc.)

We are also creating a mental health provider score card conveying mental health-related admissions, readmissions, and length of time from discharge to follow-up care visits for providers to review and use to identify opportunities for improvement.

PCMH CASE STUDIES

Below are illustrative examples of Humana's partnership with PCMHs serving the Florida Medicaid population.

PCMH CASE STUDY 1
Pediatric Associates is Florida's largest privately-owned primary care pediatric practice, with more than two hundred (200) providers and thirty-two (32) locations in Regions 4, 6, 9, 10 and 11. Pediatric Associates achieved NCQA PCMH recognition in 2015 and has approximately fifty-six thousand (56,000) assigned Humana Medicaid enrollees. They are open three hundred sixty-five (365) days a year with weekend hours, holiday hours, and evening hours available until 11:00 p.m. Additionally, they have recently launched telemedicine services for their enrollees and will insource their twenty-four seven (24/7) clinician line with registered nurses available for triage and clinical guidance.

Through their enhanced access and integrated care model, Pediatric Associates has become one of our top performing quality providers in Florida. They are ranked in the ninety-fourth (94th) percentile among similar Humana pediatric provider groups in Florida, and are ranked first out of twenty (20) Humana groups with a similar Medicaid pediatric population in Florida.

Humana works very closely with Pediatric Associates to ensure enrollees have improved access to care. Our leadership holds Joint Operating Committee meetings quarterly to discuss Medicaid initiatives and best practices that Humana and Pediatric Associates can implement together. For example, to ensure enrollees have immediate access to care for non-emergency services, Humana has assisted Pediatric Associates in determining the best location to open a pediatric urgent care center in Broward County to serve Humana Medicaid enrollees and all pediatric

patients in the community. We also partner with Pediatric Associates to contact enrollees who have not visited a PCP through their case management outreach program by providing them with the contact information for children in their service area. Additionally, Humana is partnering with Pediatric Associates on developing a strategy to expand their telemedicine program so it can be offered to all pediatric and adult enrollees across the state.

PCMH CASE STUDY 2
In 2016, through enrollee feedback, Humana recognized the need to have a more streamlined approach for connecting with enrollees after discharge from a hospital inpatient admission. We began polling our primary care providers to determine which offices were conducting outreach to their members post- discharge and what types of services were offered. Doctors Medical Center (DMC), a PCMH offering transportation, social work, and case management services, was identified as a partner for our collaborative, streamlined initiative. DMC was conducting outreach to their enrollees post-discharge to set up timely follow-up PCP appointments, arranging transportation when needed, making referrals to specialists, ensuring home health services had been scheduled and durable medical equipment had been delivered, and offering short-term case management.

We worked with DMC to develop a process that would align with the efforts of both organizations, ending duplicative outreach by various departments, a frustration identified by our enrollees. Through this process, we jointly decided DMC would conduct outreach to their enrollees following inpatient or observation utilization, rather than Humana, and would refer to Humana if there was an additional need, such as for disease management.

The process was implemented in 2016 and has worked well for our enrollees, our providers, and Humana. DMC reported they rarely receive negative feedback from enrollees regarding follow-up calls from multiple sources after discharge since implementing this initiative. Additionally, DMC makes referrals to Humana case management and other services when needed. Through this collaboration, we saw a decrease in readmissions. In 2015 there were three hundred six (306) readmissions, while in 2016 there were two hundred seventy-six (276) readmissions.

PCMH CASE STUDY 3
Tampa Family Health Centers (TFHC) is the largest federally qualified health center in Region 6, with sixty-nine (69) providers across sixteen (16) locations that provide enrollee access to adult and pediatric primary care, as well as obstetrics and gynecology, dental, pharmacy, and social services. TFHC achieved PCMH recognition and has over four thousand three hundred (4,300) Humana Medicaid enrollees. Their evening, weekend, and holiday office hours ensure our enrollees have access to a wide range of services, at their convenience. They have a dedicated centralized operational team that manages all service operations for their providers across all locations, including monthly changes to membership panels, referrals, clinical and pharmacy prior authorization requests, and claims and encounter submissions. Humana's provider relations representative works directly with this centralized team to ensure any operational challenges are resolved and all team members are trained on Medicaid requirements and resources available to support their operation. Humana is partnering with TFHC to continue improving quality scores and outcomes by placing a case manager in some of their key locations to augment the care coordination they are currently providing.

SUMMARY

Because of the many benefits the PCMH model offers to our enrollees, including integrated care, enhanced access, and improved quality outcomes, Humana sees significant value for our enrollees to have the opportunity to establish relationships with PCMH providers. To encourage this relationship, Humana publishes providers with PCMH designation in our provider directories for enrollee choice. To help providers obtain PCMH certification, we offer provider support teams and value-based purchasing arrangements that align with PCMH certification. Through our commitment to PCMH provisions, we can reduce preventable events and improve birth outcomes.

Evaluation Criteria:

1. The extent to which the respondent's description demonstrates experience that includes contracts with patient centered medical homes in the network serving populations similar to the target population of this solicitation and demonstrates:

(a) Enhanced access;
(b) Coordinated and/or integrated care; and
(c) Achievement of improved quality outcomes.

2. The extent to which the respondent's description of recognizing PCMHs addresses the reduction of potentially preventable events for enrollees assigned to a PCMH for their PCP.

3. The extent to which the respondent's description of recognizing PCMHs addresses methodologies and processes to improve prenatal care and birth outcomes for enrollees assigned to a PCMH as their PCP.

Score: This section is worth a maximum of 25 raw points with each of the above components being worth a maximum of 5 points each.

To Whom It May Concern:

It is with gratitude and deep appreciation that I send this letter for the support and education Humana and Latoya Powell provided in order for us to achieve PCMH Level II Recognition. The tools and systems used and implemented are invaluable in ensuring the delivery of quality medical care and follow up to our patients.

It enables us to reach goals set by our physicians and patients to optimize the delivery of timely appropriate care. Our patients, as a result, have become participants in ensuring their individual goals are met therefore, enriching their medical experiences and enhancing the quality of their lives.

In addition, we are now qualified to receive all benefits offered by governmental agencies that recognize the need and value these systems and education this status brings. Since the focus of health care is now cost effective quality medical care we are now prepared to meet all standards set by all agencies, insurers and patients.

We are proud to have had the opportunity to work in concert with Humana and Latoya toward achieving this valued goal.

Sincerely,

William V. Jensen, D.O.

May 10, 2017

To Whom It May Concern:

Dear Sir/ Madam,

Please accept this correspondence as our formal written letter of support and reference on behalf of Latoya Powell, Medical Home Consultant/ SFL Senior Products with Humana.

Back in 2016 Lake Worth Pediatrics has started the process of transformation into a Patient Center Medical Home, a care delivery model where patients' treatment is coordinated through their primary care physician. It has been a journey performed with great care and completeness. Although the practice has been prepared and worked as a team, it became apparent that professional advice and assistance could be used.

Humana was responsive to our needs and recommended the services of Latoya Powell, Medical Home Consultant. As a professional, she has proved to be an excellent guide. Her expertise and knowledge has helped us to accomplish the completion in an efficient manner. She was very pleasant and always available. We would certainly not hesitate to use her advices and services again should the need arise.

Please call us should you need additional information concerning the services provided by Latoya Powell.

Sincerely yours,

Michelle Padurean-office manager

MMA SRC# 4 – Telemedicine (Regional):

The respondent shall describe its overall approach to utilizing telemedicine services to promote the Agency's goals, in particular as it relates to enhanced access to the following providers within the plan's network:

a. Primary Care;
b. Licensed mental health clinicians;
c. Psychiatrists;
d. Cardiologists;
e. Pulmonologists;
f. Endocrinologists; and
g. Internists.

The respondent shall describe any limitations placed on telemedicine services within its network and the percentage of providers with the network that are authorized to provide telemedicine services for the specialty types referenced above and those actually providing telemedicine.

Response:

Humana understands the value of and endorses the use of telehealth, including telemedicine technologies, as a component of effective and accessible care delivery. As the telehealth field continues to make advances, we believe telehealth concepts will continue to alter the way healthcare is delivered. As such, we're eager to play a role in this evolution. For instance, Humana is testing telemonitoring and its effectiveness in managing enrollees' complex conditions for our Medicare and Commercial lines of business across the nation. Specific to our Florida Medicaid business, Humana is actively educating providers on telemedicine requirements and reimbursement, as well as recruiting providers offering telemedicine services. We are currently engaged with several providers to support their telemedicine programs with the goal of extending access to care, closing care gaps, and encouraging care delivery in the appropriate setting. By taking a proactive and broad approach to telemedicine and related initiatives, we expect to reduce preventable events, increase the opportunity for detection and control of chronic diseases, and improve overall health outcomes.

Humana recognizes the many opportunities for effective, streamlined, and accessible health care that technology-enabled delivery models provide. We incorporate telemedicine throughout our company. In fact, onsite medical services for our employees at our headquarters in Louisville, Kentucky are available exclusively through telemedicine. Humana's employees and their families can easily schedule eVisits at our Health and Well-Being Center to receive preventive services, sick visits, urgent care, lab work, personal health coaching, and access to our well-being library. Additionally, Humana employees are able to access telemedicine services provided by Doctor on Demand. Humana's mission is to make care accessible, so we start by providing our employees with sophisticated health services where they work.

In response to this SRC, we have combined our response to evaluation criteria 1 and 3, which is provided below.

==========

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1. The extent to which the respondent describes an approach on the use of telemedicine services within its provider network that supports achievement of the Agency's goals.

3. The extent to which the respondent has already made significant achievements in the deployment of telemedicine within its network as evidenced by:

a. The percentage of providers authorized to provide telemedicine services for the provider types referenced

b. The percentage and type of authorized providers that provided telemedicine services during the 2016 calendar year.

==========

Humana understands the importance of telehealth and telemedicine services and how these services can increase access to care. According to the AHCA Telehealth report in December 2016, fifty-five percent (55%) of practitioners in nineteen percent (19%) of facilities in Florida indicated that they had been using telehealth for less than one (1) year, demonstrating that telehealth services are continuing to grow throughout the state. Our goal is to continue to increase telemedicine services through our network across Florida through continued development of our existing strong provider partnership models. With this work, we aim to increase access to primary care providers, mental health providers, and specialists such as cardiologists, pulmonologists, endocrinologists and internists for enrollees across all our lines of business. In accordance with Rules 59G-1.057 and 59G-4.001, F.A.C., the Agency allows for enrolled Medicaid providers to offer health services to enrollees through telemedicine technology. Telemedicine will allow us to enhance access to care (particularly in rural counties) and to ensure enrollees are accessing care in the right setting, leading to a decrease in potentially preventable events and improved health outcomes. We will continue to evaluate the effectiveness of these programs in enhancing access to care and identifying opportunities to expand telemedicine.

Region 1 has a unique set of challenges, including high levels of MMA membership, provider availability shortages in multiple specialties, and sparsely populated areas including one (1) designated rural county. Additionally, according to the quarterly Statewide Managed Medicaid Care Report in Winter 2016, Region 1 has the proportionately largest percentage of unhealthy Medicaid enrollees in the state and the lowest number of available providers. Given these challenges, Humana has partnered with Health First Network (HFN), a regionally dominant multi-disciplinary group providing access to approximately thirty thousand (30,000) Medicaid enrollees, who will target access to care issues for approximately five thousand (5,000) vulnerable Humana enrollees.

Humana authorizes one hundred percent (100%) of contracted practitioners licensed within their scope of practice to perform telemedicine services. In 2016, approximately seven percent (7%) of authorized Medicaid network providers provided telemedicine services statewide. Additionally through our partnerships with established telemedicine programs, approximately sixty-six percent (66%) of our enrollees have enhanced access to care to their PCPs through telemedicine services in Region 1.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

In an effort to reduce the occurrence of potentially preventable events and to encourage telemedicine utilization in Florida, we are using a multi-pronged approach to support and partner with our providers including Health First Network, Pediatric Associates, and our behavioral health partners. This approach also includes providing telemedicine directly to our enrollees through Doctor-on-Demand. We describe the components of our approach below.

HEALTH FIRST NETWORK (HFN): Health First Network, Inc. is an integrated and comprehensive network of more than seven hundred (700) physicians dedicated to improving the health care experience and quality of life for people in Northwest Florida. HFN primary care physicians and specialists provide care through a value-based arrangement to approximately thirty thousand (30,000) Humana enrollees in Escambia, Santa Rosa, Okaloosa, and Walton counties. Humana and HFN will collaborate in a regional demonstration to close care gaps and reduce potentially preventable events for approximately five thousand (5,000) vulnerable Humana enrollees through the effective use of telemedicine in three (3) specific care areas in which potentially preventable events frequently happen:
- Pediatrics
- Diabetes Mellitus and Cardiovascular preventive services
- Mental Health

Telemedicine can be particularly useful in targeting specific care areas where diagnosis and treatment plans are driven by lab results, such as endocrinology and cardiology. HFN will offer telemedicine services at a remote site utilizing a physician extender for patient positioning, interpretation, and technology operation of high-definition dermatology-grade cameras. The telemedicine interventions will be provided through a team approach with providers, which will include representation from:
- Pediatrics
- Cardiovascular preventive medicine
- Psychiatry, Psychology and other mental health providers
- Internists, Family Practitioners
- Nurse Practitioners and Physicians' Assistants
- Nurses and other ancillary providers (such as social workers in assisting patients in acquiring prescribed medications)

Expected outcomes of the pilot include:

BETTER ACCESS TO CARE – The pilot will help close gaps in annual wellness visits for infants and adolescents. By utilizing facilities more accessible to Medicaid enrollees, pediatricians can link to patients without the required travel time to remote sites.

IMPROVED MEDICATION ADHERENCE IN MENTAL HEALTH PATIENTS – With telemedicine access, providers are able to answer questions and explain directions and instructions regarding medications received from their mental health provide to help improve medication adherence.

DIABETES AND CARDIOVASCULAR SCREENING AND MANAGEMENT – Patients with existing diseases or who are at high risk for chronic disease should be seen at least quarterly. However, these frequent visits can become a barrier to care for enrollees, particularly those living in rural area. With telemedicine, HFN will be able to monitor patients with these conditions

and assist in closing care gaps. Additionally, through this pilot, specialists such as nutrition counselors, endocrinologists, and wound care specialists will be available via the telehealth portal.

Humana will explore replicating the HFN telemedicine pilot in additional geographies after assessing the demonstration's effectiveness in closing care gaps and enrollees receiving care in the appropriate setting.

PEDIATRIC ASSOCIATES: Pediatric Associates is Florida's largest privately owned primary care pediatric practice, with more than two hundred (200) providers at thirty-two (32) locations. Humana partners closely with Pediatric Associates, which has approximately fifty-six thousand (56,000) assigned enrollees at locations throughout Regions 6, 9, 10, and 11. Pediatric Associates is one of top performing providers in Humana's network. They are ranked in the ninety-fourth (94th) percentile among similar Humana pediatric provider groups in Florida and first (1st) out of twenty (20) Humana groups with similar populations. Our leadership meets quarterly to discuss Medicaid initiatives and best practices that Humana and Pediatric Associates can implement together. For example, both Humana and Pediatric Associates understand the importance for enrollees having access to care immediately for non-emergency services. Humana has assisted Pediatric Associates in determining the best location for them to open a pediatric urgent care center in Broward county to serve Humana Medicaid enrollees and all pediatric enrollees in that community.

Pediatric Associates recently launched a new telemedicine program through a partnership with American Well, a telehealth company, to develop their telemedicine system and use of a mobile application called Kids Now. Patients can schedule a telemedicine appointment through the Kids Now application, which is connected to Pediatric Associates' EMR and appointment scheduling system. They have four dedicated full-time physicians who provide telemedicine services via phone or video conferencing for their patients across the state. Pediatric Associates offers these services with full time coverage Monday through Friday 7:00 AM to 11:00 PM and Saturday/Sunday 3:00 PM to 11:00 PM. As of September 1, 2017, their Patient Contact Center is open twenty-four (24) hours, seven (7) days a week. In 2017, they are estimating fifty (50) telemedicine visits per day. We are working with Pediatric Associates to determine if this program is scalable statewide, and we can support them in achieving this goal. In a recent strategy meeting, Humana and Pediatric Associates agreed to partner together to expand their program for all Humana pediatric and adult enrollees statewide. Follow-up meetings have been scheduled to further develop the strategy for a possible 2018 implementation.

BEHAVIORAL HEALTH PROVIDER TELEMEDICINE: Behavioral health is a specific area of opportunity for telemedicine services. According to an AHCA report, twenty-seven percent (27%) of Medicaid potentially preventable events are tied to mental health or substance abuse with the top three conditions being schizophrenia, bipolar disorder, and major depression. Through telemedicine, enrollees with these conditions are able to access providers for prevention, medication adherence questions, and assessment. For example, behavioral health prevention can be addressed during a Bio-Psychosocial Evaluation and Psychological Testing which can be administered via telemedicine technology. The results of these testing and evaluation tools describe the biological, psychological, and social factors that may contribute to an enrollee's need for services. They also provide an assessment, evaluation, and diagnosis of

an enrollee's mental status or psychological condition. Delivering these via telemedicine allows providers to for early detection, reducing the number of potentially preventable events.

Our behavioral health vendor, Access Behavioral Health (ABH), credentials behavioral healthcare providers and practitioners who conduct telemedicine with the proper interactive electronic systems that protect the confidentiality of client information and audio and visual data transferred during the provision of telemedicine services. Providers certify that they offer these services and are meet the equipment requirements to be able to offer the services on the credentialing application. Currently the ABH network has psychiatrists in three provider organizations (sixty percent (60%) of organizational provider network) who conduct Telemedicine services (Lakeview Center, Inc., Chautauqua Healthcare Services, and Children's Home Society of Florida).

DOCTOR ON DEMAND: Humana is launching a telemedicine partnership with Doctor on Demand, effective October 2018, to encourage telemedicine as a means to improve enrollee access to care and prevent unnecessary emergency department visits. Doctor on Demand is an innovative platform that provides enrollees with access to a physician twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year from the enrollee's phone or computer. The platform allows enrollees to access care from a physician with an average wait time of fewer than five (5) minutes, or to schedule an appointment for a later time. Additionally, the platform allows an enrollee to upload medical history, send images if necessary, and designate a preferred participating pharmacy to obtain a prescription.

In partnership with Doctor on Demand, Humana intends to reduce potentially preventable events by providing enrollees an alternative way to access care in an appropriate care setting. Based on 2016 patient surveys, Doctor on Demand identified the following locations where patients would have sought care if they hadn't had access to their telemedicine services:
- 5% emergency room
- 41% urgent care center
- 12% stay at home
- 36% primary care provider office
- 6% other

More than half of potentially preventable emergency department visits were tied to conditions that could have been treated in a PCP's office. The most common non-emergent medical conditions that are seen by Doctor on Demand include but are not limited to cough, cold, flu, rash, urinary tract infection, sore throat, sprain or strain, vomiting, diarrhea, fever, and medication refills. These conditions are easily treatable in a telemedicine setting. We anticipate enrollees will respond positively to the convenience that Doctor on Demand provides and that enrollees utilize telemedicine services rather than visiting an emergency department or urgent care center. Humana will receive regular data intelligence from Doctor on Demand, including utilization reports to track and monitor items such as: number of visits, type of visits, percentage of utilization and visit, and service attributes.

==========

2.The extent to which the respondent describes the methodology it will use to identify providers eligible for participation, limitations/barriers in its proposed use of telemedicine and proposed strategies to overcome those limitations/barriers.

Humana is committed to AHCA's goals of enhancing access to care and delivering coordinated, integrated care, and we are committed to using telemedicine to help achieve these goals. The progress towards achieving our goal of increasing telemedicine utilization will be tracked in our Provider 360 Committee meetings, where cross-functional areas meet to discuss strategies, processes, and performance.

Humana aims to do whatever we can to enable providers who want to deliver telemedicine services, and we require providers follow all federal, state and Florida Medicaid requirements when providing telemedicine services. Humana may include a review of the practice by our legal designee to ensure all considerations for the practice of telemedicine have been met. Further, providers must also ensure that enrollee consent is captured and documented on the individual's medical or case record.

Despite advancements in telemedicine adoption, limitations and barriers to providing these services continue to exist. Identified barriers to adoption of telemedicine capabilities include, but are not limited to:

- Confusion over the differences between telehealth and telemedicine

- Financial barriers, including procurement of equipment and technology, ongoing maintenance costs, and achievement of Return on Investment

- Coverage and reimbursement varies across different programs, for instance there is no uniformity between Commercial, Medicare, and Medicaid products

- Difficulty accessing medical history and clinical information through Electronic Health Records and Health Information Exchange network due to interoperability between provider systems

Through our ongoing conversations, we have learned that the foremost concern for providers relates to reimbursement of telemedicine services. To overcome this, Humana has increased provider education and training around telemedicine services, including educational flyers and enhanced talking points for provider relations associates (see Attachment MMA 4-1). Our telemedicine educational flyer clearly communicates to providers that Humana reimburses for telemedicine services and references the provider manual for additional details on billing the correct modifying code.

Humana understands and supports AHCA's desire to identify providers delivering telemedicine services. Utilizing claims reports of providers who have submitted telemedicine encounters and provider relations knowledge of the emerging telemedicine landscape, we maintain a log of providers equipped with telemedicine capabilities. We share this information internally with the appropriate clinical and enrollment areas within Humana. Our goal is to relay this information to enrollees for whom telemedicine services may be particularly beneficial and to enhance access to care, while also supporting our providers in continuing to provide these services.

Evaluation Criteria:

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1. The extent to which the respondent describes an approach on the use of telemedicine services within its provider network that supports achievement of the Agency's goals.

2. The extent to which the respondent describes the methodology it will use to identify providers eligible for participation, limitations/barriers in its proposed use of telemedicine and proposed strategies to overcome those limitations/barriers.

3. The extent to which the respondent has already made significant achievements in the deployment of telemedicine within its network as evidenced by:

(a) The percentage of providers authorized to provide telemedicine services for the provider types referenced; and

(b) The percentage and type of authorized providers that provided telemedicine services during the 2016 calendar year.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

What Physicians Need to Know about Telemedicine

Medicaid-covered patients can receive care from the comfort of their own home

What is telemedicine?

In an increasingly hectic world, some patients have trouble finding the time to visit their physicians for appointments, and urgent care and emergency room visits can be expensive. Many patients do not want to make an appointment for a minor ailment. For these patients, an alternative to consider is telemedicine.

Telemedicine is an evaluation, diagnosis or treatment delivered by a practitioner who is not located at the same site as the patient. Your Medicaid-covered patients may use telemedicine for covered services by conferencing with you over the phone or via an online call from the convenience of their home or care setting.

How is telemedicine reimbursed?

Telemedicine services provided to a patient with Florida Medicaid coverage must be performed by licensed practitioners within their scope of practice. The service is covered under Humana Florida Medicaid plans; however, to be reimbursed by Florida Medicaid for telemedicine services, physicians must use, at a minimum, audio and video equipment permitting two-way, real-time, interactive communication between the patient and the physician.

To be reimbursed, physicians need to include the modifier “GT” on their CMS 1500 claim form. Florida Medicaid will reimburse the practitioner who provides the evaluation, diagnosis or treatment recommendation.

Important exceptions:

Florida Medicaid does not reimburse for:

- Telephone conversations
- Chart review(s)
- Electronic mail messages
- Facsimile transmissions
- Equipment required to provide telemedicine services

These resources are available to help:

The following links provide additional details on payment and plan coverage:

- http://ahca.myflorida.com/medicaid/review/fee_schedules.shtml
- https://www.humana.com/provider/support/clinical/medicaid-materials/florida

If you are currently providing telemedicine or considering telemedicine for your patients with Humana Medical Plan (Medicaid) coverage, please contact you Humana provider representative.

Humana.com

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 5 – Provider Network Development (Statewide):

The respondent shall submit a draft network development and management plan demonstrating how it will ensure timely access to primary and specialty care services, necessary to promote the Agency's goals, including:

a. Identification of network gaps (time/distance standards, after-hours clinic availability, closed panels, etc.);
b. Strategies that will be deployed to increase provider capacity and meet the needs of enrollees where network gaps have been identified;
c. Strategies (including a description of data sources utilized) for measuring timely access to appointments with the following provider types:

(1) Cardiologists (pediatric and adult);
(2) Pulmonologists (pediatric and adult);
(3) Endocrinologists (adult);
(4) Internists (adult);
(5) Psychiatrists (pediatric and adult);
(6) Obstetricians/Gynecologists (adult); and
(7) Licensed mental health clinicians (pediatric and adult).

d. Strategies for recruitment and retention efforts planned for each provider type, including the quality and/or performance metrics that will be used to determine a provider's success in making progress towards the Agency goals.

Response:

Humana creates and maintains an annual Network Development and Management Plan (NDMP) to serve as a guidepost for managing, measuring, and continually strengthening a broad and diverse network of high-quality providers. The NDMP contains background on our network design and provides descriptions of the processes to develop and maintain a comprehensive and effective network of providers. Our Statewide Medicaid Managed Care (SMMC) network enables appropriate and timely access to high-quality and cost-effective healthcare services to the managed medical assistance (MMA) enrollees while also providing long-term supports and services to the long-term care (LTC) Humana enrollees in the SMMC program. We have provided our statewide 2017 NDMP in Attachment MMA 5-1.

Humana has built and maintained strong partnerships with our contracted providers and subcontractors. We have created and are highly committed to a culture of collaboration and innovation in identifying and implementing approaches to improve healthcare delivery and enable positive health and social outcomes. The NDMP describes our approach to measuring and monitoring provider and subcontractor performance. We use that information to manage improvements with our network partners to ensure that enrollees have access to a wide choice of high-quality services, as well as to help our network partners increase effectiveness, quality, and cost efficiency. Our NDMP includes the following topics:
- Competitive landscape of provider network
- Prior year network analysis
- Description of basic network design and network access adequacy

- How enrollees access the system
- Analysis of timely access to services
- Provider satisfaction survey, methodology, and results
- Coordination of relationships among various levels of the system
- Assistance and communication tools provided to Primary Care Providers (PCPs)
- Network barriers and gaps
- Telemedicine as a mechanism to enhanced access to care
- Electronic health records (EHRs)
- Pharmacy services overview
- Subcontractor monitoring and oversight
- Internal department coordination
- Coordination with outside organizations

==========

1. The adequacy of the respondent's methodology for identifying and resolving barriers and network gaps; including ongoing activities for network development based on identified gaps and future needs projection.

==========

Humana continuously measures and evaluates enrollee access to ensure our network meets or exceeds the SMMC requirements. This includes measuring adequacy against contractual requirements, resolving network gaps, and addressing barriers to care, including transportation and linguistic needs. We also conduct strict oversight of our subcontractors to ensure they secure and monitor the same level of access. Our measurement and evaluation process crosses multiple plan functions, including customer care, quality assurance, and medical management for each region. Humana Provider Relations associates, under the direction of the Regional Vice President of Network Operations and Provider Experience, review various metrics to understand access to care levels across service categories.

Our approach to identifying gaps and ensuring network adequacy uses established Humana systems and infrastructure, proven techniques, strict oversight, and prompt follow-up to monitor and address any network issues. Humana uses data resources to monitor travel distance and times to ensure enrollees have access to the type of provider they need, and we include both our directly contracted and subcontracted providers in these analyses. Humana ensures access to all enrollees by analyzing multiple sources of information, as required by the Agency for Health Care Administration (AHCA). Below are descriptions of our network adequacy and access tools. The Provider Relations team reviews reports and results from these tools on an ongoing basis. We also review them during our quarterly Quality Management Committee (QMC) meetings to determine appropriate interventions and next steps.

ANALYTICAL REPORTING

ACCESS ANALYSIS — Using a proven geographical analysis tool, Quest Analytics, Humana utilizes geocoding technology to precisely measure enrollee to provider adequacy access. The Quest Analytics tool measures both distance and travel times against a baseline of two hundred percent (200%) of our enrollment for Regions 1 and 2, and one hundred twenty percent (120%) for Regions 3, 4, 5, 6, 7, 8, 9, 10, and 11. We analyze access for each provider specialty as

listed in the SMMC contract by enrollee age and gender group as specifically indicated for the provider type; for example, we map pediatricians to enrollees under the age of 21. This tool allows us to identify access issues at the county and ZIP code level. We also produce maps that display enrollee access and network deficiencies.

PROVIDER TO ENROLLEE RATIOS — We analyze provider to enrollee ratios monthly against network standards in accordance with AHCA requirements. We use this tool particularly often when we anticipate increased enrollment volume to ensure that our network has the capacity to accommodate additional enrollees.

Below are descriptions of the methods we use to identify enrollee barriers to accessing care. Our Provider Relations team and the Provider 360 Committee collect and review these data monthly. Our Provider 360 Committee is a cross-functional team, chaired by the Humana President of Florida Medicaid Operations, and meets on a monthly basis to review provider trends from our Claims department, as well as Availity usage, quality measures, provider system usage, and provider grievances and inquires. The Committee includes representatives from our Claims department, Grievance and Appeals department, Credentialing department, and Provider Relations.

CUSTOMER FEEDBACK

ENROLLEE SURVEYS—Humana annually reviews results of Consumer Assessment of Healthcare Providers and Systems (CAHPS) surveys to identify any trends in barriers to care. We report the analysis of the results to our QMC to ensure we meet our goal benchmarks. We measure access to care results year over year in comparison to our established benchmark goals. In our 2016 CAHPS survey, Humana saw an increase in adult responses for “Got appointment with specialist as soon as needed” to seventy-five percent (75%) and “Got urgent care as soon as needed” to eighty-two percent (82%), a nine percent (9%) and two percent (2%) increase, respectively. We also saw an increase in “Ease of getting care, tests, or treatment needed” to eighty-six percent (86%) and “Got urgent care as soon as needed” responses for children to ninety percent (90%), two percent (2%) and two percent (2%) increase, respectively.

CLINICAL ACCESS TEAM (CAT) – Humana’s CAT facilitates resolution of identified clinical issues related to enrollee access. The CAT consists of three (3) non-clinical specialists who process inbound calls and ten (10) RNs who manage and resolve the cases. Issues may range from appointment availability to inability to locate a provider.

ASSOCIATES, ENROLLEE, PROVIDER, AND ADVISORY INPUT— On an ongoing basis, Humana examines anecdotal information from various internal and external sources as it pertains to network adequacy. This includes information contributed by individuals and committees, such as the Provider 360 Committee, as well as recommendations from providers to Humana to contract with specific providers and provider types.

MEANINGFUL DATA

COMPLAINTS AND GRIEVANCES— We receive complaints and grievances from enrollees and providers through multiple routes, which we record and track in our Customer Care Portal. For complaints that reflect network access issues or identify potentially noncompliant providers, we forward those to our Provider Relations team for review and action on a real-time basis. In addition, Humana will be designating a Provider Services Leader who will provide oversight on disputes.

OUT-OF-NETWORK REFERRALS—We examine out-of-network referrals quarterly to identify potential areas where we may need to expand specialty provider capacity.

CULTURAL AND LINGUISTIC NEEDS—Humana annually analyzes the cultural and linguistic needs of our enrollees and their geographic concentration to ensure appropriate access.

TIMELY ACCESS PCP WAIT TIMES REPORT—Humana's Provider Relations team annually conducts a survey of a statistically valid sample of PCPs to gauge appointment availability. We conduct the survey to assess wait times for scheduling appointments on an annual basis and will implement this process on a quarterly basis in 2019. During these calls, a Provider Relations representative contacts the primary care office with symptoms of a simulated condition/illness to discover the next available appointment. Through our 2016 audit, we found that the average wait times for providers was two (2) days for Sick Care Visits, one point two (1.2) days for Urgent Care Visits, and eight (8) days for Well Care Visits, which meet AHCA requirements.

AFTER-HOURS ACCESSIBILITY AUDIT—Humana calls PCP offices annually or on a more frequent basis to ensure enrollees have access to care during after-hours. The Provider Relations leadership team reviews these results and assigns them to the appropriate Provider Relations representative for immediate outreach to the provider, if necessary. Our attached NDMP conveys our results from our 2016 After-Hours Accessibility Audit, which exceeded AHCA requirements: Sixty percent (60%) of our PCPs offer after-hours care. Additionally, most of our patient-centered medical homes offer after-hours care. Humana also enhances access to after-hours care through our twenty-four (24) hours a day, seven (7) days a week nurse line. Enrollees can call this number and speak with a clinician for medical guidance. We can also warm-transfer enrollees to their PCP during office hours.

Additionally, Humana has developed a strategy to further incentivize PCPs to offer increased after-hours coverage. The initiative increases provider reimbursement for after-hour service codes 99050 and 99051. Given the current Medicaid-allowable reimbursement of seven dollars and twenty-eight cents ($7.28) and nine dollars and thirty-nine cents ($9.39), Humana offers a range of thirty-five dollars ($35) to fifty dollars ($50) for these services, which is a substantial increase.

OPEN/CLOSE PANELS—On a quarterly basis, we review the panel status of our PCPs by region and county. Additionally, we produce maps to visualize enrollee access to PCPs. We use these data to identify access barriers and implement additional targeted recruitment efforts.

ONGOING ACTIVITIES FOR NETWORK DEVELOPMENT TO MITIGATE IDENTIFIED GAPS AND BARRIERS

When our various network adequacy and access tools listed above identify network gaps or barriers, our Provider Relations team targets our provider recruitment strategy. The following recruitment strategies are ongoing, consistent practices built into Humana's network team management processes:

- If we identify providers that are not meeting contractual requirements (such as failing to meet after-hours requirement or appointment availability standards) we provide outreach and conduct provider education.

- To assist in identifying providers for recruitment to fill any recognized gaps, we use our collaborative provider partnerships with major health systems, ancillary providers, and large independent practice associations (IPAs).

- Humana enrollees can nominate a provider, in writing or telephonically, for recruitment. We forward nomination requests to the Provider Relations team for recruitment.

- We have an annual minority recruitment process to target providers to accommodate linguistic and cultural needs. We solicit feedback from minority associations, medical schools, and Native American tribes, as listed below:
-- Seminole Indian Tribe
-- Miccosukee Tribe
-- Florida Association of Minority Business Enterprise Officials
-- National Hispanic Medical Association (NHMA)
-- Minority Association of Pre-Med Students at Florida State University
-- Minorities in Medicine/Association of American Medical Colleges
-- Urban Promise
-- American Developing Smiles
-- Florida International University
-- Florida Atlantic University
-- University of Florida
-- University of Central Florida
-- Florida State University
-- University of South Florida

- We have provider recruitment mailboxes posted on our website where providers can electronically submit a request to join Humana's network.

- Because we have local Humana representatives, including our Provider Relations representatives and quality improvement nurses (QINs), we receive insight into new providers moving into areas. We are then able to target them for recruitment.

- We identify and target non-participating providers for recruitment through our review of single case letters of agreement and out-of-network utilization.

- We use a variety of available resources to identify specific providers to target, including the AHCA Master File (PML), AMA Website, Sunbiz, US News Health Report, Florida Department of Health, our competitor's directory, and web searches.

- We harvest data identifying providers who are already contracted for other Humana products in which their contracts have Health Maintenance Organization (HMO) provisions, and target these providers for recruitment.

- In areas where there are PCP shortages, we encourage our provider groups to recruit additional providers from outside the area, including physician extenders.

- We encourage our providers to offer telemedicine, reimbursing it in accordance with AHCA contractual requirements.

-- Additionally, we offer our enrollees access to Doctor-on-Demand, a telemedicine platform that provides enrollees with access to physicians twenty-four (24) hours a day, seven (7) days a week from the enrollee's phone or computer.

PROJECTION OF CHANGES IN FUTURE NETWORK CAPACITY NEEDS

Humana continuously considers projections of future capacity planning of our network measurement and management process. We base much of our network adequacy measurement process on updated enrollee counts and new maximum enrollment percentages. For instance, the Enrollee-to-Provider ratios and the Enrollee-Time-Distance measurements both require current enrollment files. As we add new enrollees, we take membership growth and geographic shifts in membership into account to ensure adequate access to care.

Significant provider contract re-negotiations can impact future network capacity planning. The Humana Network team maintains a strategic stratification of its major health system negotiations so that no more than one (1) health system in a market is under negotiation at a time. This strategy reduces the potential for multiple terminations at any given time.

Prior to any significant terminations, the Humana network team conducts a formal impact analysis of our network to proactively identify and address any enrollee access issues. To do this we use access analysis, open and close panels, and provider-enrollee ratios. This applies to hospitals, large provider groups, or subcontractors. In the event Humana initiates the termination, Humana conducts this analysis process well ahead of the ninety (90)-day notification to the provider and notifies AHCA within the contractual timeframe. In the event Humana receives a ninety (90)-day termination notice from a significant provider, our Provider Network team immediately begins the formal network termination impact analysis. We use this termination analysis as the basis to identify potential gaps and to identify priority targeted alternative providers that can act as a substitute for the impacted providers.

==========

2. The adequacy of the respondent's plan to meet the needs of enrollees if it is unable to provide the service within its provider network; including immediate, short-term and longterm interventions.

==========

We work collaboratively with enrollees and providers throughout the care planning and delivery process to ensure we meet standards and deliver care at an optimal level. We understand that

occasionally enrollees may need to rely on providers outside of our Medicaid network to meet their needs. Typically, enrollees engage with out-of-network providers when they are in the midst of treatment at the start of their enrollment period or when Humana's current network does not accommodate their specific situation. Our NDMP provides policies to ensure they can access services in a timely manner even if they require an out-of-network provider.

CONTINUITY FOR ENROLLEES

Continuity of care needs occur when an enrollee is newly eligible to Medicaid or switches from another Medicaid plan. It is critical that our policy and process coordinates services in a way that ensures there is no disruption or interruption of service delivery. Humana honors written documentation of a prior authorization of ongoing covered services for a period of sixty (60) days after the effective date of enrollment or until the enrollee's PCP or behavioral health provider reviews the enrollee's treatment plan, whichever comes first.

Written documentation may include:
- Prior existing orders
- Provider appointments
- Prescriptions, including prescriptions at non-participating pharmacies

These guidelines include enrollees who:
- were recently hospitalized and now require follow up care
- are receiving behavioral health services and are within a plan of treatment
- are being treated for a condition that has a finite course of treatment
- have a life expectancy of less than six (6) months
- are in the end-stage of a disease
- have an unstable or life-threatening medical condition
- are pregnant
- are newborn (within the first ninety (90) days of life)

To support this objective, we will assess the treatment plan where available and determine whether the existing treatment plan is appropriate. For new enrollees in a course of treatment, Humana's Case Management team contacts the attending provider to discuss and review the current condition and course of treatment, as well as potential dates for end of service. If we believe the current treatment plan is ineffective, inappropriate, or misaligned to the medical needs of the enrollee, we will work with the provider to modify the treatment plan. We will reassess the enrollee's treatment plan within ninety (90) days.

Normally, Humana allows enrollees to continue their course of treatment with an out-of-network provider for a pre-determined transition period. In these instances, Humana will execute a Single Case Agreement (SCA) with the provider. The process and language of the SCA adheres to Humana's National Network Operations (NNO) policies and procedures and AHCA's contract requirements. This help us maintain a relationship, ensure payment, and confirm Humana can verify the provider's qualifications and credentials to conduct the care they are delivering.

IMMEDIATE, SHORT-TERM, AND LONG-TERM INTERVENTIONS TO ADDRESS NETWORK GAPS

In addition to continuity of care requests, we recognize out-of-network utilization reports may identify potential gaps in our network. Once we identify and confirm a gap or disruption in our provider network, we will notify AHCA and then design and implement an aggressive and prompt recruitment plan.

In situations where we have a shortfall or “hole” in our geographic access standards for a given provider type, we address it through the following mechanisms:

- Identify all providers of that type serving in the area through all available resources that include
-- AHCA Master File (PML)
-- AMA Website
-- Sunbiz
-- US News Health Report
-- Florida Department of Health
-- Competitor’s directories
-- Web searches (e.g., Google)

- We discuss availability shortages with our provider groups to encourage additional recruitment of providers from outside the area.

- Humana may engage the enrollee’s PCP to assist with identifying providers commonly used for referrals in his/her practice that are capable of providing and willing to provide care.

- Once identified, we will recruit providers into the network who will bring that component of the network into compliance with the accessibility standards, if available.

Humana’s recruitment efforts include a variety of means to maximize success. These include onsite, face-to-face meetings with providers, telephonic outreach, and use of existing provider relationships to reach other providers. If willing providers are available that can address the specific need, our Network team will contact these providers to arrange a face-to-face meeting to recruit the provider into our network. Conversely, if the required provider type is not available or unwilling to contract with Humana, we will offer the enrollee transportation to the nearest qualified provider, make arrangements with out-of-network providers, or coordinate care through available telemedicine conduits.

If Humana’s Network team is unable to quickly bring a provider into the network, we will execute a Letter of Agreement (LOA) with the provider. The process and language of the LOA adheres to Humana’s NNO policies and procedures. Humana tracks and trends single case agreements via a tracking grid. The Contracting teams perform analysis on a periodic basis to identify potential contracting opportunities. We encourage non-network providers to join Humana’s network, and following a satisfactory pre-assessment, a Humana Network or Clinical representative engages the provider to begin the network contract process.

In the event we identify a network gap and have made what we believe is a highly reasonable offer to applicable providers in a given area, identify there is a lack of available providers, or available providers are not actively enrolled with Florida Medicaid and are still unable to secure network participation, we will document our efforts to AHCA and request a waiver. In the absence of a contract, we will seek to work with needed providers through single-case agreements and will permit enrollees to seek care from these providers on an out-of-network basis.

CLINICAL ACCESS TEAM (CAT)

Humana's CAT facilitates access to care when we identify a clinical issue related to enrollee access. The CAT team consists of three (3) non-clinical specialists who process the inbound calls on a dedicated line and ten (10) registered nurses (RNs) who manage and resolve the cases. Issues may range from appointment availability to inability to locate a provider. Once we receive an inquiry, a CAT associate will review and telephonically contact the enrollee or appointed representative to acknowledge receipt and to clarify the issue. The CAT associate may contact providers involved in the access issue to determine any extenuating circumstances, to offer assistance to possible barriers in resolving the issue, or to work with internal departments such as Provider Contracting to facilitate a resolution.

The CAT team has seen very strong results over the past twelve (12) months as shown by the Key Performance Indicators for commercial, Medicare and Medicaid populations:
- Overall access cases: 99.2% compliant with inquiry resolution
- Overall access cases: case closure within fourteen (14) calendar days
- Overall service level (80% of calls answered within thirty (30) seconds): 82%
- Overall abandonment rate (less than 5% of calls abandoned): 5%

In addition to our CAT, we have a twenty-four (24) hours a day, seven (7) days a week nurse line available to enrollees. Our nurse line enhances after-hours care by providing an available clinician to our enrollees who can advise on the appropriate level care and the appropriate care setting.

CASE STUDIES

EXAMPLE #1: At Jackson Memorial in Miami-Dade County, a mother delivered a newborn baby with a rare, lethal congenital defect of the windpipe called a type four (4) laryngeal cleft. Humana's Clinical team called every facility in Florida and, despite a thorough search, could not find a surgeon in Florida able to repair the enrollee's defect. We identified that the best center to treat this defect was at Cincinnati Children's Hospital. Humana's Clinical team and the Provider Network team worked to arrange transfer of the newborn by air ambulance to the Cincinnati Children's Hospital intensive care unit. Prior to the transfer, Humana's Provider Network team successfully negotiated a letter of agreement with the facility to ensure the hospital would receive payment for their services. The surgery was successful, and after several weeks an air ambulance transferred the baby back to the intensive care unit (ICU) at Jackson Memorial to reunite with her family.

EXAMPLE #2: A thirty-seven (37)-year-old male enrollee admitted to a participating in-network hospital in Region 1 with a diagnosis of Hashimoto's encephalopathy, seizures, and an altered mental status. Because of his complex diagnosis and multiple comorbidities, the enrollee remained in this acute setting for three (3) months. Once the enrollee's team of providers agreed to consider an alternative care setting based on the progress of the enrollee's condition, Humana assisted the enrollee with arranging and receiving post-acute care tailored to his diagnosis. Humana identified several long-term acute rehabilitation facilities that specialized in complex neurological rehabilitation rather than using a standard rehabilitation facility, based on the Provider team's recommendations. Because there were no beds available at these neurological rehabilitation facilities available In Florida, we extended our search beyond state lines. A Texas neurology recovery center accepted the enrollee as a patient. Humana's Clinical team worked very closely with our Provider Network team to successfully transfer the enrollee, which required air transfer to the facility. Prior to the transfer, Humana's Provider Network team successfully negotiated a letter of agreement (LOA) with the facility to ensure we would accurately reimburse the services. The enrollee remained at this facility for two (2) months. Once the enrollee's condition showed improvement, we arranged for the enrollee to transfer back to a local non-participating neuro-restorative facility to allow the enrollee's family to actively participate in his care, and support him in his continued progress of rehabilitation.

==========

3. The adequacy of the respondent's approach for measuring timely access for the specified provider types and the extent to which the respondent's approach includes clear methodology for determining the following:

a. Average wait time for an urgent appointment

b. Average wait time for a routine appointment

==========

Humana currently conducts audits of appointment availability and office waiting times for PCPs, and will expand our current process to the specified provider types, which include pediatric and adult cardiologists, pediatric and adult pulmonologists, adult endocrinologists, adult internists, pediatric and adult psychiatrists, adult obstetricians/gynecologists, and pediatric and adult licensed mental health clinicians. In 2016 our PCPs averaged two (2) days for Sick Care Visits, one point two (1.2) days for an urgent care appointment, and eight (8) days for a well care appointment, which meets AHCA's requirements. We expect all participating providers to render care in full compliance with AHCA access guidelines. Humana will comply with the Agency's contractual requirements for Timely Access Standards, as listed below, and actively monitor adherence to these standards.

1. Appointments for urgent medical or behavioral health care services shall be provided:

a. Within forty-eight (48) hours of a request for medical or behavioral healthcare services that do not require prior authorization.

b. Within ninety-six (96) hours of a request for medical or behavioral healthcare services that do require prior authorization.

2. Appointments for non-urgent care services shall be provided:

a. Within seven (7) days post discharge from an inpatient behavioral health admission for follow-up behavioral health treatment.

b. Within fourteen (14) days for initial outpatient behavioral health treatment.

c. Within fourteen (14) days of a request for ancillary services for the diagnosis or treatment of injury, illness, or other health condition.

d. Within thirty (30) days of a request for a primary care appointment.

e. Within sixty (60) days of a request for a specialist appointment after the appropriate referral is received by the specialist.

To facilitate timely access to appointments, routine care, urgent care services, we communicate the above standards to all network physicians using a variety of communications channels such as during site visits, the Provider Manual, and provider training materials posted on Humana.com and Availity.com. Humana will audit appointment availability and wait time for both urgent and routine visits using the process described below.

We choose a statistically valid sample of providers within a region for a variety of different access audits, including appointment availability and wait time for both urgent and routine visits. These audits monitor accessibility of appointments per Humana and AHCA's regulatory requirements and corroborate appointment wait time. Humana measures these appointment availability standards through initial credentialing site visits, complaint data, and provider self-reporting. We also conduct strict oversight of our subcontractors to ensure they secure and monitor the same level of access. The Provider Relations manager reviews results and assigns the appropriate Provider Relations representative for immediate outreach to the provider.

Humana also physically audits appointment schedules at least annually by visiting provider offices. On a random basis, a Humana associate will visit a provider's office to monitor the patient wait times, ensuring they meet accessibility standards. We also review enrollee surveys, provider surveys, complaints and grievances, and associates and provider input for insight into access issues. Our Provider 360 Committee reviews the results from these sources monthly.

==========

4. The extent to which the recruitment efforts outline the frequency and specific measures to be used to track the need to deploy recruitment activities for the provider types listed.

==========

Humana continually assesses network adequacy by reviewing and monitoring the following key components: (a) how enrollees access the care delivery system, (b) provider types by geographic area including providers who service medically complex enrollees, and (c) access to care for all levels of providers. These services include, but are not limited to:

- Acute Care Hospitals

- Primary Care

- Specialists including
-- Cardiologists (pediatric and adult);
-- Pulmonologists (pediatric and adult);
-- Endocrinologists (adult)
-- Internists (adult)
-- Obstetricians/Gynecologists (adult)
-- Psychiatrists (pediatric and adult)

- Behavioral health practitioners

- Ancillary services

- Physical therapy (pediatric)

- Speech-language pathology services (pediatric)

- Occupational therapy (pediatric)

We create time and distance reports biannually, at a minimum, using geographic access studies to ensure there are an adequate number of providers in Humana's network. Using a proven geographical analysis tool, Quest Analytics, Humana uses geocoding technology to precisely measure enrollee to provider adequacy access, including traffic density. The software produces mappings and summaries of enrollees with desired access and enrollees without desired access. We review the results of those reports and develop action plans to address any deficiencies.

Humana has consistently met the reporting criteria of the Provider Network Verification (PNV) file reporting requirements since MMA implementation. Humana performs weekly and monthly assessments based on the AHCA/PNV Adequacy Report. We assess the file against our network by provider type, and we apply our algorithm to proactively identify at-risk specialties for targeted recruitment opportunities. As a result, this process has allowed Humana to identify and rectify network gaps before they occur and before our enrollees experience access to care issues.

Our Provider Relations team and QMC monitor the reports for all provider types from our network adequacy tools, as well as from our subcontracted entities, on an ongoing basis to ensure that we proactively deploy network recruitment efforts and to quickly respond to network gaps as they arise.

==========
5. The extent to which the retention efforts outline the approach to keeping providers satisfied and in good-standing with the respondent.
==========

Keeping our providers engaged and in good standing is paramount to ensuring our enrollees receive quality care. As such, we have structured our provider engagement model to support the formation of true partnership and optimize the payer-provider relationship through

administrative simplicity, financial partnership, and strong provider satisfaction. We use the following approach to ensure our providers remain in good-standing and are satisfied:
- Interactive Provider Relations Model
- Value-Based Purchasing
- Provider Satisfaction Indicators
- Provider Performance Metrics

Humana's interactive provider relations model is a differentiator of Humana's provider network management strategy. A Provider Relations representative and QIN visit our PCPs monthly and our high-volume specialists on a quarterly basis to provide training, education, care gap data, and utilization data. This frequent interaction does not only support our providers, but it also informs us of any trends or issues our providers are facing. We have designed our model to support our providers wherever they need it to ensure they remain in good standing. We understand providers have the primary interaction with our enrollees and that it is critical to engage with them throughout their experience with Humana. Additionally, throughout our operational presence in Florida, Humana's local leadership team has established strong relationships with providers through extensive interactions. Humana's leadership regularly attends JOC meetings, provider association meetings, and strategy meetings with specific providers to discuss new initiatives, industry trends, and opportunities to reach our common goals. These interactions help support providers, identify provider needs, and maintain satisfaction from the provider community.

Humana has a sophisticated value-based model in Florida to establish financially- and quality-aligned incentive contracts with our providers. These agreements include full risk (global) capitation, shared savings model, quality-cap bonus, and MMA Physician Incentive Program payments to reward our providers for providing high-quality care. Humana designed its model to drive greater provider engagement and better clinical outcomes based on the idea that thoughtful reward incentives, packaged with consultative provider guidance and care gap alerts and integrated with comparative metrics and benchmarks, help providers raise the bar in quality. Our model helps providers more rapidly identify high-risk enrollees, improve chronic condition care delivery, reduce medical costs, and improve enrollee satisfaction. To ensure our providers remain in good standing, Humana supports our providers with several tools, including enrollee data and provider performance metrics, to keep them updated on a regular basis. This data includes a peer-to-peer performance indicator that keeps the provider aware of their performance within the network. Our provider engagement program allows Humana to truly partner with our network partners and optimize the payer-provider relationship, which keeps providers satisfied with their financial incentives and the care they deliver.

As a measure of provider satisfaction, Humana regularly monitors provider termination rate, which is less than one percent (1%) month over month. Humana also performs an annual provider satisfaction survey in all contracted regions in accordance with contractual obligations and in accordance with an AHCA-approved sample methodology and metrics. The purpose of this survey is to evaluate and measure provider satisfaction across service metric areas, including provider relations and communications, clinical management processes, authorization processes including denials and appeals, timeliness of claims payment and assistance with claims processing, complaint resolution process, and care coordination/case management support. Below are examples of our measures from our 2017 Provider Satisfaction Survey:

- My Provider Relations Representative is able to answer my questions: 99% agreement rate

- My Provider Relations Representative is professional and courteous: 99% agreement rate

- Educational and training materials are easy to understand: 98% agreement rate

- Denial notifications, including the denial reason(s), are provided in a timely manner: 100% agreement rate

- Case managers are knowledgeable, professional and courteous: 100% agreement rate

Additionally, Humana's cross-functional Provider 360 Committee, chaired by our Florida Medicaid Operations President, has a goal to continuously identify opportunities to improve the provider experience with Humana. Participants from various departments, including Provider Relations, Claims, Care Coordination, Grievance and Appeals, and Customer Care review various trends and data to understand concerns from providers, and to design initiatives to proactively address these concerns. The Committee meets monthly and produces reports for the QMC's review.

To ensure our providers remain in good standing, Humana provides several tools including enrollee data and provider performance metrics to keep them updated on regular basis, as described in more detail in the Criteria #6 below. These data include a peer-to-peer performance indicator that keeps the provider aware on their performance within the network.

==========

6. The extent to which the quality and/or performance metrics it will use to gauge progress toward the Agency goals are transparent to providers, including the frequency with which providers will be able to access their progress.

==========

Humana offers a comprehensive set of tools and resources for our providers to achieve success in accomplishing the Agency's goals of enhanced access, integrated and coordinated care, and improving the quality of care to our enrollees. We provide these resouces and tools on a regular basis to ensure that provider performance and quality metrics are transparent to providers:

- Quality Improvement Nurses (QINs)
- Humana's Monthly Health Effectiveness Data and Information Set (HEDIS) Package
- PCP Reports
- CareHub Clinical Guidance eXchange (CGX)
- Service Fund Data Analytics

QUALITY IMPROVEMENT NURSES (QINS)

A provider liaison position, QINs assist providers in improving overall health outcomes and reducing potentially preventable events. We fill these positions with RNs who have a clinical background to facilitate and coordinate care between enrollees and providers. QINs, whom we assign geographically, meet monthly with PCPs, regardless of whether the provider is

alternative payment method, to analyze and close enrollee care gaps, facilitate education, manage medical costs, and document and improve coding accuracy. During the meeting with the PCP, QINs may develop a tailored plan of how to best support the provider in improving enrollee care.

HUMANA'S MONTHLY HEDIS PACKAGE

To help PCPs better manage the care of their enrollees, a QIN or Provider Relations representative delivers monthly HEDIS reports to every PCP. These reports capture preventable events among enrollees, gaps in care, and high utilizers of pharmaceuticals. In addition, practices can view their performance on HEDIS indicators to see how they compare with other providers in their region. We package this information in an actionable manner, providing call lists with the contact information for enrollees who have care gaps and a list of recommended actions for enrollees who are non-compliant with preventive care screening and/or disease management visits. Additionally, the QIN may work with the provider to develop initiatives around the care gaps, and work with providers to close them.

PCP REPORTS

A QIN or Provider Relations representative delivers to PCPs a monthly report indicating which of their Humana enrollees have care gaps. These reports will also identify enrollees on their patient panel with potentially preventable hospital admissions and/or avoidable use of the emergency department. Our providers and their staff use these reports to reach out to enrollees and address their care gaps and identify preventative services. They may also schedule any needed appointments and make referrals to specialists.

CAREHUB CLINICAL GUIDANCE EXCHANGE (CGX)

Our CGX system generates daily Emergency Department (ED) visit alerts and care alerts we distribute to our providers. These alerts consist of evidence-based medicine care gaps and drug-to-drug/disease interaction alerts. By promoting awareness and closure of these gaps, we help our providers improve the care they deliver.

SERVICE FUND DATA ANALYTICS

Humana developed the proprietary Service Fund risk-sharing management application for providers engaged in a risk or capitated arrangement. We use this innovative tool to calculate reimbursements to providers in these arrangements by tracking and aggregating information on capitation payments, claims expensing, claims payment, reconciliation, and settlement for all PCP contacts.

On a monthly basis, Service Fund makes data files available via Availity that contain information regarding provider membership, funding, claims activity, progress toward value-based payments, and capitation payments at both individual provider and group levels. Humana tailors the reports to providers in risk or value-based arrangements and makes them available for

provider access through an online portal as well as through our Provider Relations representatives. Additionally, Humana educates providers using Service Fund by walking through standard reports during initial trainings to show the data they have access to and to show how to use it to help manage their providers and financials. Provider Relations representatives meet with PCPs monthly to review the Service Fund reports and to discuss any issues or barriers they may face.

Evaluation Criteria:

1. The adequacy of the respondent's methodology for identifying and resolving barriers and network gaps; including ongoing activities for network development based on identified gaps and future needs projection.

2. The adequacy of the respondent's plan to meet the needs of enrollees if it is unable to provide the service within its provider network; including immediate, short-term and long-term interventions.

3. The adequacy of the respondent's approach for measuring timely access for the specified provider types and the extent to which the respondent's approach includes clear methodology for determining the following:

(a) Average wait time for an urgent appointment; and
(b) Average wait time for a routine appointment.

4. The extent to which the recruitment efforts outline the frequency and specific measures to be used to track the need to deploy recruitment activities for the provider types listed.

5. The extent to which the retention efforts outline the approach to keeping providers satisfied and in good-standing with the respondent.

6. The extent to which the quality and/or performance metrics it will use to gauge progress toward the Agency goals are transparent to providers, including the frequency with which providers will be able to access their progress.

Score: This section is worth a maximum of 40 raw points with each of the above components being worth a maximum of 5 points each.

5 additional points will be awarded to respondents who demonstrate that providers shall have real-time access to their progress in achieving quality and/or performance metrics.

1. HUMANA'S NATIONAL DEVELOPMENT & MANAGEMENT PLAN OVERVIEW

Humana's Commitment to Quality Care

As a company, Humana strives to offer its enrollees access to dependable, quality care. We've seen success in our partnership with AHCA by understanding and focusing on what's most important in comprehensive care today:

- Instituting a strong provider engagement model built on a partnership to work towards a common goal of delivering quality care to enrollees
- Being easy to do business with through simplification of administrative processes simplifying administrative burdens
- Offering value-based payments to providers to reward and retain them
- Removing barriers to care between providers and enrollees

Our Approach for Establishing & Retaining a Best-In-Class Provider Network

Humana has more than two decades of innovative network development and management experience in Florida. We understand the complexity of recruiting and contracting with the wide range of providers necessary to serve and care for the needs of our enrollees across the State. To continuously grow and maintain our best-in-class provider network across Florida, Humana has developed and consistently executes a rigorous provider recruiting and retention plan to:

- Evaluate the provider network and project needs
- Create and execute an acquisition and retention plan
- Engage with quality and efficient providers
- Simplify doing business with Humana
- Provide timely access to care for enrollees
- Drive continuous improvement through ongoing evaluation of the network

Annual Network Development & Management Plan Overview

Humana's network is built on the evidence-based belief that the following concepts are imperative in our healthcare delivery system and critical components of maximizing enrollee healthcare outcomes:

- Quality of care
- The patient-centered medical home concept
- Preventative and early intervention
- Extensive access to contracted network providers
- Versatile payment reimbursement methodologies to incentivize providers, including value-based payment models
- Communicative provider and subcontractor partnerships that are based on mutual clinical goals and administrative simplicity
- Widespread use of electronic health records

With these fundamental concepts in mind, we work collaboratively with our external network provider partners and subcontractors and internally with our Clinical, Member Services, Medicaid Operations, Quality, Provider Complaints, Provider Grievances, Pharmacy, Customer Service, and Finance Departments in developing our annual Network Development and Management Plan (NDMP). We obtain information from these sources to comprehensively draft our NDMP, analyze our network

progress from the previous year, and identify opportunities to improve our network and enhance access to care for our enrollees. Our provider network leadership team compiles the cross-functional information, which then goes through a compliance review to ensure we are adhering to all AHCA, State, and federal requirements.

2. QUALITY CARE & PROVIDER NETWORK IN FLORIDA

Humana has a long-standing presence in Florida serving Medicaid, Medicare, and Commercial populations. We have operated our Medicaid plan for 20 years and our Medicare plan for 30 years in Florida. Provider satisfaction and engagement are critical to our success in serving enrollees. Thus, throughout our presence in Florida, Humana's provider relations team has established strong relationships with our providers through extensive interactions. Humana leadership regularly attends Joint Operating Committee (JOC) meetings, provider association meetings, and strategy meetings with our providers to discuss new initiatives and opportunities to reach our common goals.

Our considerable experience assessing our existing provider network in Florida and engaging in recruitment strategies to ensure the composition of the network is sufficient to provide timely access to care for enrollees. These network assessments have given us invaluable insight into provider accessibility and availability. We understand that if our enrollees are unable to access our provider network in a timely fashion, we cannot develop or maintain a competent and responsive system of care to meet their needs.

Understanding the Competitive Landscape & Enrollee Enrollment

As of March 2017, Humana has the fifth largest or 10.8% of the membership market share in the 5 regions Humana serves the Florida Medicaid population.

Current MMA Market Share

Organization	March 2017 Enrollment	Market Share
Staywell Health Plan of Florida	675,980	22.0%
Sunshine State Health Plan, Inc.	431,391	15.6%
Molina Healthcare of Florida	345,289	11.2%
Amerigroup Florida, Inc.	342,253	11.1%
Humana Medical Plan	332,565	10.8%
Prestige Health Choice	325,548	10.6%
Other (Includes 6 plans)	575,143	18.7%
	3,078,169	

Source: AHCA Enrollment Report

Humana's MMA Membership and Growth Rate

Q1 2016	
January 1, 2016	332,148
March 31, 2016	344,668
Q1 2016 Growth %	3.63%
Q1 2017	
January 1, 2017	342,818
March 31, 2017	332,565

Q1 2017 Growth %	-3.08%

Source: AHCA Enrollment Report

Changes in Membership

Membership decreased by approximately 3.08% when comparing 1st quarter 2016 to 1st quarter 2017. Some of the reasons for the decrease are changes in eligibility, an enrollee's provider is no longer in the Humana network, an enrollee moved to specialty plan, or an enrollee moved out of area Our membership has trended with overall enrollment patterns of the number of Medicaid eligibles throughout the State.

New Enrollment

- 48% are by choice
- 52% auto-assigned
- 10% enrolled are identified as pregnant

Disenrollment

- 66% ineligible for plan
- 8% provider no longer with plan
- 8% moved to specialty plan
- 6% out of service area

Prior Year Network Analysis

The 2016 NDMP highlighted initiatives and goals for developing and sustaining an adequate network. It focused specifically on improving enrollee access to care and providing support and resources to our network providers. Our measures include a Medicaid network adequacy analysis that evaluates both provider to enrollee distance and provider to enrollee ratios by county and region. We take into consideration:

- cultural competency indicators such as enrollee access to physicians with diverse linguistic abilities
- handicap access
- after-hours access
- physician closed panel data

Additionally, we review results of the following data sources:

- enrollee satisfaction survey results (CAHPS)
- Critical Access Team (CAT) data
- timely access/PCP wait time survey data
- prevalence of providers with the varying levels of Electronic Health Record capabilities

Our 2016 network analysis demonstrates Humana's robust network of various providers, including but not limited to, Primary Care, Obstetrical Care, Specialty Care, Urgent/Emergent Care, Ancillary Services, Hospital Care, Oral Health, and Behavioral Health providers for our enrollees continuously, allowing for comprehensive access to care. Further, Humana meets the AHCA-required enrollee to provider and time and distance ratios for each specialty. There are a few areas of specialties that present some challenges, especially in rural counties, when compared to the AHCA-required enrollee to provider ratios even when considering the current published maximum enrollment ratios; however, the specialty services are available within the enrollees' geographic area.

An example of this is in Region 1. AHCA's published requirement for the specialty of Podiatry is twenty-two (22) providers, even though the PML only documents twelve (12) podiatrists available in the Region 1 area. The AHCA-published minimum provider-to-enrollee ratio for this specialty in this Region is one

specialty provider per 5,200 enrollees, which would provide access for 112,000 enrollees based on twenty-two (22) providers. Humana currently has five (5) providers under contract for Podiatry in Region 1, and has documented an extreme shortage of available providers to recruit and contract. Additionally, although ratios can only be calculated with contracted providers that participate within the Region, Humana has expanded its recruitment efforts into the neighboring counties in Region 2, as well as southern Alabama to attempt to improve enrollee access.

Our Focus on Continuous Improvement

Humana understands the importance of partnering with AHCA annually to review our network findings and measurements and to update our NDMP. Those discussions will help fuel new and innovative strategies to attract new providers, improve quality of care, and achieve cost savings for AHCA and our enrollees.

3. TODAY'S BASIC NETWORK DESIGN AND NETWORK ACCESS ADEQUACY

Humana designed its Florida network to provide all enrollees with adequate access to primary care and specialty providers, as well as convenient access to network pharmacies in the regions we serve. We are continuously monitoring and evaluating our network to identify opportunities for enhancement. We contract with high-quality providers within each region and maintain good relationships through active and ongoing provider engagement.

Existing Region 1

Humana's Region 1 provider network was initially established through our existing Medicare Advantage and Commercial networks. We have continued to develop our provider network since implementation, fortifying previously established relationships. Humana's Medicaid network includes the essential provider Sacred Heart Hospital, and also encompasses every single health system and hospital in the region, as well the majority of large IPA providers. Important Medicaid providers include Sacred Heart Health System, Nemours Children's Clinic, Escambia Community Clinics, West Florida Hospital, Health First Network, Fort Walton Beach Medical Center, Baptist Health System, North Okaloosa Medical Center, Santa Rosa Medical Center and Healthmark Regional Medical Center (a designated safety net hospital). Additionally, our Region 1 provider network includes three Federally Qualified Health Centers (FQHCs) (providing 11 locations) and nine Rural Health Clinics (RHCs) (providing nine locations) and one County Health Department. Our local mental and behavioral health provider, Access Behavioral Health (ABH), is contracted to manage and serve our enrollees' behavioral health needs. In addition, some of Humana's network providers are recognized as Patient-Centered Medical Homes (PCMH). In total, Humana's network has five PCMH groups with 147 providers across 21 locations in Region 1.

Since Region 1 presents unique challenges (e.g., significant MMA membership, a significant amount of rural areas and considerable provider availability shortages in multiple specialties), Humana continues to broaden our contracting activities' scope. Humana continues to grow our Region 1 provider network despite these challenges – see Table 1 below. We have accomplished this through tenacious recruitment activities, including stretching recruitment activities into Region 2. Specifically, we have reached out to all relevant needed providers in the contiguous counties of Bay, Holmes and Washington cities that are within a reasonable time and distance standard for enrollee access. In addition to recruiting in Region 2, we are recruiting providers in southern Alabama. We have worked to identify providers that not only support reasonable time and distance measurements, but also have active and enrolled Florida

Medicaid provider numbers. We are currently working on a contract with the University of South Alabama (USA) (hospital and physicians) to provide additional support for both pediatric and women's health services within the Escambia county catchment area.

Provider Type	Providers Added	Provider Service Locations Added
PCP	24	16
SPC	190	58

**measurement period from December 2015 through December 2016*

Despite our tenacious and ongoing recruitment activities and successful continued network growth, we continue to experience contractual ratio gaps in some specialties – see Table 2 below. We continually monitor these gaps through available resources like the Agency for Health Care Administration (AHCA) Master File (PML), American Medical Association (AMA) Website, Sunbiz, US News Health Report, Florida Department of Health, our competitors' directories and Google. In addition, we discuss availability shortages with our provider groups to encourage additional recruitment from outside the area. Prior to Amendment 11, Humana filed waivers for some of the specialties in which gaps remain. Humana will refile new waiver requests in January 2018.

Specialty	Status	Waiver Originally Filed
Dermatology	All contracting efforts have been exhausted	Yes
Endocrinology (Peds)	All contracting efforts have been exhausted	No
General Dentist	Working with vendor to recruit additional Dentists	Yes
Infectious Disease	All contracting efforts have been exhausted	Yes
Ophthalmology	Working with vendor to recruit additional Ophthalmologists	Yes
Optometry	Working with vendor to recruit additional Optometrists	Yes
Otolaryngology	All contracting efforts have been exhausted	Yes
Podiatry	All contracting efforts have been exhausted	Yes
Rheumatology	All contracting efforts have been exhausted	Yes

Notwithstanding these provider network challenges, Humana's Region 1 network continues to deliver steady performance with very few provider-initiated network terminations and steady enrollee growth. Since Medicaid Managed Care (MMA) implementation, our membership has grown from 51,733 enrollees and we are currently managing 53,278 enrollees (based on July 2017 834 enrollee files).

Expansion Region 2

As Humana began the process of building a new, wide-ranging and efficient Medicaid provider network for Region 2, we approached the process by leveraging our existing Medicare and commercial lines of business provider relationships who already provide services to approximately 9,000 enrollees today. These longstanding relationships gave Humana an initial base for a strong and competitive provider network.

Region 2 has a unique set of challenges, including provider availability shortages in multiple specialties and sparsely populated areas with multiple counties being designated as being Health Provider Shortage Areas with shortages of primary care, dental, and mental health providers. 12 of the 14 counties in the region are designated as rural. Additionally, according to the quarterly Statewide Managed Medicaid Care Report in Winter 2016, Region 2 has one of the highest proportion of unhealthy Medicaid enrollees in the State and one of the lowest number of available providers.

Humana's network is built on a combination of contracts and letters of intent (LOI). Feedback we often hear during network builds is that providers are unwilling to negotiate and execute full agreements until MCOs are awarded. Upon intent to negotiate notification, Humana will prioritize conversion of LOIs to contract agreements. Humana has successfully completed conversion of LOIs to contracts in many instances throughout the country during Medicaid network expansion activities, including in Florida, Kentucky, Illinois, and Virginia.

Similar to our previous successful provider network expansion efforts, Humana partnered with regionally dominant health systems and large multi-disciplinary groups that have solid foundations in each of the communities. The concentration of providers in Region 2 are located in the anchor counties of Bay and Leon, where we have secured Tallahassee Memorial Health, Capitol Regional Medical Center, and Gulf Coast Medical Center. In addition, we have secured contracts or LOIs throughout the balance of Region 2 counties with Calhoun-Liberty Hospital, Campbellton Graceville Hospital, Gadsden Memorial Campus, Doctors Memorial Hospital, George E Weems Memorial Hospital, Doctors Memorial Hospital Bonifay, Madison County Memorial Hospital. Additionally to the facilities, we have secured contracts and LOIs with 151 adult PCPs, 29 pediatric PCPs, 16 OB/GYNs, 92 adult physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 43 pediatric physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 204 medical specialists, 51 FQHC and RHC locations, 51 home health provider service locations, and 359 behavioral health providers. Humana will continue to improve upon building a full-functioning network that supports all enrollees in accessing and receiving the care they need. In addition, Humana's network has three PCMH groups with 39 providers across 18 locations in Region 2.

Expansion Region 3

As Humana began the process of building a new, wide-ranging and efficient Medicaid provider network for Region 3, we approached the process by leveraging our existing Medicare and commercial provider relationships who provide services to approximately 45,500 enrollees today. These longstanding relationships gave Humana an initial base for a strong and competitive provider network.
Region 3 has a unique set of challenges, including provider availability shortages in multiple specialties and sparsely populated areas with multiple counties being designated as Health Provider Shortage Areas of primary care, dental, and mental health providers. Region 3 has the largest total geography of all Florida Medicaid Regions with nine of the sixteen counties being designated as rural.

Similar to our previous successful provider network expansion efforts, Humana partnered with regionally dominant health systems and large multi-disciplinary groups that have solid foundations in each of the communities. The concentration of providers in Region 3 are located in the anchor counties of Marion, Lake and Alachua where we have secured contracts with Bayfront Health Brooksville, Bayfront Health Spring Hill, Citrus Memorial Hospital, Lake City Medical Center, Munroe Regional Medical Center, North Florida Regional Medical Center, Oak Hill Hospital, Ocala Regional Medical

Center, Putnam Community Medical Center, Regional General Hospital Williston, Seven Rivers Regional Medical Center, Shands Lake Shore Regional Medical Center, Shands Live Oak Regional Medical Center, Shands Starke Regional Medical Center, South Lake Hospital, UF Health Shands Hospital, West Marion Community Hospital and LOIs with Leesburg Regional Medical Center, The Villages Regional Hospital, and Lake Butler Hospital.

In addition to the facilities, we have secured contracts with 309 adult PCPs, 152 pediatric PCPs, 67 OB/GYNs, 217 adult physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 25 pediatric physical therapy, speech therapy, occupational therapy and respiratory therapy providers, 939 medical specialists, 97 FQHC and RHC locations, 17 home health providers, and 2,256 behavioral health providers. Humana will continue to develop a full-functioning network that supports all enrollees in accessing and receiving the care they need. In addition, Humana's network has eleven PCMH groups with 135 providers across 32 locations in Region 3.

Expansion Region 4

Humana brings significant experience in servicing a large membership base in the greater Jacksonville and surrounding counties across many products, including Medicare Advantage, Medicare PPO and Medicare Private Fee for Service and commercial lines of business. With our large portfolio of products, Humana currently provides medical coverage to approximately 71,000 enrollees. Humana's current Medicare and commercial footprint includes joint venture assets and an Access Center to provide guidance and support for our dual eligible population. Our joint venture opportunities have helped shape our local Medicare Advantage and commercial markets which gives Humana a proven track record to adeptly manage Medicaid enrollees. In addition, we have two Humana exclusive MSO partners who will be adding additional affiliated practices in 2018. These alliances in the Medicare Advantage and commercial network space allows us to leverage competitive market share through high quality, efficient providers who share an interest in value-based opportunities. Humana continues to lead the Jacksonville marketplace through our Bold Goal initiatives driving our communities to become 20% healthier by the year 2020. This initiative helps bring community partners, health organizations and hospitals together in support of health and well-being. Over 200 community organizations meet on a quarterly basis for a clinical town hall format to discuss barriers to health care and strategies to close health care gaps in the community. Our passion for population health makes Humana a strong partner to AHCA in expanding our Medicaid footprint.

In building our Medicaid provider networks, we partnered with regionally dominant health systems and large multi-disciplinary groups that have solid foundations in each of the communities. The concentration of providers in Region 4 are located in the anchor counties of Duval, Volusia, and Clay where we have secured contracts with Flagler Hospital, Halifax Health Medical Center, Halifax Health Medical Center Port Orange, Memorial Hospital Jacksonville, Orange Park Medical Center, St Vincent's Medical Center Clay County, St Vincent's Medical Center Riverside, St Vincent's Medical Center Southside, and UF Health Jacksonville and LOIs with the Adventist facilities of Florida Hospital Deland, Florida Hospital Fish Memorial, Florida Hospital Flagler, Florida Hospital Memorial Medical Center, Florida Hospital New Smyrna and Florida Hospital Oceanside. Also, Humana secured a LOI with Southeast Georgia Health System Camden Campus and Brunswick Campus to further support Nassau county with enrollee access.

Additionally to the facilities, with 334 adult PCPs, 193 pediatric PCPs, 141 OB/GYNs, 113 adult physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 175 pediatric physical

therapy, speech therapy, occupational therapy, and respiratory therapy providers, 763 medical specialists, 24 FQHC and RHC locations, 16 home health providers, and 2,832 behavioral health providers. In addition, Humana's network has seventeen PCMH groups with 263 providers across 76 locations in Region 4.

Expansion Region 5

Humana's Region 5 network was originally developed in 2012 in support of Humana's filing and being approved for both Pasco and Pinellas as expansion counties prior to MMA implementation. As expansion counties, we successfully managed approximately 2,000 Medicaid enrollees. Humana has extensive experience in servicing a large membership base of approximately 115,000 enrollees across many products, including Medicare Advantage, Medicare PPO, Medicare Private Fee For Service and commercial lines of business including exchange products which we leveraged to build and maintain a strong Medicaid network. Since 2012, we have continued to strengthen the network to provide support in our daily operations of Region 6 since both Pasco and Pinellas counties neighbor Hillsborough county and we experience a significant amount of MMA membership that seek specialty and ancillary services in Region 5 which is a typical pattern of care given the extremely close geographical proximity of the three counties. Our extensive Region 5 network has greatly improved enrollee access through having a greater availability of access to providers which has resulted in improved enrollee and provider experience and satisfaction.

The Humana Region 5 network consists of all of the hospitals and health systems with the exception of one, Adventist. Our provider network includes the following Region 5 designated statewide essential providers of Bayfront Health St. Petersburg and Johns Hopkins All Children's Hospital, as well Tampa General Hospital and their specialty physicians, Shriner's Hospital for Children and University of South Florida College of Medicine in neighboring Hillsborough County in Region 6. Additionally to the facilities, we have secured contracts a with 118 adult PCPs, 233 pediatric PCPs, 99 OB/GYNs, 158 adult physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 54 pediatric physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 486 medical specialists, 16 FQHC and RHC locations, 8 home health providers, and 2662 behavioral health providers. In addition, Humana's network has five PCMH groups with 65 providers across 22 locations in Region 5.

Existing Region 6

Humana brings extensive experience in servicing a large enrollee base in the Tampa Bay area across many products, including Medicaid, Medicare Advantage, Medicare Preferred Provider Organization (PPO), Private Fee-for-Service (PFFS), and a variety of Commercial lines of business, including exchange products. Through our large portfolio of products, Humana provides medical coverage for hundreds of thousands of enrollees, including large employer groups such as Hillsborough County Public Schools, Hillsborough County Sheriff's Office, and Pinellas County Public Schools, in which Humana provides a variety of medical coverage options to their employees and family members. Because of this rich history and experience, Humana has longstanding provider network relationships, which helped to initially foster a successful MMA network build, and continue to provide strength in our daily operations. The Humana Region 6 network consists of all of the hospitals and health systems in the region with the exception of one – Adventist. Additionally, our Region 6 provider network includes the following designated statewide essential providers: Tampa General Hospital (both the hospital and their specialty physicians), Shriner's Hospital for Children, University of South Florida College of Medicine, as well five FQHCs (providing 56 service locations), 13 RHCs, (providing 13 service locations) and one County Health

Department. Humana also secured a contract with Planned Parenthood with 11 locations across Regions 5, 6, and 8 to ensure enrollee access to additional alternative providers offering a wide variety of services such as family planning with extended hours including weekends. Additionally, All Children's Hospital, another state-designated essential provider, and Bayfront Medical Center in the neighboring Pinellas County (Region 5), support our enrollee pattern of care. In addition, some of Humana's network providers boast recognition as PCMHs. In total, Humana's network has twelve PCMH groups with 275 providers across 35 locations in Region 6.

Since MMA implementation, Humana has continued to experience steady enrollee growth in Region 6, beginning with 26,167 and we are currently managing 35,057 enrollees (based on July 2017 834 membership files). Our provider network also continues steady performance with very few provider initiated network terminations. We continue to grow our Region 6 provider network:

Provider Type	Providers Added	Provider Service Locations Added
PCP	50	49
SPC	424	71

**measurement period from December 2015 through December 2016*

Expansion Region 7

As Humana began the process of building new, wide-ranging and efficient Medicaid provider network for Region 7, we approached the process by leveraging many of our existing Medicare and commercial lines of business provider relationships who are providing services to approximately 70,000 enrollees today. These longstanding relationships gave Humana an initial base for a strong and competitive provider network.

Similar to our previous successful provider network expansion efforts, Humana partnered with regionally dominant health systems and large multi-disciplinary groups that have solid foundations in each of the communities.

The concentration of providers in Region 7 are located in the anchor county of Orange. We have secured contracts with all the health systems with the exception of one, Adventist. These contracts are Arnold Palmer Medical Center, Central Florida Regional Hospital, Dr. P. Phillips Hospital, Health Central, Nemours Children's Hospital, Parrish Medical Center, Orlando Health, Osceola Regional Medical Center, Oviedo Medical Center, Poinciana Medical Center, South Seminole Hospital, St. Cloud Regional Medical Center, Winnie Palmer Hospital for Women and Babies, Wuesthoff Medical Center Melbourne, Wuesthoff Medical Center Rockledge. Additionally to the facilities, we have secured contracts with 402 adult PCPs, 252 pediatric PCPs, 202 OB/GYNs, 60 adult physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 374 pediatric physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 1021 medical specialists, 31 FQHC and RHC locations, 16 home health providers, and 3845 behavioral health providers. In addition, Humana's network has fourteen PCMH groups with 184 providers across 64 locations in Region 7.

Expansion Region 8

As Humana began the process of building a new, wide-ranging and efficient Medicaid provider network for Region 8, we approached the process by leveraging many of our existing Medicare and commercial

lines of business provider relationships who are providing services to approximately 34,000 enrollees today. These longstanding relationships gave Humana an initial base for a strong and competitive provider network.

Region 8 has a unique set of challenges, including provider availability shortages in multiple specialties and sparsely populated areas with multiple counties being designated as Health Provider Shortage Areas of primary care, dental, and mental health providers.

Humana's networks are built on a combination of contracts and letters of intent (LOI). Feedback we often hear during network builds is that providers are unwilling to negotiate and execute full agreements until MCOs are awarded. Upon intent to negotiate notification, Humana will prioritize conversion of LOIs to contract agreements. Humana has successfully completed conversion of LOIs to contracts in many instances throughout the country during Medicaid network expansion activities, including in Florida, Kentucky, Illinois, and Virginia.

Similar to our previous successful provider network expansion efforts, Humana partnered with regionally dominant health systems and large multi-disciplinary groups that have solid foundations in each of the communities. The concentration of providers in Region 8 are located in the anchor counties of Lee, Collier, and Sarasota, where we have secured contracts and LOIs with Bayfront Health Port Charlotte, Bayfront Health Punta Gorda, Cape Coral Hospital, DeSoto Memorial Hospital, Doctors Hospital of Sarasota, Englewood Community Hospital, Fawcett Memorial Hospital, Gulf Coast Medical Center, Health Park Medical Center, Hendry Regional Medical Center, Lee Memorial Hospital, Naples Community Hospital, North Collier Hospital, Physicians Regional Medical Center Collier, Physicians Regional Medical Center Pine Ridge, Sarasota Memorial Hospital, The Children's Hospital of Southwest Florida and Venice Regional Bayfront Health

Additionally to the facilities, we have secured contracts and LOIs with 190 adult PCPs, 112 pediatric PCPs, 69 OB/GYNs, 225 adult physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 96 pediatric physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 454 medical specialists, 47 FQHC and RHC locations, 15 home health providers, and 1799 behavioral health providers. Humana will continue to improve upon building a full-functioning network that supports all enrollees in accessing and receiving the care they need. In addition, Humana's network has eight PCMH groups with 155 providers across 43 locations in Region 8.

Existing Region 9

Humana has serviced large Medicaid, Medicare Advantage, and Commercial enrollees for more than 20 years in Region 9, with stable, long-term network relationships that fostered a strong network of Medicaid providers. Humana's Medicaid network includes contracts with all of the major health systems, such as Martin Memorial Health System, HCA (including JFK Hospital) and Tenet. Our network also includes the essential provider, St. Mary's Hospital, and a large physician base that provides significant access to PCPs and specialists. In addition, Humana has unique Medicaid HMO and Medicare HMO partnerships with several Medical Service Organizations (MSOs) that provide primary care clinical management through recognized PCMHs. In total, Humana's network has thirteen PCMH groups with 132 providers across 24 locations in Region 9. We have approximately 39,000 enrollees assigned to providers in value-based arrangements. Additionally, we are contracted with 18 FQHC locations and 4 RHC locations. Some physicians in Region 9 provide walk-in primary care and specialty care telemedicine services for enrollees needing services after-hours or who are unable to get to a physician office

location. Since MMA implementation, Humana has continued to steadily grow membership in Region 9, beginning with 56,730 and we are currently managing 71,414 enrollees (based on August 2017 834 membership files). Our provider network continues steady performance with very few provider initiated network terminations. Humana continues to grow our Region 9 provider network:

Provider Type	Providers Added	Provider Service Locations Added
PCP	41	41
SPC	500	120

**measurement period from December 2015 through December 2016*

Existing Region 10

Humana has serviced large Medicaid, Medicare Advantage, and Commercial memberships for over 20 years in the Region 10, with stable long-term network relationships that fostered a strong Medicaid network. Humana's Medicaid network includes contracts with most major health systems' hospitals and physicians, including the South Broward Hospital District, Broward Health, HCA and Tenet. Humana's Medicaid network also includes essential providers Nova Southeastern University College of Osteopathic Medicine, Broward General Medical Center, and Memorial Regional Hospital. In addition, Humana has unique Medicaid HMO and Medicare HMO partnerships with several MSOs that provide primary care clinical management through recognized PCMHs. Many of those same providers are now part of Humana's Medicaid HMO network. In total, Humana's network has six PCMH groups with 309 providers across 15 locations in Region 10. We have approximately 88% of our enrollees assigned to providers in value-based arrangements. Additionally, we are contracted with 6 FQHC locations. Some physicians in Region 10 provide walk-in primary care and specialty care telemedicine services for enrollees needing services after-hours or who are unable to get to a physician office location.

Since MMA implementation, Humana has continued to experience steady growth of membership in Region 10, beginning with 44,129 and we are currently managing 71,951 enrollees (based on August 2017 834 membership files). Our provider network also continues steady performance with very few provider initiated network terminations. Humana continues to grow our Region 10 provider network:

Provider Type	Providers Added	Provider Service Locations Added
SPC	344	98

**measurement period from December 2015 through December 2016*

Existing Region 11

Humana has serviced large Medicaid, Medicare Advantage, and Commercial memberships for more than 20 years in Region 11, with stable, long-term network relationships that fostered a strong Medicaid network, even though 50% of the region is considered rural because of Monroe County. Humana's Medicaid network includes contracts with all of the essential providers and with the hospitals and physicians of most major health systems, such as Jackson Health System, University of Miami School of Medicine, Florida International University College of Medicine, Nicklaus Children's Hospital, HCA, and Tenet. In addition, Humana has unique Medicaid HMO and Medicare HMO partnerships with several MSOs that provide primary care clinical management through PCMHs. Many of those same providers

are now part of Humana's Medicaid HMO network. In total, Humana's network has thirteen PCMH groups with 623 providers across 57 locations in Region 11. We have approximately 73,000 enrollees assigned to providers in value-based arrangements. Additionally, we are contracted with 38 FQHC locations. Some physicians in Region 11 provide walk-in primary care and specialty care telemedicine services for enrollees needing services after-hours or who are unable to get to a physician office location.

Since MMA implementation, Humana has continued to experience steady enrollee growth in Region 11, beginning with 64,539 enrollees in 2014 to currently managing 81,763 enrollees (based on August 2017 83files), which is the highest current regional market share. Our specialist and ancillary provider network also continues steady performance with very few provider initiated network terminations. Humana continues to grow our Region 11 provider network:

Provider Type	Providers Added	Provider Service Locations Added
PCP	N/A	13
SPC	845	161

**measurement period from December 2015 through December 2016*

All provider types in Region 11, which includes Monroe County, are adequate to meet membership needs for access to care. Since we began building our MMA network in 2011, Humana has continued to recruit all required specialty types. Particular attention has been on Monroe County, which is considered rural, in an effort to maintain an adequate network for the approximately 317 enrollees Humana serves in that county. In doing so, Humana has continued to maintain strong partnerships with our contracted providers and subcontractors, and has created a culture of collaboration. Humana has maintained the same network in Monroe County throughout 2014 and to date. Additionally, considering our low membership in Monroe County, Humana continues to retain a strong network that includes two hospitals, seven pediatricians, seven adult PCPs, and over 50 various specialties such as Mental Health, Optometry/ Ophthalmology, Allergy, Cardiology, Hospice and Lab.

4. ONGOING NETWORK EVALUATION AND ENHANCEMENT

Humana measures and evaluates enrollee access to ensure our network meets or exceeds the Statewide Medicaid Managed Care requirements. We are continuously evaluating our Florida statewide provider network, as well as analyzing our capacity in each region, to ensure that enrollees have timely access to providers, including primary care physicians (PCPs), specialists and pharmacies. This includes measuring adequacy against contractual requirements, resolving network gaps and addressing barriers to care, including transportation and linguistic needs. We use network evaluation tools, including, but not limited to, timely access to care for enrollee's analyses; enrollee and provider feedback; and Geo Access reports to proactively target areas for network enhancement.

Our Provider Relations team and Quality Management Committee (QMC) monitor reports for all provider types from our network adequacy tools, on an ongoing basis, ensuring that we are proactively deploying network recruitment efforts, as well as quickly responding to network gaps as they arise. We also conduct strict oversight of our subcontractors to ensure the same level of access is monitored and maintained.

Provider Recruitment

Humana maintains a large network and actively assesses the overall network by provider type. We review and monitor the following key components in our network assessment: (a) the enrollee pattern of care, (b) provider types by geographic area including providers who service medically complex enrollees, and (c) access to care for all levels of providers. These services include, but are not limited to:

- Acute Care Hospitals
- Behavioral Health and Ancillary Services
- Compounding pharmacies
- Early intervention services
- Intermittent skilled nursing (pediatric andadult)
- Non-Emergent Transportation
- Occupational therapy (pediatric)
- Physical therapy (pediatric)
- Primary Care
- Private duty nursing services (pediatric)
- Skilled Nursing Facilities (SNF)
- Specialists including
  - Cardiologists (pediatric and adult)
  - Endocrinologists (adult)
  - Internists (adult)
  - Obstetricians/Gynecologists (adult)
  - Pulmonologists (pediatric and adult)
  - Psychiatrists (pediatric and adult)
- Specialized therapeutic foster care
- Speech-language pathology services P(pediatric)

We consider projections of future capacity planning in our network measurement and management process. Much of our network adequacy measurement process is based on updated enrollee counts and new maximum enrollment percentages. For instance, the enrollee to provider ratios and the time and distance measurements both require current enrollment files. As new enrollees are added, we take the enrollee growth and the geographic enrollment shifts into account to ensure adequate access to care, including linguistic and cultural needs and mitigation of barriers to care.

Significant provider contract re-negotiations can impact future network capacity planning. Humana's Provider Relations team maintains a strategic stratification of our major health system negotiations, so that no more than one health system in a market is under negotiation and has the potential for termination, as a result of the contract end date, at any given time.

Prior to any significant Humana or provider-initiated terminations, including hospitals, large provider groups, or subcontractors, Humana's provider relations team conducts a formal network termination impact analysis, using access analysis, open and closed panels, and provider-enrollee ratios, to verify that there will not be any enrollee access issues. When Humana initiates a termination, we conduct this analysis well ahead of the 90-day notification to the provider, and we notify AHCA within the contractual timeframe. In the event Humana receives a 90-day termination notice from a significant provider, our

provider relations team begins the formal network termination impact analysis. This termination analysis serves as the basis to identify gaps caused by potential terminations. Should we agree to accept the termination the provider, we use the analysis to prioritize targeted alternative providers or provider types that can serve as a substitute for the impacted providers.

How We Assess Network Barriers and Gaps

Humana has consistently met the reporting criteria of the PNV file reporting requirements since MMA implementation. We have identified several key barriers to reporting accuracy:

- Accuracy of provider Medicaid enrollment
- De-duping of provider NPI numbers and locations
- Single provider specialty assignment (i.e., providers that are contracted and credentialed with multiple specialties, but can only be "bucketed" to one primary specialty to support ratio counts)

While these barriers directly affect provider ratio counts, they do not reflect the true depth of the robust provider network and density of locations available to our enrollees based on time and distance measurements. Humana continues to work directly with AHCA and our provider network to resolve these barriers to network adequacy and ratio requirements.

Humana has consistently met the reporting criteria of the Provider Network Verification (PNV) file reporting requirements since MMA implementation. Humana performs a monthly assessment based on AHCA/PNV Adequacy Report. We assess the file against our network by provider type, and we apply our algorithm to proactively identify at-risk specialties for targeted recruitment opportunities. As a result, this process has allowed Humana to identify and rectify network gaps before they occur and our enrollees experience access to care issues.

Our Provider Relations team and Quality Management Committee monitor the reports for all provider types from our network adequacy tools, as well as from our subcontracted entities, on an ongoing basis ensuring that we are proactively deploying network recruitment efforts, as well as quickly responding to network gaps as they arise. Our comprehensive provider network monitoring efforts help us guarantee our enrollees have access to providers and services they need.

We also conduct systematic network adequacy measurement and management improvement in terms of appointment availability. Annually, Humana conducts "secret shopper telephone surveys" to assess wait times in scheduling appointments at provider offices. Providers in each region are chosen based on a statistically valid sample for the survey. The secret shopper survey monitors accessibility of appointments per Humana and AHCA regulatory requirements, and validates after-hours access to a healthcare professional.

The following are descriptions of our methods to identify enrollee barriers to accessing care. Our provider relations team and Provider 360 Committee collects and reviews this data monthly. Our Provider 360 Committee is a cross-functional team, which is chaired by Humana's Vice President of Florida Medicaid, and meets monthly to review provider trends from our Claims Department, as well as Availity (provider engagement) usage, quality measures, provider system usage, and provider grievances and inquires. The Committee includes representatives from our Claims Department, Grievance and Appeals Department, Credentialing Department, and Provider Relations.

Analytical Reporting

Access Analysis —Using a proven geographical analysis tool, the Quest Analytics Suite, Humana uses geocoding technology to precisely measure enrollee to provider adequacy access. This tool measures both distance and travel times against 200% of our enrollment for Regions 1 and 2and against 120% of our enrollment for Regions 3, 4, 5, 6, 7, 8, 9, 10 and 11. We analyze access for each provider specialty as listed in the Statewide Medicaid Managed Care contract by enrollee age/gender group as indicated by the provider type (e.g.,, pediatricians will be mapped to child members). Additionally, this tool enables us to identify access issues at the county and zip code level.

Provider to Enrollee Ratios—We analyze provider to enrollee ratios on a monthly basis against network standards established by Humana in accordance with AHCA requirements. We use these reports to assist us when we anticipate increased enrollment volume to ensure that our network has the capacity to accommodate additional enrollees.

Customer Feedback

- *Enrollee Surveys*—Humana will review CAHPS® and behavioral health enrollee satisfaction survey results annually to identify any access to care issues
- *Staff, Enrollee, Provider, and Advisory Input*—On an ongoing basis, Humana examines anecdotal information, including pattern of care, from various internal and external sources as it pertains to network adequacy, including information contributed by individuals and committees Some of these sources include the Provider 360 Committee, the Critical Access Team, and PCP feedback.

Meaningful Data

- *Complaints and Grievances*—Our Customer Service Department will forward enrollee and provider complaints and grievances reflecting access issues to the Provider Relations Department for review in real-time.
- *Out-of-Network Letters of Agreement*—We examine out-of-network referrals monthly to identify potential areas where provider specialty capacity needs to be expanded.
- *Cultural and Linguistic Needs*—Humana annually analyzes the cultural and linguistic needs of our enrollees and their geographic concentration to ensure appropriate access. For example, in Regions 9, 10, and 11, 36% of our enrollees report speaking Spanish at home. Thus, we strive to recruit providers who also speak Spanish to eliminate barriers to care. In our current network, 55% of our PCPs and 38% of our specialists speak Spanish.
- *Appointment Availability Audits*—We systematically conduct network adequacy measurement and management improvement in terms of appointment availability. Annually, Humana conducts “secret shopper telephone surveys” to assess wait times in scheduling appointments at provider offices. Providers in each region are chosen based on a statistically valid sample for the survey. The secret shopper survey monitors accessibility of appointments per Humana's and AHCA’s regulatory requirements, and validates after-hours access to a healthcare professional. Additionally, Provider Relations Representatives physically audit schedules during on-site visits.
- *After-hours Clinic Availability*—Humana annually conducts calls to PCP offices to ensure enrollees have after-hours access to care. Our Provider Relations Manager reviews results and assigns the appropriate Provider Relations Representative to immediately outreach to the provider if necessary. As noted in the provider manual and the provider contract, PCPs must provide 24-hour availability to enrollees by telephone. Through a direct connection with a clinician or an answering service, enrollees should be given the means to contact their PCP or a *back*-up physician to be triaged for care.

- *Open/Close Panels—On a quarterly basis, we review the panel status of our PCPs by region and county. If a PCP asks to freeze their panel, we review their capacity reports prior to closing the panels and require an updated attestation stating they are at capacity for all payors. We will require the PCP to have an action plan to hire additional physicians and/or physician extenders to be able to re-open their panels in 6 months. Additionally, we produce maps to visualize enrollee access to PCPs. We use this data to identify access barriers and implement additional targeted recruitment efforts.*

Humana will apply the same rigorous processes for identifying and resolving barriers and network gaps for any new regions awarded. For instance, we conduct statewide analyses weekly to guide our network expansion efforts for Regions 2, 3, 4, 5, 7, and 8, including time and distance reports and provider to enrollee ratio reporting. We also leverage our Medicare and Commercial provider networks to identify high performing providers to partner with, including providers participating in our STAR Rewards Program, Value Based Payment arrangements, or serving as Patient Centered Medical Homes, to serve our Medicaid enrollees.

Identifying Network Gaps

Humana creates time and distance reports using geographic access studies to ensure there are adequate numbers of providers, including but not limited to, primary care physicians, high-volume specialty providers, and hospitals in our network. Additionally, the ratio between a PCP and the PCP's assigned enrollees is calculated to ensure enrollees receive timely and appropriate services. Humana utilizes a software program called GEO Networks (Quest Analytics Suite Program), which factors for traffic density. Location comparisons are reported by county from the enrollee's home to the nearest source(s) of care. The software produces mappings and summaries of enrollees with desired access and enrollees without desired access. The provider relations team analyzes the results of those reports and develops action plans to mitigate gaps and address any deficiencies.

Ongoing Activities for Network Development Based on Identified Gaps and Future Needs Projections

Through our assessment tools, when network gaps or barriers are identified, our provider relations team initiates mitigation strategies. The following strategies are ongoing, consistent practices built into network management processes to mitigate identified gaps and barriers:

- Through our analyses, if we identify providers that are not meeting contractual requirements, such as failing to meet after-hours requirement or appointment availability standards, our Provider Relations Representatives will conduct provider education. If necessary, Humana will implement a Correct Action Plan to resolve any barriers to care within our Medicaid network, including subcontractors.
- We make every reasonable effort to contract with additional providers to resolve access issues. Should a provider refuse participation in Humana's network, we will secure a Single Case Agreement with the provider on a case-by-case basis.
- We use our collaborative provider partnerships with major health systems, ancillary providers and large IPAs, to identify providers for recruitment.
- Our provider nomination process enables enrollees to nominate a specific provider for recruitment.
- Our annual minority recruitment process targets providers to accommodate linguistic and cultural needs. We solicit feedback from minority associations, medical schools, and Native American tribes, as listed below.
    - Seminole Indian Tribe
    - Miccosukee Tribe

  - Florida Association of Minority Business Enterprise Officials
  - National Hispanic Medical Association (NHMA)
  - Minority Association of Pre-Med Students at Florida State University
  - Minorities in Medicine/Association of American Medical Colleges
  - Urban Promise
  - American Developing Smiles
  - American Developing Smiles
  - Florida International University
  - Florida Atlantic University
  - University of Florida
  - University of Central Florida
  - Florida State University
  - University of South Florida
- We maintain provider recruitment mailboxes where providers can electronically submit an application to become a Humana provider.
- Because we have several "on-the-street" Humana representatives, including our provider relations Representatives and quality improvement nurses, we receive insight about new providers moving into areas, enabling us to target them for recruitment.
- Through our review of single case letters of agreement and out-of-network utilization, we are able to identify and target non-participating providers for recruitment.
- We use a variety of resources to identify specific providers to target, including the AHCA Master File (PML), AMA Website, Sunbiz, US News Health Report, Florida Department of Health, our competitor's directory, and web searches.
- We harvest data identifying providers who are contracted for other Humana products with HMO provisions, and target these providers for recruitment.
- In areas where there are primary care provider shortages, we encourage our provider groups to recruit additional providers from outside the area, including physician extenders.
- We encourage our providers to offer telemedicine by reimbursing telemedicine in accordance with AHCA contractual requirements.

Identifying and Targeting the Right Providers Based on Gaps

Immediate, Short-term, and Long-term Interventions to Address Network Gaps

In situations other than continuity of care requests, we recognize that out-of-network utilization reports may identify potential gaps in our network. Once we identify and confirm a gap in our provider network, we design and implement an aggressive and prompt recruitment plan. We will notify and work with AHCA upon identification of major gaps or network disruptions. In situations where we have a shortfall or "hole" in our geographic access standards for a given provider type, we address it using the following mechanisms:

- Identify all providers that meet that provider type serving in the area through all available resources including the AHCA Master File (PML), AMA Website, Sunbiz, US News Health Report, Florida Department of Health, competitor's directories and Google. In addition, we discuss availability shortages with our provider groups to encourage additional recruitment of providers from outside the area.
- Recruit providers into the network who will bring that component of the network into compliance with the accessibility standards, if available.

- Provider PCP engagement: Humana may engage the enrollee's PCP to assist with identification of providers commonly used for referrals in his/her practice that are capable of providing and willing to provide care.
- In situations where we identify a network gap and have made what we believe is a highly reasonable offer to the provider(s) in a given area, identify there is a lack of available providers, and/or available providers are not actively enrolled with Florida Medicaid and are still unable to secure network participation, we will document our efforts to AHCA and request a waiver.
- Although maximum enrollment numbers were updated through Amendment 11, Humana continues to experience network gaps in specific regions. For instance, in Region 1 (which experienced an *increase* in the maximum enrollment number) we originally had 11 waivers on hold with the Agency for Health Care Administration. At the current time, we have additional waivers that are being prepared for filing utilizing the new Waiver template process. These waivers represent a significant lack of availability of providers in this region.

Specialty	**Status**	**Waiver Originally Filed**
Dermatology	All contracting efforts have been exhausted	Yes
Endocrinology (Peds)	All contracting efforts have been exhausted	No
General Dentist	Working with vendor to recruit additional Dentists	Yes
Infectious Disease	All contracting efforts have been exhausted	Yes
Ophthalmology	Working with vendor to recruit additional Ophthalmologists	Yes
Optometry	Working with vendor to recruit additional Optometrists	Yes
Otolaryngology	All contracting efforts have been exhausted	Yes
Podiatry	All contracting efforts have been exhausted	Yes
Rheumatology	All contracting efforts have been exhausted	Yes

In the absence of a contract, we will seek to work with needed providers through single-case agreements and will permit enrollees to seek care from these providers on an out-of-network basis.

When Humana determines that use of a non-par provider is appropriate, we employ the following steps:
- Determine if request is a plan benefit and if it meets medical necessity criteria
- Ensure no in-network providers within time and distance are capable of rendering service to enrollee
- If there is not an in-network option, then send the review to the Medical Director for approval
- Once approved, Humana works to negotiate rate, and the enrollee is seen for services.

In addition, Humana recognizes the potential need for enrollees to access critical services outside of their geographic area to ensure the enrollee receives the best care in a timely manner. Below are a few examples of complex cases that displays Humana's ongoing and proficient medical coordination between our clinical and network teams to ensure our enrollees receive the absolute best care in their time of need:

Region 1 example: A 37-year-old male patient was admitted to a participating in-network hospital in Region 1 with a diagnosis of Hashimoto's encephalopathy, seizures, and an altered mental status. Due to this enrollee's complex diagnosis and multiple comorbidities, the enrollee remained in this acute setting for three months. Once the enrollee's team of providers agreed to consider an alternative care setting based on the progress of the enrollee's condition, Humana assisted the enrollee with arranging and receiving post-acute care tailored to his diagnosis. Humana identified several long term acute rehabilitation facilities that specialized in complex neurological rehabilitation rather than utilizing a standard rehabilitation facility, based on the provider team's recommendations. Because there were no beds available at these neurological rehabilitation facilities available In Florida, we extended our search beyond state lines. The enrollee was accepted as a patient by a neurological recovery center in Texas. Humana's clinical team worked very closely with our provider network team to successfully transfer the enrollee, which required air transfer to the facility. Prior to the transfer, Humana's provider network team successfully negotiated a letter of agreement (LOA) with the facility to ensure the services would be accurately reimbursed. The enrollee remained at this facility for two months. Once the enrollee's condition showed improvement, we arranged for the enrollee to be transferred back to a local non-participating neuro-restorative facility to allow the enrollee's family to be active in the enrollee's care and support him in his continued progress of rehabilitation.

Region 11 example: A newborn born baby was delivered at Jackson Memorial in Miami-Dade County with a rare lethal, congenital defect of the windpipe called a type 4 laryngeal cleft. Humana's clinical team called every facility in Florida and, despite a thorough search, no surgeon in Florida was able to repair the enrollee's defect. We identified that the best center to treat this defect was located at Cincinnati Children's Hospital. Humana's clinical team and the provider network team worked to arrange to transfer of the newborn by air ambulance to the Cincinnati Children's Hospital intensive care unit. Prior to the transfer, Humana's provider network team successfully negotiated a letter of agreement with the facility to ensure the hospital would be paid for their services. The surgery was successful and after several weeks the baby was transferred by air ambulance back to the intensive care unit at Jackson Memorial to be reunified with her family.

Humana tracks and trends LOAs via a tracking grid for each. Our contracting teams perform analysis on a periodic basis to identify potential contracting opportunities. For example, common LOA types due to shortage of providers wiling to contract with Medicaid are the Home Health providers in Regions 1 and 6 because of a lack of availability (especially in rural areas) and extremely low home health skilled nursing and therapy rates.

Outcome Measures/Evaluation of Interventions to Fill Network Gaps

We base outcome measures and evaluation of Humana's intervention efforts to fill network gaps and resolve barriers on the following:

- Increase or reduction in the number of provider type gaps as measured using the AHCA required and other network measurement criteria described above (provider-to-enrollee ratio and time/distance standards, using the AHCA network measurement tool).
- Requests for specific services to be provided by non-par providers, or out of area providers. These requests are used as a measurement of the network adequacy status, and are collected and acted upon by the network team. The requests reach us through the portals that support provider services and customer services lines, as well as from the clinical management teams. The requests are generated from:

- PCPs seeking specialist referral services
- Enrollees
- Hospitals
- Specialists
- Humana Case Managers (CMs) who identify and report a need for either a specific provider or provider type

Humana's recruitment efforts include a variety of means to maximize success. These include on-site, face-to-face meetings with providers, telephonic outreach, and use of existing provider relationships to reach other providers. If willing providers are available that can address the specific need, our provider relations team will contact these providers to arrange a face-to-face meeting to recruit the provider into our network. Conversely, if the required provider type is not available or unwilling to contract with Humana, we will offer the enrollee transportation to the nearest qualified provider, make arrangements with out-of-network providers, or coordinate care through available telemedicine conduits.

Credentialing

Humana conducts rigorous credentialing and recredentialing of all providers in our network. Credentialing is one of the quality assurance components NCQA has regularly assessed in awarding Humana's Florida Medicaid plan accreditation. Humana has earned 100 percent of the available points on all NCQA surveys conducted between 2011 and March 2017. Our credentialing, recredentialing, and provider loading processes meet all state and federal requirements, as well as NCQA guidelines. Our process confirms that the provider has a current valid state license, holds current professional liability insurance, has completed the appropriate education and training for their specialty, and is free of sanctions by federal, state, and local authorities prior to the execution of a provider contract.

Providers are an essential part of Humana's mission to assist enrollees in achieving life-long well-being. Through our credentialing and recredentialing process, we ensure contracted providers are qualified to deliver the highest quality of care to our enrollees. Humana's proprietary workflow management tool, Accelerated Provider Exchange (APEX), quickens and automates the credentialing, provider load, and provider demographic update processes allowing us to achieve best in class turnaround times. To ensure providers are ready to provide services to Humana enrollees, we require all providers to complete a thorough credentialing process and ongoing recredentialing process.

5. ENGAGING BEST-IN-CLASS PROVIDERS

Humana believes the key to successfully engage best-in-class providers is to develop a partnership working towards a common goal of delivering quality care to our enrollees. To achieve this goal, we support our providers by providing the necessary tools and resources and by rewarding the providers that serve our enrollees best. Humana's orientation education, ongoing communication and support, and innovative ideas help us to engage and retain excellent providers.

a. Starting with a Common Goal

Our provider engagement model is built around attaining a mutual goal of improving quality outcomes by aligning on the common tenets of this goal, which include financial incentives, provider partnership, administrative simplicity, and provider satisfaction. The foundation of our model is to ensure providers are satisfied with the level of support and attentiveness as a result of our responsive and comprehensive

provider engagement model. Thus, we continually measure provider satisfaction to identify opportunities for improvement in how we interact and support our providers. A key measure of provider satisfaction is our provider network termination rate. Since 2014, our overall provider network termination rate for our MMA and LTC programs has been less than 1% month-to-month. Additionally, our hospital network has stayed stable since the implementation of the MMA program.

b. Initial and Orientation Training

Humana's comprehensive provider training program allows to us achieve more sophisticated, integrated, and engaged partnerships. Provider training activities – both initial and ongoing – are an important component of our relationship-building efforts. Humana offers a variety of training formats to ensure that information is accessible and convenient and accommodates providers' differing needs (organizationally and among individual staff) at all points in time.

Humana has been providing healthcare services for more than 50 years, and we understand that each provider's circumstances are different. We have structured our training programs to support a variety of people and in recognition of their different knowledge bases, needs, and learning styles. Our trainings are flexible and scalable; we provide web-based trainings for busy providers, conference-style trainings to a provider/staff, and one-on-one trainings. The training formats we use include face-to-face orientation and monthly meetings, Humana's Provider Handbook, materials available on our website, and our Availity portal, quarterly provider newsletters, and ongoing support available from our Provider Relations Representatives.

We believe our existing network and strong relationships with providers help strengthen the SMMC program operationally through enhanced access and improved quality outcomes for our enrollees. Thus, we use a cross-functional, integrated, and "high-touch" approach to support and train providers. This "high-touch" approach begins once a provider is credentialed and contracted. Humana's training begins during the negotiation of their provider agreement with Humana or during a single case agreement. Once the provider is considered an active and participating provider, our Credentialing Department will send a welcome packet with a copy of the monthly training calendar, as well as a list of all "on-demand" online trainings we offer, and a provider relations representative will schedule an orientation meeting within 30 days. All providers new to Humana's network receive orientation training from their assigned provider relations representative, who will also serve as their point of contact for all future trainings. This training is their opportunity to understand Humana operations and processes, provider roles and responsibilities, and the vast resources available to them. We conduct the initial orientation in the provider's office, which includes information on all necessary topics to help ensure a mutually successful partnership.

Below is a comprehensive list of all of the topics covered during the orientation training:

- Introduction to the Florida SMMC program
- Contracting and credentialing
- Access to care requirements
- Web resources
- Preauthorization and notification process
- Claims processing and claims resolution process
- Continuity of care
- Enrollee special needs consideration

- Enrollee screening for alcohol and substance abuse
- Clinical management programs
- Patient-center medical home
- Medicaid risk adjustment
- Medicaid Advisory Panel
- Service level agreements
- Agency for Health Care Administration (AHCA) provider based guidelines
- Annual compliance trainings
    - Humana Medicaid Orientation
    - Cultural Competency
    - Health, Safety and Welfare (HSW)
    - Fraud, Waste and Abuse (FWA) and Business Ethics
- Ob/GYN training (for Ob/GYNs only)
- Critical incident reporting
- Disenrollment/transfer of enrollee
- Helpful numbers and regionally specific Quick Reference Guides
- Florida Medicaid Provider Handbook
- Behavioral health tool kit for Primary Care Providers (for PCPs only)
- MMA provider incentive program (MPIP)
- EHR and HIE

The Provider Handbook includes detailed information on claims submission and payment processing, including by not limited to:

- Educational information regarding claims submission, payment processes, and explanation of a clean claim, including standards for submitting a clean/complete claim and following correct coding requirements.
- Information on how to submit a claim directly through Availity or to Availity through their existing clearinghouse to Humana.
- Information on how to submit a standard CMS 1500 and UB04 for paper submission and web claims submissions.
    - For those providers who elect to submit claims electronically, companion guides are made available for 837i and 837p transactions.
- Information on the correct use of ANSI X12 837 transactions, CMS 1500 or UB04 forms, and Availity electronic claims submission to ensure required data for a clean claim

Humana makes all information included in the Provider Handbook available to all providers via the provider website. Additionally, during the provider's orientation, we create an initial assessment as a baseline to identify if providers are correctly billing for services in accordance with State guidelines and the requirements of the provider contract. This baseline helps to determine frequency and content focus of future trainings needed.

Since 2013 we have conducted provider orientation training for more than 4,000 providers in Florida. We use provider feedback to continually modify and improve our provider training content, materials, and delivery sources.

c. Ongoing Training, Communication, and Support

Humana understands that for a number of reasons, including staff turnover, providers need refresher trainings. Providers are assigned a Provider Relations Representative, who is their point of contact for all trainings. We routinely review internal policy changes, and those of governing agencies, to ensure that our trainings capture up-to-date and relevant information. We seek to schedule these training sessions at the provider's convenience at a time when there is little/no patient care activity, and when as many provider staff as possible can attend. One-on-one trainings may be conducted in the provider's offices or at a Humana location. Conference-style, region-based trainings are held in a central location (e.g. hotel conference room, Chamber of Commerce facility, etc). We welcome and encourage AHCA representatives to attend any education seminars we conduct. Additionally, Humana conducts webinars twice per week with an opportunity for provider questions and answer sessions. All webinar schedules are posted in advance on our provider website with a description of training subject matter and time and date. If we identify that a provider needs additional training or if a provider requests it, we conduct follow-up provider service training through telephonic contact and/or face-to-face training, including on-site training for hard-to-reach providers, including those in rural regions.

Humana's Provider Relations Representatives visit providers regularly. During these visits, we deliver information to help the provider understand their overall performance metrics and ascertain whether their staff have any questions or training needs. During visits that occur subsequent to a recent training session, we ask whether there are any issues related to the prior training that they would like more information about or refresher information. We also use these visits as a mechanism to hand deliver important communications and publications that may previously have been mailed or posted to our provider website.

Furthermore, we recognize that provider education is not a static process, and that it may be necessary to reach providers in different ways, at different times, and through different delivery methods. Humana utilizes four simultaneous avenues of training to ensure we are supporting our providers in delivering the best care to our enrollees, which include:

1.) Face-to-face training
2.) Web-based individual training
3.) Webinars
4.) Available resources and "on-demand" training

Recognizing that PCPs serve as the medical home, our Provider Relations Representatives visit PCPs monthly. Below is a list of reports and data shared with PCP offices on a monthly basis:

- Performance profile/report card – snapshot used to review encounter rates, admits and days per thousand, average length of stay, ER visits per thousand and pharmacy opportunities
- New enrollment and disenrollment reports – reports listing all new and disenrolled enrollees from the PCPs panel
- Top 40 enrollees – report identifying the top 40 enrollees with highest incurred cost
- Top 40 drugs – report identifying the top 40 drugs prescribed and evaluation of any opportunities for generic equivalencies
- HEDIS reports including identification of gaps

- Encounter data – provides a 12-month trend and benchmark analysis for PCP encounters and fee for service claims by incurred and processed dates
- ER trends – report identifying enrollees who have had repetitive and excessive ER visits during a specific period of time
- Delivery system reports – provides a list of highly utilized, efficient specialists and mandatory networks available for enrollees
- Network changes – report that outlines changes to the network that may impact the PCP and enrollees
- Newsletters – quarterly publications that summarize topics vital to provider practices
- Mailings – various imperative communications that may have been mailed to their office that are reinforced during visits

Ongoing Claims and Payment Training

Humana's Provider Services Department supports providers and offers assistance with any claims-related issues they may be facing by phone, in-person, and through the web. Humana continuously monitors its providers' compliance with clean claim submission requirements via its claims data and analytics system. This system allows Humana to track claims-related performance measures such as timeliness of claims submission, percentage of clean claims, and percentage of denied claims for each individual provider. For example, we have improved our process since 2015, when on average 89 percent of electronic clean claims were paid within 10 days. In 2016, nearly 99 percent of our electronic clean claims were paid within 10 days. If a provider is identified as requiring assistance with claims submission, our Provider Relations staff offers two avenues for education: a provider relations representative may either contact the provider by phone or visit the provider's office for one-to-one training.

Web-based Individual Training:

Humana provides web-based training through the Availity portal, which is our health information network that optimizes information exchange between multiple health care stakeholders through a single, secure network. The Availity portal encompasses business and clinical services, and supports nationwide real-time and batch electronic data interchange via the web and through business-to-business integration. Recorded web-based trainings may be taken anywhere and are available 24 hours a day/seven days a week. In addition, instructor-led training is available at least one day per week. Through Availity, providers and their staff may access training related to:

- Claims management
- Authorizations management
- ERA/EFT management
- Clinical Solutions
- Electronic Data Interchange (EDI)
- Eligibility and Benefits Inquiry
- Patient Responsibility Estimator Tools
- Payment Collection and Processing
- 5010 Overview
- Annual Compliance training
    - Humana Orientation
    - Cultural Competency
    - Health, Safety and Welfare
    - Fraud, Waste and Abuse and Business Ethics

Providers are trained on compliance concepts and materials during orientations and are also required to complete them on an annual basis. Humana sends multiple reminders to providers, through email, fax blast, and phone calls, throughout the year using varying communication mechanisms to ensure these important compliance topics are met.

Educational Provider Materials

Humana distributes a provider handbook to all our providers, which includes a comprehensive review of educational topics, quick reference guides regarding prior authorizations, and enrollee-covered services materials. After a provider executes an agreement with us and during their orientation training, we review the handbook contents as well as any other information related to our health plan. Our handbook contains comprehensive information about a variety of topics and is a contractual extension to their provider agreement. Below is an overview of the topics covered in the handbook:

- MMA Program Description
- Covered Services
- Emergency Service Responsibility
- Child Health Checkup
- Provider Complaints
- Grievance System
- Chronic and Complex Conditions
- PCP and Other Provider and Subcontractor Responsibilities
- Telemedicine protocols and requirements
- Delegation or Subcontract Function
- Florida Health Information Exchange (HIE)
- Preauthorization and Referral Procedures
- Medical Records Requirement
- Claims and Encounter Submission Protocols and Standards
- Cultural Competency Plan
- Enrollee Rights and Responsibilities
- Fraud and Abuse Policy
- Health, Safety and Welfare
- Patient-Centered Medical Home (PCMH)
- Medicaid Advisory Panel
- Provider Rewards and Incentives
- Provider Resource Website
- Provider Training
- Availity
- Helpful Numbers

Humana also sends out provider newsletters on a quarterly basis and email blasts with important information pertaining to policy changes, quality, industry changes, and medical protocols. EAdditional examples of provider communications may include:

- Quality Reports
- Annual AHCA and CMS compliance training/communication on Fraud, Waste and Abuse and Cultural Competency
- Letters/emails/faxes

- Committee minutes or reports
- Provider bulletins, notices, and newsletters
- Online and hard copy reports
- Peer Review Committee communications related to potential quality of care issues
- Clinical newsletters
- Office visits

Provider Website Materials

Humana has a dedicated webpage where providers can easily access Medicaid provider materials. We also prominently display urgent updates and specific quality initiatives for our providers, such as annual checkups or breast cancer screenings. The following is a list of some of the information available on our provider website:

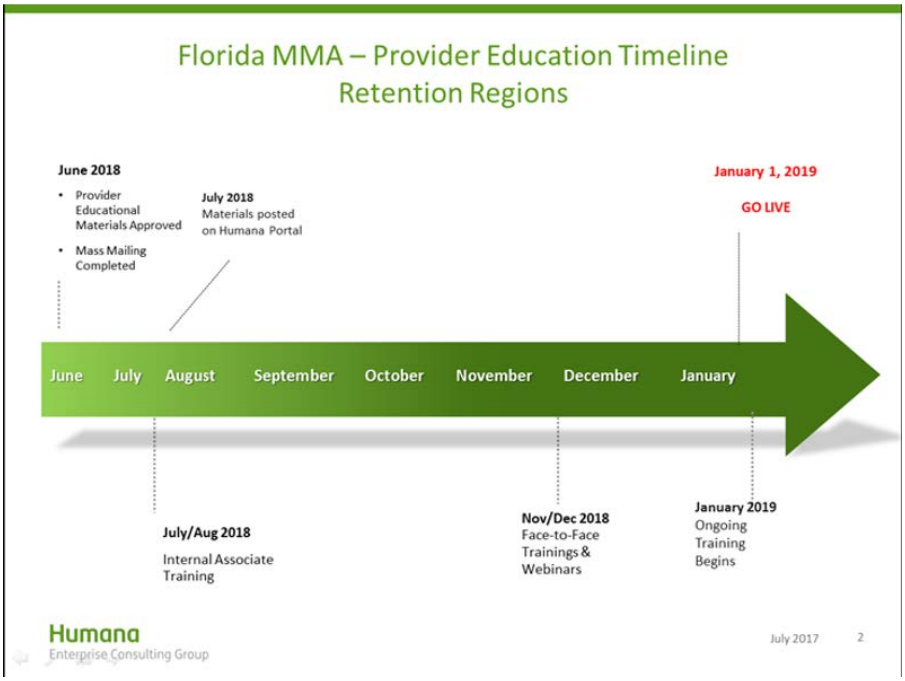
- Provider handbook
- Region-Specific Quick Reference Guides
- Assistive Care Quick Reference Guides
- Medicaid preauthorization and notification list
- Enrollee handbook
- Cultural competency plan
- Provider tools to address gaps in care
- Prescription Drug Guide
- Florida Medicaid preferred drug list
- Behavioral health tool kit
- Home health visit information
- Referral to Medicaid case management form
- Urgent updates
- Breast pump coverage
- Minority recruitment and retention information
- Provider nomination form
- Florida Medicaid Vaccines for Children (VFC) Program and child blood lead screening
- Crossover claims
- Child health check up
- Medicaid eligibility for newborn babies
- Healthy behavior programs
- Quality resources
- Program information
- Provider handbook
- Provider directory
- Helpful numbers
- Provider training calendar
- Electronic billing
- Provider ebilling companion guide

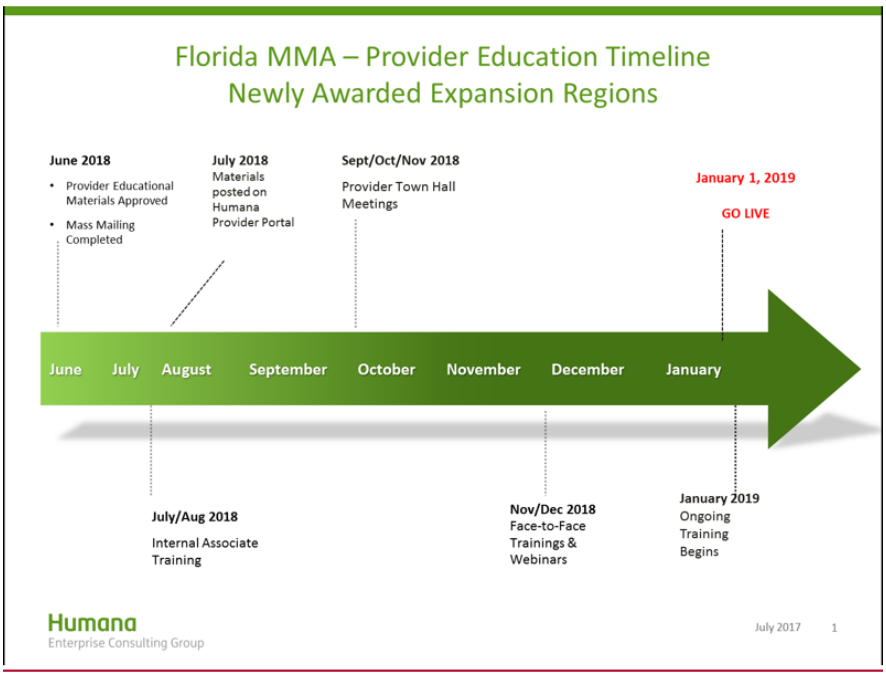
Review of Provider Claims for Training Opportunities

Our provider relations team has a comprehensive process to review claims reports. On a daily basis, our team reviews Availity rejection and denial reports for claims submitted electronically. On a monthly basis, our Provider 360 Committee reviews global provider claims, including electronic and paper claims, trends to widespread issues we need to address with our providers. On a quarterly basis, our provider outreach and provider contract representatives use these reports to provide feedback and identify training needs. Training methods include webinars, town halls, individual provider training, and newsletters. To assess the effectiveness of our trainings and educational materials we send out surveys to providers seeking feedback on the training.

The combination of our new provider orientation education training and ongoing training as well as our daily operational experience with our providers has laid the foundation for a strong training program that will be required for Humana's MMA expansion. We plan to approach provider education for the upcoming 2019 implementation through two strategies – one for existing/retention Regions and one for new, expansion Regions.

See Table 1 and 2 below





d. Rewarding Best-in-Class Providers

Humana's interactive and comprehensive provider engagement model is the basis of our provider retention efforts and a significant differentiator of Humana's provider network management strategy. Our PCPs and high-volume specialists have a relationship with an assigned Humana Quality Improvement Nurse and a Provider Relations Representative.

Provider Engagement in our Value-Based Payment Model

An effective provider engagement strategy enables the formation of true partnerships and optimizes the payer-provider relationship. Humana has extensive experience in creating modernized, value-based engaged provider partnerships that involve substantial financial risk/reward sharing and performance-based incentives for providers, which support our provider retention efforts. We designed our program to support the needs of providers, working constructively with providers from each organization regardless of their organizational size or level of technological sophistication. Humana provides a step-by-step opportunity to earn pay-for-performance financial rewards for achieving certain key clinical measures of success. As providers mature in their ability to achieve basic milestones, additional measures are added or increased outcome performance targets are established which allow providers to earn even greater pay-for-performance rewards.

Humana has a sophisticated value-based model in Florida to establish financially and quality aligned incentive contracts with our providers. These agreements include full risk (global) capitation, shared savings model, quality-cap bonus, and MMA Physician Incentive Program payments to reward our providers for providing high-quality care. Humana's model is designed to drive greater provider engagement and better clinical outcomes based on the idea that thoughtful reward incentives, packaged with consultative provider guidance and care gap alerts, integrated with comparative metrics and benchmarks helps providers to raise the bar in quality. Our model delivers an improved ability for providers to more rapidly identify high-risk enrollees, improve chronic condition care delivery, reduce medical costs, and improve enrollee satisfaction. To ensure our providers remain in good standing,

Humana supports our providers with several tools including enrollee data and provider performance metrics to keep our providers updated on a regular basis. This data includes a peer-to-peer performance indicator that keeps the provider aware of their performance within the network. Our provider engagement program allows Humana to truly partner with our network partners and optimize the payer-provider relationship, which keeps providers satisfied with their financial incentives and the care they are delivering.

Through our initial training and orientation, ongoing training programs, resources, and value-based payment model, Humana has built a best-in-class provider engagement model. However, we recognize that tools, resources and rewards aren't the only way to keep providers engaged. Providers need a corporate partner that is also easy to work with. That's why we strive to remove barriers and administrative burdens.

6. ACCESS TO CARE FOR ENROLLEES

At Humana, we strive to ensure enrollees can readily access appropriate care tailored to their needs from our extensive network of providers within the system, and we provide them multiple access points to find necessary information for timely access to services. Our access standards meet or exceed with AHCA as well as State and federal requirements.

We continuously monitor, analyze, and adjust access needs, types, and methods to ensure we provide a robust network of high-quality, contracted network providers, while striving to ensure we have the appropriate number of providers, provider-to-enrollee ratios, provider types, and availability to effectively service the diverse needs of Florida's enrollees. This helps us identify opportunities to improve our network and enhance access to care for our enrollees.

a. Analysis of Timely Access to Provider Services

Humana conducts various audits to ensure our providers are maintaining accessibility standards. We measure appointment availability standards through initial credentialing and recredentialing site visits, complaint data, capacity reports, and provider self-reporting. Humana also physically audits appointment schedules on a random basis and at least annually by visiting provider offices.

Humana currently conducts audits of appointment availability and office waiting times for PCPs and will expand our processes to the specified provider types, which include pediatric and adult cardiologists, pediatric and adult pulmonologists, adult endocrinologists, adult internists, pediatric and adult psychiatrists, adult obstetricians/gynecologists, and pediatric and adult-licensed mental health clinicians. In 2016, our PCPs averaged 1.2 days for a sick patient appointment, 2 days for an urgent care appointment, and 8 days for a well care appointment, exceeding AHCA's requirements. All participating providers are expected to render care in full compliance with AHCA access guidelines. Humana will comply with the Agency's contractual requirements for Timely Access Standards, as listed below, and actively monitor adherence to these standards.

1. Appointments for urgent medical or behavioral health care services shall be provided:
    (a) Within forty-eight (48) hours of a request for medical or behavioral health care services that do not require prior authorization.
    (b) Within ninety-six (96) hours of a request for medical or behavioral health

care services that do require prior authorization.

2. Appointments for non-urgent care services shall be provided:
   (a) Within seven (7) days post discharge from an inpatient behavioral health admission for follow-up behavioral health treatment.
   (b) Within fourteen (14) days for initial outpatient behavioral health treatment.
   (c) Within fourteen (14) days of a request for ancillary services for the diagnosis or treatment of injury, illness, or other health condition.
   (d) Within thirty (30) days of a request for a primary care appointment.
   (e) Within sixty (60) days of a request for a specialist appointment after the appropriate referral is received by the specialist.

To facilitate timely access to appointments, routine care, and urgent care services, we communicate the following standards to all network physicians through a variety of channels such as during site visits, the Provider Manual Appendix, and provider training materials posted on Humana.com and Availity.com.

APPOINTMENT TYPE	DEFINITION	STANDARD
Emergent	A sudden, unexpected situation which could become a threat to life or limb if not diagnosed and treated immediately (chest pain, excessive bleeding, constant/severe shortness of breath, severe abdominal pain, severe injury, etc.)	Immediately
Urgent	An unexpected illness/injury requiring treatment to prevent serious decline in health, but not life threatening (ear infection in child, fever lasting 1-2 days, persistent symptoms of illness lasting 3-4 days)	Within 24 hours
Routine or Primary Care	Non-urgent care for symptomatic issues (rash, arthritis, return visit to check blood pressure, etc.).	30 calendar days
After-hours access	Telephone information on how to access care after PCP's office has closed	Answering service capable of paging physician or answering service with instructions to call Humana First and/or instructions to go to nearest Emergency Room if emergent/urgent

Access Audit Process

Humana measures and evaluates enrollee access to appointments and wait times on an ongoing basis to ensure network providers meet the required standards. We also conduct strict oversight of our subcontractors to ensure they secure and monitor the same level of access.

We choose a statistically valid sample of providers within a region for a number of different access audits, including appointment availability and wait time for both urgent and routine visits. These audits monitor accessibility of appointments per Humana and AHCA's regulatory requirements and corroborate appointment wait time. Humana measures these appointment availability standards through initial credentialing site visits, complaint data, and provider self-reporting.

On a quarterly basis, Humana conducts a statistically valid sample of "secret shopper telephone surveys" to assess wait times in scheduling appointments at provider offices. The Provider Relations Manager reviews the results and assigns the appropriate provider relations representative for immediate outreach to the provider. Humana also physically audits appointment schedules by visiting provider offices annually. On a random basis, a Humana Provider Relations Representative will visit a provider's office to monitor enrollee wait times, ensuring the provider is meeting accessibility standards. We also review enrollee surveys, provider surveys, complaints and grievances, and staff and provider input for insight into access issues. Our Provider 360 Committee reviews the results from these sources on a monthly basis. While Humana currently conducts the above audits and measures for PCPs, we will expand these efforts to include the listed specialty types.

Telephonic and Visit "Secret Shopping"

We select the top 40% of PCPs in each region based on total enrollee count to survey via telephone or face to face. The secret shopper survey monitors accessibility of appointments per Humana and AHCA's regulatory requirements and corroborates after-hours access to a healthcare professional. (See Table)

The Provider Relations Representative contacts the Primary Care office with symptoms of a simulated condition/illness to assess the next available appointment.

Failure by the PCP center to meet standards will result in the following action steps:

- The center's panel will be immediately frozen to new enrollees
- A corrective action plan shall be implemented with the expectation that the center shall regain compliance with Humana's standards within a 30-day period
- The center shall be re-audited at the end of the 30-day corrective action period
- If the center is found to have regained compliance with Humana's accessibility standards, then the center's panel freeze shall be lifted
- In the event that the center does not improve accessibility standards and regain full compliance within the 30-day corrective action plan window, the center may be provided a notice of termination, with such termination to become effective immediately.

2016 Average PCP Wait Times by Number of Days

Average PCP Wait Times by Number of Days				
Region	**Total Number of PCP Locations Surveyed**	**Measure: Routine Sick Patient Care**	**Measure: Urgent Care**	**Measure: Well Care Visit**
Region 1	129	2	1.3	10.3

Region 6	335	1.8	1.2	18
Region 9	38	1.8	1.2	4.7
Region 10	33	2	1.3	3
Region 11	36	3	1.1	4
Average Wait Times (all regions)	**571**	**1.2**	**2**	**8**

Source: Timely Access/PCP Wait Times Report

Delegated entities (e.g., subcontractors, physician hospital organizations contracting with Humana on a capitated basis) shall collect data regarding appointment availability or other applicable functions utilizing Humana standards, and send written summary reports with supporting documentation to the Health Plan. Below is an example of Access Behavioral Health's survey results in Region 1 from 2016.

Access Behavioral Health Region 1: Appointment Time Access

Access Standard	Percentage of Network High-Volume Providers Who Meet Standard	Percentage of Network Practitioners Who Meet Standard
Emergent: within 6 hours	100%	100%
Urgent: within 48 hours	100%	100%
Routine (Initial): within 7 days	100%	74%
Follow up: Within 30 days	100%	100%

Additionally, in 2016, Beacon's Provider Relations team initiated a platform to ensure that Medicaid enrollees have timely access to care. Beacon's staff contacts 100 percent of the network providers (MDs, DOs, and ARNPs) each quarter and ask questions to determine the provider's ability to accommodate Humana/Beacon Medicaid enrollees. If a provider is unable to accommodate an enrollee according to Humana's access standards, Beacon ensures that the provider has an alternate plan in place to assure that these enrollees have access to care in urgent, emergent, and routine situations. Once the calls have been made to the providers, any changes that need to be made in the system are documented via Beacon's management information system. If additional documentation is needed prior to creating these events, Beacon's Provider Relations staff follows up to obtain it from the provider. Below is an example of Beacon's survey results in Regions 6, 9, 10 & 11.

Beacon: Appointment Time Access

Survey Question (reflects current Agency timely access standards)	Q1 Results
Can you accommodate a Humana/Beacon Florida Medicaid enrollee, who has an emergency, 24 hours per day, 7 days per week?	97.8% (176/180)
Can you accommodate a Humana/Beacon Florida Medicaid enrollee in need of urgent care within one (1) day of the request?	97.8% (176/180)
Can you accommodate a Humana/Beacon Florida Medicaid enrollee in need of a behavioral health routine initial evaluation ("sick care") with an appointment within one (1) week of the request?	92.8% (167/180)

Can you accommodate a Humana/Beacon Florida Medicaid enrollee in need of a behavioral health routine follow-up appointment ("well care") within one (1) month of the routine initial evaluation visit?	97.8% (176/180)

Future Enhancements

Humana will operationalize a plan in 2019 to increase the frequency of the timely access to service survey to a quarterly basis. We will also incorporate a statistically significant sample of designated high-volume specialty provider type, which include cardiologists, pulmonologists, endocrinologists, internists, psychiatrists, OB-GYN, and licensed mental health clinicians.

After-Hours Care Access

Humana also conducts calls to PCP offices to ensure enrollees have access to care during after-hours at least annually or as issues arise on a more frequent basis (See Table 1). Our Provider Relations Manager reviews the results and assigns the appropriate local provider relations representative for immediate outreach to the provider if necessary. As noted in the provider manual and the provider contract, PCPs must provide 24-hour availability to enrollees by telephone. Whether through an answering machine, or a taped message used after-hours, enrollees should be given the means to contact their PCP or a back-up physician so they can appropriately triage the enrollee for care.

Table 1

2016 After Hours Accessibility Audit

Region	Total PCP/FTE	Total PCP/FTEs After Hours	% of PCPs/FTEs w/After Hours	AHCA SLA Requirement
1	385.5	147.5	38%	30%
6	1348.5	855	63%	35%
9	575	363	63%	40%
10	420	300.5	72%	40%
11	621.5	409.5	66%	40%
Total	**3350.5**	**2075.5**	**60%**	

Humana values providers that offer after-hours to our enrollees and that realize the importance to our enrollees of having access to their PCP instead of going to an emergency room or an urgent care center. Humana is implementing an initiative to increase the reimbursement to encourage additional providers to offer after-hour services (99050 and 99051). Given the current Medicaid-allowable reimbursement of seven point two eight ($7.28) and nine point thirty-nine ($9.39), Humana is offering a range of thirty-five ($35) to fifty ($50) dollars, which is a substantial increase in reimbursement.

Enrollee Satisfaction Surveys

We also monitor enrollee wait times using enrollee satisfaction surveys (CAHPS), which we complete annually. Our Quality Management Committee (QMC) reports analysis of the to ensure we meet our goal benchmarks. Access to care results is measured year over year with established benchmark goals (see Table 2).

Table 2: Measurement and Results: CAHPS Analysis for Access to Care

Florida Medicaid Adult CAHPS Results				
CAHPS Question/Composite	**2016 Rate**	**2015 Rate**	**2015 Quality Compass National**	**2016 Market**
Getting Needed Care	77.5%	73.0%	80.8%	75.2%
Q14. Ease of getting care, tests, or treatment needed	79.3%	79.7%	82.9%	82.1%
Q25. Got appointment with specialist as soon as needed	75.8%	66.4%	78.7%	68.4%
Getting Care Quickly	78.8%	77.9%	80.7%	80.2%
Q4. Got urgent care as soon as needed	82.9%	80.6%	83.4%	83.0%
Q6. Got routine appointment as soon as needed	74.6%	75.3%	78.2%	77.6%

Florida Medicaid Child CAHPS Results				
CAHPS Question/Composite	**2016 Rate**	**2015 Rate**	**2015 Quality Compass National Average**	**2016 Market Goal**
Getting Needed Care	74.7%	82.4%	84.3%	84.9%
Q14. Ease of getting care, tests, or treatment needed	86.0%	83.9%	88.8%	86.4%
Q28. Got appointment with specialist as soon as needed	63.4%	81.0%	80.8%	83.4%
Getting Care Quickly	89.1%	87.8%	88.6%	90.4%
Q4. Got urgent care as soon as needed	90.1%	88.3%	90.2%	90.9%
Q6. Got routine care as soon as needed	88.1%	87.3%	87.1%	89.9%

Source: 2016 CAHPS Survey Results

Enrollee Turnover—Humana utilizes reporting of enrollees who have requested reassignment on a monthly basis. This report includes codes which may indicate dissatisfaction with appointment availability or office wait times.

Site Visits—Humana conducts provider site visits for PCPs during the credentialing and recredentialing process. As part of the site visits, we assess appointment scheduling policy, wait times, and after-hours accessibility. Humana also physically audits appointment schedules on a random basis during site visits.

Complaints and Grievances—Complaints and grievances from enrollees and providers are received through multiple routes and are recorded and tracked in our Customer Care Portal. Complaints that reflect network access issues or identify potentially noncompliant providers are forwarded to our Provider Relations team for review and action on a real-time basis. In addition, Humana will be designating a Provider Services Leader who will provide oversight on provider disputes.

Staff and Provider Input—Humana examines input from various internal and external sources pertaining to appointment availability and waiting times. Examples of these sources include our Provider 360 Committee, clinical access team, Provider Relations representatives, case managers, specialists' offices, and customer service specialists.

b. Telemedicine

Humana promotes telemedicine as a care delivery option to improve enrollee access to services, especially in remote geographical areas, provider shortage areas, and for enrollees with mobility issues. Humana's contracting policies and procedures define telemedicine as the practice of health care delivery by a practitioner who is located at a site other than the site where a recipient is located for the purposes of evaluation, diagnosis, or treatment.

Provider relations representatives educate providers regarding telemedicine strategies and requirements. Humana strives to ensure that all providers seeking to deliver telemedicine strategies understand how specific rules for these services apply to any person or entity prescribing or reviewing a request for Florida Medicaid services, and to all providers of Florida Medicaid services that are enrolled in or registered with the Florida Medicaid program.
We also encourage our providers to offer telemedicine by reimbursing telemedicine in accordance with AHCA contractual requirements. We offer our enrollees access to Doctor-on-Demand to encourage telemedicine as a means ability to limit out-of-network utilization and enhance non-emergency ED diversion. Doctor on Demand is a platform that provides enrollees with access to physicians 24 hours a day, seven days a week from the enrollee's phone or computer. The platform allows enrollees to see and/or talk to a physician immediately using video or phone services or to make an appointment for a later time. Additionally, the platform allows an enrollee to upload medical history, send images if necessary, and obtain a prescription.

For providers licensed within their scope of practice to perform the service, Florida Medicaid reimburses for telemedicine services using interactive telecommunications equipment that includes, at a minimum, audio and video equipment permitting two-way, real time, interactive communication between a recipient and a provider.

Florida Medicaid does not reimburse for:

- Telephone conversations, chart review(s), electronic mail messages, or facsimile transmissions.
- Equipment required to provide telemedicine services.

Furthermore, we ensure providers understand that Humana reimburses for telemedicine services in compliance with AHCA's guidelines:

- Florida Medicaid reimburses a provider who is providing the evaluation, diagnosis, or treatment recommendation located at a site other than where the recipient is located.
- Providers must include modifier GT on the CMS-1500 claim form, incorporated by reference in Rule 59G-4.001, F.A.C.

We have partnered with specific physicians throughout Regions 9, 10, and 11 to provide walk-in primary care and specialty care telemedicine services for their enrollees who need services after-hours or who are unable to get to an office location where the physician is located.

Humana continues to look for opportunities to partner with providers to deliver telemedicine services to improve enrollee access to services. In 2017, Humana developed an educational campaign to alert providers on appropriate requirements of telemedicine and Humana's reimbursement. In effort to educate providers, Humana created a one-page flyer promoting the benefits of telemedicine services, the state-mandated requirements, and Humana's reimbursement.

c. Pharmacy

Network Adequacy

We access pharmacy accessibility evaluations utilizing Quest Analytics for each region using the most current Medicaid membership file as a representation of the population.

Humana's pharmacy network team evaluates network access periodically on the following schedule:

- 4th quarter of each year for the upcoming year
- When requested by specific business areas when network service areas are being reviewed for the upcoming benefit year
- When a major pharmacy chain (> 5% of the network) leaves the network

Accessibility of pharmacy networks are evaluated to determine if networks meet adequacy based on the below standards:

- 1 pharmacy within 5 miles of an urban enrollee
- 1 pharmacy within 5 miles of a suburban enrollee
- 1 pharmacy within 15 miles of a rural enrollee

The following are the percentage of enrollees that must meet the above access standards:

- 90% of urban enrollees must meet access standards
- 90% of suburban enrollees must meet access standards
- 70% of rural enrollees must meet access standards

Compounding Pharmacies:

All pharmacies in the Humana network are able to provide enrollee's with compounded prescriptions. In addition, Humana's mail order pharmacy through PrescribeIT can also provide enrollees with compounded prescriptions. Humana continuously monitors enrollee concerns regarding access to pharmacies which includes compounded prescriptions to ensure there is adequate access.

Over-the-counter (OTC) Benefit

Humana offers an over-the-counter (OTC) program through PrescribeIT. Each enrollee has a monthly household benefit that allows up to a $17.50 coverage for each member of the household to be used toward any items that are offered on the order form. Orders ship to the enrollee's home by USPS or UPS at no charge for shipping.

Out of Network Requests

If new enrollees are utilizing a pharmacy that is not in our network, Humana will continue to allow the prescriptions to process for a period of 60 days during the enrollee's continuity-of-care period. Prior to

the end of the continuity of care 60-day time frame, Humana and the enrollee's provider(s) will educate them on how to access their drug benefit through Humana's participating pharmacy provider network.

d. How Enrollees Access the System

Humana understands that enrollees need convenient, easy-to-use system information so they can readily access appropriate care. Some of the ways enrollees access the system is through enrollee materials such as the enrollee handbook and online provider directory, as well as through access points including the Customer Service call center and Clinical Access Team (CAT). We educate enrollees on the available methods to access appropriate services on Humana's website, their enrollee ID card, and in their enrollee handbook. Enrollees and providers can contact Humana to translate these materials to their language of choice and send to them on demand. Our provider directory, both online and hard copy, gives enrollees ample means of finding a provider who is best qualified and best suits their healthcare needs.

Language Assistance and Alternative Formats **–** Effective communication with enrollees is paramount, and Humana strives to ensure "equality of opportunity" for meaningful access to health care services and activities. It promotes increased compliance and adherence to follow-up treatment, improved use of and access to preventive care, better understanding of covered services, navigation of the complex health care system, and improved enrollee satisfaction.

Humana provides, at no cost, appropriate access to oral interpretation services in 200 languages, video interpretation in 24 languages, including American Sign Language, and translated written materials of vital documents based on threshold languages and auxiliary aids required by disabled enrollees (current and future). Humana follows the Department of Health and Human Services' framework for Limited English Proficiency (LEP) and ADA enrollees for the development of the language assistance and alternative formats section of the Language Assistance and Alternative Formats Services. Below is a link to Humana Accessibility Resources: https://www.humana.com/accessibility-resources.

Humana ensures that all enrollee materials are reviewed using the Flesch-Kincaid Methodology to ensure they are written in a maximum fourth grade reading level and are easily understood (42 CFR 438.10 (5d)). Enrollee materials are printed in a type, style, and size that can easily be read by enrollees with varying degrees of visual impairment. Additionally, all enrollee materials are distributed in English and Spanish, but are also made available in varying alternative formats and foreign languages. We encourage enrollees in every mailing and on our website who need a specific format, such as braille or in a language other than English or Spanish, to request materials by calling Humana Customer Care.

e. New Enrollee Materials

New Enrollee ID Card and Welcome ***Kit*** - Enrollees that choose Humana Medical Plan as their preferred plan of choice receive two AHCA-approved mailings: one with their Humana Medical Plan Enrollee Identification Card and one with their New Enrollee Welcome Kit. The Welcome Kit includes a Welcome Letter, Important Phone Numbers List, a Health Risk Assessment Form with a self-addressed envelope, a Consent for Release of Medical Records Form, and a Continuity of Care Form with a self-addressed envelope.

The Welcome Letter introduces new enrollees to the unsecured enrollee website (https://www.humana.com/medicaid/florida/mma), where they can find materials including the Enrollee Handbook and Provider Directories and request free printed copies of any materials by calling Humana Customer Care. The letter also explains enrollment and disenrollment information and discusses each of the items included in the Welcome Kit. These materials direct enrollees to call Customer Care for any questions and concerns on how to access care and benefit information.

Enrollee Handbook - An easy-to-find and easy-to-read handbook is very important in supporting our Medicaid enrollees. Humana places great emphasis on making sure the enrollees can use the handbook at their convenience and in a manner they can easily understand. This includes the reading level, identifying easy-to-find phone numbers, and making the materials available in the language of their choice.

Provider Directories - Enrollees need detailed information on both providers and hospitals when making decisions regarding their healthcare services, so Humana strives to provide this information in an easy to use and accessible format, including the online provider directory. If enrollees are interested in learning more about Humana's physicians, such as their educational background or training, they may use the Physician Finder Plus tool on the Humana website (www.humana.com). We update this tool daily and make it accessible to all visitors to Humana.com, whether they are an enrollee or not, and without needing to log in.

Enrollees will find the "Find a Provider" feature at the top in the Quick Links section and specific links for doctors, dentists, and pharmacies on the middle of the page. This brings them to the search page, where the site prompts enrollees to enter criteria from the options below to find a provider that fulfills their needs:

- Enrollee ID number
- City, State
- ZIP code
- Network
- Provider type/Specialty
- Provider name
- "Sounds Like" provider name
- Group/Facility name
- Type of coverage
- Geographic location
- Geographic distance
- Gender
- Language
- Accreditation – NCQA, ABIM or Board Certification
- Accepting new patients status
- By symptom, condition, or procedure

Humana strives to ensure the information within Physician Finder Plus on humana.com is as accurate as possible. We make regular updates through demographic changes received from provider offices. Providers can report demographic changes in a variety of ways. They can submit changes electronically through Humana.com using the "Manage My Demographics" tool under the Resources tab. Providers

can also email, mail, or fax changes to the Provider Verification Unit. Additionally, providers can submit their changes to their Provider Relations Representative. Enrollees also have the option of alerting Humana to a demographic change by clicking on “Report updated information” on the provider’s details page in Physician Finder. Humana’s Data Collection and Verification team also contacts providers quarterly to give them an opportunity to submit any necessary demographic changes for the online directory.

Humana has built a feedback link within Physician Finder Plus whereby any logged-in enrollee can enter information submitted by a Medicaid enrollee about a specific provider. It collects and reports on two data elements: 1) enrollee’s experience; and 2) enrollee’s comfort with recommending that provider to others. We maintain the reported information for a limited amount of time and then purge it to make sure that the information is up-to-date. The information is only available via the secure portal to ensure only enrollees can submit feedback. Humana also reviews this information to help identify poor-performing providers. If a provider receives five submissions over a 12-month period that are below a score of 2 or below on a 5-point scale, we will refer it to provider relations for review.

Humana also provides a printed provider directory if an enrollee requests it. The directory contains both an English and Spanish section; however, the enrollee can request a directory in other languages by calling Customer Service. Additionally, enrollees can download the printed directory in a PDF format from Humana.com. We update the PDF format directory weekly.

f. Enrollee Access Points

Enrollees may need to access the network in a variety of ways, so Humana offers multiple access points including telephone accessibility, the Clinical Access Team (CAT), and oral interpretation services in 200 languages, to address their needs and preferences. We develop and adhere to stringent performance standards that help us monitor, maintain and report upon the various ways enrollees choose to access the network, while ensuring our providers maintain accessibility standards. We strive to ensure that all enrollees receive timely and appropriate access to care.

Telephone Accessibility - Humana Customer Services staff, available via our toll-free number, TTY/TDD, is in place to ensure enrollees have access from 8:00 a.m. to 8:00 p.m. each business day. We train our Customer Services Representatives (CSRs) to provide prompt, courteous, and accurate responses to a variety of inquiries that help the enrollee access the system, including but not limited to the following: (a) answers to questions regarding benefits and verification of eligibility; including communication of benefit changes; (b) providing assistance with selecting participating providers; (c) answers to prior authorization or claims questions; and (d) acceptance of complaints, grievances, and appeals.

After hours, on weekends, and holidays, the call center utilizes alternate technologies, such as an Integrated Voice Response (IVR) system. When an enrollee connects to the IVR, it asks in both English and Spanish if they would like to speak to a nurse about a care-related issue. If the enrollee says “yes,” it routes the call to Citra, our 24/7 nurse line vendor. If they say no, or simply hold on the line, it routes them back to the IVR. The IVR will allow them to self-serve or leave a message for callback on the next business day.

If Citra receives a non-care-related call and the enrollee would like to leave a message, Citra transfers them directly to the IVR. The automated answering system will permit any caller to leave a message that

includes a name and telephone number without requiring identifiable information such as enrollee ID or Social Security number. A representative will then call them back the next business day.

Monitoring and Reporting

Humana monitors and records all inbound calls, and logs each into our system to assist with any future calls an enrollee places to Humana. We train staff to respond to enrollee questions in all areas, including but not limited to covered services, provider network, and transportation. Calls from enrollees and providers alike are subject to the same call center performance requirements, which we monitor via the Medicaid Volume Report, produced daily.

Workforce Management provides real-time performance reporting on an ongoing basis, reported throughout the day to Operations Managers and Supervisors. This information includes call trending and real-time call and staffing adjustments made to address any identified needs/trends.

- Workforce Management adjusts associates' skill sets to provide adequate staffing at all times.
- We record 100% of all inbound calls received.
- Call and Call Center Representative performance information is housed within internal databases, Automated Call Distribution (ACD), and Workforce Management reporting systems.
- Workforce Management produces call reports, which it provides to the Customer Care Supervisor/ Team Lead. The format is similar to the Medicaid Volume Report, but includes pertinent individual measures.
- The report also addresses associates' use of time while on the phone including:
    - Talk time (time spent on each call with an enrollee/provider)
    - Not ready time (time not taking phone calls)
    - Hold time (time on hold by a caller while the CCS is researching)
- The Customer Care Supervisor/ Team Lead discuss call results with each CCS and provides coaching as needed.

The Call Center Supervisor/Team Lead, on a daily basis:

- Reviews and monitors the Medicaid Volume Report
- Analyzes the report information upon receipt
- Takes appropriate actions as needed based on the report data to adjust call center staff and to address trend impacts noted

The Call Center Supervisor/Associate's Team Lead assesses individual CCS performance on a weekly basis through:

- Side-by-side monitoring
- Monitoring of systems used
- Process followed based on call received
- Interaction documentation

Humana maintains results of the performance assessment in the associate's personnel file.

- Humana also tracks performance measures, as stipulated in the Florida Medicaid Contract, on the Medicaid Volume Report including:
- Call Answer Time: When a Medicaid enrollee calls the Call Center phone number he/she does not get a ring. The call rolls into the IVR system directly. The enrollee has the option to use IVR or opt-out. The call answer time (ASA) is measured in seconds as the time between x and y.

- Wait Time: We determine this from the time the call goes through to the IVR or the caller opts out to get a CCS. Refer to "Avg Wait" on the Medicaid Volume Report. This is the average time in seconds that a caller waited on the queue before a Customer Care Specialist answered the call.
- Abandonment rate: The abandonment rate is determined as follows: total calls disconnected/abandoned before a CCS receives it (ABA) divided by total number of calls offered (Offered). Refer to "ABA %" on the Medicaid Volume Report.
- Blocked Call Rate: The Medicaid Customer Care phone system does not block calls at any time.

Customer Care's minimum expectation for the overall quality performance score is 95%. The Medicaid Quality Summary Report is tracked at an individual level, which then rolls up into a Call Center Overall Monthly Summary Report. The Medicaid Quality Summary form is both the template and the report.

- On a daily basis, a Quality Associate (QA) pulls call recordings for a specified number of CCS's for a total of 5 observations per associate per month.
- A quality audit is completed at the individual level (by associate).
- All individual quality audits are rolled-up together to produce the Medicaid Monthly Quality Summary Report.
- Quality results are reported up to Senior Leadership (Service Operations Vice President and Senior VP & Chief Service & Information Officer) on a weekly basis for their review, comments, and feedback to the directors of the Customer Care operational area.

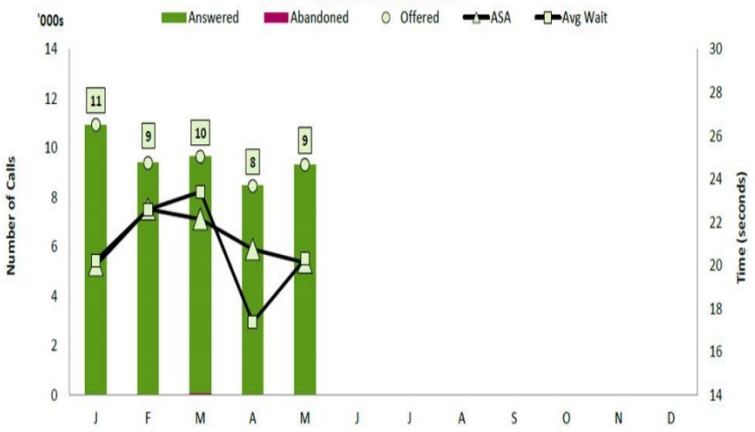
Clinical Access Team (CAT) - Humana has a Clinical Access Team (CAT) that facilitates access to care when we identify a clinical issue related to enrollee access. The CAT consists of three non-clinical specialists who process inbound calls and ten RNs who manage and resolve the cases. Issues may range from appointment availability to inability to locate a provider. Once an inquiry is received, a CAT associate will review and telephonically contact the enrollee or appointed representative to acknowledge receipt and to clarify the issue. The CAT associate may contact providers involved in the access issue to determine any extenuating circumstances, to offer assistance to possible barriers in resolving the issue, and to work with internal departments, such as Provider Relations, to facilitate a resolution. The CAT associate also provides guidance and education to promote better health outcomes for enrollees.

Performance Metrics

Here are the results of Humana's customer service performance metrics as of May 2017, including Service Level and Abandon Rate, Contractual SLA Performance, and Enrollee Calls; as well as Clinical Access Team (CAT) results:

Medicaid Customer Service: Service Level and Abandon Rate

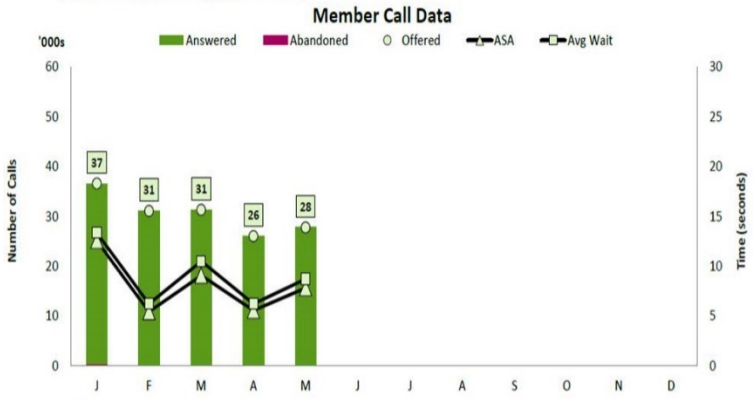
Florida - MMA - Regions 1 & 6:



Call Center - Contractual SLA Performance:

Metric/SLAs & Criteria (Member calls)	Dec	Jan	Feb	Mar	Apr	May
% Answered under 30 seconds	96.9%	90.5%	87.8%	89.1%	89.8%	90.3%
(ASA) is not to exceed 30 seconds	14	20	23	22	21	20
Average Call Blockage rate not to exceed .5%	0.0%	0.0%	0.0%	0.0%	0.0%	0.0%
Call Abandonment rate not to exceed 3%	0.3%	0.6%	0.7%	0.9%	0.7%	0.6%

Florida - MMA - Regions 9 - 11:



Call Center - Contractual SLA Performance:

Metric/SLAs & Criteria (Member calls)	Dec	Jan	Feb	Mar	Apr	May
% Answered under 30 seconds	96.8%	90.8%	96.4%	95.2%	96.5%	95.2%
(ASA) is not to exceed 30 seconds	5	13	5	9	6	8
Average Call Blockage rate not to exceed .5%	0.0%	0.0%	0.0%	0.0%	0.0%	0.0%
Call Abandonment rate not to exceed 3%	0.4%	0.9%	0.6%	0.8%	0.6%	0.7%

CAT Team Results

Over the past 12 months (7/2016 – 6/2017) with Key Performance Indicators (KPIs) for the commercial, Medicare and Medicaid population:

- Overall access cases: 99.2% compliant w/inquiry resolution & closure w/in 14 calendar days
- Overall service level (80% of calls answered within 30 seconds): 82%
- Overall abandonment rate (less than 5% of calls abandoned): 5%

At least monthly but as needed, the Plan reviews enrollee complaints from the CAT and other available sources to identify and trend complaints regarding access to care. We also monitor complaints received by our Critical Inquiry and Grievance and Appeals Departments on a monthly basis to identify and remedy access to care issues (see Table 4).

Table 4: Clinical Access Team and QI Access Complaints per 1000 Enrollees – 2016-2017

	Medicaid	
Time Period	**# of Complaints**	**Complaints/ 1000 enrollees**
2nd QTR 2016	3047	0.41
3rd QTR 2016	3049	0.41
4th QTR 2016	2390	0.32
1st QTR 2017	2588	0.35

7. MAKING IT EASY TO DO BUSINESS WITH HUMANA

Humana strives to remove barriers and administrative burdens providers often face when working with Managed Care Organizations (MCOs). Humana's leadership team, including our local staff in Florida and our corporate staff in Kentucky, believe that in order to understand and adequately address the issues providers face, we must start with a strong provider engagement model, which is why we invest in efforts to partner with our providers and support them with the tools they need to succeed such as educational materials, face-to-face training, and claims resolution. We empower our providers to deliver a robust, high-quality, clinically integrated health care model to our Medicaid enrollees. Humana has a proven record of quality initiatives and successful enrollee outcomes since serving the Florida Medicaid population over the past 20 years. For example, Humana ranks second in NCQA Quality rankings amongst MMA Medicaid plans in Florida.

Our investment in staff and information systems technologies allows us to support our providers efficiently and cost- effectively. The support providers receive from Humana's provider relations team across our spectrum of products in Florida, which includes Medicaid, Medicare, and Commercial lines of business, enhances our connection to the provider community. Often when we bring on a provider for Medicaid services, they have already had exposure to Humana with other lines of business. This diversity gives Humana a larger volume of relationships with providers, more frequent interactions between our staff and provider staff, and fosters more sophisticated, aligned, performance-based financial arrangements aimed at improving quality outcomes while containing cost.

a. Gauging and Addressing Barriers to Providers

Humana's longstanding relationships with provider associations contribute to our ability to maintain engagement with providers. Our partnerships with physicians, hospital, long-term care, and ancillary provider associations allow for open and ongoing communication that allow us to gauge and address issues providers encounter while working with Humana. Provider associations are avenues for Humana to obtain feedback on opportunities for improvement from the provider community, as well as provide educational information and communications. Humana engages with provider associations through regularly scheduled conference calls and meetings, which Humana's senior leadership team frequently

attend. Association meetings are a particularly effective way to work with medical and long-term care providers on issues that are unique to these providers, such as Medicare crossover claim processes.

- A Humana leader was recently elected to the Florida Assisted Living Association (FALA) advisory board, as well as the advisory board to the Florida Area Agencies on Aging. This relationship has allowed Humana to play an instrumental role in improving coordination between various Councils on Aging.
- Humana's market director and national Medicaid director also meet monthly with Leading Age/ Florida Association of Homes for the Aging to work through open items, such as provider concerns, possible innovations to payment arrangements and stay updated with the Nursing Facility and Assisted Living Community.
- Humana leaders attend the annual Florida Hospice and Palliative Care Association (FHPCA) meeting, where we have developed an improved understanding and relationship of hospice providers. During the most recent meeting with FHPCA, we received positive feedback on our claims and referrals process. As a result of this meeting, we also recognized the need from hospice providers to better understand the coordination between medical and long-term care as it relates to claims, authorization, and enrollee responsibility. We are developing a quick reference guide for these providers.

b. Internal Engagement Support Model

Our provider relations staff meets on a bi-weekly basis to discuss trends, initiatives, and opportunities to train and educate front-line provider relations representatives. Educational opportunities include Medicaid-related topics such as AHCA alerts, fee schedule changes and agenda topics from AHCA monthly calls. This meeting is also used as a forum to discuss best practices and provider-specific challenges, such as OB/GYN, Ambulatory Surgery Center, Hospice, Home Health or Adult Day Care related. Additionally, provider relations staff meetings provide an opportunity for Humana's front-line Provider Relations Representatives to share the challenges our providers are experiencing with provider relations leadership. These meetings allow Humana provider relations leaders to obtain front-line information to inform the development of new educational materials or the presentation of an issue or concern to the Provider 360 Committee for consideration. See the visual representation of our provider engagement model below:

The diagram below conveys Humana's provider engagement model. Our model delivers cross-functional support to our providers to ensure we are aligned in achieving our mutual goal of improved quality outcomes for our enrollees through administrative simplicity, financial partnership, and provider satisfaction.

Beyond our established relationships with our providers, Humana is continually advancing our internal infrastructure to support provider engagement and satisfaction. Humana has established the Provider 360 Committee, a multifunctional team representing provider support areas which is chaired by Humana's Medicaid Market Vice President. The committee's objective is to review all functional areas to improve provider experience through review of provider metrics, identification of process improvement opportunities, and development of provider education initiatives and materials. The Committee has representation from:

- Market Executive Leadership
- Regulatory Compliance (MMA and LTC)
- Market Provider Relations/Contracting (MMA and LTC)
- Market Hospital Contracting
- Market Service Alignment Managers
- Provider Call center
- Provider Directory
- Claims Processing (MMA and LTC)
- Availity Liaison team
- eHUB team
- Physician Performance Management
- Market Quality Operations
- Market Clinical leaders
- Corporate Medicaid Implementation
- Critical Inquiry team
- Provider Communications

- QIC Committee

c. Simplify the Administrative Burdens

Humana's network is built on the evidence-based belief that quality of care, the patient centered medical home concept, preventative and early intervention, widespread access to contracted network providers, communicative provider and subcontractor partnerships that are based on mutual clinical goals and administrative simplicity, and widespread use of Electronic Health Records, are all now imperative in our healthcare delivery system, and a critical component of maximizing enrollee healthcare outcomes. With these fundamental concepts in mind, we work collaboratively with our external network provider partners and subcontractors and internally with our Medical Management, Medicaid Operations, Quality, Pharmacy, Customer Service, and Finance Departments. We make it easy for providers to find the materials they need by providing multiple sources for policies, training information, and Humana's internal systems. The following sections provide more details about our technology and informational resources.

d. Electronic Health Records (EHR)

Humana's ultimate goal of supporting our providers in delivering quality and appropriate care to our enrollees is supported by provider electronic health records (EHRs) and the Florida Health Information Exchange. Humana has a long history of investing in and promoting state of the art technology to facilitate timely and seamless transfer of information.

Humana has adopted various mechanisms to identify Florida providers who do and do not utilize EHRs, including:

- Conducting surveys of network providers
- Provider relations interaction with providers
- Assessing AHCA and CMS Eligible Professionals/Eligible Hospitals Info Links and the AHCA and CMS EMR List Links

Humana understands there are critical barriers to impacting EHR usage:

- High cost to implement EHR technology
- Strict maintenance/compliance requirements
- Administrative burden
- Understanding meaningful use

We educate our providers on the importance of using electronic health records and demonstrating meaningful use through the following mechanisms:

- Provider handbook
- Link to Florida Medicaid EHR Incentive Program website directly from Humana's provider Web portal
- Link to Florida's EHR and HIE newsletter, "Going Digital News Bytes" directly from
- Humana's provider Web portal

Since 2014 Humana has developed a strong data collection process in order to understand the network landscape relative to EHR usage. The table below shows year over year results from 2014 through 2015 and 2015 through 2016.

All Eligible EP & Hospitals 4th Qtr 2016-Full Dentist/Psych/all other spec-regions

Although Humana showed improvement of EHR usage throughout our provider network, in order to further bolster results Humana developed a one-page educational flyer to help providers better understand the importance of EHR and meaningful use. In addition, we developed a process improvement plan for 2017 through 2018 which includes the following steps:

- Provider Relations Representatives will deliver the EHR flyer to all PCP centers and OB/GYN offices during routine monthly visits
- Fax blast the EHR flyer to all other applicable provider types
- Ensure all subcontractors receive information from the flyer as an example of Humana's efforts and report back the results of their EHR outreach efforts for their downstream providers.

e. Assistance and Communication Tools Provided to the PCPs

Humana has developed an array of education and training materials for our providers. These tools allow providers to quickly find the answers they need so they can spend more time helping enrollees with their care.

Web-Based Tools

Humana offers providers a number of web-based business solutions to ensure they are able to interact with us on an optimum basis. Providers can access our portals, Humana.com and Availity.com, for services such as:

- Health and wellness programs
- Provider publications (including provider manuals)
- Provider Training
- Quality resources
- Clinical practice guidelines
- Pharmacy services
- Claim resources
- Verification of enrollee eligibility and benefits
- View enrollee ID cards
- Review care alerts and enrollee summaries
- Submit referrals and preauthorization requests
- Send attachments (i.e. medical records)
- Check claims status and remittance information
- Access to the Medicaid Long Term Care Program information

Providers can obtain support from Humana for web based training and assistance through a variety of channels. During orientations and ongoing provider visits they may request their Provider Relations Representative assist with training, contact us via a dedicated email box or by at enrolling in one of our web based training sessions published on Humana.com.

Florida Medicaid Provider Handbook

Humana's provider manual gives provider's information and guidance on a number of topics such as:

- Program Description
- Covered Services
- Emergency Service Responsibilities
- Child Health Checkups
- Provider Complaints
- Grievance System
- Chronic and Complex Conditions
- PCP and Other Provider/Subcontractor Responsibilities
- Telemedicine
- Delegation /Subcontractor Functions
- Florida Health Information Exchange
- Preauthorization and Referral Procedures
- Medical Record Requirements
- Claims and Encounter Submission Protocols and Standards
- Cultural Competency Plan
- Enrollee Rights and Responsibilities
- Fraud and Abuse Policy
- Health, Safety and Welfare
- Patient-Centered Medical Home (PCMH)
- Medicaid Advisory Panel
- Provider Rewards and Incentives (if applicable)
- Provider Resource Website
- Provider Training
- Availity
- Helpful Numbers

Quick Reference Guide

Providers and members of their office staff are provided a region specific Quick Reference Guide that is designed to assist them with information on daily topics like frequently called phone numbers, important addresses, vendor network contact information by specialty type, medically necessary services, expanded enrollee benefits, frequently used web addresses and a sample enrollee ID card.

We deliver Quick Reference Guides to providers during orientations and ongoing provider visits, and also make them available on our website.

Provider Newsletters

Humana publishes quarterly provider newsletters on its portal to assist providers with staying current with policy changes, quality initiatives, industry changes and medical protocols.

Additional Provider Reference Materials on the Web

Humana providers have access to a variety of tools on our website. The materials are current and up-to-date to allow providers to reference them on their schedule. Materials on the website include:

- Medicaid appendix to the provider manual
- Enrollee handbook
- Quick Reference Guide (including a version for assistive care services)
- Preauthorization and Notification List (PAL)
- Prescription Drug Guide
- Provider newsletters
- Compliance-based training modules and frequently asked questions and answers
- Obstetrician and gynecologists training
- Healthy Behaviors program including smoking cessation
- Quality resources such as information on child health check-ups, oral health for children and adolescents, prenatal and postpartum care for women and HEDIS measures overview
- Information on how to access our LTSS vendor portal
- Home Health Visit Information

Compliance-Based Training (All Provider Types – PCPs, Specialists, Subcontractors, Ancillaries and Hospitals)

Providers are expected to adhere to all training programs identified by our contract and Humana as compliance-based training. This includes agreement and assurance that all affiliated participating providers and staff members are trained on the identified compliance materials.

As part of the training requirements, providers must complete annual compliance training on the following topics:

- Medicaid Provider Orientation
- Compliance and Fraud, Waste and Abuse
- Cultural Competency
- Health, Safety and Welfare (Abuse, Neglect and Exploitation)

Providers and members of their office staff can access these online training modules seven days a week, 24 hours a day on both our website and Availity portal.

We strive to make it easy to do business with Humana. Through our meetings with providers and provider associations, we learn about and address the barriers providers face in their day-to-day activities. By hiring and promoting staff that dedicated to establishing a relationship with our providers, we ensure our providers are never without a support network. By pioneering simplicity, we allow our providers to spend more time focusing on our enrollees. Finally, Humana makes every effort to support and educate our providers so they can accomplish our common goal: providing quality care to our enrollees. That's also why we have established Quality Care Initiatives including efforts to better coordinate between departments and manage complex cases and diseases.

8. HUMANA'S QUALITY OF CARE INITIATIVES

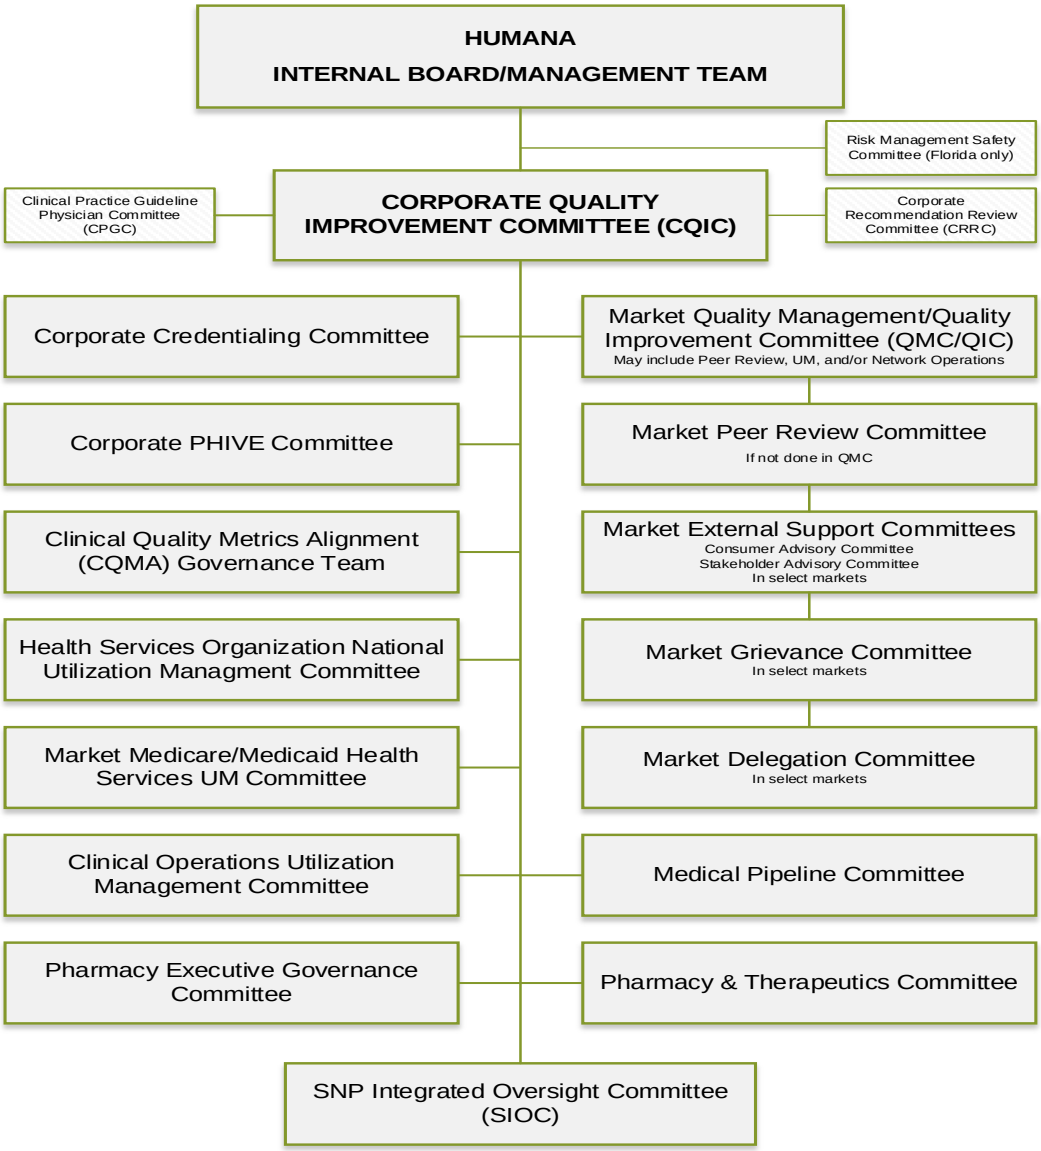
Humana serves its provider and enrollee population with a steadfast focus on improving outcomes, delivering exceptional access to care to enrollees, driving improvements in population health, all while reducing healthcare costs through well-being improvements. We do this through constant improvements to our internal processes, support mechanisms and ongoing initiatives including internal coordination across lines of business, and a strong focus on disease management and complex care.

a. Internal Department Coordination and Infrastructure

A solid infrastructure and dedicated leaders with quality improvement (QI) expertise ensure high quality comprehensive, coordinated healthcare to all enrollees. Humana's overall vision supports continuous quality improvement throughout the organization by a solid infrastructure and dedicated leaders with QIP expertise to ensure high quality, comprehensive and coordinated healthcare to all enrollees, across all plans. Corporate leadership on the Corporate Quality Improvement Committee, delegated by the Board of Directors, provides operational oversight for the QI program activities and recommends policy decisions by planning, analyzing and evaluating the activities. Quarterly and annually, the Quality Management Committee and the Florida Medicaid Quality Improvement Committee, report the Medicaid activity to include accomplishments, barriers and improvement initiatives.

The Internal Board/Executive Committee has ultimate responsibility for oversight of quality improvement activities. Members of the Internal Board/ Executive Committee include:

- President and Chief Executive Officer
- Executive Vice President and Chief Operating Officer
- Senior Vice President and Chief Medical Officer
- President, Employer Group Segment and Government
- President, Retail Segment
- President, Clinical Care Services
- President, Humana Pharmacy Solutions
- Senior Vice President and Chief Consumerism Officer
- Senior Vice President and Chief Strategy Officer
- Senior Vice President and Chief Human Resources Officer
- Senior Vice President and Chief Financial Officer
- Senior Vice President and Chief Innovation Officer
- Senior Vice President and Chief Information Officer
- Senior Vice President, Corporate Affairs
- Senior Vice President, Medicare Operations
- Senior Vice President and General Counsel



The Corporate Quality Improvement Committee (CQIC) oversees the quality improvement program, as delegated by the Internal Board/ Management Team. The Corporate Quality Improvement Committee's purpose is to use a centralized approach to the Quality Improvement program by forming one corporate committee that assumes the responsibility for the Quality Improvement Program of Humana. The CQIC is chaired by the Corporate Chief of Quality.

- The CQIC provides operational oversight for the Quality Improvement program activities and recommends policy decisions.
- The CQIC allocates a forum for members of the Committee to engage in review, coordination and direction of the Quality Improvement program.
- The Committee is charged with overseeing the establishment and integration of the Quality Improvement program and measurement of quality activities on a regular basis.
- The CQIC shall be comprised of voting members showcasing multi-specialty representation of the centralized and regionalized areas of operations. Voting members shall be stewards of

Humana's mission. Their recommendations are expected to be based on sound operational data, in support of member service, and the overall good of the markets serving Humana members.

The CQIC shall undertake the following functions and responsibilities:

- Oversee reporting of data from centralized/regionalized departments on a consistent basis, to include HEDIS improvement, CAHPS surveys, member satisfaction, disease management programs, appeals and grievances, credentialing, utilization management, member safety issues, customer service and many other quality and satisfaction metrics.
- Engage in discussion of such data with the representative and identify any opportunities for improvement.
- Improve communications between the markets and the centralized/regionalized operational areas and provide consistent reporting of data.
- Review, provide guidance and make recommendations concerning clinical guidelines, policies and procedures and Quality Improvement standards and related legal, regulatory and accreditation requirements.
- Provide guidance in defining the scope, objectives, activities and structure of Humana's Quality Improvement Program.
- Review ongoing reports from departmental quality improvement activities and determine the extent to which they meet standards and requirements, as defined in the Quality Improvement Program Description.
- Provide guidance to management teams and staff related to quality improvement priorities and projects to include Medicare Quality Improvement Projects (QIPs) and Chronic Care Improvement Programs (CCIPs).
- Monitor organizational progress in meeting Quality Improvement Program goals and objectives as outlined in the Quality Improvement Work Plan and evaluate the overall effectiveness of QI Program on an annual basis.
- Review, approve and update, as indicated Quality Improvement Program Descriptions, Quality Improvement Annual Evaluations, and UM program documents on an annual basis.
- Review, prioritize and align the Quality Improvement Work Plan with the strategic objectives of the organization annually.
- Review and approval of Special Needs Plans (SNPs) Program Descriptions, Models of Care, and Models of Care Evaluations.

Members of the CQIC include, but are not limited to representatives from:

- Accreditation
- Appeals and Grievances
- Behavioral Health
- Claims
- Clinical Policy
- Clinical Programs
- Clinical Strategy
- Commercial Product UM
- Compliance
- Consumer Messaging
- Credentialing
- Customer Service

- Disease Management
- MHSO Product UM
- National Network Operations
- Pharmacy
- Provider Communications
- Provider Contracting
- Quality Operations, Compliance and Accreditation
- Risk Management
- Sales/National Accounts
- Specialty Benefits
- Stars, QRS and Medicaid Improvement

Behavioral Health Humana incorporates behavioral health aspects into the QI program. The Medical Director and Quality and Accreditation Director from the behavioral health provider are involved in the mental health aspects of the program which includes the management of substance abuse services. The Behavioral Health Medical Director, or designee, may participate and advise the Corporate Quality Improvement Committee on behavioral health issues. Monthly collaboration work groups are conducted between the delegated Managed Behavioral Health Organization (MBHO) and the Health Plan leadership.

Protected Health Information and Vendor Ethics (PHIVE) Committee is a corporate committee created to protect the privacy of Humana members and direct the ethical behavior of vendors. The PHIVE Committee reviews the handling of identifiable and de-identifiable member data and monitors interaction with vendors to promote the highest ethical standards. The PHIVE Committee meets monthly and reports to the CQIC. Members of the PHIVE Committee may include representatives from:

- Privacy Officer (chair)
- Pharmacy Solutions
- Physician Review
- Market Vice President
- Law Department
- Regulatory Implementation
- National Network Operations
- Technical Services Group
- Personal Nurse
- Insurance and Risk Management

Technology Assessment Forum (TAF) is chartered to create Humana Medical Coverage Policies for new and emerging technologies and to review existing policies on a regular basis. The committee's purpose is to verify that Medical Coverage Policies are evidence-based and facilitate consistency in clinical decision making, mitigate legal and financial risk, and support the goals of Humana to provide guidance to its consumers. Humana Medical Directors are the only voting members of this committee. The committee is chaired by the Medical Director for Clinical Policy Development or designee and meets at least quarterly. In addition to the voting Humana Medical Directors, members of TAF may include non-voting representation from:

- Claims Policy
- Clinical Claims Review
- Clinical Programs

- Customer Service
- Health Guidance Organization
- Humana Military Health Services
- Legal Department
- National Contracting
- Product Strategy
- Provider Contracting
- Additional representatives as appropriate

Following the TAF meetings, multiple departments are involved in implementation activities in an effort to ensure our prior authorization and claims systems and processes are congruent with our medical coverage policies. System and staffing impact decisions and timeframes are tracked through the Prior Authorization (PAL) Core team on SharePoint.

Medical Pipeline Committee is chartered to discover and research new and emerging medical technologies, with the purpose of developing a strategy, determining the expected financial impact around these new technologies, and distributing information to other departments throughout Humana. Medical technologies include, but are not limited to, medical devices, professional society recommendations, CMS coverage updates, and laboratory and genetic testing. The Medical Pipeline Committee currently refers information to the following departments: Technology Assessment Forum, Provider Contracting, Lab Pay Zero Initiative, Quality Operations Compliance and Accreditation, Pharmacy, Healthcare Economics, Claims, Provider Contracting, Product Development, and Medicare. The committee meets at least quarterly and publishes an update of activities that is distributed throughout the company. The Committee also issues alerts around technologies that may be of an urgent nature that may result in high utilization and/or high financial impact. Medical Pipeline Committee members may include representatives from:

- Clinical Policy Development
- Technology Assessment Forum
- Healthcare Economics
- Genetic Guidance Program
- Additional representatives as appropriate

Pharmacy and Therapeutics (P&T) Committee has a responsibility to review and make decisions about the appropriate use of drugs, biologicals, and select non-drug pharmacy-related products. The P&T Committee reviews policies that guide exceptions and other utilization management processes, including drug utilization review program, quality improvement program,, quantity limits, generic substitution, and therapeutic interchange. This charge may be relevant in many contexts including, but not limited to, clinical edits, drug utilization review, consumer programs, contracting, and networks. The Committee may render decisions through motions or may play an advisory role depending on the issue. Ultimately, the goal of the Committee is to confirm that proper decisions are made regarding drug access and the overall value of the benefit as it pertains to drugs, biologics, and select non-drug products.

- The co-chairs designate voting members of the P&T. Those persons utilized as consultants on various issues are considered non-voting. Other non-voting stakeholders for relevant agenda are invited at the discretion of P&T.
- Within the P&T Committee membership, there is at least one voting external physician member and at least one voting external pharmacist member who are experienced in geriatrics and/or

the care of disabled individuals. Neither may be employed by nor have any business interest in Humana.

- The P&T meets at least quarterly. Meetings are held via conference call.
- The voting members of the P&T Committee must be free of conflict of interest with any P&T agenda, and must state any new potential conflicts of interest prior to discussion. All voting members must also sign a statement of conflict of interest verifying either no conflict or disclosure of conflict, if it exists, at least annually. Any consideration of voting for members who have stated a conflict of interest will be made with consultation with the Humana Ethics and Compliance office prior to granting of such privilege.
- The P&T Committee reports up to the Vice President of Pharmacy through the governance structure.

Pharmacy Executive Governance Committee (EGC) The oversight authority of the Pharmacy QM Program is the Pharmacy Executive Governance Committee and consists of senior leaders within the company. The committee has the authority to make decisions and allocate resources for the Pharmacy QM Program. Additionally, the Pharmacy Executive Governance Committee defines the scope, objectives, activities, and structure of the QM Program. The Quality and Performance Improvement Program Description (QIPD) is reviewed by the Pharmacy Executive Governance Committee at least annually and updated as necessary. The QIPD is approved annually by the President, Humana Pharmacy Solutions; Director, Pharmacy Professional Practice and Clinical Operations; Director, Quality, Process, Learning, Accreditation and Policy; and Director, HPS Clinical Strategies.

Pharmacy Executive Governance Committee holds oversight of the quality-related programs and initiatives throughout Humana Pharmacy Solutions. It uses a centralized approach to monitoring and improving the process and outcomes for the varied areas that comprise Humana's Pharmacy Solutions program. The committee defines the scope, objectives, activities, and structure of the QM Program and provides operational oversight for the program activities and recommends policy decisions. The committee has the authority to make decisions and allocate resources for the QM Program.

The scope of the committee is to:

- Improve patient safety
- Impact value to customer, member, and health plan
- Enhance member, provider, and customer experience in relation to Pharmacy benefits
- Provide committee oversight of key Pharmacy processes and outcomes
- Discuss data, identifying barriers and opportunities for improvement
- Promote communication between operational areas and consistent trending and reporting of data
- Approve and update, annually, the Humana Pharmacy, Inc. Program and Evaluation
- Facilitate the integration of operational processes across the pharmacy
- Provide guidance to staff on quality management priorities and projects
- Monitor progress in meeting quality improvement goals and corrective actions
- Maintain approved minutes and other records of all committee meetings
- Monitor and enforce compliance with Accreditation Standards

Key functions of the EGC include:

- Allow committee representatives or their designees to report on quality performance of their respective areas
- Facilitate integration of operational processes across Humana Pharmacy Solutions by planning, analyzing, and evaluating quality improvement activities
- Promote objective and systematic monitoring and evaluation of consumer and client health services and facilitates compliance with regulatory requirements
- Provide status reports to the CQIC at least annually
- Meet at least once quarterly

Voting members are appointed by the Segment VP and President, Humana Pharmacy Solutions, and may include representatives from:

- Business Development
- Clinical Programs (Commercial and Medicare)
- Commercial Sales Segment Support
- Compliance
- Consumer Messaging
- Finance and Analytics
- Health Economics
- Human Resources
- Mail Order Pharmacy
- Specialty Pharmacy
- Pharmacy Professional Affairs
- Pharmacy & Therapeutics
- Pharmacy Contracting
- Pharmacy Networks
- Service Operations
- Environmental and Safety
- Quality, Process, Learning and Accreditation

Reporting Requirements for the PEGC include, but are not limited to:

- Accuracy
- Dispensing Accuracy
- Distribution Errors (External)
- Privacy Breach Metrics
- Call Quality
- Access to Service
- Prescription Turn Around Times
- Call Center Metrics
- Regulatory Compliance
- Satisfaction: Consumer and Client Pharmacy Networks
- Safety and Risk
- Risk Management

- Environmental and Associate Safety
- Quality Improvement Projects

The Member Safety Program is a component of Humana's Quality Improvement Program, which falls under the direction of the Corporate Quality Improvement Committee (CQIC), as delegated by Humana's Internal Board/Management team. The impact and effectiveness of the program is reviewed throughout the year by the CQIC according to the Quality Improvement Work Plan. The scope of the program includes all Humana members, providers, and associates unless noted otherwise.

The CQIC is in a unique position to not only review safety initiatives throughout Humana, but also to identify areas of priority focus for the company that aligns with national safety initiatives. Operational oversight of the Member Safety Program is within the scope of the Quality Operations, Compliance and Accreditation (QOCA) Department.
The Four Key Areas of Focus designated within the Humana Member Safety Program are as follows:

- 30-Day Readmissions
- Fall Prevention
- Medication Errors
- Inpatient and Surgical Complications
- Diagnostic/Therapy Radiological Services

Humana is actively involved in monitoring and improving safety by providing members with the tools and information necessary to decrease the likelihood of adverse events. Humana has developed a written Member Safety Program Description that is approved by the Corporate Quality Improvement Committee (CQIC). Member Safety reports quarterly to the CQIC to define and monitor safety initiatives which may vary with individual Markets.

Clinical Operations Utilization Management Committee provides oversight of clinical compliance activities impacting Clinical Operations. This committee supports more effective collaboration between leaders of all Clinical Services Programs performing utilization management and also includes representatives from Risk, Legal and Compliance.

The goal is to ensure a robust compliance committee via:

- Periodic meetings with key stakeholders to identify, discuss and mitigate risks related to utilization management;
- Creation of a forum to efficiently track key risk areas, providing an opportunity to brainstorm and discuss opportunities for improvement;
- Strengthening of the partnership/relationship between business operations and the Legal/Risk/Compliance;
- Monitor the performance of all delegated entities, including tracking and trending of data results over time
- Monitor deficiencies in the delegated entities' processes and to set priorities for corrective action plans in conjunction with the Delegation Compliance Department; and
- There will be standing agenda items as well as a running list of open issues and projects that will be developed to discuss updates/status.

The Committee conducts review and analysis of clinical compliance related metrics, nurse inter-rater reliability assessment activities, Corrective Action Plans (CAPs), regulatory updates, compliance

related process/workflow changes, and quality monitoring and evaluation of effectiveness of the program. The committee is responsible for identification of improvement opportunities and development of appropriate corrective actions and compliance improvement interventions. The Committee is co-chaired by the Corporate Commercial Compliance Manager and the Clinical Operations Compliance Manager and meets monthly. The committee reports to the Corporate Quality Improvement Committee. Members of the Committee may include:

- Corporate Commercial Compliance Manager (co-chair) and Director
- Corporate Medicare and Medicaid Compliance Managers
- Clinical Operations Compliance Manager (co-chair), Compliance Consultants and Compliance Analyst
- Corporate Director of UM, CM and Specialty CM Programs
- Directors of Clinical Intake, Clinical Claims Review and Case Management
- Clinical Operations Process Managers, Relationship Managers and Performance Managers, including leaders from Humana Behavioral Health, Clinical Access Team, Delegation, Transplant, Genetic Guidance, and Neonatal Intensive Care Programs
- Legal and Risk Representatives
- Clinical Learning and Development
- Continuous Improvement and Quality
- Clinical Policy Representatives and Senior Regional Medical Director
- Other support staff and guests as deemed necessary

Corporate Credentialing Committee is responsible for review and assessment of practitioners utilizing appropriate standards for credentialing, re-credentialing, and de-credentialing. Credentialing for the company occurs as a regional function in Cincinnati and Louisville. There is a Credentialing Committee in Louisville (which combines Cincinnati and Louisville credentialing activities), one in Florida and one in Puerto Rico. Credentialing and re-credentialing data are presented to the Corporate QIC.

Physicians and other healthcare professionals participate on the Credentialing Committee, but only physician members have voting privileges. The Credentialing Committee is chaired by a Humana Medical Director, or designee, and meets monthly.

Members of the Credentialing committee include representatives from:

- Humana Medical Director or designee (chair)
- Credentialing
- Practicing network physicians

Corporate Recommendation Review Committee (CRRC) makes the final decision for Humana regarding recommendations for provider terminations for quality of care, received through the peer review process. The CRRC may affirm, modify or reverse the recommendation, or remand the matter back to the peer review committee for additional evidence. The CRRC is chaired by the Corporate Chief of Quality, with the majority of members being physicians. Members may include:

- Corporate Chief of Quality
- Humana Medical Directors
- Director of Quality Operations Compliance and Accreditation
- Director of National Network Operations or Vice President of Provider Center of Excellence
- The CRRC reports up through the CQIC

Quality Management Committee (QMC) is responsible for reviewing and evaluating aspects of preventive and clinical care at the market level. The QMC is responsible for review of market specific preventive health and clinical study initiatives, and/or focused studies. Peer review functions may be handled in QMC or by a separate Peer Review Committee. The QMC is empowered to develop appropriate corrective actions and quality improvement interventions. A Humana Medical Director or a physician designee chairs the QMC, which includes physician members who are actively practicing in the provider network. The QMC meets at least bi-annually or as often as needed. Members of the QMC may include representatives from:

- Medical Director or physician designee (chair)
- Practicing Network Physicians
- Quality Operations, Compliance and Accreditation
- Clinical Programs
- Risk Management
- Additional representatives, as appropriate

Florida Medicaid Quality Improvement Committee The Florida Medicaid Quality Improvement Committee (FL MMA QIC) provides oversight of Quality Improvement program activities and clinical recommendations for the Florida Medicaid plan. The FL MMA QIC meets quarterly and reports to the Corporate Quality Improvement Committee through the legal entity report.

The FL MMA QIC is comprised of voting members showcasing multi-department representation of the centralized and regionalized areas of operations. Voting members shall be stewards of Humana's mission. Their recommendations are expected to be based on sound operational data, in support of member service, and the overall good of the markets serving Humana members.

The Florida Medicaid Medical Director serves as Chairperson and presides at meetings of the FL MMA QIC. In the Chairperson's absence, the Divisional Director of Quality Operations, Compliance and Accreditation or the Associate Medical Director may act as Chairperson. Voting members of the FL MMA QIC includes representatives from the following areas, but is not limited to:

- Director, Health Services Organization, Case Management/Disease Management
- Director, Health Services Organization, Utilization Management
- Director, Medicaid Network Development and Operations (CFL & NFL)
- Director, Medicaid Provider Relations (SFL)
- Executive Director, FL Medicaid
- Florida Medicaid Medical Director (Chair)
- Manager, Medicaid Quality, Quality Operations, Compliance and Accreditation
- Market Vice President, Senior Products
- Operations Director

Ad hoc, non-voting membership varies based on reporting cycles to the Committee and may include representatives from various departments, including but not limited to:

- Customer Service Coordinator
- Divisional Director, Quality Operations, Compliance and Accreditation
- Manager, Medicaid Enrollee Program

- Market Director, Performance Improvement
- Market Director, Quality Improvement
- Market Manager, Finance
- Market Manager, Pharmacy
- Market Manager, Risk Management
- Market Risk Advisor, Compliance
- Process Consultant, Grievances & Appeals
- Representation from Medicaid partner, Health Choice

Peer Review Committee (PRC) is responsible for reviewing potential quality of care issues, determining the severity of the issue, and recommending quality improvements or corrective actions as appropriate. The PRC is responsible for development of individual provider quality improvement plans, where indicated, and review of progress toward resolution. Physicians and other healthcare professionals participate on the PRC, but only physician members have voting privileges. The PRC is chaired by a Humana Medical Director, or physician designee, and meets as needed to complete timely review of clinical quality concerns. The Peer Review Committee may function as a separate committee or within the Quality Management Committee at a market, regional or divisional level. The PRC reports to the local Market Quality Management Committee. Members of the Peer Review Committee may include representatives from:

- Humana Medical Director or designee
- Practicing network physicians: primary care and specialties
- Quality Operations, Compliance and Accreditation Divisional director and/or manager and support staff
- Additional representatives as appropriate

Delegation Committee is held at the market level with local delegation committees in Florida, Illinois, California, and the Southeast Region. In addition, the Health Services Organization reports to the CQIC on the delegated IPA/MSO utilization metrics for the following HSO Delegation Regions: California, Intermountain, Desert pacific, Central, Texas, Gulf States, North FL, Central FL, South FL, Southeast, and Great Lakes.

The Delegation Committee is responsible for coordination and review of Market delegated activities related to quality management or improvement, credentialing, claims payment, member rights and responsibilities, and/or utilization as appropriate. Responsibilities of the Delegation Committee include review and approval of reports from delegated entities and recommendations for corrective actions as necessary. The Delegation Committee meets at least quarterly and is chaired by a Market Senior Executive. The Delegation Committee may be combined with the Quality Management, Utilization Management, or Service Committee in the local market office. All Delegation activities are reported annually through the Corporate QIC.

Members of the Delegation Committee may include:

- Market Senior Executive (chair)
- Humana Medical Director
- Representative, Network or Provider Relations
- Representative, Quality Operations, Compliance and Accreditation

- Representative, Utilization Management
- Representative, Customer Service
- Representative, Compliance
- Representative, Delegation Oversight

Clinical Operations Utilization Management Committee provides oversight of clinical compliance activities impacting Clinical Operations. This committee supports more effective collaboration between leaders of all Clinical Services Programs performing utilization management and also includes representatives from Risk, Legal and Compliance. The goal is to ensure a robust compliance committee via:

- Periodic meetings with key stakeholders to identify, discuss, and mitigate risks related to utilization management
- Creates a forum to efficiently track key risk areas, providing an opportunity to brainstorm and discuss opportunities for improvement
- Strengthens the partnership/relationship between business operations and the Legal/Risk/Compliance
- Monitor the performance of all delegated entities, including tracking and trending of data results over time
- Monitor deficiencies in the delegated entities' processes and to set priorities for corrective action plans in conjunction with the Delegation Compliance Department
- There will be standing agenda items as well as a running list of open issues and projects that will be developed to discuss updates / status

The Committee conducts review and analysis of clinical compliance related metrics, nurse inter-rater reliability assessment activities, Corrective Action Plans (CAPs), regulatory updates, compliance related process/workflow changes, and quality monitoring and evaluation of effectiveness of the program. The committee is responsible for identification of improvement opportunities and development of appropriate corrective actions and compliance improvement interventions. The Committee is co-chaired by the Corporate Commercial Compliance Manager and the Clinical Operations Compliance Manager and meets regularly. The committee reports to the Corporate Quality Improvement Committee. Members of the Committee may include:

- Clinical Learning and Development
- Clinical Operations Compliance Manager (co-chair), Compliance Consultants and Compliance Analyst
- Clinical Operations Process Managers, Relationship Managers and Performance Managers, including leaders from Humana Behavioral Health, Clinical Access Team, Delegation, Transplant, Genetic Guidance, and Neonatal Intensive Care Programs
- Clinical Policy Representatives and Senior Regional Medical Director
- Continuous Improvement and Quality
- Corporate Commercial Compliance Manager (co-chair) and Director
- Corporate Director of UM, CM and Specialty CM Programs
- Corporate Medicare and Medicaid Compliance Managers
- Directors of Clinical Intake, Clinical Claims Review and Case Management

- Legal and Risk Representatives
- Other support staff and guests as deemed necessary

Health Services Organization National Utilization Management Committee is charged with facilitating process for monitoring the care given by hospitals, skilled nursing facilities, home health and other ancillary services. The committee is responsible for reviewing utilization data and related statistics, identifying trends, and recommending improvement strategies. The National HSO Committee also reviews and approves the HSO Policies and Procedures on at least an annual basis and when needed as changes occur. The committee meets four times a year.

Committee responsibilities include:

- Annual approval of the HSO UM Program Description, UM Work Plan and UM Evaluation
- Approval of HSO UM and Medical Management Policies and Procedures
- Evaluation of the effectiveness of, and identification of barriers to, HSO UM and CM activities
- Facilitation of a process for ongoing analysis of HSO utilization and trend data to identify outliers and create improvement plans to address appropriate utilization: This is accomplished through the monthly UM Metrics meeting, Medicare and Medicaid Trend meetings and the Model of Care operational reporting meetings where utilization trends and process compliance by division, region and product are reviewed and analyzed.
- Performance monitoring of all delegated entities, including tracking and trending of data results over time
- Monitoring deficiencies in the delegated entities' processes and setting priorities for corrective action plans in conjunction with the Delegation Compliance Department

Reporting Structure

- A National HSO UM Committee representative reports to the Corporate QIC annually. Recommendations and actions are communicated to appropriate committees and individuals, as well as to delegated entities, by means of memos and reports.

Membership and Voting

All committee members have voting privileges, with decisions made by a majority vote.

- HSO Chief Medical Officer, Chair Person
- Corporate HSO Staff
- Regional Medicare and Medicaid Health Services Medical Directors
- Regional Medicare and Medicaid Health Services Directors
- Regional Medicare and Medicaid Health Services Managers
- Behavioral Health Representatives

Risk Management/Safety Committee has oversight of the Risk Management Program and identifies corrective measures needed to eliminate or control recognized safety and health hazards and to recommend improvements. It acts on referrals for risk issues generated both internally and

externally. The Manager of Risk Management is the Chair of the Risk Management Committee, which meets a minimum of three times a year, or more frequently as needed. The committee reports quarterly to the Humana Internal Board/ Executive Committee. Members of the Risk Management/Safety Committee may include representatives from:

- Quality Operations, Compliance and Accreditation
- Health Services
- Workplace Solutions
- Humana Resources

Provider 360 Committee - Humana has a cross-functional Provider 360 Committee, chaired by the Medicaid Market President, with a goal to continuously identify opportunities to improve provider experience with Humana. Participants from various departments, including Provider Relations, Claims, Care Coordination, Grievance and Appeals, and Customer Service review various trends and data to understand concerns from providers and design initiatives to proactively address concerns. The Committee meets monthly and produces reports for the Quality Management Committee's review.

b. Disease/Complex Case Management

Disease Management

Humana's Disease Management Program is an enrollee-focused program where nurses help enrollees learn how to control their disease by providing education, support, community resources, and communication with their doctor and other specialists.

Humana's Disease Management (DM) Case Manager is a licensed nurse with skills, to classify, assess, monitor, evaluate, instruct, intervene and document goals and outcomes for each enrollee in the following programs:

- Diabetes
- Congestive Heart Failure
- Hypertension
- Asthma (adult and pediatric)
- HIV/AIDS
- Sickle Cell Disease
- Cancer

The Disease Management Program provides services that include but are not limited to:

- Evaluating enrollee needs that can affect control of their disease such as physical limitations, emotional stress, transportation difficulties, and environmental needs.
- Creating individualized self-management goals based on Health history, psychosocial assessment, doctors' recommendations, and enrollee needs.
- Providing education on diagnosis and treatment.
- Referrals to other healthcare providers as needed.
- Enrollee and provider support regarding diagnosis, plan of care, and other health related concerns.
- Educating enrollees on recommended health checks.
- Educating and assisting enrollees on reaching disease specific diet and exercise goals.

The goals of the Medicaid Disease Management program are to:

- Improve enrollees understanding and assist self-management of their disease with education and support while following their doctors plan of care.
- Help the enrollee to reach and maintain optimal control of their disease or diseases.
- Increase awareness of the health risks associated with certain personal behaviors and lifestyles.
- Improve enrollees' understanding of the importance of seeing their doctor or specialists for regular visits.
- Help enrollees know who to call if there is an urgent situation and in an emergency.
- Find and obtain community-based resources that meet the enrollee's medical, psychological, and social needs.
- Evaluate results of the program on the health of enrollees who participate in the program.

Complex Case Management

Humana's Complex Case Management is a service provided to Medicaid enrollees by Humana nurses specially trained to focus on enrollees with complex medical needs. Case Management is designed to meet the medical and psychosocial needs of the enrollee and varies depending on situation and severity. Our clinical team works to pair enrollees with network providers that can best manage the unique and specific special needs of each enrollee. A multidisciplinary team approach is utilized to ensure the enrollee's needs are met and all efforts are made to improve and optimize his/her overall health and well-being. A team of Physicians, Social Workers, and Community Services Partners are on hand to help make sure enrollees' needs are met and all efforts are made to improve and optimize their overall health and well-being. The case management program is optional.

9. CONTINOUS IMPROVEMENT THROUGH ONGOING EVALUATION

Built on partnership and toward a common goal of delivering quality care, Humana's provider engagement model is the basis of our provider retention efforts and a significant differentiator of our network management strategy. It is critical that we evaluate provider satisfaction and quality to monitor for opportunities to continuously improve. As a measure of provider satisfaction, Humana regularly monitors provider termination rate, which is less than 1% month over month. Humana also performs an annual provider satisfaction survey in all contracted Regions we operate in accordance with AHCA-contractual requirements.

Coordination and communication within and outside the system, with fellow providers as well as outside organizations are critical. Humana helps facilitate these opportunities for updates, education on changes, and ongoing enrollee quality of care. Given our operational presence in Florida, Humana's robust local leadership team has also established strong relationships with our providers, and regularly attends meetings to discuss new initiatives and opportunities to reach our common goals. These interactions help support providers, identify their needs, remove barriers, and maintain satisfaction within the provider community while making it easier to achieve our common goal.

a. Provider Satisfaction Survey, Methodology and Results

The Provider Relations team conducts an annual provider satisfaction survey in all of our contracted regions in accordance with contractual obligations and State approved sample methodology and

metrics. The survey enables Humana to evaluate and measure satisfaction across the following service metric areas: provider relations and communication, clinical management processes, authorization processes including denials and appeals, timeliness of claims payment and assistance with claims processing, complaint resolution process and care coordination/case management support. Since our provider satisfaction survey conveys valuable insight to the provider experience with Humana, we have taken steps to increase provider participation in responding to the survey. In 2015 we experienced a 15 percent response rate, which increased to 17 percent in 2016. Most recently in 2017, the rate increased to 30 percent.

Humana has received positive feedback in our provider satisfaction survey regarding our provider engagement model. For example in 2017, 99 percent of MMA respondents said their Provider Relations Representative was able to answer all of their questions and was professional and courteous. Additionally, 98 percent of respondents said the educational and training materials are easy to understand.

Humana uses a vendor, Talk2Rep, to make calls to designated provider offices with State-approved scripting. Surveys are conducted using a four-point Likert scale for the Primary care provider locations with the top 40 percent of total enrollees, and specialist locations with top 40 percent of highest claim volume. We then tabulate, analyze and evaluate survey results to identify opportunities for improvement and develop action plans based on identified service categories with highest overall "disagree/strongly disagree" responses.

Below is a snapshot of results of Humana's 2017 provider satisfaction survey, including survey sample size by provider type, number of successfully completed surveys and top five areas of strength:

Total Sample Size (all regions)	**224**
Total Primary Care Provider Locations	**77**
Total Specialist Provider Locations	**147**
Total Surveys Completed (all regions)	**68**
Primary Care Provider Locations	**19**
Specialist Provider Locations	**49**

Top 5 highest overall agree/strongly agree responses - areas of strength

Provider Relations and Communications	
Question(s):	
1b. My provider relations representative is: Able to answer my questions	99%
1d. My provider relations representative is: Professional and courteous	99%
3. Educational and training materials are easy to understand.	98%
Care Coordination and Authorizations	
Question:	
10. Denial notifications, including the denial reason(s), are provided in a timely manner.	100%
Clinical Management	
Question:	
20. Case managers are knowledgeable, professional and courteous.	100%

Top 5 highest overall disagree/strongly disagree responses - areas of potential opportunity	
Provider Relations and Communications	
Question:	
4b. In the last 12 months: I participated in an in-office visit from a Humana representative.	28%
Complaint and Appeals Resolution Process	
Question(s):	
15. I have filed a complaint/grievance or appeal and found the process easy to follow.	25%
16. The provider grievance process is effective.	24%
17. Overall, I am satisfied with the provider complaint, grievances and appeals process.	23%
19. My complaint was resolved without having to make multiple inquiries.	32%

Humana's 2017 provider satisfaction survey results were transmitted to The Agency for Health Care Administration on July 1, 2017.

b. Provider Quality

Humana strives to build strong partnerships between our PCPs and high-volume specialists and our Humana provider engagement team. Each has an assigned Humana Quality Improvement Nurse and a Provider Relations Representative, who visit PCPs on a monthly basis and high-volume specialists on a quarterly basis to provide training, education, gaps in care for enrollees, and utilization data. This frequent interaction not only supports our providers, but it also informs us of any trends or issues our providers are facing, as the model is designed to support them wherever they need it. We understand providers have the front-line interaction with our enrollees, and it is critical to engage with them throughout their experience with Humana.

Humana offers a comprehensive set of tools and resources for our providers to achieve success in accomplishing the Agency's goals of enhanced access, integrated and coordinated care, and improving the quality of care to our enrollees. We provide these tools on a regular basis to ensure that provider performance and quality metrics are transparent to providers:

- Quality Improvement Nurses
- Service Fund Data Analytics
- CareHub Clinical Guidance Exchange
- Humana's Monthly HEDIS Package
- PCP Reports (monthly, quarterly)

Quality Improvement Nurses

Humana has a provider liaison position called a Quality Improvement Nurse to assist providers in improving overall health outcomes and reducing potentially preventable events. We fill these positions with registered nurses who have a clinical background to facilitate and coordinate care between enrollees and providers. Quality Improvement Nurses are geographically assigned and meet with PCPs on a quarterly basis, regardless of whether the provider is alternative payment method, to analyze and close enrollee care gaps, facilitate education, manage medical costs, and document and improve coding accuracy. During the meeting with the PCP, Quality Improvement Nurses may develop a tailored plan of how to best support the provider in improving enrollee care.

Service Fund Data Analytics

Humana developed the proprietary Service Fund risk sharing management application for providers engaged in a risk or capitated arrangement. We use this innovative tool to calculate reimbursements to providers in these arrangements by tracking and aggregating information on capitation payments, claims expensing, claims payment, reconciliation, and settlement for all PCP contacts.

On a monthly basis, Service Fund makes data files available containing information regarding provider membership, funding, claims activity, progress toward value-based payments, and capitation payments at an individual provider level and at a group level. Humana tailors the reports to providers in risk or value-based arrangements. They are available for provider access through an online portal as well as through our Provider Relations representatives. Additionally, Humana educates providers using Service Fund by walking through standard reports during initial trainings to show the data to which they have access and how to use it to help manage their providers and financials. Provider Relations Representatives meet with PCPs monthly to review the Service Fund reports and to discuss any issues or barriers they may be facing.

CareHub Clinical Guidance Exchange

Our CareHub Clinical Guidance Exchange (CGX) system generates Care Alerts we distribute to our providers. These Care Alerts consist of evidence-based medicine care gaps and drug-to-drug/disease interaction alerts. By promoting awareness and closure of these gaps, we help our providers improve the care they deliver.

Humana's Monthly HEDIS Package

To help PCPs better manage the care of their enrollees, we provide a package of monthly HEDIS reports to every PCP. These reports capture preventable events among enrollees, gaps in care, and high utilizers of pharmaceuticals. In addition, practices can view their performance on HEDIS indicators to see how their performance compares with other providers in their region. We package this information in an actionable manner, providing call lists with the contact information for enrollees who have care gaps and a list of recommended actions for enrollees who are non-compliant with preventive care screening and/or disease management visits. Additionally, the QIN may work with the provider to develop initiatives around the care gaps and work with providers to close them

PCP Reports (Monthly, Quarterly)

Humana provides PCPs with a monthly report indicating which of their Humana enrollees have care gaps. These reports will also identify enrollees on their patient panel with potentially preventable hospital admissions and/or avoidable use of the emergency department. Our providers and their staff use these reports to reach out to enrollees and address the care gaps, as well as any identified preventative services. They may also schedule any needed appointments and make referrals to specialists.

c. Coordination of Relationships among Various Levels of the System

Joint Operations Committee Meetings

Humana utilizes Joint Operation Committee (JOC) meetings as a mechanism to meet face to face with providers to discuss and resolve issues or concerns. JOC meetings also allow Humana to use these forums as an opportunity to provide updates on contractual and program changes or offer technical

assistance. JOC meetings may be scheduled monthly, every other month, or quarterly depending on the needs of the provider network or Humana.

Medicaid Quality Work Group

The Medicaid Quality Work Group comprises representatives from various disciplines throughout the organization. Participants include representatives from Medicaid Administration, Provider Contracting, Health Services, Quality Improvement, and Quality Operations Compliance and Accreditation. Its goal is to evaluate plan performance related to services our Medicaid population receives. This group also focuses on developing appropriate enrollee and provider-focused interventions and evaluation of the implemented interventions. The work group is responsible for:

- Ongoing monitoring of HEDIS results and development, implementation, and monitoring of Florida Medicaid specific interventions.
- Organizing and collaborating on the development of an enrollee newsletter. The Work Group provides feedback on topics appropriate for the newsletter to encourage enrollees' healthy behaviors and active participation in health care.
- Provider target reports identifying enrollees with chronic conditions (e.g., diabetes, hypertension) as well as preventive and wellness visits shared with providers to assist providers in reaching out to enrollees needing care.
- Outreach, new enrollee welcome calls, and birthday wellness calls completed by the Medicaid Administration department. These calls encourage enrollees to visit their PCP routinely and participate in valuable screening activities.
- Ongoing collaboration with the Medicaid dental vendor, DentaQuest, as discussed at Work Group meetings. Recommendations from the Work Group are shared with the DentaQuest team.
- Enhanced follow-up process of postpartum women through the 8-week postpartum period.

Provider-to-Provider coordination

Humana emphasizes strong collaboration between the health plan, PCPs, and specialists for medical cost control, network development, data/information needs, and provider education. We encourage Florida PCPs to form their own "sub-network" of preferred facilities and specialists. This enables the PCP to develop critical relationships with the specialists, optimize communication and information sharing between the PCP and specialist, and ensure that enrollees receive quality, coordinated, and medically-necessary services.

Humana provides case management support to persons with one or more conditions that create a sufficient level of health status impairment or risk. For persons receiving case management support, we develop an individualized treatment plan that addresses all known health conditions, and coordination between co-occurring conditions. We share this individualized plan with the enrollee, the caregiver, the PCP, and with specialist providers who play a central role in treating one or more of the enrollee's key disorders. During the assessment process, the enrollee identifies those people essential to their health care. The case manager enlists and solicits the active participation of all appropriate stakeholders, including caregivers, providers, and community agencies to promote communication between the provider(s) and to facilitate coordination of services as necessary based upon the care plan and the needs of the enrollee. Methods to obtain input from these stakeholders regarding evaluation, problem identification and treatment recommendation may include telephone interaction, email, online communication through our Web portal, and potentially face-to-face meetings.

Humana's subcontractors such as Beacon, DentaQuest, One Homecare, and Logisticare attend Humana-sponsored Town Hall meetings with our network providers to answer questions and strengthen the partnership. Additionally, Humana facilitates in-service trainings between our contracted Hospitals, PCPs, MSOs, and our subcontractors to educate on their programs. In addition, the subcontractors attend monthly JOC meetings with Humana and the MSOs throughout the State, and hold webinar trainings for PCPs to educate them on their various programs.

Cross-Functional Provider Communications

- Provider Relations Representatives serve as the liaison between Humana and providers. The Provider Relations Representative works collaboratively with Humana departments and our network of primary care physicians, specialty care and ancillary providers, and facilities. Daily interactions between the Contracting Representatives, Medical Services, Claims, Customer Services and Finance Departments and the development of these interdepartmental relationships are critical to ensure effective coordination and communication when contracting with new vendors or transitioning services.
- Provider Call Center – Our provider Call Center is staffed with experienced provider representatives responsible for answering questions and participating in the sharing of information related to their practice and enrollee services.
- Provider Orientation – All contracted providers receive a Humana provider orientation within 30 days of their effective date into the network.
- Ongoing provider education visits – Contracted PCPs and SPCs will receive an educational visit from a Humana Representative no less than quarterly, or more often if needed. This includes face-to-face visits, telephonic, virtual webinars, or group sessions
- Joint Operating Committee (JOC) – As mentioned above, we schedule JOC meetings are scheduled monthly with large health systems to share medical information related to quality and protocols, training, and issue resolution.
- Newsletters – Newsletters are generated quarterly with information pertaining to policy changes, quality, industry changes, and medical protocols.
- Provider Manuals – These manuals contain information necessary for a provider to be successful. After a provider executes an agreement with us, we schedule an orientation session to review the manual contents as well as any other information related to our health plan.
- Provider Website – The Provider Website represents another means to obtain important, real time information about our operations. Newsletters, policies, medical protocols, claims, quality, and a multitude of other information are available to the provider through the portal.
- Webinars – The Provider Relations team hosts periodic webinars on various topics to ensure providers have access to updated Medicaid polices and requirements. Topics covered include but not limited to, claims processing, encounter submissions, Continuity of Care, Dual-eligible enrollees, Referrals and Authorizations, Contracting and Credentialing processes.
- Medicaid Advisory Panel – The Medicaid Advisory Panel identifies and reviews provider concerns and makes advisory recommendations to Humana. Humana may also make requests of the Medicaid Advisory Panel to provide feedback and recommendations on topics which will affect Medicaid enrollees. The Panel membership includes network providers, community leaders, and representatives from the various health plan disciplines.

d. Coordination with Outside Organizations

Humana recognizes the need for effective communication and coordination as a key to quality care and service excellence. We participate in and partners with national organizations, thereby keeping channels of communication open and furthering the delivery of high quality, comprehensive healthcare to all enrollees. Participation in national accrediting bodies affords input into policy-making and enhances the goal of increasing the quality of healthcare. Humana is certified by the Committee on Operating Rules for Information Exchange (CORE), which is an initiative by a non-profit alliance of health plans, networks, and trade associations to simplify healthcare administration. CORE certification ensures providers get consistent, uniform information thereby improving the quality of interaction with Humana.

Examples of national organizations Humana collaborates with include:

- National Quality Forum (NQF)
- American Health Insurance Plans (AHIP)
- National Council on Aging (NCOA) – falls pilot with the Centers for Disease Control
- National Committee for Quality Assurance (NCQA) – Health Plan Advisory Council participation
- Centers for Medicare and Medicaid Services (CMS)
- Utilization Review Accreditation Commission (URAC) – Board of Director membership
- Department of Health and Human Services (HHS) - Partnership for Patients Initiative and Million Hearts Campaign

Examples of Florida organizations Humana collaborates with include:

- Florida Assisted Living Association (FALA)
- Florida Health Care Association(FHCA)
- Florida Council on Aging (FCOA)
- Home Care Association of Florida (HCAF)
- Florida Gerontological Advanced Practice Nurses Association (FGAPNA) (Aging Life Care Association)
- The Florida Geriatric Care Managers Association (FGCMA)
- Leading Age Florida
- Florida Medical Directors Association (FMDA)
- Florida Association Directors of Nursing Administration/LTC (FADONA) Florida Health Care Social Workers Association (FHCSWA)
- Florida Association of Health Plans (FAHP)
- Alzheimer's Association
- Florida Alcohol and Drug Abuse Association (FADAA)
- Florida Council for Community Mental Health (FCCMH)
- Florida Medical Association
- Florida State Guardianship Association
- Florida Alliance of Home Care Services (FAHCS)
- Alliance for Aging
- Aging & Disability Resource Center (ADRC)
- Northwest Florida Area Agency on Aging, Inc.

Healthy Start

The Healthy Start program includes targeted support services that address identified risks. The range of free and voluntary Healthy Start services available to pregnant women, infants and children up to age three include:

- Childbirth, breastfeeding and car seat education classes
- Comprehensive assessment of service needs in light of family and community resources

- Home visits to provide education and support for breastfeeding, baby weight checks, parenting, immunization information and safe sleep
- Ongoing coordination to assure access to needed services and support to help families attain their goals
- Developmental screening, psychosocial assessments, nutritional education, smoking cessation counseling or referrals as needed

Humana will refer members to Healthy Start for these services when identified utilizing the Healthy Start Assessment Tool. The tool is used to determine eligibility for enrollment in Healthy Start's Care Coordination Program and is completed by their obstetrician at the initial visit. Eligibility is based on identified risk factors that may affect the health of the pregnancy. The goal of the program is to mitigate those risk factors. Members are automatically eligible when they exhibit one of the criteria that makes them automatically eligible, regardless of the Assessment Tool score (i.e.: homelessness, history of abuse, etc.).

In addition, Humana is working with Healthy Start on a contract that will include case finding services in which Healthy Start will attempt a home visit for members we are unable to locate.

Medicaid Advisory Panel

Community organizations and other agencies provide essential services, programs, and resources to qualified enrollees to support their quality of life and optimal well-being. To ensure that we address the needs of enrollees and identify any opportunities for improvement, Humana has developed a Medicaid Advisory Panel composed of providers including medical service organizations and hospital corporations, non-profit organizations and community agencies that serve the Medicaid population.

The Panel's purpose is to provide a forum for Humana management, leaders in community organizations, and senior hospital and medical service organization administrators to better understand the needs of our enrollees and our Plan requirements by identifying issues and concerns and providing feedback. The Panel obtains input from subject matter experts on our initiatives and strives to develop methods that we can use to better serve our enrollees. Creating new ways to approach universal challenges will lead to pilot projects, which the committee will track. This exchange of ideas allows the Plan to improve processes and develop methods to overcome challenges that we face in serving our enrollees.

There will be representatives on the Panel from various stakeholders (see below) who will be permanent enrollees. The panel will be driven topically per the consensus of the permanent enrollees. Each meeting will concentrate on one topic of interest to enrollees and/or providers. Guests may be invited as subject matter experts to speak to the topic being discussed at the meeting.

1. Network hospital corporations
2. Network medical service organizations
3. Non-profit organizations
4. Community agencies
5. Humana Medicaid administrative leadership

e. Subcontractor and Vendor Oversight Compliance

Humana partners with subcontractors to provide health care services to enrollees. To ensure that each subcontractor adheres and exceeds the requirements, Humana has implemented a rigorous oversight

program with corporate and market based teams responsible for the subcontractors' performance. We will continue to be compliant with AHCA's requirements around subcontractor monitoring and policies. Humana's Delegated Vendor Performance Oversight team (DVPO) is dedicated to monitoring and overseeing functions delegated to subcontractors. Delegation of Network Management responsibilities includes the following:

- All subcontracts that meet the Network Management Delegation definition shall have an executed and AHCA approved Network Delegation Amendment.
- Monitor compliance, network adequacy, and quality by monthly/quarterly reports and annual audits to include:
    - Policy and procedures
    - Provider Network Report of all provider groups, individual physician practices and sites in its network are not accepting new Medicaid enrollees
    - Availability of Providers providing Specialty Care services, including number and geographic distributions
    - Access to appointments
    - Opportunities to improve access for enrollees
    - Identified problems and corrective actions initiated and outcomes
- Implement Corrective Action Plans and monitor adherence to written subcontractors agreed upon process to correct noncompliance. As required, impose provider capitation payment penalties for outstanding corrective action plan issues, restriction, suspensions and/or terminations.

All subcontractors' performance and issues are presented to the DVOC for review and approval of necessary interventions and corrective actions plans in the event of subcontractors' non-compliance with the contractual provisions and service level agreements (SLAs). The oversight of subcontractors is performed by three entities, as described below.

- Market-based Delegate Relationship Managers (DRMs) – front line of Humana associates who work closely with the subcontractors. They are responsible for the due diligence of subcontractors and consistent oversight of operational performance according to the contract and SLAs. They hold joint operational meetings, which are designed to review past month's subcontractor performance with comparison to SLAs and contract provisions. The meetings are led by the DRM and attended by the Director of Oversight Vendor Performance. In addition, the Director of Oversight Vendor Performance holds monthly operational meetings with all DRMs to review subcontractors' performance, identify opportunities for improvement, develop corrective interventions and follow up on progress.
- Corporate Delegation Compliance – responsible for pre-delegation, annual and ad hoc audits of subcontractors. The audits are performed in accordance with the contractual provisions, NCQA Standards and SLAs. The audit results are presented to the DVOC for recommendations of interventions as appropriate.
- Delegated Vendor Performance Oversight unit – comprised of a director and coordinator. The role of this unit include but is not limited to:
    - In conjunction with DRMs, facilitate the coordination of oversight and monitoring activities
    - Review operational performance of subcontractors for adherence to contract provisions and SLAs
    - In conjunction with the DRMs, develop interventions, corrective action plans as necessary to improve performance and subcontractors compliance

- Participate in joint operational meetings with subcontractors; review performance and recommend improvements
- Review for under/overutilization trends and address with subcontractors
- Work with subcontractors to participate in the support of Humana's goals to improve health care outcomes (HEDIS campaigns, Plan initiatives, integration and specialty programs,)
- Establish vendor specific performance goals based on enrollees health outcomes
- Work closely with the Network Contracting Directors to monitor for financial solvency for subcontractors with financial risk

Summary of subcontractors performance are presented at the Delegated Vendor Oversight Committee (DVOC) which reports to Quality Improvement Committee.

SECTION II-HUMANA LONG-TERM CARE

1. Summary:

Humana Long Term Care (HLTC) has created and maintains this Network Development and Management Plan (NDMP) to ensure that all enrollees have appropriate access to cost effective medically necessary healthcare to avoid or delay nursing home placement when enrollees choose to remain in the community. In addition, it maintains a sufficient network to meet the needs of those that choose to reside in a nursing home.

We recognize that quality of care is imperative in our healthcare delivery system, and a critical component of maximizing enrollee healthcare outcomes. With this fundamental concept in mind, we work collaboratively with our Medical Management and Quality Departments to actively participate in ongoing network development activities that allow Humana HLTC to maintain a structure that fosters collaboration across all departments and increases effectiveness, efficiency and cost savings without compromising quality.

Throughout this document, HLTC illustrates and evaluates our goals, methodologies, and interventions. Methodologies used by HLTC allow us to assess geographically appropriate distribution of service providers, including, but not limited to: Home Health, Home Delivered Meals, Emergency Response, Adult day Health Care, Assisted Living and Nursing Homes for our membership.

Our commitment to excellence focuses on building and strengthening partnerships with our contracted providers and creating a culture of collaboration and innovation in identifying and implementing improved approaches to healthcare delivery. HLTC demonstrates within the Network Development and Management Plan that we monitor providers and other subcontractors to ensure that enrollees have a positive experience accessing their care.

The Network Development and Management Plan further outlines the current status of the Humana HLTC network and defines our future network needs. These needs are identified based on projected membership growth, including provider availability, membership medical needs and choice within the HLTC network. The Network Development and Management Plan estimates expected utilization based upon our mix of membership related to membership rate codes, geographic locations and specific individual needs. These are essential components of our Network Development Plan, allowing us to accurately anticipate and articulate future network needs and drive quality initiatives that promote our commitment to improved enrollee healthcare outcomes.

2. Introduction:

The Network Development and Management Plan (NDMP) for the Florida SMMC LTC is an annually updated tool to ensure that covered services are available and accessible in accordance with the access standards in the AHCA Contract with Plan and to meet the projected Plan enrollment levels for all 11 regions in the State of Florida.

When the Plan is establishing and maintaining the provider network, the Plan takes the following into consideration as required by 42 CFR 438.206:

a. The anticipated number of enrollees;

b. The expected utilization of services, taking into consideration the characteristics and health care needs of specific Medicaid populations represented;

c. The numbers and types (in terms of training, experience and specialization) of providers required to furnish the covered services;

d. The numbers of participating providers who are not accepting new enrollees;

e. The geographic location of providers and enrollees, considering distance, travel time, the means of transportation ordinarily used by enrollees and whether the location provides physical access for Medicaid enrollees with disabilities
f. The quality rating of the provider.

3. Evaluation of the prior year's plan:

HLTC became a capitated plan in 2014and maintained the successful robust provider network it had in place during the fee-for-service program. Effective July 1, 2015, HLTC became one combined entity composed of both HLTC and Humana Comfort Choice operating under the new name of Humana HLTC. Humana HLTC successfully integrated both provider networks and maintained relationships with all providers in order to ensure continuity of care and access to care. During the period from July 1, 2015 through December 31, 2015, the former HLTC Provider Relations staff successfully contracted with over 250 providers that were servicing previous Humana Comfort Choice members. The addition of these additional providers resulted in an enhanced, robust network that successfully met the needs of our members through 2016 until the present.
All HLTC awarded regions had Nursing Home Diversion Waiver experience so the Providers, DOEA CARES, Community Based Organizations (CBO), and other stakeholders are familiar with the managed care concept of Home and Community Based Services (HCBS) as potential alternative to Skilled Nursing Facility (SNF) residency. We continue to strive to educate our providers while working in a partnership environment.
HLTC maintains a sufficient network and actively assesses the overall condition by provider type. The methodologies we utilize evaluate the condition of the network include review and analysis of the following: (a) how enrollees access the system, (b) all provider types by geographic area, (c) access to care for all various levels of providers and (d) quality rating of providers.
HLTC communicates to the provider network regarding changes in contractual and/or program policies and subcontractor requirements through on-site provider visits, meetings, phone, webinars and electronic communication and through informational faxes where we send out pertinent information to all providers as they are affected. HLTC is able to identify specific provider types and that enables us to communicate specific information to these specialties.
HLTC obtains data through a variety of mechanisms, including but not limited to Complaints, Grievance and Appeals, Operations Committee meetings and enrollee feedback. This information is used to evaluate the network and make necessary changes in order to meet AHCA guidelines and ensure access for our enrollees.
HLTC Care Managers and Provider Relations Specialists have in-person site visits to ensure outreach and communication to our provider network, review quality of care and enrollee satisfaction.

Our goals for the 2017-2018 plan year are:

1) Continue to work with AHCA and providers that need an enrolled or registered Medicaid number or specialty codes to obtain them and process their claims
2) Begin ranking providers on quality and efficiency ratings
3) Identify low performing providers in our network based on quality and efficiency ratings and move enrollees to high ranking providers where appropriate.
4) Consistently meet contractual network adequacy requirements and any additional access needs identified by our clinical and member support areas.
5) Expand the provider network to include specialty providers supporting members that are currently enrolled in the waiver programs that will be included in the LTC program (PAC, Brain and Spinal Cord Injury and Cystic Fibrosis).

4. 2017-2018 Humana Long Term Care Network Challenges

HLTC maintains a robust provider network throughout the state, meeting or exceeding contract requirements. The biggest challenge is satisfying home bases member needs in the rural areas of regions 1, 2 and 3. HLTC is taking an aggressive, innovative approach to meet these needs.

5. Availability and Accessibility for Covered Services:

HLTC ensures that they have the minimum of two providers for each type of service in each county in the state, except in some rural areas where providers do not exist. In areas where providers do not exist or refuse to be a participating provider, we have found alternative providers to serve enrollees in these areas. HLTC has obtained waivers from AHCA in these identified counties.
Most services provided under this plan are provided in the enrollee's home, and enrollees are not required to go to the location of the provider. Home and community based services are available on a seven (7) day a week basis, and for extended hours, as dictated by enrollee needs. Providers can provide services 24 hours/7 days a week when dictated by the members needs and authorized by the care manager. The largest percentage of the population resides in a nursing home or assisted living facility which provides all the services to the enrollee 24 hours a day. The exception is for enrollees attending Adult Day Health Care and Outpatient Therapy. HLTC provides transportation when needed to get to these locations. We ensure that these services are easily accessible and readily available to our members. Adult day cares do have a limited number of hours they are open for business. HLTC utilizes Assisted Living Facilities that are authorized to provide Adult Day Care Services in addition to free standing Adult Day Care Centers for this service to ensure that members have more options for geographic location as well as additional hours offered to them.
HLTC has determined that we currently have a robust network in non-rural counties, and have identified providers in neighboring counties to assist in the rural areas. This does result in an increased rate to provide incentives for providers to go to enrollees' homes in the rural areas. Thirty counties were identified as Rural on the Florida Rural Counties map at:
https://medicare.fcso.com/Rural_health/166451.pdf

6. Adult Companion Providers (See Homemaker & Companion Service Providers)

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
  - Health Care Services Pool for Temporary staff to existing network providers

- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

7. Adult Day Health Care Centers (ADCC)

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

8. Adult Family-Care Homes (AFCH)

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.

- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
  - Ongoing activities for network development include review of AHCA provider listing for new providers.
  - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

9. Assistive Care Service Providers (see AFCH)

10. Assisted Living Facilities (ALF)

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.

- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

11. Attendant Care Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.

- Ongoing activities for network development include review of AHCA provider listing for new providers.
- Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

12. Behavior Management Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
  - Ongoing activities for network development include review of AHCA provider listing for new providers.
  - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

13. Care Managers or Case Management Agency

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.

- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

14. Home Adaptation Accessibility Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.

- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

15. Home Health Agencies (HHA)

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

16. Homemaker and Companion Service Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.

- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

17. Hospices

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building

    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

18. Medication Administration Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

19. Medication Management Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

20. Medical Supplies Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.

- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
  - Ongoing activities for network development include review of AHCA provider listing for new providers.
  - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

21. Nursing Facilities

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.

- Ongoing activities for network development include review of AHCA provider listing for new providers.
- Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

22. Nutritional Assessment and Risk Reduction Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
  - Ongoing activities for network development include review of AHCA provider listing for new providers.
  - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

23. Personal Care Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.

- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

24. Personal Emergency Response System Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific

measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

25. Transportation Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

26. Therapy (Occupational) Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.

- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

27. Therapy (Speech) Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.

- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
  - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
  - Ongoing activities for network development include review of AHCA provider listing for new providers.
  - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

28. Therapy (Respiratory) Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
  - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.

- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

29. Therapy (Physical) Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

30. Coordination between Organizations

Coordination between internal departments

Departments	Department Leadership
Credentialing	Ange Sumner, Johanna Garcia
Quality Management	Sharon Mecoli
Claims	Elaine Jones
Utilization Management	Clinton Jules, MD
Grievances	Corporate G&A
Finance	Ron Weeden
IT Systems	Tom Payne
Operations	Natalia Aresu
Compliance	Shannon Childers
Care Management	Ela Alarcon-Cabrera
Network	Ed Miller

Coordination with outside organizations

Coordination with outside organizations is an ongoing process and one that will have more relevance for outside organizations under the integrated features of SMMC. HLTC through its 13+ years of network building for the Nursing Home Diversion Waiver and the professional experiences of its staff has a robust relationship with many associations, providers and the Aging Network. HLTC is continuing to develop effective relationships with the MMA plans. HLTC and the Humana MMA plan became a comprehensive plan in those regions where both plans exist on October 1, 2016. This change has improved the care management coordination of these members as they are now managed on the same clinical platform.

Network design by region and county for the SMMC LTC population

Enrollees access the Plan Network by use of the Provider Directory and Care Management Authorization. The Provider Directory can be found online at www.humana.com/humanalongtermcare. A hard copy is provided to the member upon request. Since the SMMC LTC enrollees require a Nursing Home Level of Care certification, the entire SMMC LTC population is considered “special”. However, within this group there are those that are transitioning to step down accommodations from either the hospital or nursing home. That group in transition and others deemed chronic and most at risk are Care Management hot spots.

The Network is designed to serve the SMMC LTC population with Long Term Services and Support (LTSS) provider types.

31. Provider Relations

Education and Training

The Plan offers training to all providers and their staff regarding the requirements of the Government Sponsored SMMC Contract and special needs of enrollees. The Plan will conduct initial training within thirty (30) calendar days of placing a newly contracted provider, or provider group, on active status for the SMMC program. The Plan also conducts ongoing training, as deemed necessary by the Plan or the Agency, in order to ensure compliance with program standards and the SMMC Contract.
The Plan’s training and education to providers includes Plan’s enrollment and credentialing requirements and processes.

HLTC provides weekly training webinars for new and established providers. The training calendar is posted on the HLTC home page.
The Plan shall ensure all participating providers required to report abuse, neglect, or exploitation of vulnerable adults under s. 415.1034, F.S., obtain training on these subjects. If the Plan provides such training to its providers, training materials will include the specified standards of the Government Sponsor and/or Contract.

Provider Credentialing
Medicaid Agency's Credentialing Criteria include:

- A copy of each provider's current medical license for medical providers, or occupational or facility license as applicable to provider type, or authority to do business, including documentation of provider qualifications
- No revocation, moratorium or suspension of the provider's state license by the Agency or the Department of Health, if applicable
- A satisfactory level II background check pursuant to s. 409.907, F.S., for all treating providers not currently enrolled in Medicaid's fee-for-service program
    - Plan shall ensure providers referenced above submit fingerprints electronically following the process described on the Agency's Background Screening website. The Plan shall verify Medicaid eligibility through the background screening system.
    - Plan shall not contract with any provider who has a record of illegal conduct; i.e., found guilty of, regardless of adjudication, or who entered a plea of nolo contendere or guilty to any of the offenses listed in s. 435.04, F.S.
    - Individuals already screened as Medicaid providers or screened within the past twelve (12) months by another Florida agency or department using the same criteria as the Agency are not required to submit fingerprints electronically but shall document the results of the previous screening.
    - Individuals listed in s. 409.907(8) (a), F.S., for whom criminal history background screening cannot be documented must provide fingerprints electronically following the process described on the Agency's background screening website.
- Disclosure related to ownership and management (42 CFR 455.104), business transactions (42 CFR 455.105) and conviction of crimes (42 CFR 455.106)
- Evidence of the provider's professional liability claims history
- Any sanctions imposed on the provider by Medicare or Medicaid
- The provider's Medicaid ID number, Medicaid provider registration number or documentation of submission of the Medicaid provider registration form.
- Determination of whether the provider, or employee or volunteer of the provider, meets the definition of "direct service provider" and completion of a Level 2 criminal history background screening on each direct service provider to determine whether any have disqualifying offenses as provided for in s. 430.0402, F.S., and s. 435.04, F.S.
    - Any provider or employee or volunteer of the provider meeting the definition of "direct service provider" who has a disqualifying offense is prohibited from providing services to enrollees.
    - No additional Level 2 screening is required if the individual is qualified for licensure or employment by the Agency pursuant to its background screening standards under s. 408.809, F.S., and the individual is providing a service that is within the scope of his or her licensed practice or employment. (See s. 430.0402(3), F.S.)
        - The Plan must maintain a signed affidavit from each provider attesting to its compliance with this requirement, or with the requirements of its licensing

agency if the licensing agency requires Level 2 screening of direct services providers.
    - The Plan must include compliance with this requirement in its provider contracts and subcontracts and verify compliance as part of its subcontractor and provider monitoring activity.
- Ensure that Assisted Living Facilities meet the requirement of home-like environment characteristics as defined by the state.
- The Plan's credentialing and re-credentialing process must include ensuring that all long-term care providers are appropriately qualified, as specified in Table 1 - LTC Provider Qualifications & Minimum Network Adequacy Requirements as attached and updated.

Plan's credentialing and re-credentialing files must document the education, experience, prior training and ongoing service training for each staff member or provider rendering behavioral health services.

Credentialing and Re-credentialing (CR)
Provider agreements provide for monitoring and oversight by the Plan and the subcontractor to provide assurance that all licensed medical professionals and service provider types are credentialed in accordance with the Plan's and the Government Sponsor's credentialing requirements.
The Plan has clearly defined and documented procedures for assessing provider qualifications and service history including what provider types must be credentialed. The policies and procedures define a provider's right to review and correct credentialing information. The Credentialing Committee reviews provider credentials and makes recommendations.
During the initial credentialing verification the Plan verifies provider credentials, including a valid license to offer covered services and, when applicable, education, training, malpractice history and work history.

The provider applications include an attestation about limitations that would affect a provider's performance; a history of loss of provider license and felony convictions; a history of limitation of privileges or disciplinary actions; and current malpractice insurance coverage if applicable. The Plan reviews information (e.g., about disciplinary actions) from third parties as available and required.
The Provider on site quality review is based on provider type. The threshold for on-site review of services or treatment record-keeping practices is based on a complaint by a stakeholder such as the enrollee, Plan staff, other providers, agency, or government sponsor. The plan takes necessary steps when a provider does not meet its standards, and will evaluate those steps regularly until the provider improves or removed from participation with the Plan.
Before reevaluating a provider's qualifications for re-credentialing, the plan will receive information (e.g., about disciplinary actions) from third parties as applicable. The Re-credentialing Cycle Length for the plan to evaluate provider qualifications is at least every 36 months.
Ongoing Monitoring includes provider sanctions, complaints and quality issues between the re-credentialing cycles. The plan takes appropriate action when issues are identified.
The plan has a process for terminating the contracts of providers who demonstrate poor performance and a process for providers to appeal a terminated contract. The plan reports to appropriate authorities when it suspends or terminates a provider's contract according to the contract with the government sponsor.
The plan confirms that providers, such as hospitals, home health care agencies, skilled nursing facilities, nursing homes and behavioral health facilities, are in good standing with state and federal agencies and accrediting organizations and reviews the above standings at least every three years.

If the plan delegates CR activities, a delegation agreement will outline responsibilities of the delegate and the plan, the delegated activities and the evaluation process. The plan evaluates the delegate on a regular basis, usually annually.

Monitoring and Oversight
In addition to verification and monitoring noted above, on a monthly basis the Plan checks subcontractors and providers against the federal List of Excluded Individuals and Entities (LEIE) and the federal Excluded Parties List System (EPLS) or their equivalent, to identify excluded parties.
The Plan also checks the Agency's listing of suspended and terminated providers at the Agency website to ensure the Plan does not include any non-Medicaid eligible providers in its network.
The Plan also conducts these checks during the process of engaging the services of new employees, subcontractors and providers and during renewal of agreements and re-credentialing. The Plan will not engage the services of an entity that is in nonpayment status or is excluded from participation in federal health care programs under ss. 1128 and 1128A of the Social Security Act.
The Provider Relations Department receives and maintains copies of all member complaints documents in the provider file to be reviewed at the time of credentialing and/or when an HLTC associates express concerns about the performance of a specific provider. Provider complaints identified via member satisfaction surveys are also shared with the provider relations department to be maintained in the members file. The Quality department reviews complaint and monitoring tools of providers and addresses concerns identified at the Quality Assurance Meetings. If at any time a provider is identified as performing below standards, it is brought under review by the QI committee to determine if the provider should be removed from the HLTC network. Due to the nature of the long term-care program the care managers are continually conducting informal monitoring of providers during monthly and quarterly interviews with members. All facility based members are seen face-to-face monthly which allows for the care manager to observe the care provided to the member.

32. Quality and Anti-Fraud Administration

Audits
The Plan will furnish specific data requested in order for the Government Sponsor to conduct the services/case record audit, including audit of enrollee plan of care, provider credentialing records, service provider reimbursement records, contractor personnel records, and other documents and files as required under the Government Sponsor Contract.
Fraud
The Plan has specific controls in place for prevention and detection of potential or suspected fraud and abuse, including, but not limited to:
(a) An effective pre-payment and post-payment review process, including but not limited to data analysis, claims and other system edits, and auditing of participating providers (see s. 409.967(2)(f), F.S.);
(b) A description of the method(s), including detailed policies and procedures, for verifying enrollees' identity and if services billed by providers were actually received. Such methods must be either the use of electronic verification or biometric technology but may also include sending enrollee explanations of Medicaid benefits (EOMB), contacting enrollees by telephone, mailing enrollees a questionnaire, contacting a representative sample of enrollees, or sampling enrollees based on business analyses;
(c) Provider profiling, credentialing, and re-credentialing, and ongoing provider monitoring including a review process for claims and encounters that shall include providers and non-participating providers who:
(i) Demonstrate a pattern of submitting falsified encounter data or service reports;

(ii) Demonstrate a pattern of overstated reports or up-coded levels of service;
(iii) Alter, falsify or destroy clinical record documentation;
(iv) Make false statements relating to credentials;
(v) Misrepresent medical information to justify enrollee referrals;
(vi) Fail to render medically necessary covered services they are obligated to provide according to their provider contracts;
(vii) Charge enrollees for covered services; and
(viii) Bill for services not rendered.

(d) Prior authorization;
(e) Utilization management;
(f) Subcontract and provider contract provisions;
(g) Provisions from the provider and the enrollee handbooks; and
(h) Standards for a code of conduct.

Care Management and Quality Related issues

Quality Related Issue	**Information to obtain from the Provider**	**Provider Type**
"Significant Change"	Does the Provider share "Significant Change" information with MCO	ALL
Free from any form of restraint	Is there evidence of any physical or chemical restraints	ALL
Advance Directives	Are Advance Directives documented and available	ALL
Staffing for services	Any regulatory ratios or License Survey's indicating lack of sufficient staff.	ALL
Services as contracted and authorized	License Surveys or reports indicating lack of compliance	ALL

Cultural considerations	Delivery of services in a culturally competent manner to all enrollees, including those with limited English proficiency and diverse cultural and ethnic backgrounds.	ALL

Provider agreements include provisions for monitoring and inspections. Including:

- That the Agency and DHHS may evaluate through inspection or other means the quality, appropriateness and timeliness of services performed;
- Provide for monitoring of services rendered to Managed Care Plan enrollees through the subcontractor.

Record Reviews

The Managed Care Plan has an approved strategy for conducting medical/case record reviews. The Provider agreement provides for inspections of any records pertinent to the Contract by the Agency and DHHS. The strategy includes the following:
(a) Designated staff to perform this duty;
(b) Process for establishing inter-rater reliability;
(c) Sampling methodology for case selection;
(d) The anticipated number of reviews by practice site (non-facility service providers such as home health agencies with multiple offices locations serving the region);
(e) Record confidentiality and security;
(f) The tool that the Managed Care Plan will use to review each site;
(g) Analysis and reporting, and
(h) How the Managed Care Plan shall link the information compiled during the review to other Managed Care Plan functions (e.g., QI, re-credentialing, peer review).

In addition to record retention requirements for provider or provider licensure, provider agreements require that records be maintained for a period not less than ten (10) years from the close of the AHCA Contract and retained further if the records are under review or audit until the review or audit is complete. (Prior approval for the disposition of records must be requested and approved by the Managed Care Plan if the subcontract is continuous.)

HEDIS

HEDIS Measures Required as Part of the NCQA Accreditation Process for Medicaid Health Plans will be utilized as applicable to the SMMC program population served.

Changes in Plan

HLTC will provide the agency with the documentation of compliance with access requirements at any time there has been a significant change in the Plan's regional operations that would affect adequate capacity and services including but not limited to the following:

1. Changes in HLTC's services
2. Enrollment of a new population in HLTC

Housing Resources

General Information and HUD
The Department of Housing and Urban Development (HUD) has a number of resources to help seniors find affordable rentals. They offer a low-rent apartment search that shows low-rent apartments for senior citizens and people with disabilities, as well as for families and individuals. For low-rent apartments, the government gives funds directly to the apartment owners. There is an income limit to qualify. http://www.hud.gov/apps/section8/index.cfm

There is also the public housing program and public housing choice vouchers, commonly called Section 8. Public housing comes in all sizes and types and is managed by local housing agencies that are funded by the federal government. Public housing choice vouchers allow you to find a private rental and the government pays the landlord directly to subsidize the rent. Both programs are limited to low-income families and individuals. http://portal.hud.gov/hudportal/HUD?src=/topics/rental_assistance/phprog and
http://portal.hud.gov/hudportal/HUD?src=/program_offices/public_indian_housing/programs/hcv/abo

ut/fact_sheet
If you have questions or need help finding a rental, talk to a HUD-approved housing counselor.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 6 – Provider Network Agreements/Contracts (Regional):

The Agency has identified some of the key network service provider types that will be critical in order for the respondent to promote the Agency's goals.

The respondent shall demonstrate its progress with executing agreements or contracts it has with providers in the region by submitting **Exhibit A-4-b-1**, Provider Network Agreements/Contracts (Regional):

Response:

Please refer to the attached Exhibit A-4-b-1, which directly follows this document, for our response.

Evaluation Criteria:

For each service provider type the respondent may receive up to 20 points as described below. Points for each service provider type will be awarded as outlined in the table below:

Percentage of agreements/contracts for each service provider type	Points
0.0%	0
1.0% - 25%	5
25.1%- 50%	10
50.1%- 75%	15
75.1% or greater	20

Score: This section is worth a maximum of 240 raw points based on the above point scale.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 7 – MMA Physician Incentive Program (MPIP) (Statewide):

The Agency has designed the MMA Physician Incentive Program with the expectation that Managed Care Plans should be able to increase compensation for physicians, using funds achieved through savings from effective care management, as specified by Section 409.967(2)(a), Florida Statutes. The respondent shall describe its plan for ensuring physician compensation rates are equal to or exceed Medicare rates for MMA covered services. Specifically, the response shall include detailed descriptions of quality initiatives the respondent intends to implement or maintain that produce savings by promoting the Agency's goals, as well as other areas where the respondent has evidence that a potential for savings and increased quality exists.

Response:

Humana is an industry leader in establishing value-based relationships, with decades of experience helping providers move into arrangements that reward high-quality care. In Florida, Humana now has more than eight hundred thousand (800,000) Medicaid and Medicare enrollees attributed to Primay Care Physicians (PCP) in our continuum of value-based provider (VBP) arrangements. Our approach to the Agency for Health Care Administration (AHCA) MMA Physician Incentive Program (MPIP) rewards providers that achieve improved enrollee results and demonstrate a commitment to quality care by paying higher Medicare reimbursement rates. We place a focus on engaging the enrollee in appropriate care; in fact, our MPIP model is the only one in the State that includes the enrollee encounter rate as an incentive metric. MPIP aligns with Humana's VBP strategy and is an integral part of our broader approach to improve the health and well-being of our enrollees in the communities we serve. We have used this experience to work with ACHA to develop an enhancement to the standard MPIP structure.

We are committed to implementing high-quality case management, disease management, utilization management, and enrollee outreach programs designed to reduce potentially preventable events, improve birth outcomes, and address other drivers of high costs in the Managed Medical Assistance (MMA) program. Humana has invested in staffing and programs that support the implementation of a range of initiatives to improve quality and reduce costs, allowing us to increase reimbursement rates through MPIP. We are committed to remaining a strong partner for AHCA and Florida providers by paying enhanced reimbursement rates, and we will implement and maintain further quality initiatives that will achieve the Agency's goals and better serve our enrollees.

==========

1. The extent to which the respondent's proposal to improve quality can be tied to redirecting costs to pay higher physician rates.

==========

Quality is one of Humana's core values. We take a comprehensive approach to quality improvement, monitoring, and analyzing the quality of care our MMA program services provide. Using techniques such as root cause analysis and the plan-do-study-act-adjust approach, we identify barriers to care for our enrollees and design initiatives accordingly. In addition to our internal efforts to impact quality improvement, we ensure PCPs receive comprehensive and actionable enrollee-level data specific to medical utilization and gaps in Healthcare

Effectiveness Data and Information Set (HEDIS). Combined with support from our quality improvement nurses and provider relations representatives, we enable providers to take actions that improve the quality of care they provide to our enrollees.

To date, we have focused many of our initiatives on the drivers of potentially preventable events (PPEs). PPEs indicate areas for improvement where enrollees may be struggling to manage their condition or may not be receiving the necessary preventive care, and thus are unnecessarily admitted to the hospital or Emergency Department (ED). PPEs are also major driver of costs in the health system:

- For Humana's Florida Medicaid enrollees, the average expense for each Emergency Department visit is three hundred and fifty dollars ($350), compared to just one hundred twenty-five dollars ($125) for an urgent care visit or fifty-five dollars ($55) for a PCP visit. Statewide, more than twenty-four percent (24%) of ED encounters are considered potentially preventable [1].

- Proactive, preventive care can help enrollees avoid costly hospital admissions. According to the Agency of Healthcare Research and Quality, in 2010, the average cost per inpatient hospital stay was nine thousand seven hundred dollars ($9,700) [2]. According to AHCA's 2017 report on PPEs among statewide Medicaid Managed Care enrollees, more than two (2) hospitalizations per one thousand (1,000) enrollee months are preventable [3].

- Potentially preventable hospital readmissions represent a substantial opportunity to reduce costs through improved care. The average cost of a readmission to Medicaid is twelve thousand three hundred dollars ($12,300), which is twenty-eight percent (28%) higher than the cost of an admission [4]. More than eighty-seven percent (87%) of hospital readmissions in Florida are considered potentially preventable [5].

Additionally, we have implemented quality initiatives that focus on mothers and babies. In addition to ensuring healthy outcomes for the mother and infant during the postpartum period and childhood, our investment in initiatives that improve birth outcomes through prenatal care and reduce unintended pregnancies have the potential to generate significant cost savings. The potential gross savings from preventing unintended pregnancies in Florida is an estimated nine hundred seventy-three point two million dollars ($973.2M) [6].

By developing quality initiatives that focus on better chronic condition management, promotion of preventive care and prenatal care, and reduction in unintended pregnancies, we can generate significant cost savings that can redirect into higher payments for our providers. Humana has experience improving quality and redirecting the cost savings to providers: Trade Secret as defined in Section 812.081, Florida Statutes Trade Secret as defined in Section 812.081, Florida Statutes Trade Secret as defin

We view MPIP and the rest of our VBP continuum as key pathways to engaging providers in quality improvement. Our clinical quality initiatives work in tandem with MPIP; allowing us to both invest more in MPIP, generating cost savings through our quality initiatives, and improve quality through MPIP itself. Therefore, we have taken care to design and implement a thoughtful, data-driven MPIP program. As mentioned previously, we have used our expertise and experience working with similar quality and value-based payment initiatives to collaborate

with AHCA in developing an enhancement to the standard MPIP structure. Our metrics related to preventive care and improving health outcomes go above and beyond those used by other plans. Namely, Humana is the only SMMC plan in Florida to include the enrollee encounter rate as a metric for its MPIP model.

For pediatric PCPs, we tie reimbursement rates to MPIP metrics related to HEDIS measures, including well-child visits and pediatric and adolescent access to primary care. By aligning payment rates to performance on these metrics, we incentivize providers to take actions that increase enrollee engagement. In the short term, through increased early detection of childhood illnesses or developmental delays during well-child visits, we can offer interventions and services that ultimately reduce avoidable admissions, decrease the incidence of acute conditions (including those that are vaccine-preventable), and reduce costs. In the long term, increased enrollee engagement by PCPs encourages enrollees to seek care in the most appropriate setting. Parents and children who have developed a strong relationship with their pediatric PCP are more likely to visit that PCP rather than the Emergency Department, for acute conditions. Through MPIP, we also hold providers accountable for the rate of Emergency Department visits for their patient panel, creating an additional incentive to reduce potentially preventable events.

For board-certified OB/GYNs, our MPIP program offers higher reimbursement rates for providers that meet performance targets on measures closely linked to birth outcomes. Our OB/GYN MPIP program includes HEDIS quality measures on the frequency of ongoing prenatal care as well as postpartum care. By encouraging appropriate care-seeking during the prenatal and postpartum periods, we can reduce the risk of pregnancy-related complications, including anemia, preterm birth, preeclampsia, and complications of diabetes. Greater coverage of postpartum care leads to greater uptake of postpartum family planning, improved breastfeeding rates, and improved detection and treatment of postpartum depression. Humana's OB/GYN MPIP program also includes AHCA's Florida Medicaid performance measure regarding cesarean section (C-section) rates. By linking payments to providers' C-section rates, we expect to see improvement in outcomes related to reduced utilization of C-sections. These outcomes include fewer neonatal intensive care unit (NICU) stays, reduced maternal hospital stays, reduced risk of respiratory problems in infants, and a reduced risk of complications in subsequent pregnancies.

We recently expanded our MPIP program to include pediatric specialists, including cardiologists, endocrinologists, nephrologists, neurologists, and psychiatrists. We incentivize pediatric specialists to pursue and maintain board certification to receive enhanced Medicare reimbursement rates through MPIP. Board certification reflects a commitment by the physician to continually expand their knowledge in their medical specialty, as it requires certified physicians to complete ongoing education to maintain their certificate. Through this arrangement, we expect to see improved outcomes for children with special conditions such as juvenile idiopathic arthritis, inflammatory bowel disease, and left heart syndrome.

Throughout this response, we will detail initiatives that we have implemented, assessed, and integrated into our daily operations to improve care for our enrollees. Additionally, we will discuss initiatives that respond to more recent trends that are still in their pilot phase, and which we intend to maintain under the next contract. Through these initiatives, we have generated cost savings that will directly support higher provider reimbursement rates under MPIP.

==========

2. The extent to which the respondent incorporates quality initiatives that will result in redirecting costs by reducing potentially preventable events.

==========

As described above, PPEs are significant drivers of cost and inefficiency in the healthcare system, in addition to causing unnecessary stress and pain for enrollees and their caregivers. As part of our commitment to ensuring our enrollees receive quality care, we have introduced quality initiatives that improve participation in case management, enrollee awareness, and access to appropriate care settings, with the goal of reducing PPEs.

Humana has many quality initiatives designed to reduce the following events:
- Potentially Preventable Emergency Department Visits (PPVs)
- Potentially Preventable Hospital Admissions (PPAs)
- Potentially Preventable Hospital Readmissions (PPRs)

INITIATIVES TO REDUCE POTENTIALLY PREVENTABLE EMERGENCY DEPARTMENT VISITS

Through advanced PCP coordination, increased access to appropriate care settings, and enrollee education about proper care settings, our case management, disease management, and enrollee outreach programs reduce Emergency Department visits. This leads to lower costs and greater savings that can be redirected into our MPIP model. We have supported and enhanced our suite of clinical programs through past and current quality initiatives that target PPVs, detailed below.

LINKING ENROLLEES WITH POST-EMERGENCY DEPARTMENT CARE: THE SOUTH FLORIDA REAL-TIME ED INITIATIVE

Humana introduced the Real-Time ED Initiative in 2013, after identifying the need for up-to-date, real-time Emergency Department data to more effectively monitor and track Emergency Department utilization among our enrollees. Through this initiative, we introduced the following processes:

- Receive, assign, and process daily Emergency Department information from daily reports and an electronic encounter queue in the Humana clinical management system

- Notify PCPs of Emergency Department visits for their enrollees

- Contact enrollees to help them schedule follow-up appointments

- Provide discharge instructions to PCPs

- Contact, assess, and educate enrollees about condition management and when and where to seek treatment, if needed

- Refer enrollees to case management, disease management, and other services

To measure the effectiveness of this initiative, we tracked outcomes for those enrollees to whom we reached out. Across participating facilities in 2015, we saw an eighty-eight percent (88%) decrease in utilization in this population, from four thousand eight hundred twenty-nine (4,829) Emergency Department visits pre-outreach to eight hundred sixty-seven (867) post-outreach.

Based upon the success of this initiative, we expanded our efforts to engage PCPs and enrollees to reduce preventable Emergency Department visits. Today, we leverage the daily Emergency Department visit information that we obtain from more than sixty (60) facilities through Florida's Health Information Exchange and Event Notification System (HIE/ENS), reducing a months-long notification lag to one day. We have integrated these notifications into Humana's utilization management (UM) system for timely tracking and reporting of Emergency Department visits, and providers receive a daily report of their patients' Emergency Department encounters the prior day. We use this information in conjunction with our Emergency Department Utilization Predictive Model to determine high-risk enrollees who are most in need of immediate outreach. We also plan to add behavioral health-related visits to this model, helping us predict future visits for both medical and behavioral health conditions. Emergency Department case managers (CMs) reach out to high-risk enrollees and complete an assessment to identify needs, close gaps, educate on appropriate treatment settings, and ensure timely provider follow-up.

BRINGING MEDICAL SERVICES TO THE HOME: TRANSITION HEALTH CARE EMS PROGRAM

In addition to our quality initiatives that reduce repeat Emergency Department visits through stronger provider and enrollee outreach, we have recently introduced a pilot program to offer select medical services in enrollees' homes. As an alternative to visiting the Emergency Department, when members call Humana's twenty-four seven (24/7) nurse advice line, they can be triaged into our Transition Health Care Emergency Medical Services (EMS) program. This program provides in-home services, including prescription administration, echocardiograms, blood and urine tests, respiratory treatment, intravenous (IV) therapy, and wound care, with the goal of preventing non-urgent Emergency Department visits. The paramedics complete home safety assessments, medication reconciliation, care coordination, and community resource navigation. We anticipate that this initiative will reduce Emergency Department visits and produce cost savings that can redirect into provider reimbursements under MPIP. The program will also improve enrollees' experience and overall well-being, particularly those with complex needs, by offering services in the comfort of their home. We are currently implementing this pilot in Regions 10 and 11, and will expand to other regions following successful results.

REDUCING POTENTIALLY PREVENTABLE HOSPITAL ADMISSIONS

Our case management (CM) and utilization management (UM) approaches, combined with our emphasis on preventive care and provider engagement, drive down costs by preventing the acute events that drive PPAs and by identifying medically unnecessary inpatient admissions through front-end reviews, which reviews inpatient admissions to verify the admission meets approporiate inpatient stay criteria. We combine our standard processes with quality initiatives

that use advanced data analytics and innovative approaches to better manage the chronic conditions that are major drivers of PPAs.

IMPLEMENTING LOCAL SOLUTIONS TO REDUCE COSTS AND DELIVER BETTER CARE: OUR SICKLE CELL DISEASE MANAGEMENT (DM) PROGRAM

In June 2017 we launched our Sickle Cell Disease Management program. As sickle cell disease is a leading cause of PPAs statewide [7], we recognized the opportunity to improve enrollee outcomes and reduce costs through a disease management (DM) program specifically for this condition. We proactively identify enrollees with a diagnosis of sickle cell disease, beginning with a specific question on our welcome calls about any history of blood disease. Additionally, we educate our PCPs about our Sickle Cell DM program, and encourage them to refer any enrollees with a diagnosis of sickle cell disease to this program. Enrollees who elect to participate receive additional education and support from a disease management (DM) nurse. This education includes an emphasis on the importance of regular health check-ups with their PCP, appropriate steps to prevent infection, incorporation of healthy habits into their lifestyle, and information about support groups and community organizations that can provide additional information, assistance, and support.

In addition to our DM program, we will introduce a range of initiatives designed to support our enrollees with sickle cell disease and to reduce related events, spanning our case management, DM, and provider relations departments:

- Creation of a monthly dashboard provided to PCPs that lists enrollees diagnosed with sickle cell disease and their history of inpatient admissions, ED visits, and PCP visits

- Delivery of sickle cell disease-specific training for our case management, DM nurses and social workers

- Development and implementation of sickle cell disease-specific best practices and disease-specific education for DM case management staff

- Identification and recruitment of PCPs and pain management providers that have experience and success in treating enrollees with sickle cell disease

- Development of regional centers of excellence with providers who have a history of successful treatment of enrollees with sickle cell disease and other blood disorders

We will monitor several outcomes of our sickle cell program, including decreased inpatient utilization, decreased average length of stay for inpatient services, decreased Emergency Department utilization for a primary diagnosis of sickle cell disease, reduced associated costs, medication adherence, and improvement in acute pain.

COMMUNITY OUTREACH TO ENROLLEES: FIELD CASE MANAGER AND FIELD SOCIAL WORKER PILOTS

Through our case management program, Humana associates can help enrollees proactively address care needs before an event that may lead to an unnecessary admission or readmission to the hospital. We have introduced quality initiatives that leverage the data captured by Clinical Guidance eXchange (CGX), our case management system, to better tailor our case

management programs to enrollees who will benefit the most. Today, Humana is conducting pilots that assign field case managers (FCMs) and field social workers (FSWs) to conduct field visits at provider offices to engage high-risk enrollees in case management. We designed this program to reduce inappropriate utilization of care, to reduce barriers to closing gaps in care, and to improve the engagement of enrollees with complex needs through face-to-face support.

Our DM programs play a central role in helping our enrollees with chronic conditions more effectively manage their disease and avoid unnecessary hospital admissions. Therefore, we aim to actively engage all eligible enrollees in these programs. One recent quality initiative paired our FCM pilot with our disease management interventions to increase participation among enrollees living with HIV/AIDS. Through this initiative, we employ FCMs who are responsible for finding enrollees living with HIV/AIDS in the community. Once identified, an FCM visits the enrollee to introduce themselves in person and to educate the enrollee on the DM program and its benefits. With the permission of the enrollee, the FCM completes a survey and addresses any immediate medical, educational, social, and behavioral needs through linkage with Humana- or community-provided services. The FCM then facilitates contact with the DM nurse, who conducts ongoing telephonic outreach for the enrollee.

As a result of our FCM HIV/AIDS initiative, sixty-one percent (61%) of the eligible enrollees identified between June 2016 and May 2017 are now participating in our HIV/AIDS DM program. This is an increase from a fifty-four percent (54%) participation rate achieved in the first year of the initiative. By engaging our enrollees in DM, our enrollees have experienced better condition management and improved outcomes, resulting in an average cost reduction of forty-eight percent (48%).

REDUCING POTENTIALLY PREVENTABLE HOSPITAL READMISSIONS

Humana recognizes that effective transitions of care are critical to ensure enrollees are not readmitted, and we offer numerous, coordinated pre- and post-discharge initiatives to improve care for our enrollees throughout transitions between care settings. We identify enrollees at greatest risk of readmission and conduct discharge follow-up to identify trends in causes of readmissions. Through our sophisticated predictive models and data analytics tools, we reduce preventable hospital readmissions and reduce avoidable costs.

SERVING ENROLLEES WITH COMPLEX NEEDS DURING THE POST-DISCHARGE STAGE: ENHANCED TRANSITION PLANNING AND FREQUENTLY ADMITTED MEMBER PROGRAMS

We have introduced two (2) initiatives designed to reduce PPRs by reaching enrollees during the pre-discharge stage. Appropriate post-discharge planning is essential to reduce readmissions and yield greater cost savings that can redirect into MPIP. Humana's UM nurses facilitate interaction and coordination with hospital staff to ensure continuity of care and to coordinate post-discharge activities. They collaborate daily with hospital case managers and discharge planners for hospitalized enrollees to promote safe, timely, and appropriate planning.

The first of our quality initiatives in this area is Humana's Enhanced Transition Planning (ETP) program for our enrollees in complex case management. For those who have at least two (2) hospitalizations within the last three (3) months, a CM creates an individualized transition plan

that describes an assessment of needs, education, and assistance in scheduling follow-up appointments. In both 2015 and 2016, we significantly surpassed our readmission rate goal for those enrollees participating in this program. In 2016, we reached a sixteen percent (16%) readmission rate, which was a seven percentage point (7%) improvement over the previous year.

In addition to our ETP program, we operate a Frequently Admitted Member (FAM) program, which takes a prospective approach to the prevention of PPRs. In FAM, our clinical teams use real-time data and analytics to identify, stratify, and segment enrollees with the most acute facility inpatient admissions during the most recent three (3)-month period. We assign each FAM enrollee a designated UM nurse and supporting technician to monitor these enrollees throughout admissions and during the eight (8)-week post-discharge period. We have observed a fifty percent (50%) reduction in readmission rates for enrollees targeted by this program.

ADDRESSING A MAIN DRIVER OF PPRS: OUR MEDICATION RECONCILIATION PILOT
In addition to initiatives that reduce PPRs by targeting enrollees during the pre-discharge stage, we have introduced a quality initiative that addresses factors that contribute to PPRs during the post-discharge stage. Medication non-compliance is a leading cause of readmissions among Medicaid enrollees, particularly among those with behavioral health and chronic medical conditions [8,9]. We implemented a Medication Reconciliation pilot in August 2017 for high-risk enrollees engaged with a FCM. During the post-discharge home visit, the FCM works with the Humana pharmacy team to conduct medication reconciliation. The pilot incorporates a pharmacist via telephone into the FCM's medication reconciliation process to reduce medication-related problems that put enrollees at risk for adverse effects or readmission.

INTEGRATING PRIMARY CARE AND BEHAVIORAL HEALTH IN ANTIDEPRESSANT MEDICATION MANAGEMENT (AMM)
Major depression led to twelve percent (12%) of PPRs among Florida Medicaid enrollees between August 2014 and July 2015, making it the third leading contributor to PPRs statewide [10]. To better support enrollees with a diagnosis of major depression and to reduce associated admissions and readmissions, we have introduced a quality initiative that engages providers and enrollees to support antidepressant medication adherence. We identified two (2) key barriers to improve medication management among enrollees diagnosed with major depression: many providers lack an understanding of the AMM specification requirements, and many enrollees need education regarding the importance of medication adherence. To overcome these barriers, we have distributed AMM guidelines to all PCPs. Our quality improvement nurses reinforce the messages in these guidelines during their regular, face-to-face meetings with PCPs. To encourage higher engagement of enrollees, we distribute a monthly action list to our PCPs and behavioral health providers, listing those enrollees who are due for a follow-up visit for medication monitoring.

==========

3. The extent to which the respondent incorporates quality initiatives that will result in redirecting costs by improving prenatal care and birth outcomes.

==========

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana is committed to improving prenatal and birth-related outcomes for all pregnant enrollees and their infants. We divide quality programs dedicated to these efforts into initiatives that focus on:
- Improving prenatal care
- Reducing medically unnecessary C-sections
- Improving care for the newborn
- Reducing unintended pregnancies

IMPROVING THE TIMELINESS OF PRENATAL CARE THROUGH MOMSFIRST AND HIE/ENS

Because we are committed to facilitating early prenatal care for our enrollees, recognizing its importance to the health of both mother and baby, we have designed our specialized obstetric case management program, MomsFirst, to support women during the prenatal and postpartum periods. MomsFirst offers a wide array of prenatal and birth-related services to all pregnant Humana enrollees. Enrollees are assigned an obstetrics (OB) case manager who provides education to the enrollee and her identified partner on the frequency and importance of OB/GYN visits and good dental health during pregnancy, how to ensure proper nutrition for herself and her child, including how to access the Women, Infants, and Children (WIC) supplemental nutrition program, as well as education on family planning, delivery, postpartum care, and infant pediatrician selection. The case manager also helps with transportation, child care, and removing other structural barriers that may prevent the enrollee from visiting the OB/GYN or making other healthy lifestyle choices by linking the enrollee to our NET providers and other community resources.

Our MomsFirst program plays a powerful role in improving health outcomes for our pregnant enrollees and their babies, and in reducing the costs associated with labor and delivery. To expand participation in MomsFirst and to reach more of our pregnant enrollees with important prenatal education and support, we have introduced a quality initiative known as “Improving Timeliness of Prenatal Care & Well-child Visits in the First 15 Months of Life – 6 or more visits”. This initiative includes the following interventions:

- An OB educational webinar for provider office staff to reinforce the MomsFirst referral process, billing requirements, and our Healthy Behavior initiatives

- Enrollee education on our MomsFirst case management program and the Healthy Behaviors

- Prenatal and Postpartum Reward program

- Introduction of a pilot program for HIE/ENS to identify pregnant enrollees who have sought services at an Emergency Department, enabling earlier outreach to the enrollee

- Collaboration with Healthy Start to receive monthly files of participating enrollees, alerting us to enrollees for whom we hadn’t received notification of pregnancy from other sources

Through these interventions, we increased our timeliness of prenatal care measure to eighty-six point three seven percent (86.37%) in 2016, exceeding AHCA’s target of eighty-two point two five percent (82.25%). By engaging our enrollees in earlier and regular prenatal care, we anticipate better overall outcomes for both the mother and baby, leading to lower costs overall.

REDUCING C-SECTIONS
Research demonstrates that infants delivered via C-Section are more likely to experience short-term adverse health, such as respiratory complications, and resultant NICU stays. To reduce the C-sections that contribute to these costly conditions, we have instituted prior authorization requirements for elective C-sections and regular strategy meetings with OB/GYNs. Through these efforts, we have reduced our overall plan C-section rate by three percentage points (3%) since 2015. To further address medically unnecessary C-sections among our MMA enrollees, we will explore incentive contracting structures for hospitals to reduce costs associated with C-sections in short and long term.

IMPROVING BIRTH OUTCOMES THROUGH NEWBORN CARE: THE HUMANA STORKS PILOT
Our quality initiatives to improve birth outcomes extend to supporting our enrollees during the neonatal period. In addition to post-partum visits conducted by case managers in high-volume hospitals, we debuted the Humana Storks pilot program in January 2017. Through Humana Storks, our enrollee advocates visit enrollees who have given birth while they are still at the hospital. The advocate educates the new mother on how to access health services that will ensure the best outcomes for herself and her newborn, and offers support for scheduling upcoming appointments. In addition, the new mother receives a care package with baby supplies, including diapers, a diaper bag, baby bottles, a bib, tee-shirt, educational materials, and a list of urgent care centers. By engaging our newborn enrollees and their caregivers early in life and encouraging regular medical care, we will generate cost savings through screening, diagnosis, and treatment of early childhood illnesses that can then redirect into higher MPIP provider reimbursement rates.

REDUCING UNINTENDED PREGNANCIES EDUCATION ON LONG-ACTING, REVERSIBLE CONTRACEPTION (LARC)
Evidence demonstrates that the voluntary use of contraceptive devices to prevent unintended pregnancies can yield improved birth outcomes and cost savings. This is due to better timing and spacing of births. Humana is committed to introducing quality initiatives that proactively seek to educate and support women in achieving their desired timing and spacing of pregnancies and avoiding any future unintended pregnancies. Recently, the Florida Medicaid program unbundled immediate postpartum LARC placement from delivery reimbursement, allowing hospitals to recover the cost of the device and associated services for immediate postpartum LARC placement. To educate our providers on this change and encourage them to discuss postpartum family planning with their enrollees, we introduced an initiative to disseminate education materials to our providers on this change, including a “Tip Sheet” that assists with billing.

==========
4. The extent to which the respondent identifies other areas for quality initiatives or efficiencies that will result in potential cost savings.
==========

We have implemented additional initiatives with our provider partners to drive quality improvement, including value-based purchasing arrangements and tools that equip providers with the information they need to deliver high-quality, cost-effective care for enrollees. We have

designed these initiatives to deliver greater value at reduced cost, enabling us to redirect cost savings through the MPIP program.

VALUE-BASED PURCHASING (VBP) MODELS

Humana has extensive experience implementing value-based purchasing (VBP) models in Florida and across the U.S. With a focus on supporting our providers to move from pay-for-service to pay-for-value, our VBP continuum of models meets providers "wherever they are" on this transformational path. While “full value” risk arrangements offer the greatest opportunity to improve quality and reduce costs, not all providers have the scale and capabilities to be successful in this type of arrangement and not all are interested in it. Therefore, we may initially bring providers into rewards-type programs and then into upside-only shared savings arrangements. Along this pathway, we incentivize our providers to become patient-centered medical homes, developing capabilities to provide coordinated care for enrollees and reduce costs. When our providers have the capabilities and readiness to accept full risk, we help them move into a full-value VBP arrangement if and when they want. This pay-for-value model focuses on promoting evidenced-based, high-quality care through improved care coordination, leading to lower health care costs and better outcomes.

Our VBP program has contributed to significant cost savings through a reduction in PPEs. Humana’s Florida Medicaid providers in “full value” risk arrangements outperform their non-risk counterparts in terms of quality, outcomes, and cost. In 2016 the risk providers had significantly higher quality scores on metrics related to preventive health, well-child visits, and diabetes management. As a result of their strong performance, these providers also have strong outcomes: Humana’s Florida Medicaid risk providers are averaging twenty-five point three percent (25.3%) fewer emergency department visits per thousand (1,000) enrollees and seventeen point four percent (17.4%) fewer hospital admissions per thousand (1,000) enrollees. By reducing preventable events like these and helping enrollees to access care in appropriate settings, Florida risk providers have fourteen point seven percent (14.7%) lower inpatient medical expenses and have reduced pharmacy expenses by eleven point four percent (11.4%).

TOOLS FOR PROVIDERS TO BETTER MANAGE ENROLLEES

We offer a range of tools through which our providers can view their HEDIS performance in real-time, identify enrollees with care gaps for follow-up, and view other data that can help them more effectively manage our enrollees’ care. Our providers use these data to introduce their own quality initiatives and take actions that will improve outcomes, such as employing care coordinators and social workers to promote integration of care and access to community resources. Together with the Humana-led quality initiatives, these provider-led initiatives can lead to better enrollee health and lower costs.

CAREHUB CLINICAL GUIDANCE EXCHANGE (CGX)
Our CGX system displays Care Alerts for our case managers. Care Alerts consist of evidence-based clinical care gaps and drug-to-drug/disease interaction alerts. Our providers incorporate findings from these alerts into their medical records and clinical decision-making processes. Additionally, our system sends information to providers via an electronic medical record (EMR).

ANVITA INSIGHTS ENGINE

The Anvita Insights Engine delivers personalized analyses that identify enrollees who (1) are at risk for dangerous medical events (including hospitalizations), (2) are taking contraindicated therapies that should be discontinued, (3) are missing preventive services, and (4) have cost-savings interchange opportunities to lower costs. When deployed at the point of care, Anvita can identify, rank, and score competing treatments by safety, efficacy, and cost in real-time, using virtually all known clinical data. Anvita's tools empower our providers to reduce preventable events and provide high-quality, effective treatments at a lower cost for our enrollees.

AVAILITY CARE PROFILE

The Availity Care Profile, a platform that provides a consolidated view of enrollees and their health care services across providers, is a powerful tool for improving enrollee safety, reducing unnecessary services, eliminating duplication of procedures, and driving coordination and continuity of care. Available to all of our network providers in Florida, the Availity Care Profile includes claims information associated with office visits and hospitalizations, diagnoses and associated procedures, prescription history, lab event history, radiology event history, immunization history, and clinical messaging. This information allows providers to improve outcomes by more rapidly closing clinical care gaps, delivering preventive care, and managing chronic conditions more effectively.

HUMANA'S MONTHLY HEDIS PACKAGE

To help PCPs more effectively manage the care of our enrollees, we provide a package of monthly HEDIS reports to every PCP. These reports capture preventable events among enrollees, gaps in care, and high utilizers of pharmaceuticals. In addition, practices can view their performance on HEDIS indicators and see how their performance compares with other providers in their region. We package this information to be actionable, with call lists that include contact information for enrollees who have care gaps and a list of recommended actions for enrollees who are noncompliant with preventive care screening or disease management visits.

SUPPORT OFFERED TO PROVIDERS TO IMPROVE QUALITY

FACE-TO-FACE SUPPORT

We use a dedicated approach to supporting providers to increase provider performance, effectiveness, and the quality of care delivery to our enrollees. We have developed a series of programs, processes, metrics, and resources, including the HEDIS package described above. This is complemented by a robust process to identify and leverage best practices among our provider network. The series of reports documented above, combining medical and behavioral health utilization data, allows us to target outreach to those providers with high numbers of PPEs.

Our approach to face-to-face support includes the following departments and activities:

- Provider Relations: Our provider relations representatives (PRRs) are our direct liaisons and field representatives to our providers. They are responsible for meeting with innetwork PCPs monthly and high-volume specialists quarterly. In this front-line position, they are also

responsible for educating providers, clarifying provider inquiries, and relaying provider concerns to the broader Provider Relations team. We currently have more than fifty (50) provider relations representatives assigned to providers throughout the State.

- Quality: Our quality improvement nurses (QINs), who we geographically assign to PCPs and meet with PCPs quarterly, deliver provider-specific metrics, coach providers on gap closing opportunities, and provide resources and educational opportunities for providers and staff. There are nearly twenty (20) QINs assigned to PCPs in our Florida Medicaid network.

- Claims and Documentation: Our Claims Department provides education for providers to ensure accuracy of documentation and coding

- Case Management: Our Case Management and Disease Management teams assist our providers in developing strategies for engagement of enrollees qualified for care programs, provide feedback on program activity, and identify strategies to respond to actionable care opportunities (ED utilization, readmissions, etc.)

JOINT OPERATING COMMITTEE

We have established a Joint Operating Committee (JOC) with a wide range of providers, including our high-volume, fee-for-service networks, capitated specialty networks, hospital-based physician groups, and global risk providers. The JOC is a critical element of a successful risk relationship with our providers, creating an open line of communication between our providers and Humana.

The goal of this committee is to identify the best way to provide the highest quality of care to our enrollees in the most affordable manner and to discuss ongoing operations. To guide the meetings, we provide our risk partners with a package of reports including:
- Financial Performance Summary
- Medical Metric Report with comparison to regional averages and benchmarks
- Inpatient Stay Reports summarized by primary diagnosis and compared to PCP office visits
- Behavioral Health Utilization Reports
- Emergency Department and Outpatient Reports by diagnosis
- Emergency Department Visit Report
- OB-GYN Report
- Top 40 Report to identify members with high admissions and Emergency Department visits

Through these reports, Humana reviews provider performance on metrics related to hospital admission and readmission rates, HEDIS quality, medications taken for pharmacy, settlement data for finance, and medical risk adjustment. By discussing these metrics, we work collaboratively to identify ways to improve performance, drive better enrollee outcomes, and ensure a successful risk relationship.

Evaluation Criteria:

1. The extent to which the respondent's proposal to improve quality can be tied to redirecting costs to pay higher physician rates.

2. The extent to which the respondent incorporates quality initiatives that will result in redirecting costs by reducing potentially preventable events.

3. The extent to which the respondent incorporates quality initiatives that will result in redirecting costs by improving prenatal care and birth outcomes.

4. The extent to which the respondent identifies other areas for quality initiatives or efficiencies that will result in potential cost savings.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

C. RECIPIENT EXPERIENCE

MMA SRC# 8 – Primary Care Providers (PCP) Assignment (Statewide):

The respondent shall describe its overall process of assigning enrollees to primary care providers (PCPs), including its assignment algorithm. The response shall include the quality and/or performance metrics used to determine high quality PCPs, and the timeframes associated with processing an enrollee's request to change PCPs.

Response:

An enrollee's relationship with his or her primary care provider (PCP) forms the foundation of a successful enrollee experience. PCPs guide enrollees as they interact with the healthcare system and help enrollees take responsibility for their health. Enrollees who access care through their PCP tend to have better health outcomes and greater satisfaction with the services that they receive. Additionally, appropriate care-seeking at the PCP (as opposed to the emergency department (ED) or an urgent care center) contributes to cost savings. Humana is committed to assisting enrollees in choosing a PCP who meets their needs, including their unique health conditions, cultural and language preferences, and proximity to their residence. When enrollees do not make an affirmative choice in PCP selection, our intelligent, automated PCP assignment process is designed to match enrollees with a PCP who fits their needs and preferences at a location near their home, allowing enrollees to access services immediately upon enrollment.

OVERVIEW OF HUMANA'S PCP ASSIGNMENT PROCESS

Humana recognizes the importance of facilitating strong connections between enrollees and PCPs. To support this, we make significant efforts to ensure that, whenever possible, enrollees affirmatively choose a PCP. However, when an enrollee does not choose a PCP, Humana assigns a PCP within the following timelines:

- Two (2) days of enrollment for new enrollees
- Twenty-four (24) hours for enrollees with express enrollment
- Three (3) days for PCP change requests received on maintenance files from the state

Our PCP assignment algorithm is designed to assign a PCP that is most suited for the enrollee. It takes into account important considerations such as continuity of care and ease of access to the PCP's office.

- To ensure continuity of care, our algorithm will assign enrollees to the in-network PCP identified in the enrollment supplemental file

- For enrollees who were previously enrolled with Humana in the past six (6) months, the algorithm re-assigns the enrollee to the most recent PCP on record

- If the enrollee has family members who are Humana enrollees, then the algorithm assigns enrollees to the same in-network PCP as their family members

If this information is not available at the time of initial PCP assignment, then Humana uses the accessibility standards defined in the current contract (a maximum of twenty (20) miles and thirty (30) minutes from the enrollee's address) to assign enrollees to the closest PCP with an open panel.

==========

1. The extent to which the respondent's description includes how quality and/or performance metrics are defined and utilized in the assignment process.

2. The extent to which the respondent's algorithm includes assignment of enrollees to high quality PCPs.

==========

Our PCP assignment process is rooted in our unwavering commitment to maintain a high-quality network, as demonstrated by independent, objective measurement sources including HEDIS quality measures and Consumer Assessment of Healthcare Providers and Systems (CAHPS) surveys. Humana serves more than two point two five (2.25) million medical plan enrollees across Florida, and through this experience, we have extensive quality performance data for PCPs throughout the state. In 2015, our enrollees reported an eighty point nine percent (80.9%) satisfaction rate with their personal doctor, above the national average as reported by National Committee for Quality Assurance's (NCQA) Quality Compass. Defined quality metrics guide our provider improvement processes and assignment procedures, with enrollee assignment limits placed on providers with low performance. Additionally, we are developing a new initiative to stratify provider performance into levels to meet AHCA's goal of incorporating quality metrics into the PCP assignment process.

DEVELOPING A HIGH-QUALITY PCP NETWORK

Our approach to PCP assignment is premised upon maintaining a high-quality network. We consider provider quality in every step of our network development process, from contracting to credentialing to re-credentialing. These processes ensure that only the highest performing providers are included in our provider network and are available for enrollee assignment.
During the contracting phase, we administer a provider assessment form that helps our associates determine if the provider is a good addition to our network and can meet the needs of our enrollees. This assessment contains questions such as:

- Is the provider familiar with HEDIS measures?
- How often does the PCP see his or her Medicaid patients?
- Does the office have Electronic Medical Records?
- Does the PCP offer after-hours and weekend appointments?
- Is the practice Patient Centered Medical Home (PCMH) certified? If yes, at what level?

Our credentialing process includes a comprehensive provider site visit utilizing an evaluation tool that reviews federal, state, and ADA compliance measures. Our associates catalog and

verify the following information to ensure the safety and appropriateness of these providers for our enrollees:

- Current valid state license(s)
- Current valid Drug Enforcement Agency (DEA) and/or Controlled Dangerous Substance (CDS) certificate (as applicable)
- Education, training, and current board certification
- Work history
- History of professional liability claims that resulted in settlements and/or judgments
- State sanctions, restrictions on licensure and/or limitations on scope of practice
- Medicare and Medicaid sanctions

DEFINING AND UTILIZING QUALITY AND PERFORMANCE METRICS

Once a provider is included in our network, we strive to ensure consistent, high-quality performance. For nearly thirty (30) years, Humana has been actively measuring providers and facilities including the effectiveness and efficiency of providers. We measure provider quality through our annual provider audits which measure providers' performance on HEDIS quality measures.

Humana has launched the Physician Performance Measurement initiative, developed in consultation with current Humana providers. The initiative will evaluate providers on evidence-based clinical measures developed by credible organizations such as the NCQA and the AQA Alliance (formerly known as the Ambulatory Care Quality Alliance), and endorsed by the National Quality Forum (NQF). To support this initiative, Humana has invested in Optum Symmetry EBM Connect software to secure NCQA certification for our physician measurement program and to ensure the quality and objectivity of our provider data. This information will serve as an empirically-based, data-driven approach to identify PCP performance indicators that align with AHCA's quality improvement plan. As an example, measures we are considering for inclusion within the Children and Adolescents' Access to Primary Care Practitioners measure set are:

- Patient(s) 12-24 months of age that had a PCP visit during the 12 months prior to the end of the report period

- Patient(s) 25 months to 6 years of age that had a PCP visit during the 12 months prior to the end of the report period

- Patient(s) 7-11 years of age that had a PCP visit during the 24 month report period

- Patient(s) 12-19 years of age that had a PCP visit during the 24 month report

Providers will be evaluated by effectiveness measures related to their specialty and will be compared to colleagues within similar geographic locations. Providers will be placed into performance levels based on Humana's effectiveness performance index. We plan to calculate this performance index by dividing the actual compliance rate by the expected compliance rate.

The expected compliance rate is the composite value derived by multiplying the peer compliance rate by the provider's prevalence rate for each given measure.

INCLUSION OF QUALITY IN THE PCP ASSIGNMENT PROCESS

Humana will evaluate the PCP tier designations at least annually using a rolling measurement period. Physicians with performance significantly below their peer average will be referred to Humana's quality department for provider outreach and a potential Corrective Action Plan (CAP). While the provider is on the CAP, we close their panel to any new enrollee assignments. If the provider improves their performance in line with the CAP's goals and timeline, the panel will be re-opened to enrollee assignment.

In accordance with the previously mentioned NCQA PHQ certification, Humana will display an indication of the providers' quality performance in the online Provider Directory for enrollees to view and for our Customer Care Specialists (CCS) to use as they assist enrollees in making changes to their PCP assignment.

In addition to the stratification of our providers into performance levels, we are examining additional options to include quality in the PCP assignment process. We will work with providers and AHCA to determine the best approach to support incorporation of quality and performance metrics into the PCP assignment process. Our physician advisory committee will support and inform our physician performance measurement initiative. Our providers will consult with Humana to inform, among other things, our data selection, evaluation methods, and quality improvement programs. Moving forward, we will also use this committee to inform the application of this initiative to our PCP assignment algorithm. In addition, associates from our market quality department will work with our Provider Advisory Group, which includes representation from our Provider Network and Provider Relations teams, to steer and inform the identification of metrics to support our PCP stratification process. The Provider 360 Committee (a cross-functional team that meets monthly and includes representation from executive leadership and our quality, provider relations, and claims department) will also be used as a forum to discuss and review the quality metrics identified for the upcoming year. This committee will ensure our measures align with the quality improvement goals set by AHCA as well as internally developed quality improvement goals.

==========

3. The extent to which the respondent can process requests for PCP changes within three (3) business days.

==========

Humana's systems reflect a PCP change within twenty-four (24) hours from the time of request. Enrollees are able to request PCP changes at any time by contacting our Customer Care department; visiting our MyHumana online enrollee portal; and through their Case Manager, as applicable. If the request for a PCP change is made telephonically, our CCSs use Humana's Customer Relationship Management System (CRM) and the Physician Finder Plus (PFP) tool to guide the enrollee through the PCP selection process. Case Managers can also contact the Customer Care department on the enrollee's behalf to request a PCP re-assignment. Humana's

CRM provides our CCSs with information about the enrollee to guide the PCP selection process, including:

- Enrollee's current address (which is verified by the CCS)
- Enrollee's preferred language
- Preferred contact timeframe
- Current family member PCP assignments, if applicable
- PCP's NCQA PCMH accreditation status
- Provider type and board certification credentials (e.g.. family practitioner, pediatrician)
- Provider quality performance (in early 2019)

When enrollees request a PCP change, our CCSs have access to a complete, 360-degree view of the enrollee via CRM. Our specialists can see the enrollee's calling time preferences, current and previously filed complaints or grievances, care gaps, and more. The specialists can use this information to better understand the enrollee's needs and document the reason for the change. Our CCSs are also trained to ensure the PCP change is the best decision for the enrollee given the enrollee's location and needs, including any existing conditions or language requirements. During this call or via our website, CCSs enter PCP changes in real time, instantaneously updating the enrollee's profile in CRM in compliance with the contractual requirements. The platforms viewed by our associates and providers are updated with the new PCP assignment that night. This change may be viewed by our associates and providers as soon as it is entered into the system. Our automated system also sends enrollee ID cards once a PCP change is entered.

When a CCS identifies an enrollee who has more than two PCP changes in the past six (6) months, the CCS works to identify the enrollee's rationale for the PCP change and to determine if the enrollee would benefit from a referral to case management or if the enrollee has a lack of understanding of their benefits. In the latter case, the CCS educates the enrollee on how to access care and the benefits they receive through MMA. Any overall trends noted in enrollee requests for PCP reassignments, including potential quality of care concerns for specific provider(s), are used to inform our provider outreach and quality improvement efforts.

Evaluation Criteria:

1. The extent to which the respondent's description includes how quality and/or performance metrics are defined and utilized in the assignment process.

2. The extent to which the respondent's algorithm includes assignment of enrollees to high quality PCPs.

3. The extent to which the respondent can process requests for PCP changes within three (3) business days.

Score: This section is worth a maximum of 15 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

MMA SRC# 9 – PCP Timely Access Standards (Statewide):

The respondent shall describe the process and monitoring plan it uses to ensure compliance with the timely access standards as defined in **Exhibit B-1**, Managed Medical Assistance (MMA) Program, **Section VIII.**, Provider Services **Item A.**, Network Adequacy Standards, **Sub-Item 8.**, Timely Access Standards. The respondent shall also describe the process and methodology it uses for determining whether a PCP has the capacity to accept new patients.

Response:

Humana brings broad and lengthy experience assessing provider networks in Florida into our provider recruitment strategies. These strategies ensure that network composition sufficiently provides enrollees with timely access to care for urgent and non-urgent services, and give us invaluable insight into provider accessibility and availability. We understand that to achieve effective and responsive care delivery, our enrollees must be able to access our provider network in a timely fashion.

We comply with the Agency for Health Care Administration's (AHCA) contractual requirements for timely access standards, as listed below, and actively monitor provider adherence to these standards:

1. Appointments for urgent medical health care services shall be provided:
a. Within forty-eight (48) hours of a request for medical health care or behavioral health services that do not require authorization
b. Within ninety-six (96) hours of a request for medical health care or behavioral health services that do require authorization

2. Appointments for non-urgent care services shall be provided:
a. Within thirty (30) days of a request for primary care appointment

3. The primary care provider (PCP) provides or arranges for coverage of services, consultation, or approval for referrals twenty-four hours per day, seven days per week (24/7) by a Medicaid-enrolled PCP(s)

There are several methods we use to ensure enrollees have access to an adequate selection of PCPs, including family practice, general practice, internal medicine, and pediatric providers. The first method to ensure timely access to care begins with the broad scale of our provider network. We routinely monitor our network composition against AHCA's Geographic Access and Provider per Enrollee ratio requirements defined in the Managed Medical Assistance (MMA) Provider Network Standards Table, Section VIII. This guarantees that we have a sufficient number of providers to meet our enrollees' needs within each geographic area, and within the required time and distance access standards.

Humana also ensures providers maintain accessibility, appointment availability and after-hours coverage through an array of processes and tools to monitor these standards. Lastly, Humana has several processes in place to assess PCP panel capacity to ensure enrollees are assigned to a suitable provider.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

==========

1. The extent to which the respondent's process and monitoring plan ensure that enrollees have access to urgent or non-urgent services within the timely access standards defined in Exhibit B-1, Managed Medical Assistance (MMA) Program, Section VIII., Provider Services, Item A., Network Adequancy Standards, Sub-Item 8., Timeline Access Standards.

==========

Our Humana provider agreement and Florida Medicaid Provider Manual contractually require participating PCPs to ensure enrollees have timely access to care for PCP services and referrals to specialists for medical and behavioral health, as follows:
- Urgent care: Enrollee must be seen within one (1) day of the request
- Sick care: Enrollee must be seen within one (1) week of requesting an appointment
- Well-care visit: Enrollee must be seen within one (1) month of requesting an appointment

We require all participating providers to render care in full compliance with AHCA and Humana's access guidelines. Additionally, as noted in the provider manual and the provider contract, PCPs must provide twenty-four (24)-hour availability to enrollees by telephone. Whether through an answering service, call forwarding, provider call coverage, or other AHCA-approved means, enrollees must be able to connect with clinicians who can render a clinical decision twenty-four (24) hours a day, seven (7) days a week. Humana audits appointment availability and wait time for urgent visits, non-urgent visits, and after-hours coverage using the monitoring methods described below.

TIMELY ACCESS PCP WAIT TIMES REPORT - Humana's Provider Relations team conducts an annual survey of a statistically valid sample of PCPs to gauge appointment availability. During these calls, a Provider Relations representative contacts the primary care office with symptoms of a simulated condition/illness to discover the next available appointment. Through our 2016 audit, we found that the average wait times for providers was two (2) days for sick care visits, just over one (1) day for urgent care visits, and eight (8) days for well-care visits, which exceeded AHCA requirements. See Attachment MMA 9-1 for Humana's 2016 PCP audit results. Starting in 2019 we will implement this process on a quarterly basis.

AFTER-HOURS ACCESSIBILITY AUDIT - Humana calls PCP offices annually or on a more frequent basis to ensure enrollees have after-hours access to care. The Provider Relations leadership team reviews results and then assigns the appropriate Provider Relations representative for immediate outreach to the provider, if necessary. Attachment MMA 9-2 includes results from our 2016 After-Hours Accessibility Audit, which exceeded AHCA requirements, as sixty percent (60%) of our PCPs offer after-hours care. Additionally, most of our patient-centered medical homes offer after-hours care. Humana also enhances access to after-hours care through our twenty-four seven (24/7) nurse line, which allows enrollees to call and speak with a clinician for medical guidance. Enrollees can also be warm transferred to their PCP during office hours.

Humana has developed a strategy to further incentivize PCPs to offer increased after-hours coverage. The initiative increases provider reimbursement for after-hours service codes 99050 and 99051. Given the current Medicaid-allowable reimbursement of seven dollars and twenty-eight cents ($7.28) and nine dollars and thirty-nine cents ($9.39), Humana is offering a range of thirty-five ($35) to fifty ($50) dollars, which is a substantial increase in reimbursement.

ENROLLEE SURVEYS - Humana annually reviews results of Consumer Assessment of Healthcare Providers and Systems (CAHPS) surveys to identify any appointment and wait time issues. We report the results to our Quality Management Committee (QMC) to ensure we meet goal benchmarks. We measure access to care results year over year in comparison to our established benchmark goals (see Attachment 9-3). In our 2016 CAHPS survey, Humana saw an increase in adult responses for "Got appointment with specialist as soon as needed" to seventy-five percent (75%) and "Got urgent care as soon as needed" to eighty-two percent (82%) (a nine percent (9%) and two percent (2%) increase, respectively). We also saw an increase in "Ease of getting care, tests, or treatment needed" to eighty-six percent (86%) and "Got urgent care as soon as needed" responses for children to ninety percent (90%) (two percent (2%) and two percent (2%) increases, respectively).

ENROLLEE TURNOVER - On a monthly basis Humana reviews reporting of enrollees who have requested reassignment. This report includes codes that may indicate dissatisfaction with appointment availability or office wait times.

SITE VISITS - Humana conducts provider site visits for PCPs during the credentialing and recredentialing process. As part of these visits, we assess appointment scheduling policy, wait times, and after-hours accessibility. Humana also physically audits appointment schedules on a random basis during site visits.

COMPLAINTS AND GRIEVANCES - We receive complaints and grievances from enrollees and providers through multiple routes, which we record and track in our Customer Care Portal. Our Provider Relations team receives complaints that reflect network access issues or identify potentially non-compliant providers for review and action on a real-time basis. In addition, Humana will be designating a Provider Services Leader for oversight on provider disputes.

STAFF AND PROVIDER INPUT - Humana examines input from various internal and external sources pertaining to appointment availability and wait times. Examples of these sources include our Provider 360 Committee, the Clinical Access Team (CAT), Provider Relations representatives, case managers (CMs), specialists' offices, and customer care specialists (CCSs).

Our Provider Relations leadership team and Provider 360 Committee review the reports, based on data collection frequency, and identify issues related to potentially non-compliant PCPs. Provider Relations representatives follow up with non-compliant providers to ascertain problems, educate the provider, and if necessary, put the provider on a corrective action plan to remedy root cause issues.

==========

2. The extent to which the respondent's monitoring plan includes specific mitigation steps it will take if there is a potential access accessibility issue identified.

==========

If a provider fails to meet contract standards for appointment availability, wait times, or after-hours coverage, Humana's Provider Relations team will promptly reach out to educate the provider. Our Provider Relations team will then re-audit the provider after thirty (30) days. If the

provider is still not meeting our access standards, Humana develops and implements a corrective action plan (CAP), which we communicate to the provider in writing and during a meeting between the provider and Provider Relations representative. Humana's actions in addressing contractual non-compliance, such as not meeting appointment availability and access standards, may include, but are not limited to, the following:

- Immediately freezing the PCP's panel to new enrollees.

- Implementing a CAP with the expectation that the PCP shall regain compliance with Humana's standards within a thirty (30)-day period.

- Re-auditing the PCP at the end of the thirty (30)-day CAP.

- Lifting the PCP's panel freeze if we find the PCP has regained compliance with Humana's accessibility standards.

- Providing a notice of termination or extending the CAP window if the PCP does not improve accessibility standards and regain full compliance within the thirty (30)-day CAP window. Since the implementation of our MMA program, we have not terminated any providers related to accessibility and availability reasons.

Humana's Quality Management Committee (QMC) reviews all instances where providers are not meeting appointment availability and access standards. Humana continues to monitor an identified case to ensure that the provider office has implemented remedies for the indicated issues.

==========
3. The extent to which the respondent's process and methodology for determining PCP capacity clearly outline the steps and data used for determining whether a PCP has the capacity to accept new patients.
==========

Humana monitors PCPs' capacity to accept new enrollees using a variety of mechanisms described below. We have designed all methods to cap PCP enrollment at levels that guarantee enrollees' access to care is within all AHCA access standards.

CREDENTIALING ATTESTATION - During our credentialing and recredentialing processes, we require PCPs to complete an attestation, which includes reporting how many active enrollees they have in their panel. Their panel must not exceed three thousand (3,000) active enrollees for all healthcare plans and lines of business. We have included an example of this attestation in Attachment 9-4.

PCP CLOSE PANEL PROCESS - Because many of our providers also serve our Medicare and commercial population in Florida, we implemented a process that extends a requested panel freeze for Medicaid enrollees to enrollees of all lines of business. If a PCP asks to freeze their panel, we review their capacity reports prior to closing it, and require an updated attestation stating they are at capacity for all payors. We require the PCP to have an action plan to hire

additional physicians and/or physician extenders to be able to re-open their panels in six (6) months.

FAILURE TO MEET ACCESS OR QUALITY STANDARDS - Humana may require a PCP to close their panel for reasons such as failure to meet availability and access standards, or for failure to meet Humana quality standards, such as unsafe office conditions, office uncleanliness, discrimination, or ADA noncompliance issues. In these situations, we ensure there are an adequate number of participating providers accepting new enrollees, or we recruit additional providers that have capacity to accept new patients. We will re-open the panel upon evidence that the provider is meeting availability and access standards or has improved quality standards.

MONTHLY RATIO REPORTING – Humana analyzes our network monthly against AHCA's regional ratio requirements, as listed below.

- Regions 1 and 2 must have an adequate number of PCPs against two hundred percent (200%) of the Managed Care Plan's actual monthly enrollment

- Regions 3 - 11 must have an adequate number of PCPs against one hundred twenty percent (120%) of the Managed Care Plan's actual monthly enrollment

- The ratio requirement is one (1) PCP per one thousand five hundred (1,500) HMO Medicaid enrollees. The ratio requirement may be increased by 750 enrollees for every full-time physician extender (ARNP or PA) affiliated with the PCP's office.

Monthly measurement reporting allows Humana to ensure there are an adequate number of PCPs available to accept new patients if a change in network participation or unexpected PCP panel status were to occur. PCP panels must not exceed three thousand (3,000) active enrollees for all health plans across all lines of business. We have designed our PCP assignment algorithm to take these factors into account to understand a PCP's capacity to accept new patients. Our auto-assignment system does not assign enrollees to PCPs with closed panels.

Our Provider 360 Committee meets monthly to discuss specific provider performance issues and identify any providers that we should close off from enrollee assignment. The committee reviews PCPs "closed" in the previous month to identify progress and steps needed to achieve an "open" status. As of October 2017, over eighty-nine percent (89%) of PCP panels were open. Attachment MMA 9-5 demonstrates that we exceed PCP-to-enrollee ratios statewide.

Evaluation Criteria:

1. The extent to which the respondent's process and monitoring plan ensure that enrollees have access to urgent or non-urgent services within the timely access standards defined in **Exhibit B-1**, Managed Medical Assistance (MMA) Program, **Section VIII.,** Provider Services, **Item A.**, Network Adequacy Standards, **Sub-Item 8.**, Timely Access Standards.

2. The extent to which the respondent's monitoring plan includes specific mitigation steps it will take if there is a potential accessibility issue identified.

3. The extent to which the respondent's process and methodology for determining PCP capacity clearly outline the steps and data used for determining whether a PCP has the capacity to accept new patients.

Score: This section is worth a maximum of 15 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Attachment MMA 9-1: 2016 PCP Audit Results

Humana's Provider Relations team annually conducts a survey of a statistically valid sample of PCPs to gauge appointment availability. Please see below for Humana's 2016 PCP audit results.

Table 1: AHCA Contractual Requirements

1. APPOINTMENT TYPE	2. STANDARD
Emergent	Immediately
Urgent	Within 24 hours
Routine or Primary Care	30 calendar days
After-hours access	Answering service capable of paging physician or answering service with instructions to call Humana First and/or instructions to go to nearest Emergency Room if emergent/urgent

Table 2: Humana Average PCP Wait Times by Number of Days

Average PCP Wait Times by Number of Days				
Region	Total Number of PCP Locations Surveyed	Measure: Routine Sick Patient Care	Measure: Urgent Care	Measure: Well Care Visit
Region 1	129	2	1.3	10.3
Region 6	335	1.8	1.2	18
Region 9	38	1.8	1.2	4.7
Region 10	33	2	1.3	3
Region 11	36	3	1.1	4
Average Wait Times (all regions)	571	2	1.2	8

**In Regions 1 and 6, we conducted a full analysis of our network, rather than just a statistically significant sample to ensure there were no access issues. **

Attachment MMA 9-2: 2016 After-Hours Accessibility Report

Humana calls PCP offices annually or on a more frequent basis to ensure enrollees have access to care during after-hours. Results are reviewed by the Provider Relations leadership team and assigned to the appropriate Provider Relations representative for immediate outreach to the provider, if necessary. The table below conveys our results from our 2016 After-Hours Accessibility Audit, which exceeded Agency for Health Care Administration (AHCA) requirements in the following regions.

Region	Total PCP/FTE	Total PCP/FTEs After-Hours	% of PCPs/FTEs w/After-Hours	AHCA Contractual SLA Requirement	Humana Results
1	385.5	147.5	38%	30%	Exceeds
6	1348.5	855	63%	35%	Exceeds
9	575	363	63%	40%	Exceeds
10	420	300.5	72%	40%	Exceeds
11	621.5	409.5	66%	40%	Exceeds
Total	3350.5	2075.5	60%		

**In Regions 1 and 6, we conducted a full analysis of our network, rather than just a statistically significant sample to ensure there were no access issues. **

Attachment MMA 9-3: Measurement and Results: CAHPS

Humana annually reviews results of Consumer Assessment of Healthcare Providers and Systems (CAHPS) surveys to identify any appointment and wait time issues. We report the analysis of the results to our Quality Management Committee (QMC). We measure access to care results year-over-year in comparison to our established benchmark goals.

Florida Medicaid Adult CAHPS Results			
CAHPS Question/Composite	2015 Rate	2016 Rate	2016 Market Goal
Getting Needed Care			
Ease of getting care, tests, or treatment needed	79.70%	79.30%	82.10%
Got appointment with specialist as soon as needed	66.40%	75.80%	68.40%
Getting Care Quickly			
Got urgent care as soon as needed	80.60%	82.90%	83.00%

Florida Medicaid Child CAHPS Results			
CAHPS Question/Composite	2015 Rate	2016 Rate	2016 Market Goal
Getting Needed Care			
Ease of getting care, tests, or treatment needed	83.90%	86.00%	86.40%
Getting Care Quickly			
Got urgent care as soon as needed	88.30%	90.10%	90.90%
Got routine care as soon as needed	87.30%	88.10%	89.90%

Attachment MMA 9-4: Humana Credentialing Attestation

Humana Medical Plan – Florida Medicaid
Attestation for Primary Care Physicians

In accordance with Section 1932(b)(7) of the Social Security Act (as enabled by Section 4704(a) of the 1997 Balanced Budget Act), the plan shall provide adequate assurances that it has the capacity to serve the expected Medicaid enrollment in that service area.

The minimum standards for primary care physicians must be met to ensure adequate accessibility to all primary care services for all enrolled recipients at all ages.

One FTE primary care physician is required per 1,500 HMO Medicaid members. The ratio may be increased by 750 HMO Medicaid members for every one physician extender (ARNP or PA).

A full-time primary care physician in the Humana Medical Plan may not have more than 2,400 Commercial and Medicare Member Equivalent (CMME) members enrolled in his/her panel. A Medicare enrollee is equivalent to three non-Medicare enrollees (ratio@1:3). A physician extender may increase the panel enrollment by an additional 1,200 CMME members.

I attest that my total patient load is no greater than 3,000 active patients for all health care entities and lines of business.

I attest that I understand the above guidelines for Medicaid and Humana Medical Plan and am in compliance with these established standards for my panel. The plan may audit my enrolled membership for Medicaid, commercial and Medicare.

PCP name (Printed)	PCP signature
Center number	Date
Group name	Tax ID

Medicaid attestation procedures

- The Medicaid Attestation is required for all PCPs contracted for Medicaid at time of initial credentialing and recredentialing.
- The “Printed name” and “Center number” fields are not required; however, the “PCP signature” and “Date” must be present.
- Attestation must be signed within 180 days of credentialing approval date.

Attachment MMA 9-5: PCP to Enrollee Ratios

The tables below demonstrate that as of October 2017, we exceed PCP to enrollee ratios statewide.

Table 1: PCP to Enrollee Ratios in Existing Regions

Region	Actual Enrollment	Number of Required PCPs	Contracted PCPs	Met Requirement
01	55,489	37	245	Exceeded
06	37,895	26	473	Exceeded
09	70,605	48	448	Exceeded
10	71,603	48	499	Exceeded
11	79,937	54	784	Exceeded
Grand Total	315,529	213	2,449	Exceeded

Table 2: PCP to Enrollee Ratios in Expansion Regions

Region	Projected Enrollment	Number of Required PCPs	Contracted PCPs	Met Requirement
02	26,923	18	180	Exceeded
03	42,972	9	461	Exceeded
04	18,942	13	527	Exceeded
05	11,072	8	351	Exceeded
07	11,164	8	654	Exceeded
08	13,194	9	302	Exceeded
Grand Total	124,267	65	2, 475	Exceeded

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 10 – Transitions of Care (Statewide):

The respondent shall describe how it will address the transition of care between service settings, including transitions from hospital to nursing facility rehabilitation and from hospital or nursing facility rehabilitation to home. Identify specific methodologies for ensuring that transition planning ensures appropriate primary care and behavioral health follow up, where appropriate. Provide an example of an effective transition plan.

Response:

Individuals within the healthcare system are most vulnerable when transitioning between care settings and levels of care. Humana has worked to identify communication challenges through the transition process and develop practices aimed at resolving them. Together, our utilization management and case management teams serve as the link that connects the various care settings and levels of care through which an enrollee moves. They coordinate care and share information through discharge plans, plans of care, medication lists, and other clinical reports to ensure a safe and effective transition. Processes are integrated within our Clinical Guidance eXchange (CGX) clinical platform to ensure continuous information sharing among all involved parties. Our CGX clinical workflow system supports an integrated approach to care coordination. As a fully-integrated approach, this enterprise solution provides enhanced capabilities to identify enrollees for programs, document gaps in care, automate care planning, monitor plan compliance, and identify undesirable outcomes for further intervention.

We have created transition processes that meet the needs of our enrollees and their families during these critical times when they are most likely to seek education and help with care coordination. Our transition planning actions start as soon as we are made aware that our enrollee is hospitalized, and they continue throughout the admission as well as post-discharge. Humana's post-discharge transition activities focus on identifying and addressing gaps in care and services post-discharge and preventing readmissions.

OVERVIEW OF HUMANA'S TRANSITION PROCESSES

For transitions from inpatient acute and long-term care facilities to the community, we follow the Dr. Eric Coleman Care Transitions Model, which is grounded in improving quality and safety during transitions. At the foundation of our transition processes are the following five (5) pillars of care:

- Coordinated and proactive discharge planning, including communication among all stakeholders, referral to needed post-discharge services and collaboration with community based agencies

- Timely and appropriate primary and specialty care follow-up post-discharge

- Medication management and medication reconciliation during transitions

- Establishing a medical home with a focus on prevention and proactive health management in the outpatient setting

- Empowering Enrollees and caregivers through education on their health conditions

Throughout an enrollee's transition from one level of care or setting to another, Humana Utilization Management and Case Management Nurses review all relevant clinical information including assessments, care plans, discharge plans, and medications to address barriers to care and to ensure services are in place to facilitate a seamless transition between care settings. They facilitate the transfer of information across care setting and levels of care, coordinating with facilities and providers to ensure medication reconciliation occurs and all other necessary communication among providers takes place.

We begin to assess and plan for discharge needs upon notification of an admission. Along with reviewing the enrollee's current clinical and functional status, we identify potential readmission risk using Humana's proprietary Readmission Predictive Model (RPM) (please see Attachment MMA 10-1). Available on admission, the RPM augments clinical review and helps identify enrollees who may benefit from more intensive support across transitions of care.

Humana associates involved in transition of care between service settings (sometimes referred to collectively as "transition associates" throughout this response) include Utilization Management Nurses, Case Managers (CMs), Behavioral CMs, Social Workers, and Case Management Assistants who together guide enrollees and their caretakers from admission to discharge to recovery. These individuals operate within a multidisciplinary team (MDT) in order to ensure that enrollees' holistic needs are identified and addressed during this transition. The MDT may include the enrollee, their caregivers, the enrollee's Primary Care Physician (PCP), and other providers involved in their care. Humana's Medical Directors work with the team to ensure approvals between levels of care and to communicate with physicians in community and inpatient settings.

==========

1. The extent to which the respondent's process and example address the following transition of care requirements:

==========

In the following response, we describe our process and provide a real case example that addresses each of the transition of care requirements. Our case example is a twenty (20) year old male enrollee, "Alex," who suffered a traumatic brain injury in September 2016 when he was hit by a vehicle while riding a motorcycle without a helmet. His diagnoses upon admission to the hospital included Respiratory Failure, Altered Mental Status, and Subdural Hematoma; he underwent a Ventriculoperitoneal (VP) shunt, a Decompressive Craniotomy, and a Tracheostomy, and had a gastrostomy tube (G-tube) inserted. Due to Alex's severe injuries, he transitioned first to a Skilled Nursing Facility and then to an inpatient acute rehabilitation hospital before being discharged to home on February 16, 2017.

==========

a. Assessment criteria for making sure the enrollee can be served safely in the community;

==========

Humana strives to provide efficient, enrollee-centered, and safe care planning for all enrollees transitioning between service settings. Throughout an enrollee's transition from one level of care or setting to another, Humana transition associates review all relevant clinical information including assessments, existing plans of care, discharge plans, and medications to address barriers to care and to ensure services are in place to facilitate a seamless transition between care settings. They also conduct home assessments to obtain authorizations for necessary modifications and equipment needed prior to transitions home.

Discharge planning, an integral part of the inpatient Utilization Management (UM) process, begins on admission to an inpatient stay. UM Nurses have direct access to our hospitals' Electronic Health Records (EHRs), which facilitates information gathering and reduces burden on hospital staff. Telephone UM Nurses facilitate interaction and coordination with hospital staff to ensure continuity of care while enrollees are in the inpatient setting, to identify any gaps or barriers in transition of care, and to coordinate post-discharge activities. The UM Nurse completes a comprehensive assessment of the enrollee and caregiver needs through completion of the Discharge Planning Assessment Tool in Humana's clinical platform, (CGX). The assessment gathers information on key factors that determine whether the enrollee can be served safely in the community, including but not limited to the following:

- Medical needs at time of discharge;
-- Availability of support from family and friends;
-- Access to a PCP and specialists;

- Potential barriers to discharge such as:
-- Confusion, cognitive Impairment, and memory loss
-- Cultural or language barriers
-- Currently active behavioral health diagnosis
-- Diagnosis resulting in significant life style change or educational needs
-- Drug abuse
-- Environmental risk (pediatric or dependent enrollee in risk environment)
-- Financial barriers
-- History of falls

- Healthcare behaviors and challenges such as:
-- Access issues, resides in rural area
-- History of non-compliance with plan of care or medications

In our case example, Alex was initially admitted to the hospital following his accident. Alex was determined to be eligible for Humana's Complex Case Management program and was assigned a CM shortly after his admission. Humana's transition team, consisting of the UM Nurse, CM, and Social Worker, engaged in assessment and discharge planning coordination with Alex's mother and his attending physician, medical team, and discharge planning staff at the hospital, where Alex remained until November 1, 2016. During his hospitalization, the CM referred Alex to Florida's Brain and Spinal Cord Injury Program and began assisting and guiding his mother regarding an application to the Traumatic Brain Injury and Spinal Cord Injury Waiver program.

Because of Alex's severe injuries, he could not be safely transitioned home at that time; he suffered from cognitive impairment, and his injuries were going to require significant lifestyle

changes and educational services. The discharge planning team agreed that a skilled nursing facility (SNF) was the most appropriate level of care at that point. In this setting, Alex could gain strength and stamina necessary in order to eventually fully participate in rehabilitation at an acute inpatient rehabilitation facility. During his time at the SNF, Alex received physical, occupational, and speech therapy (PT, OT, and ST). He was also fitted for and received custom splints for his upper and lower extremities. He made progress with his therapy, gaining enhanced mobility and the ability to follow simple commands on a consistent basis. He also regained his desire to eat.

Alex was transferred to an inpatient acute rehabilitation facility on January 24, 2017. During Alex's three (3) weeks at the rehabilitation facility, his tracheostomy was removed and he continued intensive rehabilitation. Alex's CM visited Alex and his mother in the facility and called his mother weekly. A swallow study was performed during his stay, which he did not pass, and the timeframe for a second swallow study was discussed. Since he did not pass the swallow study, Alex's G-tube had to remain in place and thus skilled nursing services would continue to be required. Humana's post-acute UM Nurse met with Alex's mother and collaborated with the facility discharge planner, facility therapy staff, primary care physician, Humana Medical Director, and Alex's Humana CM to discuss goals and discharge planning. It remained his mother's desire to have Alex go home. The Humana Social Worker on our transition team contacted Alex's mother and discussed available community resources. After a meeting with Alex's (MDT) and family, it was decided Alex could be safely transitioned home. Before discharge, Alex's CM completed a home visit and arranged needed services and supplies. Alex was safely discharged home on February 16, 2017.

==========

b. Collaboration with providers' (e.g., hospitals, institutional settings, assisted living facilities, crisis stabilization unit, statewide inpatient psychiatric program) discharge planning staff;

==========

Humana's transition associates have extensive training and experience in collaborating with facility discharge planning staff to ensure smooth transitions for our Managed Medical Assistance (MMA) enrollees in Florida. Transition associates review initial discharge planning information from the facility and work closely with facility discharge planning staff to identify and review potential barriers to discharge through communications with the enrollee, their caregivers, the providers, and hospital nurses and social workers. Humana's transition associates also share relevant information with the facility discharge planning staff (e.g., known barriers to discharge that may be available in our integrated (CGX) documentation platform). The Discharge Planning assessment referenced above is a working document that is updated throughout the inpatient stay as additional information becomes available, up to and including the final facility discharge plan.

Humana's transition associates ensure the appropriate exchange of information to facilitate transitions to new settings or levels of care, including changes in medications and the discharge plan. Pre-discharge activities related to collaboration with facility discharge planning staff and other relevant stakeholders include the following:

- Involvement, cooperation, communication, and coordination during the planning process with the physician, hospital and facility representatives, the enrollee or authorized representative, the

enrollee's family or caregivers, pre-established community resources, Humana CMs; and appropriate clinical programs

- Provision of authorizations for needed post-discharge services as ordered by the treating physicians, such as home health and durable medical equipment (DME)

- Referral and scheduling assistance with our home care partners

- Referral and scheduling assistance to ensure necessary post-discharge appointments are arranged with the PCP, behavioral health providers, and other specialists

- Consideration for and referral to Humana care management programs such as disease management, case management, and other clinical programs

- Notification and coordination of discharge orders with providers, social supports, and community resources (e.g., home health, DME), the enrollee or authorized representative, the enrollee's family or caregivers, Humana CMs, and clinical programs as appropriate

The UM Nurse communicates the discharge plan with the enrollee, facility, caregivers, and PCP to effectively transition the enrollee home or to another facility and to ensure understanding of the plan by all parties.

Humana maintains detailed procedures for facility transfers, including hospital to hospital, Long-Term Acute Care Hospital (LTACH), Inpatient Rehabilitation Facilities (IRF), SNF, and Psychiatric Facilities. Our procedures address and ensure effective collaboration and define transition associate responsibilities. This includes PCP notification and facilitating communication between the transferring facility and the accepting facility. CMs with behavioral health experience and training are assigned to work with behavioral health facilities. We have also established regular calls between our transition team and hospitals to support discharges to assisted living facilities, group homes, and other services; this partnership serves our common goal of helping enrollees achieve health and well-being.

SPECIAL COLLABORATION PROCESSES FOR HIGH-RISK ENROLLEES

In addition to our standard pre-discharge transition processes, our transition team also engages in the following collaboration calls for high-risk enrollees during their inpatient stay:

- CASE CONFERENCES are scheduled on an "as needed" basis for enrollees with complex discharge planning needs or referrals. The UM nurse or social worker identifies enrollees based on the current clinical status during the inpatient stay or through identified historical utilization patterns (e.g., multiple readmissions). The case conference may include the post-acute team of nurses and medical directors, social workers, CM, PCP, and long-term care team. The teams work collaboratively to ensure the enrollee's discharge plan is safe, effective, and addresses all of the enrollee's needs. Following the call, the UM nurse contacts the enrollee and hospital case management team and updates them with the plan of care. Our social workers or CMs may also contact the enrollee and give information and referral assistance for community resources.

- OUTLIER CALLS are held weekly for enrollees with an extended inpatient stay. The call includes the UM nurse, UM leader, Medical Director(s), CM, and Social Worker. The purpose of the call is to discuss the enrollee's inpatient medical admission, discharge needs, and any anticipated barriers to discharge. If barriers to discharge are identified, the Associate Medical Director reaches out to the admitting physician for a peer-to-peer discussion. During the call, the teams discuss the enrollee's plan of care and schedule case conferences as needed.

- When an enrollee under twenty-one (21) years of age has a serious or complex medical condition that may require long-term care services (nursing facility, medical foster care, or model waiver services), Humana's transition team will refer to and work with the Medicaid interagency Children's Multidiciplinary Assessment Team (CMAT). The CMAT will determine eligibility for services to meet the enrollee's medical needs. In such cases, Humana's transition team works with the parent or legal guardian to initiate a referral for a CMAT level of care recommendation; coordinate with the local CMAT staff; attend the CMAT staffing; and coordinate services for the enrollee, ensuring that all medically necessary care is authorized and delivered in a timely fashion.

In our case example, Humana's transition team collaborated with discharge planning staff at all three (3) facilities in which Alex received care prior to his discharge home. In addition to working with hospital discharge staff prior to Alex's transfer to the SNF as noted above, the CM convened two (2) MDT conferences while Alex was at the SNF, one on November 29, 2016, and the second on January 19, 2017, at which time it was decided that Alex was ready to transition to an inpatient acute rehabilitation hospital and then to his home. Following the calls, the UM nurse updated Alex's family and the SNF discharge planning team about his plan of care. Alex was evaluated and accepted for admission by the rehabilitation center. A transition of care conference call was held that included Alex's CM and the Post-Acute UM Nurse who would be working with Alex at the rehabilitation center to discuss care needs and family discharge goals.

Alex was transferred to the rehabilitation center on January 24, 2017. Humana's post-acute UM Nurse met with Alex's mother and collaborated with the facility discharge planner, facility therapy staff, primary care physician, Humana Medical Director, and Alex's Humana CM to discuss goals and discharge planning. The MDT met again to determine whether Alex could safely be transitioned home. After the CM conducted a home assessment, made all post-discharge arrangements, and ordered needed services, Alex was discharged to his home on February 16, 2017.

The transition team notified Alex's PCP of all facility transfer plans and facilitated communication between the transferring facility and the accepting facility to ensure smooth transfers.

==========

c. Referral and scheduling assistance;

==========

Humana's transition associates provide referral and scheduling assistance both prior to and post-discharge. As noted above, prior to discharge they give authorizations for needed post-discharge services as ordered by the treating physicians, as well as referral and scheduling

assistance with our home care partners. They ensure a timely post-discharge appointment with the PCP or specialist is arranged. They also refer the enrollee to Humana care management programs such as disease management or case management. Humana's provider network is highly engaged. Communication between our transition team and the enrollee's PCP and specialists often occurs during the hospitalization. This helps ensure that the enrollee's outpatient providers are aware of what is occurring during the hospitalization and can ensure appropriate follow-up.

Post-discharge, transition associates continue to provide referral and scheduling assistance to ensure follow-up doctors' visits and outpatient care are arranged according to post-discharge instructions. They also assist with removing barriers to keeping appointments (e.g., by ensuring the enrollee has transportation for follow-up visits). When high-risk enrollees are discharged home, a Field CM visits the enrollee in the home and provides scheduling and referral assistance, a home assessment, and other support as needed.

In our case example, a Humana social worker contacted Alex's mother and discussed available community resources. The social worker also helped Alex's mom connect with Legal Aide for assistance related to Power of Attorney, as well as the local Aging and Disabilities Resource Center. The CM completed a home visit and arranged the following services and supplies: skilled nursing 24 hours/day, 7 days/week by assigned Home Health Agency. DME equipment including hospital bed, wheelchair, shower chair, Hoyer lift, enteral formula, and all G-tube supplies. The CM also ordered soft supplies such as briefs and underpads.

After his February discharge home, Alex's CM continued to provide referral and scheduling assistance. The CM made a home visit after Alex was transferred home, and followed up with Alex's PCP and specialty physicians in the community who are treating Alex. Alex continues to receive physical, occupational, and speech therapy in an outpatient setting. When Alex began communicating by typing on his computer and texting on his phone, his mother called the CM to share her excitement. The CM visited Alex in his home again on June 16, 2017, and arranged for Alex to be evaluated for a custom wheelchair to enhance his mobility, which he received in July 2017. The CM referred Alex to the Humana social worker in case for any additional assistance or resources were needed and has also arranged for a second swallow study to be performed in September 2017.

Alex's CM has continued to follow up with Alex's mom over the past year about application for the Traumatic Brain Injury and Spinal Cord Injury Waiver, but his mother has decied not to take any action. The CM has also worked to establish Alex's eligibility for the Long-term Care (LTC) program. Alex signed a consent form for the LTC program and had an appointment scheduled with his PCP in September 2017 for the 3008 form to be completed. The CM just received the 3008 form back from the PCP office and sent the application packet to the CARES unit. She will continue to follow up and assist Alex's mom with the LTC eligibility process.

==========

d. Coordination with PCP and behavioral health providers to ensure appropriate follow up has occurred

==========

Post-discharge transition activities include a call to the enrollee within three (3) business days following discharge. Transition associates ensure that follow-up doctor's visits and outpatient care are arranged according to post-discharge instructions. They continue to communicate with the enrollee and their caregivers, PCP, behavioral health provider, and other relevant stakeholders to continually assess and intervene proactively, ensuring that enrollees are receiving necessary care and services. For enrollees in case management, the CM regularly facilitates case conferences to coordinate care and promote communication with the care team caring for the enrollee. PCPs and behavioral health providers are responsible for notifying our transition team of missed appointments, and CMs also follow up to make sure the appointment occurred.

Humana's approach to provider engagement includes proactively working with the PCP to serve as a central care coordinator following a discharge. Nearly half of Humana's MMA enrollees are attributed to PCPs in full value, global risk arrangements, which create incentives for providers to keep enrollees stable post-discharge and prevent readmissions.

Humana's HEDIS results for "Follow-up after Hospitalization for Mental Illness within seven (7) Days Post-Discharge" exceeded the national mean in measurement year 2016 and saw improvement between 2015 and 2016. Our performance on this measure also exceeded the Florida mean for measurement years 2015 and 2016.

In our case example, Alex's CM provides assistance to the family in scheduling and keeping physician appointments, communicates with Humana's transportation vendor to obtain appropriate transport, and communicates regularly with his PCP and community specialists to ensure appointments are kept. The CM also collaborates directly with Alex's PCP and specialists to ensure he is in compliance with his post-discharge plan, as well as to communicate any concerns Alex or his family may have, such as those surrounding his progress with mobility.

==========

e. Processes to prevent unnecessary hospital or nursing facility readmissions.

==========

Humana's post-discharge transition activities focus on identifying and addressing gaps in care and preventing readmissions. Post-discharge outreach is made to all enrollees discharged home. The specific outreach is based on the enrollee's risk level, as determined by the enrollee's Readmission Predictive Model score.

- High-risk enrollees are routed directly to a CM for post-discharge outreach. The CM administers the Post-Discharge Screening Tool, in its entirety, identifies gaps in care and documents appropriate interventions, and identifies enrollees eligible for Humana case management or disease management programs.

- Medium-risk enrollees are routed to a case management assistant for an abbreviated post-discharge screening. If gaps in care are identified, or if the enrollee requests to speak with a nurse, a CM follows up within twenty-four (24) hours.

- Low-risk enrollees are routed to a Voice Activated Technology (VAT) system and receive a VAT call that explains Humana's Post-Discharge Management program and invites enrollees to request a call back. Enrollees who request a call back are routed to a case management assistant for the abbreviated post-discharge screening.

Humana's goal is to complete the post-discharge call to the enrollee with three (3) business days following discharge. At least three (3) attempts, on different days and at different times, are made to reach the enrollee. Upon reaching the enrollee, the CM or case management assistant requests permission to obtain a Protected Health Information (PHI) consent form if not already obtained during the enrollee's hospitalization, verifies name and date of birth, and notifies the enrollee that the call is recorded. The CM or case management assistant then walks through a series of questions with the enrollee or caregiver to ensure the following items are in place:

- Enrollee received discharge instructions and fully understands their condition(s) and post-discharge care.

- Enrollee is in a safe environment with a support system to adequately provide post-discharge support.

- Enrollee was able to obtain all post-discharge medications and understands how to take them, can identify side effects and complications, and knows when to report concerns. Additionally, if the enrollee cannot afford medications, the case management team works with the enrollee on obtaining medications from community resources, pharmaceutical companies, or contacts the physician's office for assistance.

- Home health services and durable medical equipment are in place, if needed.

- Follow-up doctor's visits and outpatient care are arranged according to post-discharge instructions.

- Enrollee has required transportation for follow-up visits, and understands the transportation benefit.

- No complications or new problems have occurred without being reported to the physician.

- Enrollee understands when to report any complications to their physician and when to seek medical care.

At the conclusion of the call, we remind enrollees that there is a phone number on the back of their ID cards to schedule transportation and a phone number for the twenty-four (24) hours a day, seven (7) days a week Nurse Advice Line.

The goal of all post-discharge intervention is to identify and close any gaps in care that may lead to complications or readmissions. Humana's program is based on best practices identified in the clinical literature and on our own internal studies, which suggest that the closer the post-discharge intervention follows the discharge, the more likely the intervention will have a positive impact on outcomes and decrease inappropriate and costly readmissions. Our goal is to contact

at least thirty-five percent (35%) of enrollees within three (3) days after discharge. We exceeded this goal in both 2015 at fifty-one percent (51%) and 2016 at fifty-five percent (55%), and saw a significant improvement over that period. Our ten (10) day post-discharge contact rate also exceeded our goal (of at least fifty-eight percent (58%)) in both years and improved in 2016 as compared to the prior year (seventy-three percent (73%) in 2015 to seventy-seven percent (77%) in 2016).

We are focused on effective transitions for all our enrollees, but understand that certain populations require enhanced transition planning. As appropriate, enrollees are engaged in a case management program. If behavioral health needs are identified during or after the inpatient stay, then enrollees are referred to our behavioral health programs for support.

CMs closely monitor enrollees, especially those at high-risk, to ensure a safe transition from inpatient settings to the community and to reduce avoidable readmissions. CMs are responsible for creating an individualized transition plan for the enrollee, which includes:

- Setting goals that promote positive health outcomes

- Scheduling appointments

- Educating enrollees on their conditions to reduce preventable emergency department visits, hospital admissions, and readmissions

- Educating enrollees on benefits available through Humana and community resources

- Addressing enrollee post-discharge needs prior to hospital discharge (such as home health services, securing discharge medications prior to discharge, transportation)

- Coordinating care within and across treatment settings

- Giving enrollees and families a single point of contact

- Creating a process through which healthcare providers can communicate with one another about the enrollee's care

- Making enrollee preferences known and accessible to all providers

Humana has many tailored transition processes and programs to reduce readmissions for high-need populations, including:

- FIELD CASE MANAGEMENT. Humana has Field CM and Field Social Worker Pilots for the purpose of reducing barriers in order to close gaps in care, reducing readmissions, and improving engagement for enrollees with complex needs. Field CMs and Social Workers meet with the enrollee wherever they need to, including in the hospital.

We have also instituted a field visit component for all of our telephone CMS throughout our MMA program. While the majority of enrollee contacts will continue to be telephone, each CM will conduct at least one (1) field visit per month per caseload at the hospital or PCP office to

engage enrollees who have been identified for case management but whom we have been unable to contact.

- MEDICATION RECONCILIATION PILOT. We implemented a Medicaid Reconciliation Pilot in August 2017 for high-risk enrollees engaged with a Field CM (FCM). During the post-discharge home visit, the FCM works with the Humana pharmacy team to conduct medication reconciliation. The pilot incorporates a pharmacist into the FCM's medication reconciliation process to ensure the enrollee is getting the most out of his or her medications and to avoid medication-related problems that put enrollees at risk for adverse effects or readmission. Information from these visits is shared with the enrollee's PCP and uploaded in the enrollee's electronic medical record (EMR).

- FREQUENTLY ADMITTED MEMBER (FAM) PROGRAM. Humana has a FAM Program to identify, engage, and manage high-utilizing enrollees and improve their clinical outcomes. On an ongoing basis, clinical analytics teams use real-time data (e.g., authorizations) to identify enrollees with multiple facility inpatient admissions. Each FAM enrollee is assigned a designated UM nurse and supporting technician who follow these enrollees on all admissions. Having a consistent, concurrent review nurse allows the UM team to build trust with the enrollee, in addition to the relationship the enrollee has developed with their CM. It also facilitates the UM team's ability to coordinate medical record sharing between the PCP and hospitals. Our transition team follows these enrollees for eight (8) weeks post-discharge. We have observed a fifty percent (50%) reduction in readmission rates for enrollees targeted by this program.

- DIRECTING ENROLLEES TO "CHOICE SNFS." For some enrollees who are ready to be discharged from the hospital, immediate discharge to the home would present a risk of readmission due to short-term complex medical needs. To address this, we have identified high-acuity SNFs in our network where such enrollees can be transferred for additional therapy and in-facility doctor visits prior to being discharged home. To ensure enrollees are able to identify and access the highest quality, most appropriate SNFs, we created a SNF scorecard. The SNF scorecard is a tool used to identify services available, acuity levels, compliance with regulations, patient satisfaction and additional programs available at a SNF. Scorecard measures include:

- Services available

- Availability to admit new residents

- Wound care management capabilities

- Availability of intravenous (IV) medication and nutrition

- CMS Nursing Home Compare ratings

- Engagement with Humana CMs

- IN-HOME PHYSICIAN OR NURSE PRACTITIONER VISITS POST-DISCHARGE. Humana offers a variety of approaches to in-home clinical visits for our most complex and vulnerable enrollees that help prevent readmissions. First, many of our providers send nurse practitioners

or physician assistants to high-risk enrollees' homes post-discharge. Additionally, we contract with an in-home provider of medical services, typically used to address needs of enrollees with a "home bound" status. The provider is an in-home physician-based healthcare delivery company dedicated to improving access to high-quality in-home medical care. They also offer education on enrollees' disease state, and about the importance of compliance with their treatment plan, medication adherence, understanding signs and symptoms that require immediate reporting to the PCP, and the importance of regular PCP visits.

- POST-DISCHARGE MEALS. Good nutrition is essential for recovery following a hospitalization or skilled nursing stay. Humana offers post-discharge meal delivery as an expanded benefit to our enrollees, which covers up to ten (10) home-delivered meals per year after discharge from an inpatient hospital, long-term acute care hospital, or rehabilitation facility. This benefit is particularly helpful for enrollees who have limited social supports.

- NEONATAL INTENSIVE CARE UNIT (NICU) CM PROGRAM. The NICU CM program provides utilization review and case management of infants that are inpatient in the NICU in order to reduce readmissions. Nurses with extensive NICU experience follow each case throughout the NICU stay and for thirty (30) days post-discharge. The nurses provide authorizations and medical necessity approvals and discharge planning. They also offer support and education for families of the infants to address any concerns the family has about what to expect at home. For high-risk infants, the NICU nurses transfer the case to the Medicaid pediatric team for longer term outreach for up to one year to educate and support the caregiver.

- ENHANCED CARE COORDINATION FOR ENROLLEES UNDER AGE TWENTY-ONE (21). For enrollees under age twenty-one (21) who are in nursing facilities and meet criteria for transition from the nursing facility to home, a CM works collaboratively with each enrollee's MDT to transition the enrollee safely from the facility to the community. A transition plan is developed thirty (30) days prior to discharge, including the services and supports the enrollee needs to successfully reside in the community. During the first six (6) months following discharge from the nursing facility, the CM contacts the enrollee at least twice per month, including at least one face-to-face meeting. After the initial six (6) month transition period, the CM continues to maintain monthly contact with the enrollee or their authorized representative.

In our case example, Alex receives Enhanced Care Coordination for Enrollees under Age twenty-one (21) and complex case management from a Field CM who visits Alex and his mother both in the home and over the phone. Alex's progression through inpatient acute, SNF, and finally inpatient rehabilitation facilities maximized his potential for recovery. He initially transferred from the hospital to a SNF because he could not participate with the rigorous therapy regimen that is provided in an acute rehabilitation setting. However, after he received three (3) months of therapy (PT, OT, ST) at a lower level of intensity in the SNF he progressed in strength and endurance so that he was ready for the transition of care to the rehabilitation center where he received intensive therapy. Alex has been home since February 16, 2017 with no readmissions.

The effectiveness of our transition planning processes is evident in our outcomes. In both 2015 and 2016, we significantly surpassed our readmission rate goal for enrollees in Complex Case Management:
Readmission Rate Goal: 30% or less

2015 Readmit Rate: 23%
2016 Readmit Rate: 16%

==========

2. The extent to which the respondent's process and example ensures the protection of the enrollee's privacy consistent with confidentiality requirements.

==========

Humana places the utmost importance on enrollee privacy and confidentiality. Ethics and the protection of enrollee privacy are integral to the case management process that occurs on a daily basis, and all of our associates receive thorough training that includes protection of the enrollee's privacy consistent with confidentiality requirements. All Humana associates and contractors must complete Humana's Ethics and Compliance training within thirty (30) days of hire and annually thereafter. This mandatory training is tracked for every associate. Topics include, but are not limited to: Privacy and Information Protection Policies including the Acceptable Use Policy, role of Enterprise Information Protection (EIP) and the Privacy Office, key definitions and responsibilities, social engineering tactics such as phishing, physical safeguards, and security incident and privacy breach reporting. Humana holds an annual Cyber Security Awareness event each October for the enterprise. This event is a weeklong focus on all things information protection. Renowned information security experts share their knowledge throughout the week with presentations, expo halls, and interactive activities.

We also offer our contracted healthcare providers and business partners an important part of our Enterprise Compliance Program: Ethics Every Day for Contracted Healthcare Providers and Business Partners. This training outlines our program's standards of conduct requirements, including reporting of improper disclosure of, or access to, enrollee information. It also addresses the safeguarding of information used to perform functions for or related to Humana, including following the privacy and security rules of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and the more recent Health Information Technology for Economics and Clinical Health Act (HITECH). Healthcare providers and business partners are expected to have policies and procedures in place to affirm the integrity of their organizations' information. Examples include:

- Privacy and security training program for employees and business partners

- Confidentiality agreements, where applicable

- A procedure for the required return and destruction of Protected Health Information (PHI) if an agreement involving the support of Humana is terminated

- A procedure for restricting the marketing of PHI

Several safeguards are in place to ensure that enrollee privacy rights are guaranteed at all times. We have both inbound and outbound call authentication processes to ensure we are speaking with the enrollee, as follows:

- Inbound Call Authentication (three (3) required):
-- Enrollee ID

-- Medicaid ID number
-- Enrollee date of birth (DOB)
-- Enrollee zip code
-- Enrollee group name, group number, or product type (only if needed)

- Outbound Call Authentication:
-- Dial the enrollee's number on file
-- Ask to speak with the enrollee, addressing by full name
-- Ask for other appropriate identification such as zip code or DOB
-- If unable to provide zip code or DOB, ask for enrollee ID, group name, group number or product type, Medicaid ID, or SSI#

If we do not have a complete Power of Attorney consent form or a signed PHI consent form in our documentation system, the CM and other members of the Humana team obtain verbal consent from the enrollee at each contact to speak to anyone other than the enrollee. Authentication of the consent is documented in the CGX system at each contact.

The CM may request that the enrollee complete a PHI consent form if the enrollee requests that the CM speak to another person on an ongoing basis about their health status and concerns. A PHI consent form is then mailed to the enrollee with a self-addressed, stamped envelope. The PHI consent form allows Humana to obtain an enrollee's permission to discuss personal health information with a specific person named on the PHI form.

Humana employees are prohibited from disclosing any medical information to anyone inside or outside the health plan, except when required by law. Humana employees are educated on ensuring appropriate PHI and sign a confidentiality statement upon hire and on an annual basis. Enrollee- and Provider-specific information is used solely for the purposes of utilization management, quality management, disease management, discharge planning, care management and coordination, and claims payment. It is shared only with those individuals who need access to such information in order to conduct utilization management and related processes. Agreements with providers functioning in a peer review capacity specifically address and uphold the confidential nature of all enrollees' medical information.

Humana operates a framework of internal IT controls and information security policies and procedures to maintain the health information system's compliance with HIPAA and other privacy laws, as well as commonly accepted professional standards of health information management. We rely on secure software systems to protect and maintain our enrollees' sensitive medical information. The CGX system contains our enrollees' care plans, which can only be accessed by the enrollee's case manager, the UM Nurse and the enrollee's PCP. Following a defense-in-depth methodology, Humana utilizes numerous controls that are used to prevent data loss and breach of confidentiality. These include, but are not limited to: firewalls, De-Militarized Zones (DMZs), intrusion prevention, intrusion detection, group policies within active directory (least privilege), role-based access control (RBAC), data segmentation, anti-virus, anti-malware, full disk encryption, data loss prevention (DLP) tools, active data-in-use monitoring, monitoring of dark web activity, and web content filtering to protect endpoints from malicious websites. Humana undergoes many internal and third party audits including the National Institute of Standards and Technology (NIST), the Health Information Trust Alliance (HITRUST), the Payment Card Industry Data Security Standard (PCI DSS), and various state

department of insurance audits. Humana is currently certified as being compliant with NIST, HITRUST, and PCI DSS standards.

In our case example, Humana's UM Nurse provided and reviewed the Discharge Management Tools with the Alex's mother and obtained consent for the release of PHI during his stay at the inpatient hospital to which he was initially admitted.

Evaluation Criteria:

1. The extent to which the respondent's process and example address the following transition of care requirements:

- **(a)** Assessment criteria for making sure the enrollee can be served safely in the community;
- **(b)** Collaboration with providers' (e.g., hospitals, institutional settings, assisted living facilities, crisis stabilization unit, statewide inpatient psychiatric program) discharge planning staff;
- **(c)** Referral and scheduling assistance;
- **(d)** Coordination with PCP and behavioral health providers to ensure appropriate follow up has occurred; and
- **(e)** Processes to prevent unnecessary hospital or nursing facility readmissions.

2. The extent to which the respondent's process and example ensures the protection of the enrollee's privacy consistent with confidentiality requirements.

Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Attachment MMA 10-01: Humana's Readmission Predictive Model

Humana uses the Readmission Predictive Model (RPM) to assess the probability of an enrollee being readmitted into a facility within 30 days. A score is generated on the day of admission. Generating scores at the time of admission gives more time to intervene and prevent the next potential admission, and helps improve the "reach rate," since the enrollee will still be in the hospital when the score is generated.

Trade Secret as defined in Section 812.081, Florida Statutes

[redacted]

Trade Secret as defined in Section 812.081, Florida Statutes

Readiness Model – *Complexity*

This is an example of how a predictive model works:

Traditional, diagnosis-only approaches treat enrollees A and B equally.

[redacted]

The take away

Humana's readmission predictive modeling approach, built on a database of a half million admissions, allows stratification and prioritization to those enrollee in the most need.

Humana.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 11 – Provider Network – Network Development Plan (Regional):

The respondent shall submit a draft network development and management plan demonstrating how it will ensure timely access to the following services:

- Physical therapy (pediatric);
- Speech-language pathology services (pediatric);
- Occupational therapy (pediatric);
- Private duty nursing services (pediatric);
- Intermittent skilled nursing (pediatric and adult);
- Early intervention services;
- Compounding pharmacies; and
- Specialized therapeutic foster care.

The respondent's approach shall include at a minimum:

a. Identification of network gaps (time/distance output reporting, after-hour clinic availability, open/closed panels, etc.);

b. Strategies that will be deployed to increase provider capacity where network gaps have been identified;

c. Strategies for ensuring timely access to services by measuring the time in-between when services are authorized and when they are received; and

d. Strategies for updating the network development and management plan, including the data that will be used to inform improvements to increase access to services.

Response:

Humana's annual Network Development and Management Plan (NDMP) describes our ability to manage, measure, and continually strengthen our network of high quality providers. It serves as a guide to our Provider Relations associates and Agency for Health Care Administration (AHCA) for our network development and maintenance efforts. We submit an updated version to the Florida AHCA annually with regional updates. The Humana Medicaid network enables appropriate and timely access to high quality and cost-effective healthcare services for our enrollees. Our NDMP conveys how we ensure timely access to all provider types and services, including access to pediatric physical therapy, pediatric speech-language pathology services, pediatric occupational therapy, pediatric private duty nursing services, pediatric and adult intermittent skilled nursing, early intervention services, compounding pharmacies, and specialized therapeutic foster care. The NDMP also serves as a description and confirmation of our compliance with the standards and recommendations that have been outlined in the contract with AHCA and with its objectives for access, range and diversity of providers. We have provided our 2017 Network Development and Management Plan in Attachment MMA-11-1.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

With a commitment to excellence, Humana has built and maintains strong partnerships with our contracted providers and subcontractors. We have created and maintain a culture of collaboration and innovation in identifying and implementing improved approaches to healthcare delivery. The NDMP describes our approach to measuring and monitoring provider and subcontractor performance. We use that information to manage improvements with our network partners to ensure that enrollees have a wide choice of high quality access to services and to help our network partners increase effectiveness, quality, and cost efficiency. Our NDMP includes the following topics:

- Competitive landscape of provider network
- Prior year network analysis
- Description of basic network design and network access adequacy
- How enrollees access the system
- Analysis of timely access to services
- Provider satisfaction survey, methodology, and results
- Coordination of relationships among various levels of the system
- Assistance and communication tools provided to the Primary Care Providers (PCPs)
- Network barriers and gaps
- Telemedicine as a mechanism to enhanced access to care
- Electronic health records
- Pharmacy services overview
- Subcontractor monitoring and oversight
- Internal department coordination
- Coordination with outside organizations

REGION 1 NETWORK DEVELOPMENT STATUS

Humana initially established and built our Region 1 provider network through our existing Medicare Advantage and commercial networks. Since we began building our network in this region in 2011, Humana has continued to develop our provider network (specifically targeting providers with Medicaid experience) and to strengthen previously established relationships. The Humana Medicaid network of providers includes the essential provider Sacred Heart Hospital, as well as all health systems and hospitals in the region and most of large Independent Practice Association (IPA) providers in the region. Important Medicaid providers include Sacred Heart Health System, Nemours Children's Clinic, Escambia Community Clinics, West Florida Hospital, Health First Network, Fort Walton Beach Medical Center, Baptist Health System, North Okaloosa Medical Center, Santa Rosa Medical Center, and Healthmark Regional Medical Center (a designated safety net hospital). Additionally, our Region 1 provider network includes three (3) Federally Qualified Health Centers (providing eleven (11) locations), nine (9) Rural Health Clinics (providing nine (9) locations) and one (1) County Health Department. Our local mental and behavioral health provider, Access Behavioral Health (ABH), is contracted to manage and serve the behavioral health needs of our Medicaid enrollees. Humana's network has five (5) Patient-Centered Medical Home (PCMH) groups with one hundred and forty-seven (147) providers across twenty-one (21) locations in Region 1.

Region 1 has a unique set of challenges, including high levels of Managed Medical Assistance (MMA) enrollment, provider availability shortages in multiple specialties, and sparsely populated

areas including one (1) designated rural county. Additionally, according to the quarterly Statewide Managed Medicaid Care Report in Winter 2016, Region 1 has the proportionately largest percentage of unhealthy Medicaid enrollees in the state and the lowest number of available providers. Despite these challenges, Humana continues to broaden the scope of its contracting activities and enhance our Region 1 provider network. These efforts are conveyed in Table 1 of the attached NDMP. We have accomplished this growth through aggressive recruitment activities, which included extending our recruitment activities into Region 2 based on patterns of care. Specifically, we have reached out to needed provider types in the contiguous counties of Bay, Holmes, and Washington, which are within a reasonable time and distance standard for enrollee access. We have also attempted to recruit providers in southern Alabama who are within reasonable time and distance measurements, and are actively enrolled as a Florida Medicaid provider. We are currently working to contract with the University of South Alabama (hospital and physicians) to supplement pediatric and women's health services within the Escambia county catchment area.

Humana's Region 1 network continues to perform well with very few provider-initiated network terminations and steady enrollee growth. Since MMA implementation, our enrollment has grown from fifty-one thousand, seven hundred and thirty-three (51,733) to fifty-three thousand, two hundred and seventy-eight (53,278) enrollees (based on July 2017 834 enrollee files). From December 2015 to December 2016, we added twenty-four (24) PCPs in sixteen (16) locations and one hundred and ninety (190) specialists in fifty-eight (58) locations.

Despite our tenacious and ongoing recruitment activities and successful continued growth of the network, we continue to experience contractual ratio gaps in some specialties – see Table 2 in our attached NDMP. We continually monitor these gaps and use available resources to identify providers to fill the gaps, such as the AHCA Master File (PML), AMA Website, Sunbiz, US News Health Report, Florida Department of Health, our competitor's directory, and web searches. In addition, we discuss availability shortages with our provider groups to encourage additional recruitment of providers from outside the area. Prior to Amendment 11, Humana filed waivers for some of the specialties in which gaps remain. Humana will refile new waiver requests in January 2018.

==========
(a) Identification of network gaps (time/distance output reporting, after-hour clinic availability, open/closed panels, etc.);

1. The adequacy of the respondent's methodology for identifying and resolving barriers and network gaps; including ongoing activities or network development based on region-specific identified gaps and future needs projection.

b. Strategies that will be deployed to increase provider capacity where network gaps have been identified;
==========

Humana continuously measures and evaluates enrollee access to ensure our network meets or exceeds the Statewide Medicaid Managed Care requirements. This includes measuring adequacy against contractual requirements, resolving network gaps and addressing barriers to care, including transportation and linguistic needs. We also conduct strict oversight of our

subcontractors to ensure the same level of access is secured and monitored. Our measurement and evaluation process crosses multiple plan functions. This includes customer service, quality assurance and medical management for each region. The Humana Provider Relations associates, under the direction of the Regional Vice President of Network Operations and Provider Experience, reviews various metrics to understand access to care levels across service categories.

Our approach to identifying gaps and ensuring network adequacy uses established Humana systems and infrastructure, proven techniques, strict oversight, and prompt follow-up to monitor and address any network issues. Humana uses data resources to monitor travel distance and times to ensure enrollees have access to the type of provider they need. Humana includes both our directly contracted and subcontracted providers in our analyses. Humana ensures access to all enrollees through analysis of multiple sources of information, as required by AHCA. Below are descriptions of our network adequacy and access tools. The reports and results from these tools are reviewed on an ongoing basis by our Provider Relations team. They are also reviewed during our quarterly Quality Management Committee meetings to determine appropriate interventions and next steps.

ANALYTICAL REPORTING

ACCESS ANALYSIS

Using a proven geographical analysis tool, Quest Analytics, Humana utilizes geocoding technology to precisely measure enrollee to provider adequacy access. The Quest Analytics tool measures both distance and travel times against a baseline of two hundred percent (200%) of our enrollment for Regions 1 and 2 and one hundred and twenty percent (120%) for regions 3, 4, 5, 6, 7, 8, 9, 10 and 11. We analyze access for each provider specialty as listed in the SMMC contract by enrollee age and gender group as specifically indicated for the provider type (for example, pediatricians will be mapped to enrollees under the age of twenty-one (21)). This tool allows us to identify access issues at the county and zip code level. Additionally, we produce maps that display enrollee access and network deficiencies.

PROVIDER TO ENROLLEE RATIOS

Provider to enrollee ratios are analyzed monthly against network standards in accordance with the AHCA requirements. We use this tool particularly often when we anticipate increased enrollment volume to ensure that our network has the capacity to accommodate those additional enrollees.

Below are descriptions of the methods we use to identify enrollee barriers to accessing care. This data is collected and reviewed monthly by our Provider Relations team and the Provider 360 Committee. Our Provider 360 Committee is a cross-functional team, chaired by the Humana President of Florida Medicaid Operations, and meets on a monthly basis to review provider trends from our claims department, as well as Availity usage, quality measures, provider system usage, and provider grievances and inquires. The Committee includes representatives from our Claims department, Grievance and Appeals department, Credentialing department, and Provider Relations.

CUSTOMER FEEDBACK

ENROLLEE SURVEYS

Humana annually reviews results of Consumer Assessment of Healthcare Providers and Systems (CAHPS) surveys to identify any trends in barriers to care. We report the analysis of the results to our Quality Management Committee (QMC) to ensure our goal benchmarks are met. We measure access to care results year-over-year in comparison to our established benchmark goals. In our 2016 CAHPS survey, Humana saw an increase in adult responses for "Got appointment with specialist as soon as needed" to seventy-five-point eight percent (75.8%) and "Got urgent care as soon as needed" to eighty-two-point nine percent (82.9%) (a nine-point four percent (9.4%) and two-point three percent (2.3%) increase, respectively). We also saw an increase in "Ease of getting care, tests, or treatment needed" to eighty-six percent (86.0%) and "Got urgent care as soon as needed" responses for children to ninety-point one percent (90.1%) (two-point one percent (2.1%) and one-point eight percent (1.8%), respectively).

Clinical Access team (CAT) – Humana has a Clinical Access team (CAT) that facilitates resolution of identified clinical issues related to enrollee access. The CAT consists of three (3) non-clinical specialists who process inbound calls and ten (10) RNs who manage and resolve the cases. Issues may range from appointment availability to inability to locate a provider.

Associate, Enrollee, Provider, and Advisory Input— On an ongoing basis, Humana examines anecdotal information from various internal and external sources as it pertains to network adequacy. This includes information contributed by individuals and committees, such as the Provider 360 Committee. This includes recommendations from providers to Humana to contract with specific providers and provider types.

MEANINGFUL DATA

Complaints and Grievances— Complaints and grievances from enrollees and providers are received through multiple routes and are recorded and tracked in our Customer Care Portal. Complaints that reflect network access issues or identify potentially noncompliant providers are forwarded to our Provider Relations team for review and action on a real-time basis. In addition, Humana will be designating a Provider Services Leader who will offer oversight on disputes.

Out-of-Network Referrals—We examine out-of-network referrals quarterly to identify potential areas where specialty provider capacity may need to be expanded.

Cultural and Linguistic Needs—Humana annually analyzes the cultural and linguistic needs of our enrollees and their geographic concentration to ensure appropriate access.

Timely Access PCP Wait Times Report—Humana's Provider Relations team annually conducts a survey of a statistically valid sample of PCPs to gauge appointment availability. We conduct the survey to assess wait times for scheduling appointments on an annual basis and will implement this process on a quarterly basis in 2019. During these calls, a Provider Relations representative contacts the primary care office with symptoms of a simulated condition/illness to discover the next available appointment. Through our 2016 audit, we found that the average wait times for providers was one-point two (1.2) days for Urgent Care Visits, two (2) days for Sick Care Visits, and eight (8) days for Well Care Visits, which meet AHCA requirements.

After-Hours Accessibility Audit—Humana calls PCP offices annually or on a more frequent basis to ensure enrollees have access to care during after-hours. Results are reviewed by the Provider Relations leadership team and assigned to the appropriate Provider Relations representative for immediate outreach to the provider, if necessary. Our attached NDMP conveys our results from our 2016 After-Hours Accessibility Audit, which exceeded AHCA requirements as sixty percent (60%) of our PCPs are offering after-hours care. Additionally, our patient-centered medical homes all offer after-hours care. Humana also enhances access to after-hours care through our nurse line available twenty-four (24) hours a day, seven (7) days a week. Enrollees can call this number and speak with a clinician for medical guidance. Enrollees can also be warm transferred to their PCP during office hours. Additionally, Humana has developed a strategy to further incentivize PCPs to offer increased after-hours coverage. The initiative increases provider reimbursement for after-hour service codes 99050 and 99051. Given the current Medicaid-allowable reimbursement of seven dollars and twenty-eight cents ($7.28) and nine dollars and thirty-nine cents ($9.39), Humana is offering a range of thirty-five dollars ($35) to fifty dollars ($50) for these services which is a substantial increase.

Open/Close Panels—On a quarterly basis, we review the panel status of our PCPs by region and county. Additionally, we produce maps to visualize enrollee access to PCPs. We use this data to identify access barriers and implement additional targeted recruitment efforts.

ONGOING ACTIVITIES FOR NETWORK DEVELOPMENT TO MITIGATE IDENTIFIED GAPS AND BARRIERS

When network gaps or barriers are identified through our various network adequacy and access tools listed above, our Provider Relations team targets our provider recruitment strategy. The following recruitment strategies are ongoing, consistent practices and are built into Humana's network team management processes to mitigate identified gaps and barriers.

- If, through our aforementioned analyses and processes, we identify providers that are not meeting contractual requirements (such as failing to meet after-hours requirement or appointment availability standards) we outreach and conduct provider education.

- To assist in identifying providers for recruitment to fill any recognized gaps, we use our collaborative provider partnerships with major health systems, ancillary providers and large IPAs.

- Humana enrollees have the capability to nominate a provider, in writing or telephonically, for recruitment. Nomination requests are forwarded to the Provider Relations team for recruitment.

- We have an annual minority recruitment process to target providers to accommodate linguistic and cultural needs. We solicit feedback from minority associations, medical schools, and Native American tribes, as listed below:
-- Seminole Indian Tribe
-- Miccosukee Tribe
-- Florida Association of Minority Business Enterprise Officials
-- National Hispanic Medical Association (NHMA)

-- Minority Association of Pre-Med Students at Florida State University
-- Minorities in Medicine/Association of American Medical Colleges
-- Urban Promise
-- American Developing Smiles
-- American Developing Smiles
-- Florida International University
-- Florida Atlantic University
-- University of Florida
-- University of Central Florida
-- Florida State University
-- University of South Florida

- We have provider recruitment mailboxes posted on our website where providers can electronically submit a request to join Humana's network.

- Because we have local Humana representatives, including our Provider Relations Representatives and quality improvement nurses, we receive insight to new providers moving into areas. We are then able to target them for recruitment.

- We can identify and target non-participating providers for recruitment through our review of single case letters of agreement and out-of-network utilization.

- We use a variety of available resources to identify specific providers to target, including the AHCA Master File (PML), AMA Website, Sunbiz, US News Health Report, Florida Department of Health, our competitor's directory, and web searches.

- We harvest data identifying providers who are already contracted for other Humana products in which their contracts have Health Maintenance Organization provisions, and target these providers for recruitment.

- In areas where there are primary care provider shortages, we encourage our provider groups to recruit additional providers from outside the area, including physician extenders.

- We encourage our providers to offer telemedicine by reimbursing telemedicine in accordance with AHCA contractual requirements.

-- Additionally, we offer our enrollees access to Doctor-on-Demand, a telemedicine platform that gives enrollees with access to physicians twenty-four (24) hours a day, seven (7) days a week from the enrollee's phone or computer.

PROJECTION OF CHANGES IN FUTURE NETWORK CAPACITY NEEDS

Humana continuously considers projections of future capacity planning of our network measurement and management process. Much of our network adequacy measurement process is based on updated enrollee counts and new maximum enrollment percentages. For instance, the Enrollee-to-Provider ratios and the Enrollee-Time-Distance measurements both require

current enrollment files. As new enrollees are added, we take the enrollee growth and the geographic shifts in enrollment into account to ensure adequate access to care.

Significant provider contract re-negotiations can impact future network capacity planning. The Humana network team maintains a strategic stratification of its major health system negotiations such that no more than one health system in a market is under negotiation at a time. This strategy reduces the potential for multiple terminations at any given time.

Prior to any significant terminations the Humana network team conducts a formal impact analysis of our network to proactively identify and address any enrollee access issues. This is accomplished using access analysis, open and close panels, and provider-enrollee ratios. This applies to hospitals, large provider groups, or subcontractors. In the event Humana initiates the termination, Humana conducts this analysis process well ahead of the ninety (90) day notification to the provider and notifies AHCA within the contractual timeframe. In the event Humana receives a ninety (90) day termination notice from a significant provider, our provider network team begins the formal network termination impact analysis immediately. This termination analysis is used as the basis to identify potential gaps and to identify priority targeted alternative providers that can act as a substitute for the impacted providers.

==========
2. The adequacy of the respondent's plan to meet the needs of enrollees if it is unable to provide the service within its provider network; including immediate, short-term and long-term interventions.
==========

We work collaboratively with enrollees and providers throughout the care planning and delivery process to ensure standards are met and care is delivered at an optimal level. We understand that occasionally enrollees may need to rely on providers outside of our Medicaid network to meet their needs. Typically, enrollees engage with out-of-network providers when they are amidst treatment at the start of their enrollment period or Humana's current network does not accommodate their specific situation. Our NDMP has policies to ensure services can be accessed in a timely manner even if they require an out-of-network provider.

CONTINUITY FOR ENROLLEES
Continuity of care needs occur when an enrollee is newly eligible to Medicaid or switches from another Medicaid plan. It is critical that our policy and process coordinates services in a way that ensures service delivery is not disrupted or interrupted. Humana honors written documentation of a prior authorization of ongoing covered services for a period of sixty (60) days after the effective date of enrollment or until the enrollee's PCP or behavioral health provider reviews the enrollee's treatment plan (whichever comes first).

Written documentation may include:
- Prior existing orders
- Provider appointments
- Prescriptions, including prescriptions at non-participating pharmacies

These guidelines include enrollees who:
- were recently hospitalized and now require follow up care

- are receiving behavioral health services and are within a plan of treatment
- are being treated for a condition that has a finite course of treatment
- have a life expectancy of less than six (6) months
- are in the end stage of a disease
- have an unstable or life-threatening medical condition
- are pregnant
- are newborn (within the first ninety (90) days of life)

To support this objective, we will assess the treatment plan (where available) and determine whether the existing treatment plan is appropriate. For new enrollees in a course of treatment, Humana's care management team contacts the attending provider to discuss and review the current condition and course of treatment as well as potential dates for end of service. If we believe the current treatment plan is ineffective, inappropriate, or misaligned to the medical needs of the enrollee, we will work with the provider to modify the treatment plan. The enrollee's treatment plan will be reassessed within ninety (90) days.

Normally, Humana allows enrollees to continue their course of treatment with an out-of-network provider for a predetermined transition period. In these instances, Humana will execute a Single Case Agreement (SCA) with the provider. The process and language of the SCA adheres to Humana's National Network Organization policies and procedures and AHCA's contract requirements. This maintains a relationship, ensures payment and confirms Humana can verify the provider's qualifications and credentials to conduct the care being delivered.

IMMEDIATE, SHORT-TERM, AND LONG-TERM INTERVENTIONS TO ADDRESS NETWORK GAPS

In addition to continuity of care requests, we recognize out-of-network utilization reports may identify potential gaps in our network. Once we identify and confirm a gap or disruption in our provider network, we will notify AHCA and then design and implement an aggressive and prompt recruitment plan.

In situations where we have a shortfall or "hole" in our geographic access standards for a given provider type, we address it through the following mechanisms:

- Identify all providers of that type serving in the area through all available resources that include:
-- AHCA Master File (PML)
-- AMA Website
-- Sunbiz
-- US News Health Report
-- Florida Department of Health
-- Competitor's directories
-- Web searches (i.e. Google)

- We discuss availability shortages with our provider groups to encourage additional recruitment of providers from outside the area.

- Humana may engage the enrollee's PCP to assist with identification of providers commonly used for referrals in his/her practice that are capable of providing and willing to provide care.

- Once identified, we will recruit providers into the network who will bring that component of the network into compliance with the accessibility standards, if available.

Humana's recruitment efforts include a variety of means to maximize success. These include on-site, face-to-face meetings with providers, telephonic outreach, and use of existing provider relationships to reach other providers. If willing providers are available that can address the specific need, our network team will contact these providers to arrange a face-to-face meeting to recruit the provider into our network. Conversely, if the required provider type is not available, or unwilling to contract with Humana, we will offer the enrollee transportation to the nearest qualified provider, make arrangements with out-of-network providers or coordinate care through available telemedicine conduits.

If Humana's network team is unable to quickly bring a provider into the network, we will execute a Letter of Agreement (LOA) with the provider. The process and language of the LOA adheres to Humana's National Network Organization policies and procedures. Humana tracks and trends single case agreements via a tracking grid. The contracting teams preform analysis on a periodic basis to identify potential contracting opportunities. Non-network providers are encouraged to join Humana's network, and following a satisfactory pre-assessment, a Humana Network or Clinical representative engages the provider may begin the network contract process.

If we identify a network gap and have made what we believe is a highly reasonable offer to any applicable providers in a defined area, identify there is a lack of available providers, or available providers are not actively enrolled with Florida Medicaid and are still unable to secure network participation, we will document our efforts to AHCA and request a waiver. In the absence of a contract, we will seek to work with needed providers through single-case agreements and will permit enrollees to seek care from these providers on an out-of-network basis.

CLINICAL ACCESS TEAM

Humana has a Clinical Access team (CAT) that facilitates access to care when a clinical issue related to enrollee access is identified. The CAT team consists of three (3) non-clinical specialists who process the inbound calls on a dedicated line and ten (10) registered nurses who manage and resolve the cases. Issues may range from appointment availability to inability to locate a provider. Once an inquiry is received, a CAT associate will review and telephonically contact the enrollee (or appointed representative) to acknowledge receipt and to clarify the issue. The CAT associate may contact providers involved in the access issue to determine any extenuating circumstances, to offer solutions to possible barriers in resolving the issue, or work with internal departments (such as Provider Contracting) to facilitate a resolution.

The CAT team has seen very strong results over the past twelve (12) months as shown by the Key Performance Indicators for commercial, Medicare and Medicaid populations:

- Overall access cases: 99.2% compliant with inquiry resolution

- Overall access cases: case closure within 14 calendar days
- Overall service level (80% of calls answered within 30 seconds): 82%
- Overall abandonment rate (less than 5% of calls abandoned): 5%

In addition to our CAT, we have a nurse line available to enrollees twenty-four (24) hours a day, seven (7) days a week. Our nurse line enhances after hours care by always have a clinician available to our enrollees to advise on the appropriate level care and the appropriate care setting.

==========

c. Strategies for ensuring timely access to services by measuring the time in-between when services are authorized and when they are received; and

3. The extent to which the respondent's plan includes strategies for measuring the time in-between when services are authorized and when they are received.

==========

Humana has implemented strategies to measure the time in-between when services are authorized and when they are received to improve health outcomes and reduce potentially preventable events. Year over year since the implementation of the MMA program, we have seen an increase in utilization of pediatric physical therapy, pediatric speech-language pathology services, pediatric occupational therapy, pediatric private duty nursing services, pediatric and adult intermittent skilled nursing, early intervention services, compounding pharmacies, and specialized therapeutic foster care. We measure this utilization metric to ensure our enrollees have access to these services. Since 2014, the overall volume of claims from these services has increased from one hundred seventeen thousand, six hundred eighty-two (117,682) to two hundred ninety-six thousand, six hundred ninety-two (296,692) in 2017. Additionally, we monitor the calls received by our Customer Service line and CAT team, as well as reports from our other network access tools, to identify access issues related to these provider types. We have received minimal complaints on not being able to access these provider types. These measures indicate our network is providing sufficient access to these services for our enrollees. Humana also will use our quarterly meetings with specialists and delegated entities to determine if specialists are meeting contract times.

Humana will also utilize electronic visit verification (EVV) to ensure that our enrollees are receiving the correct and timely home-based services, such as therapies, private duty nursing and intermittent skilled nursing. Humana has partnered with Sandata to utilize EVV with innovative technology, including things such as geo-mapping combined with mobile technology, across several states, including Florida, for its Medicare Advantage line of business. Prior to implementation of this contract, Humana plans to develop additional EVV processes which will provide real-time data and can be used to identify when authorized services have not been received.

However, Humana recognizes the need to continue to improve the process to monitor access to these services. We are exploring ways to utilize EVV, referral and authorization, and claims data to produce a quarterly report by region for the following specialties and/or service types:

- Physical therapy (pediatric);
- Speech-language pathology services (pediatric);

- Occupational therapy (pediatric);
- Private duty nursing services (pediatric);
- Intermittent skilled nursing (pediatric and adult);
- Early intervention services;
- Compounding pharmacies; and
- Specialized therapeutic foster care.
- Cardiologist
- Pulmonologist
- Endocrinologist

These reports will help us to identify trends that may indicate barriers to care. We will also distribute these reports to provider relations and clinical areas for investigation, outreach, and potential contracting and education needs.

Our Provider 360 Committee reviews all reports related to access to care and determine strategies to overcome access issues.

REVIEW WITH ENROLLEES

Each month, the Care Management program takes verification of services to a higher level by contacting enrollees at random to ensure that authorized services were received. Enrollees are contacted by the Care Manager by phone and a listing of their authorized and billed services is reviewed. If a discrepancy exists between the claimed services and what the enrollee reports as having happened, then the case is referred to the Special Investigations Unit for investigation.

CASE STUDY
A Humana provider, One Homecare Solutions (OHC), has implemented an EVV solution to measure the time when an enrollee receives a service. When Home health services are being rendered to the enrollee, the OHC nurse will utilize a mobile EVV app to both check in and check out once services are completed. The information is reported and provided to Humana.
In addition, ONE's One Finalization Group makes follow-up calls to our enrollees receiving private duty nursing services to confirm services have been rendered, which is also captured and reported.

==========
d. Strategies for updating the network development and management plan, including the data that will be used to inform improvements to increase access to services.

4. The extent to which the respondent's update of its network development and management data that will be used to inform improvements to increase access to services.
==========

Humana creates and maintains our annual Network Development and Management Plan (NDMP) to serve as a description of our commitment and a guidepost for fostering our ability to manage, measure, and continually strengthen a robust network of high quality providers. We update our NDMP annually for submission to AHCA with guidance and leadership from our Provider Network Directors.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana's network is built on the evidence-based belief that the following concepts are imperative in our healthcare delivery system and critical components of maximizing enrollee healthcare outcomes:

- Quality of care
- The patient centered medical home concept
- Preventative and early intervention
- Extensive access to contracted network providers
- Communicative provider and subcontractor partnerships that are based on mutual clinical goals and administrative simplicity
- Widespread use of electronic health records

With these fundamental concepts in mind, we work collaboratively with our external network provider partners and subcontractors and internally with our Medical Management, Enrollee Services, Medicaid Operations, Quality, Provider Complaints, Provider Grievances Departments, Pharmacy, Customer Service, and Finance Departments in developing our annual NDMP. We obtain information from these sources to thoroughly draft our NDMP, analyze our network progress from the previous year, and identify opportunities to improve our network and enhance access to care for our enrollees. Our NDMP includes descriptions and analyses of the competitive landscape of provider network, the prior year network, the description of basic network design and network access adequacy, how enrollees access the system, the analysis of timely access to services, the provider satisfaction survey (including methodology and results), coordination of relationships among various levels of the system, assistance and communication tools provided to the PCPs, network barriers and gaps, telemedicine, electronic health records, pharmacy, subcontractor monitoring and oversight, internal department coordination, and coordination with outside organizations.

Once the NDMP is drafted by our Provider Network Directors, our leadership team reviews the NDMP and gives input. Additionally, the NDMP goes through a compliance review to ensure we are adhering to all AHCA, state, and federal requirements.

==========

5. The extent to which the respondent's draft network development and management plan addresses the delegation of provider network functions to subcontractors and the oversight of these operations

==========

Humana partners with subcontractors to provide healthcare services to enrollees. To ensure that each subcontractor adheres to and exceeds the requirements, Humana has implemented a rigorous oversight program with corporate and market-based teams responsible for the subcontractors' performance. We will continue to be compliant with AHCA's requirements for subcontractor monitoring and policies. Humana's Delegated Vendor Performance Oversight team (DVPO) is dedicated to monitoring and overseeing functions delegated to subcontractors.

Delegation of Network Management responsibilities includes the following:

- All subcontracts that meet the Network Management Delegation definition shall have an executed and AHCA approved Network Delegation Amendment.

- Monitor compliance, network adequacy, and quality by monthly/quarterly reports and annual audits to include:

-- Policy and procedures

-- Provider Network Report of all provider groups, individual physician practices and sites in its network are not accepting new Medicaid enrollees

-- Availability of Providers providing Specialty Care services, including number and geographic distributions

-- Access to appointments

-- Opportunities to improve access for enrollees

-- Identified problems and corrective actions initiated and outcomes

- Implement Corrective Action Plans and monitor adherence to written subcontractors agreed upon process to correct noncompliance. As required, impose provider capitation payment penalties for outstanding corrective action plan issues, restriction, suspensions, and/or terminations.

All subcontractors' performance and issues are presented to the Delegated Vendor Oversight Committee (DVOC) for review and approval of necessary interventions and corrective actions plans in the event of subcontractors' non-compliance with the contractual provisions and service level agreements (SLAs). The oversight of subcontractors is performed by three entities, as described below.

- Market-based Delegate Relationship Managers (DRMs) – front line of Humana associates who work closely with the subcontractors. They are responsible for the due diligence of subcontractors and consistent oversight of operational performance according to the contract and SLAs. They hold joint operational meetings, which are designed to review past month's subcontractor performance with comparison to SLAs and contract provisions. The meetings are led by the DRM and attended by the Director of Oversight Vendor Performance. In addition, the Director of Oversight Vendor Performance holds monthly operational meetings with all DRMs to review subcontractors' performance, identify opportunities for improvement, develop corrective interventions, and follow up on progress.

- Corporate Delegation Compliance – responsible for pre-delegation, annual, and ad hoc audits of subcontractors. The audits are performed in accordance with the contractual provisions, NCQA Standards, and SLAs. The audit results are presented to the DVOC for recommendations of interventions as appropriate.

- Delegated Vendor Performance Oversight unit – comprised of a director and coordinator. The role of this unit includes but is not limited to:

-- In conjunction with DRMs, facilitate the coordination of oversight and monitoring activities

-- Review operational performance of subcontractors for adherence to contract provisions and SLAs

-- In conjunction with the DRMs, develop interventions, corrective action plans as necessary to improve performance and subcontractor compliance

-- Participate in joint operational meetings with subcontractors; review performance and recommend improvements

-- Review for under/overutilization trends and address with subcontractors

-- Work with subcontractors to participate in the support of Humana's goals to improve healthcare outcomes (HEDIS campaigns, Plan initiatives, integration and specialty programs,)

-- Establish vendor specific performance goals based on enrollees health outcomes

-- Work closely with the Network Contracting Directors to monitor for financial solvency for subcontractors with financial risk

Summary of subcontractor performance is presented at the DVOC which reports to Quality Improvement Committee.

Evaluation Criteria:

1. The adequacy of the respondent's methodology for identifying and resolving barriers and network gaps; including ongoing activities or network development based on region-specific identified gaps and future needs projection.

2. The adequacy of the respondent's plan to meet the needs of enrollees if it is unable to provide the service within its provider network; including immediate, short-term and long-term interventions.

3. The extent to which the respondent's plan includes strategies for measuring the time in-between when services are authorized and when they are received.

4. The extent to which the respondent's update of its network development and management plan is informed by multiple data sources (including complaints, grievances, etc.).

5. The extent to which the respondent's draft network development and management plan addresses the delegation of provider network functions to subcontractors and the oversight of these operations.

1. HUMANA'S NATIONAL DEVELOPMENT & MANAGEMENT PLAN OVERVIEW

Humana's Commitment to Quality Care

As a company, Humana strives to offer its enrollees access to dependable, quality care. We've seen success in our partnership with AHCA by understanding and focusing on what's most important in comprehensive care today:

- Instituting a strong provider engagement model built on a partnership to work towards a common goal of delivering quality care to enrollees
- Being easy to do business with through simplification of administrative processes simplifying administrative burdens
- Offering value-based payments to providers to reward and retain them
- Removing barriers to care between providers and enrollees

Our Approach for Establishing & Retaining a Best-In-Class Provider Network

Humana has more than two decades of innovative network development and management experience in Florida. We understand the complexity of recruiting and contracting with the wide range of providers necessary to serve and care for the needs of our enrollees across the State. To continuously grow and maintain our best-in-class provider network across Florida, Humana has developed and consistently executes a rigorous provider recruiting and retention plan to:

- Evaluate the provider network and project needs
- Create and execute an acquisition and retention plan
- Engage with quality and efficient providers
- Simplify doing business with Humana
- Provide timely access to care for enrollees
- Drive continuous improvement through ongoing evaluation of the network

Annual Network Development & Management Plan Overview

Humana's network is built on the evidence-based belief that the following concepts are imperative in our healthcare delivery system and critical components of maximizing enrollee healthcare outcomes:

- Quality of care
- The patient-centered medical home concept
- Preventative and early intervention
- Extensive access to contracted network providers
- Versatile payment reimbursement methodologies to incentivize providers, including value-based payment models
- Communicative provider and subcontractor partnerships that are based on mutual clinical goals and administrative simplicity
- Widespread use of electronic health records

With these fundamental concepts in mind, we work collaboratively with our external network provider partners and subcontractors and internally with our Clinical, Member Services, Medicaid Operations, Quality, Provider Complaints, Provider Grievances, Pharmacy, Customer Service, and Finance Departments in developing our annual Network Development and Management Plan (NDMP). We obtain information from these sources to comprehensively draft our NDMP, analyze our network

progress from the previous year, and identify opportunities to improve our network and enhance access to care for our enrollees. Our provider network leadership team compiles the cross-functional information, which then goes through a compliance review to ensure we are adhering to all AHCA, State, and federal requirements.

2. QUALITY CARE & PROVIDER NETWORK IN FLORIDA

Humana has a long-standing presence in Florida serving Medicaid, Medicare, and Commercial populations. We have operated our Medicaid plan for 20 years and our Medicare plan for 30 years in Florida. Provider satisfaction and engagement are critical to our success in serving enrollees. Thus, throughout our presence in Florida, Humana's provider relations team has established strong relationships with our providers through extensive interactions. Humana leadership regularly attends Joint Operating Committee (JOC) meetings, provider association meetings, and strategy meetings with our providers to discuss new initiatives and opportunities to reach our common goals.

Our considerable experience assessing our existing provider network in Florida and engaging in recruitment strategies to ensure the composition of the network is sufficient to provide timely access to care for enrollees. These network assessments have given us invaluable insight into provider accessibility and availability. We understand that if our enrollees are unable to access our provider network in a timely fashion, we cannot develop or maintain a competent and responsive system of care to meet their needs.

Understanding the Competitive Landscape & Enrollee Enrollment

As of March 2017, Humana has the fifth largest or 10.8% of the membership market share in the 5 regions Humana serves the Florida Medicaid population.

Current MMA Market Share

Organization	March 2017 Enrollment	Market Share
Staywell Health Plan of Florida	675,980	22.0%
Sunshine State Health Plan, Inc.	431,391	15.6%
Molina Healthcare of Florida	345,289	11.2%
Amerigroup Florida, Inc.	342,253	11.1%
Humana Medical Plan	332,565	10.8%
Prestige Health Choice	325,548	10.6%
Other (Includes 6 plans)	575,143	18.7%
	3,078,169

Humana's MMA Membership and Growth Rate

Q1 2016	
January 1, 2016	332,148
March 31, 2016	344,668
Q1 2016 Growth %	3.63%
Q1 2017	
January 1, 2017	342,818
March 31, 2017	332,565

Q1 2017 Growth %	-3.08%

Source: AHCA Enrollment Report

Changes in Membership

Membership decreased by approximately 3.08% when comparing 1st quarter 2016 to 1st quarter 2017. Some of the reasons for the decrease are changes in eligibility, an enrollee's provider is no longer in the Humana network, an enrollee moved to specialty plan, or an enrollee moved out of area Our membership has trended with overall enrollment patterns of the number of Medicaid eligibles throughout the State.

New Enrollment

- 48% are by choice
- 52% auto-assigned
- 10% enrolled are identified as pregnant

Disenrollment

- 66% ineligible for plan
- 8% provider no longer with plan
- 8% moved to specialty plan
- 6% out of service area

Prior Year Network Analysis

The 2016 NDMP highlighted initiatives and goals for developing and sustaining an adequate network. It focused specifically on improving enrollee access to care and providing support and resources to our network providers. Our measures include a Medicaid network adequacy analysis that evaluates both provider to enrollee distance and provider to enrollee ratios by county and region. We take into consideration:

- cultural competency indicators such as enrollee access to physicians with diverse linguistic abilities
- handicap access
- after-hours access
- physician closed panel data

Additionally, we review results of the following data sources:

- enrollee satisfaction survey results (CAHPS)
- Critical Access Team (CAT) data
- timely access/PCP wait time survey data
- prevalence of providers with the varying levels of Electronic Health Record capabilities

Our 2016 network analysis demonstrates Humana's robust network of various providers, including but not limited to, Primary Care, Obstetrical Care, Specialty Care, Urgent/Emergent Care, Ancillary Services, Hospital Care, Oral Health, and Behavioral Health providers for our enrollees continuously, allowing for comprehensive access to care. Further, Humana meets the AHCA-required enrollee to provider and time and distance ratios for each specialty. There are a few areas of specialties that present some challenges, especially in rural counties, when compared to the AHCA-required enrollee to provider ratios even when considering the current published maximum enrollment ratios; however, the specialty services are available within the enrollees' geographic area.

An example of this is in Region 1. AHCA's published requirement for the specialty of Podiatry is twenty-two (22) providers, even though the PML only documents twelve (12) podiatrists available in the Region 1 area. The AHCA-published minimum provider-to-enrollee ratio for this specialty in this Region is one

specialty provider per 5,200 enrollees, which would provide access for 112,000 enrollees based on twenty-two (22) providers. Humana currently has five (5) providers under contract for Podiatry in Region 1, and has documented an extreme shortage of available providers to recruit and contract. Additionally, although ratios can only be calculated with contracted providers that participate within the Region, Humana has expanded its recruitment efforts into the neighboring counties in Region 2, as well as southern Alabama to attempt to improve enrollee access.

Our Focus on Continuous Improvement

Humana understands the importance of partnering with AHCA annually to review our network findings and measurements and to update our NDMP. Those discussions will help fuel new and innovative strategies to attract new providers, improve quality of care, and achieve cost savings for AHCA and our enrollees.

3. TODAY'S BASIC NETWORK DESIGN AND NETWORK ACCESS ADEQUACY

Humana designed its Florida network to provide all enrollees with adequate access to primary care and specialty providers, as well as convenient access to network pharmacies in the regions we serve. We are continuously monitoring and evaluating our network to identify opportunities for enhancement. We contract with high-quality providers within each region and maintain good relationships through active and ongoing provider engagement.

Existing Region 1

Humana's Region 1 provider network was initially established through our existing Medicare Advantage and Commercial networks. We have continued to develop our provider network since implementation, fortifying previously established relationships. Humana's Medicaid network includes the essential provider Sacred Heart Hospital, and also encompasses every single health system and hospital in the region, as well the majority of large IPA providers. Important Medicaid providers include Sacred Heart Health System, Nemours Children's Clinic, Escambia Community Clinics, West Florida Hospital, Health First Network, Fort Walton Beach Medical Center, Baptist Health System, North Okaloosa Medical Center, Santa Rosa Medical Center and Healthmark Regional Medical Center (a designated safety net hospital). Additionally, our Region 1 provider network includes three Federally Qualified Health Centers (FQHCs) (providing 11 locations) and nine Rural Health Clinics (RHCs) (providing nine locations) and one County Health Department. Our local mental and behavioral health provider, Access Behavioral Health (ABH), is contracted to manage and serve our enrollees' behavioral health needs. In addition, some of Humana's network providers are recognized as Patient-Centered Medical Homes (PCMH). In total, Humana's network has five PCMH groups with 147 providers across 21 locations in Region 1.

Since Region 1 presents unique challenges (e.g., significant MMA membership, a significant amount of rural areas and considerable provider availability shortages in multiple specialties), Humana continues to broaden our contracting activities' scope. Humana continues to grow our Region 1 provider network despite these challenges – see Table 1 below. We have accomplished this through tenacious recruitment activities, including stretching recruitment activities into Region 2. Specifically, we have reached out to all relevant needed providers in the contiguous counties of Bay, Holmes and Washington cities that are within a reasonable time and distance standard for enrollee access. In addition to recruiting in Region 2, we are recruiting providers in southern Alabama. We have worked to identify providers that not only support reasonable time and distance measurements, but also have active and enrolled Florida

Medicaid provider numbers. We are currently working on a contract with the University of South Alabama (USA) (hospital and physicians) to provide additional support for both pediatric and women's health services within the Escambia county catchment area.

Provider Type	Providers Added	Provider Service Locations Added
PCP	24	16
SPC	190	58

**measurement period from December 2015 through December 2016*

Despite our tenacious and ongoing recruitment activities and successful continued network growth, we continue to experience contractual ratio gaps in some specialties – see Table 2 below. We continually monitor these gaps through available resources like the Agency for Health Care Administration (AHCA) Master File (PML), American Medical Association (AMA) Website, Sunbiz, US News Health Report, Florida Department of Health, our competitors' directories and Google. In addition, we discuss availability shortages with our provider groups to encourage additional recruitment from outside the area. Prior to Amendment 11, Humana filed waivers for some of the specialties in which gaps remain. Humana will refile new waiver requests in January 2018.

Specialty	Status	Waiver Originally Filed
Dermatology	All contracting efforts have been exhausted	Yes
Endocrinology (Peds)	All contracting efforts have been exhausted	No
General Dentist	Working with vendor to recruit additional Dentists	Yes
Infectious Disease	All contracting efforts have been exhausted	Yes
Ophthalmology	Working with vendor to recruit additional Ophthalmologists	Yes
Optometry	Working with vendor to recruit additional Optometrists	Yes
Otolaryngology	All contracting efforts have been exhausted	Yes
Podiatry	All contracting efforts have been exhausted	Yes
Rheumatology	All contracting efforts have been exhausted	Yes

Notwithstanding these provider network challenges, Humana's Region 1 network continues to deliver steady performance with very few provider-initiated network terminations and steady enrollee growth. Since Medicaid Managed Care (MMA) implementation, our membership has grown from 51,733 enrollees and we are currently managing 53,278 enrollees (based on July 2017 834 enrollee files).

Expansion Region 2

As Humana began the process of building a new, wide-ranging and efficient Medicaid provider network for Region 2, we approached the process by leveraging our existing Medicare and commercial lines of business provider relationships who already provide services to approximately 9,000 enrollees today. These longstanding relationships gave Humana an initial base for a strong and competitive provider network.

Region 2 has a unique set of challenges, including provider availability shortages in multiple specialties and sparsely populated areas with multiple counties being designated as being Health Provider Shortage Areas with shortages of primary care, dental, and mental health providers. 12 of the 14 counties in the region are designated as rural. Additionally, according to the quarterly Statewide Managed Medicaid Care Report in Winter 2016, Region 2 has one of the highest proportion of unhealthy Medicaid enrollees in the State and one of the lowest number of available providers.

Humana's network is built on a combination of contracts and letters of intent (LOI). Feedback we often hear during network builds is that providers are unwilling to negotiate and execute full agreements until MCOs are awarded. Upon intent to negotiate notification, Humana will prioritize conversion of LOIs to contract agreements. Humana has successfully completed conversion of LOIs to contracts in many instances throughout the country during Medicaid network expansion activities, including in Florida, Kentucky, Illinois, and Virginia.

Similar to our previous successful provider network expansion efforts, Humana partnered with regionally dominant health systems and large multi-disciplinary groups that have solid foundations in each of the communities. The concentration of providers in Region 2 are located in the anchor counties of Bay and Leon, where we have secured Tallahassee Memorial Health, Capitol Regional Medical Center, and Gulf Coast Medical Center. In addition, we have secured contracts or LOIs throughout the balance of Region 2 counties with Calhoun-Liberty Hospital, Campbellton Graceville Hospital, Gadsden Memorial Campus, Doctors Memorial Hospital, George E Weems Memorial Hospital, Doctors Memorial Hospital Bonifay, Madison County Memorial Hospital. Additionally to the facilities, we have secured contracts and LOIs with 151 adult PCPs, 29 pediatric PCPs, 16 OB/GYNs, 92 adult physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 43 pediatric physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 204 medical specialists, 51 FQHC and RHC locations, 51 home health provider service locations, and 359 behavioral health providers. Humana will continue to improve upon building a full-functioning network that supports all enrollees in accessing and receiving the care they need. In addition, Humana's network has three PCMH groups with 39 providers across 18 locations in Region 2.

Expansion Region 3

As Humana began the process of building a new, wide-ranging and efficient Medicaid provider network for Region 3, we approached the process by leveraging our existing Medicare and commercial provider relationships who provide services to approximately 45,500 enrollees today. These longstanding relationships gave Humana an initial base for a strong and competitive provider network.
Region 3 has a unique set of challenges, including provider availability shortages in multiple specialties and sparsely populated areas with multiple counties being designated as Health Provider Shortage Areas of primary care, dental, and mental health providers. Region 3 has the largest total geography of all Florida Medicaid Regions with nine of the sixteen counties being designated as rural.

Similar to our previous successful provider network expansion efforts, Humana partnered with regionally dominant health systems and large multi-disciplinary groups that have solid foundations in each of the communities. The concentration of providers in Region 3 are located in the anchor counties of Marion, Lake and Alachua where we have secured contracts with Bayfront Health Brooksville, Bayfront Health Spring Hill, Citrus Memorial Hospital, Lake City Medical Center, Munroe Regional Medical Center, North Florida Regional Medical Center, Oak Hill Hospital, Ocala Regional Medical

Center, Putnam Community Medical Center, Regional General Hospital Williston, Seven Rivers Regional Medical Center, Shands Lake Shore Regional Medical Center, Shands Live Oak Regional Medical Center, Shands Starke Regional Medical Center, South Lake Hospital, UF Health Shands Hospital, West Marion Community Hospital and LOIs with Leesburg Regional Medical Center, The Villages Regional Hospital, and Lake Butler Hospital.

In addition to the facilities, we have secured contracts with 309 adult PCPs, 152 pediatric PCPs, 67 OB/GYNs, 217 adult physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 25 pediatric physical therapy, speech therapy, occupational therapy and respiratory therapy providers, 939 medical specialists, 97 FQHC and RHC locations, 17 home health providers, and 2,256 behavioral health providers. Humana will continue to develop a full-functioning network that supports all enrollees in accessing and receiving the care they need. In addition, Humana's network has eleven PCMH groups with 135 providers across 32 locations in Region 3.

Expansion Region 4

Humana brings significant experience in servicing a large membership base in the greater Jacksonville and surrounding counties across many products, including Medicare Advantage, Medicare PPO and Medicare Private Fee for Service and commercial lines of business. With our large portfolio of products, Humana currently provides medical coverage to approximately 71,000 enrollees. Humana's current Medicare and commercial footprint includes joint venture assets and an Access Center to provide guidance and support for our dual eligible population. Our joint venture opportunities have helped shape our local Medicare Advantage and commercial markets which gives Humana a proven track record to adeptly manage Medicaid enrollees. In addition, we have two Humana exclusive MSO partners who will be adding additional affiliated practices in 2018. These alliances in the Medicare Advantage and commercial network space allows us to leverage competitive market share through high quality, efficient providers who share an interest in value-based opportunities. Humana continues to lead the Jacksonville marketplace through our Bold Goal initiatives driving our communities to become 20% healthier by the year 2020. This initiative helps bring community partners, health organizations and hospitals together in support of health and well-being. Over 200 community organizations meet on a quarterly basis for a clinical town hall format to discuss barriers to health care and strategies to close health care gaps in the community. Our passion for population health makes Humana a strong partner to AHCA in expanding our Medicaid footprint.

In building our Medicaid provider networks, we partnered with regionally dominant health systems and large multi-disciplinary groups that have solid foundations in each of the communities. The concentration of providers in Region 4 are located in the anchor counties of Duval, Volusia, and Clay where we have secured contracts with Flagler Hospital, Halifax Health Medical Center, Halifax Health Medical Center Port Orange, Memorial Hospital Jacksonville, Orange Park Medical Center, St Vincent's Medical Center Clay County, St Vincent's Medical Center Riverside, St Vincent's Medical Center Southside, and UF Health Jacksonville and LOIs with the Adventist facilities of Florida Hospital Deland, Florida Hospital Fish Memorial, Florida Hospital Flagler, Florida Hospital Memorial Medical Center, Florida Hospital New Smyrna and Florida Hospital Oceanside. Also, Humana secured a LOI with Southeast Georgia Health System Camden Campus and Brunswick Campus to further support Nassau county with enrollee access.

Additionally to the facilities, with 334 adult PCPs, 193 pediatric PCPs, 141 OB/GYNs, 113 adult physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 175 pediatric physical

therapy, speech therapy, occupational therapy, and respiratory therapy providers, 763 medical specialists, 24 FQHC and RHC locations, 16 home health providers, and 2,832 behavioral health providers. In addition, Humana's network has seventeen PCMH groups with 263 providers across 76 locations in Region 4.

Expansion Region 5

Humana's Region 5 network was originally developed in 2012 in support of Humana's filing and being approved for both Pasco and Pinellas as expansion counties prior to MMA implementation. As expansion counties, we successfully managed approximately 2,000 Medicaid enrollees. Humana has extensive experience in servicing a large membership base of approximately 115,000 enrollees across many products, including Medicare Advantage, Medicare PPO, Medicare Private Fee For Service and commercial lines of business including exchange products which we leveraged to build and maintain a strong Medicaid network. Since 2012, we have continued to strengthen the network to provide support in our daily operations of Region 6 since both Pasco and Pinellas counties neighbor Hillsborough county and we experience a significant amount of MMA membership that seek specialty and ancillary services in Region 5 which is a typical pattern of care given the extremely close geographical proximity of the three counties. Our extensive Region 5 network has greatly improved enrollee access through having a greater availability of access to providers which has resulted in improved enrollee and provider experience and satisfaction.

The Humana Region 5 network consists of all of the hospitals and health systems with the exception of one, Adventist. Our provider network includes the following Region 5 designated statewide essential providers of Bayfront Health St. Petersburg and Johns Hopkins All Children's Hospital, as well Tampa General Hospital and their specialty physicians, Shriner's Hospital for Children and University of South Florida College of Medicine in neighboring Hillsborough County in Region 6. Additionally to the facilities, we have secured contracts a with 118 adult PCPs, 233 pediatric PCPs, 99 OB/GYNs, 158 adult physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 54 pediatric physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 486 medical specialists, 16 FQHC and RHC locations, 8 home health providers, and 2662 behavioral health providers. In addition, Humana's network has five PCMH groups with 65 providers across 22 locations in Region 5.

Existing Region 6

Humana brings extensive experience in servicing a large enrollee base in the Tampa Bay area across many products, including Medicaid, Medicare Advantage, Medicare Preferred Provider Organization (PPO), Private Fee-for-Service (PFFS), and a variety of Commercial lines of business, including exchange products. Through our large portfolio of products, Humana provides medical coverage for hundreds of thousands of enrollees, including large employer groups such as Hillsborough County Public Schools, Hillsborough County Sheriff's Office, and Pinellas County Public Schools, in which Humana provides a variety of medical coverage options to their employees and family members. Because of this rich history and experience, Humana has longstanding provider network relationships, which helped to initially foster a successful MMA network build, and continue to provide strength in our daily operations. The Humana Region 6 network consists of all of the hospitals and health systems in the region with the exception of one – Adventist. Additionally, our Region 6 provider network includes the following designated statewide essential providers: Tampa General Hospital (both the hospital and their specialty physicians), Shriner's Hospital for Children, University of South Florida College of Medicine, as well five FQHCs (providing 56 service locations), 13 RHCs, (providing 13 service locations) and one County Health

Department. Humana also secured a contract with Planned Parenthood with 11 locations across Regions 5, 6, and 8 to ensure enrollee access to additional alternative providers offering a wide variety of services such as family planning with extended hours including weekends. Additionally, All Children's Hospital, another state-designated essential provider, and Bayfront Medical Center in the neighboring Pinellas County (Region 5), support our enrollee pattern of care. In addition, some of Humana's network providers boast recognition as PCMHs. In total, Humana's network has twelve PCMH groups with 275 providers across 35 locations in Region 6.

Since MMA implementation, Humana has continued to experience steady enrollee growth in Region 6, beginning with 26,167 and we are currently managing 35,057 enrollees (based on July 2017 834 membership files). Our provider network also continues steady performance with very few provider initiated network terminations. We continue to grow our Region 6 provider network:

Provider Type	Providers Added	Provider Service Locations Added
PCP	50	49
SPC	424	71

**measurement period from December 2015 through December 2016*

Expansion Region 7

As Humana began the process of building new, wide-ranging and efficient Medicaid provider network for Region 7, we approached the process by leveraging many of our existing Medicare and commercial lines of business provider relationships who are providing services to approximately 70,000 enrollees today. These longstanding relationships gave Humana an initial base for a strong and competitive provider network.

Similar to our previous successful provider network expansion efforts, Humana partnered with regionally dominant health systems and large multi-disciplinary groups that have solid foundations in each of the communities.

The concentration of providers in Region 7 are located in the anchor county of Orange. We have secured contracts with all the health systems with the exception of one, Adventist. These contracts are Arnold Palmer Medical Center, Central Florida Regional Hospital, Dr. P. Phillips Hospital, Health Central, Nemours Children's Hospital, Parrish Medical Center, Orlando Health, Osceola Regional Medical Center, Oviedo Medical Center, Poinciana Medical Center, South Seminole Hospital, St. Cloud Regional Medical Center, Winnie Palmer Hospital for Women and Babies, Wuesthoff Medical Center Melbourne, Wuesthoff Medical Center Rockledge. Additionally to the facilities, we have secured contracts with 402 adult PCPs, 252 pediatric PCPs, 202 OB/GYNs, 60 adult physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 374 pediatric physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 1021 medical specialists, 31 FQHC and RHC locations, 16 home health providers, and 3845 behavioral health providers. In addition, Humana's network has fourteen PCMH groups with 184 providers across 64 locations in Region 7.

Expansion Region 8

As Humana began the process of building a new, wide-ranging and efficient Medicaid provider network for Region 8, we approached the process by leveraging many of our existing Medicare and commercial

lines of business provider relationships who are providing services to approximately 34,000 enrollees today. These longstanding relationships gave Humana an initial base for a strong and competitive provider network.

Region 8 has a unique set of challenges, including provider availability shortages in multiple specialties and sparsely populated areas with multiple counties being designated as Health Provider Shortage Areas of primary care, dental, and mental health providers.

Humana's networks are built on a combination of contracts and letters of intent (LOI). Feedback we often hear during network builds is that providers are unwilling to negotiate and execute full agreements until MCOs are awarded. Upon intent to negotiate notification, Humana will prioritize conversion of LOIs to contract agreements. Humana has successfully completed conversion of LOIs to contracts in many instances throughout the country during Medicaid network expansion activities, including in Florida, Kentucky, Illinois, and Virginia.

Similar to our previous successful provider network expansion efforts, Humana partnered with regionally dominant health systems and large multi-disciplinary groups that have solid foundations in each of the communities. The concentration of providers in Region 8 are located in the anchor counties of Lee, Collier, and Sarasota, where we have secured contracts and LOIs with Bayfront Health Port Charlotte, Bayfront Health Punta Gorda, Cape Coral Hospital, DeSoto Memorial Hospital, Doctors Hospital of Sarasota, Englewood Community Hospital, Fawcett Memorial Hospital, Gulf Coast Medical Center, Health Park Medical Center, Hendry Regional Medical Center, Lee Memorial Hospital, Naples Community Hospital, North Collier Hospital, Physicians Regional Medical Center Collier, Physicians Regional Medical Center Pine Ridge, Sarasota Memorial Hospital, The Children's Hospital of Southwest Florida and Venice Regional Bayfront Health

Additionally to the facilities, we have secured contracts and LOIs with 190 adult PCPs, 112 pediatric PCPs, 69 OB/GYNs, 225 adult physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 96 pediatric physical therapy, speech therapy, occupational therapy, and respiratory therapy providers, 454 medical specialists, 47 FQHC and RHC locations, 15 home health providers, and 1799 behavioral health providers. Humana will continue to improve upon building a full-functioning network that supports all enrollees in accessing and receiving the care they need. In addition, Humana's network has eight PCMH groups with 155 providers across 43 locations in Region 8.

Existing Region 9

Humana has serviced large Medicaid, Medicare Advantage, and Commercial enrollees for more than 20 years in Region 9, with stable, long-term network relationships that fostered a strong network of Medicaid providers. Humana's Medicaid network includes contracts with all of the major health systems, such as Martin Memorial Health System, HCA (including JFK Hospital) and Tenet. Our network also includes the essential provider, St. Mary's Hospital, and a large physician base that provides significant access to PCPs and specialists. In addition, Humana has unique Medicaid HMO and Medicare HMO partnerships with several Medical Service Organizations (MSOs) that provide primary care clinical management through recognized PCMHs. In total, Humana's network has thirteen PCMH groups with 132 providers across 24 locations in Region 9. We have approximately 39,000 enrollees assigned to providers in value-based arrangements. Additionally, we are contracted with 18 FQHC locations and 4 RHC locations. Some physicians in Region 9 provide walk-in primary care and specialty care telemedicine services for enrollees needing services after-hours or who are unable to get to a physician office

location. Since MMA implementation, Humana has continued to steadily grow membership in Region 9, beginning with 56,730 and we are currently managing 71,414 enrollees (based on August 2017 834 membership files). Our provider network continues steady performance with very few provider initiated network terminations. Humana continues to grow our Region 9 provider network:

Provider Type	Providers Added	Provider Service Locations Added
PCP	41	41
SPC	500	120

**measurement period from December 2015 through December 2016*

Existing Region 10

Humana has serviced large Medicaid, Medicare Advantage, and Commercial memberships for over 20 years in the Region 10, with stable long-term network relationships that fostered a strong Medicaid network. Humana's Medicaid network includes contracts with most major health systems' hospitals and physicians, including the South Broward Hospital District, Broward Health, HCA and Tenet. Humana's Medicaid network also includes essential providers Nova Southeastern University College of Osteopathic Medicine, Broward General Medical Center, and Memorial Regional Hospital. In addition, Humana has unique Medicaid HMO and Medicare HMO partnerships with several MSOs that provide primary care clinical management through recognized PCMHs. Many of those same providers are now part of Humana's Medicaid HMO network. In total, Humana's network has six PCMH groups with 309 providers across 15 locations in Region 10. We have approximately 88% of our enrollees assigned to providers in value-based arrangements. Additionally, we are contracted with 6 FQHC locations. Some physicians in Region 10 provide walk-in primary care and specialty care telemedicine services for enrollees needing services after-hours or who are unable to get to a physician office location.

Since MMA implementation, Humana has continued to experience steady growth of membership in Region 10, beginning with 44,129 and we are currently managing 71,951 enrollees (based on August 2017 834 membership files). Our provider network also continues steady performance with very few provider initiated network terminations. Humana continues to grow our Region 10 provider network:

Provider Type	Providers Added	Provider Service Locations Added
SPC	344	98

**measurement period from December 2015 through December 2016*

Existing Region 11

Humana has serviced large Medicaid, Medicare Advantage, and Commercial memberships for more than 20 years in Region 11, with stable, long-term network relationships that fostered a strong Medicaid network, even though 50% of the region is considered rural because of Monroe County. Humana's Medicaid network includes contracts with all of the essential providers and with the hospitals and physicians of most major health systems, such as Jackson Health System, University of Miami School of Medicine, Florida International University College of Medicine, Nicklaus Children's Hospital, HCA, and Tenet. In addition, Humana has unique Medicaid HMO and Medicare HMO partnerships with several MSOs that provide primary care clinical management through PCMHs. Many of those same providers

are now part of Humana's Medicaid HMO network. In total, Humana's network has thirteen PCMH groups with 623 providers across 57 locations in Region 11. We have approximately 73,000 enrollees assigned to providers in value-based arrangements. Additionally, we are contracted with 38 FQHC locations. Some physicians in Region 11 provide walk-in primary care and specialty care telemedicine services for enrollees needing services after-hours or who are unable to get to a physician office location.

Since MMA implementation, Humana has continued to experience steady enrollee growth in Region 11, beginning with 64,539 enrollees in 2014 to currently managing 81,763 enrollees (based on August 2017 83files), which is the highest current regional market share. Our specialist and ancillary provider network also continues steady performance with very few provider initiated network terminations. Humana continues to grow our Region 11 provider network:

Provider Type	Providers Added	Provider Service Locations Added
PCP	N/A	13
SPC	845	161

**measurement period from December 2015 through December 2016*

All provider types in Region 11, which includes Monroe County, are adequate to meet membership needs for access to care. Since we began building our MMA network in 2011, Humana has continued to recruit all required specialty types. Particular attention has been on Monroe County, which is considered rural, in an effort to maintain an adequate network for the approximately 317 enrollees Humana serves in that county. In doing so, Humana has continued to maintain strong partnerships with our contracted providers and subcontractors, and has created a culture of collaboration. Humana has maintained the same network in Monroe County throughout 2014 and to date. Additionally, considering our low membership in Monroe County, Humana continues to retain a strong network that includes two hospitals, seven pediatricians, seven adult PCPs, and over 50 various specialties such as Mental Health, Optometry/ Ophthalmology, Allergy, Cardiology, Hospice and Lab.

4. ONGOING NETWORK EVALUATION AND ENHANCEMENT

Humana measures and evaluates enrollee access to ensure our network meets or exceeds the Statewide Medicaid Managed Care requirements. We are continuously evaluating our Florida statewide provider network, as well as analyzing our capacity in each region, to ensure that enrollees have timely access to providers, including primary care physicians (PCPs), specialists and pharmacies. This includes measuring adequacy against contractual requirements, resolving network gaps and addressing barriers to care, including transportation and linguistic needs. We use network evaluation tools, including, but not limited to, timely access to care for enrollee's analyses; enrollee and provider feedback; and Geo Access reports to proactively target areas for network enhancement.

Our Provider Relations team and Quality Management Committee (QMC) monitor reports for all provider types from our network adequacy tools, on an ongoing basis, ensuring that we are proactively deploying network recruitment efforts, as well as quickly responding to network gaps as they arise. We also conduct strict oversight of our subcontractors to ensure the same level of access is monitored and maintained.

Provider Recruitment

Humana maintains a large network and actively assesses the overall network by provider type. We review and monitor the following key components in our network assessment: (a) the enrollee pattern of care, (b) provider types by geographic area including providers who service medically complex enrollees, and (c) access to care for all levels of providers. These services include, but are not limited to:

- Acute Care Hospitals
- Behavioral Health and Ancillary Services
- Compounding pharmacies
- Early intervention services
- Intermittent skilled nursing (pediatric andadult)
- Non-Emergent Transportation
- Occupational therapy (pediatric)
- Physical therapy (pediatric)
- Primary Care
- Private duty nursing services (pediatric)
- Skilled Nursing Facilities (SNF)
- Specialists including
  - Cardiologists (pediatric and adult)
  - Endocrinologists (adult)
  - Internists (adult)
  - Obstetricians/Gynecologists (adult)
  - Pulmonologists (pediatric and adult)
  - Psychiatrists (pediatric and adult)
- Specialized therapeutic foster care
- Speech-language pathology services P(pediatric)

We consider projections of future capacity planning in our network measurement and management process. Much of our network adequacy measurement process is based on updated enrollee counts and new maximum enrollment percentages. For instance, the enrollee to provider ratios and the time and distance measurements both require current enrollment files. As new enrollees are added, we take the enrollee growth and the geographic enrollment shifts into account to ensure adequate access to care, including linguistic and cultural needs and mitigation of barriers to care.

Significant provider contract re-negotiations can impact future network capacity planning. Humana's Provider Relations team maintains a strategic stratification of our major health system negotiations, so that no more than one health system in a market is under negotiation and has the potential for termination, as a result of the contract end date, at any given time.

Prior to any significant Humana or provider-initiated terminations, including hospitals, large provider groups, or subcontractors, Humana's provider relations team conducts a formal network termination impact analysis, using access analysis, open and closed panels, and provider-enrollee ratios, to verify that there will not be any enrollee access issues. When Humana initiates a termination, we conduct this analysis well ahead of the 90-day notification to the provider, and we notify AHCA within the contractual timeframe. In the event Humana receives a 90-day termination notice from a significant provider, our

provider relations team begins the formal network termination impact analysis. This termination analysis serves as the basis to identify gaps caused by potential terminations. Should we agree to accept the termination the provider, we use the analysis to prioritize targeted alternative providers or provider types that can serve as a substitute for the impacted providers.

How We Assess Network Barriers and Gaps

Humana has consistently met the reporting criteria of the PNV file reporting requirements since MMA implementation. We have identified several key barriers to reporting accuracy:

- Accuracy of provider Medicaid enrollment
- De-duping of provider NPI numbers and locations
- Single provider specialty assignment (i.e., providers that are contracted and credentialed with multiple specialties, but can only be "bucketed" to one primary specialty to support ratio counts)

While these barriers directly affect provider ratio counts, they do not reflect the true depth of the robust provider network and density of locations available to our enrollees based on time and distance measurements. Humana continues to work directly with AHCA and our provider network to resolve these barriers to network adequacy and ratio requirements.

Humana has consistently met the reporting criteria of the Provider Network Verification (PNV) file reporting requirements since MMA implementation. Humana performs a monthly assessment based on AHCA/PNV Adequacy Report. We assess the file against our network by provider type, and we apply our algorithm to proactively identify at-risk specialties for targeted recruitment opportunities. As a result, this process has allowed Humana to identify and rectify network gaps before they occur and our enrollees experience access to care issues.

Our Provider Relations team and Quality Management Committee monitor the reports for all provider types from our network adequacy tools, as well as from our subcontracted entities, on an ongoing basis ensuring that we are proactively deploying network recruitment efforts, as well as quickly responding to network gaps as they arise. Our comprehensive provider network monitoring efforts help us guarantee our enrollees have access to providers and services they need.

We also conduct systematic network adequacy measurement and management improvement in terms of appointment availability. Annually, Humana conducts "secret shopper telephone surveys" to assess wait times in scheduling appointments at provider offices. Providers in each region are chosen based on a statistically valid sample for the survey. The secret shopper survey monitors accessibility of appointments per Humana and AHCA regulatory requirements, and validates after-hours access to a healthcare professional.

The following are descriptions of our methods to identify enrollee barriers to accessing care. Our provider relations team and Provider 360 Committee collects and reviews this data monthly. Our Provider 360 Committee is a cross-functional team, which is chaired by Humana's Vice President of Florida Medicaid, and meets monthly to review provider trends from our Claims Department, as well as Availity (provider engagement) usage, quality measures, provider system usage, and provider grievances and inquires. The Committee includes representatives from our Claims Department, Grievance and Appeals Department, Credentialing Department, and Provider Relations.

Analytical Reporting

Access Analysis —Using a proven geographical analysis tool, the Quest Analytics Suite, Humana uses geocoding technology to precisely measure enrollee to provider adequacy access. This tool measures both distance and travel times against 200% of our enrollment for Regions 1 and 2and against 120% of our enrollment for Regions 3, 4, 5, 6, 7, 8, 9, 10 and 11. We analyze access for each provider specialty as listed in the Statewide Medicaid Managed Care contract by enrollee age/gender group as indicated by the provider type (e.g.,, pediatricians will be mapped to child members). Additionally, this tool enables us to identify access issues at the county and zip code level.

Provider to Enrollee Ratios—We analyze provider to enrollee ratios on a monthly basis against network standards established by Humana in accordance with AHCA requirements. We use these reports to assist us when we anticipate increased enrollment volume to ensure that our network has the capacity to accommodate additional enrollees.

Customer Feedback

- *Enrollee Surveys*—Humana will review CAHPS® and behavioral health enrollee satisfaction survey results annually to identify any access to care issues
- *Staff, Enrollee, Provider, and Advisory Input*—On an ongoing basis, Humana examines anecdotal information, including pattern of care, from various internal and external sources as it pertains to network adequacy, including information contributed by individuals and committees Some of these sources include the Provider 360 Committee, the Critical Access Team, and PCP feedback.

Meaningful Data

- *Complaints and Grievances*—Our Customer Service Department will forward enrollee and provider complaints and grievances reflecting access issues to the Provider Relations Department for review in real-time.
- *Out-of-Network Letters of Agreement*—We examine out-of-network referrals monthly to identify potential areas where provider specialty capacity needs to be expanded.
- *Cultural and Linguistic Needs*—Humana annually analyzes the cultural and linguistic needs of our enrollees and their geographic concentration to ensure appropriate access. For example, in Regions 9, 10, and 11, 36% of our enrollees report speaking Spanish at home. Thus, we strive to recruit providers who also speak Spanish to eliminate barriers to care. In our current network, 55% of our PCPs and 38% of our specialists speak Spanish.
- *Appointment Availability Audits*—We systematically conduct network adequacy measurement and management improvement in terms of appointment availability. Annually, Humana conducts “secret shopper telephone surveys” to assess wait times in scheduling appointments at provider offices. Providers in each region are chosen based on a statistically valid sample for the survey. The secret shopper survey monitors accessibility of appointments per Humana's and AHCA’s regulatory requirements, and validates after-hours access to a healthcare professional. Additionally, Provider Relations Representatives physically audit schedules during on-site visits.
- *After-hours Clinic Availability*—Humana annually conducts calls to PCP offices to ensure enrollees have after-hours access to care. Our Provider Relations Manager reviews results and assigns the appropriate Provider Relations Representative to immediately outreach to the provider if necessary. As noted in the provider manual and the provider contract, PCPs must provide 24-hour availability to enrollees by telephone. Through a direct connection with a clinician or an answering service, enrollees should be given the means to contact their PCP or a *back*-up physician to be triaged for care.

- *Open/Close Panels—On a quarterly basis, we review the panel status of our PCPs by region and county. If a PCP asks to freeze their panel, we review their capacity reports prior to closing the panels and require an updated attestation stating they are at capacity for all payors. We will require the PCP to have an action plan to hire additional physicians and/or physician extenders to be able to re-open their panels in 6 months. Additionally, we produce maps to visualize enrollee access to PCPs. We use this data to identify access barriers and implement additional targeted recruitment efforts.*

Humana will apply the same rigorous processes for identifying and resolving barriers and network gaps for any new regions awarded. For instance, we conduct statewide analyses weekly to guide our network expansion efforts for Regions 2, 3, 4, 5, 7, and 8, including time and distance reports and provider to enrollee ratio reporting. We also leverage our Medicare and Commercial provider networks to identify high performing providers to partner with, including providers participating in our STAR Rewards Program, Value Based Payment arrangements, or serving as Patient Centered Medical Homes, to serve our Medicaid enrollees.

Identifying Network Gaps

Humana creates time and distance reports using geographic access studies to ensure there are adequate numbers of providers, including but not limited to, primary care physicians, high-volume specialty providers, and hospitals in our network. Additionally, the ratio between a PCP and the PCP's assigned enrollees is calculated to ensure enrollees receive timely and appropriate services. Humana utilizes a software program called GEO Networks (Quest Analytics Suite Program), which factors for traffic density. Location comparisons are reported by county from the enrollee's home to the nearest source(s) of care. The software produces mappings and summaries of enrollees with desired access and enrollees without desired access. The provider relations team analyzes the results of those reports and develops action plans to mitigate gaps and address any deficiencies.

Ongoing Activities for Network Development Based on Identified Gaps and Future Needs Projections

Through our assessment tools, when network gaps or barriers are identified, our provider relations team initiates mitigation strategies. The following strategies are ongoing, consistent practices built into network management processes to mitigate identified gaps and barriers:

- Through our analyses, if we identify providers that are not meeting contractual requirements, such as failing to meet after-hours requirement or appointment availability standards, our Provider Relations Representatives will conduct provider education. If necessary, Humana will implement a Correct Action Plan to resolve any barriers to care within our Medicaid network, including subcontractors.
- We make every reasonable effort to contract with additional providers to resolve access issues. Should a provider refuse participation in Humana's network, we will secure a Single Case Agreement with the provider on a case-by-case basis.
- We use our collaborative provider partnerships with major health systems, ancillary providers and large IPAs, to identify providers for recruitment.
- Our provider nomination process enables enrollees to nominate a specific provider for recruitment.
- Our annual minority recruitment process targets providers to accommodate linguistic and cultural needs. We solicit feedback from minority associations, medical schools, and Native American tribes, as listed below.
    - Seminole Indian Tribe
    - Miccosukee Tribe

  - Florida Association of Minority Business Enterprise Officials
  - National Hispanic Medical Association (NHMA)
  - Minority Association of Pre-Med Students at Florida State University
  - Minorities in Medicine/Association of American Medical Colleges
  - Urban Promise
  - American Developing Smiles
  - American Developing Smiles
  - Florida International University
  - Florida Atlantic University
  - University of Florida
  - University of Central Florida
  - Florida State University
  - University of South Florida
- We maintain provider recruitment mailboxes where providers can electronically submit an application to become a Humana provider.
- Because we have several "on-the-street" Humana representatives, including our provider relations Representatives and quality improvement nurses, we receive insight about new providers moving into areas, enabling us to target them for recruitment.
- Through our review of single case letters of agreement and out-of-network utilization, we are able to identify and target non-participating providers for recruitment.
- We use a variety of resources to identify specific providers to target, including the AHCA Master File (PML), AMA Website, Sunbiz, US News Health Report, Florida Department of Health, our competitor's directory, and web searches.
- We harvest data identifying providers who are contracted for other Humana products with HMO provisions, and target these providers for recruitment.
- In areas where there are primary care provider shortages, we encourage our provider groups to recruit additional providers from outside the area, including physician extenders.
- We encourage our providers to offer telemedicine by reimbursing telemedicine in accordance with AHCA contractual requirements.

Identifying and Targeting the Right Providers Based on Gaps

Immediate, Short-term, and Long-term Interventions to Address Network Gaps

In situations other than continuity of care requests, we recognize that out-of-network utilization reports may identify potential gaps in our network. Once we identify and confirm a gap in our provider network, we design and implement an aggressive and prompt recruitment plan. We will notify and work with AHCA upon identification of major gaps or network disruptions. In situations where we have a shortfall or "hole" in our geographic access standards for a given provider type, we address it using the following mechanisms:

- Identify all providers that meet that provider type serving in the area through all available resources including the AHCA Master File (PML), AMA Website, Sunbiz, US News Health Report, Florida Department of Health, competitor's directories and Google. In addition, we discuss availability shortages with our provider groups to encourage additional recruitment of providers from outside the area.
- Recruit providers into the network who will bring that component of the network into compliance with the accessibility standards, if available.

- Provider PCP engagement: Humana may engage the enrollee's PCP to assist with identification of providers commonly used for referrals in his/her practice that are capable of providing and willing to provide care.
- In situations where we identify a network gap and have made what we believe is a highly reasonable offer to the provider(s) in a given area, identify there is a lack of available providers, and/or available providers are not actively enrolled with Florida Medicaid and are still unable to secure network participation, we will document our efforts to AHCA and request a waiver.
- Although maximum enrollment numbers were updated through Amendment 11, Humana continues to experience network gaps in specific regions. For instance, in Region 1 (which experienced an *increase* in the maximum enrollment number) we originally had 11 waivers on hold with the Agency for Health Care Administration. At the current time, we have additional waivers that are being prepared for filing utilizing the new Waiver template process. These waivers represent a significant lack of availability of providers in this region.

Specialty	**Status**	**Waiver Originally Filed**
Dermatology	All contracting efforts have been exhausted	Yes
Endocrinology (Peds)	All contracting efforts have been exhausted	No
General Dentist	Working with vendor to recruit additional Dentists	Yes
Infectious Disease	All contracting efforts have been exhausted	Yes
Ophthalmology	Working with vendor to recruit additional Ophthalmologists	Yes
Optometry	Working with vendor to recruit additional Optometrists	Yes
Otolaryngology	All contracting efforts have been exhausted	Yes
Podiatry	All contracting efforts have been exhausted	Yes
Rheumatology	All contracting efforts have been exhausted	Yes

In the absence of a contract, we will seek to work with needed providers through single-case agreements and will permit enrollees to seek care from these providers on an out-of-network basis.

When Humana determines that use of a non-par provider is appropriate, we employ the following steps:
- Determine if request is a plan benefit and if it meets medical necessity criteria
- Ensure no in-network providers within time and distance are capable of rendering service to enrollee
- If there is not an in-network option, then send the review to the Medical Director for approval
- Once approved, Humana works to negotiate rate, and the enrollee is seen for services.

In addition, Humana recognizes the potential need for enrollees to access critical services outside of their geographic area to ensure the enrollee receives the best care in a timely manner. Below are a few examples of complex cases that displays Humana's ongoing and proficient medical coordination between our clinical and network teams to ensure our enrollees receive the absolute best care in their time of need:

Region 1 example: A 37-year-old male patient was admitted to a participating in-network hospital in Region 1 with a diagnosis of Hashimoto's encephalopathy, seizures, and an altered mental status. Due to this enrollee's complex diagnosis and multiple comorbidities, the enrollee remained in this acute setting for three months. Once the enrollee's team of providers agreed to consider an alternative care setting based on the progress of the enrollee's condition, Humana assisted the enrollee with arranging and receiving post-acute care tailored to his diagnosis. Humana identified several long term acute rehabilitation facilities that specialized in complex neurological rehabilitation rather than utilizing a standard rehabilitation facility, based on the provider team's recommendations. Because there were no beds available at these neurological rehabilitation facilities available In Florida, we extended our search beyond state lines. The enrollee was accepted as a patient by a neurological recovery center in Texas. Humana's clinical team worked very closely with our provider network team to successfully transfer the enrollee, which required air transfer to the facility. Prior to the transfer, Humana's provider network team successfully negotiated a letter of agreement (LOA) with the facility to ensure the services would be accurately reimbursed. The enrollee remained at this facility for two months. Once the enrollee's condition showed improvement, we arranged for the enrollee to be transferred back to a local non-participating neuro-restorative facility to allow the enrollee's family to be active in the enrollee's care and support him in his continued progress of rehabilitation.

Region 11 example: A newborn born baby was delivered at Jackson Memorial in Miami-Dade County with a rare lethal, congenital defect of the windpipe called a type 4 laryngeal cleft. Humana's clinical team called every facility in Florida and, despite a thorough search, no surgeon in Florida was able to repair the enrollee's defect. We identified that the best center to treat this defect was located at Cincinnati Children's Hospital. Humana's clinical team and the provider network team worked to arrange to transfer of the newborn by air ambulance to the Cincinnati Children's Hospital intensive care unit. Prior to the transfer, Humana's provider network team successfully negotiated a letter of agreement with the facility to ensure the hospital would be paid for their services. The surgery was successful and after several weeks the baby was transferred by air ambulance back to the intensive care unit at Jackson Memorial to be reunified with her family.

Humana tracks and trends LOAs via a tracking grid for each. Our contracting teams perform analysis on a periodic basis to identify potential contracting opportunities. For example, common LOA types due to shortage of providers wiling to contract with Medicaid are the Home Health providers in Regions 1 and 6 because of a lack of availability (especially in rural areas) and extremely low home health skilled nursing and therapy rates.

Outcome Measures/Evaluation of Interventions to Fill Network Gaps

We base outcome measures and evaluation of Humana's intervention efforts to fill network gaps and resolve barriers on the following:

- Increase or reduction in the number of provider type gaps as measured using the AHCA required and other network measurement criteria described above (provider-to-enrollee ratio and time/distance standards, using the AHCA network measurement tool).
- Requests for specific services to be provided by non-par providers, or out of area providers. These requests are used as a measurement of the network adequacy status, and are collected and acted upon by the network team. The requests reach us through the portals that support provider services and customer services lines, as well as from the clinical management teams. The requests are generated from:

- PCPs seeking specialist referral services
- Enrollees
- Hospitals
- Specialists
- Humana Case Managers (CMs) who identify and report a need for either a specific provider or provider type

Humana's recruitment efforts include a variety of means to maximize success. These include on-site, face-to-face meetings with providers, telephonic outreach, and use of existing provider relationships to reach other providers. If willing providers are available that can address the specific need, our provider relations team will contact these providers to arrange a face-to-face meeting to recruit the provider into our network. Conversely, if the required provider type is not available or unwilling to contract with Humana, we will offer the enrollee transportation to the nearest qualified provider, make arrangements with out-of-network providers, or coordinate care through available telemedicine conduits.

Credentialing

Humana conducts rigorous credentialing and recredentialing of all providers in our network. Credentialing is one of the quality assurance components NCQA has regularly assessed in awarding Humana's Florida Medicaid plan accreditation. Humana has earned 100 percent of the available points on all NCQA surveys conducted between 2011 and March 2017. Our credentialing, recredentialing, and provider loading processes meet all state and federal requirements, as well as NCQA guidelines. Our process confirms that the provider has a current valid state license, holds current professional liability insurance, has completed the appropriate education and training for their specialty, and is free of sanctions by federal, state, and local authorities prior to the execution of a provider contract.

Providers are an essential part of Humana's mission to assist enrollees in achieving life-long well-being. Through our credentialing and recredentialing process, we ensure contracted providers are qualified to deliver the highest quality of care to our enrollees. Humana's proprietary workflow management tool, Accelerated Provider Exchange (APEX), quickens and automates the credentialing, provider load, and provider demographic update processes allowing us to achieve best in class turnaround times. To ensure providers are ready to provide services to Humana enrollees, we require all providers to complete a thorough credentialing process and ongoing recredentialing process.

5. ENGAGING BEST-IN-CLASS PROVIDERS

Humana believes the key to successfully engage best-in-class providers is to develop a partnership working towards a common goal of delivering quality care to our enrollees. To achieve this goal, we support our providers by providing the necessary tools and resources and by rewarding the providers that serve our enrollees best. Humana's orientation education, ongoing communication and support, and innovative ideas help us to engage and retain excellent providers.

a. Starting with a Common Goal

Our provider engagement model is built around attaining a mutual goal of improving quality outcomes by aligning on the common tenets of this goal, which include financial incentives, provider partnership, administrative simplicity, and provider satisfaction. The foundation of our model is to ensure providers are satisfied with the level of support and attentiveness as a result of our responsive and comprehensive

provider engagement model. Thus, we continually measure provider satisfaction to identify opportunities for improvement in how we interact and support our providers. A key measure of provider satisfaction is our provider network termination rate. Since 2014, our overall provider network termination rate for our MMA and LTC programs has been less than 1% month-to-month. Additionally, our hospital network has stayed stable since the implementation of the MMA program.

b. Initial and Orientation Training

Humana's comprehensive provider training program allows to us achieve more sophisticated, integrated, and engaged partnerships. Provider training activities – both initial and ongoing – are an important component of our relationship-building efforts. Humana offers a variety of training formats to ensure that information is accessible and convenient and accommodates providers' differing needs (organizationally and among individual staff) at all points in time.

Humana has been providing healthcare services for more than 50 years, and we understand that each provider's circumstances are different. We have structured our training programs to support a variety of people and in recognition of their different knowledge bases, needs, and learning styles. Our trainings are flexible and scalable; we provide web-based trainings for busy providers, conference-style trainings to a provider/staff, and one-on-one trainings. The training formats we use include face-to-face orientation and monthly meetings, Humana's Provider Handbook, materials available on our website, and our Availity portal, quarterly provider newsletters, and ongoing support available from our Provider Relations Representatives.

We believe our existing network and strong relationships with providers help strengthen the SMMC program operationally through enhanced access and improved quality outcomes for our enrollees. Thus, we use a cross-functional, integrated, and "high-touch" approach to support and train providers. This "high-touch" approach begins once a provider is credentialed and contracted. Humana's training begins during the negotiation of their provider agreement with Humana or during a single case agreement. Once the provider is considered an active and participating provider, our Credentialing Department will send a welcome packet with a copy of the monthly training calendar, as well as a list of all "on-demand" online trainings we offer, and a provider relations representative will schedule an orientation meeting within 30 days. All providers new to Humana's network receive orientation training from their assigned provider relations representative, who will also serve as their point of contact for all future trainings. This training is their opportunity to understand Humana operations and processes, provider roles and responsibilities, and the vast resources available to them. We conduct the initial orientation in the provider's office, which includes information on all necessary topics to help ensure a mutually successful partnership.

Below is a comprehensive list of all of the topics covered during the orientation training:

- Introduction to the Florida SMMC program
- Contracting and credentialing
- Access to care requirements
- Web resources
- Preauthorization and notification process
- Claims processing and claims resolution process
- Continuity of care
- Enrollee special needs consideration

- Enrollee screening for alcohol and substance abuse
- Clinical management programs
- Patient-center medical home
- Medicaid risk adjustment
- Medicaid Advisory Panel
- Service level agreements
- Agency for Health Care Administration (AHCA) provider based guidelines
- Annual compliance trainings
    - Humana Medicaid Orientation
    - Cultural Competency
    - Health, Safety and Welfare (HSW)
    - Fraud, Waste and Abuse (FWA) and Business Ethics
- Ob/GYN training (for Ob/GYNs only)
- Critical incident reporting
- Disenrollment/transfer of enrollee
- Helpful numbers and regionally specific Quick Reference Guides
- Florida Medicaid Provider Handbook
- Behavioral health tool kit for Primary Care Providers (for PCPs only)
- MMA provider incentive program (MPIP)
- EHR and HIE

The Provider Handbook includes detailed information on claims submission and payment processing, including by not limited to:

- Educational information regarding claims submission, payment processes, and explanation of a clean claim, including standards for submitting a clean/complete claim and following correct coding requirements.
- Information on how to submit a claim directly through Availity or to Availity through their existing clearinghouse to Humana.
- Information on how to submit a standard CMS 1500 and UB04 for paper submission and web claims submissions.
    - For those providers who elect to submit claims electronically, companion guides are made available for 837i and 837p transactions.
- Information on the correct use of ANSI X12 837 transactions, CMS 1500 or UB04 forms, and Availity electronic claims submission to ensure required data for a clean claim

Humana makes all information included in the Provider Handbook available to all providers via the provider website. Additionally, during the provider's orientation, we create an initial assessment as a baseline to identify if providers are correctly billing for services in accordance with State guidelines and the requirements of the provider contract. This baseline helps to determine frequency and content focus of future trainings needed.

Since 2013 we have conducted provider orientation training for more than 4,000 providers in Florida. We use provider feedback to continually modify and improve our provider training content, materials, and delivery sources.

c. Ongoing Training, Communication, and Support

Humana understands that for a number of reasons, including staff turnover, providers need refresher trainings. Providers are assigned a Provider Relations Representative, who is their point of contact for all trainings. We routinely review internal policy changes, and those of governing agencies, to ensure that our trainings capture up-to-date and relevant information. We seek to schedule these training sessions at the provider's convenience at a time when there is little/no patient care activity, and when as many provider staff as possible can attend. One-on-one trainings may be conducted in the provider's offices or at a Humana location. Conference-style, region-based trainings are held in a central location (e.g. hotel conference room, Chamber of Commerce facility, etc). We welcome and encourage AHCA representatives to attend any education seminars we conduct. Additionally, Humana conducts webinars twice per week with an opportunity for provider questions and answer sessions. All webinar schedules are posted in advance on our provider website with a description of training subject matter and time and date. If we identify that a provider needs additional training or if a provider requests it, we conduct follow-up provider service training through telephonic contact and/or face-to-face training, including on-site training for hard-to-reach providers, including those in rural regions.

Humana's Provider Relations Representatives visit providers regularly. During these visits, we deliver information to help the provider understand their overall performance metrics and ascertain whether their staff have any questions or training needs. During visits that occur subsequent to a recent training session, we ask whether there are any issues related to the prior training that they would like more information about or refresher information. We also use these visits as a mechanism to hand deliver important communications and publications that may previously have been mailed or posted to our provider website.

Furthermore, we recognize that provider education is not a static process, and that it may be necessary to reach providers in different ways, at different times, and through different delivery methods. Humana utilizes four simultaneous avenues of training to ensure we are supporting our providers in delivering the best care to our enrollees, which include:

1.) Face-to-face training
2.) Web-based individual training
3.) Webinars
4.) Available resources and "on-demand" training

Recognizing that PCPs serve as the medical home, our Provider Relations Representatives visit PCPs monthly. Below is a list of reports and data shared with PCP offices on a monthly basis:

- Performance profile/report card – snapshot used to review encounter rates, admits and days per thousand, average length of stay, ER visits per thousand and pharmacy opportunities
- New enrollment and disenrollment reports – reports listing all new and disenrolled enrollees from the PCPs panel
- Top 40 enrollees – report identifying the top 40 enrollees with highest incurred cost
- Top 40 drugs – report identifying the top 40 drugs prescribed and evaluation of any opportunities for generic equivalencies
- HEDIS reports including identification of gaps

- Encounter data – provides a 12-month trend and benchmark analysis for PCP encounters and fee for service claims by incurred and processed dates
- ER trends – report identifying enrollees who have had repetitive and excessive ER visits during a specific period of time
- Delivery system reports – provides a list of highly utilized, efficient specialists and mandatory networks available for enrollees
- Network changes – report that outlines changes to the network that may impact the PCP and enrollees
- Newsletters – quarterly publications that summarize topics vital to provider practices
- Mailings – various imperative communications that may have been mailed to their office that are reinforced during visits

Ongoing Claims and Payment Training

Humana's Provider Services Department supports providers and offers assistance with any claims-related issues they may be facing by phone, in-person, and through the web. Humana continuously monitors its providers' compliance with clean claim submission requirements via its claims data and analytics system. This system allows Humana to track claims-related performance measures such as timeliness of claims submission, percentage of clean claims, and percentage of denied claims for each individual provider. For example, we have improved our process since 2015, when on average 89 percent of electronic clean claims were paid within 10 days. In 2016, nearly 99 percent of our electronic clean claims were paid within 10 days. If a provider is identified as requiring assistance with claims submission, our Provider Relations staff offers two avenues for education: a provider relations representative may either contact the provider by phone or visit the provider's office for one-to-one training.

Web-based Individual Training:

Humana provides web-based training through the Availity portal, which is our health information network that optimizes information exchange between multiple health care stakeholders through a single, secure network. The Availity portal encompasses business and clinical services, and supports nationwide real-time and batch electronic data interchange via the web and through business-to-business integration. Recorded web-based trainings may be taken anywhere and are available 24 hours a day/seven days a week. In addition, instructor-led training is available at least one day per week. Through Availity, providers and their staff may access training related to:

- Claims management
- Authorizations management
- ERA/EFT management
- Clinical Solutions
- Electronic Data Interchange (EDI)
- Eligibility and Benefits Inquiry
- Patient Responsibility Estimator Tools
- Payment Collection and Processing
- 5010 Overview
- Annual Compliance training
    - Humana Orientation
    - Cultural Competency
    - Health, Safety and Welfare
    - Fraud, Waste and Abuse and Business Ethics

Providers are trained on compliance concepts and materials during orientations and are also required to complete them on an annual basis. Humana sends multiple reminders to providers, through email, fax blast, and phone calls, throughout the year using varying communication mechanisms to ensure these important compliance topics are met.

Educational Provider Materials

Humana distributes a provider handbook to all our providers, which includes a comprehensive review of educational topics, quick reference guides regarding prior authorizations, and enrollee-covered services materials. After a provider executes an agreement with us and during their orientation training, we review the handbook contents as well as any other information related to our health plan. Our handbook contains comprehensive information about a variety of topics and is a contractual extension to their provider agreement. Below is an overview of the topics covered in the handbook:

- MMA Program Description
- Covered Services
- Emergency Service Responsibility
- Child Health Checkup
- Provider Complaints
- Grievance System
- Chronic and Complex Conditions
- PCP and Other Provider and Subcontractor Responsibilities
- Telemedicine protocols and requirements
- Delegation or Subcontract Function
- Florida Health Information Exchange (HIE)
- Preauthorization and Referral Procedures
- Medical Records Requirement
- Claims and Encounter Submission Protocols and Standards
- Cultural Competency Plan
- Enrollee Rights and Responsibilities
- Fraud and Abuse Policy
- Health, Safety and Welfare
- Patient-Centered Medical Home (PCMH)
- Medicaid Advisory Panel
- Provider Rewards and Incentives
- Provider Resource Website
- Provider Training
- Availity
- Helpful Numbers

Humana also sends out provider newsletters on a quarterly basis and email blasts with important information pertaining to policy changes, quality, industry changes, and medical protocols. EAdditional examples of provider communications may include:

- Quality Reports
- Annual AHCA and CMS compliance training/communication on Fraud, Waste and Abuse and Cultural Competency
- Letters/emails/faxes

- Committee minutes or reports
- Provider bulletins, notices, and newsletters
- Online and hard copy reports
- Peer Review Committee communications related to potential quality of care issues
- Clinical newsletters
- Office visits

Provider Website Materials

Humana has a dedicated webpage where providers can easily access Medicaid provider materials. We also prominently display urgent updates and specific quality initiatives for our providers, such as annual checkups or breast cancer screenings. The following is a list of some of the information available on our provider website:

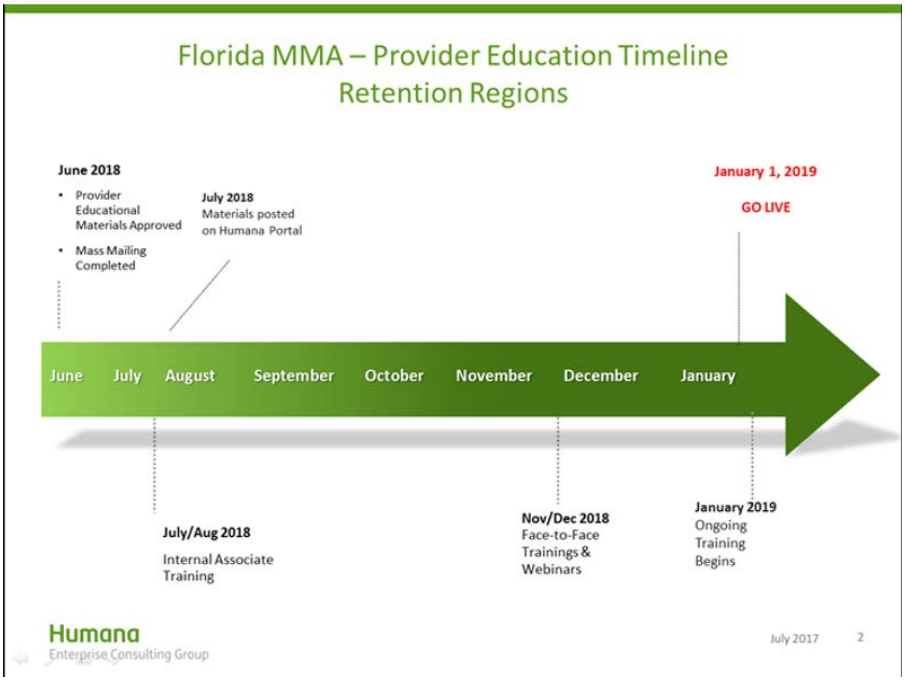
- Provider handbook
- Region-Specific Quick Reference Guides
- Assistive Care Quick Reference Guides
- Medicaid preauthorization and notification list
- Enrollee handbook
- Cultural competency plan
- Provider tools to address gaps in care
- Prescription Drug Guide
- Florida Medicaid preferred drug list
- Behavioral health tool kit
- Home health visit information
- Referral to Medicaid case management form
- Urgent updates
- Breast pump coverage
- Minority recruitment and retention information
- Provider nomination form
- Florida Medicaid Vaccines for Children (VFC) Program and child blood lead screening
- Crossover claims
- Child health check up
- Medicaid eligibility for newborn babies
- Healthy behavior programs
- Quality resources
- Program information
- Provider handbook
- Provider directory
- Helpful numbers
- Provider training calendar
- Electronic billing
- Provider ebilling companion guide

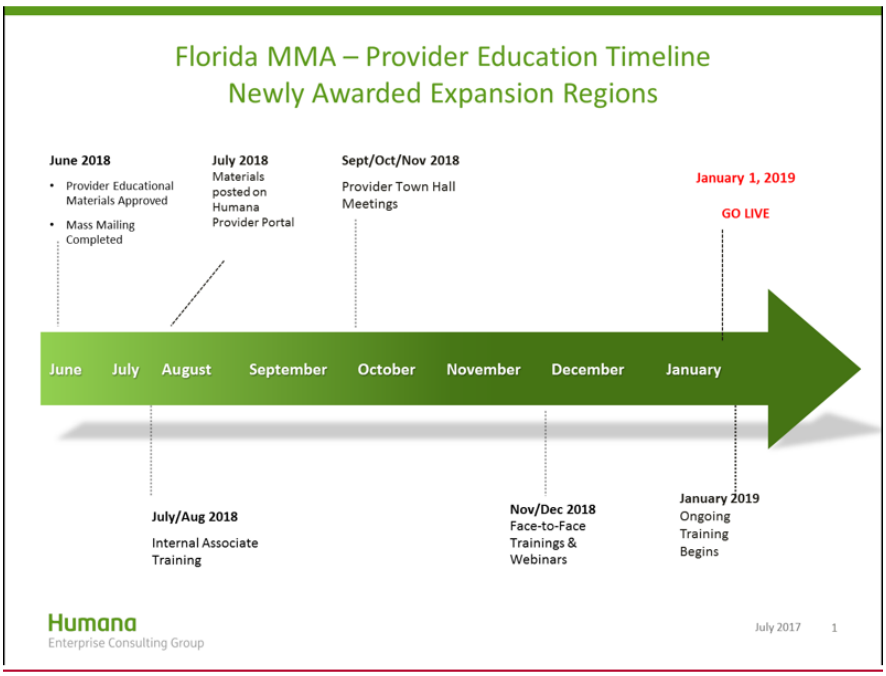
Review of Provider Claims for Training Opportunities

Our provider relations team has a comprehensive process to review claims reports. On a daily basis, our team reviews Availity rejection and denial reports for claims submitted electronically. On a monthly basis, our Provider 360 Committee reviews global provider claims, including electronic and paper claims, trends to widespread issues we need to address with our providers. On a quarterly basis, our provider outreach and provider contract representatives use these reports to provide feedback and identify training needs. Training methods include webinars, town halls, individual provider training, and newsletters. To assess the effectiveness of our trainings and educational materials we send out surveys to providers seeking feedback on the training.

The combination of our new provider orientation education training and ongoing training as well as our daily operational experience with our providers has laid the foundation for a strong training program that will be required for Humana's MMA expansion. We plan to approach provider education for the upcoming 2019 implementation through two strategies – one for existing/retention Regions and one for new, expansion Regions.

See Provider Education Time Lines below





d. Rewarding Best-in-Class Providers

Humana's interactive and comprehensive provider engagement model is the basis of our provider retention efforts and a significant differentiator of Humana's provider network management strategy. Our PCPs and high-volume specialists have a relationship with an assigned Humana Quality Improvement Nurse and a Provider Relations Representative.

Provider Engagement in our Value-Based Payment Model

An effective provider engagement strategy enables the formation of true partnerships and optimizes the payer-provider relationship. Humana has extensive experience in creating modernized, value-based engaged provider partnerships that involve substantial financial risk/reward sharing and performance-based incentives for providers, which support our provider retention efforts. We designed our program to support the needs of providers, working constructively with providers from each organization regardless of their organizational size or level of technological sophistication. Humana provides a step-by-step opportunity to earn pay-for-performance financial rewards for achieving certain key clinical measures of success. As providers mature in their ability to achieve basic milestones, additional measures are added or increased outcome performance targets are established which allow providers to earn even greater pay-for-performance rewards.

Humana has a sophisticated value-based model in Florida to establish financially and quality aligned incentive contracts with our providers. These agreements include full risk (global) capitation, shared savings model, quality-cap bonus, and MMA Physician Incentive Program payments to reward our providers for providing high-quality care. Humana's model is designed to drive greater provider engagement and better clinical outcomes based on the idea that thoughtful reward incentives, packaged with consultative provider guidance and care gap alerts, integrated with comparative metrics and benchmarks helps providers to raise the bar in quality. Our model delivers an improved ability for providers to more rapidly identify high-risk enrollees, improve chronic condition care delivery, reduce medical costs, and improve enrollee satisfaction. To ensure our providers remain in good standing,

Humana supports our providers with several tools including enrollee data and provider performance metrics to keep our providers updated on a regular basis. This data includes a peer-to-peer performance indicator that keeps the provider aware of their performance within the network. Our provider engagement program allows Humana to truly partner with our network partners and optimize the payer-provider relationship, which keeps providers satisfied with their financial incentives and the care they are delivering.

Through our initial training and orientation, ongoing training programs, resources, and value-based payment model, Humana has built a best-in-class provider engagement model. However, we recognize that tools, resources and rewards aren't the only way to keep providers engaged. Providers need a corporate partner that is also easy to work with. That's why we strive to remove barriers and administrative burdens.

6. ACCESS TO CARE FOR ENROLLEES

At Humana, we strive to ensure enrollees can readily access appropriate care tailored to their needs from our extensive network of providers within the system, and we provide them multiple access points to find necessary information for timely access to services. Our access standards meet or exceed with AHCA as well as State and federal requirements.

We continuously monitor, analyze, and adjust access needs, types, and methods to ensure we provide a robust network of high-quality, contracted network providers, while striving to ensure we have the appropriate number of providers, provider-to-enrollee ratios, provider types, and availability to effectively service the diverse needs of Florida's enrollees. This helps us identify opportunities to improve our network and enhance access to care for our enrollees.

a. Analysis of Timely Access to Provider Services

Humana conducts various audits to ensure our providers are maintaining accessibility standards. We measure appointment availability standards through initial credentialing and recredentialing site visits, complaint data, capacity reports, and provider self-reporting. Humana also physically audits appointment schedules on a random basis and at least annually by visiting provider offices.

Humana currently conducts audits of appointment availability and office waiting times for PCPs and will expand our processes to the specified provider types, which include pediatric and adult cardiologists, pediatric and adult pulmonologists, adult endocrinologists, adult internists, pediatric and adult psychiatrists, adult obstetricians/gynecologists, and pediatric and adult-licensed mental health clinicians. In 2016, our PCPs averaged 1.2 days for a sick patient appointment, 2 days for an urgent care appointment, and 8 days for a well care appointment, exceeding AHCA's requirements. All participating providers are expected to render care in full compliance with AHCA access guidelines. Humana will comply with the Agency's contractual requirements for Timely Access Standards, as listed below, and actively monitor adherence to these standards.

1. Appointments for urgent medical or behavioral health care services shall be provided:
    (a) Within forty-eight (48) hours of a request for medical or behavioral health care services that do not require prior authorization.
    (b) Within ninety-six (96) hours of a request for medical or behavioral health

care services that do require prior authorization.

2. Appointments for non-urgent care services shall be provided:
   (a) Within seven (7) days post discharge from an inpatient behavioral health admission for follow-up behavioral health treatment.
   (b) Within fourteen (14) days for initial outpatient behavioral health treatment.
   (c) Within fourteen (14) days of a request for ancillary services for the diagnosis or treatment of injury, illness, or other health condition.
   (d) Within thirty (30) days of a request for a primary care appointment.
   (e) Within sixty (60) days of a request for a specialist appointment after the appropriate referral is received by the specialist.

To facilitate timely access to appointments, routine care, and urgent care services, we communicate the following standards to all network physicians through a variety of channels such as during site visits, the Provider Manual Appendix, and provider training materials posted on Humana.com and Availity.com.

APPOINTMENT TYPE	DEFINITION	STANDARD
Emergent	A sudden, unexpected situation which could become a threat to life or limb if not diagnosed and treated immediately (chest pain, excessive bleeding, constant/severe shortness of breath, severe abdominal pain, severe injury, etc.)	Immediately
Urgent	An unexpected illness/injury requiring treatment to prevent serious decline in health, but not life threatening (ear infection in child, fever lasting 1-2 days, persistent symptoms of illness lasting 3-4 days)	Within 24 hours
Routine or Primary Care	Non-urgent care for symptomatic issues (rash, arthritis, return visit to check blood pressure, etc.).	30 calendar days
After-hours access	Telephone information on how to access care after PCP's office has closed	Answering service capable of paging physician or answering service with instructions to call Humana First and/or instructions to go to nearest Emergency Room if emergent/urgent

Access Audit Process

Humana measures and evaluates enrollee access to appointments and wait times on an ongoing basis to ensure network providers meet the required standards. We also conduct strict oversight of our subcontractors to ensure they secure and monitor the same level of access.

We choose a statistically valid sample of providers within a region for a number of different access audits, including appointment availability and wait time for both urgent and routine visits. These audits monitor accessibility of appointments per Humana and AHCA's regulatory requirements and corroborate appointment wait time. Humana measures these appointment availability standards through initial credentialing site visits, complaint data, and provider self-reporting.

On a quarterly basis, Humana conducts a statistically valid sample of "secret shopper telephone surveys" to assess wait times in scheduling appointments at provider offices. The Provider Relations Manager reviews the results and assigns the appropriate provider relations representative for immediate outreach to the provider. Humana also physically audits appointment schedules by visiting provider offices annually. On a random basis, a Humana Provider Relations Representative will visit a provider's office to monitor enrollee wait times, ensuring the provider is meeting accessibility standards. We also review enrollee surveys, provider surveys, complaints and grievances, and staff and provider input for insight into access issues. Our Provider 360 Committee reviews the results from these sources on a monthly basis. While Humana currently conducts the above audits and measures for PCPs, we will expand these efforts to include the listed specialty types.

Telephonic and Visit "Secret Shopping"

We select the top 40% of PCPs in each region based on total enrollee count to survey via telephone or face to face. The secret shopper survey monitors accessibility of appointments per Humana and AHCA's regulatory requirements and corroborates after-hours access to a healthcare professional. (See Table)

The Provider Relations Representative contacts the Primary Care office with symptoms of a simulated condition/illness to assess the next available appointment.

Failure by the PCP center to meet standards will result in the following action steps:

- The center's panel will be immediately frozen to new enrollees
- A corrective action plan shall be implemented with the expectation that the center shall regain compliance with Humana's standards within a 30-day period
- The center shall be re-audited at the end of the 30-day corrective action period
- If the center is found to have regained compliance with Humana's accessibility standards, then the center's panel freeze shall be lifted
- In the event that the center does not improve accessibility standards and regain full compliance within the 30-day corrective action plan window, the center may be provided a notice of termination, with such termination to become effective immediately.

2016 Average PCP Wait Times by Number of Days

Average PCP Wait Times by Number of Days				
Region	**Total Number of PCP Locations Surveyed**	**Measure: Routine Sick Patient Care**	**Measure: Urgent Care**	**Measure: Well Care Visit**
Region 1	129	2	1.3	10.3

Region 6	335	1.8	1.2	18
Region 9	38	1.8	1.2	4.7
Region 10	33	2	1.3	3
Region 11	36	3	1.1	4
Average Wait Times (all regions)	**571**	**2**	**1.2**	**8**

Source: Timely Access/PCP Wait Times Report

Delegated entities (e.g., subcontractors, physician hospital organizations contracting with Humana on a capitated basis) shall collect data regarding appointment availability or other applicable functions utilizing Humana standards, and send written summary reports with supporting documentation to the Health Plan. Below is an example of Access Behavioral Health's survey results in Region 1 from 2016.

Access Behavioral Health Region 1: Appointment Time Access

Access Standard	Percentage of Network High-Volume Providers Who Meet Standard	Percentage of Network Practitioners Who Meet Standard
Emergent: within 6 hours	100%	100%
Urgent: within 48 hours	100%	100%
Routine (Initial): within 7 days	100%	74%
Follow up: Within 30 days	100%	100%

Additionally, in 2016, Beacon's Provider Relations team initiated a platform to ensure that Medicaid enrollees have timely access to care. Beacon's staff contacts 100 percent of the network providers (MDs, DOs, and ARNPs) each quarter and ask questions to determine the provider's ability to accommodate Humana/Beacon Medicaid enrollees. If a provider is unable to accommodate an enrollee according to Humana's access standards, Beacon ensures that the provider has an alternate plan in place to assure that these enrollees have access to care in urgent, emergent, and routine situations. Once the calls have been made to the providers, any changes that need to be made in the system are documented via Beacon's management information system. If additional documentation is needed prior to creating these events, Beacon's Provider Relations staff follows up to obtain it from the provider. Below is an example of Beacon's survey results in Regions 6, 9, 10 & 11.

Beacon: Appointment Time Access

Survey Question (reflects current Agency timely access standards)	Q1 Results
Can you accommodate a Humana/Beacon Florida Medicaid enrollee, who has an emergency, 24 hours per day, 7 days per week?	97.8% (176/180)
Can you accommodate a Humana/Beacon Florida Medicaid enrollee in need of urgent care within one (1) day of the request?	97.8% (176/180)
Can you accommodate a Humana/Beacon Florida Medicaid enrollee in need of a behavioral health routine initial evaluation ("sick care") with an appointment within one (1) week of the request?	92.8% (167/180)

Can you accommodate a Humana/Beacon Florida Medicaid enrollee in need of a behavioral health routine follow-up appointment ("well care") within one (1) month of the routine initial evaluation visit?	97.8% (176/180)

Future Enhancements

Humana will operationalize a plan in 2019 to increase the frequency of the timely access to service survey to a quarterly basis. We will also incorporate a statistically significant sample of designated high-volume specialty provider type, which include cardiologists, pulmonologists, endocrinologists, internists, psychiatrists, OB-GYN, and licensed mental health clinicians.

After-Hours Care Access

Humana also conducts calls to PCP offices to ensure enrollees have access to care during after-hours at least annually or as issues arise on a more frequent basis (See Table 1). Our Provider Relations Manager reviews the results and assigns the appropriate local provider relations representative for immediate outreach to the provider if necessary. As noted in the provider manual and the provider contract, PCPs must provide 24-hour availability to enrollees by telephone. Whether through an answering machine, or a taped message used after-hours, enrollees should be given the means to contact their PCP or a back-up physician so they can appropriately triage the enrollee for care.

Table 1

2016 After Hours Accessibility Audit

Region	Total PCP/FTE	Total PCP/FTEs After Hours	% of PCPs/FTEs w/After Hours	AHCA SLA Requirement
1	385.5	147.5	38%	30%
6	1348.5	855	63%	35%
9	575	363	63%	40%
10	420	300.5	72%	40%
11	621.5	409.5	66%	40%
Total	**3350.5**	**2075.5**	**60%**	

Humana values providers that offer after-hours to our enrollees and that realize the importance to our enrollees of having access to their PCP instead of going to an emergency room or an urgent care center. Humana is implementing an initiative to increase the reimbursement to encourage additional providers to offer after-hour services (99050 and 99051). Given the current Medicaid-allowable reimbursement of seven point two eight ($7.28) and nine point thirty-nine ($9.39), Humana is offering a range of thirty-five ($35) to fifty ($50) dollars, which is a substantial increase in reimbursement.

Enrollee Satisfaction Surveys

We also monitor enrollee wait times using enrollee satisfaction surveys (CAHPS), which we complete annually. Our Quality Management Committee (QMC) reports analysis of the to ensure we meet our goal benchmarks. Access to care results is measured year over year with established benchmark goals (see Table 2).

Table 2: Measurement and Results: CAHPS Analysis for Access to Care

Florida Medicaid Adult CAHPS Results				
CAHPS Question/Composite	**2016 Rate**	**2015 Rate**	**2015 Quality Compass National**	**2016 Market**
Getting Needed Care	77.5%	73.0%	80.8%	75.2%
Q14. Ease of getting care, tests, or treatment needed	79.3%	79.7%	82.9%	82.1%
Q25. Got appointment with specialist as soon as needed	75.8%	66.4%	78.7%	68.4%
Getting Care Quickly	78.8%	77.9%	80.7%	80.2%
Q4. Got urgent care as soon as needed	82.9%	80.6%	83.4%	83.0%
Q6. Got routine appointment as soon as needed	74.6%	75.3%	78.2%	77.6%

Florida Medicaid Child CAHPS Results				
CAHPS Question/Composite	**2016 Rate**	**2015 Rate**	**2015 Quality Compass National Average**	**2016 Market Goal**
Getting Needed Care	74.7%	82.4%	84.3%	84.9%
Q14. Ease of getting care, tests, or treatment needed	86.0%	83.9%	88.8%	86.4%
Q28. Got appointment with specialist as soon as needed	63.4%	81.0%	80.8%	83.4%
Getting Care Quickly	89.1%	87.8%	88.6%	90.4%
Q4. Got urgent care as soon as needed	90.1%	88.3%	90.2%	90.9%
Q6. Got routine care as soon as needed	88.1%	87.3%	87.1%	89.9%

Source: 2016 CAHPS Survey Results

Enrollee Turnover—Humana utilizes reporting of enrollees who have requested reassignment on a monthly basis. This report includes codes which may indicate dissatisfaction with appointment availability or office wait times.

Site Visits—Humana conducts provider site visits for PCPs during the credentialing and recredentialing process. As part of the site visits, we assess appointment scheduling policy, wait times, and after-hours accessibility. Humana also physically audits appointment schedules on a random basis during site visits.

Complaints and Grievances—Complaints and grievances from enrollees and providers are received through multiple routes and are recorded and tracked in our Customer Care Portal. Complaints that reflect network access issues or identify potentially noncompliant providers are forwarded to our Provider Relations team for review and action on a real-time basis. In addition, Humana will be designating a Provider Services Leader who will provide oversight on provider disputes.

Staff and Provider Input—Humana examines input from various internal and external sources pertaining to appointment availability and waiting times. Examples of these sources include our Provider 360 Committee, clinical access team, Provider Relations representatives, case managers, specialists' offices, and customer service specialists.

b. Telemedicine

Humana promotes telemedicine as a care delivery option to improve enrollee access to services, especially in remote geographical areas, provider shortage areas, and for enrollees with mobility issues. Humana's contracting policies and procedures define telemedicine as the practice of health care delivery by a practitioner who is located at a site other than the site where a recipient is located for the purposes of evaluation, diagnosis, or treatment.

Provider relations representatives educate providers regarding telemedicine strategies and requirements. Humana strives to ensure that all providers seeking to deliver telemedicine strategies understand how specific rules for these services apply to any person or entity prescribing or reviewing a request for Florida Medicaid services, and to all providers of Florida Medicaid services that are enrolled in or registered with the Florida Medicaid program.
We also encourage our providers to offer telemedicine by reimbursing telemedicine in accordance with AHCA contractual requirements. We offer our enrollees access to Doctor-on-Demand to encourage telemedicine as a means ability to limit out-of-network utilization and enhance non-emergency ED diversion. Doctor on Demand is a platform that provides enrollees with access to physicians 24 hours a day, seven days a week from the enrollee's phone or computer. The platform allows enrollees to see and/or talk to a physician immediately using video or phone services or to make an appointment for a later time. Additionally, the platform allows an enrollee to upload medical history, send images if necessary, and obtain a prescription.

For providers licensed within their scope of practice to perform the service, Florida Medicaid reimburses for telemedicine services using interactive telecommunications equipment that includes, at a minimum, audio and video equipment permitting two-way, real time, interactive communication between a recipient and a provider.

Florida Medicaid does not reimburse for:

- Telephone conversations, chart review(s), electronic mail messages, or facsimile transmissions.
- Equipment required to provide telemedicine services.

Furthermore, we ensure providers understand that Humana reimburses for telemedicine services in compliance with AHCA's guidelines:

- Florida Medicaid reimburses a provider who is providing the evaluation, diagnosis, or treatment recommendation located at a site other than where the recipient is located.
- Providers must include modifier GT on the CMS-1500 claim form, incorporated by reference in Rule 59G-4.001, F.A.C.

We have partnered with specific physicians throughout Regions 9, 10, and 11 to provide walk-in primary care and specialty care telemedicine services for their enrollees who need services after-hours or who are unable to get to an office location where the physician is located.

Humana continues to look for opportunities to partner with providers to deliver telemedicine services to improve enrollee access to services. In 2017, Humana developed an educational campaign to alert providers on appropriate requirements of telemedicine and Humana's reimbursement. In effort to educate providers, Humana created a one-page flyer promoting the benefits of telemedicine services, the state-mandated requirements, and Humana's reimbursement.

c. Pharmacy

Network Adequacy

We access pharmacy accessibility evaluations utilizing Quest Analytics for each region using the most current Medicaid membership file as a representation of the population.

Humana's pharmacy network team evaluates network access periodically on the following schedule:

- 4th quarter of each year for the upcoming year
- When requested by specific business areas when network service areas are being reviewed for the upcoming benefit year
- When a major pharmacy chain (> 5% of the network) leaves the network

Accessibility of pharmacy networks are evaluated to determine if networks meet adequacy based on the below standards:

- 1 pharmacy within 5 miles of an urban enrollee
- 1 pharmacy within 5 miles of a suburban enrollee
- 1 pharmacy within 15 miles of a rural enrollee

The following are the percentage of enrollees that must meet the above access standards:

- 90% of urban enrollees must meet access standards
- 90% of suburban enrollees must meet access standards
- 70% of rural enrollees must meet access standards

Compounding Pharmacies:

All pharmacies in the Humana network are able to provide enrollee's with compounded prescriptions. In addition, Humana's mail order pharmacy through PrescribeIT can also provide enrollees with compounded prescriptions. Humana continuously monitors enrollee concerns regarding access to pharmacies which includes compounded prescriptions to ensure there is adequate access.

Over-the-counter (OTC) Benefit

Humana offers an over-the-counter (OTC) program through PrescribeIT. Each enrollee has a monthly household benefit that allows up to a $17.50 coverage for each member of the household to be used toward any items that are offered on the order form. Orders ship to the enrollee's home by USPS or UPS at no charge for shipping.

Out of Network Requests

If new enrollees are utilizing a pharmacy that is not in our network, Humana will continue to allow the prescriptions to process for a period of 60 days during the enrollee's continuity-of-care period. Prior to

the end of the continuity of care 60-day time frame, Humana and the enrollee's provider(s) will educate them on how to access their drug benefit through Humana's participating pharmacy provider network.

d. How Enrollees Access the System

Humana understands that enrollees need convenient, easy-to-use system information so they can readily access appropriate care. Some of the ways enrollees access the system is through enrollee materials such as the enrollee handbook and online provider directory, as well as through access points including the Customer Service call center and Clinical Access Team (CAT). We educate enrollees on the available methods to access appropriate services on Humana's website, their enrollee ID card, and in their enrollee handbook. Enrollees and providers can contact Humana to translate these materials to their language of choice and send to them on demand. Our provider directory, both online and hard copy, gives enrollees ample means of finding a provider who is best qualified and best suits their healthcare needs.

Language Assistance and Alternative Formats **–** Effective communication with enrollees is paramount, and Humana strives to ensure "equality of opportunity" for meaningful access to health care services and activities. It promotes increased compliance and adherence to follow-up treatment, improved use of and access to preventive care, better understanding of covered services, navigation of the complex health care system, and improved enrollee satisfaction.

Humana provides, at no cost, appropriate access to oral interpretation services in 200 languages, video interpretation in 24 languages, including American Sign Language, and translated written materials of vital documents based on threshold languages and auxiliary aids required by disabled enrollees (current and future). Humana follows the Department of Health and Human Services' framework for Limited English Proficiency (LEP) and ADA enrollees for the development of the language assistance and alternative formats section of the Language Assistance and Alternative Formats Services. Below is a link to Humana Accessibility Resources: https://www.humana.com/accessibility-resources.

Humana ensures that all enrollee materials are reviewed using the Flesch-Kincaid Methodology to ensure they are written in a maximum fourth grade reading level and are easily understood (42 CFR 438.10 (5d)). Enrollee materials are printed in a type, style, and size that can easily be read by enrollees with varying degrees of visual impairment. Additionally, all enrollee materials are distributed in English and Spanish, but are also made available in varying alternative formats and foreign languages. We encourage enrollees in every mailing and on our website who need a specific format, such as braille or in a language other than English or Spanish, to request materials by calling Humana Customer Care.

e. New Enrollee Materials

New Enrollee ID Card and Welcome Kit - Enrollees that choose Humana Medical Plan as their preferred plan of choice receive two AHCA-approved mailings: one with their Humana Medical Plan Enrollee Identification Card and one with their New Enrollee Welcome Kit. The Welcome Kit includes a Welcome Letter, Important Phone Numbers List, a Health Risk Assessment Form with a self-addressed envelope, a Consent for Release of Medical Records Form, and a Continuity of Care Form with a self-addressed envelope.

The Welcome Letter introduces new enrollees to the unsecured enrollee website (https://www.humana.com/medicaid/florida/mma), where they can find materials including the Enrollee Handbook and Provider Directories and request free printed copies of any materials by calling Humana Customer Care. The letter also explains enrollment and disenrollment information and discusses each of the items included in the Welcome Kit. These materials direct enrollees to call Customer Care for any questions and concerns on how to access care and benefit information.

Enrollee Handbook - An easy-to-find and easy-to-read handbook is very important in supporting our Medicaid enrollees. Humana places great emphasis on making sure the enrollees can use the handbook at their convenience and in a manner they can easily understand. This includes the reading level, identifying easy-to-find phone numbers, and making the materials available in the language of their choice.

Provider Directories - Enrollees need detailed information on both providers and hospitals when making decisions regarding their healthcare services, so Humana strives to provide this information in an easy to use and accessible format, including the online provider directory. If enrollees are interested in learning more about Humana's physicians, such as their educational background or training, they may use the Physician Finder Plus tool on the Humana website (www.humana.com). We update this tool daily and make it accessible to all visitors to Humana.com, whether they are an enrollee or not, and without needing to log in.

Enrollees will find the "Find a Provider" feature at the top in the Quick Links section and specific links for doctors, dentists, and pharmacies on the middle of the page. This brings them to the search page, where the site prompts enrollees to enter criteria from the options below to find a provider that fulfills their needs:

- Enrollee ID number
- City, State
- ZIP code
- Network
- Provider type/Specialty
- Provider name
- "Sounds Like" provider name
- Group/Facility name
- Type of coverage
- Geographic location
- Geographic distance
- Gender
- Language
- Accreditation – NCQA, ABIM or Board Certification
- Accepting new patients status
- By symptom, condition, or procedure

Humana strives to ensure the information within Physician Finder Plus on humana.com is as accurate as possible. We make regular updates through demographic changes received from provider offices. Providers can report demographic changes in a variety of ways. They can submit changes electronically through Humana.com using the "Manage My Demographics" tool under the Resources tab. Providers

can also email, mail, or fax changes to the Provider Verification Unit. Additionally, providers can submit their changes to their Provider Relations Representative. Enrollees also have the option of alerting Humana to a demographic change by clicking on “Report updated information” on the provider’s details page in Physician Finder. Humana’s Data Collection and Verification team also contacts providers quarterly to give them an opportunity to submit any necessary demographic changes for the online directory.

Humana has built a feedback link within Physician Finder Plus whereby any logged-in enrollee can enter information submitted by a Medicaid enrollee about a specific provider. It collects and reports on two data elements: 1) enrollee’s experience; and 2) enrollee’s comfort with recommending that provider to others. We maintain the reported information for a limited amount of time and then purge it to make sure that the information is up-to-date. The information is only available via the secure portal to ensure only enrollees can submit feedback. Humana also reviews this information to help identify poor-performing providers. If a provider receives five submissions over a 12-month period that are below a score of 2 or below on a 5-point scale, we will refer it to provider relations for review.

Humana also provides a printed provider directory if an enrollee requests it. The directory contains both an English and Spanish section; however, the enrollee can request a directory in other languages by calling Customer Service. Additionally, enrollees can download the printed directory in a PDF format from Humana.com. We update the PDF format directory weekly.

f. Enrollee Access Points

Enrollees may need to access the network in a variety of ways, so Humana offers multiple access points including telephone accessibility, the Clinical Access Team (CAT), and oral interpretation services in 200 languages, to address their needs and preferences. We develop and adhere to stringent performance standards that help us monitor, maintain and report upon the various ways enrollees choose to access the network, while ensuring our providers maintain accessibility standards. We strive to ensure that all enrollees receive timely and appropriate access to care.

Telephone Accessibility - Humana Customer Services staff, available via our toll-free number, TTY/TDD, is in place to ensure enrollees have access from 8:00 a.m. to 8:00 p.m. each business day. We train our Customer Services Representatives (CSRs) to provide prompt, courteous, and accurate responses to a variety of inquiries that help the enrollee access the system, including but not limited to the following: (a) answers to questions regarding benefits and verification of eligibility; including communication of benefit changes; (b) providing assistance with selecting participating providers; (c) answers to prior authorization or claims questions; and (d) acceptance of complaints, grievances, and appeals.

After hours, on weekends, and holidays, the call center utilizes alternate technologies, such as an Integrated Voice Response (IVR) system. When an enrollee connects to the IVR, it asks in both English and Spanish if they would like to speak to a nurse about a care-related issue. If the enrollee says “yes,” it routes the call to Citra, our 24/7 nurse line vendor. If they say no, or simply hold on the line, it routes them back to the IVR. The IVR will allow them to self-serve or leave a message for callback on the next business day.

If Citra receives a non-care-related call and the enrollee would like to leave a message, Citra transfers them directly to the IVR. The automated answering system will permit any caller to leave a message that

includes a name and telephone number without requiring identifiable information such as enrollee ID or Social Security number. A representative will then call them back the next business day.

Monitoring and Reporting

Humana monitors and records all inbound calls, and logs each into our system to assist with any future calls an enrollee places to Humana. We train staff to respond to enrollee questions in all areas, including but not limited to covered services, provider network, and transportation. Calls from enrollees and providers alike are subject to the same call center performance requirements, which we monitor via the Medicaid Volume Report, produced daily.

Workforce Management provides real-time performance reporting on an ongoing basis, reported throughout the day to Operations Managers and Supervisors. This information includes call trending and real-time call and staffing adjustments made to address any identified needs/trends.

- Workforce Management adjusts associates' skill sets to provide adequate staffing at all times.
- We record 100% of all inbound calls received.
- Call and Call Center Representative performance information is housed within internal databases, Automated Call Distribution (ACD), and Workforce Management reporting systems.
- Workforce Management produces call reports, which it provides to the Customer Care Supervisor/ Team Lead. The format is similar to the Medicaid Volume Report, but includes pertinent individual measures.
- The report also addresses associates' use of time while on the phone including:
    - Talk time (time spent on each call with an enrollee/provider)
    - Not ready time (time not taking phone calls)
    - Hold time (time on hold by a caller while the CCS is researching)
- The Customer Care Supervisor/ Team Lead discuss call results with each CCS and provides coaching as needed.

The Call Center Supervisor/Team Lead, on a daily basis:

- Reviews and monitors the Medicaid Volume Report
- Analyzes the report information upon receipt
- Takes appropriate actions as needed based on the report data to adjust call center staff and to address trend impacts noted

The Call Center Supervisor/Associate's Team Lead assesses individual CCS performance on a weekly basis through:

- Side-by-side monitoring
- Monitoring of systems used
- Process followed based on call received
- Interaction documentation

Humana maintains results of the performance assessment in the associate's personnel file.

- Humana also tracks performance measures, as stipulated in the Florida Medicaid Contract, on the Medicaid Volume Report including:
- Call Answer Time: When a Medicaid enrollee calls the Call Center phone number he/she does not get a ring. The call rolls into the IVR system directly. The enrollee has the option to use IVR or opt-out. The call answer time (ASA) is measured in seconds as the time between x and y.

- Wait Time: We determine this from the time the call goes through to the IVR or the caller opts out to get a CCS. Refer to “Avg Wait” on the Medicaid Volume Report. This is the average time in seconds that a caller waited on the queue before a Customer Care Specialist answered the call.
- Abandonment rate: The abandonment rate is determined as follows: total calls disconnected/abandoned before a CCS receives it (ABA) divided by total number of calls offered (Offered). Refer to “ABA %” on the Medicaid Volume Report.
- Blocked Call Rate: The Medicaid Customer Care phone system does not block calls at any time.

Customer Care’s minimum expectation for the overall quality performance score is 95%. The Medicaid Quality Summary Report is tracked at an individual level, which then rolls up into a Call Center Overall Monthly Summary Report. The Medicaid Quality Summary form is both the template and the report.

- On a daily basis, a Quality Associate (QA) pulls call recordings for a specified number of CCS’s for a total of 5 observations per associate per month.
- A quality audit is completed at the individual level (by associate).
- All individual quality audits are rolled-up together to produce the Medicaid Monthly Quality Summary Report.
- Quality results are reported up to Senior Leadership (Service Operations Vice President and Senior VP & Chief Service & Information Officer) on a weekly basis for their review, comments, and feedback to the directors of the Customer Care operational area.

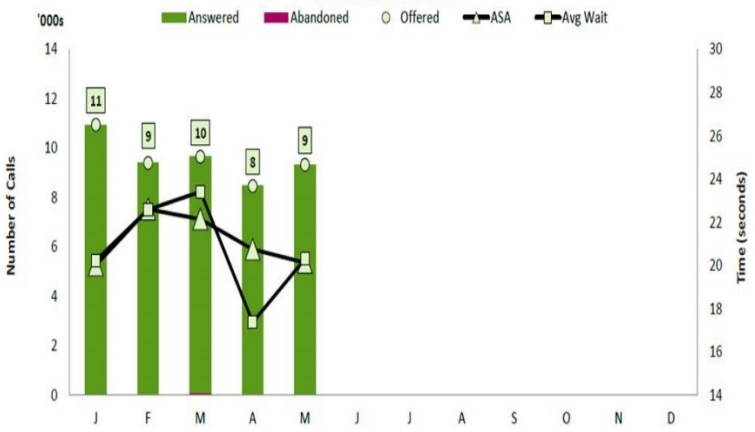
Clinical Access Team (CAT) - Humana has a Clinical Access Team (CAT) that facilitates access to care when we identify a clinical issue related to enrollee access. The CAT consists of three non-clinical specialists who process inbound calls and ten RNs who manage and resolve the cases. Issues may range from appointment availability to inability to locate a provider. Once an inquiry is received, a CAT associate will review and telephonically contact the enrollee or appointed representative to acknowledge receipt and to clarify the issue. The CAT associate may contact providers involved in the access issue to determine any extenuating circumstances, to offer assistance to possible barriers in resolving the issue, and to work with internal departments, such as Provider Relations, to facilitate a resolution. The CAT associate also provides guidance and education to promote better health outcomes for enrollees.

Performance Metrics

Here are the results of Humana’s customer service performance metrics as of May 2017, including Service Level and Abandon Rate, Contractual SLA Performance, and Enrollee Calls; as well as Clinical Access Team (CAT) results:

Medicaid Customer Service: Service Level and Abandon Rate

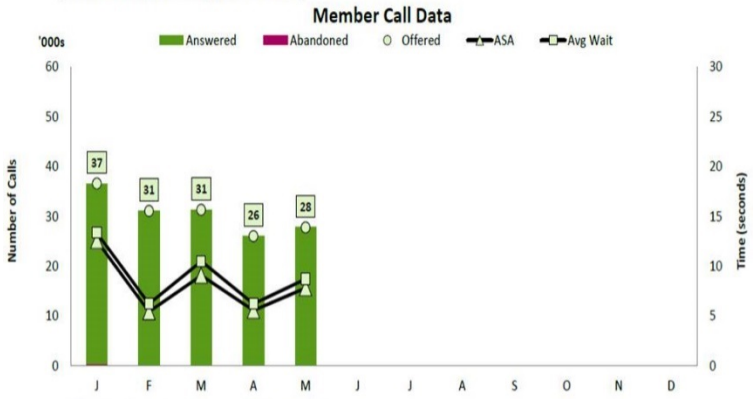
Florida - MMA - Regions 1 & 6:



Call Center - Contractual SLA Performance:

Metric/SLAs & Criteria (Member calls)	Dec	Jan	Feb	Mar	Apr	May
% Answered under 30 seconds	96.9%	90.5%	87.8%	89.1%	89.8%	90.3%
(ASA) is not to exceed 30 seconds	14	20	23	22	21	20
Average Call Blockage rate not to exceed .5%	0.0%	0.0%	0.0%	0.0%	0.0%	0.0%
Call Abandonment rate not to exceed 3%	0.3%	0.6%	0.7%	0.9%	0.7%	0.6%

Florida - MMA - Regions 9 - 11:



Call Center - Contractual SLA Performance:

Metric/SLAs & Criteria (Member calls)	Dec	Jan	Feb	Mar	Apr	May
% Answered under 30 seconds	96.8%	90.8%	96.4%	95.2%	96.5%	95.2%
(ASA) is not to exceed 30 seconds	5	13	5	9	6	8
Average Call Blockage rate not to exceed .5%	0.0%	0.0%	0.0%	0.0%	0.0%	0.0%
Call Abandonment rate not to exceed 3%	0.4%	0.9%	0.6%	0.8%	0.6%	0.7%

CAT Team Results

Over the past 12 months (7/2016 – 6/2017) with Key Performance Indicators (KPIs) for the commercial, Medicare and Medicaid population:

- Overall access cases: 99.2% compliant w/inquiry resolution & closure w/in 14 calendar days
- Overall service level (80% of calls answered within 30 seconds): 82%
- Overall abandonment rate (less than 5% of calls abandoned): 5%

At least monthly but as needed, the Plan reviews enrollee complaints from the CAT and other available sources to identify and trend complaints regarding access to care. We also monitor complaints received by our Critical Inquiry and Grievance and Appeals Departments on a monthly basis to identify and remedy access to care issues (see Table 4).

Table 4: Clinical Access Team and QI Access Complaints per 1000 Enrollees – 2016-2017

	Medicaid	
Time Period	**# of Complaints**	**Complaints/ 1000 enrollees**
2nd QTR 2016	3047	0.41
3rd QTR 2016	3049	0.41
4th QTR 2016	2390	0.32
1st QTR 2017	2588	0.35

Source: Clinical Access Team Reports and complaints received directly in market Network Administration and Quality Improvement

7. MAKING IT EASY TO DO BUSINESS WITH HUMANA

Humana strives to remove barriers and administrative burdens providers often face when working with Managed Care Organizations (MCOs). Humana's leadership team, including our local staff in Florida and our corporate staff in Kentucky, believe that in order to understand and adequately address the issues providers face, we must start with a strong provider engagement model, which is why we invest in efforts to partner with our providers and support them with the tools they need to succeed such as educational materials, face-to-face training, and claims resolution. We empower our providers to deliver a robust, high-quality, clinically integrated health care model to our Medicaid enrollees. Humana has a proven record of quality initiatives and successful enrollee outcomes since serving the Florida Medicaid population over the past 20 years. For example, Humana ranks second in NCQA Quality rankings amongst MMA Medicaid plans in Florida.

Our investment in staff and information systems technologies allows us to support our providers efficiently and cost- effectively. The support providers receive from Humana's provider relations team across our spectrum of products in Florida, which includes Medicaid, Medicare, and Commercial lines of business, enhances our connection to the provider community. Often when we bring on a provider for Medicaid services, they have already had exposure to Humana with other lines of business. This diversity gives Humana a larger volume of relationships with providers, more frequent interactions between our staff and provider staff, and fosters more sophisticated, aligned, performance-based financial arrangements aimed at improving quality outcomes while containing cost.

a. Gauging and Addressing Barriers to Providers

Humana's longstanding relationships with provider associations contribute to our ability to maintain engagement with providers. Our partnerships with physicians, hospital, long-term care, and ancillary provider associations allow for open and ongoing communication that allow us to gauge and address issues providers encounter while working with Humana. Provider associations are avenues for Humana to obtain feedback on opportunities for improvement from the provider community, as well as provide educational information and communications. Humana engages with provider associations through regularly scheduled conference calls and meetings, which Humana's senior leadership team frequently

attend. Association meetings are a particularly effective way to work with medical and long-term care providers on issues that are unique to these providers, such as Medicare crossover claim processes.

- A Humana leader was recently elected to the Florida Assisted Living Association (FALA) advisory board, as well as the advisory board to the Florida Area Agencies on Aging. This relationship has allowed Humana to play an instrumental role in improving coordination between various Councils on Aging.
- Humana's market director and national Medicaid director also meet monthly with Leading Age/ Florida Association of Homes for the Aging to work through open items, such as provider concerns, possible innovations to payment arrangements and stay updated with the Nursing Facility and Assisted Living Community.
- Humana leaders attend the annual Florida Hospice and Palliative Care Association (FHPCA) meeting, where we have developed an improved understanding and relationship of hospice providers. During the most recent meeting with FHPCA, we received positive feedback on our claims and referrals process. As a result of this meeting, we also recognized the need from hospice providers to better understand the coordination between medical and long-term care as it relates to claims, authorization, and enrollee responsibility. We are developing a quick reference guide for these providers.

b. Internal Engagement Support Model

Our provider relations staff meets on a bi-weekly basis to discuss trends, initiatives, and opportunities to train and educate front-line provider relations representatives. Educational opportunities include Medicaid-related topics such as AHCA alerts, fee schedule changes and agenda topics from AHCA monthly calls. This meeting is also used as a forum to discuss best practices and provider-specific challenges, such as OB/GYN, Ambulatory Surgery Center, Hospice, Home Health or Adult Day Care related. Additionally, provider relations staff meetings provide an opportunity for Humana's front-line Provider Relations Representatives to share the challenges our providers are experiencing with provider relations leadership. These meetings allow Humana provider relations leaders to obtain front-line information to inform the development of new educational materials or the presentation of an issue or concern to the Provider 360 Committee for consideration. See the visual representation of our provider engagement model below:

The diagram below conveys Humana's provider engagement model. Our model delivers cross-functional support to our providers to ensure we are aligned in achieving our mutual goal of improved quality outcomes for our enrollees through administrative simplicity, financial partnership, and provider satisfaction.

Beyond our established relationships with our providers, Humana is continually advancing our internal infrastructure to support provider engagement and satisfaction. Humana has established the Provider 360 Committee, a multifunctional team representing provider support areas which is chaired by Humana's Medicaid Market Vice President. The committee's objective is to review all functional areas to improve provider experience through review of provider metrics, identification of process improvement opportunities, and development of provider education initiatives and materials. The Committee has representation from:

- Market Executive Leadership
- Regulatory Compliance (MMA and LTC)
- Market Provider Relations/Contracting (MMA and LTC)
- Market Hospital Contracting
- Market Service Alignment Managers
- Provider Call center
- Provider Directory
- Claims Processing (MMA and LTC)
- Availity Liaison team
- eHUB team
- Physician Performance Management
- Market Quality Operations
- Market Clinical leaders
- Corporate Medicaid Implementation
- Critical Inquiry team
- Provider Communications

- QIC Committee

c. Simplify the Administrative Burdens

Humana's network is built on the evidence-based belief that quality of care, the patient centered medical home concept, preventative and early intervention, widespread access to contracted network providers, communicative provider and subcontractor partnerships that are based on mutual clinical goals and administrative simplicity, and widespread use of Electronic Health Records, are all now imperative in our healthcare delivery system, and a critical component of maximizing enrollee healthcare outcomes. With these fundamental concepts in mind, we work collaboratively with our external network provider partners and subcontractors and internally with our Medical Management, Medicaid Operations, Quality, Pharmacy, Customer Service, and Finance Departments. We make it easy for providers to find the materials they need by providing multiple sources for policies, training information, and Humana's internal systems. The following sections provide more details about our technology and informational resources.

d. Electronic Health Records (EHR)

Humana's ultimate goal of supporting our providers in delivering quality and appropriate care to our enrollees is supported by provider electronic health records (EHRs) and the Florida Health Information Exchange. Humana has a long history of investing in and promoting state of the art technology to facilitate timely and seamless transfer of information.

Humana has adopted various mechanisms to identify Florida providers who do and do not utilize EHRs, including:

- Conducting surveys of network providers
- Provider relations interaction with providers
- Assessing AHCA and CMS Eligible Professionals/Eligible Hospitals Info Links and the AHCA and CMS EMR List Links

Humana understands there are critical barriers to impacting EHR usage:

- High cost to implement EHR technology
- Strict maintenance/compliance requirements
- Administrative burden
- Understanding meaningful use

We educate our providers on the importance of using electronic health records and demonstrating meaningful use through the following mechanisms:

- Provider handbook
- Link to Florida Medicaid EHR Incentive Program website directly from Humana's provider Web portal
- Link to Florida's EHR and HIE newsletter, "Going Digital News Bytes" directly from
- Humana's provider Web portal

Since 2014 Humana has developed a strong data collection process in order to understand the network landscape relative to EHR usage. The table below shows year over year results from 2014 through 2015 and 2015 through 2016.

All Eligible EP & Hospitals 4th Qtr 2016-Full Dentist/Psych/all other spec-regions										
ALL SPEC/ALL LOCATIONS	DENOMINATOR	NUMERATOR	2016 4th Qtr	2016 3rd Qtr	*4q 2016 % of Improvement from 2015*	2015	2014	2015 % of Improvement from 2014	Goal	*4q diff from goal*
Region 1	2656	1456	54.82%	53.61%	*15.19%*	38.42%	34.10%	4.32%	55%	*0.18%*
Region 6	6229	2390	38.37%	34.27%	*9.79%*	24.49%	29.41%	-4.92%	60%	*21.63%*
Region 9	4153	1930	46.47%	46.14%	*11.65%*	34.49%	8.76%	25.73%	60%	*13.53%*
Region 10	3865	1488	38.50%	38.72%	*8.82%*	29.91%	10.10%	19.81%	50%	*11.50%*
Region 11	7928	2831	35.71%	35.73%	*11.97%*	23.75%	18.20%	5.55%	45%	*9.29%*
Total	24831	10095	40.65%	**39.42%**	***11.20%***	**28.23%**	-	-	-	-

Although Humana showed improvement of EHR usage throughout our provider network, in order to further bolster results Humana developed a one-page educational flyer to help providers better understand the importance of EHR and meaningful use. In addition, we developed a process improvement plan for 2017 through 2018 which includes the following steps:

- Provider Relations Representatives will deliver the EHR flyer to all PCP centers and OB/GYN offices during routine monthly visits
- Fax blast the EHR flyer to all other applicable provider types
- Ensure all subcontractors receive information from the flyer as an example of Humana's efforts and report back the results of their EHR outreach efforts for their downstream providers.

e. Assistance and Communication Tools Provided to the PCPs

Humana has developed an array of education and training materials for our providers. These tools allow providers to quickly find the answers they need so they can spend more time helping enrollees with their care.

Web-Based Tools

Humana offers providers a number of web-based business solutions to ensure they are able to interact with us on an optimum basis. Providers can access our portals, Humana.com and Availity.com, for services such as:

- Health and wellness programs
- Provider publications (including provider manuals)
- Provider training
- Quality resources
- Clinical practice guidelines
- Pharmacy services
- Claim resources
- Verification of enrollee eligibility and benefits
- View enrollee ID cards
- Review care alerts and enrollee summaries
- Submit referrals and preauthorization requests
- Send attachments (i.e. medical records)
- Check claims status and remittance information
- Access to the Medicaid Long Term Care Program information

Providers can obtain support from Humana for web based training and assistance through a variety of channels. During orientations and ongoing provider visits they may request their Provider Relations Representative assist with training, contact us via a dedicated email box or by at enrolling in one of our web based training sessions published on Humana.com.

Florida Medicaid Provider Manual

Humana's provider manual gives provider's information and guidance on a number of topics such as:

- Program Description
- Covered Services
- Emergency Service Responsibilities
- Child Health Checkups
- Provider Complaints
- Grievance System
- Chronic and Complex Conditions
- PCP and Other Provider/Subcontractor Responsibilities
- Telemedicine
- Delegation /Subcontractor Functions
- Florida Health Information Exchange
- Preauthorization and Referral Procedures
- Medical Record Requirements
- Claims and Encounter Submission Protocols and Standards
- Cultural Competency Plan
- Enrollee Rights and Responsibilities
- Fraud and Abuse Policy
- Health, Safety and Welfare
- Patient-Centered Medical Home (PCMH)
- Medicaid Advisory Panel
- Provider Rewards and Incentives (if applicable)
- Provider Resource Website
- Provider Training
- Availity
- Helpful Numbers

Quick Reference Guide

Providers and members of their office staff are provided a region specific Quick Reference Guide that is designed to assist them with information on daily topics like frequently called phone numbers, important addresses, vendor network contact information by specialty type, medically necessary services, expanded enrollee benefits, frequently used web addresses and a sample enrollee ID card.

We deliver Quick Reference Guides to providers during orientations and ongoing provider visits, and also make them available on our website.

Provider Newsletters

Humana publishes quarterly provider newsletters on its portal to assist providers with staying current with policy changes, quality initiatives, industry changes and medical protocols.

Additional Provider Reference Materials on the Web

Humana providers have access to a variety of tools on our website. The materials are current and up-to-date to allow providers to reference them on their schedule. Materials on the website include:

- Medicaid appendix to the provider manual
- Enrollee handbook
- Quick Reference Guide (including a version for assistive care services)
- Preauthorization and Notification List (PAL)
- Prescription Drug Guide
- Provider newsletters
- Compliance-based training modules and frequently asked questions and answers
- Obstetrician and gynecologists training
- Healthy Behaviors program including smoking cessation
- Quality resources such as information on child health check-ups, oral health for children and adolescents, prenatal and postpartum care for women and HEDIS measures overview
- Information on how to access our LTSS vendor portal
- Home Health Visit Information

Compliance-Based Training (All Provider Types – PCPs, Specialists, Subcontractors, Ancillaries and Hospitals)

Providers are expected to adhere to all training programs identified by our contract and Humana as compliance-based training. This includes agreement and assurance that all affiliated participating providers and staff members are trained on the identified compliance materials.

As part of the training requirements, providers must complete annual compliance training on the following topics:

- Medicaid Provider Orientation
- Compliance and Fraud, Waste and Abuse
- Cultural Competency
- Health, Safety and Welfare (Abuse, Neglect and Exploitation)

Providers and members of their office staff can access these online training modules seven days a week, 24 hours a day on both our website and Availity portal.

We strive to make it easy to do business with Humana. Through our meetings with providers and provider associations, we learn about and address the barriers providers face in their day-to-day activities. By hiring and promoting staff that dedicated to establishing a relationship with our providers, we ensure our providers are never without a support network. By pioneering simplicity, we allow our providers to spend more time focusing on our enrollees. Finally, Humana makes every effort to support and educate our providers so they can accomplish our common goal: providing quality care to our enrollees. That's also why we have established Quality Care Initiatives including efforts to better coordinate between departments and manage complex cases and diseases.

8. HUMANA'S QUALITY OF CARE INITIATIVES

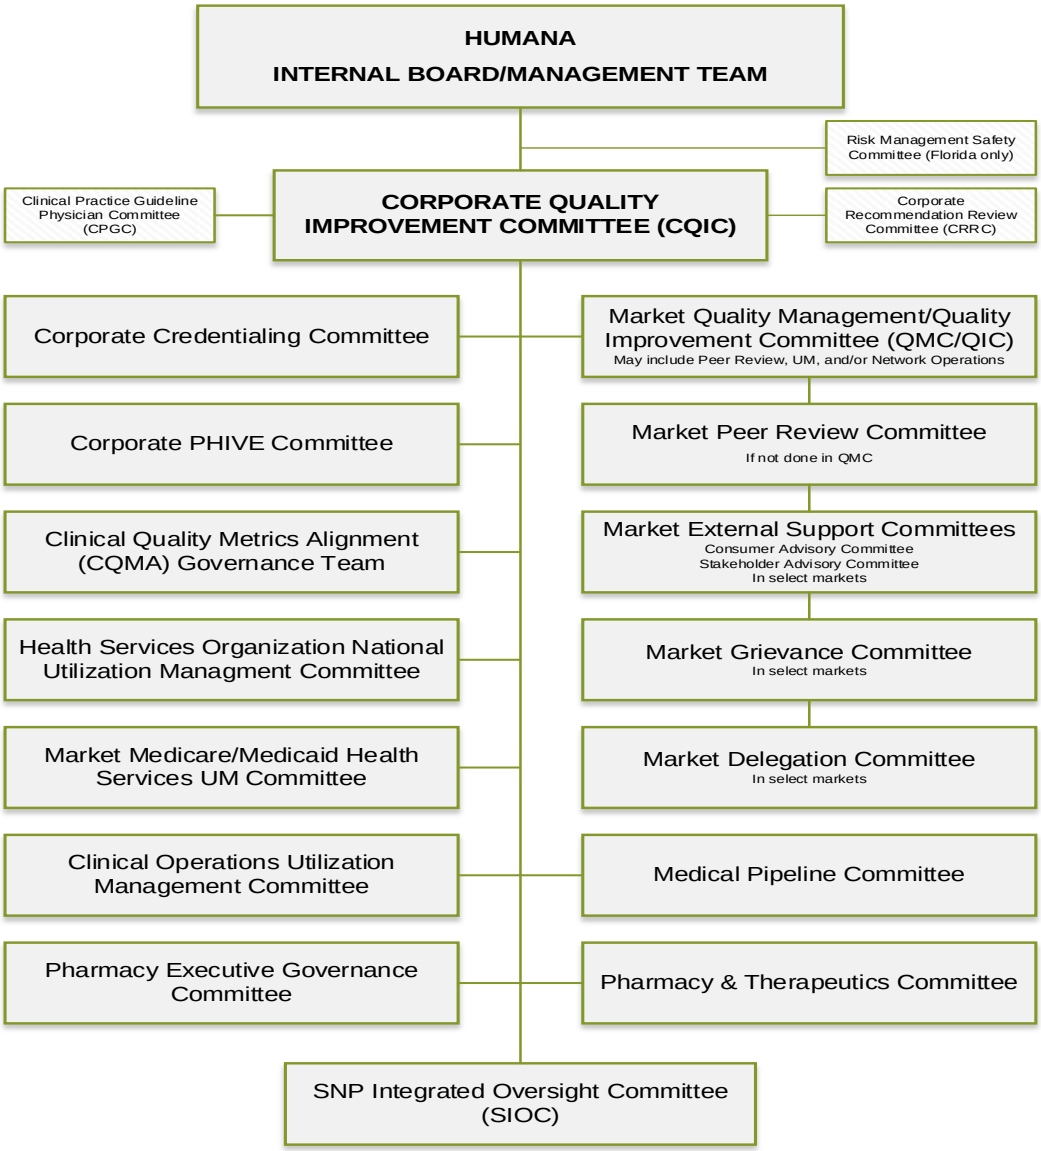
Humana serves its provider and enrollee population with a steadfast focus on improving outcomes, delivering exceptional access to care to enrollees, driving improvements in population health, all while reducing healthcare costs through well-being improvements. We do this through constant improvements to our internal processes, support mechanisms and ongoing initiatives including internal coordination across lines of business, and a strong focus on disease management and complex care.

a. Internal Department Coordination and Infrastructure

A solid infrastructure and dedicated leaders with quality improvement (QI) expertise ensure high quality comprehensive, coordinated healthcare to all enrollees. Humana's overall vision supports continuous quality improvement throughout the organization by a solid infrastructure and dedicated leaders with QIP expertise to ensure high quality, comprehensive and coordinated healthcare to all enrollees, across all plans. Corporate leadership on the Corporate Quality Improvement Committee, delegated by the Board of Directors, provides operational oversight for the QI program activities and recommends policy decisions by planning, analyzing and evaluating the activities. Quarterly and annually, the Quality Management Committee and the Florida Medicaid Quality Improvement Committee, report the Medicaid activity to include accomplishments, barriers and improvement initiatives.

The Internal Board/Executive Committee has ultimate responsibility for oversight of quality improvement activities. Members of the Internal Board/ Executive Committee include:

- President and Chief Executive Officer
- Executive Vice President and Chief Operating Officer
- Senior Vice President and Chief Medical Officer
- President, Employer Group Segment and Government
- President, Retail Segment
- President, Clinical Care Services
- President, Humana Pharmacy Solutions
- Senior Vice President and Chief Consumerism Officer
- Senior Vice President and Chief Strategy Officer
- Senior Vice President and Chief Human Resources Officer
- Senior Vice President and Chief Financial Officer
- Senior Vice President and Chief Innovation Officer
- Senior Vice President and Chief Information Officer
- Senior Vice President, Corporate Affairs
- Senior Vice President, Medicare Operations
- Senior Vice President and General Counsel



The Corporate Quality Improvement Committee (CQIC) oversees the quality improvement program, as delegated by the Internal Board/ Management Team. The Corporate Quality Improvement Committee's purpose is to use a centralized approach to the Quality Improvement program by forming one corporate committee that assumes the responsibility for the Quality Improvement Program of Humana. The CQIC is chaired by the Corporate Chief of Quality.

- The CQIC provides operational oversight for the Quality Improvement program activities and recommends policy decisions.
- The CQIC allocates a forum for members of the Committee to engage in review, coordination and direction of the Quality Improvement program.
- The Committee is charged with overseeing the establishment and integration of the Quality Improvement program and measurement of quality activities on a regular basis.
- The CQIC shall be comprised of voting members showcasing multi-specialty representation of the centralized and regionalized areas of operations. Voting members shall be stewards of

Humana's mission. Their recommendations are expected to be based on sound operational data, in support of member service, and the overall good of the markets serving Humana members.

The CQIC shall undertake the following functions and responsibilities:

- Oversee reporting of data from centralized/regionalized departments on a consistent basis, to include HEDIS improvement, CAHPS surveys, member satisfaction, disease management programs, appeals and grievances, credentialing, utilization management, member safety issues, customer service and many other quality and satisfaction metrics.
- Engage in discussion of such data with the representative and identify any opportunities for improvement.
- Improve communications between the markets and the centralized/regionalized operational areas and provide consistent reporting of data.
- Review, provide guidance and make recommendations concerning clinical guidelines, policies and procedures and Quality Improvement standards and related legal, regulatory and accreditation requirements.
- Provide guidance in defining the scope, objectives, activities and structure of Humana's Quality Improvement Program.
- Review ongoing reports from departmental quality improvement activities and determine the extent to which they meet standards and requirements, as defined in the Quality Improvement Program Description.
- Provide guidance to management teams and staff related to quality improvement priorities and projects to include Medicare Quality Improvement Projects (QIPs) and Chronic Care Improvement Programs (CCIPs).
- Monitor organizational progress in meeting Quality Improvement Program goals and objectives as outlined in the Quality Improvement Work Plan and evaluate the overall effectiveness of QI Program on an annual basis.
- Review, approve and update, as indicated Quality Improvement Program Descriptions, Quality Improvement Annual Evaluations, and UM program documents on an annual basis.
- Review, prioritize and align the Quality Improvement Work Plan with the strategic objectives of the organization annually.
- Review and approval of Special Needs Plans (SNPs) Program Descriptions, Models of Care, and Models of Care Evaluations.

Members of the CQIC include, but are not limited to representatives from:

- Accreditation
- Appeals and Grievances
- Behavioral Health
- Claims
- Clinical Policy
- Clinical Programs
- Clinical Strategy
- Commercial Product UM
- Compliance
- Consumer Messaging
- Credentialing
- Customer Service

- Disease Management
- MHSO Product UM
- National Network Operations
- Pharmacy
- Provider Communications
- Provider Contracting
- Quality Operations, Compliance and Accreditation
- Risk Management
- Sales/National Accounts
- Specialty Benefits
- Stars, QRS and Medicaid Improvement

Behavioral Health Humana incorporates behavioral health aspects into the QI program. The Medical Director and Quality and Accreditation Director from the behavioral health provider are involved in the mental health aspects of the program which includes the management of substance abuse services. The Behavioral Health Medical Director, or designee, may participate and advise the Corporate Quality Improvement Committee on behavioral health issues. Monthly collaboration work groups are conducted between the delegated Managed Behavioral Health Organization (MBHO) and the Health Plan leadership.

Protected Health Information and Vendor Ethics (PHIVE) Committee is a corporate committee created to protect the privacy of Humana members and direct the ethical behavior of vendors. The PHIVE Committee reviews the handling of identifiable and de-identifiable member data and monitors interaction with vendors to promote the highest ethical standards. The PHIVE Committee meets monthly and reports to the CQIC. Members of the PHIVE Committee may include representatives from:

- Privacy Officer (chair)
- Pharmacy Solutions
- Physician Review
- Market Vice President
- Law Department
- Regulatory Implementation
- National Network Operations
- Technical Services Group
- Personal Nurse
- Insurance and Risk Management

Technology Assessment Forum (TAF) is chartered to create Humana Medical Coverage Policies for new and emerging technologies and to review existing policies on a regular basis. The committee's purpose is to verify that Medical Coverage Policies are evidence-based and facilitate consistency in clinical decision making, mitigate legal and financial risk, and support the goals of Humana to provide guidance to its consumers. Humana Medical Directors are the only voting members of this committee. The committee is chaired by the Medical Director for Clinical Policy Development or designee and meets at least quarterly. In addition to the voting Humana Medical Directors, members of TAF may include non-voting representation from:

- Claims Policy
- Clinical Claims Review
- Clinical Programs

- Customer Service
- Health Guidance Organization
- Humana Military Health Services
- Legal Department
- National Contracting
- Product Strategy
- Provider Contracting
- Additional representatives as appropriate

Following the TAF meetings, multiple departments are involved in implementation activities in an effort to ensure our prior authorization and claims systems and processes are congruent with our medical coverage policies. System and staffing impact decisions and timeframes are tracked through the Prior Authorization (PAL) Core team on SharePoint.

Medical Pipeline Committee is chartered to discover and research new and emerging medical technologies, with the purpose of developing a strategy, determining the expected financial impact around these new technologies, and distributing information to other departments throughout Humana. Medical technologies include, but are not limited to, medical devices, professional society recommendations, CMS coverage updates, and laboratory and genetic testing. The Medical Pipeline Committee currently refers information to the following departments: Technology Assessment Forum, Provider Contracting, Lab Pay Zero Initiative, Quality Operations Compliance and Accreditation, Pharmacy, Healthcare Economics, Claims, Provider Contracting, Product Development, and Medicare. The committee meets at least quarterly and publishes an update of activities that is distributed throughout the company. The Committee also issues alerts around technologies that may be of an urgent nature that may result in high utilization and/or high financial impact. Medical Pipeline Committee members may include representatives from:

- Clinical Policy Development
- Technology Assessment Forum
- Healthcare Economics
- Genetic Guidance Program
- Additional representatives as appropriate

Pharmacy and Therapeutics (P&T) Committee has a responsibility to review and make decisions about the appropriate use of drugs, biologicals, and select non-drug pharmacy-related products. The P&T Committee reviews policies that guide exceptions and other utilization management processes, including drug utilization review program, quality improvement program,, quantity limits, generic substitution, and therapeutic interchange. This charge may be relevant in many contexts including, but not limited to, clinical edits, drug utilization review, consumer programs, contracting, and networks. The Committee may render decisions through motions or may play an advisory role depending on the issue. Ultimately, the goal of the Committee is to confirm that proper decisions are made regarding drug access and the overall value of the benefit as it pertains to drugs, biologics, and select non-drug products.

- The co-chairs designate voting members of the P&T. Those persons utilized as consultants on various issues are considered non-voting. Other non-voting stakeholders for relevant agenda are invited at the discretion of P&T.
- Within the P&T Committee membership, there is at least one voting external physician member and at least one voting external pharmacist member who are experienced in geriatrics and/or

the care of disabled individuals. Neither may be employed by nor have any business interest in Humana.

- The P&T meets at least quarterly. Meetings are held via conference call.
- The voting members of the P&T Committee must be free of conflict of interest with any P&T agenda, and must state any new potential conflicts of interest prior to discussion. All voting members must also sign a statement of conflict of interest verifying either no conflict or disclosure of conflict, if it exists, at least annually. Any consideration of voting for members who have stated a conflict of interest will be made with consultation with the Humana Ethics and Compliance office prior to granting of such privilege.
- The P&T Committee reports up to the Vice President of Pharmacy through the governance structure.

Pharmacy Executive Governance Committee (EGC) The oversight authority of the Pharmacy QM Program is the Pharmacy Executive Governance Committee and consists of senior leaders within the company. The committee has the authority to make decisions and allocate resources for the Pharmacy QM Program. Additionally, the Pharmacy Executive Governance Committee defines the scope, objectives, activities, and structure of the QM Program. The Quality and Performance Improvement Program Description (QIPD) is reviewed by the Pharmacy Executive Governance Committee at least annually and updated as necessary. The QIPD is approved annually by the President, Humana Pharmacy Solutions; Director, Pharmacy Professional Practice and Clinical Operations; Director, Quality, Process, Learning, Accreditation and Policy; and Director, HPS Clinical Strategies.

Pharmacy Executive Governance Committee holds oversight of the quality-related programs and initiatives throughout Humana Pharmacy Solutions. It uses a centralized approach to monitoring and improving the process and outcomes for the varied areas that comprise Humana's Pharmacy Solutions program. The committee defines the scope, objectives, activities, and structure of the QM Program and provides operational oversight for the program activities and recommends policy decisions. The committee has the authority to make decisions and allocate resources for the QM Program.

The scope of the committee is to:

- Improve patient safety
- Impact value to customer, member, and health plan
- Enhance member, provider, and customer experience in relation to Pharmacy benefits
- Provide committee oversight of key Pharmacy processes and outcomes
- Discuss data, identifying barriers and opportunities for improvement
- Promote communication between operational areas and consistent trending and reporting of data
- Approve and update, annually, the Humana Pharmacy, Inc. Program and Evaluation
- Facilitate the integration of operational processes across the pharmacy
- Provide guidance to staff on quality management priorities and projects
- Monitor progress in meeting quality improvement goals and corrective actions
- Maintain approved minutes and other records of all committee meetings
- Monitor and enforce compliance with Accreditation Standards

Key functions of the EGC include:

- Allow committee representatives or their designees to report on quality performance of their respective areas
- Facilitate integration of operational processes across Humana Pharmacy Solutions by planning, analyzing, and evaluating quality improvement activities
- Promote objective and systematic monitoring and evaluation of consumer and client health services and facilitates compliance with regulatory requirements
- Provide status reports to the CQIC at least annually
- Meet at least once quarterly

Voting members are appointed by the Segment VP and President, Humana Pharmacy Solutions, and may include representatives from:

- Business Development
- Clinical Programs (Commercial and Medicare)
- Commercial Sales Segment Support
- Compliance
- Consumer Messaging
- Finance and Analytics
- Health Economics
- Human Resources
- Mail Order Pharmacy
- Specialty Pharmacy
- Pharmacy Professional Affairs
- Pharmacy & Therapeutics
- Pharmacy Contracting
- Pharmacy Networks
- Service Operations
- Environmental and Safety
- Quality, Process, Learning and Accreditation

Reporting Requirements for the PEGC include, but are not limited to:

- Accuracy
- Dispensing Accuracy
- Distribution Errors (External)
- Privacy Breach Metrics
- Call Quality
- Access to Service
- Prescription Turn Around Times
- Call Center Metrics
- Regulatory Compliance
- Satisfaction: Consumer and Client Pharmacy Networks
- Safety and Risk
- Risk Management

- Environmental and Associate Safety
- Quality Improvement Projects

The Member Safety Program is a component of Humana's Quality Improvement Program, which falls under the direction of the Corporate Quality Improvement Committee (CQIC), as delegated by Humana's Internal Board/Management team. The impact and effectiveness of the program is reviewed throughout the year by the CQIC according to the Quality Improvement Work Plan. The scope of the program includes all Humana members, providers, and associates unless noted otherwise.

The CQIC is in a unique position to not only review safety initiatives throughout Humana, but also to identify areas of priority focus for the company that aligns with national safety initiatives. Operational oversight of the Member Safety Program is within the scope of the Quality Operations, Compliance and Accreditation (QOCA) Department.
The Four Key Areas of Focus designated within the Humana Member Safety Program are as follows:

- 30-Day Readmissions
- Fall Prevention
- Medication Errors
- Inpatient and Surgical Complications
- Diagnostic/Therapy Radiological Services

Humana is actively involved in monitoring and improving safety by providing members with the tools and information necessary to decrease the likelihood of adverse events. Humana has developed a written Member Safety Program Description that is approved by the Corporate Quality Improvement Committee (CQIC). Member Safety reports quarterly to the CQIC to define and monitor safety initiatives which may vary with individual Markets.

Clinical Operations Utilization Management Committee provides oversight of clinical compliance activities impacting Clinical Operations. This committee supports more effective collaboration between leaders of all Clinical Services Programs performing utilization management and also includes representatives from Risk, Legal and Compliance.

The goal is to ensure a robust compliance committee via:

- Periodic meetings with key stakeholders to identify, discuss and mitigate risks related to utilization management;
- Creation of a forum to efficiently track key risk areas, providing an opportunity to brainstorm and discuss opportunities for improvement;
- Strengthening of the partnership/relationship between business operations and the Legal/Risk/Compliance;
- Monitor the performance of all delegated entities, including tracking and trending of data results over time
- Monitor deficiencies in the delegated entities' processes and to set priorities for corrective action plans in conjunction with the Delegation Compliance Department; and
- There will be standing agenda items as well as a running list of open issues and projects that will be developed to discuss updates/status.

The Committee conducts review and analysis of clinical compliance related metrics, nurse inter-rater reliability assessment activities, Corrective Action Plans (CAPs), regulatory updates, compliance

related process/workflow changes, and quality monitoring and evaluation of effectiveness of the program. The committee is responsible for identification of improvement opportunities and development of appropriate corrective actions and compliance improvement interventions. The Committee is co-chaired by the Corporate Commercial Compliance Manager and the Clinical Operations Compliance Manager and meets monthly. The committee reports to the Corporate Quality Improvement Committee. Members of the Committee may include:

- Corporate Commercial Compliance Manager (co-chair) and Director
- Corporate Medicare and Medicaid Compliance Managers
- Clinical Operations Compliance Manager (co-chair), Compliance Consultants and Compliance Analyst
- Corporate Director of UM, CM and Specialty CM Programs
- Directors of Clinical Intake, Clinical Claims Review and Case Management
- Clinical Operations Process Managers, Relationship Managers and Performance Managers, including leaders from Humana Behavioral Health, Clinical Access Team, Delegation, Transplant, Genetic Guidance, and Neonatal Intensive Care Programs
- Legal and Risk Representatives
- Clinical Learning and Development
- Continuous Improvement and Quality
- Clinical Policy Representatives and Senior Regional Medical Director
- Other support staff and guests as deemed necessary

Corporate Credentialing Committee is responsible for review and assessment of practitioners utilizing appropriate standards for credentialing, re-credentialing, and de-credentialing. Credentialing for the company occurs as a regional function in Cincinnati and Louisville. There is a Credentialing Committee in Louisville (which combines Cincinnati and Louisville credentialing activities), one in Florida and one in Puerto Rico. Credentialing and re-credentialing data are presented to the Corporate QIC.

Physicians and other healthcare professionals participate on the Credentialing Committee, but only physician members have voting privileges. The Credentialing Committee is chaired by a Humana Medical Director, or designee, and meets monthly.

Members of the Credentialing committee include representatives from:

- Humana Medical Director or designee (chair)
- Credentialing
- Practicing network physicians

Corporate Recommendation Review Committee (CRRC) makes the final decision for Humana regarding recommendations for provider terminations for quality of care, received through the peer review process. The CRRC may affirm, modify or reverse the recommendation, or remand the matter back to the peer review committee for additional evidence. The CRRC is chaired by the Corporate Chief of Quality, with the majority of members being physicians. Members may include:

- Corporate Chief of Quality
- Humana Medical Directors
- Director of Quality Operations Compliance and Accreditation
- Director of National Network Operations or Vice President of Provider Center of Excellence
- The CRRC reports up through the CQIC

Quality Management Committee (QMC) is responsible for reviewing and evaluating aspects of preventive and clinical care at the market level. The QMC is responsible for review of market specific preventive health and clinical study initiatives, and/or focused studies. Peer review functions may be handled in QMC or by a separate Peer Review Committee. The QMC is empowered to develop appropriate corrective actions and quality improvement interventions. A Humana Medical Director or a physician designee chairs the QMC, which includes physician members who are actively practicing in the provider network. The QMC meets at least bi-annually or as often as needed. Members of the QMC may include representatives from:

- Medical Director or physician designee (chair)
- Practicing Network Physicians
- Quality Operations, Compliance and Accreditation
- Clinical Programs
- Risk Management
- Additional representatives, as appropriate

Florida Medicaid Quality Improvement Committee The Florida Medicaid Quality Improvement Committee (FL MMA QIC) provides oversight of Quality Improvement program activities and clinical recommendations for the Florida Medicaid plan. The FL MMA QIC meets quarterly and reports to the Corporate Quality Improvement Committee through the legal entity report.

The FL MMA QIC is comprised of voting members showcasing multi-department representation of the centralized and regionalized areas of operations. Voting members shall be stewards of Humana's mission. Their recommendations are expected to be based on sound operational data, in support of member service, and the overall good of the markets serving Humana members.

The Florida Medicaid Medical Director serves as Chairperson and presides at meetings of the FL MMA QIC. In the Chairperson's absence, the Divisional Director of Quality Operations, Compliance and Accreditation or the Associate Medical Director may act as Chairperson. Voting members of the FL MMA QIC includes representatives from the following areas, but is not limited to:

- Director, Health Services Organization, Case Management/Disease Management
- Director, Health Services Organization, Utilization Management
- Director, Medicaid Network Development and Operations (CFL & NFL)
- Director, Medicaid Provider Relations (SFL)
- Executive Director, FL Medicaid
- Florida Medicaid Medical Director (Chair)
- Manager, Medicaid Quality, Quality Operations, Compliance and Accreditation
- Market Vice President, Senior Products
- Operations Director

Ad hoc, non-voting membership varies based on reporting cycles to the Committee and may include representatives from various departments, including but not limited to:

- Customer Service Coordinator
- Divisional Director, Quality Operations, Compliance and Accreditation
- Manager, Medicaid Enrollee Program

- Market Director, Performance Improvement
- Market Director, Quality Improvement
- Market Manager, Finance
- Market Manager, Pharmacy
- Market Manager, Risk Management
- Market Risk Advisor, Compliance
- Process Consultant, Grievances & Appeals
- Representation from Medicaid partner, Health Choice

Peer Review Committee (PRC) is responsible for reviewing potential quality of care issues, determining the severity of the issue, and recommending quality improvements or corrective actions as appropriate. The PRC is responsible for development of individual provider quality improvement plans, where indicated, and review of progress toward resolution. Physicians and other healthcare professionals participate on the PRC, but only physician members have voting privileges. The PRC is chaired by a Humana Medical Director, or physician designee, and meets as needed to complete timely review of clinical quality concerns. The Peer Review Committee may function as a separate committee or within the Quality Management Committee at a market, regional or divisional level. The PRC reports to the local Market Quality Management Committee. Members of the Peer Review Committee may include representatives from:

- Humana Medical Director or designee
- Practicing network physicians: primary care and specialties
- Quality Operations, Compliance and Accreditation Divisional director and/or manager and support staff
- Additional representatives as appropriate

Delegation Committee is held at the market level with local delegation committees in Florida, Illinois, California, and the Southeast Region. In addition, the Health Services Organization reports to the CQIC on the delegated IPA/MSO utilization metrics for the following HSO Delegation Regions: California, Intermountain, Desert pacific, Central, Texas, Gulf States, North FL, Central FL, South FL, Southeast, and Great Lakes.

The Delegation Committee is responsible for coordination and review of Market delegated activities related to quality management or improvement, credentialing, claims payment, member rights and responsibilities, and/or utilization as appropriate. Responsibilities of the Delegation Committee include review and approval of reports from delegated entities and recommendations for corrective actions as necessary. The Delegation Committee meets at least quarterly and is chaired by a Market Senior Executive. The Delegation Committee may be combined with the Quality Management, Utilization Management, or Service Committee in the local market office. All Delegation activities are reported annually through the Corporate QIC.

Members of the Delegation Committee may include:

- Market Senior Executive (chair)
- Humana Medical Director
- Representative, Network or Provider Relations
- Representative, Quality Operations, Compliance and Accreditation

- Representative, Utilization Management
- Representative, Customer Service
- Representative, Compliance
- Representative, Delegation Oversight

Clinical Operations Utilization Management Committee provides oversight of clinical compliance activities impacting Clinical Operations. This committee supports more effective collaboration between leaders of all Clinical Services Programs performing utilization management and also includes representatives from Risk, Legal and Compliance. The goal is to ensure a robust compliance committee via:

- Periodic meetings with key stakeholders to identify, discuss, and mitigate risks related to utilization management
- Creates a forum to efficiently track key risk areas, providing an opportunity to brainstorm and discuss opportunities for improvement
- Strengthens the partnership/relationship between business operations and the Legal/Risk/Compliance
- Monitor the performance of all delegated entities, including tracking and trending of data results over time
- Monitor deficiencies in the delegated entities' processes and to set priorities for corrective action plans in conjunction with the Delegation Compliance Department
- There will be standing agenda items as well as a running list of open issues and projects that will be developed to discuss updates / status

The Committee conducts review and analysis of clinical compliance related metrics, nurse inter-rater reliability assessment activities, Corrective Action Plans (CAPs), regulatory updates, compliance related process/workflow changes, and quality monitoring and evaluation of effectiveness of the program. The committee is responsible for identification of improvement opportunities and development of appropriate corrective actions and compliance improvement interventions. The Committee is co-chaired by the Corporate Commercial Compliance Manager and the Clinical Operations Compliance Manager and meets regularly. The committee reports to the Corporate Quality Improvement Committee. Members of the Committee may include:

- Clinical Learning and Development
- Clinical Operations Compliance Manager (co-chair), Compliance Consultants and Compliance Analyst
- Clinical Operations Process Managers, Relationship Managers and Performance Managers, including leaders from Humana Behavioral Health, Clinical Access Team, Delegation, Transplant, Genetic Guidance, and Neonatal Intensive Care Programs
- Clinical Policy Representatives and Senior Regional Medical Director
- Continuous Improvement and Quality
- Corporate Commercial Compliance Manager (co-chair) and Director
- Corporate Director of UM, CM and Specialty CM Programs
- Corporate Medicare and Medicaid Compliance Managers
- Directors of Clinical Intake, Clinical Claims Review and Case Management

- Legal and Risk Representatives
- Other support staff and guests as deemed necessary

Health Services Organization National Utilization Management Committee is charged with facilitating process for monitoring the care given by hospitals, skilled nursing facilities, home health and other ancillary services. The committee is responsible for reviewing utilization data and related statistics, identifying trends, and recommending improvement strategies. The National HSO Committee also reviews and approves the HSO Policies and Procedures on at least an annual basis and when needed as changes occur. The committee meets four times a year.

Committee responsibilities include:

- Annual approval of the HSO UM Program Description, UM Work Plan and UM Evaluation
- Approval of HSO UM and Medical Management Policies and Procedures
- Evaluation of the effectiveness of, and identification of barriers to, HSO UM and CM activities
- Facilitation of a process for ongoing analysis of HSO utilization and trend data to identify outliers and create improvement plans to address appropriate utilization: This is accomplished through the monthly UM Metrics meeting, Medicare and Medicaid Trend meetings and the Model of Care operational reporting meetings where utilization trends and process compliance by division, region and product are reviewed and analyzed.
- Performance monitoring of all delegated entities, including tracking and trending of data results over time
- Monitoring deficiencies in the delegated entities' processes and setting priorities for corrective action plans in conjunction with the Delegation Compliance Department

Reporting Structure

- A National HSO UM Committee representative reports to the Corporate QIC annually. Recommendations and actions are communicated to appropriate committees and individuals, as well as to delegated entities, by means of memos and reports.

Membership and Voting

All committee members have voting privileges, with decisions made by a majority vote.

- HSO Chief Medical Officer, Chair Person
- Corporate HSO Staff
- Regional Medicare and Medicaid Health Services Medical Directors
- Regional Medicare and Medicaid Health Services Directors
- Regional Medicare and Medicaid Health Services Managers
- Behavioral Health Representatives

Risk Management/Safety Committee has oversight of the Risk Management Program and identifies corrective measures needed to eliminate or control recognized safety and health hazards and to recommend improvements. It acts on referrals for risk issues generated both internally and

externally. The Manager of Risk Management is the Chair of the Risk Management Committee, which meets a minimum of three times a year, or more frequently as needed. The committee reports quarterly to the Humana Internal Board/ Executive Committee. Members of the Risk Management/Safety Committee may include representatives from:

- Quality Operations, Compliance and Accreditation
- Health Services
- Workplace Solutions
- Humana Resources

Provider 360 Committee - Humana has a cross-functional Provider 360 Committee, chaired by the Medicaid Market President, with a goal to continuously identify opportunities to improve provider experience with Humana. Participants from various departments, including Provider Relations, Claims, Care Coordination, Grievance and Appeals, and Customer Service review various trends and data to understand concerns from providers and design initiatives to proactively address concerns. The Committee meets monthly and produces reports for the Quality Management Committee's review.

b. Disease/Complex Case Management

Disease Management

Humana's Disease Management Program is an enrollee-focused program where nurses help enrollees learn how to control their disease by providing education, support, community resources, and communication with their doctor and other specialists.

Humana's Disease Management (DM) Case Manager is a licensed nurse with skills, to classify, assess, monitor, evaluate, instruct, intervene and document goals and outcomes for each enrollee in the following programs:

- Diabetes
- Congestive Heart Failure
- Hypertension
- Asthma (adult and pediatric)
- HIV/AIDS
- Sickle Cell Disease
- Cancer

The Disease Management Program provides services that include but are not limited to:

- Evaluating enrollee needs that can affect control of their disease such as physical limitations, emotional stress, transportation difficulties, and environmental needs.
- Creating individualized self-management goals based on Health history, psychosocial assessment, doctors' recommendations, and enrollee needs.
- Providing education on diagnosis and treatment.
- Referrals to other healthcare providers as needed.
- Enrollee and provider support regarding diagnosis, plan of care, and other health related concerns.
- Educating enrollees on recommended health checks.
- Educating and assisting enrollees on reaching disease specific diet and exercise goals.

The goals of the Medicaid Disease Management program are to:

- Improve enrollees understanding and assist self-management of their disease with education and support while following their doctors plan of care.
- Help the enrollee to reach and maintain optimal control of their disease or diseases.
- Increase awareness of the health risks associated with certain personal behaviors and lifestyles.
- Improve enrollees' understanding of the importance of seeing their doctor or specialists for regular visits.
- Help enrollees know who to call if there is an urgent situation and in an emergency.
- Find and obtain community-based resources that meet the enrollee's medical, psychological, and social needs.
- Evaluate results of the program on the health of enrollees who participate in the program.

Complex Case Management

Humana's Complex Case Management is a service provided to Medicaid enrollees by Humana nurses specially trained to focus on enrollees with complex medical needs. Case Management is designed to meet the medical and psychosocial needs of the enrollee and varies depending on situation and severity. Our clinical team works to pair enrollees with network providers that can best manage the unique and specific special needs of each enrollee. A multidisciplinary team approach is utilized to ensure the enrollee's needs are met and all efforts are made to improve and optimize his/her overall health and well-being. A team of Physicians, Social Workers, and Community Services Partners are on hand to help make sure enrollees' needs are met and all efforts are made to improve and optimize their overall health and well-being. The case management program is optional.

9. CONTINOUS IMPROVEMENT THROUGH ONGOING EVALUATION

Built on partnership and toward a common goal of delivering quality care, Humana's provider engagement model is the basis of our provider retention efforts and a significant differentiator of our network management strategy. It is critical that we evaluate provider satisfaction and quality to monitor for opportunities to continuously improve. As a measure of provider satisfaction, Humana regularly monitors provider termination rate, which is less than 1% month over month. Humana also performs an annual provider satisfaction survey in all contracted Regions we operate in accordance with AHCA-contractual requirements.

Coordination and communication within and outside the system, with fellow providers as well as outside organizations are critical. Humana helps facilitate these opportunities for updates, education on changes, and ongoing enrollee quality of care. Given our operational presence in Florida, Humana's robust local leadership team has also established strong relationships with our providers, and regularly attends meetings to discuss new initiatives and opportunities to reach our common goals. These interactions help support providers, identify their needs, remove barriers, and maintain satisfaction within the provider community while making it easier to achieve our common goal.

a. Provider Satisfaction Survey, Methodology and Results

The Provider Relations team conducts an annual provider satisfaction survey in all of our contracted regions in accordance with contractual obligations and State approved sample methodology and

metrics. The survey enables Humana to evaluate and measure satisfaction across the following service metric areas: provider relations and communication, clinical management processes, authorization processes including denials and appeals, timeliness of claims payment and assistance with claims processing, complaint resolution process and care coordination/case management support. Since our provider satisfaction survey conveys valuable insight to the provider experience with Humana, we have taken steps to increase provider participation in responding to the survey. In 2015 we experienced a 15 percent response rate, which increased to 17 percent in 2016. Most recently in 2017, the rate increased to 30 percent.

Humana has received positive feedback in our provider satisfaction survey regarding our provider engagement model. For example in 2017, 99 percent of MMA respondents said their Provider Relations Representative was able to answer all of their questions and was professional and courteous. Additionally, 98 percent of respondents said the educational and training materials are easy to understand.

Humana uses a vendor, Talk2Rep, to make calls to designated provider offices with State-approved scripting. Surveys are conducted using a four-point Likert scale for the Primary care provider locations with the top 40 percent of total enrollees, and specialist locations with top 40 percent of highest claim volume. We then tabulate, analyze and evaluate survey results to identify opportunities for improvement and develop action plans based on identified service categories with highest overall "disagree/strongly disagree" responses.

Below is a snapshot of results of Humana's 2017 provider satisfaction survey, including survey sample size by provider type, number of successfully completed surveys and top five areas of strength:

Total Sample Size (all regions)	**224**
Total Primary Care Provider Locations	**77**
Total Specialist Provider Locations	**147**
Total Surveys Completed (all regions)	**68**
Primary Care Provider Locations	**19**
Specialist Provider Locations	**49**

Top 5 highest overall agree/strongly agree responses - areas of strength

Provider Relations and Communications	
Question(s):	
1b. My provider relations representative is: Able to answer my questions	99%
1d. My provider relations representative is: Professional and courteous	99%
3. Educational and training materials are easy to understand.	98%
Care Coordination and Authorizations	
Question:	
10. Denial notifications, including the denial reason(s), are provided in a timely manner.	100%
Clinical Management	
Question:	
20. Case managers are knowledgeable, professional and courteous.	100%

Top 5 highest overall disagree/strongly disagree responses - areas of potential opportunity	
Provider Relations and Communications	
Question:	
4b. In the last 12 months: I participated in an in-office visit from a Humana representative.	28%
Complaint and Appeals Resolution Process	
Question(s):	
15. I have filed a complaint/grievance or appeal and found the process easy to follow.	25%
16. The provider grievance process is effective.	24%
17. Overall, I am satisfied with the provider complaint, grievances and appeals process.	23%
19. My complaint was resolved without having to make multiple inquiries.	32%

Humana's 2017 provider satisfaction survey results were transmitted to The Agency for Health Care Administration on July 1, 2017.

b. Provider Quality

Humana strives to build strong partnerships between our PCPs and high-volume specialists and our Humana provider engagement team. Each has an assigned Humana Quality Improvement Nurse and a Provider Relations Representative, who visit PCPs on a monthly basis and high-volume specialists on a quarterly basis to provide training, education, gaps in care for enrollees, and utilization data. This frequent interaction not only supports our providers, but it also informs us of any trends or issues our providers are facing, as the model is designed to support them wherever they need it. We understand providers have the front-line interaction with our enrollees, and it is critical to engage with them throughout their experience with Humana.

Humana offers a comprehensive set of tools and resources for our providers to achieve success in accomplishing the Agency's goals of enhanced access, integrated and coordinated care, and improving the quality of care to our enrollees. We provide these tools on a regular basis to ensure that provider performance and quality metrics are transparent to providers:

- Quality Improvement Nurses
- Service Fund Data Analytics
- CareHub Clinical Guidance Exchange
- Humana's Monthly HEDIS Package
- PCP Reports (monthly, quarterly)

Quality Improvement Nurses

Humana has a provider liaison position called a Quality Improvement Nurse to assist providers in improving overall health outcomes and reducing potentially preventable events. We fill these positions with registered nurses who have a clinical background to facilitate and coordinate care between enrollees and providers. Quality Improvement Nurses are geographically assigned and meet with PCPs on a quarterly basis, regardless of whether the provider is alternative payment method, to analyze and close enrollee care gaps, facilitate education, manage medical costs, and document and improve coding accuracy. During the meeting with the PCP, Quality Improvement Nurses may develop a tailored plan of how to best support the provider in improving enrollee care.

Service Fund Data Analytics

Humana developed the proprietary Service Fund risk sharing management application for providers engaged in a risk or capitated arrangement. We use this innovative tool to calculate reimbursements to providers in these arrangements by tracking and aggregating information on capitation payments, claims expensing, claims payment, reconciliation, and settlement for all PCP contacts.

On a monthly basis, Service Fund makes data files available containing information regarding provider membership, funding, claims activity, progress toward value-based payments, and capitation payments at an individual provider level and at a group level. Humana tailors the reports to providers in risk or value-based arrangements. They are available for provider access through an online portal as well as through our Provider Relations representatives. Additionally, Humana educates providers using Service Fund by walking through standard reports during initial trainings to show the data to which they have access and how to use it to help manage their providers and financials. Provider Relations Representatives meet with PCPs monthly to review the Service Fund reports and to discuss any issues or barriers they may be facing.

CareHub Clinical Guidance Exchange

Our CareHub Clinical Guidance Exchange (CGX) system generates Care Alerts we distribute to our providers. These Care Alerts consist of evidence-based medicine care gaps and drug-to-drug/disease interaction alerts. By promoting awareness and closure of these gaps, we help our providers improve the care they deliver.

Humana's Monthly HEDIS Package

To help PCPs better manage the care of their enrollees, we provide a package of monthly HEDIS reports to every PCP. These reports capture preventable events among enrollees, gaps in care, and high utilizers of pharmaceuticals. In addition, practices can view their performance on HEDIS indicators to see how their performance compares with other providers in their region. We package this information in an actionable manner, providing call lists with the contact information for enrollees who have care gaps and a list of recommended actions for enrollees who are non-compliant with preventive care screening and/or disease management visits. Additionally, the QIN may work with the provider to develop initiatives around the care gaps and work with providers to close them

PCP Reports (Monthly, Quarterly)

Humana provides PCPs with a monthly report indicating which of their Humana enrollees have care gaps. These reports will also identify enrollees on their patient panel with potentially preventable hospital admissions and/or avoidable use of the emergency department. Our providers and their staff use these reports to reach out to enrollees and address the care gaps, as well as any identified preventative services. They may also schedule any needed appointments and make referrals to specialists.

c. Coordination of Relationships among Various Levels of the System

Joint Operations Committee Meetings

Humana utilizes Joint Operation Committee (JOC) meetings as a mechanism to meet face to face with providers to discuss and resolve issues or concerns. JOC meetings also allow Humana to use these forums as an opportunity to provide updates on contractual and program changes or offer technical

assistance. JOC meetings may be scheduled monthly, every other month, or quarterly depending on the needs of the provider network or Humana.

Medicaid Quality Work Group

The Medicaid Quality Work Group comprises representatives from various disciplines throughout the organization. Participants include representatives from Medicaid Administration, Provider Contracting, Health Services, Quality Improvement, and Quality Operations Compliance and Accreditation. Its goal is to evaluate plan performance related to services our Medicaid population receives. This group also focuses on developing appropriate enrollee and provider-focused interventions and evaluation of the implemented interventions. The work group is responsible for:

- Ongoing monitoring of HEDIS results and development, implementation, and monitoring of Florida Medicaid specific interventions.
- Organizing and collaborating on the development of an enrollee newsletter. The Work Group provides feedback on topics appropriate for the newsletter to encourage enrollees' healthy behaviors and active participation in health care.
- Provider target reports identifying enrollees with chronic conditions (e.g., diabetes, hypertension) as well as preventive and wellness visits shared with providers to assist providers in reaching out to enrollees needing care.
- Outreach, new enrollee welcome calls, and birthday wellness calls completed by the Medicaid Administration department. These calls encourage enrollees to visit their PCP routinely and participate in valuable screening activities.
- Ongoing collaboration with the Medicaid dental vendor, DentaQuest, as discussed at Work Group meetings. Recommendations from the Work Group are shared with the DentaQuest team.
- Enhanced follow-up process of postpartum women through the 8-week postpartum period.

Provider-to-Provider coordination

Humana emphasizes strong collaboration between the health plan, PCPs, and specialists for medical cost control, network development, data/information needs, and provider education. We encourage Florida PCPs to form their own "sub-network" of preferred facilities and specialists. This enables the PCP to develop critical relationships with the specialists, optimize communication and information sharing between the PCP and specialist, and ensure that enrollees receive quality, coordinated, and medically-necessary services.

Humana provides case management support to persons with one or more conditions that create a sufficient level of health status impairment or risk. For persons receiving case management support, we develop an individualized treatment plan that addresses all known health conditions, and coordination between co-occurring conditions. We share this individualized plan with the enrollee, the caregiver, the PCP, and with specialist providers who play a central role in treating one or more of the enrollee's key disorders. During the assessment process, the enrollee identifies those people essential to their health care. The case manager enlists and solicits the active participation of all appropriate stakeholders, including caregivers, providers, and community agencies to promote communication between the provider(s) and to facilitate coordination of services as necessary based upon the care plan and the needs of the enrollee. Methods to obtain input from these stakeholders regarding evaluation, problem identification and treatment recommendation may include telephone interaction, email, online communication through our Web portal, and potentially face-to-face meetings.

Humana's subcontractors such as Beacon, DentaQuest, One Homecare, and Logisticare attend Humana-sponsored Town Hall meetings with our network providers to answer questions and strengthen the partnership. Additionally, Humana facilitates in-service trainings between our contracted Hospitals, PCPs, MSOs, and our subcontractors to educate on their programs. In addition, the subcontractors attend monthly JOC meetings with Humana and the MSOs throughout the State, and hold webinar trainings for PCPs to educate them on their various programs.

Cross-Functional Provider Communications

- Provider Relations Representatives serve as the liaison between Humana and providers. The Provider Relations Representative works collaboratively with Humana departments and our network of primary care physicians, specialty care and ancillary providers, and facilities. Daily interactions between the Contracting Representatives, Medical Services, Claims, Customer Services and Finance Departments and the development of these interdepartmental relationships are critical to ensure effective coordination and communication when contracting with new vendors or transitioning services.
- Provider Call Center – Our provider Call Center is staffed with experienced provider representatives responsible for answering questions and participating in the sharing of information related to their practice and enrollee services.
- Provider Orientation – All contracted providers receive a Humana provider orientation within 30 days of their effective date into the network.
- Ongoing provider education visits – Contracted PCPs and SPCs will receive an educational visit from a Humana Representative no less than quarterly, or more often if needed. This includes face-to-face visits, telephonic, virtual webinars, or group sessions
- Joint Operating Committee (JOC) – As mentioned above, we schedule JOC meetings are scheduled monthly with large health systems to share medical information related to quality and protocols, training, and issue resolution.
- Newsletters – Newsletters are generated quarterly with information pertaining to policy changes, quality, industry changes, and medical protocols.
- Provider Manuals – These manuals contain information necessary for a provider to be successful. After a provider executes an agreement with us, we schedule an orientation session to review the manual contents as well as any other information related to our health plan.
- Provider Website – The Provider Website represents another means to obtain important, real time information about our operations. Newsletters, policies, medical protocols, claims, quality, and a multitude of other information are available to the provider through the portal.
- Webinars – The Provider Relations team hosts periodic webinars on various topics to ensure providers have access to updated Medicaid polices and requirements. Topics covered include but not limited to, claims processing, encounter submissions, Continuity of Care, Dual-eligible enrollees, Referrals and Authorizations, Contracting and Credentialing processes.
- Medicaid Advisory Panel – The Medicaid Advisory Panel identifies and reviews provider concerns and makes advisory recommendations to Humana. Humana may also make requests of the Medicaid Advisory Panel to provide feedback and recommendations on topics which will affect Medicaid enrollees. The Panel membership includes network providers, community leaders, and representatives from the various health plan disciplines.

d. Coordination with Outside Organizations

Humana recognizes the need for effective communication and coordination as a key to quality care and service excellence. We participate in and partners with national organizations, thereby keeping channels of communication open and furthering the delivery of high quality, comprehensive healthcare to all enrollees. Participation in national accrediting bodies affords input into policy-making and enhances the goal of increasing the quality of healthcare. Humana is certified by the Committee on Operating Rules for Information Exchange (CORE), which is an initiative by a non-profit alliance of health plans, networks, and trade associations to simplify healthcare administration. CORE certification ensures providers get consistent, uniform information thereby improving the quality of interaction with Humana.

Examples of national organizations Humana collaborates with include:

- National Quality Forum (NQF)
- American Health Insurance Plans (AHIP)
- National Council on Aging (NCOA) – falls pilot with the Centers for Disease Control
- National Committee for Quality Assurance (NCQA) – Health Plan Advisory Council participation
- Centers for Medicare and Medicaid Services (CMS)
- Utilization Review Accreditation Commission (URAC) – Board of Director membership
- Department of Health and Human Services (HHS) - Partnership for Patients Initiative and Million Hearts Campaign

Examples of Florida organizations Humana collaborates with include:

- Florida Assisted Living Association (FALA)
- Florida Health Care Association(FHCA)
- Florida Council on Aging (FCOA)
- Home Care Association of Florida (HCAF)
- Florida Gerontological Advanced Practice Nurses Association (FGAPNA) (Aging Life Care Association)
- The Florida Geriatric Care Managers Association (FGCMA)
- Leading Age Florida
- Florida Medical Directors Association (FMDA)
- Florida Association Directors of Nursing Administration/LTC (FADONA) Florida Health Care Social Workers Association (FHCSWA)
- Florida Association of Health Plans (FAHP)
- Alzheimer's Association
- Florida Alcohol and Drug Abuse Association (FADAA)
- Florida Council for Community Mental Health (FCCMH)
- Florida Medical Association
- Florida State Guardianship Association
- Florida Alliance of Home Care Services (FAHCS)
- Alliance for Aging
- Aging & Disability Resource Center (ADRC)
- Northwest Florida Area Agency on Aging, Inc.

Healthy Start

The Healthy Start program includes targeted support services that address identified risks. The range of free and voluntary Healthy Start services available to pregnant women, infants and children up to age three include:

- Childbirth, breastfeeding and car seat education classes
- Comprehensive assessment of service needs in light of family and community resources

- Home visits to provide education and support for breastfeeding, baby weight checks, parenting, immunization information and safe sleep
- Ongoing coordination to assure access to needed services and support to help families attain their goals
- Developmental screening, psychosocial assessments, nutritional education, smoking cessation counseling or referrals as needed

Humana will refer members to Healthy Start for these services when identified utilizing the Healthy Start Assessment Tool. The tool is used to determine eligibility for enrollment in Healthy Start's Care Coordination Program and is completed by their obstetrician at the initial visit. Eligibility is based on identified risk factors that may affect the health of the pregnancy. The goal of the program is to mitigate those risk factors. Members are automatically eligible when they exhibit one of the criteria that makes them automatically eligible, regardless of the Assessment Tool score (i.e.: homelessness, history of abuse, etc.).

In addition, Humana is working with Healthy Start on a contract that will include case finding services in which Healthy Start will attempt a home visit for members we are unable to locate.

Medicaid Advisory Panel

Community organizations and other agencies provide essential services, programs, and resources to qualified enrollees to support their quality of life and optimal well-being. To ensure that we address the needs of enrollees and identify any opportunities for improvement, Humana has developed a Medicaid Advisory Panel composed of providers including medical service organizations and hospital corporations, non-profit organizations and community agencies that serve the Medicaid population.

The Panel's purpose is to provide a forum for Humana management, leaders in community organizations, and senior hospital and medical service organization administrators to better understand the needs of our enrollees and our Plan requirements by identifying issues and concerns and providing feedback. The Panel obtains input from subject matter experts on our initiatives and strives to develop methods that we can use to better serve our enrollees. Creating new ways to approach universal challenges will lead to pilot projects, which the committee will track. This exchange of ideas allows the Plan to improve processes and develop methods to overcome challenges that we face in serving our enrollees.

There will be representatives on the Panel from various stakeholders (see below) who will be permanent enrollees. The panel will be driven topically per the consensus of the permanent enrollees. Each meeting will concentrate on one topic of interest to enrollees and/or providers. Guests may be invited as subject matter experts to speak to the topic being discussed at the meeting.

1. Network hospital corporations
2. Network medical service organizations
3. Non-profit organizations
4. Community agencies
5. Humana Medicaid administrative leadership

e. Subcontractor and Vendor Oversight Compliance

Humana partners with subcontractors to provide health care services to enrollees. To ensure that each subcontractor adheres and exceeds the requirements, Humana has implemented a rigorous oversight

program with corporate and market based teams responsible for the subcontractors' performance. We will continue to be compliant with AHCA's requirements around subcontractor monitoring and policies. Humana's Delegated Vendor Performance Oversight team (DVPO) is dedicated to monitoring and overseeing functions delegated to subcontractors. Delegation of Network Management responsibilities includes the following:

- All subcontracts that meet the Network Management Delegation definition shall have an executed and AHCA approved Network Delegation Amendment.
- Monitor compliance, network adequacy, and quality by monthly/quarterly reports and annual audits to include:
    - Policy and procedures
    - Provider Network Report of all provider groups, individual physician practices and sites in its network are not accepting new Medicaid enrollees
    - Availability of Providers providing Specialty Care services, including number and geographic distributions
    - Access to appointments
    - Opportunities to improve access for enrollees
    - Identified problems and corrective actions initiated and outcomes
- Implement Corrective Action Plans and monitor adherence to written subcontractors agreed upon process to correct noncompliance. As required, impose provider capitation payment penalties for outstanding corrective action plan issues, restriction, suspensions and/or terminations.

All subcontractors' performance and issues are presented to the Delegated Vendor Oversight Committee DVOC for review and approval of necessary interventions and corrective actions plans in the event of subcontractors' non-compliance with the contractual provisions and service level agreements (SLAs). The oversight of subcontractors is performed by three entities, as described below.

- Market-based Delegate Relationship Managers (DRMs) – front line of Humana associates who work closely with the subcontractors. They are responsible for the due diligence of subcontractors and consistent oversight of operational performance according to the contract and SLAs. They hold joint operational meetings, which are designed to review past month's subcontractor performance with comparison to SLAs and contract provisions. The meetings are led by the DRM and attended by the Director of Oversight Vendor Performance. In addition, the Director of Oversight Vendor Performance holds monthly operational meetings with all DRMs to review subcontractors' performance, identify opportunities for improvement, develop corrective interventions and follow up on progress.
- Corporate Delegation Compliance – responsible for pre-delegation, annual and ad hoc audits of subcontractors. The audits are performed in accordance with the contractual provisions, NCQA Standards and SLAs. The audit results are presented to the DVOC for recommendations of interventions as appropriate.
- Delegated Vendor Performance Oversight unit – comprised of a director and coordinator. The role of this unit include but is not limited to:
    - In conjunction with DRMs, facilitate the coordination of oversight and monitoring activities
    - Review operational performance of subcontractors for adherence to contract provisions and SLAs
    - In conjunction with the DRMs, develop interventions, corrective action plans as necessary to improve performance and subcontractors compliance

- Participate in joint operational meetings with subcontractors; review performance and recommend improvements
- Review for under/overutilization trends and address with subcontractors
- Work with subcontractors to participate in the support of Humana's goals to improve health care outcomes (HEDIS campaigns, Plan initiatives, integration and specialty programs,)
- Establish vendor specific performance goals based on enrollees health outcomes
- Work closely with the Network Contracting Directors to monitor for financial solvency for subcontractors with financial risk

Summary of subcontractors performance are presented at the DVOC which reports to Quality Improvement Committee.

SECTION II-HUMANA LONG-TERM CARE

1. Summary:

Humana Long Term Care (HLTC) has created and maintains this Network Development and Management Plan (NDMP) to ensure that all enrollees have appropriate access to cost effective medically necessary healthcare to avoid or delay nursing home placement when enrollees choose to remain in the community. In addition, it maintains a sufficient network to meet the needs of those that choose to reside in a nursing home.

We recognize that quality of care is imperative in our healthcare delivery system, and a critical component of maximizing enrollee healthcare outcomes. With this fundamental concept in mind, we work collaboratively with our Medical Management and Quality Departments to actively participate in ongoing network development activities that allow Humana HLTC to maintain a structure that fosters collaboration across all departments and increases effectiveness, efficiency and cost savings without compromising quality.

Throughout this document, HLTC illustrates and evaluates our goals, methodologies, and interventions. Methodologies used by HLTC allow us to assess geographically appropriate distribution of service providers, including, but not limited to: Home Health, Home Delivered Meals, Emergency Response, Adult day Health Care, Assisted Living and Nursing Homes for our membership.

Our commitment to excellence focuses on building and strengthening partnerships with our contracted providers and creating a culture of collaboration and innovation in identifying and implementing improved approaches to healthcare delivery. HLTC demonstrates within the Network Development and Management Plan that we monitor providers and other subcontractors to ensure that enrollees have a positive experience accessing their care.

The Network Development and Management Plan further outlines the current status of the Humana HLTC network and defines our future network needs. These needs are identified based on projected membership growth, including provider availability, membership medical needs and choice within the HLTC network. The Network Development and Management Plan estimates expected utilization based upon our mix of membership related to membership rate codes, geographic locations and specific individual needs. These are essential components of our Network Development Plan, allowing us to accurately anticipate and articulate future network needs and drive quality initiatives that promote our commitment to improved enrollee healthcare outcomes.

2. Introduction:

The Network Development and Management Plan (NDMP) for the Florida SMMC LTC is an annually updated tool to ensure that covered services are available and accessible in accordance with the access standards in the AHCA Contract with Plan and to meet the projected Plan enrollment levels for all 11 regions in the State of Florida.

When the Plan is establishing and maintaining the provider network, the Plan takes the following into consideration as required by 42 CFR 438.206:

a. The anticipated number of enrollees;

b. The expected utilization of services, taking into consideration the characteristics and health care needs of specific Medicaid populations represented;

c. The numbers and types (in terms of training, experience and specialization) of providers required to furnish the covered services;

d. The numbers of participating providers who are not accepting new enrollees;

e. The geographic location of providers and enrollees, considering distance, travel time, the means of transportation ordinarily used by enrollees and whether the location provides physical access for Medicaid enrollees with disabilities
f. The quality rating of the provider.

3. Evaluation of the prior year's plan:

HLTC became a capitated plan in 2014and maintained the successful robust provider network it had in place during the fee-for-service program. Effective July 1, 2015, HLTC became one combined entity composed of both HLTC and Humana Comfort Choice operating under the new name of Humana HLTC. Humana HLTC successfully integrated both provider networks and maintained relationships with all providers in order to ensure continuity of care and access to care. During the period from July 1, 2015 through December 31, 2015, the former HLTC Provider Relations staff successfully contracted with over 250 providers that were servicing previous Humana Comfort Choice members. The addition of these additional providers resulted in an enhanced, robust network that successfully met the needs of our members through 2016 until the present.
All HLTC awarded regions had Nursing Home Diversion Waiver experience so the Providers, DOEA CARES, Community Based Organizations (CBO), and other stakeholders are familiar with the managed care concept of Home and Community Based Services (HCBS) as potential alternative to Skilled Nursing Facility (SNF) residency. We continue to strive to educate our providers while working in a partnership environment.
HLTC maintains a sufficient network and actively assesses the overall condition by provider type. The methodologies we utilize evaluate the condition of the network include review and analysis of the following: (a) how enrollees access the system, (b) all provider types by geographic area, (c) access to care for all various levels of providers and (d) quality rating of providers.
HLTC communicates to the provider network regarding changes in contractual and/or program policies and subcontractor requirements through on-site provider visits, meetings, phone, webinars and electronic communication and through informational faxes where we send out pertinent information to all providers as they are affected. HLTC is able to identify specific provider types and that enables us to communicate specific information to these specialties.
HLTC obtains data through a variety of mechanisms, including but not limited to Complaints, Grievance and Appeals, Operations Committee meetings and enrollee feedback. This information is used to evaluate the network and make necessary changes in order to meet AHCA guidelines and ensure access for our enrollees.
HLTC Care Managers and Provider Relations Specialists have in-person site visits to ensure outreach and communication to our provider network, review quality of care and enrollee satisfaction.

Our goals for the 2017-2018 plan year are:

1) Continue to work with AHCA and providers that need an enrolled or registered Medicaid number or specialty codes to obtain them and process their claims
2) Begin ranking providers on quality and efficiency ratings
3) Identify low performing providers in our network based on quality and efficiency ratings and move enrollees to high ranking providers where appropriate.
4) Consistently meet contractual network adequacy requirements and any additional access needs identified by our clinical and member support areas.
5) Expand the provider network to include specialty providers supporting members that are currently enrolled in the waiver programs that will be included in the LTC program (PAC, Brain and Spinal Cord Injury and Cystic Fibrosis).

4. 2017-2018 Humana Long Term Care Network Challenges

HLTC maintains a robust provider network throughout the state, meeting or exceeding contract requirements. The biggest challenge is satisfying home bases member needs in the rural areas of regions 1, 2 and 3. HLTC is taking an aggressive, innovative approach to meet these needs.

5. Availability and Accessibility for Covered Services:

HLTC ensures that they have the minimum of two providers for each type of service in each county in the state, except in some rural areas where providers do not exist. In areas where providers do not exist or refuse to be a participating provider, we have found alternative providers to serve enrollees in these areas. HLTC has obtained waivers from AHCA in these identified counties.
Most services provided under this plan are provided in the enrollee's home, and enrollees are not required to go to the location of the provider. Home and community based services are available on a seven (7) day a week basis, and for extended hours, as dictated by enrollee needs. Providers can provide services 24 hours/7 days a week when dictated by the members needs and authorized by the care manager. The largest percentage of the population resides in a nursing home or assisted living facility which provides all the services to the enrollee 24 hours a day. The exception is for enrollees attending Adult Day Health Care and Outpatient Therapy. HLTC provides transportation when needed to get to these locations. We ensure that these services are easily accessible and readily available to our members. Adult day cares do have a limited number of hours they are open for business. HLTC utilizes Assisted Living Facilities that are authorized to provide Adult Day Care Services in addition to free standing Adult Day Care Centers for this service to ensure that members have more options for geographic location as well as additional hours offered to them.
HLTC has determined that we currently have a robust network in non-rural counties, and have identified providers in neighboring counties to assist in the rural areas. This does result in an increased rate to provide incentives for providers to go to enrollees' homes in the rural areas. Thirty counties were identified as Rural on the Florida Rural Counties map at:
https://medicare.fcso.com/Rural_health/166451.pdf

6. Adult Companion Providers (See Homemaker & Companion Service Providers)

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
  - Health Care Services Pool for Temporary staff to existing network providers

- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

7. Adult Day Health Care Centers (ADCC)

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

8. Adult Family-Care Homes (AFCH)

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.

- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
  - Ongoing activities for network development include review of AHCA provider listing for new providers.
  - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

9. Assistive Care Service Providers (see AFCH)

10. Assisted Living Facilities (ALF)

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.

- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
  - Ongoing activities for network development include review of AHCA provider listing for new providers.
  - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

11. Attendant Care Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.

- Ongoing activities for network development include review of AHCA provider listing for new providers.
- Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

12. Behavior Management Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
  - Ongoing activities for network development include review of AHCA provider listing for new providers.
  - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

13. Care Managers or Case Management Agency

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.

- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

14. Home Adaptation Accessibility Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.

- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

15. Home Health Agencies (HHA)

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

16. Homemaker and Companion Service Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.

- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

17. Hospices

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building

    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

18. Medication Administration Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

19. Medication Management Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

20. Medical Supplies Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.

- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
  - Ongoing activities for network development include review of AHCA provider listing for new providers.
  - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

21. Nursing Facilities

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.

- Ongoing activities for network development include review of AHCA provider listing for new providers.
- Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

22. Nutritional Assessment and Risk Reduction Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
  - Ongoing activities for network development include review of AHCA provider listing for new providers.
  - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

23. Personal Care Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.

- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

24. Personal Emergency Response System Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific

measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

25. Transportation Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

26. Therapy (Occupational) Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.

- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

27. Therapy (Speech) Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.

- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
  - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
  - Ongoing activities for network development include review of AHCA provider listing for new providers.
  - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

28. Therapy (Respiratory) Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
  - Licensed Provider Listing
  - Agencies that offer the same service
  - Providers that may make a longer ride than usual to service the area.
  - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
  - Engage existing Providers on capacity building
  - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.

- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

29. Therapy (Physical) Providers

- Enrollees access these services and providers through Plan Care Management authorization process.
- Timely access to services is ensured by having a sufficient number of providers to meet the needs of the membership. Care Managers follow up to ensure that providers are timely in the delivery of services.
- Relationship of this service provider to other provider contacts is facilitated by the use of Plan Care Management process which engages these providers through other agencies and requires observational feedback to the Care Manager when no other agency, such as Home Health, is involved.
- Barriers and Network Gaps would be identified through Care Management authorization process and the Network Scorecard which highlights to the Plan the number of such providers in the Service Area.
- Immediate / short-term interventions to address network gaps includes use of LOA (Letter of Agreement) and targeting new providers through:
    - Licensed Provider Listing
    - Agencies that offer the same service
    - Providers that may make a longer ride than usual to service the area.
    - Health Care Services Pool for Temporary staff to existing network providers
- Longer-term interventions to fill network gaps and resolve barriers.
    - Engage existing Providers on capacity building
    - Engage Regional Community Based Organizations (CBO) from a jobs perspective.
- Outcome measures/evaluation of interventions to fill network gaps and resolve barriers will generally be based on reported efforts by Care Manager/Provider/Enrollee and specific measures such as number of Plan Network providers relative to the total number of providers licensed.
- Future capacity during the coming year for this covered service is projected to be met by current network and current network development efforts.
    - Ongoing activities for network development include review of AHCA provider listing for new providers.
    - Continued engaged with CBO and Provider Agencies related to identified gaps and future needs projection.

30. Coordination between Organizations

Coordination between internal departments

Departments	Department Leadership
Credentialing	Ange Sumner, Johanna Garcia
Quality Management	Sharon Mecoli
Claims	Elaine Jones
Utilization Management	Clinton Jules, MD
Grievances	Corporate G&A
Finance	Ron Weeden
IT Systems	Tom Payne
Operations	Natalia Aresu
Compliance	Shannon Childers
Care Management	Ela Alarcon-Cabrera
Network	Ed Miller

Coordination with outside organizations

Coordination with outside organizations is an ongoing process and one that will have more relevance for outside organizations under the integrated features of SMMC. HLTC through its 13+ years of network building for the Nursing Home Diversion Waiver and the professional experiences of its staff has a robust relationship with many associations, providers and the Aging Network. HLTC is continuing to develop effective relationships with the MMA plans. HLTC and the Humana MMA plan became a comprehensive plan in those regions where both plans exist on October 1, 2016. This change has improved the care management coordination of these members as they are now managed on the same clinical platform.

Network design by region and county for the SMMC LTC population

Enrollees access the Plan Network by use of the Provider Directory and Care Management Authorization. The Provider Directory can be found online at www.humana.com/humanalongtermcare. A hard copy is provided to the member upon request. Since the SMMC LTC enrollees require a Nursing Home Level of Care certification, the entire SMMC LTC population is considered “special”. However, within this group there are those that are transitioning to step down accommodations from either the hospital or nursing home. That group in transition and others deemed chronic and most at risk are Care Management hot spots.

The Network is designed to serve the SMMC LTC population with Long Term Services and Support (LTSS) provider types.

31. Provider Relations

Education and Training

The Plan offers training to all providers and their staff regarding the requirements of the Government Sponsored SMMC Contract and special needs of enrollees. The Plan will conduct initial training within thirty (30) calendar days of placing a newly contracted provider, or provider group, on active status for the SMMC program. The Plan also conducts ongoing training, as deemed necessary by the Plan or the Agency, in order to ensure compliance with program standards and the SMMC Contract.
The Plan’s training and education to providers includes Plan’s enrollment and credentialing requirements and processes.

HLTC provides weekly training webinars for new and established providers. The training calendar is posted on the HLTC home page.
The Plan shall ensure all participating providers required to report abuse, neglect, or exploitation of vulnerable adults under s. 415.1034, F.S., obtain training on these subjects. If the Plan provides such training to its providers, training materials will include the specified standards of the Government Sponsor and/or Contract.

Provider Credentialing
Medicaid Agency's Credentialing Criteria include:

- A copy of each provider's current medical license for medical providers, or occupational or facility license as applicable to provider type, or authority to do business, including documentation of provider qualifications
- No revocation, moratorium or suspension of the provider's state license by the Agency or the Department of Health, if applicable
- A satisfactory level II background check pursuant to s. 409.907, F.S., for all treating providers not currently enrolled in Medicaid's fee-for-service program
    - Plan shall ensure providers referenced above submit fingerprints electronically following the process described on the Agency's Background Screening website. The Plan shall verify Medicaid eligibility through the background screening system.
    - Plan shall not contract with any provider who has a record of illegal conduct; i.e., found guilty of, regardless of adjudication, or who entered a plea of nolo contendere or guilty to any of the offenses listed in s. 435.04, F.S.
    - Individuals already screened as Medicaid providers or screened within the past twelve (12) months by another Florida agency or department using the same criteria as the Agency are not required to submit fingerprints electronically but shall document the results of the previous screening.
    - Individuals listed in s. 409.907(8) (a), F.S., for whom criminal history background screening cannot be documented must provide fingerprints electronically following the process described on the Agency's background screening website.
- Disclosure related to ownership and management (42 CFR 455.104), business transactions (42 CFR 455.105) and conviction of crimes (42 CFR 455.106)
- Evidence of the provider's professional liability claims history
- Any sanctions imposed on the provider by Medicare or Medicaid
- The provider's Medicaid ID number, Medicaid provider registration number or documentation of submission of the Medicaid provider registration form.
- Determination of whether the provider, or employee or volunteer of the provider, meets the definition of "direct service provider" and completion of a Level 2 criminal history background screening on each direct service provider to determine whether any have disqualifying offenses as provided for in s. 430.0402, F.S., and s. 435.04, F.S.
    - Any provider or employee or volunteer of the provider meeting the definition of "direct service provider" who has a disqualifying offense is prohibited from providing services to enrollees.
    - No additional Level 2 screening is required if the individual is qualified for licensure or employment by the Agency pursuant to its background screening standards under s. 408.809, F.S., and the individual is providing a service that is within the scope of his or her licensed practice or employment. (See s. 430.0402(3), F.S.)
        - The Plan must maintain a signed affidavit from each provider attesting to its compliance with this requirement, or with the requirements of its licensing

agency if the licensing agency requires Level 2 screening of direct services providers.
    - The Plan must include compliance with this requirement in its provider contracts and subcontracts and verify compliance as part of its subcontractor and provider monitoring activity.
- Ensure that Assisted Living Facilities meet the requirement of home-like environment characteristics as defined by the state.
- The Plan's credentialing and re-credentialing process must include ensuring that all long-term care providers are appropriately qualified, as specified in Table 1 - LTC Provider Qualifications & Minimum Network Adequacy Requirements as attached and updated.

Plan's credentialing and re-credentialing files must document the education, experience, prior training and ongoing service training for each staff member or provider rendering behavioral health services.

Credentialing and Re-credentialing (CR)
Provider agreements provide for monitoring and oversight by the Plan and the subcontractor to provide assurance that all licensed medical professionals and service provider types are credentialed in accordance with the Plan's and the Government Sponsor's credentialing requirements.
The Plan has clearly defined and documented procedures for assessing provider qualifications and service history including what provider types must be credentialed. The policies and procedures define a provider's right to review and correct credentialing information. The Credentialing Committee reviews provider credentials and makes recommendations.
During the initial credentialing verification the Plan verifies provider credentials, including a valid license to offer covered services and, when applicable, education, training, malpractice history and work history.

The provider applications include an attestation about limitations that would affect a provider's performance; a history of loss of provider license and felony convictions; a history of limitation of privileges or disciplinary actions; and current malpractice insurance coverage if applicable. The Plan reviews information (e.g., about disciplinary actions) from third parties as available and required.
The Provider on site quality review is based on provider type. The threshold for on-site review of services or treatment record-keeping practices is based on a complaint by a stakeholder such as the enrollee, Plan staff, other providers, agency, or government sponsor. The plan takes necessary steps when a provider does not meet its standards, and will evaluate those steps regularly until the provider improves or removed from participation with the Plan.
Before reevaluating a provider's qualifications for re-credentialing, the plan will receive information (e.g., about disciplinary actions) from third parties as applicable. The Re-credentialing Cycle Length for the plan to evaluate provider qualifications is at least every 36 months.
Ongoing Monitoring includes provider sanctions, complaints and quality issues between the re-credentialing cycles. The plan takes appropriate action when issues are identified.
The plan has a process for terminating the contracts of providers who demonstrate poor performance and a process for providers to appeal a terminated contract. The plan reports to appropriate authorities when it suspends or terminates a provider's contract according to the contract with the government sponsor.
The plan confirms that providers, such as hospitals, home health care agencies, skilled nursing facilities, nursing homes and behavioral health facilities, are in good standing with state and federal agencies and accrediting organizations and reviews the above standings at least every three years.

If the plan delegates CR activities, a delegation agreement will outline responsibilities of the delegate and the plan, the delegated activities and the evaluation process. The plan evaluates the delegate on a regular basis, usually annually.

Monitoring and Oversight
In addition to verification and monitoring noted above, on a monthly basis the Plan checks subcontractors and providers against the federal List of Excluded Individuals and Entities (LEIE) and the federal Excluded Parties List System (EPLS) or their equivalent, to identify excluded parties.
The Plan also checks the Agency's listing of suspended and terminated providers at the Agency website to ensure the Plan does not include any non-Medicaid eligible providers in its network.
The Plan also conducts these checks during the process of engaging the services of new employees, subcontractors and providers and during renewal of agreements and re-credentialing. The Plan will not engage the services of an entity that is in nonpayment status or is excluded from participation in federal health care programs under ss. 1128 and 1128A of the Social Security Act.
The Provider Relations Department receives and maintains copies of all member complaints documents in the provider file to be reviewed at the time of credentialing and/or when an HLTC associates express concerns about the performance of a specific provider. Provider complaints identified via member satisfaction surveys are also shared with the provider relations department to be maintained in the members file. The Quality department reviews complaint and monitoring tools of providers and addresses concerns identified at the Quality Assurance Meetings. If at any time a provider is identified as performing below standards, it is brought under review by the QI committee to determine if the provider should be removed from the HLTC network. Due to the nature of the long term-care program the care managers are continually conducting informal monitoring of providers during monthly and quarterly interviews with members. All facility based members are seen face-to-face monthly which allows for the care manager to observe the care provided to the member.

32. Quality and Anti-Fraud Administration

Audits
The Plan will furnish specific data requested in order for the Government Sponsor to conduct the services/case record audit, including audit of enrollee plan of care, provider credentialing records, service provider reimbursement records, contractor personnel records, and other documents and files as required under the Government Sponsor Contract.
Fraud
The Plan has specific controls in place for prevention and detection of potential or suspected fraud and abuse, including, but not limited to:
(a) An effective pre-payment and post-payment review process, including but not limited to data analysis, claims and other system edits, and auditing of participating providers (see s. 409.967(2)(f), F.S.);
(b) A description of the method(s), including detailed policies and procedures, for verifying enrollees' identity and if services billed by providers were actually received. Such methods must be either the use of electronic verification or biometric technology but may also include sending enrollee explanations of Medicaid benefits (EOMB), contacting enrollees by telephone, mailing enrollees a questionnaire, contacting a representative sample of enrollees, or sampling enrollees based on business analyses;
(c) Provider profiling, credentialing, and re-credentialing, and ongoing provider monitoring including a review process for claims and encounters that shall include providers and non-participating providers who:
(i) Demonstrate a pattern of submitting falsified encounter data or service reports;

(ii) Demonstrate a pattern of overstated reports or up-coded levels of service;
(iii) Alter, falsify or destroy clinical record documentation;
(iv) Make false statements relating to credentials;
(v) Misrepresent medical information to justify enrollee referrals;
(vi) Fail to render medically necessary covered services they are obligated to provide according to their provider contracts;
(vii) Charge enrollees for covered services; and
(viii) Bill for services not rendered.

(d) Prior authorization;
(e) Utilization management;
(f) Subcontract and provider contract provisions;
(g) Provisions from the provider and the enrollee handbooks; and
(h) Standards for a code of conduct.

Care Management and Quality Related issues

Quality Related Issue	**Information to obtain from the Provider**	**Provider Type**
"Significant Change"	Does the Provider share "Significant Change" information with MCO	ALL
Free from any form of restraint	Is there evidence of any physical or chemical restraints	ALL
Advance Directives	Are Advance Directives documented and available	ALL
Staffing for services	Any regulatory ratios or License Survey's indicating lack of sufficient staff.	ALL
Services as contracted and authorized	License Surveys or reports indicating lack of compliance	ALL

Cultural considerations	Delivery of services in a culturally competent manner to all enrollees, including those with limited English proficiency and diverse cultural and ethnic backgrounds.	ALL

Provider agreements include provisions for monitoring and inspections. Including:

- That the Agency and DHHS may evaluate through inspection or other means the quality, appropriateness and timeliness of services performed;
- Provide for monitoring of services rendered to Managed Care Plan enrollees through the subcontractor.

Record Reviews

The Managed Care Plan has an approved strategy for conducting medical/case record reviews. The Provider agreement provides for inspections of any records pertinent to the Contract by the Agency and DHHS. The strategy includes the following:
(a) Designated staff to perform this duty;
(b) Process for establishing inter-rater reliability;
(c) Sampling methodology for case selection;
(d) The anticipated number of reviews by practice site (non-facility service providers such as home health agencies with multiple offices locations serving the region);
(e) Record confidentiality and security;
(f) The tool that the Managed Care Plan will use to review each site;
(g) Analysis and reporting, and
(h) How the Managed Care Plan shall link the information compiled during the review to other Managed Care Plan functions (e.g., QI, re-credentialing, peer review).

In addition to record retention requirements for provider or provider licensure, provider agreements require that records be maintained for a period not less than ten (10) years from the close of the AHCA Contract and retained further if the records are under review or audit until the review or audit is complete. (Prior approval for the disposition of records must be requested and approved by the Managed Care Plan if the subcontract is continuous.)

HEDIS

HEDIS Measures Required as Part of the NCQA Accreditation Process for Medicaid Health Plans will be utilized as applicable to the SMMC program population served.

Changes in Plan

HLTC will provide the agency with the documentation of compliance with access requirements at any time there has been a significant change in the Plan's regional operations that would affect adequate capacity and services including but not limited to the following:

1. Changes in HLTC's services
2. Enrollment of a new population in HLTC

Housing Resources

General Information and HUD
The Department of Housing and Urban Development (HUD) has a number of resources to help seniors find affordable rentals. They offer a low-rent apartment search that shows low-rent apartments for senior citizens and people with disabilities, as well as for families and individuals. For low-rent apartments, the government gives funds directly to the apartment owners. There is an income limit to qualify. http://www.hud.gov/apps/section8/index.cfm

There is also the public housing program and public housing choice vouchers, commonly called Section 8. Public housing comes in all sizes and types and is managed by local housing agencies that are funded by the federal government. Public housing choice vouchers allow you to find a private rental and the government pays the landlord directly to subsidize the rent. Both programs are limited to low-income families and individuals. http://portal.hud.gov/hudportal/HUD?src=/topics/rental_assistance/phprog and

D. PROVIDER EXPERIENCE

MMA SRC# 12 – Provider Credentialing (Statewide):

The respondent shall describe its proposed process to credential and recredential providers (including subcontractors' processes, if applicable), including credentialing timeframes, internal continuous quality improvement initiatives for recredentialing, transparency for providers on their application status and the steps the respondent or its subcontractors will take to ensure the respondent and the Agency have accurate provider demographic information in-between credentialing cycles.

Response:

Humana has designed our credentialing and recredentialing processes to ensure our network of contracted providers are qualified to deliver the highest possible quality of care to enrollees. All Humana-contracted providers complete a thorough initial credentialing and ongoing recredentialing process. As of August 2017, Humana has initiated credentialing, credentialed, and recredentialed more than four hundred sixty-six thousand (466,000) providers nationwide. Our success in provider credentialing and load process is a combination of both our dedicated and knowledgeable credentialing staff and our proprietary workflow management tool.

Accelerated Provider Exchange (APEX), Humana's proprietary workflow management tool, automates and accelerates the credentialing, provider load, and provider demographic update processes. It has enabled best-in-class turnaround times while allowing Humana associates throughout the company to communicate with providers regarding their credentialing and network participation status in real time and with full transparency throughout the process. Since January 2017, Humana has fully credentialed and loaded providers as participating in claims and directory systems in an average of forty-two (42) days. Following the implementation of system efficiencies six (6) months ago, we have reduced the average credential and load time to thirty-two (32) days. Humana is also implementing an improved provider information verification process to ensure we have updated provider demographic and participation status information available to our enrollees, enhancing their access to care. We recognize that process efficiency and communication of provider participation status are both critical to ensure provider engagement and satisfaction.

==========

1. The adequacy of the respondent's description of its credentialing and recredentialing criteria, certified credential verification organization processes, and utilization of a third party credentialing vendor.

==========

Humana has strict, documented credentialing and recredentialing policy and procedure processes in place, written to reflect and capture the highest level of credentialing requirements amongst all governing agencies, including the requirements of the Florida Statewide Medicaid Managed Care (SMMC) contract. Humana currently conducts all

credentialing and recredentialing processes internally without the use of an external entity. However, Humana will comply with any new credentialing requirements, including but not limited to streamlined credentialing processes and working with credentialing verification organizations. Our Credentials Committee exists to ensure that we adhere to the processes and procedures outlined and that we credential and recredential providers within the set requirements. The Committee, which Humana's Medical Director (MD) chairs, includes representation from a range of participating providers in both primary care and specialty disciplines.

Our credentialing, recredentialing, and provider loading processes meet all state and federal requirements as well as NCQA guidelines. The process confirms that the provider has a current valid state license, holds current professional liability insurance, has completed the appropriate education and training for the given specialty, and is free of sanctions by federal, state, and local authorities prior to the execution of a provider contract.

Credentialing is one of the quality assurance components the National Committee on Quality Assurance (NCQA) regularly assesses in awarding Humana's Florida Medicaid plan accreditation. Humana has earned one hundred percent (100%) of the available points on all NCQA surveys conducted between 2011 and March 2017. If awarded additional regions, Humana is prepared to perform our timely credentialing processes to ensure we have an adequate network ahead of go-live. Additionally, because many providers in regions throughout the State participate in our Medicare and commercial networks, we will only need to collect Medicaid-specific credentialing elements to fully credential the providers ahead of delivering services to the Managed Medical Assistance (MMA) population.

CREDENTIALING AND RECREDENTIALING CRITERIA

Humana will continue to use existing processes for contracting, credentialing, recredentialing, and loading providers. This process requires each healthcare provider to include the following information when applying to contract with us:

- COMPLETED APPLICATION - Provider must supply a completed application and attest to the correctness/completeness of the application. Attestation signature date must not be greater than one hundred eighty (180) days.

- EDUCATION AND TRAINING - Provider has completed appropriate education and training for applied specialty.

- BOARD CERTIFICATION - As applicable, evidence provider is board certified. Board certification is not a requirement of network participation.

- STATE LICENSE - Provider holds a current state professional license, certificate, or registration in the state(s) in which they will treat Humana enrollees.

- ACTIVE, VALID FLORIDA MEDICAID IDENTIFICATION (ID) NUMBER - Provider demonstrates current eligibility for participation in Medicaid, as applicable, and is enrolled with a Florida Medicaid ID number.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

- DRUG ENFORCEMENT ADMINISTRATION (DEA) AND/OR CONTROLLED DANGEROUS SUBSTANCE (CDS) CERTIFICATE - Provider holds a current federal DEA certificate and/or a CDS certificate, if applicable to profession.

- PROFESSIONAL LIABILITY INSURANCE (PLI) - Provider holds current PLI in contracted amounts, has completed the PLI exception procedure, or has documentation of coverage under the Federal Tort Claims Act for professional liability coverage.

- CLAIMS HISTORY - Provider has acceptable liability claims history. Any history of repeated catastrophic claims which, after examination by the Credentials Committee and/or the medical/dental director, indicates a propensity for or trend in malpractice claims, and/or are unusual for a provider in that specialty, is grounds for denial, unless the provider satisfies the Credentials Committee that such actions do not indicate a continuing quality of care concern.

- WORK HISTORY - Provider demonstrates appropriate history of employment and clinical practice. Provider should explain any gaps in work history greater than six (6) months and should satisfy the Credentials Committee that such gaps do not indicate a continuing quality of care concern.

- HOSPITAL PRIVILEGES - Provider holds current clinical privileges in good standing at a participating facility, if applicable to care provider delivers. Clinical privileges should not contain any Material Limitations.

- FEDERAL, STATE, AND LOCAL SANCTION-FREE STATUS - Provider holds current sanction-free status by federal, state, and local authorities to provide healthcare services, unless provider satisfies the Credentials Committee that such sanction does not present a continuing quality of care concern. This includes the Office of Inspector General, the General Services Administration, and Medicaid sanctions.

- PRIOR ACTIONS OR RELINQUISHMENTS - Provider should not have a history of any action in effect within the last five (5) years taken by a federal, state, or local government, including but not limited to the applicable state licensing body; by a hospital, health plan, or other health care entity; or by a professional society to discipline, exclude, suspend, revoke, deny; or any suspensions or other restrictions that include Material Limitations. Additionally, providers within the last five (5) years should not have voluntarily relinquished any membership, license, privileges, or participation status or other ability to render healthcare services, including, but not limited to, a state license or clinical privileges; while under investigation by the entity providing such membership, privileges, participation status, or other ability to render health care services; or in return for such entity not conducting an investigation. Such prior actions or relinquishments may not be grounds for denial if the provider satisfies the Credentials Committee that such action or relinquishment does not indicate a continuing quality of care concern.

- CONVICTIONS - Provider has not been convicted of, nor, has pleaded guilty or no contest to, (a) any felony, or (b) any misdemeanor involving moral turpitude or related to the practice of a healthcare profession, the Federal Health Program fraud and abuse, third-party

reimbursement, or controlled substances, unless the provider satisfies the Credentials Committee that the conviction or plea does not present a continuing quality of care concern.

- LACK OF PHYSICAL OR MENTAL IMPAIRMENT - Provider should not demonstrate a lack of physical or mental impairment, including impairments from chemical dependency, that may impair their ability to practice or may pose a risk of harm to patients.

- QUALITY - For recredentialing purposes only, provider should demonstrate an acceptable performance record related to Humana enrollees. This record includes activities/findings collected through Humana's quality improvement (QI) programs, utilization management systems, handling of grievances and appeals, enrollee satisfaction surveys, and other plan activities. "Quality" refers to the measure of competence, professional conduct, care, and safety that a provider affords an enrollee. Denials based on this criterion that constitute an Adverse Action, which are actions or recommendations that limit, reduce, restrict, suspend, revoke, terminate, deny, or fail to renew a provider's participation in Humana, require further action under the Humana Provider Quality Review Process.

- CONFIRM LANGUAGES - National Network Operations and Credentialing Operations will confirm languages that the providers use, including American Sign Language (ASL).

- NATIONAL PROVIDER IDENTIFIER (NPI) AND TAXONOMY - Provider has an NPI and taxonomy that is assigned and verifiable through the National Plan and Provider Enumerator System (NPPES).

- BACKGROUND SCREENING - Provider is subject to a level II background check pursuant to s. 409.907, F.S., for all providers not currently enrolled in Medicaid.

- PCP PATIENT LOAD ATTESTATION - Attestation that the total active patient loads is no more than three thousand (3,000) patients per PCP. An active patient is one that the provider sees a minimum of three (3) times per year.

- DISCLOSURE OF OWNERSHIP – We collect disclosure of ownership forms related to ownership and management (42 CFR 455.104), business transactions (42 CFR 455.105), and conviction of crimes (42 CFR 455.106) as part of the credentialing and recredentialing process.

PROVIDERS SUBJECT TO CREDENTIALING PROCESS

Humana requires credentialing for all providers in our provider directory. Because Humana operates a long-term care (LTC) plan in every region of the State, the credentialing process for our Managed Medical Assistance (MMA) and LTC plans frequently intersect, creating a comprehensive approach to our credentialing process and enhancing access to services for all of our enrollees. Providers subject to credentialing and recredentialing include, but are not limited to:

MEDICAL PROVIDERS:

- Medical Doctors

- Oral Surgeons

- Chiropractors

- Osteopaths

- Podiatrists

- Nurse Practitioners, who are licensed, certified, or registered by the state to practice independently or as required by state regulations

- Dentists

- Optometrists

BEHAVIORAL HEALTH PROVIDERS:

- Psychiatrists and other physicians

- Addiction medicine specialists

- Doctoral or Master's level psychologists who are state-certified or licensed

- Master's level clinical social workers who are state-certified or licensed

- Master's level clinical nurse specialists or psychiatric nurse practitioners who are nationally or state-certified or licensed

- Other behavioral health specialists who are licensed, certified, or registered by the state to practice independently

ORGANIZATIONAL PROVIDERS WE ASSESS INCLUDE ANY FACILITY PRINTED IN THE DIRECTORY, AND ARE NOT LIMITED TO:

- Hospitals
- Home health agencies
- Skilled nursing facilities (SNFs)
- Free-standing surgical centers
- Hospices
- Clinical laboratories
- Comprehensive outpatient rehabilitation facilities
- Outpatient physical therapy and speech pathology providers
- Pharmacies
- Providers of end-stage renal disease services

- Providers of outpatient diabetes self-management training
- Portable x-ray suppliers
- Rural health clinics and federally-qualified health centers
- Transportation

WE ALSO ASSESS BEHAVIORAL HEALTHCARE FACILITIES PROVIDING MENTAL HEALTH OR SUBSTANCE ABUSE SERVICES IN THE FOLLOWING SETTINGS:

- Inpatient
- Residential
- Ambulatory

CREDENTIALING AND RECREDENTIALING APPLICATION PROCESS

Information about and assistance with the credentialing and recredentialing process is available from Provider Relations representatives, the provider handbook, the provider website, the provider call center, provider orientation, and quick reference guides. Humana requires participation in the Council for Affordable Quality Healthcare Inc.'s (CAQH) Universal Credentialing ProView, an online service that helps physicians and other healthcare providers with the credentialing process, including state-specific credentialing applications as required by state regulations. Humana acts only upon complete credentialing and recredentialing applications, defined as a submitted application form completed with responsive and accurate information, dated and signed, and accompanied by all required and requested documents. Upon receipt of a complete credentialing or recredentialing application, a credentialing specialist loads the provider application into APEX. Humana plans to enhance this process in the future by implementing an automatic feed from CAQH to APEX. Currently, APEX includes a credentialing module that organizes supporting documentation, automates the process, and facilitates the credentialing specialist's review of the credentialing application for mandatory criteria.

PROVIDER OFFICE SITE EVALUATIONS

As part of the pre-credentializing process, Humana surveys all primary care provider and obstetricians/gynecologists' office locations as applicable to confirm they meet our office site standards. During credentialing and recredentialing, representatives conduct a site visit for applying providers to verify data, as listed below, that we collect on the application. Humana's comprehensive provider site visit evaluation tool meets all federal, state, and Americans with Disabilities Act (ADA) compliance measures, included in Attachment MMA 12-1. We save the completed evaluation tool in the provider's and it is credentialing file.

During this site visit, Humana verifies information including, but not limited to:

- ADA compliance

- Waiting and exam room cleanliness and accessibility

- Risk management (e.g., emergency procedures and safe disposal of identified chemicals)

- Ancillary services (e.g., Clinical Laboratory Improvement Amendments (CLIA) certificates)

- Safety (e.g., signage)

- Access and availability (e.g., answering services, appointment scheduling)

- Medical record keeping and filing (e.g., security measures)

- Thresholds for acceptable performance against criteria

Humana verifies all items listed above during credentialing, and then re-verifies every three (3) years during recredentialing. Regardless of site visit score, any significant deficiency in any critical element will result in a site visit failure. We allow all site visit failures time to correct deficiencies and require a repeat site visit prior to submitting a provider's application for credentialing. Significant deficiency examples include:
- Non-compliance with ADA
- Inadequacy of medical/treatment record keeping
- Uncleanliness of waiting and exam room space

VERIFICATION PROCESS

Humana's APEX system contains links to various verification sources, which helps streamline and expedite the credentialing and recredentialing verification process. For example, APEX receives a feed from the American Medical Association (AMA) that allows verification of credentialing information in real time. We also have links to the Office of the Inspector General verification source and the General Administration Sources verification source to review any sanctions against the provider. Additionally, we have built in an "attach a screenshot" feature in APEX as part of the credentialing and recredentialing process. A credentialing specialist can capture a screenshot of a verification site, such as licensure verification, which becomes evidence of verification as part of the credentialing file. This advancement eliminates the need to print and upload the verification to our system, further expediting our credentialing process.

APEX records date of verification, verification source, and the report date as part of the credentialing and recredentialing process. Humana also assigns each member of its credentialing staff a unique electronic identifier as part of the credentialing quality assurance process, which we record in APEX.

Verification of credentialing information comes from one of the following sources:
- The primary source
- A contracted agent of the primary source
- Another National Committee for Quality Assurance (NCQA)-accepted source for the credential

Appropriate documentation of verifications includes:
- Credentialing documents signed and dated by verifier
- A detailed checklist, including the name of the source used, the date of verification, the signature or initials of the credentialing specialist who verified the information, and the report date, if applicable.

CREDENTIALING AND RECREDENTIALING DECISION-MAKING PROCESS

Humana uses a tiered process for credentialing and recredentialing approval, with categorization determining the path for approval. This process allows the Credentials Committee to expedite credentialing approval or more thoughtfully consider an approval.

For Category I credentialing applications, those files meeting all credentialing criteria, Humana's medical or dental director approves these daily and presents them to the Credentials Committee during monthly meetings. The Credentials Committee has final approval or denial authority for credentialing and recredentialing applications.

Humana's medical or dental director presents Category II applicants, whose applications do not meet all credentialing criteria for expedited approval, on a monthly basis to the Credentials Committee. The committee comprises participating providers in both primary care and specialty disciplines who employ a peer review process to determine whether to approve or deny Category II applicants. Meeting minutes document evidence of the Credentials Committee's discussion and decisions, certified by chairperson or designee signature. Once credentialed, recredentials are due every three (3) years from initial approval date.

Humana processes the credentialing or recredentialing decision of the Credentials Committee as follows:

- APPROVALS: The Credentials Committee notifies providers of the decision within sixty (60) days.

- DENIALS: Humana notifies the provider of the reasons for the denial and provides notice of an opportunity to request reconsideration of the decision in writing within fourteen (14) days of the notice. Upon reconsideration, the Credentials Committee affirms, modifies, or reverses its initial decision. Humana notifies the provider in writing of the Credentials Committee's reconsideration decision within sixty (60) days.

- ADVERSE ACTIONS: Adverse Actions are actions or recommendations that limit, reduce, restrict, suspend, revoke, terminate, deny, or fail to renew a provider's participation in Humana's Network for reasons related to quality and that adversely affect, or could adversely affect, an enrollee's health or welfare. Adverse Actions lasting longer than thirty (30) days entitle the applicant to prompt notice of his or her right to request a hearing under the Humana Provider Quality Review Process.

ONGOING MONITORING AND INTERVENTIONS

Humana monitors provider sanctions, complaints, and quality issues between recredentialing cycles, and ensures corrective actions are taken to address occurrences of poor quality. We implement ongoing monitoring and appropriate interventions, up to and including removal from the network, by collecting and reviewing the following information within thirty (30) calendar days of its release:

- Medicare and Medicaid sanctions and exclusions
- Sanctions or limitations on licensure
- Complaints
- Identified Adverse Events

GATHERING DATA FOR RECREDENTIALING PROCESS

Humana recredentials its providers at least every thirty-six (36) months. Humana employs effective and structured mechanisms to collect provider performance information for the recredentialing process. APEX automatically populates the provider performance score into the provider's file prior to the recredentialing decision. Provider performance indicators include:

- Provider complaints
- Outlier prescriber/procedure history
- Grievance and appeals
- Healthcare Effectiveness Data and Information Set (HEDIS) scores
- Utilization

Humana's Quality Management System (QMS) electronically tracks providers with confirmed quality of care issues by NPI and interfaces with the APEX for a quality performance score.

DELEGATED AND SUBCONTRACTOR CREDENTIALING

Delegated and subcontractor credentialing is the process by which Humana has agreed to allow qualified entities to perform a portion of our credentialing review process and oversees the delegate to ensure ongoing adherence to program requirements. Humana delegates credentialing and recredentialing activities to organizations or entities that demonstrate compliance with federal, state, and accreditation requirements, such as NCQA. These activities include:

- Collection of application and attestation
- Primary source verification
- Site visits and medical record keeping review
- Ongoing monitoring of information
- Credentialing and recredentialing decision making

Before Humana delegates the credentialing function to any entity, we perform a pre-authorization performance capacity audit to evaluate compliance with Humana's standards, which includes compliance with federal, state, and NCQA accreditation. We review the following criteria during the audit:

- Credentialing policies and procedures

- Program descriptions and work plans
- Forms, tools, and reports
- Credentialing Committee minutes
- Sub-delegation agreements
- Letters of accreditation
- Credentialing file review

Humana measures results on a standard audit form that determines if we approve the entity for delegated credentialing.

- Entities with a score of ninety-five percent (95%) or above are approved.

- Entities with a score between seventy percent (70%) and ninety-five percent (95%) (by section and total) may be approved with a corrective action plan (CAP) in place, which will include the identified issues and deficiencies, the corrective actions required, and the timeframes for performance of the corrective actions and achieved results.

- If an entity scores below seventy percent (70%) during a pre-delegation review, Humana does not approve them for delegation.

The delegated entity is subject to annual reviews to ensure they meet state, federal, and NCQA Accreditation oversight requirements. Please refer to Attachment MMA 12-2 for our delegated credentialing audit process and Attachment MMA 12-3 for our delegation policy. If during the annual audit, a delegate falls below seventy percent (70%), we will either place the entity on a CAP or terminate them, depending on the issues that led to the non-compliance. In 2016 we placed three (3) entities on CAPs for credentialing, which were all subsequently resolved. The Credentials Committee determines the corrective action to take against a delegated entity failing to comply with federal, state, NCQA Accreditation, and Humana credentialing requirements. Humana has a delegation agreement in place with all delegated or subcontracted entities. It outlines the responsibilities of both the plan and the delegated entity as well as the assessment and evaluation of the credentialing standards. Ongoing oversight ensures that the delegated entity continues to operate in a compliant manner.

==========

2. The extent to which the respondent's timeframes for processing credentialing applications is more expeditious than the industry standard processing timeline of one hundred twenty (120) days.

==========

Humana continues to exceed industry standard and state requirements for credentialing as a result of our provider credentialing experience, processes, and proprietary workflow management tool, APEX. On average, Humana completed the credentialing verification process with an average of ten (10) days in 2016 and within an average of seven (7) days to date in 2017. Since January 2017, Humana has fully verified credentials and loaded providers as participating in claims and directory systems in an average of forty-two (42) days. In Florida, Humana credentialed eight thousand one hundred twenty-five (8,125) providers and recredentialed three thousand eight hundred six (3,806) providers in 2016.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana recognizes that our ability to move providers rapidly through the credentialing and loading process directly impacts enrollees' access to care. We have designed our process to expeditiously credential and load providers to ensure we can proactively fill any identified network deficiencies as quickly as possible, as described in our case examples below. Humana has established processes and technology, including APEX, to monitor compliance with AHCA's required timeframe of one hundred twenty (120) days to process credentialing applications. Furthermore, Humana's processes support not only the credentialing verification processes to occur within thirty (30) days, but also for the end-to-end provider participation process to occur within sixty (60) days. Humana's policy requires that providers be credentialed and loaded as participating in Humana's directory and claims systems within sixty (60) days of receipt of a complete credentialing application.

Humana has advanced our credentialing and recredentialing processes through a variety of system and process improvements and investments. For example, we have introduced data feeds with the AMA to verify board certification and education records, as well as with various verification sources, including the National Practitioner Data Bank, licensure boards, Office of Inspector General sanctions, and General Service Administration sanctions, to allow for real-time verification.

CASE EXAMPLES

---

1. There are occasional circumstances in which our network team requires urgent credentialing of a provider, and our credentialing team can move a provider through the credentialing process in a single day. We have experienced several situations in which a provider has retired without advance notice, requiring us to locate another provider to serve our enrollees and fill unexpected network gaps. After our provider network team identified and contracted with new providers, the credentialing team quickly completed all credentialing verification for a Category I application, ensuring our enrollees had timely access to care.

2. After an unexpected termination of a subcontractor agreement that affected multiple regions, Humana quickly contracted with more than thirty-five (35) providers including sixteen (16) home health agencies, fourteen (14) durable medical equipment and medical supplies providers, five (5) intravenous (IV) home infusion providers. Using the Category I application process, our credentialing team completed the credentialing process within a few days, allowing us to rapidly load these providers into our system and minimize provider network and enrollee disruption.

==========

3. The adequacy of the respondent's approach to providing transparency to providers throughout the credentialing and recredentialing processes, including how providers will be informed at each step of the application process.

==========

Humana understands that communication with providers through the contracting process, credentialing, and recredentialing is critical to maintaining an engaged provider network. We developed APEX not only as a workflow management tool, but also as a business monitoring tool. This tool initiates communication with providers when we need credentialing

or recredentialing information, and it also provides Humana associates insight to a provider's credentialing status. Attachment MMA 12-4 conveys the APEX data flow.

CREDENTIALING AND RECREDENTIALING PROVIDER EDUCATION AND ASSISTANCE

Humana provides transparency around credentialing and recredentialing processes by educating providers and assisting in the application process using the following methods:

- PROVIDER RELATIONS REPRESENTATIVES DURING PROVIDER RECRUITMENT - During the provider recruitment period, Humana initiates a discussion around the credentialing process with providers to ensure they understand the process and to help answer questions about the process. Additionally, provider relations representatives will offer guidance to providers on how to enroll as a Florida Medicaid provider and a high-level overview on AHCA's streamlined credentialing process if necessary. We also prompt providers to enroll in and update their CAQH application prior to initiating the credentialing process to ensure their information is up-to-date. Provider relations representatives also play a critical role during the recredentialing process by communicating with providers regarding any required action on their part to complete recredentialing.

- PROVIDER RELATIONS REPRESENTATIVE DURING PRE-CREDENTIALING - If there is any information missing from the credentialing or recredentialing application, a provider relations representative will reach out to the provider by phone or email to obtain the additional information or answer any questions about the application.

- PROVIDER MANUAL - Humana provides detailed information and answers to frequently asked questions about the credentialing process in the provider manual, which we make available to providers both online and in hard copy.

- PROVIDER WEBSITE - Humana's provider website has information available twenty-four (24) hours a day, seven (7) days a week on the credentialing process and recredentialing process.

- PROVIDER CALL CENTER – We train our customer service specialists (CSSs) to understand and explain the credentialing and recredentialing processes.

- INITIAL PROVIDER ORIENTATION – We provide training on the re-credentialing process during initial provider orientation.

CREDENTIALING AND RECREDENTIALING REAL-TIME STATUS UPDATES

Our provider relations representatives and CSSs use APEX when we receive a provider inquiry regarding credentialing/recredentialing and participation status. If providers need assistance during the credentialing or recredentialing process, they can contact their provider relations representative, submit a question through email, or call our provider call center. We thoroughly train our provider relations representatives in the credentialing processes and

criteria to ensure they can fully assist our providers. Once the application is approved, APEX generates a letter to send to the provider with the approval status.

CREDENTIALING AND RECREDENTIALING CREDENTIALS COMMITTEE DECISION

All providers presented to the Credentials Committee will receive written communication regarding Humana's decision to approve or deny credentialing within sixty (60) days. We send any providers denied credentialing a communication that includes instruction on where they can find information on how to have the Committee reconsider the decision. Please see Attachment MMA 12-5 for a sample of a Credentialing Committee denial letter.

TRANSPARENCY DURING RECREDENTIALING PERIOD

Humana understands that the recredentialing process is critical to both access to care as well as continuity of care for our enrollees. To ensure that our providers remain in network and do not experience a lapse in credentialing status, Humana has invested in processes and technology that has resulted in a recredentialing rate of ninety-nine percent (99%) within the three (3)-year window.

Humana's recredentialing process depends on effective and frequent communication with our providers. APEX initiates the recredentialing process systemically seven (7) months before a provider's credentialing expires, initiating communication with providers and documenting Humana's efforts to contact providers regarding the recredentialing period.

- Seven (7) months prior to recredentialing due date, APEX creates a list of providers requiring credentialing. APEX automatically searches CAQH for updated provider information, comparing it to Humana's stored demographic information. APEX produces reports for provider relations representatives to monitor.

- Six (6) months prior to a recredentialing due date, APEX automatically initiates an outbound communication via fax to the provider. This communication notifies the provider of their recredentialing timeline and details what action is required on their part.

- Four (4) months prior to a recredentialing due date, a credentialing associate places an outbound phone call to discuss any outstanding information required for recredentialing. APEX logs and tracks all outbound calls.

- Three (3) months prior to a recredentialing due date, APEX produces a report of providers with outstanding information. The credentialing team mails a letter to the provider notifying them of the recredentialing due date and required action on the provider's part.

- Two (2) months prior to the recredentialing due date, Humana market contractors reach out to providers to request assistance in obtaining outstanding information.

- One (1) month prior to the recredentialing due date, we send a letter via certified mail with receipt of confirmation to notify the provider that we will terminate their credentialing status

at the end of the month and that we request they contact their market contractor immediately.

- At the recredentialing due date, a Humana credentialing specialist initiates the decredentialing process within APEX.

==========

4. The extent to which the respondent uses information from provider complaints, monitoring, and recommendations from its Quality Improvement Committee in its recredentialing process.

==========

Humana conducts ongoing monitoring of credentialed providers between credentialing and recredentialing cycles. We continuously monitor provider complaints, sanctions, limitations on licensure, identified adverse events, enrollee complaints about providers, and quality issues. We receive an updated list of sanctions and licensure issues from CAQH on a weekly basis and compare the list to all platforms with participating and non-participating providers. If there is an issue with a participating provider, our credentialing specialists review the issue and determine if there is a need to de-credential the provider. If there is an issue with a non-participating provider, our specialists forward an APEX task with the information to prevent claims payment to providers who do not meet licensure or sanction requirements. If Humana receives a complaint about the provider's office, Humana will conduct a site visit, regardless of the provider's credentialing status.

One of Humana's advantages in operating multiple lines of business is that we closely monitor providers in all regions and have greater opportunities to identify problem areas. We provide a large overall enrollee volume to many of our providers, which broadens the degree in which we can and will become directly aware of a problem. If a Medicare Advantage (MA) enrollee raises a complaint with a provider, we will typically assess and address it within the context of all Humana lines of business.

QUALITY REVIEW OF REQUIRED CREDENTIALING/RECREDENTIALING PROCESSES

Humana's provider credentialing and recredentialing process is consistent with CMS, NCQA, and American Accreditation Health Care Commission/Utilization Review Accreditation Commission standards. Humana's provider credentialing and recredentialing process meets AHCA credentialing requirements.

GATHERING DATA FOR RECREDENTIALING PROCESS

Humana has effective and structured mechanisms for the collection of provider performance indicators during the recredentialing process, which include provider complaints, outlier prescriber/procedure history, grievance and appeals, HEDIS scores, utilization, and providing excessive ancillary or preventative services. Humana's Quality Management System (QMS) electronically tracks providers with confirmed quality of care issues by NPI and interfaces with APEX. When a provider is queried, it generates a quality performance

score that considers the provider performance indicators. If the provider receives a quality performance score of nine (9) or less within the three (3)-year period, we classify the provider's file as a Category I file, which the medical director then reviews and approves. If the provider receives a quality performance score of greater than nine (9), we classify the provider as a Category II provider, which we refer to our Credentials Committee for further review.

During credentialing, Humana also reviews any enrollee complaints against a provider since the last credentialing or recredentialing cycle. When the Quality Improvement Committee (QIC) reviews quarterly and annual reports, it may recommend denying certain providers from inclusion. Humana's QIC also reviews any provider complaints about the credentialing and recredentialing process on a routine basis. If any issues are raised that can help refine our credentialing process or highlight gaps, we will address them.

==========

5. The extent to which the respondent and its subcontractors incorporate the Agency's streamlined credentialing capability (via promotion of limited enrollment) in its credentialing and recredentialing processes.

==========

Through Humana's Florida-based provider knowledge, our provider relations and credentialing experience, and our partnership with AHCA, we ensure providers experience a streamlined process when applying for participation in our network. If included in our contract with AHCA, Humana will incorporate AHCA's streamlined credentialing capability and limited enrollment process into our current credentialing processes.

CREDENTIAL VERIFICATION ORGANIZATION (CVO) PROCESSES AND THIRD-PARTY CREDENTIALING VENDORS

Selecting a CVO and streamlining credentialing will simplify the credentialing and recredentialing process for Florida providers and health plans. If AHCA pursues using a CVO, we will credential our providers using the CVO processes, and we will provide education and assistance through multiple avenues to complete credentialing.

CVO EDUCATION AND ASSISTANCE UPON IMPLEMENTATION

If at any point our providers need assistance in completing the credentialing application, providers can contact their provider relations representative, submit a question through email, or call the provider call center. We will thoroughly train our provider relations representatives in the CVO credentialing processes to ensure they are fully able to assist our providers.

==========

6. The extent to which the respondent outlines steps the respondent and its subcontractors will take to ensure provider demographic or participation status changes are reported to the plan in-between credentialing cycles.

==========

Humana has created multiple avenues for providers to update demographic and participation changes, which we integrate into our work streams and databases to ensure the highest accuracy of provider information for our stakeholders. We require providers and subcontractors to inform us of any changes in demographic information and accepting new patient status per their contracts with Humana. Providers can submit changes electronically through the Availity portal using the Provider Data Management Tool or Manage My Demographics tool within Humana Payer Spaces under the Resources Tab. Providers can also email, mail, or fax changes to the Provider Verification Unit at Humana.

During regular visits with PCPs and high-volume specialists, Humana provider relations representatives gather necessary provider information updates at each visit. They send these updates to our data load team, making it easy for providers to share changes with Humana. Our provider relations representatives may also review rosters from large provider groups to review any changes to participation status. Providers may also self-report any changes in demographic or participation status to their provider relations representative or through our provider relations call center.

Additionally, Humana investigates and corrects complaints and reports from enrollees that indicate provider data is inaccurate. Enrollees also have the option of alerting Humana to a demographic change by clicking on “Report updated information” on the provider’s details page in Physician Finder on Humana.com.

Quarterly, Humana’s Data Collection and Verification (DCAV) department performs outreach to all participating professional offices in Humana’s network. During the outreach process, Humana sends a request to provider offices to review the information Humana has on file and has posted within its provider directory. The DCAV team asks providers to identify errors, corrections, and updates. The focus of the review is to ensure accuracy of directory demographics like address and appointment phone number, as well as to verify the providers that work in that office.

Recently, we implemented a Provider Data Management feature on our Availity web portal. In this workflow, the provider can update their service locations, any new providers joining the organization, contact information, and panel status. Once the provider attests to the information, Humana will have access to the updated information. Availity also sends providers a quarterly notification to remind providers to review, change, and attest their demographic information.

We require our subcontractors to provide us with any participation or panel changes for providers and to send us updated rosters at least monthly, which we include in our directory.

SUMMARY

Humana’s credentialing process is exceptionally adept at enrolling and loading qualified providers in our network to serve our enrollees. Through this process, which is industry-leading in both speed and quality, Humana provides our enrollees quality care through a

carefully and efficiently credentialed and recredentialed provider network. We have made significant investments and improvements to our technology and processes to ensure providers experience a streamlined process with Humana, and we review this process annually to identify new opportunities for improvement. Our ability to quickly contract and credential providers allows us to fill network gaps efficiently, improving enrollee access to care. Humana is implementing an improved provider data verification system, which will result in an enhanced process to collect provider demographic information and participation status during credentialing cycles. Finally, by incorporating the quality of care a provider delivers into our recredentialing process, we improve both the enrollee experience and their health outcomes, creating a higher standard of care.

Evaluation Criteria:

1. The adequacy of the respondent's description of its credentialing and recredentialing criteria, certified credential verification organization processes, and utilization of a third party credentialing vendor.

2. The extent to which the respondent's timeframes for processing credentialing applications is more expeditious than the industry standard processing timeline of one hundred twenty (120) days.

3. The adequacy of the respondent's approach to providing transparency to providers throughout the credentialing and recredentialing processes, including how providers will be informed at each step of the application process.

4. The extent to which the respondent uses information from provider complaints, monitoring, and recommendations from its Quality Improvement Committee in its recredentialing process.

5. The extent to which the respondent and its subcontractors incorporate the Agency's streamlined credentialing capability (via promotion of limited enrollment) in its credentialing and recredentialing processes.

6. The extent to which the respondent outlines steps the respondent and its subcontractors will take to ensure provider demographic or participation status changes are reported to the plan in-between credentialing cycles.

Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 5 points each.

Survey purpose

- ○ Initial credentialing
- ○ Recredentialing
- ○ Audit, based on cause

Provider type

- ○ PCP
- ○ OB/GYN
- ○ Pediatrician
- ○ Specialist

Translation services – Limited English proficiency requirements

1. Are translation services available in a minimum of 150 languages (oral interpretation vendor)?
   - ○ Yes (1)
   - ○ No (2)

General information

2. Do/can you provide alternative appointment scheduling for those who need extra time?
   - ○ Yes (1)
   - ○ No (2)

3. Are members' rights to file a grievance visually posted?
   - ○ Yes (1)
   - ○ No (2)

4. On inspection, is the office functionally safe and sanitary?
   - ○ Yes (1)
   - ○ No (2)

5. Is there a policy and procedure document that states what to do in case of emergency?
   - ○ Yes (1)
   - ○ No (2)

Parking for disabled people

6. Is the parking adequate and close by?
   - Yes (1)
   - No (2)

7. Does your facility provide one accessible parking space per 25 total parking spaces?
   - Yes (1)
   - No (2)

8. Is at least one van-accessible parking space available per every one to 25 total spaces?
   - Yes (1)
   - No (2)

9. Is the parking space clearly marked by the International Symbol of Access?
   - Yes (1)
   - No (2)

10. If only on-street parking is available, is there an unobstructed curb cut/ramp?
    - Yes (1)
    - No (2)

Exterior travel route

11. If the accessible route crosses a curb, is a curb ramp provided?
    - Yes (1)
    - No (2)
    - N/A (3)

12. Is the ramp at least 36 inches wide?
    - Yes (1)
    - No (2)
    - N/A (3)

Building entrance

13. Is the exterior entry door at least 32 inches wide and does it open at least 90 degrees?
    - Yes (1)
    - No (2)

14. Does the entrance door have handles that can be opened without grasping, pinching or twisting of the wrist?
    - Yes (1)
    - No (2)

Interior route

15. Are all interior travel route paths at least 36 inches wide?
    - Yes (1)
    - No (2)
    - N/A (3)

16. Is the route stable, firm and slip-resistant?
    - Yes (1)
    - No (2)
    - N/A (3)

17. Is the route clear of any free object that may stick out?
    - Yes (1)
    - No (2)
    - N/A (3)

18. Is the interior door leading from waiting room to other interior rooms at least 32 inches wide and does it open at least 90 degrees?
    - Yes (1)
    - No (2)
    - N/A (3)

19. Does the facility have an elevator?
    - Yes (1)
    - No (2)
    - N/A (3)

20. Do the sliding doors reopen automatically when obstructed by an object? (Note: If constructed before March 15, 2012, and manually operated, the door is not required to reopen automatically.)
    - Yes (1)
    - No (2)
    - N/A (3)

21. Are the call buttons no higher than 54 inches from the floor?
    - Yes (1)
    - No (2)
    - N/A (3)

22. Are the in-car buttons no higher than 48 inches from the floor?
    - Yes (1)
    - No (2)
    - N/A (3)

23. Do the elevators provide audible signal indicators and or Braille signage?
    - Yes (1)
    - No (2)
    - N/A (3)

24. Are there audible signals when the elevator car passes or stops at a floor?
    - Yes (1)
    - No (2)
    - N/A (3)

Waiting room/area

25. Is there an open space at least 36 inches wide by 48 inches long in the waiting area to accommodate a wheelchair?
    - Yes (1)
    - No (2)

26. Does the reception area accommodate at least 1.5 seats per number of patients scheduled each hour?
    - Yes (1)
    - No (2)

Restrooms

27. Does the restroom entry configuration provide adequate maneuvering space for a person using a wheelchair? (A person in a wheelchair needs 36 inches of clear width for forward movement and a five-foot diameter or T-shaped clear space to make turns. If a restroom's entry vestibule has two doors, a person in a wheelchair needs a minimum distance of 48 inches clear of the door swing between the two doors.)
    - Yes (1)
    - No (2)
    - N/A (3)

28. In restrooms without stalls, is there a 30-inch-by-48-inch area of open floor space (or larger) clear of the door swing?
    - Yes (1)
    - No (2)
    - N/A (3)

29. Is the side-wall grab bar at least 42 inches long?
    - Yes (1)
    - No (2)
    - N/A (3)

30. Is the rear-wall grab bar at least 36 inches long?
    - Yes (1)
    - No (2)
    - N/A (3)

31. Is the toilet paper dispenser no greater than 48 inches above the floor below the side-wall grab bar?
    - Yes (1)
    - No (2)
    - N/A (3)

32. Is there a least one accessible sink that provides enough space for wheelchair users to park in front of the sink (30 inches wide by 48 inches long)?
    - Yes (1)
    - No (2)
    - N/A (3)

33. Is the faucet handle operable without needing to grasp, twist or pinch?
    - Yes (1)
    - No (2)
    - N/A (3)

34. Are the soap and towel dispensers (or hand-driers) within reach (i.e., no higher than 48 inches from floor) and not over an obstruction?
    - Yes (1)
    - No (2)
    - N/A (3)

Exam rooms

35. Is the entry door to the exam room at least 32 inches wide?
    - Yes (1)
    - No (2)

36. Is there adequate space for a mobility device to make a 180-degree turn (i.e., at least 30 inches by 48 inches) on one side of the exam table?
    - Yes (1)
    - No (2)

37. Are there private changing areas that are accessible?
    - Yes (1)
    - No (2)

38. Are gowns and drapes provided?
    - Yes (1)
    - No (2)

Compliance for the physically disabled: Equipment/Scales

39. Is there a weight scale that can accommodate people in wheelchairs or who are unable to stand without assistance, which is either integrated into a patient lift, integrated into an exam table or has a wheelchair-accessible platform?
    - Yes (1)
    - No (2)

40. Does your office have or can your office adapt an exam table for accessible transfers of people who use a wheelchair or are unable to transfer without assistance? (This may include the use of an adjustable-height table, transfer board, portable lift or a stretcher/gurney.)
    - Yes (1)
    - No (2)

Accommodations for hearing, speech and sight disabilities

41. Does the office have the ability to accommodate members with hearing, speech and sight disabilities? (The following materials are examples of accommodations: paper/writing utensil, visual aids, written materials, assistive-listening devices or systems and access to qualified sign language interpreters.)
    - o Yes (1)
    - o No (2)

Americans with Disabilities Act (ADA) and cultural competency training

42. Do your staff members receive ADA training once a year?
    - o Yes (1)
    - o No (2)

43. If yes, how does the staff receive ADA training?
    - o Internally (1)
    - o Managed-care-provided (e.g., Humana) (2)
    - o ADA.gov (3)

Plans, policies and licensure

44. Is there a hazardous materials/waste policy that describes the storage of sterile needles and proper disposal of used needles?
    - o Yes (1)
    - o No (2)

45. Is there an exposure-control process that includes infections control and universal precautions policies, procedures or protocols?
    - o Yes (1)
    - o No (2)

46. Does the office have a Clinical Laboratory Improvement Amendments (CLIA) certificate?
    - o Yes (1)
    - o No (2)

CLIA certificate number (1)	
Certificate date (2)	
Certificate expiration date (3)	
Waiver number (4)	
Waiver expiration date (5)	

47. Does the office have a standard list of abbreviations, acronyms, symbols and dose designations that **are not** to be used? The list must include:
    - – U, u
    - – IU
    - – Q.D., QD, q.d., qd, Q.O.D., QOD, q.o.d. qod
    - – Trailing zero (x.o mg)
    - – Lack of leading zero (.xmg)
    - – MS
    - – MSO4
    - – MgSO4
    - o Yes (1)
    - o No (2)

48. Does the office confirm that its preprinted forms do not include any of the previously mentioned abbreviations?
    - o Yes (1)
    - o No (2)

49. Does the office label all medications and medication containers (e.g., syringes, basins) to identify the contents?
    - o Yes (1)
    - o No (2)

50. Are all medications stored and maintained in an area away from public access **and** in an area, cabinet or room that can be securely locked?
    - Yes (1)
    - No (2)

51. Is there a 24-hour answering service or machine instructing members about how to obtain care?
    - Yes (1)
    - No (2)

52. Are your office hours and after-hours phone number posted internally and externally? (Note: May be "N/A" only if the office is located in large building and outside posting is prohibited by building management.)
    - Yes (1)
    - No (2)
    - N/A (3)

Medical records

NOTE: For initial credentialing and recredentialing, the reviewer must evaluate one blinded medical record to assess the adequacy of medical-record-keeping practices.

53. Are medical records maintained in an area away from public access?
    - Yes (1)
    - No (2)

54. Is a Health Insurance Portability and Accountability Act (HIPAA)-compliant written authorization obtained from the member or the member's authorized representative for maintaining the release of medical records? (Ask to see policy and procedure and the release form.)
    - Yes (1)
    - No (2)

55. Is there a mechanism for tracking referrals and reports to and from other practitioners and providers (e.g., between a primary care physician and a specialist)?
    - Yes (1)
    - No (2)

56. Is there evidence that medical record documentation standards have been implemented (e.g., legible, clear, concise, consistent, complete)?
    - Yes (1)
    - No (2)

57. Is there prominent documentation in an individual's record regarding the execution of an advance directive?
    - Yes (1)
    - No (2)

58. Is there a policy/procedure that outlines anti-discrimination in health care delivery? (Ask to see policy.)
    - Yes (1)
    - No (2)

59. Is there an appointment available for:
    a. Complete physical exam, routine preventive health, or well-child visits within 21 to 30 calendar days?
    - Yes (1)
    - No (2)

    b. Symptomatic visit within seven calendar days?
    - Yes (1)
    - No (2)

    c. Specialty care within 21 working days?
    - Yes (1)
    - No (2)

d. Urgent visit within 24 hours?
- Yes (1)
- No (2)

e. Emergent visit as soon as possible (i.e., immediately)?
- Yes (1)
- No (2)

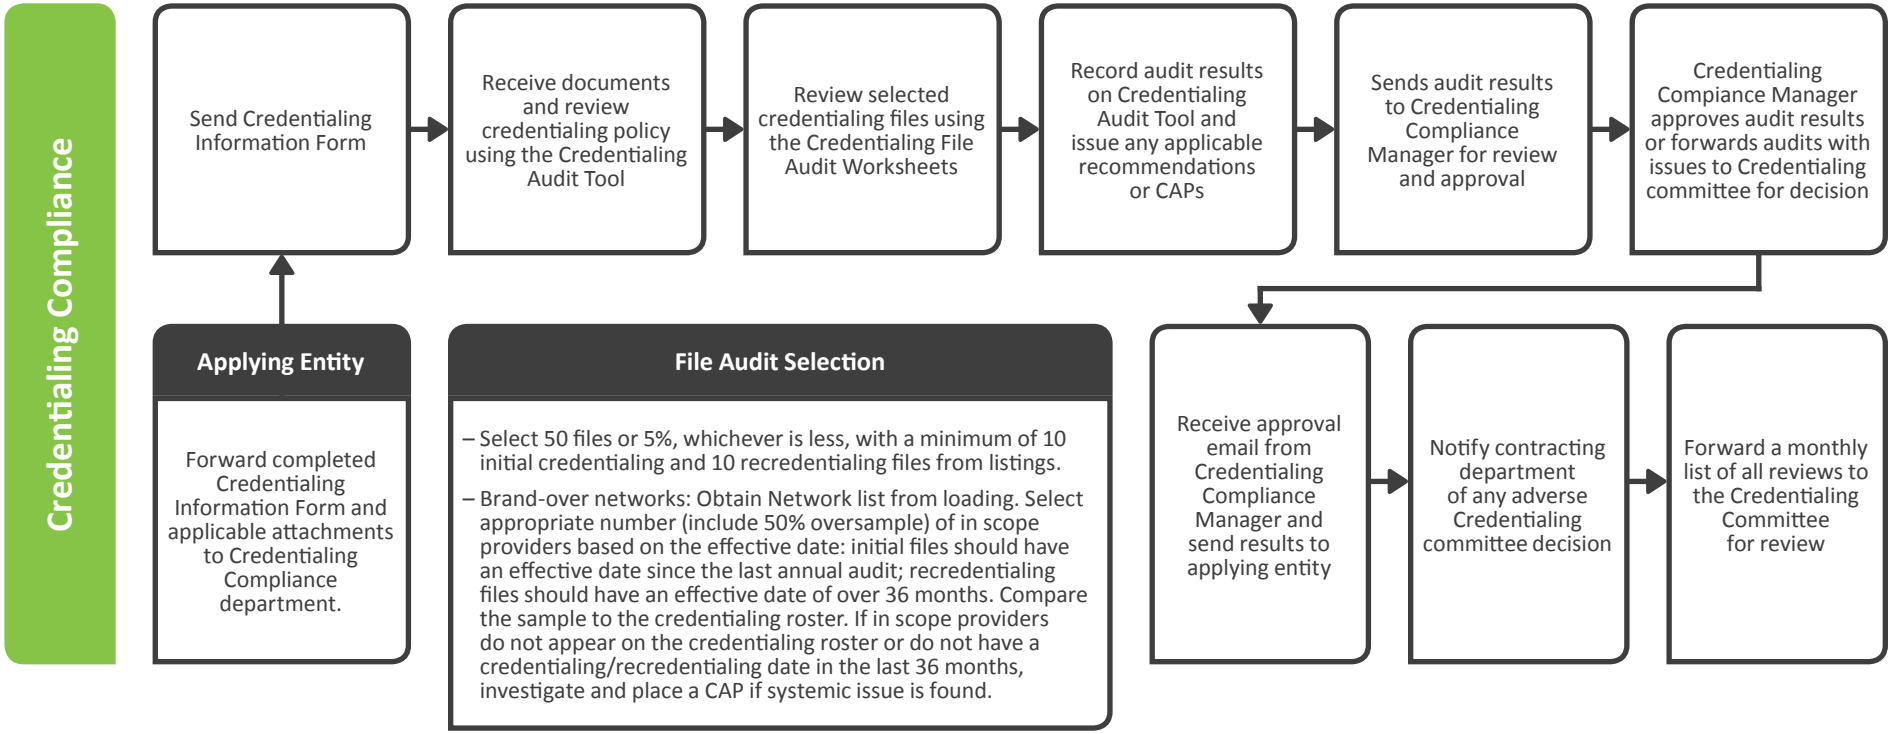
f. Do physicians see patients within 15 to 30 minutes of scheduled appointments?
- Yes (1)
- No (2)

Summary
Office address:
Practitioner(s) at this site:
1. The undersigned health plan representative has identified the following areas needing improvement and has discussed these areas with the practitioner or designee:
Follow-up to the site review will be evaluated by the health plan. Health plan representative signature: _____ Title:_____ Date:
Comments to the health plan:
I, the undersigned practitioner or designee, have reviewed the results of the office site evaluation. I agree to correct any area needing improvement as indicated by Humana. Practitioner/designee signature: _____Title: _____ Date:

	Scoring range
Excellent	**90 – 100%**
Acceptable	**80 – 89%**
Unacceptable	**79% and below**
Any "N/A" answer will receive the assigned score for a "yes" answer automatically when entered into the system.	

Attachment MMA 12-2: Annual Delegated Credentialing Audit Process

Humana measures results on a standard audit form that determines if the entity will be approved for delegated credentialing. The delegated entity is also subject to annual reviews to ensure it is meeting State, Federal and Accreditation oversight requirements. Please see below for our delegated credentialing audit process.



Delegation Policy

Humana

Humana Policy and Standards

Creation Date:	September, 1996	**Accountable Dept:**	10906- Licensure and Business Partner Compliance
Publication Date:	July 18, 2016	**Business Domain:**	02 Governance and Compliance
Last Review ed:	July 18, 2016	**Business Area:**	13.05 Delegation

Scope:

This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to perform an activity or function on its behalf.

Statement:

This policy describes the oversight process for any activity or function for the Medicare, Medicaid, Marketplace Exchanges (FFM, SBM, SHOP, SPM), commercial and specialty lines of business that have been delegated by Humana to another entity. Humana remains responsible for the performance and compliance of any function that is delegated. Functions that may be delegated include, but are not limited to:

- Claims Processing
- Claims Repricing
- Credentialing
- Clinical Health Services for medical and behavioral health
  - Utilization Management (UM)
  - Complex Case Management (CCM)
  - Disease Management (DM)
  - Quality Improvement (QI)
- Special Needs Plan (SNP)

The following standards are part of this Delegation Policy:

- Pre-Delegation Audit
- Annual Delegation Audit
- Corrective Action Plan
- Delegation Services Addendum and Delegation Attachments
- Provisions for Protected Health Information (PHI)
- Sub-Delegation
- Termination of Delegation
- Additional Delegated Functions

Definitions:

Additional Delegated Functions- Any additional activity or function that has been delegated by Humana.

Annual Delegation Audit- Method to evaluate an entity's contractual, regulatory and accreditation organization compliance and performance capacity annually.

Claims Processing- The process to receive, investigate and an act on a claim filed by a provider or an insured. It involves multiple administration and customer service layers that include review, investigation, adjustment, and remittance of payment or denial of a claim. Delegation of claims processing is whereby Humana delegates all of these processes to another entity.

Complex Case Management- Coordination of care and services provided to members who have experienced a critical event or diagnosis that requires extensive use of resources and who need help navigating the system to facilitate appropriate delivery of care and services.

Concurrent- A review for an extension of a previously approved, ongoing course of treatment or number of treatments.

Humana Internal
UNCONTROLLED WHEN PRINTED. Check controlled location to verify that this is the current version before use.

Corrective Action Plan- Issued to a delegated entity when they fail to meet established thresholds of compliance.

Credentialing- The process of obtaining and reviewing the documentation provided by the applicant and/or obtained during the process for the purpose of determining participation privilege status in the health plan.

Delegated Entity- An entity contracted to perform a function on behalf of Humana.

Delegation- A formal process whereby a health plan gives a qualified contracted provider group the authority to perform certain business functions on its behalf.

Delegation Attachment- A legal document that covers the specific performance requirements based on the function being delegated.

Delegation Council- A cross-functional group to review and vet proposals that involve clinical or claim delegation

Delegation Services Addendum- An additional document not included in the main part of the contract. It contains additional terms, obligations and information regarding the delegation of specific functions to an entity.

Disease Management- A multidisciplinary, continuum-based approach to health care delivery that proactively identifies populations with, or at risk for, established medical conditions.

Pre-Delegation Audit- Method to evaluate an entity's compliance and performance capacity prior to the execution of a delegation contract.

Pre-service Review- A service that an organization must approve, in whole or in part, in advance of a member obtaining medical care or services.

Post Service- Assessing appropriateness of medical services on a case-by-case or aggregate basis after services was provided.

Sub-Delegation- An entity contracted with a delegated entity to perform a function on behalf of the delegate.

Utilization Management- A formal evaluation (pre-service, concurrent, or post service) of the coverage, medical necessity, efficiency or appropriateness of health care services and treatment plans.

Acronyms:

BAA- Business Associate Agreement

CAC- Contract Approval Committee

CAP- Corrective Action Plan

FFM- Federally-Facilitated Marketplace

HIPAA- Health Insurance Portability and Accountability Act

HITECH- Health Information Technology for Economic and Clinical Health Act

SBM- State-Based Marketplace

SHOP- Small Business Health Options Program

SNP- Special Needs Plan

SPM- State Partnership Marketplace (partnership of state and federal agencies)

Related Documents: N/A

Standard: Pre-Delegation Audit

Purpose: To evaluate the entity's capability to perform the requested delegated functions on behalf of Humana in a contractually compliant manner.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been recommended for delegation by a Humana contractor to perform an activity or function on Humana's behalf.

Requirement: The Delegation Compliance department will perform a pre-delegation audit prior to any function being delegated to a prospective entity upon receipt of the Request for Delegation form and the Predelegation Questionnaire (claims delegation only). The pre-delegation audit will include evaluation of a prospective delegate's compliance and performance capacity which will include a review and approval of the following applicable items of the prospective delegate:

- Delegation Council review of proposed clinical health services and claims delegation
- Contract Approval Committee (CAC) approval for claims delegation
- Policies and procedures
- Program descriptions and work plans
- Forms, tools and reports
- Sub-delegation agreements
- Audit of contracted sub-delegate's program including policies, procedures and program documents
- Letters of accreditation
- Financial solvency
- File audit
- Federal/state exclusion screenings
- Offshore contracting

If a delegate requests a change of a subcontractor at any point, Humana's Delegation Compliance department will review and approve the subcontractor's policies, procedures and program documents, either directly or by review and approval of the delegate's audit of the proposed sub-delegate. These reviews will be conducted prior to contracting and require the subcontractor to comply with all Humana, federal, state and accreditation requirements.

Results of the pre-delegation audit are recorded on a standardized audit tool and then scored to determine the prospective delegate's ability to meet compliance requirements. Approval or rejection of the prospective delegate's pre-delegation audit will be based on the following compliance thresholds:

- Prospective delegates with a pre-delegation audit score of less than 70% must be referred to the appropriate committee, market leadership, compliance leadership, or business owner for additional evaluation and final determination on the entity's ability to meet Humana requirements to assume a delegated function.

- Prospective delegates with a pre-delegation audit score of 70%- 94% or those missing critical elements may only be approved if a Corrective Action Plan (CAP) is implemented. Refer to the Corrective Action Plan standard.

- Prospective delegates with pre-delegation audit score of 95% or higher may be approved without requiring a CAP, although potential opportunities for improvement should be documented and communicated to the delegate

Definitions: N/A

Related Documents: N/A

Standard: Annual Delegation Audit

Purpose: To review annually the functions of a delegated entity against contractual, state, federal and accreditation organization standards and requirements to ensure compliance.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to

perform an activity or function on its behalf.

Requirement: The Delegation Compliance department will perform an annual delegation audit to evaluate a delegate's continued ability to meet delegation compliance requirements, which will include a review and approval of the following applicable items of the delegate:

- Policies and procedures
- Program descriptions and work plans
- Forms, tools and reports
- Sub-delegation agreements
- Audit of contracted sub-delegate's program including policies, procedures and program documents
- Letters of accreditation
- Financial solvency
- File audit
- Confirming no offshore contracting

If a delegate requests a change of a subcontractor at any point, Humana's Delegation Compliance department will review and approve the subcontractor's policies, procedures and program documents, either directly or by review and approval of the delegate's audit of the proposed sub-delegate. These reviews will be conducted prior to contracting and require the subcontractor to comply with all Humana, federal, state and accreditation requirements.

Results of the annual audit are recorded on a standardized audit tool and then scored to determine the delegate's ability to meet compliance requirements. Approval or rejection of the delegates annual delegation audit scores will be based on the following compliance thresholds:

- Delegates with annual delegation audit scores of 70% or less must be referred to the appropriate committee, market leadership, compliance leadership or business owner for additional evaluation and final determination on appropriate and necessary next steps which may include; additional corrective measures, cancellation of a particular delegated function by termination of a delegation attachment, or termination of the delegation services addendum.

- Delegates with annual delegation audit scores of 70%-94% may only be approved if a Corrective Action Plan (CAP) is implemented. Refer to Corrective Action Plan standard.

- Delegates with annual delegation audit scores of 95% or higher may be approved without requiring a CAP, although potential opportunities for improvement should be documented and communicated to the delegate.

Definitions: N/A

Related Documents: N/A

Standard: Corrective Action Plan

Purpose: To formally identify and document any contractual, regulatory or accreditation organization performance requirements or other issues, provide an explanation of how the delegate is determined to be non-compliant and provide a plan of action to bring the delegate into compliance.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to perform an activity or function on its behalf.

Requirement: The Delegation Compliance department will issue a Corrective Action Plan (CAP) when the delegate fails to meet established compliance thresholds, contractual requirements, or other requirements. Specific deficiencies resulting in a CAP include, but are not limited to:

- Failure to achieve an overall audit score of 95%, or
- Failure to achieve a single-item score of equal to or greater than 70%, or
- Failure to meet compliance thresholds for critical elements as specified on standardized audit tool, during a pre-delegation, annual delegation audit, or contractual review.

A CAP should contain:

1. The identified issues and deficiencies
2. The corrective actions required, and
3. The timeframes for performance of the corrective actions and achieved results.

The delegate's performance under the CAP will be monitored by Delegation Compliance. Monitoring frequency is dependent upon the potential risks identified, and will occur until the delegate has achieved the required results.

If a delegate fails to achieve the required results within the timeframe provided, the delegate's results will be referred to the appropriate committee, market leadership, compliance leadership or business owner for additional evaluation and a final determination on appropriate and necessary next steps, which may include; additional corrective measures, cancellation of a particular delegated function by termination of a delegation attachment, or termination of the delegation services addendum.

Definitions: N/A

Related Documents: N/A

Standard: Delegation Services Addendum and Delegation Attachments

Purpose: To establish a legally enforceable contractual arrangement between Humana and an entity that outlines the legal obligations mutually agreed upon between the parties to the agreement.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to perform an activity or function on its behalf.

Requirement: Upon approval of delegation pursuant to the pre-delegation audit standard, Humana and delegate must execute Humana's Delegation Services Addendum and Delegation Attachment for each delegated function. The written Delegation Services Addendum and Delegation Attachment(s) must:

- Be mutually agreed upon.
- Describe the activities and the responsibilities of Humana and the delegated entity.
- Requires at least semiannual reporting by the delegated entity to Humana.
- Describe the process by which Humana evaluates the delegated entity's performance.
- Describe the remedies available to Humana if the delegated entity does not fulfill its obligations, including revocation of the Delegation Attachments.
- Retain for Humana the right to approve, suspend and terminate any delegated or sub-delegated function, including but not limited to the termination of individual practitioners, providers and provider sites where credentialing decision making is delegated.
- Retain for Humana pre-approval rights for any proposed sub-delegation.
- Contractually require that delegate shall provide sufficient oversight of the subcontractor to ensure that the subcontractor shall comply with all of the terms and conditions of the Delegation Services Addendum and attachments, or allow Humana to perform direct oversight of sub-delegate..
- Require delegate to comply with Humana, state and federal law and accreditation organization requirements.
- For Qualified Health Plans (QHP): Delegate must comply with 45 CFR 156.340 and permit access by the Secretary and the OIG or their designees in connection with their right to evaluate through audit, inspection, or other means, to the delegated or downstream entity's books, contracts, computers, or other electronic systems, including medical records and documentation, relating to the QHP issuer's obligations in accordance with Federal standards under paragraph (a) of 45 CFR 156.340 until 10 years from the final date of the agreement period.

The Delegation Compliance department will maintain the Delegation Services Addendum with applicable Delegation Attachment(s).

Definitions: N/A

Related Documents: 45 CFR 156.340

Standard: Provisions for Protected Health Information (PHI)

Purpose: To protect the confidentiality, integrity, and availability of electronic PHI when it is stored, maintained, or transmitted.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to perform an activity or function on its behalf.

Requirement: If a delegation arrangement involves the use of protected health information (PHI), Humana and delegate must execute Humana's Business Associate Agreement (BAA). The BAA should be mutually agreed upon and describe the following information:

- A list of allowed uses of PHI.
- A description of delegate safeguards to protect the information from inappropriate use or further disclosure.
- A stipulation that the delegate will ensure that sub-delegates have similar safeguards.
- A stipulation that the delegate will provide individuals with access to their PHI.
- A stipulation that the delegate will inform the organization if inappropriate uses of the information occur.
- A stipulation that the delegate will ensure that PHI is returned destroyed or protected if the delegation agreement ends.
- All other requirements under HIPAA/HITECH Act statutes and regulations.

The Business Associate Agreement (BAA) should be maintained by the Humana's Privacy Office and a copy of the BAA to the Delegation Compliance department.

Definitions: N/A

Related Documents: N/A

Standard: Sub-Delegation

Purpose: To establish requirements if a delegate choses to sub-delegate any activities that are currently delegated to them by Humana.

Scope: This standard governs the sub-delegation by any delegate of a delegated function

Requirement: The delegate will request Humana's approval to sub-delegate any portion of the delegated functions or activities. The delegate will demonstrate to Humana a plan for adequate oversight of the sub-delegate or request oversight by the Delegation Compliance department prior to approval of the sub-delegate.

If Humana approves the sub-delegation, the delegate will provide Humana documentation of a written sub-delegation agreement (and, as applicable, a Business Associate Agreement) that:

- Is mutually agreed upon.
- Describes the activities and the responsibilities of the delegate and the sub-delegated entity.
- Requires at least semiannual reporting of the sub-delegated entity to the delegate.
- Describes the process by which the delegate evaluates the sub-delegated entity's performance.
- Describes the remedies available to the delegate if the sub-delegated entity does not fulfill its obligations, including revocation of the delegation agreement.
- Allows Delegation Compliance access to all records and documentation pertaining to monitoring and oversight of the sub-delegates delegated activities.

If it retains oversight responsibilities, the delegate will provide:

- Evidence of annual oversight of sub-delegated entity.

Definitions: N/A

Related Documents: N/A

Standard: Termination of Delegation

Purpose: To mitigate any risks the delegate may impose on Humana due to failure to comply with regulatory, contractual and other compliance requirements.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to perform an activity or function on its behalf.

Requirement: A delegate's failure to perform or comply with the terms of the Delegation Services Addendum and attachments will result in Delegation Compliance referring the delegate's noncompliance or unacceptable performance status to the appropriate committee, market leadership, compliance leadership, or business owner recommending termination of delegation. Specific deficiencies that may lead to termination include:

- Failure to comply with state and federal laws, rules and regulations.
- Failure to comply with Humana or accreditation organization standards.
- Failure to cooperate with Humana's delegation audit process.
- Failure to comply with any term of the Delegation Services Addendum or delegation attachment(s).
- Failure to comply with the terms of any implemented Corrective Action Plan.
- Failure to submit accurate and timely delegation reports, as specified in the Delegation Services Addendum and attachments.
- Placement on any federal/state government programs exclusion lists.

Either the termination of the Delegation Services Addendum and/or a rescission of the delegated function/service should be initiated.

Definitions: N/A

Related Documents: N/A

Standard: Additional Delegated Functions

Purpose: To identify functions that could be delegated to an entity that would be out of scope for the Delegation Compliance department to oversee and/or monitor.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to perform an activity or function on its behalf.

Requirement: The following additional activities or functions may be delegated by operational areas within Humana when the operational area assumes responsibility for oversight of that function or activity:

- Network Management
  - Provider access and availability
  - Provider contracting

Oversight of these additional activities or functions should meet the requirements of Humana's Delegation Policy and all standards therein.

Attachment MMA 12-4: Credentialing Life Cycle of an APEX Work Case

Work Case Created

- Provider Relations team initiates task for completion of credentialing once all credentialing related documents including completed office site visit evaluation an ownership addendum are received

Automation:
- Systematic evaluation to determine where the Work Case needs to go next
- Full Terminations of Practitioners & Practitioner Groups executed without Contract Load involvement, when possible

Contract Payment-related Work Performed

- Contract Information System Modeling (Assess pre-implementation impact of payment terms)
- Contract Information System Load

Demographic and Contract Participation Work Performed

- Contract Load Team
- Data Collection and Verification Team (DCAV)

Automation:
- Provider records updated
- Systematic evaluation to determine need for Credentialing, Enrollment, & /or Service Fund involvement

Credentialing Work Performed

- Credentialing team performs all validation steps in compliance with process and policy (i.e. verification of provider's licensure, education, certification)

Automation:
- Provider record updated
- Cred Approval or Cred Denial Letter sent
- Notice of Cred Denial sent to Work Case Originator, when applicable

Service Fund Work Performed

- Service Fund Team (Member Assignment/Reassignment, modifications to Capitated payment mechanisms, etc…)
- Not all Work Cases/Providers encounter this step

Automation:
- Comments entered on Work Case and Attachments linked to Providers are archived to the Providers'' records
- Notice of Completion email sent to Work Case Originator, if requested

Provider Orientation

- Provider Relations Representative communicates effective date to provider and schedules Humana orientation training

Humana.

Attachment MMA 12-5: Credentialing Committee Denial Letter

Humana

January 1, 2015

John Doe, MD
500 West Main St
Suite 100
Louisville, KY 40202

Sent via Certified Mail, Return Receipt Requested
123456789

Dear Dr. John Doe,

This letter serves as notification that your credentialing application has been denied by the Humana Credentials Committee for the following reason:

<Insert reason from attached list>

This determination was based on Humana's established credentialing criteria. You may be eligible to reapply for participation two years from this decision date.

If you feel this determination was made in error, you may submit a request for reconsideration by the Credentials Committee within 14 days of receipt of this letter. Please forward the request to my attention at the email address furnished below and include a detailed explanation regarding the issue you wish to be reconsidered to sbarczak@humana.com.

If you have additional questions, please contact Denise Carnes at dcarnes@humana.com.

Sincerely,

Sylvester Barczak, M.D.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 13 – Value Based Purchasing (Regional):

a. The respondent shall describe the continuum of value-based purchasing (VBP) contractual arrangements available for providers, delineated by primary care, specialty care and hospital-based care.

b. The respondent shall describe the volume of contracts it expects to implement or maintain through a VBP arrangement each year for each of the next five (5) Contract years, delineated by primary care, specialty care and hospital-based care.

c. The respondent shall include specific outcomes it expects to see throughout the life cycle of the VBP continuum, delineated by primary care, specialty care and hospital-based care.

d. The respondent shall describe specific VBP arrangements it intends to implement and/or maintain in an effort to promote the Agency's goals, delineated by primary care, specialty care and hospital-based care.

Response:

Value-based purchasing (VBP) plays a powerful role in improving the quality of care that enrollees receive by rewarding providers who deliver better care at lower costs. Humana is an industry leader in establishing value-based relationships. With thirty (30) years of experience building VBP partnerships with our providers, Humana was one of the first health plans nationwide to partner with providers to develop these models. Over these decades of partnership and with a continuous focus on improvement, we have developed a VBP strategy that produces positive results through stronger clinical models, an enhanced focus on health, an enrollee-centric approach, and industry-leading provider relationships. Today, more than two million (2,000,000) Humana enrollees nationwide are attributed to more than forty-nine thousand (49,000) primary care providers (PCPs) engaged in VBP arrangements.

In Florida, Humana has been deeply committed to improving health outcomes and reducing costs through VBP programs in our Medicaid, Medicare, and commercial plans. We now have more than eight hundred thousand (800,000) Florida Medicaid and Medicare enrollees attributed to local VBP-engaged PCPs. A map displaying the locations of these providers throughout the State can be found in Attachment MMA 13-1. We have developed a custom set of locally-responsive models tailored to fit the needs of our Florida Medicaid providers. Through data analytics and in-person assistance from our Provider Relations representatives and others, we support our providers to move along a continuum of VBP programs towards whatever end-point on the risk-bearing spectrum with which they feel most comfortable. Humana will continue harnessing VBP arrangements to drive improved results among our Florida Medicaid enrollees, including the reduction of potentially preventable events and better birth outcomes.

==========

a. The respondent shall describe the continuum of value-based purchasing (VBP) contractual arrangements available for providers, delineated by primary care, specialty care and hospital-based care.

d. The respondent shall describe specific VBP arrangements it intends to implement and/or maintain in an effort to promote the Agency's goals, delineated by primary care, specialty care and hospital based care.

1. The extent to which the respondent has provided the continuum of value-based purchasing arrangements available to network providers, delineated by primary care, specialty care and hospital-based care.

==========

Our experience developing our continuum of value-based programs has demonstrated that the health care system delivers better outcomes when providers are offered thoughtful incentives, consultative guidance, and care gap alerts that are integrated with and measured by thoughtful comparative metrics and benchmarks. Among those providers engaged in VBP arrangements, we have repeatedly observed more rapid identification of high-risk enrollees, stronger delivery of care for chronic conditions, reduction of medical costs, and greater enrollee satisfaction.

An effective provider engagement strategy enables the formation of true partnerships and optimizes the payer-provider relationship. For some providers, the shift from a fee-for-service delivery model to value-based payments can be challenging. It requires the effective use of enrollee data, a focus on care coordination, and attention to enrollee engagement, with the enrollee and PCP serving as the hub of the care model (Attachment MMA 13-2). For many providers, these are lofty goals; for others, they are attainable with only minor adjustments to their current models. Humana's continuum of value-based programs allows each provider to enter into a VBP arrangement that suits its current capabilities, experience, and readiness. For example, while Full Value arrangements offer the greatest opportunity to improve quality and reduce costs, many providers have not yet developed the scale and capabilities to be successful in a risk-bearing environment. After working with the provider to determine the appropriate starting point, Humana offers the guidance and resources necessary to support the provider in moving as far along the continuum as desired.

Our continuum encompasses four models, each progressively moving further away from a volume-based payment model and closer to a value-based design. Each step provides a gradual evolution towards true value-based care delivery. Humana's nationwide Value-based Continuum is described below and illustrated in Attachment MMA 13-3.

PCPs are enrollees' most frequent point of entry into the health care system, and are best-suited for the efficient delivery of preventive care services. In addition, with their frequent touchpoints with enrollees and an increasingly whole-person focus, PCPs serve as a central point of coordination among specialists and hospitals. For these reasons, we have emphasized PCP-centric models in our value-based continuum.

STAR REWARDS: This program is our quality-only reward available to PCPs in our network. The goal for each practice in this program is to meet quality targets for at least four of five HEDIS quality measures. These measures include: comprehensive diabetes care – neuropathy screening; comprehensive diabetes care – HbA1c control; breast cancer screening; colorectal cancer screening; and medication adherence - hypertension. Rewards

are calculated annually as the aggregate of all physicians' performance within each practice. The bonuses offered through this program incentivize providers to learn about how they can drive improvement on HEDIS measures related to reducing preventable events.

MODEL PRACTICE: Physicians can earn incentives for achieving quality targets for the additional clinical and strategic initiative measures that are added for this program, such as emergency department (ED) utilization and readmission rates. This design helps providers take accountability for a broader set of measures that are related to positive health outcomes. While providers receive bonus payments for achievements in the model practice program, they are also eligible for shared-savings opportunities. When providers are eligible for shared savings, they are incentivized to deliver preventive care that reduces avoidable costs, such as vaccines, cancer screenings, and regular check-ups.

MEDICAL HOME: The third level of Humana's continuum is offered to groups that are either recognized as a patient-centered medical home (PCMH) or are in the process toward recognition from any accrediting agency, such as NCQA or The Joint Commission. The Medical Home program is suited for providers that have made progress in addressing some of the necessary requirements to become successful population health managers. For example, participants in the Medical Home program have implemented an electronic medical records system and likely use electronic prescribing systems. Additionally, they may have made other infrastructure changes, including the employment of care coordinators inside the practice. Under the Medical Home design, rewards measures and shared savings arrangements are the same as in the Model Practice program. However, with the Medical Home program, a care coordination payment is made to address the cost of building capabilities to achieve PCMH certification. This shared savings feature incentivizes larger, more sophisticated PCPs to coordinate enrollees' care through effective referrals, the sharing of data with other providers, and helping enrollees receive care in the most appropriate settings.

FULL VALUE: The final level of Humana's value-based continuum is the Full Value model. In this model, we pay a per-enrollee, per-month global capitation rate to providers to fully manage the cost and quality of care for our enrollees. This model ensures clinical cost savings are reinvested back to PCPs. Before providers advance to Full Value, Humana assesses their capabilities and infrastructure to ensure participating providers are in a position to be successful in the arrangement. Infrastructure that supports success in Full Value arrangements includes social workers or case management staff, referral teams, outreach to enrollees that are designated unable-to-contact, electronic health records, and a HEDIS team that manages gaps and develops action plans for the provider. As providers assume full risk for enrollee outcomes through this model, they are incentivized to manage and improve all aspects of enrollees' care, including care delivered by specialists or by hospitals, as well as social determinants of health. In addition to ensuring enrollees receive the appropriate preventive care, the Full Value model drives improved enrollee outcomes by motivating providers to coordinate care at all levels, from primary care to specialty care to inpatient stays, and to ensure that enrollees are adhering to their course of treatment.

FLORIDA MEDICAID VALUE-BASED PURCHASING MODELS

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Based on our successful national value-based continuum, we have developed a custom-tailored continuum of VBP programs specifically for Florida Medicaid providers that we will maintain under the next contract. This continuum is informed by best practices from Humana's nationwide experience and expertise, but it is driven by the needs and capabilities of Florida providers and the enrollees they serve. Humana's Florida Medicaid PCPs participate in this full continuum of VBP programs, while specialists are currently participating in our MPIP and Full Value models.

PCPS AND SPECIALISTS

Humana's value-based continuum for Florida Medicaid PCPs includes four VBP programs. Two of these programs – MPIP and Full Value – extend to specialists:

QUALITY-CAP BONUS: Our Quality-Cap Bonus program offers our Florida Medicaid providers a variation of our nationwide Star Rewards model. PCPs that exceed NCQA benchmarks across a series of HEDIS quality metrics related to access to primary care, immunizations, well-child visits, cancer screenings, and disease management can receive quarterly bonuses. Humana has rewarded high-performing Florida Medicaid providers with [redacted] in bonuses through this program since 2014. The bonuses offered through this program incentivize providers to implement interventions that improve HEDIS measures related to reducing preventable events. As providers assume no risk in this model, it serves as an introduction to VBP and prepares providers to move along the continuum towards higher-risk arrangements.

MMA PHYSICIAN INCENTIVE PROGRAM (MPIP): We operate an enhanced version of MPIP, the VBP program established by AHCA that rewards Medicaid providers who achieve quality targets with Medicare reimbursement rates. Higher reimbursement rates offer an incentive for MPIP providers to proactively drive quality improvement and achieve tangible gains related to their target measures, leading to better preventive care, improved health outcomes, and lower overall costs. Humana's program includes family practitioners, general practitioners, and pediatricians who see children ages zero (0) to twenty (20), as well as OB/GYNs and pediatric specialists. Each provider type has a tailored set of quality metrics related to specific health outcomes for their scope of services. In collaboration with AHCA, Humana enhanced the standard program by adding data-driven metrics that focus on reducing preventable events and improving birth outcomes. Pediatric PCPs in our network can elect to use the Enrollee Encounter Rate and Emergency Department Utilization as a benchmark or to use HEDIS measures, including those related to well-child visits and access to primary care. OB/GYNs' reimbursements are tied to quality metrics related to Prenatal Care, Caesarean Section Rates, and Postpartum Care. In recognition of the unique provider landscape in each region, we have also established region-specific benchmarks for each metric. Humana is continuously vetting additional quality metrics for all providers in the MPIP program in order to support the shift from pay-for-volume to pay-for-value.

SHARED SAVINGS: In a design similar to the Model Practice and Medical Home arrangements featured in Humana's nationwide Value-Based continuum, Humana rewards Florida Medicaid PCPs who reduce overall medical costs, while maintaining performance standards across quality metrics, with a portion of the cost savings realized by Humana. The potential to receive shared savings, while assuming no risk, incentivizes PCPs to take steps (such as establishing care coordination and integration processes) that reduce preventable events,

better manage chronic conditions, and lower costs. Shared savings also helps providers develop population health management capabilities that are essential to success in Full Value arrangements.

FULL VALUE (GLOBAL RISK): In our Florida Full Value model – exactly as with our nationwide Full Value model, described above - we pay PCPs and specialists, including behavioral health (BH) providers, on a PMPM basis to manage the care of our enrollees. In this arrangement, providers accept financial risk for the outcomes resulting from the services used by enrollees each month. When the cost of an enrollee's services is lower than a Full Value provider's monthly capitated rate to manage their care, the provider receives the cost savings surplus. Conversely, when the cost of the enrollee's care exceeds the provider's Full Value rate, the provider is accountable for the deficit incurred. The financial link with enrollee outcomes and service usage incentivizes providers to establish practices that enable the best outcomes for enrollees, such as employment of care coordinators and social workers, integrated care teams, electronic health records, and an emphasis on engaging enrollees in care.

HOSPITALS

While this continuum of VBP arrangements has a direct impact on hospital-based care, Humana does not currently directly enter into VBP arrangements with hospitals. This was a deliberate choice, informed by our success working through PCPs to reduce avoidable hospitalizations and readmissions. We have found value based models that incentivize PCPs to take a proactive approach to preventive care and take a lead role in coordinating care between providers are most successful in ultimately reducing preventable events and improving the appropriate utilization of hospital-based care. However, Humana remains committed to improving quality through value-based care, and we will continue to explore innovative payment models with all provider types, including hospitals.

==========

b. The respondent shall describe the volume of contracts it expects to implement or maintain through a VBP arrangement each year for each of the next five (5) Contract years, delineated by primary care, specialty care and hospital-based care.

2. The extent to which the respondent has provided specific percentages of overall contracts, delineated by primary care and specialty care and hospital-based care, that it intends to implement or maintain through some type of VBP arrangement for each of the five (5) Contract years, including a rationale for the intending percentages.

==========

The number of Florida providers in Humana's VBP arrangements has increased dramatically over the past decade. Today, Humana has more than eight hundred thousand (800,000) Florida Medicaid and Medicare enrollees attributed to PCPs engaged in VBP arrangements. We anticipate that our volume of VBP contracts will continue to grow over the course of AHCA's new SMMC contract. For Region 1, we have developed the following projections for the specific percentage of providers expected to participate in VBP arrangements, delineated by primary, specialty, and hospital-based care for each of the five (5) Contract years.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

REGION 1 VBP PROJECTIONS BY CONTRACT YEAR AND PROVIDER TYPE

Trade Secret as defined in Section 812.081, Florida Statutes

[redacted]

Trade Secret as defined in Section 812.081, Florida Statutes [redacted]

HOSPITALS

In Region 1, Humana has chosen not to contract with Hospitals through VBP arrangements throughout the contract.

While Humana's continuum of VBP arrangements has a direct impact on hospital-based care, we do not directly enter into VBP arrangements with hospitals. This was a deliberate choice, informed by our success working through PCPs and specialists to reduce avoidable hospitalizations and readmissions. We have found that we are most successful in improving hospital-based care through VBP by incentivizing PCPs and specialists to take a proactive approach to preventive care and a lead role in coordinating care between providers at all levels of the health system.

==========

c. The respondent shall include specific outcomes it expects to see throughout the life cycle of the VBP continuum, delineated by primary care, specialty care and hospital-based care.

3. The extent to which the respondent describes how its VBP arrangements incentivize quality improvement, including specific outcomes it expects at each stage of the continuum.

==========

Each stage of our value-based continuum has quality measures and incentives that are designed to achieve specific outcomes related to reducing potentially preventable events, improving birth outcomes, and improving the overall quality of care for our enrollees. To achieve these outcomes, each model emphasizes the importance of care coordination, preventive services, and the management of chronic conditions with measures that are reflective of our providers' capabilities and preparedness to address these areas.

PRIMARY CARE

QUALITY-CAP BONUS

Humana's Quality-Cap Bonus program rewards PCPs who perform above national NCQA benchmarks on a series of metrics tied to quality improvement. These metrics are tied to the reduction of potentially preventable events and the early detection and treatment of disease.

For example, we offer bonuses to providers with strong performance on the Adults' Access to Preventive/Ambulatory Health Services (AAP) HEDIS measure in order to increase the percentage of our enrollees who visit their provider for regular preventive care. Among

adults, regular PCP visits for preventive health services are essential for detecting and treating minor illnesses before they cause serious problems, for delivering preventive services, and for encouraging behavior change such smoking cessation and physical activity. By linking PCP visits to quality rewards, PCPs are further incentivized to ensure that their enrollees come in for regular visits. These regular interactions encourage enrollees to go to their PCP first for treatment of acute illnesses, rather than the ED.

Another example is our Quality-Cap Bonus model, which incentivizes our PCPs to increase their rates of breast cancer and cervical cancer screening. This leads to improved rates of early detection and greater access to specialist treatment for these conditions. The outcomes we expect to see from these incentives include reduced hospitalizations and overall lower morbidity related to these conditions as a result of early detection and treatment.

PCPs also play an important role in chronic condition management. For this reason, we include measures related to diabetes control in our Quality-Cap Bonus program, including HgbA1c Testing and HgbA1c Control. By incentivizing providers to help our enrollees manage these conditions, we expect to see a related reduction in diabetes-related ED visits and inpatient admissions.

MPIP

By linking higher reimbursement rates to PCPs' performance in MPIP metrics related to well-child visits and children's and adolescents' access to primary care, we expect to see a reduction in ED visits for preventable childhood illnesses. Parents and children who have developed a strong relationship with their pediatric PCP are more likely to visit the PCP for acute conditions rather than the ED. In addition, through early detection of childhood illnesses or developmental delays during well-child visits, we can enable early access to care and treatment that will ultimately reduce admissions, reduce the incidence of acute conditions (including those that are vaccine-preventable), and lower costs.

For family practitioners and board-certified general practitioners participating in MPIP, we incentivize preventive health services and PCP engagement through metrics related to well-child visits and the enrollee encounter rate. As a result of this emphasis on appropriate medical utilization (including preventive care), PCPs can better detect and treat acute conditions and manage chronic conditions, thus decreasing the need for inpatient admissions or ED visits.

SHARED SAVINGS

After providers have demonstrated success in the Quality-Cap Bonus or MPIP programs, Humana helps them grow into more sophisticated arrangements, such as our Shared Savings model. Providers participating in this model are incentivized to lower the cost of care for enrollees while achieving high-quality outcomes. Therefore, we expect to see PCPs make referrals to specialists and assist enrollees with finding the most appropriate setting of care. For example, PCPs participating in this arrangement educate enrollees about appropriate care-seeking such as when it is appropriate to call their PCP, visit an urgent care center, or go to the ED.

By tying payments to performance on a broad set of HEDIS quality metrics and achievement of overall cost savings, our Shared Savings program incentivizes PCPs to improve the health

outcomes of our enrollees. Examples include reduction of recurring and costly events like ED visits and hospital readmissions. Through improved rates of well-child visits and improved access to the PCP for adolescents and children that result from our Shared Savings program, we expect to see reductions in the number of children who require difficult and costly treatment for conditions that can be prevented or detected by a PCP. This includes the prevention of childhood diseases, including those that are vaccine-preventable, and the early detection and treatment of conditions with potentially serious effects, including elevated blood lead levels. Additionally, through a focus on nutrition and physical activity counseling for children, we expect to see fewer children who are require treatment for Type II diabetes.

For adults, we include metrics related to breast and cervical cancer screening and adult well-visits. The inclusion of these metrics combined with aligned incentives created by a shared savings structure, creates a situation in which we expect to see high rates of screening for, and thus earlier detection and treatment of, breast and cervical cancers. According to the National Cancer Institute, screening with mammography can lead to a fifteen (15) percent to twenty (20) percent relative reduction in mortality from breast cancer. Regular pap screenings decrease cervical cancer incidence and mortality by at least eighty (80) percent. Screening for chlamydia reduces the complications of chlamydial infection, including pelvic inflammatory disease. In addition, it reduces the risk of passing the infection to an infant during delivery. Furthermore, by encouraging regular PCP visits for adults, we expect to see higher rates of screening and detection of common conditions, including diabetes, hypertension, and heart disease. Detection of these conditions and early entry into treatment can reduce future complications or disease.

Given the important role of the PCP in chronic disease management, we include HEDIS metrics related to asthma and diabetes control in our Shared Savings program. This will result in fewer ED and inpatient visits related to asthma and fewer complications from diabetes, including neuropathy and eye problems, as well as fewer ED and inpatient visits.

FULL VALUE

By promoting shared accountability, the Full Value model incentivizes PCPs to address all aspects of the enrollee's care that might affect outcomes. With an emphasis on metrics that address potentially preventable events, Full Value VBP arrangements will improve outcomes that reflect more integrated care and attention to social determinants of health, including reduced ED visits, inpatient admissions and readmissions, and unnecessary ancillary services.

Humana's Florida Medicaid providers in Full Value risk arrangements outperform their non-risk counterparts in terms of quality, outcomes, and cost. In 2016, the risk providers had significantly higher quality scores on metrics related to preventive health, well child visits, and diabetes management. As a result of their strong performance, these providers also have strong outcomes – Humana's Florida Medicaid risk providers average twenty-five point three percent (25.3%) fewer ED visits per one thousand (1,000) enrollees and seventeen point four percent (17.4%) fewer inpatient admissions per one thousand (1,000) enrollees. By reducing preventable events like these and helping enrollees access care in appropriate settings, Florida risk providers have fourteen point seven percent (14.7%) lower inpatient

medical expenses and have reduced pharmacy expenses by eleven point four percent (11.4%).

Providers operating under the Full Value model have both the incentive and resources to ensure that our enrollees are receiving preventive care, including engagement of unreachable enrollees. Through better attention to screening, immunizations, and well visits, we expect to see early detection of diseases, engagement in treatment, and fewer vaccine-preventable infections such as influenza and varicella. Additionally, providers in our Full Value arrangements are commonly patient-centered medical homes (PCMHs), which promote comprehensive care through a team of providers, including PCPs, specialists, and support staff. By investing in integrated care and coordination with specialists (including behavioral health providers) we expect to see fewer admissions and ED visits, better post-discharge follow-up care, and greater medication adherence through a more team-focused approach to the management of chronic conditions.

Additionally, through investments in the employment of case managers and social workers, our providers operating under the Full Value model are better equipped to address the social determinants of health that can affect our enrollees' outcomes. By better supporting our enrollees in all aspects of their lives we expect to see fewer preventable diseases, better management of chronic diseases, and fewer ED visits. This support includes things such as help navigating the health care system, programs to enable adherence to their medication schedules, availability of non-emergency transportation for provider visits, and access to a safe living environment and healthy foods.

The Full Value arrangement also supports providers as they introduce cost-saving innovations such as telemedicine. Telemedicine can help PCPs, particularly those in rural areas, better connect with the specialists that can help them manage the chronic conditions of their enrollees.

SPECIALTY CARE

MPIP

For board-certified OB/GYNs, our MPIP program is designed to drive improvements in measures closely linked to birth outcomes. As providers are incentivized to improve the frequency of ongoing prenatal care among enrollees, we expect to see a reduced risk of pregnancy-related complications, including anemia, preterm birth, preeclampsia, and complications of diabetes. Additionally, we expect to see a lower proportion of babies born at a low birthweight, as babies born to mothers who receive no prenatal care are three times more likely to be born at a low birthweight. Babies who are born to mothers who receive no prenatal care are also five times more likely to die, according to the U.S. Department of Health and Human Services' Office on Women's Health.

According to the American College of Obstetricians and Gynecologists, by connecting provider payments to C-section rates, we also expect to see reduced maternal hospital stays, reduced risk of respiratory problems in infants, and a reduced risk of complications in subsequent pregnancies.

Our MPIP program will also measure the percentage of enrollees with a postpartum care visit, which leads to improvements in outcomes. Greater coverage of postpartum care can lead to greater uptake of post-partum family planning, improved breastfeeding rates, and improved detection and treatment of post-partum depression. In addition, for those women with pre-existing conditions, such as diabetes, we can expect to see improved outcomes related to their condition as the OB/GYN can help them get back on track in managing their condition during the post-partum period.

Pediatric specialists (including cardiologists, endocrinologists, nephrologists, neurologists, and psychiatrists) are incentivized to pursue and maintain board certification in order to receive a Medicare rate payment through MPIP. Board certification is a process that exceeds state licensing requirements for practicing medicine. Certification reflects an ongoing commitment by the physician to continually expand their knowledge in their medical specialty. Once a physician is certified by the board, they are required to formally maintain their certificate through ongoing education. Through this arrangement, we expect to see improved outcomes for children with special conditions such as Juvenile Idiopathic Arthritis, Inflammatory Bowel Disease, and Left Heart Syndrome.

FULL VALUE

Our Full Value arrangements use a range of metrics to assess our medical specialists' performance and determine payments, including HEDIS, enrollee encounter rate, surplus/deficit calculations, and medical metrics, including admissions, readmissions, and ED visit rates. With attention to a broad swath of indicators and an emphasis on better outcomes at lower costs, our specialists in this arrangement are incentivized to take actions that support integrated care with PCPs and other specialists, promote medication adherence, and help our enrollees seek care at their PCP's office or urgent care, rather than the ED. In addition, specialists are encouraged to avoid costly and unnecessary ancillary services such as those radiology or laboratory services that do not have a bearing on enrollee outcomes. By taking these steps, we expect our enrollees who see specialists in VBP arrangements to have fewer inpatient admissions and readmissions, fewer ED visits, and use fewer unnecessary ancillary services.

For BH specialists in our network, the outcomes measured through the Full Value arrangement are also directly linked to the reduction of preventable events. Incentives are determined based upon 7-day and 30-day follow-up rates after hospitalization; initiation and engagement of alcohol and other drug dependence treatment; and hospital psychiatric re-admissions at thirty (30), sixty (60), ninety (90), and one hundred eighty (180) days. By encouraging our BH providers to focus on proper follow-up care following hospital admissions and initiation of substance use treatment, we expect to see higher engagement in treatment for our enrollees and improved management of their BH conditions, resulting in fewer ED visits and inpatient admissions associated with BH.

HOSPITAL-BASED CARE

As discussed above, Humana has chosen not to enter into VBP arrangements with hospitals. We have determined through our experience operating VBP arrangements for PCPs and specialists that we are able to successfully improve hospital outcomes through these

models. We educate our PCPs on actions they can take in ambulatory settings to reduce potentially preventable hospitalizations. An example of this communication can be found in Attachment MMA 13-4. By incentivizing providers to focus on all aspects of an enrollee's care, including the care they receive in the hospital, and by rewarding them for reducing inpatient admissions among our enrollees, we see fewer inpatient admissions and readmissions, and better coordination of post-discharge care.

==========

4. The extent to which the respondent describes how its VBP arrangements incorporate goals or incentives for reduction of potentially preventable events.

==========

At the most fundamental level, our VBP programs are designed to reduce potentially preventable events by tying payments to overall enrollee outcomes. We build VBP arrangements around three (3) key strategies to reduce preventable events:

- Incorporation of preventive care measures
- Incorporation of clinical initiative measures and
- Implementation of Shared Savings and Full Value models

Preventive care plays an important role in all of our VBP programs. Payments are tied directly to preventive care measures, including access to primary care for children, adolescents, and adults, well-child visits, and the enrollee encounter rate. In addition to controlling preventable events through the administration of screenings, immunizations, and other prevention activities, regular engagement with the PCP contributes to reduced ED visits. When enrollees have established a strong relationship with their PCP, they are more likely and feel more comfortable going to their PCP for acute incidents than to the ED. Additionally, VBP may incentivize providers to stay open later and have more flexible hours to better accommodate enrollees' needs.

Clinical initiative measures – incorporated into our MPIP, Shared Savings and Full Value models – directly link VBP with reducing potentially preventable events. These measures include acute care admissions per one thousand (1,000) enrollees per year, inpatient days per one thousand (1,000) enrollees per year, readmission rates within thirty (30) days; and ED visits per one thousand (1,000).

Through our Shared Savings and Full Value arrangements, providers are incentivized to deliver services and coordination that reduce costly ED visits, hospital admissions, and readmissions, as reducing these events allows providers to experience greater savings. Namely, these arrangements incentivize management of chronic conditions, which are the top two (2) contributors to inpatient admissions and readmissions in Region 1 (COPD and congestive heart failure). Providers in these arrangements are more likely to coordinate with specialists to help enrollees manage their conditions, and provide the support and resources that enrollees need to adopt healthy habits, including smoking cessation, exercise, and healthy eating. In addition, providers engaged in these arrangements have frequently established procedures for following up with unable-to-contact enrollees and ensuring that enrollees do not miss appointments. Through social workers or case managers, they can

connect enrollees with community resources, such as smoking cessation support, that contribute to improved outcomes and respond to the social determinants of health.

Additionally, by incentivizing our providers to reduce readmissions, our VBP program promotes integrated care. Behavioral health-related conditions are a leading cause of readmissions in Region 1, with bipolar disorder as the leading contributor, and pancreas disorders (most commonly caused by chronic alcohol consumption) as the 3rd leading cause. To control readmissions related to these conditions, PCPs need to coordinate with BH providers, and BH providers need to make sure that follow-up appointments are completed. In addition, PCPs are incentivized to link enrollees with substance use programs to help them control their condition.

Within our Shared Savings and Full Value programs – through which providers can share in a portion of Humana's savings – PCPs and specialists are further incentivized to reduce the use of unnecessary ancillary services as a cost-reduction measure. By reducing the number of unnecessary radiology services, diagnostic tests, laboratory tests, therapy services, and pharmaceuticals, our VBP program is successful in not only lowering costs, but also ensuring a better quality of care for our enrollees by cutting down the amount of time they spend in outpatient facilities receiving tests and avoiding any pain associated with these procedures.

==========

5. The extent to which the respondent describes how its VBP arrangements incorporate goals or incentives for improvement of birth outcomes

==========

Humana shares AHCA's goals of reducing unintended pregnancies and promoting positive birth outcomes. Our VBP programs incentivize providers to focus on the main contributors to good birth outcomes, including frequent prenatal care, postpartum care, and reduction of medically unnecessary C-sections.

Our MPIP program is open to any physician who is board-certified in obstetrics and gynecology by the American Board of Obstetrics and Gynecology or the American Osteopathic Board of Obstetrics and Gynecology and who had at least ten (10) Medicaid deliveries during the measurement period. As of July 2017, we have one hundred fifteen (115) OB/GYNs who are qualified for and are receiving the enhanced payment through MPIP. These physicians are responsible for hundreds of pregnant Medicaid enrollees, providing the prenatal and postpartum care and deliveries.

The indicators by which our MPIP providers are measured are directly linked to AHCA's goals for improving birth outcomes, including increasing the frequency of prenatal care, increasing the number of women who complete a postpartum care visit, and a reduction in medically unnecessary C-sections. By linking reimbursement rates to these indicators, we incentivize our providers to take actions that improve birth outcomes among our enrollees.

Family planning education and support is critical to the reduction in unintended pregnancies and is thus an important contributor to better birth outcome rates across the population. To that end, PCPs can counsel and administer family planning methods to our enrollees to prevent

future unintended pregnancies or can refer our enrollees to a location where they can receive the family planning method of their choice. OB/GYNs can also administer family planning methods to women who are not pregnant and counsel pregnant women on family planning methods that can be used post-partum. This includes administering these methods during the immediate or intermediate post-partum period.

This collection of approaches, as enabled by our Shared Savings and Full Value programs, encourages both PCPs and specialists to invest in initiatives that drive improved birth outcomes and reduce overall avoidable medical costs.

==========

6. The extent to which the respondent provides a breakdown of specific VBP strategies employed with its current network of primary care providers.

==========

As described throughout this response, Humana currently implements a continuum of VBP strategies for Florida Medicaid PCPs. Our VBP arrangements have been informed by over twenty (20) years of experience serving Floridians and the strong relationships we have built with providers throughout the state over that time. This continuum reflects our commitment to meeting providers at their level of readiness and supporting them to move as far as they like along the spectrum to full accountability.

In the first level of our continuum, the Quality-Cap Bonus program serves as an introduction to VBP for our PCPs. Through this program, PCPs can receive incentive payments for their performance on key HEDIS measures. We currently have more than one thousand (1,000) Florida Medicaid PCPs participating in this program in Florida.

In the next level, PCPs and specialists can participate in the MMA Provider Incentive Program (MPIP). Humana's MPIP model rewards providers who both achieve certain standards in the HEDIS measures and who achieve progress in medical metrics, including the enrollee encounter rate and ED visits per one thousand (1,000) enrollees. MPIP encourages providers to take a whole-person view of health, with an emphasis on prevention and bringing enrollees into care. Today, more than sixty-five thousand (65,000) Humana MMA enrollees are attributed to PCPs that qualify for Medicare reimbursement rates through the MPIP program.

Providers' engagement in MPIP sets them up for the next level of our continuum, our Shared Savings model. In this model, PCPs are eligible to receive a portion of Humana's own savings based upon their performance on a range of HEDIS metrics and their overall medical savings. By encouraging providers to focus on quality of care in addition to lowering costs, we prepare them to take on greater risk. Humana has more than one hundred twenty-eight thousand (128,000) MMA enrollees attributed to providers under a Shared Savings arrangement in Florida.

The final level of our continuum is our Full Value model. In this model, PCPs and specialists receive a per-enrollee, per-month sub-capitation payment. As this arrangement gives our providers full responsibility for the care of our enrollees and allows them to keep any surplus, providers are incentivized to take steps that will prevent costly events, such as ED

visits and admissions. Providers are also incentivized to invest in integrated models of care and to ensure enrollees are receiving the appropriate preventive care. Today, more than one hundred sixty-one thousand (161,000) Humana MMA enrollees are attributed to Florida Medicaid providers in a Full Value arrangement.

==========

7. The extent to which the respondent describes the approach in sharing specific data elements with providers under a VBP arrangement and the level of respondent support offered to providers to ensure progression along the continuum of VBP arrangements.

==========

SHARING SPECIFIC DATA ELEMENTS WITH PROVIDERS

We use a range of tools to share specific data elements with providers under a VBP arrangement. In addition to sharing VBP-specific information, including capitation payments, providers can view their HEDIS performance in real-time, identify enrollees with care gaps for follow-up, and view other data that can help them to better manage our enrollees' care, achieve savings, and prepare to progress along the VBP continuum.

CAREHUB CLINICAL GUIDANCE EXCHANGE

Our CareHub Clinical Guidance Exchange (CGX) system generates Care Alerts that are distributed to our providers. These Care Alerts consist of evidence-based medicine care gaps and drug-to-drug/disease interaction alerts. By promoting awareness and closure of these gaps, we help our providers improve their results and progress along the continuum of VBP arrangements.

ANVITA INSIGHTS ENGINE

The Anvita Insights Engine delivers personalized patient analyses that identify enrollees who (1) are at risk for dangerous medical events, including hospitalizations; (2) are taking contraindicated therapies that should be discontinued; (3) are missing preventive services; and (4) have cost-savings interchange opportunities to lower costs. Furthermore, when deployed at the Point of Care, Anvita can identify, rank, and score competing treatments by safety, efficacy, and cost in real-time by using virtually all known clinical data. When combined, Anvita's tools empower our providers to reduce preventable events and provide high-quality, efficacious treatments at a lower cost for our enrollees, increasing their opportunities to benefit from our VBP risk arrangements.

AVAILITY CARE PROFILE

The Availity Care Profile, a platform that provides a consolidated view of enrollees and their health care services across providers, is a powerful tool for improving enrollee safety, reducing unnecessary services, eliminating duplication of procedures, and driving coordination and continuity of care. Available to all of our network providers in Florida, the Availity Care Profile includes claims information associated with office visits and hospitalizations, diagnoses and associated procedures, prescription history, lab event history, radiology event history, immunization history, and clinical messaging. By allowing more rapid closure of gaps in care for enrollees, greater opportunity for preventive care

services, and better chronic condition management, providers are enabled to improve enrollee outcomes, ultimately contributing to better payments through VBP.

SERVICE FUND DATA ANALYTICS

Humana developed the proprietary Service Fund risk sharing management application for providers engaged in a risk or capitated arrangement. This innovative tool is used to control reimbursements to providers in these arrangements by tracking and aggregating information on capitation payments, claims expensing, claims payment, reconciliation, and settlement for all PCP contacts.

On a monthly basis, Service Fund makes data files available containing information regarding provider membership, funding, claims activity, progress toward value-based payments, and capitation payments at an individual provider level and at a group level. Humana tailors the reports to providers in risk or value-based arrangements. They are available for provider access through an online portal, as well as through our Provider Relations representatives. Additionally, Humana educates providers using Service Fund by walking through standard reports during initial trainings to show the data to which they have access and how to use it to help manage their providers and financials. On a monthly basis, our Provider Relations Representatives meet with PCPs to review the Service Fund reports and to discuss any issues or barriers they may be facing.

HUMANA'S MONTHLY HEDIS PACKAGE

To help PCPs better manage the care of their enrollees through VBP arrangements, we provide a package of monthly HEDIS reports to every PCP. These reports capture preventable events among enrollees, gaps in care, and high utilizers of pharmaceuticals. In addition, practices can view their performance on HEDIS indicators, and see how their performance compares with other providers in their region. An example of this report is included in Attachment MMA 13-5. We package this information in an actionable manner, providing call lists with the contact information for enrollees who have care gaps and a list of recommended actions for enrollees who are non-compliant with preventive care screening and/or disease management visits. These reports can serve as a catalyst for providers to make changes to their organization to better meet the needs of Humana enrollees. For example, several providers have created outreach teams that use the reports to contact enrollees with care gaps and schedule appointments to address them.

LEVEL OF RESPONDENT SUPPORT OFFERED TO PROVIDERS TO ENSURE PROGRESSION ALONG THE CONTINUUM OF VBP ARRANGEMENTS

In addition to encouraging progression along the continuum of VBP arrangements through strong data capabilities, Humana's departments provide in-person support to help our providers close care gaps, identify ways to improve their performance, and act on the data that we provide.

FACE-TO-FACE SUPPORT

We use a dedicated approach to supporting providers to increase provider performance and effectiveness and move along the continuum of VBP arrangements. The departments that engage in face-to-face support for our providers work together in tandem to help providers

to succeed in their current VBP arrangements and to move along the continuum towards pay-for-value models. We have developed a series of programs, processes, metrics, and resources – including the HEDIS package described above – complemented by a robust process to identify and leverage best practices among our provider network.

Our approach to face-to-face support includes the following departments and activities:

- Provider Relations: Our Provider Relations representatives are our direct liaisons and field representatives to our providers. They are responsible for meeting with PCPs and high-volume specialists in our network monthly. In this front-line position, they are also responsible for educating providers, clarifying provider inquiries, and relaying provider concerns to the broader Provider Relations team. We currently have more than fifty (50) Provider Relations representatives assigned to providers throughout the state.

- Quality: Our Quality Improvement Nurses (QINs), who are geographically assigned to PCPs and meet with PCPs quarterly, deliver provider-specific metrics, coach providers on gap closing opportunities, and provide resources and educational opportunities for providers and staff. There are nearly twenty (20) QINs assigned to PCPs in our Florida Medicaid network.

- Claims and Documentation: Our Claims Department provides education for providers to ensure accuracy of documentation and coding.

- Care Management: Our Care Management and Disease Management teams assist our providers in developing strategies for engagement of enrollees qualified for care programs, provide feedback on program activity, and identify strategies to respond to actionable care opportunities (ED utilization, readmissions, etc.).

JOINT OPERATING COMMITTEE

In addition to monthly meetings between our Provider Relations representatives and our providers in risk arrangements, we have established a Joint Operating Committee (JOC) with a wide range of providers, including our high-volume fee-for-service networks, capitated specialty networks, hospital-based physician groups, and global risk providers. The JOC is a critical element of a successful risk relationship with our providers, allowing an open line of communication between our providers and Humana.

The goal of this committee is to identify the best way to provide the highest quality of care to our enrollees in the most affordable manner and discuss ongoing operations. To guide the meetings, we provide our risk partners with a package of reports including:

- Financial Performance Summary
- Medical Metric Report with comparison to regional averages and benchmarks
- Inpatient Stay Reports summarized by primary diagnosis and compared to PCP office visits
- ED and Outpatient Reports by diagnosis
- ED Visit Report
- OB-GYN Report
- Top Forty (40) Report to identify enrollees with high admissions and ED visits

Through these reports, Humana reviews provider performance on metrics related to hospital admission and readmission rates, HEDIS quality, medications taken for pharmacy, settlement data for finance, and medical risk adjustment. Through discussion of this data, along with the provider's experience in VBP, we work collaboratively to identify ways to improve performance, drive better enrollee outcomes, and ensure a successful risk relationship.

Evaluation Criteria:

1. The extent to which the respondent has provided the continuum of value-based purchasing arrangements available to network providers, delineated by primary care, specialty care and hospital-based care.

2. The extent to which the respondent has provided specific percentages of overall contracts, delineated by primary care and specialty care and hospital-based care, that it intends to implement or maintain through some type of VBP arrangement for each of the five (5) Contract years, including a rationale for the intended percentages.

3. The extent to which the respondent describes how its VBP arrangements incentivize quality improvement, including specific outcomes it expects at each stage on the continuum.

4. The extent to which the respondent describes how its VBP arrangements incorporate goals or incentives for reduction of potentially preventable events.

5. The extent to which the respondent describes how its VBP arrangements incorporate goals or incentives for improvement of birth outcomes.

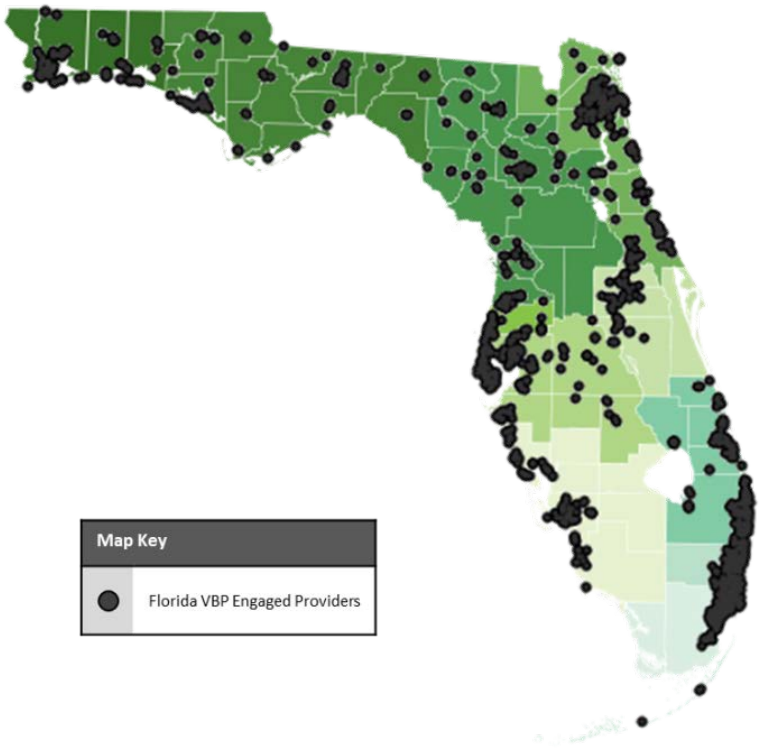
6. The extent to which the respondent provides a breakdown of specific VBP strategies employed with its current network of primary care providers.

7. The extent to which the respondent describes the approach in sharing specific data elements with providers under a VBP arrangement and the level of respondent support offered to providers to ensure progression along the continuum of VBP arrangements.

Score: This section is worth a maximum of 35 raw points with each of the above components being worth a maximum of 5 points each.

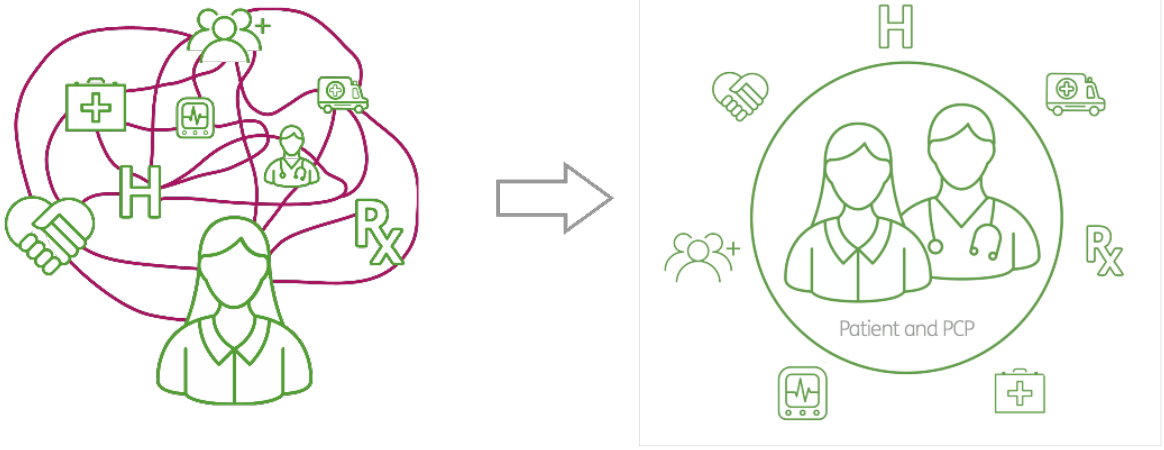
REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Attachment MMA 13-1: Map of Humana Network Providers Engaged in VBP in Florida



Attachment MMA 13-2: Value-Based Care Model

The shift from a fee-for-service delivery model to value-based payments can be challenging. It requires the effective use of enrollee data, a focus on care coordination, and attention to enrollee engagement, with the enrollee and PCP serving as the hub of the care model, as seen below.

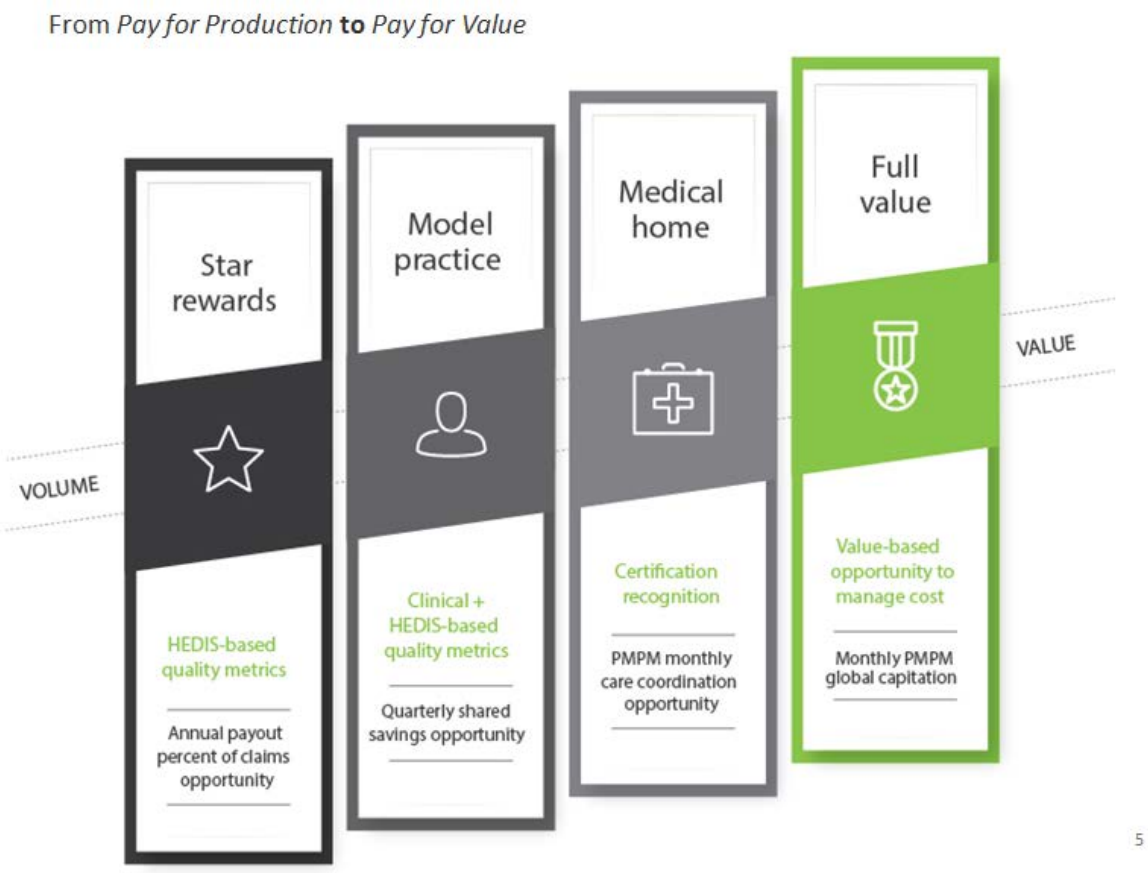


Fee-For-Service Model

Value-based Care Model

Attachment MMA 13-3: Humana's Value-Based Continuum

Humana's Value-Based Continuum encompasses four models, each progressively moving further away from a volume-based payment model and closer to a value-based design. Each step provides a gradual evolution towards true value-based care delivery. Humana's nationwide Value-Based Continuum is illustrated below.



HEDIS® Measure Overview: Hospitalization for Potentially Preventable Complications (HPC)

For 2016, the National Committee for Quality Assurance (NCQA) added Hospitalization for Potentially Preventable Complications, or HPC, to its Healthcare Effectiveness Data and Information Set (HEDIS). This measure, which tracks the number of admissions for complications of chronic and acute ambulatory care sensitive conditions (ACSC), is an important indicator of care coordination. The Centers for Medicare & Medicaid Services (CMS) will include this measure on the Star display page in 2017 and in the 2018 Star ratings, unless there are issues with the initial data collection. Data collected in 2016 will be used by CMS to calculate the measure for the Star display page in 2017.

Please note: The information offered in this flier is based on HEDIS technical specifications. It is not meant to preclude clinical judgment. Treatment decisions should *always* be based on clinical judgment.

Who is included in HPC?

Patients 67 and older as of Dec. 31 of the measurement year are included in HPC. The measure looks at the rate of acute inpatient discharges with a diagnosis considered an ACSC per 1,000 members and the risk-adjusted ratio of observed to expected discharges for ACSC. Patients enrolled in an institutional special needs plan (I-SNP) any time during the measurement year are excluded. The rate is risk-adjusted based on comorbidity, age and gender.

How do you do well on HPC?

To do well, organizations must limit admissions for complications of chronic and acute ambulatory care sensitive conditions. The conditions are listed below. Detailed code descriptions are available in the NCQA HEDIS 2016 Technical Specifications guide.

ACSC List

An ambulatory care sensitive condition is defined as an acute or chronic health condition that can be managed or treated in an outpatient setting. The ambulatory care conditions included in the HPC measure are:

Chronic ACSC

- Diabetes short-term complications
- Uncontrolled diabetes
- Chronic obstructive pulmonary disease (COPD)
- Hypertension
- Diabetes long-term complications
- Lower-extremity amputation among patients with diabetes
- Asthma
- Heart failure

Acute ACSC

- Bacterial pneumonia
- Cellulitis
- Urinary tract infection
- Pressure ulcer

How primary care physicians can help

- Ensure appropriate outpatient management of the above conditions
- Coordinate efforts with specialists and other health care providers to prevent complications and subsequent admissions
- Provide prompt follow-up care postdischarge to prevent complications and subsequent readmissions

Source: HEDIS 2016 Healthcare Effectiveness Data and Information Set (HEDIS®) Technical Specifications. HEDIS is a set of standardized performance measures designed to help purchasers and consumers compare the performance of health plans on an apples-to-apples basis. Trade Secret as defined in Section 812.081, Florida Statutes

E. DELIVERY SYSTEM COORDINATION

MMA SRC# 14 – General HEDIS Performance Measures Experience (Statewide):

The respondent shall describe its experience in achieving quality standards with populations similar to the target population described in this solicitation. Include in table format, the target population (TANF, ABD, dual eligibles), the respondent's results for the HEDIS measures specified below for each of the last two (2) years (CY 2015/ HEDIS 2016 and CY 2016/ HEDIS 2017) for the respondent's three (3) largest Medicaid Contracts (measured by number of enrollees). If the respondent does not have HEDIS results for at least three (3) Medicaid Contracts, the respondent shall provide commercial HEDIS measures for the respondent's largest Contracts. If the Respondent has Florida Medicaid HEDIS results, it shall include the Florida Medicaid experience as one of three (3) states for the last two (2) years.

The respondent shall provide the data requested in **Exhibit A-4-b-2**, MMA Performance Measurement Tool (10-2-2017) to provide results for the following HEDIS measures:

- Childhood Immunization Status (Combo 3);
- Well-Child Visits in the First 15 Months (6 or more);
- Immunizations for Adolescents (Combo 1);
- Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life;
- Adolescent Well Care Visits;
- Frequency of Ongoing Prenatal Care (>= 81% of expected visits); and
- Timeliness of Prenatal Care.

Response:

Humana is committed to providing high-quality care for our enrollees. Our performance and experience meeting quality standards in Florida, and nationally, demonstrate our commitment to quality:

- Humana is ranked 2nd in quality among Florida's Medicaid plans according to the National Committee for Quality Assurance (NCQA)[1], serving more than three hundred thirty thousand (330,000) enrollees in Florida

- Humana's Florida Medicaid plan has been NCQA accredited since 1997. We are in the process of seeking an additional NCQA certification for Long-term Care Case Management.

- We are also one of the top quality Medicare Advantage plans in the State of Florida, according to the Centers for Medicare and Medicaid Services' (CMS) Star rating, having achieved four point five 4.5 (of five (5)) Stars. On our respondent plan, Humana Medical Plan, Inc., we serve more than three hundred sixty-five thousand (365,000) Medicare beneficiaries across the state. Across all of our plans in the State of Florida, we serve over six hundred twenty thousand (620,000) Medicare beneficiaries, including more than one hundred five thousand (105,000) who are eligible for both Medicare and Medicaid.

- Nationally, two point four (2.4) million of Humana Medicare Advantage members are in 4-plus Stars contracts. Humana has received a four point five (4.5)-Star rating for five (5) of our Medicare Advantage contracts offered in eight (8) states.

Healthcare Effectiveness Data and Information Set (HEDIS) data plays a major role in how we measure, monitor, and improve the quality of care being provided to enrollees. Humana's robust quality improvement program promotes quality of care and patient outcomes performance for all of our Medicaid membership. We regularly measure, monitor, and evaluate our performance against AHCA and NCQA benchmarks in order to conduct oversight and improvement of medical and behavioral health care and support services.

==========

1. The extent of experience (e.g., number of Contracts, enrollees or years) in achieving quality standards with similar target populations, for the HEDIS performance measures included in this submission requirement.

==========

OVERVIEW

Humana has extensive experience achieving quality standards with similar target populations for HEDIS measures listed in this SRC. We have been monitoring and tracking HEDIS measures in our Florida SMMC plan for over twenty (20) years, in our Group Commercial plan for over twenty (20) years, and in our Florida Commercial Marketplace (Exchange) plan since go-live in 2014. Below we have included a brief overview of the top three (3) largest Medicaid and Commercial contracts for our respondent plan in Florida, Humana Medical Plan, Inc. These correlate to the three (3) contracts shown in Exhibit A-4-b-2.

1. Florida Medicaid Managed Care
-- 325,909 enrollees
-- Program Summary and Populations Served: Medicaid, TANF and ABD

2. Florida Group Commercial
-- 167,336 enrollees
-- Program Summary and Populations Served: Commercial group benefits for ages 0 to 64

3. Florida Commercial Marketplace (Exchange)
-- 19,998 enrollees
-- Program Summary and Populations Served: Exchange benefits for commercial population ages zero (0) to sixty-four (64)

FLORIDA SMMC

Humana has operated as a Medicaid plan in Florida since 1997. We currently operate as an MMA plan across five regions, serving nearly three hundred thirty thousand (330,000) Florida enrollees. We provide the full range of Medicaid preventive services for Medicaid TANF-eligible

individuals, as well as those enrollees who are aged, blind and disabled. We currently serve two hundred sixty-four thousand nine hundred thirty-three (264,933) TANF Medicaid enrollees, of which two hundred nine thousand three hundred two (209,302) are under the age of twenty-one (21). We currently monitor the following forty-two (42) measures in our Florida SMMC operations, including those measures listed in this SRC:

- Adolescent Well Care Visits – (AWC)
- Adults' Access to Preventive/Ambulatory Health Service – (AAP)
- Annual Dental Visits (ADV)
- Antidepressant Medication Management - (AMM)
- Adult BMI Assessment – (ABA)
- Breast Cancer Screening – (BCS)
- Cervical Cancer Screening - (CCS)
- Childhood Immunization Status – (CIS) – Combo 2 and 3
- Comprehensive Diabetes Care – (CDC)
-- Hemoglobin A1c (HbA1c) testing
-- HbA1c poor control
-- HbA1c control (<8%)
-- Eye exam (retinal) performed
-- Medical attention for nephropathy
- Controlling High Blood Pressure – (CBP)
- Follow-up Care for Children Prescribed ADHD Medication – (ADD)
- Immunization for Adolescents – (IMA)
- Chlamydia Screening in Women – (CHL)
- Prenatal and Postpartum Care – (PPC)
- Medication Management for People with Asthma – (MMA)
- Well-Child Visits in the First 15 Mos. of Life – (W15)
- Well-Child Visits in the Third, Fourth, Fifth and Sixth Years of Life – (W34)
- Children and Adolescents' Access to Primary Care Practitioners – (CAP)
- Initiation and Engagement of Alcohol and Other Drug Dependence Treatment – (IET)
- Ambulatory Care – (AMB)
- Lead Screening in Children – (LSC)
- Annual Monitoring for Patients on Persistent Medications – (MPM)
- Frequency of Ongoing Prenatal Care – (FPC)
- Adherence to Antipsychotic Medications for Individuals With Schizophrenia – (SAA)
- Metabolic Monitoring for Children and Adolescents on Antipsychotics – (APM)
- Use of Multiple Concurrent Antipsychotics in Children and Adolescents – (APC)

HEDIS & Agency-Defined
- Follow-Up after Hospitalization for Mental Illness – (FHM)

AHCA-DEFINED
- Mental Health Readmission Rate – (RER)
- Transportation Timeliness – (TRT)
- Transportation Availability – (TRA)
- Highly Active Anti-Retroviral Treatment – (HAART)
- HIV-Related Outpatient Medical Visits – (HIVV)

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

CHILD HEALTH CHECK UP REPORT (CMS-416)
- Dental Treatment Services – (TDENT)
- Sealants – (SEA)

CHILD CORE SET
- Preventive Dental Services – (PDENT)
- Dental Sealants for 6-9 yr. Old Children at Elevated Carries Risk – (SEAL)
- Human Papillomavirus (HPV) Vaccine for Female Adolescents – (HPV)
- Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents: Body Mass Index Assessment for Children/Adolescents – (WCC)

ADULT CORE SET
- Antenatal Steroids (ANT)
- Plan All-Cause Readmissions – (PCR)
- HIV Viral Load Suppression – (VLS)
- Medical Assistance with Smoking and Tobacco Use Cessation – (MSC)

FLORIDA COMMERCIAL

Humana currently operates as a Group Commercial plan state-wide in Florida, serving over one hundred sixty-seven thousand (167,000) Florida enrollees. We provide the full range of commercial benefits for enrollees ages zero (0) to sixty-four (64). We currently monitor the following measures in our Florida Group Commercial operations.

- Adult Body Mass Index (BMI) Assessment
- Child and Adolescent BMI, Nutrition, Physical Activity
-- BMI Percentile Total
-- Nutrition Counseling Total
-- Physical Activity Counseling Total
- Childhood Immunization
-- DTaP
-- IPV
-- MMR
-- HIB
-- Hepatitis B
-- Varicella
-- Pneumococcal Conjugate
-- Combination 2
-- Combination 3
- Adolescent Immunization
-- Combo 1
-- Meningococcal
-- Tdap/Td
- HPV vaccine for Female Adolescents
- Breast Cancer Screening
- Cervical Cancer Screening
- Colorectal Cancer Screening

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

- Chlamydia Screening in Women: Ages 16-20 yrs., 21-24 yrs., and total
- Appropriate Testing for Pharyngitis
- Urinary Tract Infection (URI) Treatment
- Acute Bronchitis Treatment
- Spirometry Testing
- Pharmacotherapy for Chronic Obstructive Pulmonary Disease (COPD)
-- Bronchodilator
-- Corticosteroid
- Appropriate Medication for Asthma: Ages 5-11 yrs., 12-18 yrs., 19-50 yrs., 51-64 yrs. and total
- Medication Management for People With Asthma
-- Medication Compliance 75%
- Controlling High Blood Pressure
- Persistence Beta-Blocker Treatment
- Comprehensive Diabetes Care
-- Blood Pressure Control < 140/90
-- Eye Exam
-- Good HbA1C Control < 8.0
-- HbA1c <7.0% Special Population
-- HbA1c Testing
-- Monitoring Diabetic Nephropathy
-- Poor HbA1c Control
- Imaging Studies for Low Back Pain
- Antidepressant Treatment
-- Acute Phase Treatment
-- Continuation Phase Treatment
- Follow-up Care for Attention-Deficit/Hyperactivity Disorder (ADHD) Medication
-- Continuation &Maintenance
-- Initiation
- Follow-up Mental Illness Discharges
-- 7 Days
-- 30 Days
- Monitoring for Long Term Med ACE or ARBs
-- Digoxin
-- Diuretics
-- Total
- Adult Access to Preventive Care: Ages 20-44 yrs., 45-64 yrs., 65 yrs. and older, and total
- Children's Access to Primary Care: Ages 12-24 mos., 25 mos.-6 yrs., 7-11 yrs., and 12-19 yrs.,
- Alcohol and Other Drugs (AOD) Treatment
-- Initiation
-- Engagement
- Prenatal and Postpartum Care
-- Postpartum Care
-- Prenatal Care
- Well-Child Visit, first 15 mos.
-- Six or More Visits
- Well-Child Visit, 3-6 yrs.
- Well-Care Visit – Adolescent
- Plan All-Cause Readmissions

-- Total Observed-to-Expected Ratio

FLORIDA COMMERCIAL MARKETPLACE (EXCHANGE)

Humana currently operates as a Florida Commercial Marketplace (Exchange) plan state-wide in Florida, serving over nineteen thousand (19,000) Florida enrollees. We provide the full range of commercial benefits for enrollees, ages zero (0) – sixty-four (64). We currently monitor the following measures in our Florida Commercial Marketplace (Exchange) operations.

- Child and Adolescent BMI, Nutrition, Phys Activity
-- BMI Percentile Total
-- Nutrition Counseling Total
-- Physical Activity Counseling Total
- Cervical Cancer Screening
- Chlamydia Screening in Women: Ages 16-24 yrs., 21-24 yrs., and total
- Appropriate Testing for Pharyngitis
- URI Treatment
- Controlling High Blood Pressure
- Comprehensive Diabetes Care
-- Eye Exam
-- Good HbA1C Control < 8.0
-- HbA1c Testing
-- Monitoring Diabetic Nephropathy
- Imaging Studies for Low Back Pain
-- Total
- Follow-up Mental Illness Discharges
-- 7 Days
- Monitoring for Long Term Med
-- ACE or ARBs
-- Digoxin
-- Diuretics
-- Total
- AOD Treatment
-- Initiation
-- Engagement
- Prenatal and Postpartum Care
-- Postpartum Care
-- Prenatal Care
- Well-Child Visit, 3-6 yrs.
-- 6 or More Visits

EXPERIENCE MEASURING HEDIS IN OTHER MEDICAID PLANS

In addition to our experience as Humana Medical Plan in Florida, Humana has broader experience measuring HEDIS performance for measures included in this SRC in our shared

parent affiliate Medicaid plans in other states. We describe our experience in Kentucky and Illinois below.

KENTUCKY MEDICAID
Humana has served as a Medicaid health plan in Kentucky since 2013, and currently covers the physical and behavioral health services for over one hundred forty thousand (140,000) Medicaid TANF and ABD enrollees state-wide. We currently monitor the follow measures in our Kentucky program:

HEDIS Measures
- Well-Child Visits in the 1st 15 mos. of Life
- Well-Child Visits, 3-6 yrs.
- Well-Child Visits, 12-21 yrs.
- Lead Screening in Children
- Annual Dental Visit, 2-21 yrs.
- Height and Weight Measurement, 3-17 yrs.
- BMI Measurement, 3-17 yrs.
- Counseling for Nutrition, 3-17 yrs.
- Counseling for Physical Activity, 3-17 yrs.
- Timeliness of Prenatal Care
- Frequency of Prenatal Care Visits, >=81%
- Timeliness of Postpartum Care
- Screening for Tobacco Use
- Counseling/Education for Tobacco Use
- Antidepressant Medication Management, Acute and Continuation Phase
- Adherence to Antipsychotic Medications for Individuals with Schizophrenia
- Diabetes Monitoring for People With Diabetes and Schizophrenia
- Diabetes Screening for People With Schizophrenia or Bipolar Disorder who are Using Antipsychotics
- Cardiovascular Monitoring for People With Cardiovascular Disease and Schizophrenia
- Follow-Up Care for Children Prescribed ADHD Medication, Initiation and Continuation Phase
- Follow-Up After Hospitalization for Mental Illness within 7 days and within 30 days of Discharge
- Initiation and Engagement of Alcohol and Other Drug (AOD) Dependence Treatment
- Use of Appropriate Meds for People with Asthma, Total
- Med Management for People with Asthma, Compliance 75%
- Asthma Medication Ratio, Total
- Hemoglobin A1c (HbA1c) Testing
- HbA1c Poor Control (>9.0%)
- Eye Exam (Retinal) Performed
- Medical Attention for Nephropathy
- Blood Pressure Control (<140/90 mm Hg)
- Adult BMI Assessment
- Breast Cancer Screening
- Cervical Cancer Screening
- Persistence of ß-Blocker Treatment After a Heart Attack
- Cholesterol Management for Patients With Cardiovascular Conditions
- Controlling High Blood Pressure Appropriate Testing for children with Pharyngitis

- Appropriate Treatment for Children with Upper Respiratory Infections (URI)
- Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis
- Use of Spirometry Testing in the Assessment and Diagnosis of COPD
- Pharmacotherapy Management of COPD Exacerbation
-- Systemic Corticosteroid
-- Bronchodilator
- Adults' Access to Preventive/Ambulatory Health Services: Ages 20-44 yrs., 45-64 yrs., and 65 yrs. and older
- Children and Adolescents' Access to PCP: Ages 12-24 mos., 25 mos.-6 yrs., 7-11 yrs., and 12-19 yrs.

KY HEALTH OUTCOME PERFORMANCE MEASURES
- Screening and/or Counseling for Tobacco
- Screening and/or Counseling for Alcohol/Substance Use
- Screening and/or Counseling for Sexual Activity
- Screening for Depression
- Annual Dental Visit in Children with Special Health Care Needs (CSHCN), 2-21 yrs.
- Well-Child Visits in CSHCN, in the 1st 15 mos., 3-6 yrs., 12-21 yrs.
- Access to PCP in CSHCN, 12-24 mos, 25 mos.-6 yrs., 7-11 yrs., 12-19 yrs.
- Screening for Tobacco Use
- Positive Screening for Tobacco Use
- Received Intervention for Tobacco Use
- Screening for Alcohol Use
- Positive Screening for Alcohol Use
- Received Intervention for Alcohol Use
- Screening for Substance/Drug Use
- Positive Screening for Substance/Drug Use
- Received Intervention for Substance/Drug Use
- Assessment/Education/Counselling for Nutrition
- Assessment/Education/Counselling for Over the Counter (OTC)/Prescription Med
- Screening for Domestic Violence
- Postpartum Depression
- Healthy Weight for Height
- Counselling for Nutrition
- Counselling for Physical Activity
- LDL-C/Cholesterol Screening

ILLINOIS INTEGRATED CARE PROGRAM
Humana has served as a Medicaid health plan in the Illinois Integrated Care Program (ICP), and currently covers the medical and Long-term Care services for over five thousand one hundred (5,100) enrollees in the state. We currently monitor the follow measures in our ICP program:

- Avoidance of Antibiotic Treatment in Adults With Acute Bronchitis
- Adult BMI Assessment
- Annual Dental Visit
- Antidepressant Medication Management
-- Acute
-- Continuation

- Asthma Medication Ratio
- Disease-Modifying Anti-Rheumatic Drug Therapy for Rheumatoid Arthritis
- Adolescent Well-Care Visits
- Breast Cancer Screening
- Controlling Blood Pressure
- Cervical Cancer Screening
- Comprehensive Diabetes Care (CDC)
-- CDC-<100LDL-C
-- CDC-BP<140/80
-- CDC-BP<140/90
-- CDC-CDC HBA <8
-- CDC-CDC Neph
-- CDC-CDC-HbA1c
-- CDC-Eye Exams
-- CDC-HbA1c<7
-- CDC-HbA1c>9
-- CDC-LDL-C
- Chlamydia Screening in Women
- Frequency of Prenatal Care (FPC)
-- FPC-21-40%
-- FPC-41-60%
-- FPC-61-80%
-- FPC-< 21%
-- FPC->= 81%
- Follow up after Hospitalization (FUH)
-- FUH-30-Day
-- FUH-7-Day
- Initiation and Engagement of Alcohol and Other Drug Dependence Treatment
-- Engagement
-- Initiation
- Use of Imaging Studies for Low Back Pain
- Medication Management for People With Asthma
-- 50% compliance
-- 75% compliance
- Annual Monitoring for Patients on Persistent Medications
-- ARBs
-- Digoxin
-- Diuretics
- Non-Recommended Cervical Cancer Screening in Adolescent Females
- Persistence of Beta-Blocker Treatment After a Heart Attack
- Pharmacotherapy Management of COPD Exacerbation
-- Bronchodil
-- SCsteroid
- Prenatal and Postpartum Care
-- Postpartum
-- Prenatal
- Adherence to Antipsychotic Medications for Individuals With Schizophrenia
- Cardiovascular Monitoring for People With Cardiovascular Disease and Schizophrenia

- Diabetes Monitoring for People With Diabetes and Schizophrenia
- Statin Use in Patients with Cardiovascular Disease
- Statin therapy for patients with diabetes
- Use of Spirometry Testing in the Assessment and Diagnosis of COPD
- Diabetes Screening for People With Schizophrenia or Bipolar Disorder Who Are Using Antipsychotic Medications

==========

2. The extent to which the respondent exceeded the national mean and applicable regional mean for each quality measure reported and showed improvement from the first year to the second year reported.

==========

Exhibit A-4-b-2 contains our HEDIS 2016 and HEDIS 2017 performance for the measures listed in this SRC.

Footnotes

[1] http://healthinsuranceratings.ncqa.org/2017/search/Medicaid/FL

Evaluation Criteria:

1. The extent of experience (e.g., number of Contracts, enrollees or years) in achieving quality standards with similar target populations, for the HEDIS performance measures included in this submission requirement.

2. The extent to which the respondent exceeded the national mean and applicable regional mean for each quality measure reported and showed improvement from the first year to the second year reported.

Score: This section is worth a maximum of 70 raw points with component 1 worth a maximum of 10 points and component 2 worth a maximum of 60 points as described below:

Exhibit A-4-b-2, MMA Performance Measurement Tool (10-2-2017), provides for forty-two (42) opportunities for a respondent to report prior experience in meeting quality standards (seven (7) measure rates, three (3) states each, two (2) years each).

For each of the seven (7) measure rates, a total of 5 points is available per state reported (for a total of 105 points available). The respondent will be awarded 1 point if their reported plan rate exceeded the national Medicaid mean and 1 point if their reported plan rate exceeded the applicable regional Medicaid mean, for each available year, for each available state. The respondent will be awarded an additional 1 point for each measure rate where the second year's rate is an improvement over the first year's rate, for each available state.

An aggregate score will be calculated and respondents will receive a final score of 0 through 60 corresponding to the number and percentage of points received out of the total available points. For example, if a respondent receives 100% of the available 105 points, the final score will be

60 points (100%). If a respondent receives 95 (90%) of the available 105 points, the final score will be 54 points (90%). If a respondent receives 10 (10%) of the available 105 points, the final score will be 6 points (10%).

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

EXHIBIT A-4-b-2
MMA SRC# 14 - MMA PERFORMANCE MEASUREMENT TOOL (10-2-2017)

INSTRUCTIONS:

Respondents should submit calendar year 2015/HEDIS 2016 and calendar year 2016/ HEDIS 2017 performance measure data for the selected HEDIS measures for the respondent's three (3) largest Medicaid contracts (measured by number of enrollees).

If the respondent does not have HEDIS results for at least three (3) Medicaid Contracts, the respondent shall provide commercial HEDIS measures for the respondent's largest Contracts. If the Respondent has Florida Medicaid HEDIS results, it shall include the Florida Medicaid experience as one (1) of three (3) states for the last two (2) years.

The performance measures that respondents are required to report on can be found on the Performance Measure Group B tab.

Use the drop-down box to select the state for which you are reporting and enter the performance measure rates (to the hundredths place, or XX.XX) for that state's Medicaid population for the appropriate calendar year.

Well-Child Visits in the Third, Fourth, Fifth and Sixth Years of Life	74.89	75.43	83.90	82.21	71.11	77.46

Total Points	66

MMA SRC# 15 – Failure to Meet HEDIS Measures (Statewide):

In addition to providing HEDIS measure data, describe any instances of failure to meet HEDIS or Contract-required quality standards for the measures listed below and actions taken to improve performance. Describe actions taken to improve quality performance when HEDIS or Contract-required standards were met, but improvement was desirable.

- Childhood Immunization Status (Combo 3);
- Well-Child Visits in the First 15 Months (6 or more);
- Immunizations for Adolescents (Combo 1);
- Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life;
- Adolescent Well Care Visits;
- Frequency of Ongoing Prenatal Care (>= 81% of expected visits); and
- Timeliness of Prenatal Care.

Response:

Humana employs continuous quality improvement (CQI) strategies to ensure we are constantly improving care and outcomes for our enrollees. Through our CQI approach, we execute a planned sequence of systematic and documented activities aimed at both resolving identified variances and improving processes. To address areas where we have performed below the state or national target, we employ the following processes:

- Analysis of plan demographics (including clinical, geographic, and cultural) to identify high-risk populations, areas of network need, enrollee education opportunities, and performance improvement opportunities

- Analysis of access and availability issues including after hours availability of Primary Care Physicians (PCPs)

- Analysis of continuity and coordination of care

- Review of other non-clinical areas of performance (such as Service Center call statistics and other enrollee services functions, marketing and outreach, claims processing timeliness and accuracy, and provider satisfaction.)

==========

1. The extent to which the described experience demonstrates the ability to improve quality in a meaningful way and to successfully remediate all failures for the HEDIS performance measures included in this submission requirement.

2. The extent to which the described experience demonstrates the ability to improve quality in a meaningful way even when HEDIS or Contract-required standards were met, but improvement was desirable, for the HEDIS performance measures included in this submission requirement.

==========

FLORIDA SMMC

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Per the Statewide Medicaid Managed Care (SMMC) Contract, plans are required to meet the National Committee for Quality Assurance (NCQA) 50th percentile in order to be in compliance with contract quality standards.

In calendar year (CY) 2015, Humana performed below Healthcare Effectiveness Data and Information Set (HEDIS) or Contract-required quality standards for only one measure listed in this SRC in our Florida SMMC program: Immunizations for Adolescents – Combination 1

In CY 2016, Humana performed above HEDIS and/or contract required quality standards for ALL measures listed in this SRC in our FL SMMC program, and improved our rates in all measures. Please refer to Attachment MMA 15-1 to see how our HEDIS 2016 and 2017 scores compared to the NCQA 50th percentile standard.

COMPARISON TO FLORIDA ALL-PLAN AVERAGE
Each year, AHCA releases the SMMC HEDIS averages, for all SMMC plans in the state, by measure. In CY 2015, we performed above the all-plan average for the following measures listed in this SRC:
- Childhood Immunization Status (Combo 3) - Performed above all-plan average
- Well-Child Visits in the First 15 Months (6 or more) - Performed above all-plan average
- Immunizations for Adolescents (Combo 1) - Performed above all-plan average
- Adolescent Well Care Visits - Performed above all-plan average
- Frequency of Ongoing Prenatal Care (>= 81% of expected visits) - Performed above all-plan average
- Timeliness of Prenatal Care - Performed above all-plan average

In CY 2016, we performed above the all plan average for the following measures listed in this SRC:
- Well-Child Visits in the First 15 Months (6 or more) - Performed above all-plan average
- Immunizations for Adolescents (Combo 1) - Performed above all-plan average
- Frequency of Ongoing Prenatal Care (>= 81% of expected visits) - Performed above all-plan average
- Timeliness of Prenatal Care - Performed above all-plan average

STRATEGIC ACTIONS TAKEN TO IMPROVE PERFORMANCE MEASURES
Humana actively monitors and takes actions to improve performance measures. We hold a monthly Medicaid Strategy meeting, which includes the Medicaid Medical Director, to review HEDIS measures and discuss successes and areas for improvement. Our Florida HEDIS team holds monthly meetings on specific HEDIS measures to drill down on root causes of any performance issues. We continuously monitor our performance through our HEDIS dashboards, showing real time performance on measures and our compliance with NCQA and Agency for Health Care Administration (AHCA) standards. Finally, HEDIS performance is a discussion topic at the quarterly comprehensive Quality Improvement Committee (QIC) meetings. We discuss how improvements on the medical and long-term care (LTC) components of care can improve outcomes for both populations.

SPECIFIC ACTIONS TAKEN IN FLORIDA SMMC PROGRAM TO IMPROVE HEDIS PERFORMANCE

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Following our analysis of why we performed below the target on Immunizations for Adolescents – Combination 1, we identified opportunities for improvement and barriers that might impede improvement. We conducted quarterly Florida QIC meetings to initiate and evaluate various action plans specific to performance metrics and quality benchmarks.

We identified the following opportunities and barriers between Calendar Year 2015 and Calendar Year 2016.

Enrollee-Based Opportunities and Barriers
- Failure to schedule or keep appointments for chronic conditions or preventive care.

- Failure to establish initial appointment; enrollee has no established relationship with a PCP.

- Lack of health education regarding the importance of preventive screenings, immunizations, or warning signs for chronic conditions.

- Enrollee transportation issues vary, but some examples of barriers include the enrollee being allowed only one escort, or enrollee and children may have different providers and health plans, making it difficult to coordinate transportation.

Provider-Based Initiatives
- No available office staff to contact enrollees for preventive screenings, immunizations, or follow up on chronic conditions

- Incorrect demographic data received from the plan or State and unable to locate enrollee

- Lack of knowledge of enrollee incentives offered by plan

IMPROVEMENTS, INTERVENTIONS, AND ACTIONS
To improve our rate for Immunizations for Adolescents – Combination 1, we implemented the following initiatives in 2016:

Enrollee-Based Initiatives
- Conducted welcome calls to new Medicaid enrollees and caregivers to encourage them to schedule their recommended routine and disease-specific screenings and immunizations. The enrollee and caregiver were also offered assistance with scheduling visits and transportation.

-Conducted Birthday Wellness and Postpartum calls, to remind enrollees to make an appointment for their checkups and screenings.

- Initiated distribution of Wellness wallet and immunization cards to Adolescents for convenient enrollee access to health information.

- Ongoing Childhood Check-up Call Campaign for education and appointment initiatives.

- Continued the Targeted Women and Children Outreach Campaign to reach women of child-bearing age with or without children who had not undergone screenings to encourage them to receive cervical cancer screening, breast cancer screening, and chlamydia screening.

- Healthy Behavior Programs are provider-based programs, including: Baby Well Visits Program, Pediatric Well Visit Program, Mom's First Prenatal and Post-Partum Program, Smoking Cessation Program, Substance Abuse Program, and the Humana Family Fit Program. These programs are aimed at improving our enrollees' healthy behaviors. Once enrollees meet the requirements of the program, they receive a gift card.

- Clinical Alert (enrollees): The clinical alert is a reminder banner with different messages each month. The banner is placed on the enrollee portal. (Attachment MMA 15-2)

Provider-Based Initiatives
- Throughout 2016, Quality Improvement nurses (QIN) visited pediatric offices, distributing and discussing action lists in the form of Tool Kits and gap reports to educate Medicaid providers about performance measures required by AHCA. Providers were encouraged to fax in documents and lab results as supplemental data to close the gaps in immunization records.

- Offered PCP quality bonus encouraging providers to meet quality standards.

-Continued use of enhanced Medicaid specific performance report card to show comparison of each provider's performance to peers.

- Continued distribution of a childhood checkup up provider tool.

- Distribution of Provider Medicaid HEDIS checklist, a one-page document that enables providers to track the services that have been completed. (Attachment MMA 15-3)

- Clinical Alert (providers): The clinical alert is a reminder banner with a different well-being message each month. The banner is placed on the provider portal. (Attachment MMA 15-4)

We have included our 2015 and 2016 roadmap for this measure in Attachment MMA 15-5.

MEANINGFUL IMPROVEMENTS
Through our HEDIS improvement initiatives during 2016, we improved our rate for Immunizations for Adolescents – Combination 1 from 72.99% (HEDIS 2016) to 78.59% (HEDIS 2017).

ONGOING IMPROVEMENT INITIATIVES FOR MEASURES THAT MET BENCHMARKS

Humana continuously strives to improve quality outcomes, including areas where we have met contract-required benchmarks, but improvement is still desirable. We are always seeking ways to improve the quality of care provided to our enrollees. Each year, we develop our HEDIS roadmap, containing strategies and initiatives to improve all of our HEDIS measures. Our roadmaps include ongoing improvement initiatives for those measures where we have fallen below contract standards, as well as those where we have met contract standards, but are still seeking to improve. Following are examples of initiatives from our 2018 roadmap, based on HEDIS 2017 results where we met the benchmark for each measure, illustrating how we are constantly working to improve quality outcomes.

CHILDHOOD IMMUNIZATION STATUS - COMBO 3

	HEDIS 2016	HEDIS 2017
Humana:	73.72	72.51
NCQA 50th Percentile:	71.53	71.06

For this measure, we met the benchmark for HEDIS 2016 and HEDIS 2017; however, our rate declined between those reporting years. Going into HEDIS 2018 reporting year, we have the following initiatives in place to improve our performance on this measure:

- Healthy Behavior Reward Program: Baby Well Visit Program

- 2017 Medicaid PCP Bonus

- Monthly Child Health Checkup (CHCUP) and Dental Reminder Call Campaign

- Monthly Welcome Calls to New Enrollees

- 2017 Medicaid HEDIS CAHPS Guide & Checklist delivered to providers

- Quality Improvement Nurse Educational Visits to Pediatrician Offices

- Children/Adolescent Wellness Wallet Card

- Clinical Alert (enrollees and providers)

- Florida SHOTS data - monthly

- Voice Activated Technology (VAT) call targeted to parents/caregivers of non-compliant children for a Well Care Visit, immunization and lead screening

- Targeted Adult & Child Wellness Letter Campaign

WELL-CHILD VISITS IN THE 3RD, 4TH, 5TH, AND 6TH YEARS OF LIFE

	HEDIS 2016	HEDIS 2017
Humana:	74.89	75.43
NCQA 50th Percentile:	72.05	71.42

For this measure, we met the benchmark for HEDIS 2016 and HEDIS 2017 and even improved from one year to the next; however, our rate did not improve as much as we would like between those reporting years. Going into HEDIS 2018 reporting year, we identified the following initiatives to increase our performance on this measure:

- Healthy Behavior Reward Program: Pediatric Well Visit Program

- 2017 Medicaid PCP Bonus - CAP Measure

- Monthly Welcome Calls to New Enrollees

- Monthly Child Health Checkup (CHCUP) and Dental Reminder Call Campaign

- Monthly Quality Improvement Nurse Educational Visits to Pediatrician Offices

- 2017 Medicaid HEDIS CAHPS Guide & Checklist delivered to providers

- Provider Educational Pamphlet: FL Medicaid Child Check-Up Information

- Children/Adolescent Wellness Wallet Card

- Clinical Alert (enrollees and providers)

- Voice Activated Technology (VAT) call targeted to parents/caregivers of non-compliant children for a Well Care Visit, immunization and lead screening

- Targeted Adult & Child Wellness Letter Campaign

FLORIDA GROUP COMMERCIAL

While there are no contractually required benchmarks for our Florida Group Commercial plan, we monitor our performance against the NCQA HMO/POS 50th percentile to identify areas for improvement. In 2015 and 2016 we monitored and measured all HEDIS measures listed in this SRC, except for one: Frequency of ongoing prenatal care ≥81% of expected visits.

In CY 2015 (HEDIS 2016), Humana performed below the NCQA 50th percentile standard for the following measures listed in this SRC in our Florida Group Commercial plan:

- Childhood Immunization Status – Combination 3
- Immunizations for Adolescents – Combination 1
- Timeliness of Prenatal Care

In CY 2016 (HEDIS 2017), Humana performed below the NCQA 50th percentile standard for the following measures listed in this SRC in our Florida Group Commercial plan:

- Childhood Immunization Status – Combination 3
- Immunizations for Adolescents – Combination 1
- Timeliness of Prenatal Care

SPECIFIC ACTIONS TAKEN IN FLORIDA GROUP COMMERCIAL PLAN TO IMPROVE HEDIS PERFORMANCE
We conducted an analysis of our performance, identifying the following opportunities and barriers, improvements and changes, and conclusions and recommendations:

Opportunities and Barriers

- Enrollees lacking knowledge of plan coverage, particularly for preventive services

- Limited scope and effectiveness of provider-directed initiatives

- Provider reward program remains in early stages, leading to a lack of incentive to engage providers in quality improvement

Improvements and Changes
- Dedicated chart chase team resulted in closure of nearly four thousand four hundreed (4,400) open gaps.

- Continue cross-departmental coordination with other areas, such as ProActive and Marketing, to multi-message enrollees on topics of importance such as plan coverage and preventive services.

- Increase provider relationships by engaging with existing Provider Organized Delivery System (PODS) groups or Virtual PODS. PODS groups engage and build trusting relationships with providers to help them provide the right care at the right time for our enrollees; partner with Provider Development Center of Excellence (PDCoE) to expand rewards coverage.

-Educate and inform enrollees on materials available on Humana's website for wellness related educational opportunities, such as Humana Beginnings, Smoking Cessation, and Personal Nurse.

-Expand blood pressure and maternity care email campaigns.

Conclusions and Recommendations
- Focus on enrollee awareness of preventive services, maternity, and diabetes-related initiatives

- Leverage PODS model and other market resources to engage in communication and relationship-building with Commercial providers to broaden range of message

FLORIDA COMMERCIAL MARKETPLACE (EXCHANGE)

While there are no contractually required benchmarks for our Florida Commercial Marketplace plan, we monitor our performance against the NCQA HMO/POS 50th percentile to identify areas for improvement. In 2015 and 2016 we monitored and measured all HEDIS measures listed in this SRC, except for the following:

- Adolescent Well Care Visits
- Immunization for Adolescents – Combination 1 (not reported in HEDIS 2017)

In CY 2015 (HEDIS 2016), Humana performed below the NCQA 50th percentile standard for the following measures listed in this SRC in our Florida Marketplace plan:

- Childhood Immunization Status – Combination 3
- Timeliness of Prenatal Care

- Immunizations for Adolescents – Combination 1
- Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life
- Well-Child Visits in the first 15 Months of Life (6 or more visits)

In CY 2016 (HEDIS 2017), Humana performed below the NCQA 50th percentile standard for the following measures listed in this SRC in our Florida Marketplace plan:

- Childhood Immunization Status – Combination 3
- Timeliness of Prenatal Care
- Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life
- Well-Child Visits in the first 15 Months of Life (6 or more visits)

SPECIFIC ACTIONS TAKEN IN FLORIDA MARKETPLACE PROGRAM TO IMPROVE HEDIS PERFORMANCE
We conducted an analysis of our performance, identifying the following opportunities and barriers, improvements and changes, and conclusions and recommendations:

Opportunities and Barriers
- High turnover rate among marketplace enrollment decreases effectiveness of quality initiatives, especially enrollee experience-focused initiatives.

- Data indicates high out-of-network utilization, emergent care services, and a low number of PCP visits.

- Out-of-network emergent access to care leads to a higher financial burden for enrollees and does not link to positive changes in health outcomes.

- Many enrollees lack education concerning how and where to utilize health insurance. Coverage levels and clarity on out-of-pocket costs related specifically to preventive screenings.

- Provider attribution issues, specifically auto-assignment to a PCP when an enrollee is unfamiliar with their assigned physician, or physician hours, costs, and geography are primary driving factors. Strong PCP relationships are critical to gap closure.

- Providers are unfamiliar with measure specifications.

Improvements and Changes
- A Quality Improvement Strategy (QIS) focused on enrollee-PCP engagement has been submitted to the Centers for Medicare and Medicaid Services (CMS). Enrollee-PCP relationships are key to enrollee retention and gap closure.

- Preliminary data indicates improved enrollee experience scores versus 2014 beta test results. Increased focus on enrollee perception-related initiatives throughout the year was a contributing factor.

- Increased scope of provider outreach initiatives aimed at improving HEDIS scores.

- Commercial team dedicated to chart chase activity resulted in increased gap closure for reporting year 2015 versus reporting year 2014.

Conclusions and Recommendations
- Focus on improving enrollee experience scores related to Enrollee Survey, which is heavily weighted in the calculation in overall quality star scores

- QIS to enhance enrollee-PCP engagement to improve the opportunity to coordinate care

- Focus on tactics to drive up results in specific HEDIS preventive areas and Qualified Health Plan Enrollee Scores

- Better understand emergency department utilization to effectively encourage enrollees to engage in PCP relationships

- Continued focus on maturity of Commercial rewards program

Evaluation Criteria:

1. The extent to which the described experience demonstrates the ability to improve quality in a meaningful way and to successfully remediate all failures for the HEDIS performance measures included in this submission requirement.

2. The extent to which the described experience demonstrates the ability to improve quality in a meaningful way even when HEDIS or Contract-required standards were met, but improvement was desirable, for the HEDIS performance measures included in this submission requirement.

Score: This section is worth a maximum of 10 raw points with each component worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Attachment MMA 15-1: Humana HEDIS 2016 and 2017 Results Compared to NCQA 50th Percentile

In calendar year 2016, Humana performed above HEDIS and/or contract required quality standards for ALL measures listed in this SRC in our FL SMMC program, and improved our rates in all measures. Please refer to the table below to see how our HEDIS 2016 and 2017 scores compared to the NCQA 50th percentile standard.

Measure	HEDIS Year	
	2016 (CY 2015)	2017 (CY 2016)
Adolescent Well-Care Visits		
Humana Medical Plan, Inc. - Florida	**55.19**	**51.58**
NCQA 50th Percentile	49.07%	48.41
Childhood Immunization Status - Combo 3		
Humana Medical Plan, Inc. - Florida	**73.72**	**72.51**
NCQA 50th Percentile	71.53%	71.06
Frequency of Ongoing Prenatal Care (>= 81%)		
Humana Medical Plan, Inc. - Florida	**69.59**	**71.53**
NCQA 50th Percentile	59.49%	59.26
Prenatal and Postpartum Care - Timeliness of Prenatal Care		
Humana Medical Plan, Inc. - Florida	**85.82**	**86.37**
NCQA 50th Percentile	85.07%	82.25
Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life		
Humana Medical Plan, Inc. - Florida	**74.89**	**75.43**
NCQA 50th Percentile	72.05%	71.42
Well-Child Visits in the first 15 Months of Life (6 or more visits)		
Humana Medical Plan, Inc. - Florida	**62.56**	**66.91**
NCQA 50th Percentile	59.69%	59.57
Immunizations for Adolescents - Combination 1		
Humana Medical Plan, Inc. - Florida	72.99	**78.59**
NCQA 50th Percentile	73.09%	74.52

Attachment MMA 15-2: Member Portal Clinical Alerts

The clinical alert is a reminder banner with a different message each month. The banner is placed on the member portal.

Clinical Timeline 2016 – Clinical Alerts Member Portal

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec
Cervical Health Awareness	Healthy Heart Month	Colorectal Cancer Awareness	Alcohol Awareness Month	High Blood Pressure Education	Mid-Year Wellness Reminder	Promote Eye Exam	Immunization Awareness Month	Healthy Eating & Lifestyle	Breast Cancer Awareness	Diabetes Awareness Month	National Influenza Vaccination

All Year Round (Except June): *Don't forget to schedule yours and/or your child's free yearly well-visit and dental checkup. Call your doctors or call Customer Service at 1-800-477-6931 (TYY: 711) to schedule appointments today, and remember these visits are at no cost to you!*
Jan: If you are a female, consult your doctor or an OB/GYN for an annual Pap smear testing
Feb: This is Healthy Heart Month. Time to think about eating healthy and exercising to keep your heart strong. Consult your doctor on lifestyle changes.
Mar: If you are age 50 and older, it is important to talk to your doctor about a colon screening.
Apr: If you or someone you love struggles with drugs and/or alcohol, speak with your physician. You may also call our Customer Services at 1-800-477-6931 and ask about the Healthy Behavior Reward Program.
May: Is your blood pressure below 120/80? If not or you are not sure, consult your doctor to discuss treatment options.
Jun: We are half way through the year. Have you schedule yours and/or your child's free yearly well0visit and dental check-up. *Call your doctors or call Customer Service at 1-800-477-6931 (TYY: 711) to schedule appointments today, and remember these visits are at no cost to you!*
Jul: Have you or your child had an eye exam this year? If not, we encourage you to schedule with an in-network eye doctor. Yearly eye exam is important to maintain good vision.
Aug: Are you or your child up to date on all immunization? Consult your doctor about the importance of getting immunized.
Sept: It is important to maintain a healthy diet and weight. Humana offers nutritional counseling for free. Call Customer Services at 1-800-477-6931 and ask about the benefit.
Oct: Are you a female age 50-74? Have you had a mammogram done this year or last year? If not, consult your doctor about a mammogram.
Nov: If you or someone you love are living with diabetes, education and support are important to help you stay in control and healthy. Humana offers a Diabetes Disease Management Program for free. To learn more about our program, call at 1-800-322-2758
Dec: It's not too late! A yearly flu vaccine is recommended for everyone 6 months and older. Consult your doctor and get your flu vaccine today.

1.0.9.5 12/2015 Katie Wetherington – SMCC Contract Manager

2017 ADULT MEDICAID SCREENINGS, SERVICES AND EDUCATION CHECKLIST

MEMBER NAME: _____ DOB: _____ HUMANA ID:_____

PREVENTION AND SCREENINGS	DESCRIPTION OF REQUIREMENT	DATE COMPLETED
❑ Adult body mass index (BMI)	BMI assessment for adults ages 18 to 74 between Jan. 1, 2016, and Dec. 31, 2017	___/___/___ **Result:**
❑ Breast cancer screening	Mammography for women ages 50 to 74 between Oct. 1, 2015, and Dec. 31, 2017, or exclusion due to bilateral mastectomy	___/___/___
❑ Cervical cancer screening	Pap smear evident for women ages 21 to 64 between Jan. 1, 2015, and Dec. 31, 2017, or pap/human papillomavirus co-testing for women ages 30 to 64 between Jan. 1, 2013, and Dec. 31, 2017, or exclusion due to complete/total/radical hysterectomy	___/___/___
❑ Chlamydia screening	At least one test for chlamydia in women ages 16 to 24, who are sexually active, before Dec. 31, 2017	___/___/___
❑ Ambulatory or preventive care visit	An ambulatory or preventive care visit as defined for adults ages 20 and older before Dec. 31, 2017	___/___/___
RESPIRATORY CONDITIONS	**DESCRIPTION OF REQUIREMENT**	**DATE COMPLETED**
❑ Medication management for people with asthma	Monitor adherence to asthma controller medication regimen for members ages 5 to 64 diagnosed with persistent asthma **Asthma controller medications:** **Antibody inhibitor:** omalizumab; **Inhaled steroid combinations:** Symbicort®, Advair®, Dulera®; **Inhaled corticosteroid:** beclomethasone, Pulmicort®, fluticasone CFC-free, mometasone; **Leukotriene modifiers:** montelukast, zafirlukast; **Mast cell stabilizers:** cromolyn; **Methylxanthines:** theophylline	___/___/___ **Rx:**
CARDIOVASCULAR CONDITIONS	**DESCRIPTION OF REQUIREMENT**	**DATE COMPLETED**
❑ Controlling high blood pressure	Blood pressure controlled in adults ages 18 to 85 (target depends on age and diabetes diagnosis) prior to Dec. 31, 2017, with a diagnosis of hypertension prior to June 30, 2017	___/___/___ **Result:**
DIABETES CARE (ADULTS 18 AND OLDER)	**DESCRIPTION OF REQUIREMENT**	**DATE COMPLETED**
❑ Annual diabetic retinal eye exam	Diabetic retinal eye exam before Dec. 31, 2017	__/__/__ **Result:**
❑ Annual HbA1c testing	Testing and control of HbA1c lower than 8 percent before Dec. 31, 2017	__/__/__ **Result:**
❑ Medical attention for nephropathy	Nephropathy screening test or evidence of nephropathy as per claim/ encounter, nephrologist visit, urine protein test or ACE inhibitor/ARB therapy before Dec. 31, 2017	__/__/__ **Result:**
BEHAVIORAL HEALTH MANAGEMENT	**DESCRIPTION OF REQUIREMENT**	**DATE COMPLETED**
❑ Antidepressant medication management	Encourage and monitor compliance with antidepressant medications for members ages 18 and older, newly diagnosed with major depression	__/__/__
❑ Initiation and engagement of alcohol and drug dependence treatment	Initiate treatment through an inpatient alcohol or other drug dependence (AOD) admission, outpatient visit, intensive outpatient encounter or partial hospitalization within 14 days of diagnosis and have two or more additional services with a diagnosis of AOD within 30 days of the initial visit	Initial: __/__/__ Follow-ups: __/__/__ __/__/__
❑ Diabetes screening for people with schizophrenia or bipolar disorder who are using antipsychotic medications	One blood glucose or HbA1c test for members ages 18 to 64 years old with schizophrenia or bipolar disorder, who were dispensed an antipsychotic medication before Dec. 31, 2017	Glucose/HbA1c: __/__/__

Please note: This is for office use only and should not be submitted to Humana to close Healthcare Effectiveness Data and Information Set (HEDIS®) gaps in care for your patients.

2017 MEDICAID PEDIATRIC SCREENINGS, SERVICES AND EDUCATION CHECKLIST

MEMBER NAME: _____ DOB:_____ HUMANA ID: _____

PREVENTION AND SCREENINGS	DESCRIPTION OF REQUIREMENT	DATE COMPLETED
❑ Chlamydia screening	At least one test for chlamydia in women ages 16 to 24, who are sexually active, before Dec. 31, 2017	____/____/____
❑ Immunizations (childhood and adolescent)	• Childhood immunizations are up to date by the child's second birthday • Adolescent immunizations are up to date by the child's 13th birthday	____/____/____
❑ Lead screening	At least one blood lead screening before the child's second birthday	____/____/____ **Result:**
❑ Well-care visit (childhood and adolescent)	• At least six well-child visits prior to **15 months** of age • At least one well-child visit for children/adolescents 1 to 21 years of age before Dec. 31, 2017 *(Note: Documentation should include complete history, including physical and mental health, physical exam, BMI/BMI percentile, nutrition counseling and anticipatory guidance.)*	____/____/____
❑ Annual dental visit	An annual dental visit with a dental practitioner for all members ages 2 to 20 before Dec. 31, 2017	____/____/____
RESPIRATORY CONDITIONS	**DESCRIPTION OF REQUIREMENT**	**DATE COMPLETED**
❑ Medication management for people with asthma	Monitor adherence with asthma controller medication regimen for members ages 5 to 64 diagnosed with persistent asthma **Asthma controller medications:** **Antibody inhibitor:** omalizumab **Inhaled steroid combinations:** Symbicort®, Advair®, Dulera® **Inhaled corticosteroid:** beclomethasone, Pulmicort®, fluticasone CFC-free, mometasone **Leukotriene modifiers:** montelukast, zafirlukast **Mast cell stabilizers:** cromolyn **Methylxanthines:** theophylline	____/____/____ **Rx:**
BEHAVIORAL HEALTH MANAGEMENT	**DESCRIPTION OF REQUIREMENT**	**DATE COMPLETED**
❑ Follow-up management for children with newly prescribed attention deficit disorder/ attention deficit hyperactivity disorder (ADD/ADHD)	• An in-person outpatient visit within 30 days of prescription fill • Two additional in-person outpatient follow-up visits between days 31 and 300 of prescription fill	____/____/____ ____/____/____ ____/____/____
❑ Initiation and engagement of alcohol and drug dependence treatment	• Initiate treatment through an inpatient alcohol or other drug dependence (AOD) admission, outpatient visit, intensive outpatient encounter or partial hospitalization within 14 days of diagnosis and • Have two or more additional services with a diagnosis of AOD within 30 days of the initial visit	Initial: ___ /____ / ____ Follow-ups: ___ /____ /____ ___ /____ /____
❑ Metabolic monitoring for children and adolescents on antipsychotics	One blood glucose or HbA1c test and one LDL-C or cholesterol test for children/adolescents 1 to 17 years old who had two or more antipsychotic prescriptions before Dec. 31, 2017	Glucose/HbA1c: ___/___/___ LDL-C/cholesterol: ___/___/___

Please note: This document is for office use only and should not be submitted to Humana to close Healthcare Effectiveness Data and Information Set (HEDIS®) gaps in care for your patients.

Attachment 15-4: Provider Portal Clinical Alerts

2017 Florida Medicaid Provider Web Banners

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec
Cervical Health Awareness	Healthy Heart Month	Colorectal Cancer Awareness	Alcohol Awareness Month	High Blood Pressure Education	Mid-Year Wellness Reminder	Promote Eye Exam	Immunization Awareness Month	Healthy Eating & Lifestyle	Breast Cancer Awareness	Diabetes Awareness Month	National Influenza Vaccination

Jan: Jan is Cervical Health Awareness Month. Please help us raise awareness on the importance of getting an annual well-woman check.

Feb: February is Healthy Heart Month. Please educate your patients to make heart-healthy choices to prevent the nation's leading killers.

Mar: March is Colorectal Cancer Awareness Month. Please help us raise awareness on the importance of getting colorectal cancer screening regularly.

Apr: April is Alcohol Awareness Month. Humana offers a Healthy Behavior Substance Abuse Program. To refer a member, please call 1-800-221-5487.

May: May is High Blood Pressure Education Month. Please educate your patients about contributing lifestyle factors and healthy choices.

Jun: We are halfway through the year. Please be sure to reach out to those patients who have not had a yearly check-up.

Jul: Encourage your patients to schedule an annual eye exam with an in-network optometrist or ophthalmologist to maintain good vision.

Aug: August is Immunization Awareness Month. Please educate patients and caregivers about the value of immunization throughout their lifespans to prevent dangerous and deadly diseases.

Sept: It is important to maintain a healthy diet and weight. Patients can learn more about Humana's free nutritional counseling by calling Customer Service at 1-800-477-6931.

Oct: October is Breast Cancer Awareness Month. Please help us raise awareness on the importance of getting a mammogram.

Nov: November is Diabetes Awareness Month. Refer patients to our free Diabetes Disease Management Program by calling 1-800-322-2758.

Dec: It's not too late! A yearly flu vaccine is recommended for everyone 6 months old and older. Please encourage your patients to get vaccinated today.

Attachment MMA 15-5: Humana CY 2015 and CY 2016 HEDIS Improvement Roadmap for Immunizations for Adolescents – Combo 1.

HEDIS Measure	2015 Initiatives	Start Date	End Date
Immunization for Adolescent	Healthy Behavior Reward Program: First Baby Well Visit	1/1/2015	12/31/2015

	Targeted Women and Children Outreach Campaign	9/15/2016	10/31/2016

MMA SRC# 16 – HEDIS (Data Sources) (Statewide):

The respondent shall describe:

a. The extent to which it has used the following standard supplemental data sources for its HEDIS and other performance measures:

- Laboratory result files;
- Immunization data in State or county registries;
- Transactional data from behavioral healthcare vendors; and
- Current or historic State transactional files in a standard electronic format.

b. The extent to which it has used supplemental data from electronic health record vendor systems and data from certified eMeasure vendors for HEDIS and other performance measures.

c. The extent to which it has experience reporting HEDIS measures collected using Electronic Clinical Data Systems.

Response:

Incorporating data from numerous and varied sources is crucial in order to have a well-rounded evaluation and an effective reporting of Healthcare Effectiveness Data and Information Set (HEDIS) measures. Humana has decades of specifically applicable experience collecting data in association with HEDIS reporting. This includes using laboratory result files, immunization data in state or county registries, transactional data from behavioral healthcare vendors, and current or historic state transactional files in a standard electronic format. We have been monitoring and tracking HEDIS data, including supplemental data, since we began Medicaid operations in Florida in 1997. As a Florida SMMC Medicaid plan for the last four (4) years, Humana has been using supplemental data sources under the current contract for HEDIS and other performance measures. These capabilities and experience are enabled by our advanced technological capabilities to facilitate electronic clinical data transfer in Florida.

Our response to this SRC outlines our experience in our current operations as a comprehensive SMMC plan as well as the advantages and opportunities we bring to Florida as a national health care company, providing the experience and resources to innovate, adopt, and scale new technologies.

==========
1. The extent to which the described experience demonstrates the ability to use standard supplemental data sources (lab result files; immunization data in State or county registries; transactional data from behavioral healthcare vendors; and current or historic State transactional files in a standard electronic format) for HEDIS and other performance measures.
==========

Capturing accurate results data on a regular basis is crucial to the success of Humana's Integrated Care Delivery Model. Nationally, across all lines of business, Humana is currently capturing data from two hundred (200) active lab connections and received more than five

hundred ninety-seven million (597,000,000) lab records in 2016. Humana is also capturing supplemental data from two hundred eighty-eight (288) active provider connections and received more than eighty-two million (82,000,000) records in 2016. This trend is continuing in 2017 as we have already received two hundred seventy-eight million (278,000,000) lab records and two hundred five million (205,000,000) supplemental records as of June 28, 2017.

The Humana Clinical Innovations Quality Systems Integration Lab/Supplemental team works cross-departmentally to maximize the capture of clinical data for analytic, disease management, business intelligence, and HEDIS reporting. Humana pulls from our sizeable national experience using supplemental data for our Medicaid line of business.

The supplemental data we use for HEDIS measures in the Florida SMMC program include:

- Lead Screening
- Chlamydia
- Cervical Cancer
- Childhood Immunization Status (CIS)
- Immunizations for Adolescents
- Diabetes Screening for People with Schizophrenia
- Metabolic Monitoring for Children and Adolescents on Antipsychotics
- Annual Monitoring for Patients on Persistent Medications
- Adult BMI monitoring
- Cervical Cancer Screening (CCS)
- Comprehensive Diabetes Care (CDC)

To increase the pass rate for several HEDIS measures including CDC and CCS, we require our Florida providers to submit laboratory results on our enrollees. Immunization data is solicited directly from eleven (11) states by QSI Data Intake and the results are used to determine pass rates for the Immunizations for Adolescents (IMA) and CIS measures. As a partner with the State of Florida, we work directly with the Florida State Health Online Tracking System (SHOTS) program to supply child immunization status data to the State, including Humana wholly owned provider centers that are contracted with Florida SHOTS to enter immunization data into the registry. We have also signed a data exchange agreement with Florida SHOTS to receive immunization data based on eligibility information we receive from AHCA. As part of the data exchange agreement, Humana submits the immunization data for our Florida membership to Florida SHOTS in the required electronic format.

Humana evaluates all collected lab and supplemental data for completeness and relevancy at several points along the intake process. Annually, an external certified auditor must review Humana's supplemental data systems, processes, and content for National Committee for Quality Assurance (NCQA) compliance. The auditor performs the review onsight and in-depth with the appropriate Humana teams.

We take corrective measures to address quality and ensure that the records received will fulfill the NCQA, Centers Medicare & Medicaid (CMS), and Agency-defined Adult and Child Core Set measure requirements. Corrective measures are identified and implemented through:

- Contacting the data vendor for missing, incomplete, or incorrectly formatted records

- Reviewing internal processes for end-to-end data integrity

- Reviewing record quality flags and addressing the internal or external process that led to the flag

- Reviewing the data type against the NCQA technical specifications to ensure measure eligibility, compliance and exclusion criteria are properly documented in an enrollee's data

- Externally validating enrollee data and measure eligibility, compliance, and exclusion documentation

We identify enrollees with missing data for a particular measure and determine the reason for the data gap. We use the reason for missing data as a guide to implement corrective measures for retrieving that data.

Humana utilizes transactional data files from AHCA and our two behavioral health partners in Florida to supply our HEDIS file with eligibility and enrollment information. We receive the 834 enrollment files and 837 enrollment files from AHCA; our information technology (IT) team then extracts the enrollee enrollment information into the HEDIS vendor file layout. Humana also receives weekly transactional electronic claims data feeds from our behavioral health partners. We mine the data into the engine of our HEDIS subcontractor, VERSCEND. That data is then used to support our behavioral health HEDIS or AHCA's Agency-Defined measures.

==========

2. The extent to which the described experience demonstrates the ability to use supplemental data from electronic health record (EHR) vendor systems and data from certified eMeasure vendors for HEDIS and other performance measures.

==========

At Humana, we use our electronic health record (EHR) data exchange to support clinical and quality initiatives. In our Florida Medicaid program, EHRs provide the opportunity for providers to identify and close care gaps, to ensure the care enrollees receive is appropriate, and to aid in the concurrent review process. For example, there are currently virtual rounds in facilities that allow providers to see the status of their enrollees. EHRs ensure providers have access to files to understand enrollee labs and diagnoses, among other things. Our providers and clinical staff have access to hospital medical records, giving them real time access to our enrollees' information. This ability affords us better understanding of the ongoing health issues of our enrollees and enhances our ability to manage those health issues.

We use the clinical information collected through the EHR data exchange in the monitoring, analysis and reporting of our HEDIS and other performance measures. Attachment MMA 16-1 illustrates Humana's connectivity solution at a high level.

We consider EHR data extractions and exchange an important component of the Humana-provider-enrollee partnership aimed at creating better outcomes for Floridians. We evaluate all EHR data extracts for completeness and relevancy at several points along the intake process. Corrective measures to address quality ensure that the records received will fulfill the NCQA

measure requirements. Enrollees with missing data for a measure are identified and the reason for the missing data is determined as a guide to enable the retrieval of that data. We follow up with providers to address missing enrollee data. For example, if a pediatric enrollee missed a scheduled immunization, we follow up with the provider to address any quality of care issues and help them develop a plan to address care gaps.

In April, our Florida comprehensive program connected with the AHCA Event Notification System (ENS) to allow Humana to receive real-time data feeds on hospital utilization data. Our current connection to the ENS automatically generates reports for providers on emergenct department usage and emergency department medications prescribed. We also supplement our inpatient authorization data with discharge information received on the admission, discharge, and transfer files via the ENS. This information enables us to follow our enrollees post discharge to ensure they receive a follow up appointment, medications, and the necessary community and social supports, and ultimately to reduce re-admissions.

In Florida, Humana is contracted with a certified HEDIS vendor, VERSCEND. All of our data is evaluated using the VERSCEND engine to ensure accuracy. We have been working with certified HEDIS eVendors for a total of nine (9) years in Florida and have worked with VERSCEND specifically for four (4) years. We have a strong working relationship with VERSCEND and there has not been a need for bringing additional eVendors into our processes.

Nationally, we also have hundreds of established connections directly with provider EHR systems and receive data from providers. These processes load the received data into Humana's supplemental and lab data-marts. This is part of our broader strategy to enable providers to best use their data to support quality improvements.

==========
3. The extent to which the described experience demonstrates the ability to report HEDIS measures collected using Electronic Clinical Data Systems (ECDS).
==========

Electronic Clinical Data Systems (ECDS) reporting represents an innovation in the realm of quality data capturing and monitoring. With our broader electronic clinical data transfer capabilities, demonstrated willingness and ability to innovate, and long standing relationship with AHCA and providers across the state, Humana is an ideal partner to support AHCA in expanding and implementing ECDS.

HUMANA'S ELECTRONIC CLINICAL DATA TRANSFER CAPABILITIES

Humana began expanding its health information technology (HIT) more than three (3) years ago to eliminate chart chase and to provide a more seamless exchange of clinical data. Our HIT approaches aim to reduce provider disruption and reduce the cost of onsite record retrieval. Our goal has been real time integration of structured, usable data. Attachment MMA 16-2 illustrates the high-level capabilities of our HIT architecture.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana's corporate resources provide the ability for successful scalability of initiatives and new technologies. Humana has developed its new Internal Health Information Exchange (iHIE) system that provides one stop shopping for clinical information inside Humana regardless of the back-end system hosting the data. Internal users can access records of many types such as images, medical record extracts, assessments, and care plans, all from a single location.

COMPONENTS OF THE IHIE INCLUDE:

- Registry: This is the catalog and record-locator service that maintains the location and pointers of clinical documents and how to get that information if requested

- Repository: The systems that store the actual records and maintain the pointers to those records that can notify or push the information to users additionally, users can retrieve the records on-demand

SERVICES IN THE IHIE INCLUDE:

- Document Registration: Allows systems which have clinical information to register a document and provide its locator ID so that the iHIE can make it available to other systems

- Document Query: Allows system to ask the iHIE if any information is available for an enrollee. The iHIE will return a list of available documents

- Document Get: Retrieves a record and makes it available to the requesting system

- Document Notification/Push: Allows systems to subscribe to messages that whenever the iHIE receives a registration, it can automatically push the data to the system which needs it

HUMANA AS A DEMONSTRATED PARTNER TO AHCA

We have demonstrated our commitment to partnering with AHCA in advancing electronic information exchange through the Florida HIE ENS. In 2013, Humana identified a need for enhanced, real-time emergency department data in order to identify those enrollees who accessed the emergency department appropriately so we could ensure their transitional care from one setting to another was as seamless as possible, as well as to better target those enrollees who were using the emergency department inappropriately to educate them on a better way to access the care they needed. We led the initiative to develop electronic data exchanges with the goal of reducing avoidable emergency department visits and driving out unnecessary spending.

Building upon our success with the real-time emergency department pilot, Humana is currently contracted with AHCA as part of Florida HIE's ENS for Regions 9, 10, and 11. Physicians receive a daily report of the prior day's emergency department encounters for their patients. Humana continues to reach out to high-utilizing enrollees to make sure their needs are taken care of and to engage them in case management. Our Case Managers also partner with the providers to encourage them to reach out to other low-utilizing patients to address care needs.

(Please see Attachment MMA 16-3 for Humana's emergency department Messages Distribution Model.)

Enhancing care and improving enrollee experience is truly a partnership between Humana and providers. We use direct trust technology to send reports to physicians. We have achieved savings through emergency department visit reduction, in part due to timely collaboration with management services organizations (MSOs) and PCPs to identify and close gaps. We identify utilization metrics targeted at increasing the quality of care and work with our providers to use that utilization data in a meaningful way to improve health outcomes.

HIE ENS notifications have been integrated into Humana's utilization management system allowing for timely tracking and reporting. HIE ENS allows us to understand the lag between emergency department\ encounters and PCP follow-up office visits in a similar way as the current Admit-to-Encounter report for inpatient admissions. Humana receives an automated daily report with the admission, discharge, and transfer data, which includes emergency department visit information. We deliver a file to providers each day that includes both ENS notifications and the emergency departments Medicaid Predictive Model. Including the Predictive Model score better equips our providers to identify their enrollees with the highest risk of a potential emergency department visit or admission.

HUMANA'S BROADER CLINICAL DATA TRANSFER CAPABILITIES

Nationally, Humana has nearly one thousand (1,000) provider location connections, of which more than eight hundred sixty (860) are connected via Transcend Insights, utilizing the IHE (Integrating Health Experience) standard protocols. The provider groups include (but are not limited to) hospitals, physician groups and labs. The volume of documents and results that we have received year to date is in the tens of millions. Humana is currently in talks with multiple state and regional HIEs to connect and exchange documents similar to what we are exchanging with individual provider groups. Attachment MMA 16-4 illustrates Humana's capabilities with inbound and outbound data exchange.

In partnership with our wholly-owned organization, Transcend Insights, we have established bi-directional data exchange with several industry leading EHR systems to accept electronic medical records using industry IHE standards. This exchange is Humana's main connectivity channel to transmit clinical data transactions bi-directionally with providers. While we prefer to connect in this method, we are also able to exchange data via non-IHE-standard methods such as secured file exchange (Secured FTP, FHIR API's and messaging under the Direct Trust standard or the Direct Protocol). Internally, Humana has a clinical case management system, Clinical Guidance eXchange (CGX), for the creation and management of care plans and assessments, and a record registry and repository to broker the transmission and receipt of care plans and assessments with external entities. Humana uses industry standard technologies such as the IHE profiles and HL7 CCDs to achieve interoperability with external providers and other clinical entities.

Our experience partnering with AHCA on the HIE ENS demonstrates our capability to explore new and innovative ways to measure the quality of care we deliver to our enrollees. Through our interoperable clinical system, CGX, we can capture clinical, quality, and utilization management

data to inform our HEDIS performance measuring activities. As a national health care company with multiple lines of business, we also have the ability to bring a very broad and diverse set of capabilities to Florida in a meaningful and scalable way, making us an ideal partner for exploring ECDS and other technologies in Florida.

Evaluation Criteria:

1. The extent to which the described experience demonstrates the ability to use standard supplemental data sources (lab result files; immunization data in State or county registries; transactional data from behavioral healthcare vendors; and current or historic State transactional files in a standard electronic format) for HEDIS and other performance measures.

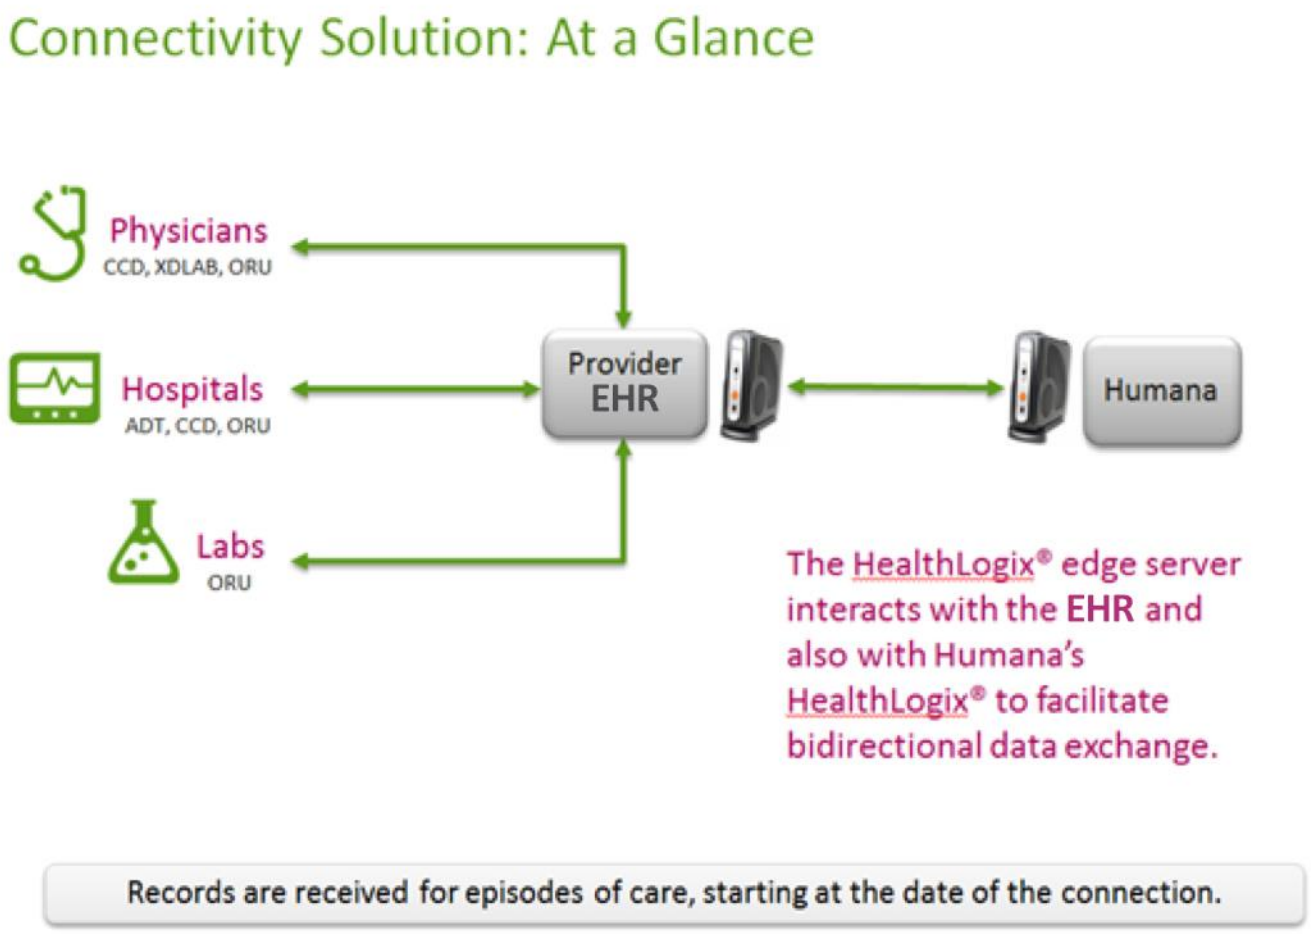
2. The extent to which the described experience demonstrates the ability to use supplemental data from electronic health record (EHR) vendor systems and data from certified eMeasure vendors for HEDIS and other performance measures.

3. The extent to which the described experience demonstrates the ability to report HEDIS measures collected using Electronic Clinical Data Systems (ECDS).

Score: This section is worth a maximum of 15 raw points with each of the above components being worth a maximum of 5 points each.

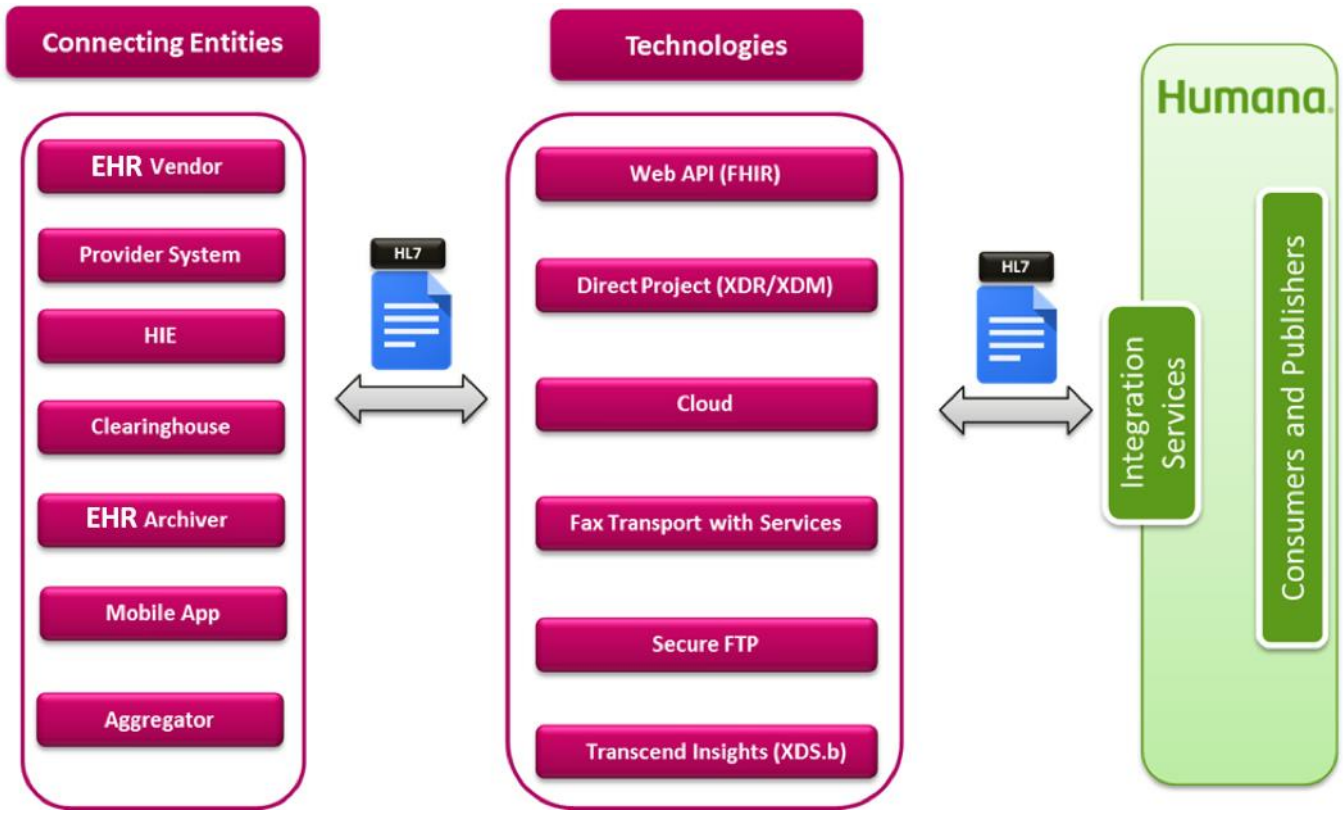
Attachment MMA 16-1: Humana's EHR/EMR Connectivity Solution

At Humana, we use our EHR data exchange to support our clinical and quality initiatives. In our Florida Medicaid program, EHRs/EMRs provide the opportunity for providers to identify and close care gaps, to ensure the care enrollees receive is appropriate, and to aid in the concurrent review process. We utilize the clinical information collected through the EHR data exchange in the monitoring, analysis and reporting of our HEDIS and other performance measures. The chart below illustrates our connectivity solution at a high level.



Attachment MMA 16-2: Humana HIT Architecture

Humana began expanding its health information technology (HIT) over three years ago to eliminate "chart chase" and to provide a more seamless exchange of clinical data. Our HIT approaches aim to reduce provider disruption, as well as reduce the cost of onsite record retrieval. Our goal has been real time integration of structured, usable data. The chart below illustrates the high-level capabilities of our HIT architecture.



Attachment MMA 16-3: Humana's Emergency Department Messages Distribution

Humana is leveraging direct trust technology to send reports to physicians. We have achieved savings and emergency department visit reduction, in part, due to timely collaboration with management services organizations (MSOs) and primary care providers (PCPs) to identify and close gaps. Below is an overview of our emergency department Messages Distribution Model.

ADT messages flow into Humana's HIT area from external clinical organizations. Some of these ADTs will come from emergency departments.

ADT

ADT

ADT

Humana

At Humana, these ADT messages are interrogated to determine if this is an ER event. If so, an ER event message is created for distribution to the PCP.

ADT

ED Message

Filter

Event Factory

PCP's want and need this information for treatment and risk mitigation reasons.

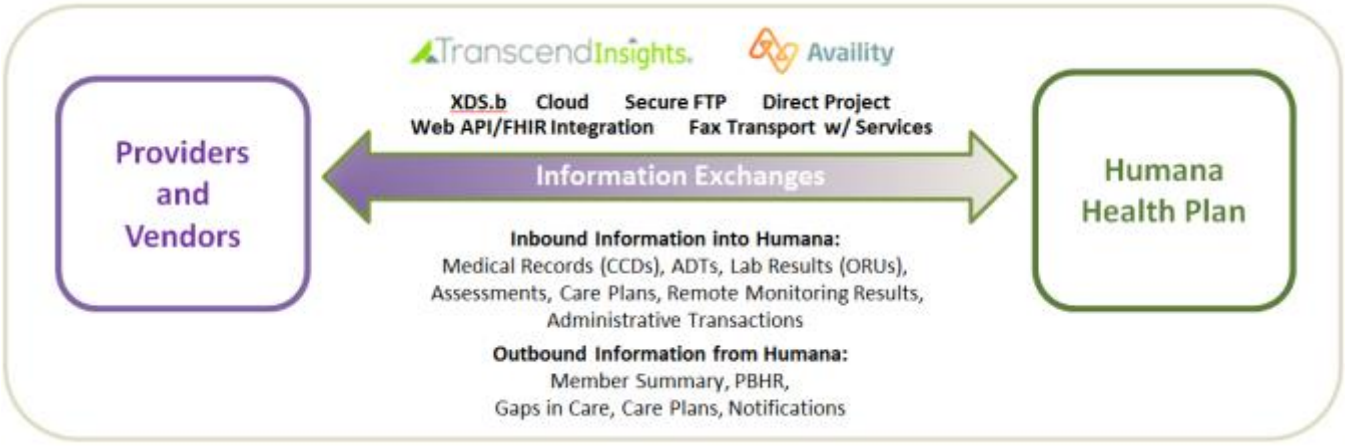
Direct Message

Emergency Department Message using Direct SMTP

Direct is a national encryption standard for securely exchanging clinical healthcare data via the Internet. It allows the provider to receive the message in a variety of ways including EMR integration and email.

Attachment MMA 16-4: Humana's Bi-Directional Informational Exchange

Humana is currently talking with multiple state and regional Health Insurance Exchanges (HIEs) to connect and exchange documents similar to what we are exchanging with individual provider groups. The graphic below illustrates Humana's capabilities with inbound and outbound data exchange.



MMA SRC# 17 – Coordination of Carved Out Services (Statewide):

The respondent shall describe its approach to coordinating services that are not covered by the respondent, but are covered by Florida Medicaid either through the FFS delivery system (e.g., behavior analysis services, prescribed pediatric extended care) or through a prepaid dental plan.

Response:

Humana's approach to coordinating services focuses on ensuring that enrollees receive all medically necessary services in a timely manner in the most appropriate setting. Our goal for our referral processes, whether Humana services, fee-for-service (FFS) delivery system or prepaid dental plan, is supporting the best possible quality outcomes for enrollees throughout the health care system. To achieve this goal, we use proactive identification of enrollees who require referrals, close coordination with Florida state agencies and the prepaid dental plan, collaboration with other plans through which our enrollees have coverage (including Medicare, Tricare, and commercial plans), and a multi-faceted communications program that involves and engages all stakeholders. Effective and efficient care coordination places the enrollee at the center of a cohesive process to meet their care and support needs through the Florida MMA Program.

==========
1. The extent to which the respondent describes effective and efficient processes for reciprocal referral for needed services
==========

Humana's reciprocal referral for needed services process ensures enrollees are receiving care from a coordinated delivery system in which transfers from Humana to FFS state agencies or a prepaid dental plan are as seamless as possible. Our Clinical Guidance eXchange (CGX) and Customer Relations Management (CRM) systems - used by our clinical and Customer Care associates, respectively – provide a unified view of enrollee needs and services across our organization, enabling seamless coordination and continuity of care for enrollees receiving carved out services. Our care coordination processes involve all stakeholders in one coordinated effort to ensure they are effective, efficient, and improve outcomes. Those stakeholders include:

- Enrollees and authorized representatives
- Florida state agencies providing Medicaid FFS benefits
- Prepaid dental plan
- Providers
- Case managers
- Humana social workers
- Humana provider relations team
- Humana Customer Care specialists
- Subcontractors, including our behavioral health and non-emergency transportation (NET) partners

STRONG WORKING RELATIONSHIP WITH STATE AGENCIES

As a partner in Florida Medicaid for more than twenty (20) years in Florida, Humana has established meaningful relationships and open communications with Florida state agencies, including the Department of Health and Agency for Persons with Disabilities. The quality of these relationships is fundamental to the success of our coordination processes. We work closely with all Florida state agencies that provide Medicaid FFS benefits to facilitate timely referrals and provide seamless coordination for enrollees. We engage with these agencies to offer information about Humana's covered benefits and to share contact information for reciprocal referrals to Humana for MMA services. Our close working relationships enable us to follow up on referrals for our enrollees (with the enrollee's permission) and provide timely resolution of any potential issues. Our case managers work with state agency case managers, as appropriate, to ensure that enrollees are receiving the care they need.

PROACTIVE IDENTIFICATION AND REFERRAL

Humana takes a proactive approach to facilitating referrals for services provided through the FFS delivery system and prepaid dental plan. We identify enrollees who may qualify for these services through a variety of sources, including the following:

- 834 enrollment data
- Inbound calls from enrollees
- Case management program, supports, and assessments
- Disease management
- Clinical Guidance eXchange
- Customer Relations Management
- Provider inquiries/referrals
- Outbound Welcome Calls
- Subcontractor inquiries

Our social workers and case managers review 834 enrollment data to identify enrollees who may qualify for waiver services, including Familial Dysautonomia and iBudget. Enrollees who call or are otherwise identified as requesting assistance with obtaining waiver services are referred to our social workers for outreach and assistance.

When a social worker or case manager identifies an enrollee who may meet these criteria through this data review, assessment, or a referral, they reach out to the enrollee to provide education about the benefits of the FFS services the enrollee may be eligible to receive. If the enrollee agrees to a referral for these benefits, the social worker warm transfers the enrollee to the appropriate agency. If a warm transfer is not possible, the social worker or case manager contacts the agency on behalf of the enrollee and assists the enrollee with the application process. The social worker then follows up to determine if the enrollee is receiving the benefit and provides information or assistance if needed.

ENROLLEE STORY: IMPROVING ENROLLEE OUTCOMES THROUGH COORDINATION
Manuel is a twenty-eight (28)-year-old enrollee who had been diagnosed with diabetes and cognitive impairments. Melissa, a Humana social worker, received a referral from Manuel's case

manager to coordinate the support and services Manuel required to manage his condition. When Manuel was referred, he was homeless and had poor health literacy. Together with Manuel's medical and behavioral case managers, Melissa assisted Manuel to relocate to a safe boarding home where he could receive appropriate support for diabetes management and cognitive limitations. Recognizing that Manuel might qualify and benefit from services provided through the iBudget waiver, Melissa worked with the case managers to obtain the information needed to help Manuel obtain the waiver. After Melissa overcame initial challenges in obtaining the IQ test to qualify for the waiver, Manuel received the iBudget waiver and was able to move into a long-term placement better suited to his care needs.

CARE COORDINATION OF MEDICAID FFS SERVICES

Humana's case managers coordinate with state agencies that provide Medicaid FFS services to facilitate referrals for enrollees in the case management program. In addition to facilitating referrals originating from providers, our case managers draw upon their extensive clinical knowledge, training, and familiarity with Medicaid FFS benefits to identify enrollees who require these benefits. For example, our pediatric case managers assist caregivers for children who may qualify for prescribed pediatric extended care (PPEC) by offering information about the benefit, identifying providers in their area who provide the services, assisting the enrollee/caregiver to coordinate any necessary referrals from the provider, and submitting necessary paperwork or applications to the state. Our case manager sends the enrollee's care plan and notes to the PPEC case manager for review and coordination (with enrollee/caregiver permission) and invites the PPEC provider to participate in the enrollee's multi disciplinary team (MDT).

For those enrollees who may qualify for and benefit from behavior analysis (BA) services, our Behavioral Health (BH) case managers can provide specialized support and guidance to coordinate service provisions. After a provider submits a written order for BA services, the BH case manager assists the enrollee in finding a BA provider and submitting the request for coverage to Beacon Health Options (Beacon), as the administrative services organization responsible for AHCA's BA Utilization Management program. Our case managers continue to provide follow-up and care coordination upon initiation of BA services, including ensuring enrollee satisfaction with their chosen BA providers and facilitating any needed re-authorizations. Information about BA services is integrated into our enrollee's case record in CGX to further facilitate HIPAA-compliant communication among the enrollee's case managers and providers.

Our close working relationship with Beacon – as one of our own BH vendor and as the administrative services organization responsible for BA Utilization Management - also facilitates reciprocal referrals to Humana for Medicaid managed care. Beacon's associates enable referrals to managed care plans for those recipients of Beacon's UM services, including BA authorizations, and will help recipients to contact AHCA's Medicaid hotline to access services and resources available through the MMA program.

COLLABORATING WITH PROVIDERS

Humana's highly engaged provider network is a key source of referrals for appropriate Medicaid FFS benefits and prepaid dental plan services. Our providers work closely with enrollees, case managers, and state agencies to make timely referrals. Our Provider Relations team educates providers about benefits and the appropriate referral processes through a variety of communication channels. In addition to including information about these carved out services and the appropriate referral processes in our provider manual, we will disseminate a short and easy-to-use benefit guide via mail, fax, and face-to-face meetings that will allow our providers to quickly and easily access more information about referrals for these benefits, including information from AHCA's website. In addition, our quarterly provider newsletter and provider website will be used to share information about these services, including contact information for any questions about referrals.

Additionally, as the MMA program transitions from carved-in to carved-out dental services, we will similarly engage with our providers to offer guidance and education regarding the changes in the benefit structure, ensuring they have updated information about the prepaid dental plan to share with their patients.

==========

2. The adequacy of the respondent's approach to engage and educate enrollees in understanding the difference in benefits covered by the respondent and those that are available through other Medicaid delivery systems.

==========

ENGAGING AND EDUCATING ENROLLEES

It is crucial that enrollees understand how to appropriately access all of their benefits. We use a variety of methods to engage and educate our enrollees, helping them to understand the difference in benefits covered by Humana and those covered by other Medicaid delivery systems, including Medicaid FFS and the prepaid dental plan. We begin this education during initial enrollment and continue to assist enrollees in understanding their full range of benefits throughout their membership with Humana. Communications include:

- Welcome Call
- Customer Care inbound calls
- Enrollee handbook
- Enrollee website portal

In addition to educating enrollees about the differences in benefits, we offer information about how to obtain assistance with needed referrals and provide phone numbers enrollees can call to receive assistance with the referral process. We also highlight how care coordination assists enrollees whether they are receiving services from Humana, Medicaid FFS, the prepaid dental plan, and/or another insurer, such as Medicare or a commercial plan.

WELCOME CALL

Humana places a Welcome Call to all new enrollees. This call is an opportunity for us to establish a direct and personal connection with each enrollee, to provide important information about benefits, and to gather key enrollee information. During the call, we answer questions about covered benefits through Humana, discuss benefits available through Medicaid FFS, and refer to the prepaid dental plan for information about covered dental services. We encourage enrollees to review the enrollee handbook and enrollee portal, or call the Customer Care center, if they have any questions at a later date. We also arrange to send additional information about Medicaid FFS benefits to any enrollees who request it.

CUSTOMER CARE INBOUND CALLS

Humana's Customer Care Specialists provide information and assistance to enrollees on an ongoing basis. We encourage enrollees to call our Customer Care line if they have questions, would like to discuss their benefits, or ask for assistance. When an enrollee calls with a question about covered benefits, a Customer Care specialist explains the benefits covered by Humana, Medicaid FFS, and/or the prepaid dental plan. Through CRM, our specialists can view the enrollee's record and provide tailored information and guidance for their case. If the benefit the enrollee is seeking is covered elsewhere, our specialist transfers the enrollee to the appropriate organization for more information about the referral process.

ENROLLEE HANDBOOK

Our enrollee handbook, easily accessible through our website or via mail if requested, contains information about Medicaid covered services. With AHCA's approval, we will enhance our handbook to include a list of Medicaid FFS benefits alongside the list of Humana's covered benefits. We will clearly delineate which benefits are covered, explain where or by whom they are covered, and provide more information about how to contact Humana or a state agency for questions/referrals for these services. Our handbook will also include AHCA-approved language on the prepaid dental plan, including contact information for referrals and the list of dental services covered through this plan.

ENROLLEE PORTAL

With AHCA's approval, our online enrollee portal will also be enhanced to provide a clear description of the services covered through Medicaid FFS and the prepaid dental plan, including information on how enrollees can obtain any necessary referrals through their provider and instructions for how to complete applications for waiver. We will also provide Humana contact phone numbers that enrollees can call to ask questions or request assistance with referrals.

==========

3. The extent to which the respondent's description includes a process for ensuring respondent's staff and subcontractors are aware of and effectively communicate the appropriate information on services available through other Medicaid delivery systems.

==========

Educating all associates and subcontractors about services available through other Medicaid delivery systems is key to ensuring that enrollees receive accurate information about benefits and timely referrals. Humana begins this educational process long before an associate or subcontractor interacts with enrollees and conducts refresher courses and updates to information throughout the year.

EMPLOYEE ON-BOARDING

All Humana employees complete an on-boarding program and annual online refresher training sessions, which include information about services and associated referral procedures for Medicaid managed care benefits, Humana's expanded benefits and Medicaid FFS benefits. Enrollee-facing employees, including our case managers, social workers, and Customer Care specialists, receive additional education on how to recognize enrollees who may qualify for FFS benefits and how to coordinate and complete referrals for these services. As MMA shifts from a carved-in to carved-out model for dental services, we will ensure that all associates and subcontractors understand this and other changes to the contract through our training program.

ONGOING COMMUNICATION

In addition to our established, initial training programs, Humana continually looks for other opportunities to ensure that our associates and subcontractors know and effectively communicate appropriate information on services available through other Medicaid delivery systems. Regular associate meetings provide a forum for associate education, and we use these sessions to reiterate and reinforce information about referral processes for FFS services. Any updates or changes to these services – including updates to benefits covered through Medicaid FFS and the prepaid dental plan – are communicated to all associates and subcontractors through email updates and alerts, work instructions, and policy and procedure updates. These updates are reiterated during our regular associate meetings.

SUBCONTRACTOR TRAINING

Our subcontractors are required to complete the same on-boarding and annual online training as Humana associates, including information about Medicaid FFS services. In addition to this training, our subcontractor relationship managers serve as a main point of contact to field any questions subcontractors may have about Humana policies and procedures related to these benefits. These managers share any updates through email and regularly recurring meetings. For example, we ensure that our behavioral health subcontractors are familiar with AHCA's policies on behavioral analysis services and that their providers are aware of all authorization processes. We also ensure our non-emergency transportation vendors understand that our enrollees' transportation to Medicaid FFS and prepaid dental plan services is a covered benefit.

Evaluation Criteria:

1. The extent to which the respondent describes effective and efficient processes for reciprocal referral for needed services.

2. The adequacy of the respondent's approach to engage and educate enrollees in understanding the difference in benefits covered by the respondent and those that are available through other Medicaid delivery systems.

3. The extent to which the respondent's description includes a process for ensuring respondent's staff and subcontractors are aware of and effectively communicate the appropriate information on services available through other Medicaid delivery systems.

Score: This section is worth a maximum of 15 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

MMA SRC# 18 - Vignette (Statewide):

The respondent shall review the below case vignette, which describes potential Florida Medicaid recipients. Note: The vignette included below is fictional.

> *Jose is a 15-year old male. He is diagnosed with bipolar disorder and is currently hospitalized under the Baker Act; this is his third psychiatric admission under the Baker Act in the past year. Up until six (6) months ago, Jose lived with his mother and two younger siblings, but he moved in with his father after his behavior declined and his mother was unable to protect herself and his siblings from Jose's angry outbursts and verbal and physical aggression. His father is physically disabled from a work injury, and he is concerned about managing Jose upon release, as Jose's behavior at home and school has significantly declined. At school, Jose is currently failing and has a notable number of absences and office referrals for altercations. Jose was diagnosed two months ago, during his second psychiatric admission, with bipolar disorder. Jose has been prescribed a low dose of Seroquel daily, but he does not take it consistently because of the side effects. He experiences drowsiness, dry mouth, and nausea. In his current admission, his laboratory testing results showed evidence of thyroid dysfunction. The hospital social worker assisted the family in completing and submitting a referral for Statewide Inpatient Psychiatric Program (SIPP) services, but the SIPP provider informed the social worker that authorization was denied. Jose's father has called the plan's enrollee help line for assistance with completing an expedited appeal. Jose was involved in outpatient therapy for the past six weeks. There have not been any adjustments to his medications to date. Jose has been enrolled in Medicaid since he was 5-years old. He has been enrolled in his health plan since July 2014.*

The respondent shall describe its approach to coordinating care for an enrollee with Jose's profile, including a detailed description and workflow demonstrating notable points in the system where the respondent's processes are implemented:

a. New Enrollee Identification;
b. Health Risk Assessment;
c. Care Coordination/Case Management;
d. Service Planning;
e. Discharge/Transition Planning;
f. Disease Management;
g. Utilization Management; and
h. Grievance and Appeals.

Where applicable, the respondent should include specific experiences the respondent has had in addressing these same needs in Florida or other states.

Response:

JOSE

LOOKING BACK: HUMANA IS INTRODUCED TO JOSE

In July 2014, Jose was a newly eligible ten (10) year old enrolled into Humana's Managed Medical Assistance (MMA) plan. Jose received a Welcome Call from the Florida-based Humana Medicaid Administration Education and Satisfaction Unit (ESU). This call was initiated by Jose's telephone number being loaded into auto dialer software upon enrollment. Jose's mother was successfully contacted and the ESU Customer Care Specialist, Alicia, welcomed Jose's mother (as his guardian) to the plan. Alicia completed a health risk screening, provided an overview on well-child visits, and educated her about well-check incentives available for meeting Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) guidelines and annual check-ups for Jose. Alicia also confirmed receipt of the new enrollee welcome materials, identified any immediate health concerns, and verified the name and contact information of Jose's current pediatrician. Jose's mother agreed to receive reminders about Child Health Check-Ups through the Child Wellness Campaign. Through this discussion with Jose's mother, Alicia determined there was no need for medical or behavioral referral for case management at that time.

LOOKING BACK: JOSE'S INITIAL STRATIFICATION, SYSTEM SUPPORTS AND MONITORING

Humana's integrated care approach includes ongoing review of Jose's health information to identify and target care needs. The identification process includes: daily and systematic reviews for inpatient authorizations and emergency visits; Healthcare Effectiveness Data and Information Set (HEDIS) gap in care alerts (to ensure EPSDT requirements are up to date according to the periodicity schedule); as well as monthly Medicaid Severity Scores predicting high cost or utilization. This model includes medical, pharmacy, and behavioral health claims to identify enrollees who might benefit from case or disease management. During Jose's first two (2) years with the Humana plan, he was not identified for potential case or disease management. He was also up to date on all EPSDT requirements and had not had any hospital admissions until this last year.

LOOKING BACK: JOSE'S BEHAVIORS AND BAKER ACT ADMISSIONS

Towards the end of 2018, Jose began displaying escalating behaviors that negatively impacted his interactions with his family and his performance at school. This resulted in two (2) inpatient admissions under the Baker Act. He was also diagnosed with bipolar disorder and was prescribed a low dose of Seroquel. After each of these admissions, our behavioral health (BH) utilization review clinician, Lisa, (who is a licensed clinical social worker) partnered with the facility in the discharge planning process. Throughout both of these Baker Act admissions, Lisa maintained ongoing contact with the facility, reviewed Jose's progress during multidisciplinary team (MDT) meetings, and assisted with identifying barriers that might have prevented successful discharge or readmission.

She also spoke with Jose's parents to give them information on the Complex Case Management (CCM) program. Lisa explained that the CCM program would connect a licensed BH case manager to Jose and the family. The case manager would assist by identifying care needs and coordinating appropriate covered and non-covered services. These could include covered services like outpatient individual and family therapy, as well as non-covered services like engagement with the Boys and Girls Club and Boy Scouts of America. This could also include additional support services through organizations such as the National Alliance for Mental Health. Unfortunately, Jose's parents declined her offer for CCM at the time.

Through her training and experience, Lisa understood that timely access and availability of providers was essential in establishing and engaging ongoing treatment for Jose. Lisa educated the family and coordinated providers and community resources for Jose and his parents (including individual and family support groups). While Jose's case was not in active case management while he was outpatient, it was flagged for additional monitoring and opportunities for future case management engagement.

DAY 1: JOSE'S THIRD BAKER ACT ADMISSION

In February of 2019, Lisa receives a request for an inpatient authorization under the Baker Act for now fifteen (15) year old Jose. Lisa accesses his enrollee record through Humana's clinical system, CareHub Clinical Guidance Exchange (CGX) [1], to review the previous admission details, authorization history, and demographic information. She is familiar with Jose and his family from working with them on his two (2) previous admissions. To gain a full picture of Jose, Lisa views the Integrated Member Profile (IMP) tab of CGX which contains a comprehensive snapshot of case management activity, diagnosis, medications, authorizations, and alerts. Jose's file in CGX contains details on his:

- First admission in September, 2018

- Historical MDT meeting documentation; participants include Jose's Primary Care Physician (PCP)

- Demographic information and details of his family (he has two (2) siblings, his parents, Frank and Marie, are separated, and Frank had a work injury leading to disability)

- Documented cultural and language preferences

- Release of Information for Behavioral Health on file, in order to share information on Jose's BH admissions with his PCP

- Residence change in September, 2018 when Jose moved in with his father

- Second admission in December, 2018 with a diagnosis of bipolar disorder

- Current medication, Seroquel (low dose)

- New indication of thyroid dysfunction on this February, 2019 admission

- Increasing episodes of behavioral issues including truancy, verbal, and physical aggression at home and school

- Eligibility for CCM, documentation of multiple discussions since the first admission, and the family choosing not to participate

- Lack of psychiatric claims information supporting completion of outpatient follow-up, meaning it appears Jose has not been seeing his treating provider on a regular basis

Lisa understands it is important to engage Jose and his family as soon as possible with swift and comprehensive interventions to promote successful outcomes. She feels the CCM program is the best solution to accomplish this goal. Within twenty-four (24) hours of receipt of the inpatient authorization request, Lisa completes her review of Jose's information in the system. She learns the reason for his admission and contacts the facility discharge planner to communicate the receipt and approval of the authorization. Lisa also obtains additional details about Jose's admission from the facility discharge planner and they discuss his status and the timing for engaging in necessary after-care services.

Together, they review Jose's inpatient treatment plan and initiate the discharge planning process. Lisa learns the facility and Jose's family are planning to submit a referral for a Statewide Inpatient Psychiatric Program (SIPP) placement for Jose. A SIPP is available for children and youth requiring treatment in a psychiatric residential setting when a less restrictive setting is not viable and where services are expected to be beneficial and relatively short-term. Jose's family feels this is the best option for him at this point.

DAY 2: SIPP REFERRAL FOR JOSE AND CLINICAL PEER TO PEER

Jose's facility discharge planner gathers the required information and sends a referral for a SIPP placement for Jose. The SIPP provider submits the request for authorization through the provider portal to Humana as a result of this referral. A SIPP assigned utilization management (UM) clinician reviews the submitted assessment and clinical data given by the facility discharge planner, however, the clinician finds that the information provided within the request does not support the authorization of a SIPP placement. Per our process, the UM clinician notifies a Humana board-certified and Florida licensed psychiatrist for further review. Upon receipt, the Humana reviewing psychiatrist contacts the SIPP provider to gain insight on treatment strategies and historical interventions.

Together, the reviewing psychiatrist and the SIPP provider conduct an analysis of Jose's clinical and behavioral picture, noting the recent addition of a thyroid dysfunction, which had not been noted during previous admissions. They discuss the fact that a potential medical cause for Jose's escalating behaviors has not yet been explored. The reviewing psychiatrist discusses Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) and potential medical causes, which must be addressed and controlled prior to exploring a SIPP psychiatric placement. Jose's current medication compliance and reported side effects are also reviewed. They note that he is inconsistent in taking his Seroquel and that he needs a follow-up for medication review and adjustment.

Multiple community-based options are identified as alternatives to SIPP placement. After discussion, the SIPP provider and reviewing psychiatrist decide the Therapeutic Behavioral On-site Services (TBOS) is a better fit for Jose's situation and note that it is a covered alternative behavioral health treatment option. TBOS provides in-home services including individual and family therapy, behavior management, and therapeutic support. The conversation concludes with the facility provider and the reviewing psychiatrist agreeing on the value of Jose residing in his father's home if possible. This plan allows exploration of the various potential causes contributing to his recent decline in behavior prior to seeking a SIPP placement. The facility and

Jose's father, Frank, will receive written notification of the adverse benefit determination, including grievance and appeal information, along with the right to a Medicaid Fair Hearing.

EXPEDITED APPEAL
Upon receipt of the notice of adverse benefit determination, Frank calls the Humana Enrollee Help Line and explains that he would like to file an expedited appeal of his son's denied SIPP request. He is transferred to Humana's Grievance and Appeals (G&A) department and the representative accepts Frank's request for an expedited appeal and documents accordingly in the system. His expedited appeal is submitted to the SIPP-assigned utilization manager. This initiates a second-level review by the medical director, who is a board-certified psychiatrist and was not involved in Jose's initial determination. This review is completed and the decision upholding the adverse benefit determination of SIPP denial is communicated to Jose's Dad less than seventy-two (72) hours of receipt of his expedited appeal request.

DAY 2 – 3: ONGOING CASE MANAGEMENT FOR JOSE

In conjunction with the appeal process, Lisa obtains a copy of Jose's inpatient individualized treatment plan for review to ensure that the care he is receiving is appropriate and aligns to his presenting condition. Through her comprehensive training and experience, Lisa knows there are less restrictive alternatives available so she initiates an MDT meeting including herself, Jose, his parents, his treating psychiatrist, and the facility discharge planner to review Jose's current inpatient treatment plan. She makes sure the following items are discussed:

-Information obtained during the initial assessment

- Up to date release of information forms for release of Behavioral Health information are on file

- Current diagnosis of thyroid dysfunction and the need for follow up with Jose's PCP

- The peer-to-peer outcomes and the treating provider's plan to explore alternatives to SIPP placement, specifically TBOS

- The family's prioritization and preference around Jose's care

- Medication side effects, evaluation of medical therapies and alternatives, compliance, monitoring and education

- Jose's planned inpatient therapies:

-- Individual and group therapy to include anger and behavior management strategies

-- Family therapy

- Barriers to Jose's access-to-care, such as transportation and provider hours that have prevented Jose from previous engagement in psychiatric sessions

- Resources and support to remove the identified barriers, specifically covering transportation and provider options

- Efficacy of the outpatient therapy sessions he has been attending for the past six (6) weeks

- Jose's eligibility for CCM, as he has had multiple admissions, has the presence of psychosocial barriers, and has complex needs for care coordination

Jose's parents share that they are overwhelmed with the number of individuals involved in Jose's care and are feeling frustrated as Jose's behavior continues to worsen. Lisa uses this opportunity to highlight the benefit of having a CCM case manager to help Frank and Marie. She explains that the CCM facilitates communications between Jose's entire treatment team and Jose's PCP, and that this coordination will ensure effective and timely delivery of care for Jose. Frank accepts the recommendation and Lisa generates a referral for CCM outreach. Frank also agrees to TBOS for Jose and is open to any local provider. Lisa enlists the assistance of a BH after-care coordinator to identify contracted TBOS providers specializing in adolescent treatment, with appointment availability, located near Jose's father. The after-care coordinator uses a systematically maintained provider directory in order to locate an appropriate provider with capacity to meet Jose's need for timely and appropriate care. Lisa facilitates the scheduling of an initial appointment to occur within seven (7) days of Jose's discharge. She also helps Frank schedule transportation to ensure he makes it to the appointment. Had an in-network provider not been accessible for Jose, a single case agreement with the provider would have been established to meet Jose's after care needs.

DAY 4: JOSE'S DISCHARGE PLAN

Lisa and Jose's family create a discharge plan. Lisa documents the following in CGX and provides a copy to Jose's family, his BH outpatient therapist, and his PCP:

- Crisis plan in case Jose experiences difficulties
- Follow-up BH appointment scheduled for 7 days and 30 days
- Follow-up PCP appointment for medical work-up
- Medication reconciliation and prescriptions
- Pertinent condition-specific education
- Transportation arrangements confirmed
- Lisa's contact information
- Confirmed Individual Education Plan review appointment with parents and advised support can be provided upon request

Alex, Jose's newly assigned CCM, reviews Jose's file in CGX, and contacts Lisa to discuss his current status and discharge plan. Alex becomes a part of the MDT, as they work towards the scheduled discharge date, and completes the comprehensive needs assessment while Jose is inpatient. The comprehensive needs assessment drives the development of the plan of care by identifying and prioritizing Jose's cognitive, psychosocial, behavioral history, medical history, cultural, linguistic, and functional needs.

DAY 5: JOSE'S POST DISCHARGE AND AFTER CARE

Once Jose is home, Alex works closely with him and his family, ensuring the after-care plan is initiated. Jose's plan of care (POC) is developed and finalized five days after Alex's initial assessment. Services on the POC are authorized and initiated within fourteen (14) days. Alex utilizes a holistic person-centered approach (including Jose and his family) in the POC development and ensures that Jose remains at the center of all strategies and identified interventions. Alex performs ongoing coordination and communication with Jose's PCP and outpatient care team and provides copies of the POC. Based on Jose's identified issues and needs, the self-management strategies to meet his goals include:

- Engaging in bi-weekly anger management and coping skill development sessions with his TBOS therapist
- Participating with family (including siblings) in bi-weekly therapy sessions with TBOS therapist
- Following all PCP recommendations, including re-establishing psychiatric visits
- Adhering to medication recommendations as identified and communicating all side effects to the prescribing provider
- Actively participating in Individual Education Planning sessions with Jose's school counselor
- Joining an after school club, sports team, or community program
- Engaging in monthly support group sessions with his family

Lisa completes her utilization management process by calling Jose and his father to remind them of both his seven (7) day and thirty (30) day scheduled follow up appointments. She also confirms that there are no transportation needs. She documents her call in CGX to ensure Alex can see that she has completed this follow up.

DAY 30 AND BEYOND: JOSE'S ONGOING COMPLEX CASE MANAGEMENT

Alex ensures that Jose completes his full medical evaluation and has received his PCP's final results and recommendations. He also makes sure that Jose has begun taking his newly prescribed thyroid medication. In addition, his newly assigned TBOS behavioral health therapist has met with Jose and Frank at their home and completed a psychosocial assessment to determine the appropriate therapeutic approach to Jose's care. Alex continues to engage and support Jose and his family through monthly contacts and quarterly face to face visits, and will reconvene the MDT every six (6) months or more frequently if needed. Less than a month after returning home, Jose is consistently taking his prescribed thyroid medication. He has been working with his TBOS therapist on managing his behavior and is currently focused on identifying triggers to his anger and managing associated symptoms appropriately. Alex is seeing results from the coordination of covered services, the education provided to Jose and his family, and the community resources to which they were connected. He also sees Jose is beginning to achieve his desired goal of managing his behaviors to hold positive interactions with his entire family, including his mother, Marie.

Humana's approach to Jose's situation ensures that care and supports are being provided in the right place, at the right time, involving the appropriate providers as well as natural and community supports. The goal of case management is to empower Jose to self-manage his needs in the least restrictive environment, as well as to be a source of support and guidance on

his personal health and well-being journey. Jose is a great example of how a caring and coordinated group of people can improve the health and well-being of a person in need.

Footnote

---

[1] CareHub is Humana's enterprise solution for complete program integration for our provider community and enrollees. CGX supports an integrated, comprehensive approach to medical, behavioral health, pharmacy, utilization, and care management. Full system integration allows our care team the capability to identify potential enrollees for programs, document gaps in care, automate care planning, monitor plan compliance, and identify opportunities for intervention.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The adequacy of the respondent's approach in addressing the following:

- **a.** Identification processes for enrollees with complex health conditions or who are in need of care coordination;
- **b.** Description of the sources of data/information that would be utilized in the assessment process, including timeframes for completion;
- **c.** Application of the respondent's case management risk stratification protocol;
- **d.** Identification of service needs (covered and non-covered) and a description for service referral processes that the plan has in place;
- **e.** Description of the interventions and strategies that would be used to facilitate compliance with the plan of care, including use of incentives, healthy behavior programs, etc.;
- **f.** Application of discharge and aftercare planning protocols that facilitate a successful transition;
- **g.** Application of coordination protocols utilized with other insurers (when applicable), primary care providers, specialists, other services providers, and community partners particularly when referrals are needed for non-covered services;
- **h.** Description of the assessment of provider capacity to meet the specific needs of enrollees;
- **i.** Identification of strategies that promote enrollee self-management and treatment adherence;
- **j.** Application of utilization management protocols (i.e., identification of the criteria that will be utilized, processes to ensure continuity of care, etc.); and
- **k.** Application of strategies to integrate information about the enrollee across the plan and various subcontractors when the respondent has delegated functions.

2. The extent to which the respondent's workflows/narrative descriptions include timeframes for completion of each step in the care planning process.

3. The extent to which the respondent demonstrates innovative processes that it has in place to enhance communication among all service providers and subcontractors (for delegated functions).

4. The extent to which the respondent describes an approach that supports care delivery in the most appropriate and cost-effective setting and avoids unnecessary institutionalization (i.e., hospital or nursing facility care) or emergency department use.

5. The extent to which the respondent demonstrates experience in providing services to enrollees with complex medical needs and provide evidence of strategies utilized that resulted in improved health outcomes.

6. The extent to which the respondent demonstrates a holistic system of coordinated health care interventions designed to achieve cost savings through the organized and timely delivery of high quality services.

7. The extent to which the respondent describes innovative strategies to integrate information across all systems/processes (e.g., prior authorization data synching up with the claims system) into its workflows.

Score: This section is worth a maximum of 85 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Attachment MMA 18-1: Jose's Visual Story Guide

We have provided this document as a visual guide to our response. The key timelines from our core response are duplicated here in a format intended to supplement and enable a comprehensive review of Humana's approach to Jose.

About Jose:

Jose is a 15-year old male, enrolled in Medicaid since age 5 and has been with Humana's plan since July 2014. He is diagnosed with bipolar disorder and is currently hospitalized under the Baker Act; this is his third psychiatric admission under the Baker Act in the past year. Up until six (6) months ago, Jose lived with his mother and two younger siblings. However, he moved in with his father after his behavior at home and in school declined and his mother was unable to protect herself and his siblings from Jose's angry outbursts and verbal and physical aggression. Jose is prescribed a low dose of Seroquel daily, but he is noncompliant and is now showing evidence of a Thyroid dysfunction. Jose's SIPP authorization was denied and his father called Humana for help filing an expedited appeal.

Key Components of Care

- **Highly engaged BH Utilization Review Clinician and BH CCM** for ongoing contact, identification of care needs, coordination of appropriate services, among other supports for Jose and his family
- **Integrated Plan of Care (POC) Approach** for ongoing review of Jose's health information to identify and target care needs
- **Ongoing Education, Engagement, and Relationship** with Jose and his family to ensure they are equipped with resources and tools to promote successful outcomes
- **TBOS, an Alternative BH Treatment option** for Jose, instead of a SIPP psychiatric placement
- **Multidisciplinary Team (MDT)** composed of Jose, Jose's parents, the BH utilization review clinician, CCM, his treating psychiatrist, and the facility discharge planner
- **Focus on Jose's Path Forward** by evaluating medical therapies, medication side effects, compliance and monitoring, and making necessary adjustments as needed

Jose's Support System

- **Lisa** — BH Utilization Review Clinician
- **Alex** — Complex Case Manager
- **Frank** — Father
- **Marie** — Mother
- **Psychiatrist**
- **Facility Discharge Planner**

Jose's Timeline:

1 — Looking Back July 1st 2014:
Initial enrollment into Humana's MMA plan when Jose was 10 years old

2 — Looking Back 3rd week of July 2014:
Welcome call from ESU CCS, Alicia

3 — Admission Day 1: Jose's 3rd Baker Act Admission
Lisa reviews Jose's CGX record and contacts facility discharge planner to initiate coordination

4 — Admission Day 2:
SIPP referral requested, Peer to Peer completed; TBOS identified as better fit; receives adverse determination on SIPP, Frank receives notice

5 — Admission Day 2-3: Ongoing Case Management
Lisa schedules and holds MDT meeting, CCM referral is accepted by Jose's parents; Frank agrees to TBOS for Jose

6 — Admission Day 4: Jose's Discharge Plan
Lisa & Jose's family create discharge plan, include Alex in MDT

7 — Day 5: Post Discharge & After Care
Alex works with Jose and family to ensure after-care plan is initiated

8 — 7 Days Post Discharge:
Lisa conducts follow up for seven day appointment confirmation

9 — 30 Days Post Discharge:
Lisa conducts final follow up for 30 day appointment confirmation, concluding her UM activity

10 — Day 30 & Beyond:
TBOS BH Therapist meets with Jose and determines POC; from Date of Discharge to current, Jose is engaged with Alex, CCM

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 19 - Vignette (Statewide):

The respondent shall review the below case vignette, which describes potential Florida Medicaid recipients. Note: The vignette included below is fictional.

> *Jane is a 57-year old female with Type II diabetes mellitus and hypertension. Jane is compliant with her treatment plan, which consists of the following prescribed drugs: Insulin and Lisinopril. She is also compliant with her follow-up appointments with her specialists. She lives alone, but receives support from her eldest daughter who lives nearby. Jane thought she timed her follow-up visit with her endocrinologist adequately to allow sufficient time to receive a new prescription for all drugs; however, Jane realizes she only has enough insulin to last through the doses for tomorrow. Her appointment with Dr. Seem, her endocrinologist, is in two weeks. Jane calls her doctor's office who informs her that they have no availability to see her today or tomorrow and Dr. Seem will not write a new prescription without examining Jane since it has been four months since her last appointment. Jane decides to call her health plan's member hotline for assistance.*

The respondent shall describe the approach for handling Jane's call and how the respondent would help Jane obtain her medication.

Response:

SERVING JANE'S IMMEDIATE NEEDS WHILE DEVELOPING LONG-TERM SOLUTIONS

FEBRUARY 15, 2019: JANE'S CUSTOMER CARE CALL
Jane, a Humana enrollee with an urgent need to obtain an insulin refill from her doctor, calls the Humana toll-free number on the back of her ID card. This connects Jane to Marvin, a Customer Care Specialist (CCS), at Humana's Tampa-based Customer Care Call Center, which operates between 8:00 am and 8:00 pm. If Jane had Limited English Proficiency (LEP) and required language assistance, Humana would offer bilingual CCSs to assist in Spanish or would provide a full-service, over-the-phone interpretation and translation service for up to 170 additional languages, as well as services for hearing impaired enrollees.

CCS Marvin answers Jane's call, authenticates her identity, informs her that the call may be recorded, and accesses her enrollee information on his screen. Marvin finds no alerts for gaps in care for Jane and sees that Jane has historically not been triggered for disease management, is not currently assigned to a case manager, and is not engaged in a clinical program. Jane explains to Marvin that she regularly sees her doctors and faithfully takes her medications. She further explains that she needs a refill, but that her next appointment is in two weeks and her doctor has refused to provide a refill before then. Marvin recognizes from his training that Jane's situation is not a benefit inquiry, but rather a lack of access to urgently needed medical care. He further recognizes that this is a serious issue and requires immediate action.

Through his training and experience, Marvin knows Jane's type of access to care issue is often resolved with a conference call to the provider's office, as there is often simply a misunderstanding between the provider and the enrollee. Marvin obtains Jane's permission to

perform a three-way call with Jane's endocrinologist, Dr. Seem. On this call, the office staff confirms that it will not provide the prescription until Jane is seen at her appointment in two weeks. Marvin realizes that if this barrier is left unattended, it could lead to dangerous blood sugar levels. This would likely lead to Jane needing to visit an urgent care center or, worse yet, an emergency department. This triggers Marvin to initiate the escalation process. With Jane still on the line, Marvin disconnects with Dr. Seem's office and explains to Jane that the next step is to transfer her call to our Clinical Access Team (CAT). He obtains Jane's agreement to directly connect her to a registered nurse (RN) on that team. To ensure this connection is successful, Marvin initiates a warm transfer, keeping Jane on the line so that he can directly introduce Jane and fully explain her situation to Ruby, the Florida licensed RN receiving her call.

The CAT is comprised of RNs like Ruby who are knowledgeable of enrollee benefits and clinical needs. They are also equipped to identify appropriate solutions for Jane and advocate on her behalf to access care. The CAT's mission is to provide personalized guidance toward issue resolution and to enable enrollees like Jane to access preventive care which will promote healthy behaviors, positive health outcomes and well-being. Ruby has been trained to facilitate timely clinical access to care, initiate referrals to appropriate clinical programs, provide guidance to in-network providers, and promote Humana's compliance with regulatory and accreditation requirements. She was also trained to serve as a liaison for enrollees or their representative, providers, and other appropriate stakeholders. Ruby benefits from Humana's significant presence managing more than two million (2,000,000) members across multiple lines of business in Florida, as the CAT has fostered strong and effective provider relationships which facilitate timely resolutions.

JANE'S ESCALATION AND RESOLUTION

Ruby speaks with Jane and after she determines that her current clinical condition is stable, she verifies her correct understanding of Jane's access to care issue. Ruby secures Jane's permission and makes a second three-way call to Dr. Seem's office. Ruby requests to speak with his nurse. It is determined there are no earlier appointments available, but through her discussion with Ruby, Dr. Seem's nurse recognizes the urgency of Jane's situation and states that since Jane is scheduled, they will provide a one-time insulin refill. She further explains that this refill will be phoned to Jane's preferred pharmacy. Dr. Seem's nurse advises that if Jane's upcoming appointment is missed or rescheduled, Jane will not be able to obtain further refills. Jane confirms her understanding of this and Ruby ends the call with Dr. Seem's office, keeping Jane on the line. Ruby confirms with Jane that she has the appointment date and time noted and transportation to the appointment has been scheduled. Jane states that she will ask her daughter to pick up the insulin refill today. Ruby ensures that Jane has the Customer Care number and reminds her that it is available for her to call 24 hours per day. She also reminds Jane about the Nurse Advice Line number which will allow her to access the after-hours nurse line, in case she has any additional issues or health concerns.

MARCH 1, 2019: RUBY FOLLOWS UP WITH JANE
Ruby schedules a reminder to contact Jane for a discussion about her appointment with Dr. Seem. When Ruby calls Jane, she confirms that Jane obtained her new prescription and picked up her insulin. She also confirms that there are no continued access-to-care issues and that no new needs are identified. Ruby also suggests that Jane may wish to provide a Release of

Information to Humana so Jane's daughter is able to call on her behalf. She explains one of the benefits of this is that Humana would be able to engage with Jane's daughter to increase family support to help her manage her medical issues. Jane agrees to complete the form. Ruby confirms her address and sends the form to Jane in the mail. Ruby and Jane discuss a tracking and reminder system to make sure she is keeping up with all of her appointments and to ensure timely refills are available. They discuss the goal of avoiding a potential exacerbation of her symptoms that would require a visit to urgent care or the emergency department. Ruby then provides Jane additional information on Humana's Diabetes Disease Management (DM) program, which could help her more effectively manage her diabetes. Jane would like to learn more about her condition and agrees to enroll in the DM program. Ruby advises Jane that she will receive a call from the Humana DM RN to enroll her in the program within 7 to 10 days. Ruby makes a note to follow up with Jane in two weeks to ensure the DM RN contacts her for enrollment.

MARCH 1, 2019: RUBY ADDRESSES ISSUE WITH DR. SEEM
After the conversation with Jane, Ruby contacts our Provider Relations Team, notifying them of the issue Jane experienced with Dr. Seem and requests that they contact him and his staff to provide additional education and training concerning the requirement to provide timely medically necessary services to enrollees. The Provider Relations team will coordinate with Dr. Seem and his staff, reviewing contract obligations, the Provider Manual, and information related to serving enrollees with empathy and understanding, as well as conforming to contractual requirements around timing of visits and enrollees' access to care.

Ruby educates Jane about her grievance and appeals rights and options, but Jane does not feel this is necessary as the issue was resolved. Had Jane wished to file a grievance, Ruby would offer a warm transfer to Customer Care and, if declined, she would provide Jane with the Customer Care number so she could call on her own. When contacted, the CCS would log the grievance in Humana's Customer Relationship Management (CRM) system [1] and it would be promptly reviewed by our Grievance and Appeals team to determine the most appropriate way to assist Jane in resolving her issue. We would provide her with help filling out forms and assist her in reaching necessary agencies and obtaining information about the provider's actions leading to the filing of the grievance.

REFLECTING ON HUMANA'S FOCUS ON REPEATABLE LONG-TERM RESULTS

After Ruby was able to help Jane resolve her immediate issue, our integrated team took the opportunity to explore the underlying issue that led to Jane's situation. The team was able to work with her to develop long-term solutions to empower her in the self-management of her chronic conditions.

Jane's situation was resolved through our standard process steps and protocols. However, we recognize that this is not the case in all situations. Our representatives are trained to seamlessly handle all situations that may arise. Below we detail this by providing additional information on the training CCS Marvin received to enable him to properly work through Jane's issue as well as the alternate escalation options Ruby would have worked through had Dr. Seem's nurse not agreed to provide the one time refill.

MARVIN'S TRAINING TO SUPPORT ENROLLEES LIKE JANE

Marvin's CCS training included eight weeks of classroom study, call shadowing, live-call demonstrations, and call monitoring and review. CCSs such as Marvin are equipped to properly identify and triage cases like Jane's, locating appropriate resources to resolve enrollee issues in a timely manner. More specifically, Marvin has learned strategies to identify indicators of access-to-care barriers, prioritize immediate needs, identify enrollee health literacy levels, display empathy and emotional support on calls, and advocate for the enrollee utilizing resource tools to remove or work around the barriers creating the needs. Marvin also completed training on cultural competency, disaster recovery, risk management, and how to provide clear and understandable guidance to enrollees in the event of complex situations.

Marvin utilizes multiple tools, including the Customer Care operational manual and policies and procedures to reference appropriate call scripts, actions, referrals, escalation protocols, and to document the actions leading to the enrollee's inquiry or issue resolution in the CRM system. Marvin is able to update information when applicable and capture the enrollee's preferences in the system for future reference.

Our CCS staff also complete specific prescription-related training that addresses procedures for ensuring enrollees have access to medications. The CCS is prepared for situations where there is an access-to-care need to accurately determine when medication overrides should be granted to enrollees, how to locate resources corresponding to immediate medication needs identified, and resolve authorization related claim denials according to procedural guidelines. Examples of resource documents covered in this training module include:

- Florida Medicaid Plan Lost, Stolen or Damaged Prescriptions
- Pharmacy Disaster Exception Process
- Natural Disaster Guidance
- Replacement Medications for Declared and Non-Declared Disaster
- Florida Medicaid Non-Certified Pharmacies

RUBY'S ALTERNATE ESCALATION OPTIONS

If Ruby had not been successful in obtaining the appointment and refill from Dr. Seem's office for Jane, there are several other escalation protocols and strategies that would have been utilized to prevent an urgent care or emergency room visit, or a preventable hospital admission:

- Involving a Humana Medical Director to engage in a peer-to-peer conversation with Dr. Seem to request the necessary medication on an urgent need basis

- Contacting Jane's PCP, requesting that the PCP issue the prescription for Jane's insulin to cover her until her scheduled appointment with Dr. Seem

- Providing guidance to schedule an appointment with a new in-network endocrinologist, who might be available to see her on the same day, using the Humana online provider directory

- Utilizing our new telemedicine partnership with Doctor on Demand, where Jane can talk with a physician via live video feed within 5 minutes of her request

- Accessing an appointment at one of Humana's wholly owned/joint venture provider groups in Florida

- Contacting Jane's pharmacy to request a one-time emergency fill on her insulin

If a medical emergency had been identified or if this had occurred during a time of disaster, Ruby would have directed Jane to seek appropriate medical services and resources.

Footnotes:

[1] CRM is Humana's documentation system for enrollee support activities, providing message optimization, enrollee-centric prioritization, data mining and reporting, and enhanced processes for quality management to streamline the flow of data to other internal systems.

Evaluation Criteria:

1. The adequacy of the respondent's approach in addressing the following:

(a) Training for call center staff that illustrates the ability to triage cases of this nature, including the internal escalation process available to call center staff.

(b) Description of the interventions and strategies that would assist Jane in avoiding a visit to urgent care or the emergency department to receive a new prescription.

(c) Evidence of the integration between and among all relevant departments, including subcontractors if applicable, to facilitate a seamless resolution.

Score: This section is worth a maximum of 15 raw points with each of the above components being worth a maximum of 5 points each.

Attachment MMA 19-1: Jane's Visual Story Guide

We have provided this document as a visual guide to our response. The key timelines from our core response are duplicated here in a format intended to supplement and enable a comprehensive review of Humana's approach to Jane.

About Jane:

Jane is a 57-year-old female with Type II diabetes mellitus and hypertension, and is an existing Humana MMA Medicaid enrollee. She is compliant with her treatment plan (Insulin and Lisinopril) and follow up appointments with her endocrinologist, Dr. Seem. Realizing that she only has enough insulin to last until the following day, Jane calls Dr. Seem's office, but they have no availability and will not write a new prescription until she is seen. Jane calls Humana on February 15, 2019 and speaks to Marvin, a Customer Care Specialist (CCS), for assistance.

Key Components of Care

- **Highly Experienced Customer Care** team of specialists trained to identify situations, assess risks, escalate, and facilitate resolution to mitigate disruptions in care
- **Clinical Access Team (CAT) Escalation** when barriers can't be resolved conventionally, with a licensed RN trained to facilitate timely access, referrals, guidance, and compliance while acting as a liaison for enrollees, representatives, and providers
- **Follow-Up Education and Engagement** to help inform Jane on our DM program, discuss goals, and engage other supports, such as Jane's daughter and a DM RN
- **Focus on Repeatable Long-Term Results** to help resolve immediate issues while providing information and solutions that empower Jane to self-manage her care
- **Provider Education and Training** with Dr. Seem and his staff, via Humana's Provider Relations team

Jane's Support System

- **Jane's Daughter**
- **Marvin** CCS
- **Ruby** CAT RN
- **Dr. Seem's Office** Endocrinologist

Jane's Timeline:

1. **Trigger for Action**
   Jane needs an insulin refill, but her next appointment is in two weeks and Dr. Seem has refused to provide a refill before then. Marvin, Humana's CCS, recognizes this is a serious issue that requires immediate action.
2. **Day 1: Customer Care Call**
   Marvin receives Jane's call, authenticates her identify, and accesses her enrollee information. He notes no prior gaps in care, and she has not been triggered for DM.
3. **Day 1: 3-Way Facilitated Call**
   Marvin gets Jane's permission to make a 3-way call with Dr. Seem's office, confirming her next prescription will not be filled prior to her appointment.
4. **Day 1: Escalation to CAT**
   Marvin triggers an escalation to the CAT and transfers her to Ruby, a RN on the team.
5. **Day 1: CAT Assessment**
   Ruby speaks with Jane, verifies situation and with Jane's permission, makes second three-way facilitated call to Dr. Seem.
6. **Day 1: CAT Facilitated 3-Way Call**
   Ruby facilitates 3-way call with Dr. Seem's office, requesting to speak to a nurse, who recognizes the urgency and agrees to a one-time refill.
7. **Day 1: One-Time Refill Request Approved**
   Post-call, Ruby confirms Jane's appointment time and educates her on the Customer Care number and Nurse Advice Line.
8. **Day 15: CAT Follow-Up and DM Enrollment**
   Ruby follows up with Jane to remind her about her upcoming appointment and also educates her on Humana's Diabetes DM program. A Humana DM RN will call Jane within 7-10 days to enroll her in the program.
9. **Day 15: Provider Relations Follow-Up**
   Ruby contacts Humana's Provider Relations team to notify them of Dr. Seem and his staff, and to recommend additional education and training, and to re-review contractual obligations with the office.
10. **Day 15: Grievance Option**
    Ruby lets Jane know about her option to file a grievance with the customer care team, but Jane declines since her issue has been resolved.

EXHIBIT A-4-b
MMA SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

MMA SRC# 20 – Vignette (Statewide):

The respondent shall review the below case vignette, which describes potential Florida Medicaid recipients. Note: The vignette included below is fictional.

> *Emma is four-years old. She currently lives in a pediatric nursing facility. At the age of two she was admitted to PICU following a respiratory arrest during an acute illness. A further complication of her condition led to her requiring a tracheostomy to support her breathing. Following an acute exacerbation of her condition, she is now unable to breathe without the support of her ventilator when she is tired, asleep, or unwell. She is fully ventilated overnight. Her difficulties are compounded by complex seizures. Emma's doctor says Emma needs to have nurses or health care assistants with her at all times to monitor her ventilation. Emma's most recent developmental screening indicates the presence of an intellectual disability. Emma's condition has stabilized, but her mother is concerned about agreeing to bring her home permanently. Her mother is the sole income for their home, which includes three older siblings and Emma's maternal grandmother. Emma's grandmother is retired, and her ability to help the family is limited by severe rheumatoid arthritis.*
>
> *To be discharged to her home, Emma's physician has ordered a custom wheelchair that must be individually fabricated and assembled. Her physician also ordered an electronic tablet to provide cognition exercises for Emma. The tablet has a cognition exercise application that reduces the likelihood for any seizure activity that may occur with other similar tablets. Florida Medicaid does not cover the tablet nor the wheelchair, which includes a part that will make it easier for Emma to hold the tablet. Her mother is unable to bear the costs for these special service items. Further orders for Emma's transition to home care are:*
>
> - *Continuous pulse oximetry monitoring.*
> - *Apnea monitor when she is not on the ventilator.*
> - *A backup generator for the ventilator if the power goes out in the home.*
>
> *Emma is a new enrollee. Prior to her enrollment, all services were provided through the Medicaid FFS delivery system.*

The respondent shall describe its approach to coordinating care for an enrollee with Emma's profile, including a detailed description and workflow demonstrating notable points in the system where the respondent's processes are implemented:

a. New Enrollee Identification;
b. Health Risk Assessment;
c. Care Coordination/Case Management;
d. Service Planning;
e. Discharge/Transition Planning;
f. Disease Management;
g. Utilization Management; and
h. Grievance and Appeals.

Where applicable, the respondent should include specific experiences the respondent has had in addressing these same needs in Florida or other states.

Response:

EMMA

Emma had an acute illness with respiratory arrest when she was two (2) years old, and has been living in a nursing facility for the last two years. She has a tracheostomy and is supported by the ventilator when she is sick, tired, or asleep. Emma's condition is compounded by complex seizures and her most recent diagnosis of an intellectual disability. Emma has three sisters at home with her mother and grandmother. While Emma is medically fragile, she is stable and can be discharged home with specific equipment and services. Emma is a new enrollee to the Humana plan.

DAY 1: HUMANA IS INTRODUCED TO EMMA

Notification of Emma's eligibility comes to Humana via the 834 enrollment file. Humana loads Emma's eligibility information and auto-creates a case in Humana's proprietary clinical workflow system, CareHub Clinical Guidance eXchange (CGX) [1]. CGX has business rules in place to initially stratify Emma's case as high-risk, due to her complex needs, so it is prioritized for assignment. Concurrently, this electronic transmission triggers Humana's welcome materials to be mailed within five days of notification.

Following the auto-case creation, Humana assigns Emma to "Amy," a Humana Registered Nurse (RN) with not only pediatric experience, but also intensive care experience. Amy manages Humana enrollees at Emma's skilled nursing facility (SNF). Amy, as with all Humana pediatric case managers, exceeds the minimal experience requirements and works within the identified case load ratio of no more than fifteen (15) enrollees to one (1) case manager for enrollees under age twenty-one (21) residing in a SNF.

In addition to Amy's specific pediatric experience, she was provided with Humana's eight (8) week orientation. This included training on Medicaid, Humana's systems, ethics, cultural competency, motivational interviewing, and other computer-based training. After initial orientation, Amy was mentored by senior case managers who advised her on topics like providing education on community resources and resolving enrollee issues in a timely manner. Amy learned strategies for identifying barriers to care, prioritizing immediate needs, and displaying empathy and emotional support. Amy has also been provided with ongoing training to keep her up to date and continuously learning. This has been offered to her through monthly half-day education, training, and oversight sessions to ensure she has access to the most up-to-date information and to her case manager mentors.

DAY 2: INITIAL OUTREACH AND VISIT TO EMMA

When Amy receives an electronic alert of Emma's assignment, she reviews Emma's demographic information and location and plans to visit the facility the following day. Since Amy manages Humana enrollees in this SNF, she has an established relationship with staff that work there. During her visit, Amy collaborates with admissions to verify enrollment, eligibility, and location. After reviewing Emma's facility medical record, Amy notes Emma's length in the facility, the illness that led to her requiring a tracheostomy, her ventilator support, her complex seizures, and her recent diagnosis with an intellectual disability. Since Emma was a resident of the facility prior to her Humana enrollment, Amy understands the requirement to note the physician's orders for what Emma will need to be discharged home when she initiates transition planning. Amy has a relationship with the facility's Social Worker (SW) who assists Amy in obtaining a copy of Emma's facility Plan Of Care (POC) and her pre-admission screening and resident review (PASRR) I and II. Amy also obtains the schedule for Emma's multidisciplinary team (MDT) meeting at the facility so she can participate.

Amy is fortunate to catch Emma's mother visiting this morning. Amy introduces herself and Humana's program to Emma's mother. She also confirms that Emma's mother, "Susan," received Humana's welcome materials and Emma's ID card. Amy explains program options to Susan and obtains a completed Freedom of Choice form. Susan shares with Amy that she would love to have Emma home with their family, but also knows Emma must have a customized wheelchair and an electronic tablet to be discharged home, and given that she provides the sole income for the household, she cannot afford them. Susan also knows these were previously not included in Emma's fee-for-service (FFS) Medicaid coverage and is hopeful that Humana will enable Emma's transition home.

Amy knows the importance of having educational materials, information, and resources to ensure Susan is prepared, not only to make informed decisions, but to be appropriately comfortable with Emma's care. Susan shares how she has become familiar with the ventilator and alarms, including Emma's suction equipment, and is appreciative of how much education and training the facility has provided. While Amy is mindful of the time it takes to review new material, complete a comprehensive assessment, and finalize a plan of care (POC), she lets Susan know they need to finalize it within five days. Susan agrees to continue and is appreciative of any help Humana can provide Emma.

Amy completes Emma's pediatric health risk assessment, including assessing for appropriate cognitive function, and reviews facility records and other released records to identify child health screenings in accordance with the Agency-approved periodicity schedule. Through collaboration with the SNF and Emma's identified MDT, Humana's finalized POC includes Emma's and Susan's goals for desired wellness, health, functional, and quality of life outcomes. Emma's MDT consists of Emma and Susan, Emma's facility physician and nurse, SW, therapists, and now Amy. Amy obtains and documents Emma's community primary care provider (PCP), and provides a copy of Emma's POC, to notify of Emma's upcoming transition plan and Susan's desire to have Emma re-established as a patient.

Amy assesses for community and other supportive services, and refers Emma for needed assistance. Amy collaborates with the facility SW to ensure Emma has been referred to the local Women, Infants, and Children (WIC) program, and educates Susan on the importance of getting the referral information after Emma's well-child visits. Emma's POC encourages well-child visits to help prevent further illness or exacerbations of chronic illness. As part of understanding what

Emma and Susan need without overwhelming them, Amy continues to build trust while completing required assessments, finalizing Emma's POC, and obtaining state-required documents. Emma requires a high level of family and mental health support in addition to twenty-four (24) hours a day, seven (7) days a week medical supervision, ongoing care from medical specialists, and customized equipment.

Emma needs an individualized, age-appropriate educational plan, taking into account her physical and intellectual disabilities. Amy wants to make sure Susan is aware of and has the opportunity to participate in available programs, like Florida's Voluntary Prekindergarten (VPK), to help build the foundation for educational success. Amy also wants to make sure Susan is aware of Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) to ensure Emma's screenings are up to date.

Amy provides Susan her contact information and encourages Susan to contact her with any questions or concerns.

DAY 8: AMY REVIEWS EMMA'S CASE WITH HUMANA'S MEDICAL DIRECTOR

Due to Emma's condition and the amount of support and durable medical equipment (DME) needed to safely transition her home, Amy reaches out to Humana's Medical Director after the initial meeting to review and discuss Emma's case. The Medical Director reviews what Amy has done with Emma so far and agrees with the need for specialized equipment to make Emma's transition home a success. The Medical Director shares that it is highly likely both the customized wheelchair and the electronic tablet with cognition exercises will be approved, meeting medical necessity, consistent with EPSDT, and appropriate in light of Emma's intellectual disability.

DAY 28 – 68: ONGOING CONTACT WITH EMMA WHILE IN THE SNF

Amy's clinical judgment and adherence to principles of patient-centered care dictate the frequency of contacts to help prepare Emma and Susan for discharge. Amy maintains monthly contact and continues to build on their relationship and work with the family towards Emma's transition home. Amy shares with Susan that she has discussed Emma with Humana's Medical Director and that he is optimistic about the approval of Emma's DME. Amy educates Susan on Humana's authorization process and how our Medical Director may request a peer-to-peer discussion to get a better understanding of the ordering physician's thoughts over other options. Amy also educates Susan on the grievance and appeals processes and her rights to a Medicaid Fair Hearing should she ever disagree with a decision made regarding Emma.

Amy continues her monthly visits with Emma and Susan while Emma is in the facility. Amy participates in the facility's MDT to provide input, gain insight, and to review the services and supports Emma needs as she prepares for transition. Amy updates Emma's individualized POC with input from the MDT. Amy also collaborates with Humana's transition team to update Emma's transition plan. Amy informs Susan of other Humana associates who will help with Emma's transition and tells her about other resources available to her, including home visits.

Social Workers and Field Case Managers (FCMs) specializing in community resources and supports are periodically introduced into the MDT meetings as they prepare for transition.

Amy works with the SNF to facilitate orders for Emma's DME. The orders for Emma's discharge include a customized wheelchair, an electronic tablet to provide cognition exercises, a continuous pulse oximeter, an apnea monitor, a backup generator (for the ventilator), and nurses or health care assistants twenty-four (24) hours a day, seven (7) days a week. After review of Emma's case, Humana's Medical Director does in fact request a peer-to-peer review with the ordering physician to discuss the appropriateness of the apnea monitor and a backup generator. Susan was prepared for this due to Amy's advanced education about its likelihood. With twenty-four (24) hours a day, seven (7) days a week private duty nursing (PDN) and a ventilator with alarms and pulse oximetry, Humana's Medical Director cites evidence and clinical practice guidelines that an apnea monitor is not medically necessary. The Medical Director also recommends a heart monitor and two portable ventilators (for safety and convenience), which could also be used in transport instead of a backup generator.

Following the peer review, Humana's Medical Director and Emma's ordering physician agree upon the equipment appropriate for Emma. This includes the customized wheelchair, the tablet with cognition exercises, a pulse oximeter, a heart monitor, two portable ventilators (each with a backup battery), a suction machine and disposable medical supplies for respiratory support. Private Duty Nursing was approved twenty-four (24) hours a day, seven (7) days a week to assure proper ongoing care, and emergency care, if needed.

DAY 58: MAKING SURE EMMA WILL BE SAFE IN A DISASTER OR EMERGENCY

Amy assists Susan with notifying the power company of Emma's disability status and dependency on a ventilator. This allows for Emma to be prioritized for evacuation and for power restoration after an outage. Amy registers Emma with Florida's special needs shelter to ensure there is a disaster plan for the family to follow in the event of an emergency. In addition to widespread disaster and emergency planning, Amy assists Susan in completing a personal emergency plan for individual or local outages. Susan now knows which hospital to request transportation to by ambulance, if Emma has an emergency and she needs to dial 9-1-1.

DAY 88 – 117: ONGOING CONTACT AND TRANSITION PLANNING WITH EMMA

Amy collaborates with the facility SW and ensures Susan's home has been evaluated and that recommended home modifications are addressed. Since Emma's wheelchair is customized to size, it is not necessary to widen the doors. However, Susan does need a wheelchair ramp. Humana's SW, who is also involved with Emma's MDT, works with Susan to identify resources and community supports, to include coordination with a contractor for ramp installation to accommodate Emma's wheelchair. In addition to the DME company providing a respiratory therapist for Emma, Humana sources in-home physical therapy (PT) and occupational therapy (OT) as recommended by Emma's PCP. Amy identifies providers and establishes a schedule for all ordered services prior to the transition.

In preparation for Emma's transition, Amy assists Susan in identifying in-network providers to be included on Emma's MDT. The team will include a pediatrician, pulmonologist, neurologist, ENT, cardiologist, gastroenterologist, and any other specialists she might need. Additionally Amy, Susan, and Emma's grandmother are included in these meetings. For pediatric specialists not listed on the Managed Medical Assistance Provider Network Standards Table, Amy reaches out to Humana's network team to ensure access to services for Emma by completing letters of agreement with a local specialist and neurologist within a reasonable distance from home, approximately fifteen (15) minutes travel time.

Amy informs Susan of Humana's mail order pharmacy for Emma's maintenance medications and assists in transferring her prescriptions, explaining the procedure for reorder and prescription changes. Amy encourages Susan to use Humana's One Medication Experience (OME), which is accessible on the computer or a mobile application. OME allows visibility to prescription or other (including over-the-counter) medications through claims data or as entered by anyone on Emma's care team (including Susan). Capturing Emma's medications in OME allows Emma's case managers, pharmacists, and Susan the ability to see one comprehensive list of medications. This group of individuals can also be alerted for any contraindications, duplication, or interactions. Emma's medication list can be accessed through CGX. This single point of record effectively establishes a highly valuable, single source of truth which can be utilized by Humana's clinical care team for reference in planning or coordination activities.

Amy also understands the need for counseling and support for Emma's family. Amy refers Susan to local education and support resources and groups for Susan, Emma's siblings, and Emma's grandmother. Counseling is also available to help Emma adjust to her home environment. Transition counseling is provided to teach Emma's siblings how to help Emma, what normal and appropriate interactions with her look like, what they should do to make sure she is safe, and how to help ensure Emma feels like a part of the family. Amy recommends and provides information on Red Cross CPR and first aid classes for Emma's whole family.

Amy informs Susan about Emma being a good candidate to attend a Florida Medicaid Prescribed Pediatric Extended Care (PPEC) center. A PPEC is designed to provide medical and therapeutic care to medically complex Medicaid enrollees younger than twenty-one (21) years in a non-residential setting. Florida's PPEC program is a fee-for-service program that is managed by a Medicaid Quality Improvement Organization (QIO). Humana collaborates with the QIO to ensure that the care rendered at the PPEC meets Emma's physiological, developmental, nutritional, and social needs while aligning with the care rendered at home. Susan agrees to allow Humana to apply for Emma to attend, with the understanding that Humana will pay for Emma's services and therapies at the PPEC. Amy collaborates with Susan, the PPEC, and the QIO to arrange safe transportation between home and PPEC, recognizing the need for a skilled nurse to manage her ventilator during transport.

DAY 118 – EMMA MEETS HER FIELD CASE MANAGER AND SOCIAL WORKER

Amy continues to meet with Emma and Susan at the facility until they are ready for transition. Amy is comfortable with Emma's transition plan and happy with the progress that has been made. Amy introduces Susan to Emma's field case manager (FCM) and social worker (SW), during a MDT meeting. The FCM visit is scheduled for post-transition in order to assess that

services are meeting their needs, how they are adjusting to being at home, and to answer any questions they may have.

Amy ensures Emma's community PCP is aware of Emma's transition and has a follow-up appointment scheduled, and assists Susan in arranging for non-emergent transportation, by ambulance, to her PCP appointment.

DAY 122: EMMA RECEIVES HER NEW WHEELCHAIR AND TABLET

Private duty nursing is scheduled to begin the day of transition. Emma receives her new customized wheelchair at the facility to allow her to practice and get comfortable with it. Emma adapts quickly to her wheelchair and her tablet. Emma is excited to be going home with her mother, her sisters, and her grandmother. Non-emergent ambulance transport is scheduled due to Emma's respiratory condition and Emma's private duty nurse will be waiting upon arrival. Several of Emma's follow-up appointments are scheduled and Amy also assists with scheduling non-emergent transportation for them by ambulance. Amy provides Susan with information and guidance, and reassures her that she can call her any time to help with appointments, transportation, or other needs that arise for Emma.

DAY 124: EMMA'S TRANSITION HOME

After four months and anxiously awaiting this big day, Emma comes home to be with her family. Emma does not remember living at home, having been at the SNF for more than two years. Emma immediately sees the balloons that her sisters and grandmother are holding as they are waiting out front. Emma's private duty nurse (PDN) and the respiratory therapist from the DME company are both there, ready to meet Emma and verify everything is working properly. While Susan was very familiar with all Emma's equipment at the SNF, the respiratory therapist educates Susan and Emma's grandmother on her new equipment. Emma's PDN listens and reinforces key points from their education and training as well. Amy calls to check on Emma and Susan and make sure everything is okay and she confirms the previously scheduled upcoming visit from Emma's FCM. Within ten days of discharge, Amy ensures the 2506 form is submitted to alert the State that Emma has been discharged from the nursing facility.

DAY 127: EMMA'S FCM VISIT

Emma's FCM visits her, completing Emma's assessment in her new environment and ensuring services are in place with no gaps in care. The FCM also updates her POC, and makes sure Emma and Susan are comfortable in their new environment with no issues or concerns.

DAY 150: FOSTERING AN ONGOING RELATIONSHIP WITH EMMA AND SUSAN

Amy maintains monthly contact with Susan, while Emma's FCM visits them to review Emma's POC quarterly, or more frequently if Emma has a change in condition or Susan requests a change in Emma's services. In addition to monthly contacts and quarterly visits, Emma's MDT

meets every six (6) months to provide a comprehensive review of the services and supports Emma needs, to authorize reimbursable services that are ordered, and to update the POC. Emma's MDT will meet more often, if needed, and is updated to include not only core members such as Emma, Susan and the Case Managers, but also other health care professionals involved in Emma's care, like her Private Duty Nurses, interagency or school staff, and any others Susan requests to participate. It is within these MDT meetings that Amy keeps Emma's Individualized Service Plan up to date and accurately reflecting Emma's services, supports and goals. Amy participates with interagency or school representatives, when Susan requests it, in order to update Emma's educational support plan or Individualized Educational Plan.

On a monthly basis, Amy reviews Emma's case with the Humana Medical Director. It is particularly exciting for Amy to review and share Emma's progress, since the Medical Director is familiar with Emma from when she was in the SNF. Our Medical Directors also participate in AHCA's monthly Enhanced Care Coordination meetings and can address aspects of Emma's care if needed during these gatherings.

Amy, with support from Emma's MDT, continues to educate Susan on Emma's illness, reportable signs and symptoms, and medication administration (to include side effects and interactions), appropriate use and functioning of DME, EPSDT, the importance of screenings and vaccinations at the appropriate time, and the importance of updating Emma's PCP and specialists when things change. Susan and Emma's grandmother are trained to know what to do should Emma have a seizure, how to perform safe suctioning techniques and how to care for Emma's tracheostomy. Amy and Emma's care team work with Emma's family to assist in Emma's care, if needed. Amy provides resources for covering EPSDT and ensures robust communication is open and ongoing between Emma's PDNs and her community PCP by including them in the MDT meetings and providing updated POCs.

Amy and Emma's MDT also continues to reinforce that it is important to encourage independence in Emma and that, despite their best intentions, the support of family members and medical professionals alone may not be sufficient to enable her to develop her capabilities. Counseling and education for the family members to gain and maintain a healthy and helpful perspective on this is recommended, and is communicated to be an integral part of Emma's care.

Humana's ongoing approach to case management helps Susan to make decisions about service options, identify personal goals, achieve or maintain Emma's highest level of self-sufficiency, and identify and invite others to participate in MDT meetings at times and locations of convenience. It also provides a method for Susan to request updates to the POC, as needed. If at any time Susan declines case management for Emma, Humana complies with all requirements, but continues monthly contact and continues to offer case management on an annual basis. All communications are documented in Emma's record in CGX.

Amy continues to make appropriate referrals and assists with scheduling for health care and non-emergent transportation services, by ambulance, including those identified through well-child visits and care coordination follow-up services. Amy also informs Susan how to access specialists without the need for a referral, as appropriate for Emma's condition and identified needs. Throughout the entire process, all assessments, forms, communications, and other interactions are documented and maintained within Emma's record in CGX.

LOOKING AHEAD: EMMA'S PATH FORWARD

In thinking towards the future, Emma's ability to attend school or receive home education needs to be considered. Emma may be eligible to attend full- or half-day kindergarten. Emma needs her nurse with her at all times and needs non-emergent transport on a daily basis. It is Susan's goal to have Emma attend their neighborhood school with her other children. Emma's MDT, with direction from Amy, will investigate options, including transport to the school of Susan's choice, as well as schools outside her district that may accept her into their program.

Emma has now been home for six months, and is attending a PPEC center. Emma has experienced very few days of not feeling well. She loves being home with her family, and while Susan was the most apprehensive about bringing Emma home, she is the first one to say how much she enjoys having all her girls under the same roof. Susan is now an advocate in one of her support groups for other families wanting to bring their child home. She often laughs and says the biggest problem they have is her girls taking Emma's tablet, wanting a turn to play those games. Emma is adjusting very well and with PDN in the home twenty-four (24) hours a day, seven (7) days a week, Susan says she worries much less than when Emma was in the facility. Amy continues to monitor Emma closely for any changes in condition, as she knows Emma is a medically fragile child who is dependent on timely services and regular medical care in order to maintain her health and happiness.

Footnotes

---

[1] CGX supports an integrated, comprehensive approach to medical, behavioral health, pharmacy, utilization, and care management. Full system integration allows our care team the capability to identify potential enrollees for programs, document gaps in care, automate care planning, monitor plan compliance, and identify opportunities for intervention. CGX is part of CareHub, Humana's enterprise solution for complete program integration for our provider community and enrollees.

Evaluation Criteria:

1. The adequacy of the respondent's approach in addressing the following:

- **a.** Identification processes for enrollees with complex health conditions or who are in need of care coordination;
- **b.** Description of the sources of data/information that would be utilized in the assessment process, including timeframes for completion;
- **c.** Application of the respondent's case management risk stratification protocol;
- **d.** Identification of service needs (covered and non-covered) and a description for service referral processes that the respondent has in place;
- **e.** Description of the interventions and strategies that would be used to facilitate compliance with the plan of care, including use of incentives, healthy behavior programs, etc.;
- **f.** Application of discharge and aftercare planning protocols that facilitate a successful transition;

g. Application of coordination protocols utilized with other insurers (when applicable), primary care providers, specialists, other services providers, and community partners particularly when referrals are needed for non-covered services;

h. Description of the assessment of provider capacity to meet the specific needs of enrollees;

i. Identification of strategies that promote enrollee self-management and treatment adherence;

j. Application of utilization management protocols (i.e., identification of the criteria that will be utilized, processes to ensure continuity of care, etc.); and

k. Application of strategies to integrate information about the enrollee across the plan and various subcontractors when the respondent has delegated functions.

2. The extent to which the respondents' workflows/narrative descriptions include timeframes for completion of each step in the care planning process.

3. The extent to which the respondent demonstrates innovative processes that it has in place to enhance communication among all service providers and subcontractors (for delegated functions).

4. The extent to which the respondent describes an approach that supports care delivery in the most appropriate and cost-effective setting and avoid unnecessary institutionalization (i.e., hospital or nursing facility care) or emergency department use.

5. The extent to which the respondent demonstrates experience in providing services to enrollees with complex medical needs and provide evidence of strategies utilized that resulted in improved health outcomes.

6. The extent to which the respondent demonstrates a holistic system of coordinated health care interventions designed to achieve cost savings through the organized and timely delivery of high quality services.

7. The extent to which the respondent describes innovative strategies to integrate information across all systems/processes (e.g., prior authorization data synching up with the claims system) into its workflows.

Score: This section is worth a maximum of 85 raw points with each of the above components being worth a maximum of 5 points each.

Attachment MMA-20-1: Emma's Visual Story Guide

We have provided this document as a visual guide to our response. The key timelines from our core response are duplicated here in a format intended to supplement and enable a comprehensive review of Humana's approach to Emma.

About Emma:

Emma is four (4) years old, a new MMA Medicaid enrollee to Humana's plan, with recent coverage through Medicaid FFS. She had an acute illness with respiratory arrest when she was two (2) years old and is currently living in a skilled nursing facility (SNF). She has a tracheostomy and is supported by the ventilator when she is sick, tired, or asleep. Emma's condition is compounded by complex seizures and her most recent diagnosis of an intellectual disability. Emma has three (3) sisters at home, with her mother and grandmother. While she is medically fragile, her condition has stabilized and she can be discharged home with specific equipment and services. Her mother is concerned about agreeing to bring her home permanently because of Emma's complex needs.

Key Components of Care

- **Stratification** prioritizes Emma for immediate assignment due to complex needs
- **Focus on transitioning Emma home** to live with her family, while including appropriate services and supports to effectively manage her needs there
- **Knowledgeable Case Manager (CM), Field Case Manager (FCM), respiratory therapist, Medical Director, and Private Duty Nurse (PDN)** to fully assess Emma's needs, help prepare her for discharge, and provide post-transition support, services, and ongoing education for Emma and her family
- **Multidisciplinary Team (MDT)** composed of in-network providers and specialists, as well as Emma's mother and grandmother, to help with transition and ongoing care
- **Focus on Emma's path forward** including education options (e.g. VPK), follow-up services (e.g. EPSDT), PPEC, and recreation to keep family's desires at the forefront of her plan of care (POC)
- **Customized Durable Medical Equipment (DME) authorized for Emma; transition home** – each with backup battery, suction machine and disposable medical supplies for respiratory support

Emma's Support System	**Susan** Mother	**Emma's Grandmother**	**Emma's siblings**	**Amy** Humana Pediatric CM	**SNF**	**Humana Medical Director**	**Humana FCM**	**Humana FSW**	**PDN**	**Community PCP and Specialists**

Emma's Timeline:

Pre-Humana: Health Status
Emma has been in a SNF for two (2) years after respiratory arrest. She also has complex seizures and has recently been diagnosed with an intellectual disability. She can be discharged home with specific supports, but her mother is reluctant.

Day 1: Case Management Assignment
Emma's case is automatically created and prioritized based on complex needs. She is assigned to Amy, a pediatric CM.

Day 2-3: Outreach
Amy visits the SNF. Once verified, she meets family, discusses POC, completes the health risk assessment (HRA), and begins discharge planning.

Day 8: Medical Director Case Review
Amy reviews Emma's case with Humana's Medical Director to approve specialized equipment for her transition.

Day 28-68: Ongoing Contact & DME Review
Amy maintains monthly contact and updates POC post-MDT meetings. Medical Director has peer-to-peer review with Emma's physician to agree upon appropriate DME.

Day 58: Emergency & Disaster Planning
Amy assists Susan in creating a personalized emergency and disaster plan for the family.

Day 88 – 117: Transition Planning
Amy meets with Field Social Worker (FSW) to evaluate home for transition; finds in-network providers for MDT and includes family; collaborates with Quality Improvement Organization for PPEC candidacy.

Day 118: Field CM & Social Worker
FCM & Social Worker (SW) attend MDT meeting; schedule PCP appointment and FCM visit for post-transition period.

Day 122 – 124: Emma's Transition Home
Emma's DME arrives and her transport is scheduled home. Appropriate medical professionals verify everything is working and educate Emma's family on equipment.

Day 127: FCM Visit
Humana's FCM visits Emma's home to assess new environment; ensures services are in place with no gaps in care.

Ongoing: Monitoring
Monthly contact, quarterly reviews of POC, and MDT meetings every 6 months, or sooner if needed. Emma attends PPEC.

G. STATUTORY REQUIREMENTS

MMA SRC #21 – Provider Network Agreements/Contracts Statewide Essential Providers (Statewide)

The respondent shall submit **Exhibit A-4-b-3**, Provider Network Agreements/Contracts Statewide Essential Providers, to demonstrate its progress with executing agreements or contracts with Statewide Essential Providers by submitting **Exhibit A-4-b-3**:

Response:

Humana has recruited Statewide Essential Providers into our network and maintains strong relationships with these providers to ensure access to care for our enrollees. These include:

- Tampa General Hospital
- Shands Teaching Hospital
- Shands-Jacksonville
- Florida State University College of Medicine
- Jacksonville Memorial Hospital—Jackson Health System
- Sacred Heart Hospital
- Winnie Palmer Hospital at Arnold Palmer Medical Center—Orlando Health
- All Children's Hospital
- NEO: All Children's Hospital
- OB: Bayfront Medical Center
- St. Mary's Medical Center
- Broward General Medical Center
- Lee Memorial Health System
- University of Florida College of Medicine
- University of Miami School of Medicine
- University of South Florida College of Medicine

In preparing our submission file, Humana reviewed our strategy to contract with additional faculty Statewide Essential Providers, including the University of Central Florida College of Medicine, Nova Southeastern University of Osteopathic Medicine, and Florida International University College of Medicine.

Through our experience and our conversations with these providers, they have not expressed interest in becoming contracted providers and instead, prefer to sign single case letters of agreements if services are required. These providers receive payment as per the Agency for Health Care Administration's (AHCA) mandatory fee schedule. Please refer to attached Exhibit A-4-b-3.

EXAMPLE OF ESSENTIAL PROVIDER PARTNERSHIP
Humana has maintained a contract agreement with the University of South Florida (USF) for our Medicare and commercial populations for more than a decade. In 2012, in support of Humana's Medicaid network development, we amended the contract to include services to Medicaid enrollees and now have approximately one thousand (1,000) Medicaid enrollees attributed to

USF. We share a mutually rewarding relationship in which our teams work closely together on all aspects of the contract and business operations, including Medicaid contract compliance, clinical programs and authorizations, claims reconciliation, and financial recovery. USF also serves on Humana's Bold Goal Health Advisory Board. Humana's Bold Goal is to make the Tampa Bay community 20% healthier by 2020 through community engagement and stakeholder partnerships.

Evaluation Criteria:

Percentage of agreements/contracts for each service provider type	Points
0.0%	0
1.0% - 25%	10
25.1%- 50%	20
50.1%- 75%	30
75.1% or greater	40

Score: This section is worth a maximum of 40 raw points based on the above point scale.

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

RESPONDENT NAME: Humana Medical Plan, Inc.

A. RESPONDENT BACKGROUND / EXPERIENCE

LTC SRC# 1 – Participant Direction of Services (Statewide):

The respondent shall describe its experience with participant direction of services (also referred to as self-directed or consumer-directed) by specifying the model(s) of participant direction used in the states in which the respondent currently operates and previously operated (e.g., agency with choice or fiscal employer agent). The respondent shall include a flowchart depicting how services are authorized and delivered through the participant direction programs referenced in the response. The description shall include:

- Whether the model(s) includes the use of employer authority, budget authority, or both;
- The target population (ABD, DD, general aging population, etc.);
- The number of participants in each participant direction program;
- The services provided through its participant direction programs;
- The monitoring approach used to prevent and detect waste and abuse, specifically over-utilization of services;
- The lessons learned from implementing participant direction programs; and
- The innovations it has deployed to enhance the delivery of services through the participant direction program.

Response:

Participant direction of services provides Long-term Care (LTC) enrollees with autonomy, independence, and greater oversight of their care. By allowing a trusted individual to be present in the home to provide these services, our enrollees experience a level of comfort and support that may not be otherwise attainable. Our enrollee-centric approach to the participant-directed option (PDO) uses streamlined processes to care planning, service authorization, and claims and encounter submissions. We incorporate our lessons learned and innovations from our PDO program in Florida as well as from our affiliate health plan experience in Illinois and Virginia in order to continually improve our approach to PDO service delivery. For example, we have embraced the use of electronic visit verification (EVV), which operates in conjunction with our case managers dedicated approach to PDO monitoring to prevent and address any potential fraud, waste, and abuse. In addition, we have introduced a PDO specialist position to serve as a designated liaison between our case managers, fiscal/employer agents (F/EAs), and enrollees and to provide expert management of PDO enrollment and oversight.

Today, approximately five percent (5%) of Humana's LTC enrollees in Florida – accounting for more than one thousand (1,000) enrollees – participate in our F/EA PDO model. This experience, combined with our broader organization's more than thirty (30) years of experience working with physically disabled and elderly individuals in Florida and nationwide, makes us an ideal partner to continue providing LTC enrollees in Florida with the support and direction they need to direct their own care.

==========

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1. The extent to which the respondent's description includes experience with managing a participant direction of service delivery model.
==========

Humana has implemented a participant direction of service model in Florida since SMMC LTC implementation in 2014. Additionally, our affiliate health plans in Illinois and Virginia have operated PDO models for Medicaid enrollees since 2013 and 2014, respectively. Across these plans, we serve more than one thousand seven hundred (1,700) individuals who have selected PDO for all or a portion of their service delivery. This breadth of experience has informed the continued growth and evolution of our PDO model, as described below.

==========
Whether the model(s) includes the use of employer authority, budget authority, etc.
==========

We employ a F/EA PDO model in Florida, with the enrollee maintaining employer authority. The F/EA is responsible for:

- Managing the budgetary aspects of PDO, including payroll and taxes
- Completing background checks
- Training enrollees who select the PDO model on employer responsibilities, including interviewing, hiring, and supervising

Our contracts with two F/EAs in Florida, GT Independence and Public Partnerships, LLC (PPL), provide our enrollees with their choice of F/EA, including the ability to transfer to another F/EA, if desired.

In addition to our local experience with the employer authority model in Florida, due to our shared services and national leadership model we are able to draw upon our affiliates' experience with the employer authority model in Illinois and Virginia. In both of these states, the enrollee is empowered to select, hire, and monitor their direct service worker (DSW). In Illinois, the state serves as the F/EA, rather than an outside vendor, and oversees the payment of DSWs.

==========
The target population (ABD, DD, general aging population), etc.
==========

Our Florida LTC enrollees who receive or are eligible for home- and community-based services (HCBS) are the target population for PDO. Among those enrollees who are eligible, we recognize that PDO is especially suited to enrollees who:

- May benefit from directing their own care and have the ability to select who provides their care
- Want to train and direct their workers about their individual needs and preferences
- Have trusted individuals in their lives who currently provide or can provide care

Our Case Managers (CMs) educate all enrollees with eligible PDO services on their care plan about PDO upon enrollment, and annually thereafter. Additionally, we educate those enrollees who are transitioning from institutional settings to the community about PDO. All of our CMs

have been extensively trained to provide specialized support and guidance for our enrollees electing PDO.

We are committed to ensuring that our enrollees who do choose PDO are prepared to hold employer authority, either by themselves or with the support of a representative. Using the PDO pre-screening tool and LTC self-assessment, the CM assesses the enrollee's preparedness for PDO. If the enrollee chooses to appoint a representative to manage their PDO responsibilities, or if the CM determines through the LTC self-assessment that a representative is needed to assist the enrollee in carrying out some or all of the PDO duties, the CM asks the enrollee to select a representative. This representative must pass a Level 2 Background Screening clearance and complete the PDO pre-screening tool and LTC self-assessment.

==========
The number of participants in each participant direction program.
==========

As of July 2017, we have one thousand fifty-two (1,052) PDO participants in Florida. Our affiliated health plans serve four hundred fifty-one (451) PDO participants in Virginia and two hundred four (204) PDO participants in Illinois.

==========
The services provided through participant direction programs.
==========

The following services are provided through Humana's PDO program in Florida:
- Adult companion care
- Attendant care
- Homemaker
- Personal care services
- Intermittent skilled nursing

ENROLLEE STORY

Dolores, a 78-year-old LTC enrollee in Florida, was residing in an assisted living facility after the death of her husband. While Dolores wanted to live at home, home health services were not adequate for her needs, and she did not have any immediate family in Florida to care for her. Her CM, Vicky, spoke with Dolores and her daughter about these challenges. Dolores and her daughter did not feel comfortable choosing someone they did not know to care for Dolores in the home. Vicky reviewed the PDO program with Dolores and her daughter, and explained that since the daughter was not the legal representative of her mother, she could be employed via PDO to provide services for her mother. While her daughter was initially hesitant (as she did not have any medical background) Vicky assured her that the PDO program would provide the proper training and support to enable her to effectively carry out these services. Dolores's daughter then agreed to move home from Ohio with her spouse and children to care for her mother through PDO. In the words of Vicky, "The PDO program was a blessing for them. Dolores' daughter was still employed, and, most important, Dolores was able to come back from the nursing home."

==========

2. The extent to which the respondent's flowchart provides a description that addresses the following components:
a) Care planning
b) Service authorization
c) Involvement of the Fiscal Employer Agent
d) Electronic Visit Verification
e) Claims processing
f) Claims payment
g) Encounter data submission

==========

A flowchart describing our PDO processes in Florida, from care planning through encounter data submission, can be found in Attachment LTC 1-1. Our PDO processes are informed by our experience operating a PDO program in Florida, and our affiliates' experience with PDO in Illinois and Virginia. The processes used by our affiliates in Illinois and Virginia are depicted in Attachment LTC 1-2 and LTC 1-3, respectively. Our processes are designed to ensure that enrollees receive PDO services in a timely, safe, and healthy manner. They have evolved over time to incorporate our lessons learned and innovations, including our introduction of the PDO specialist role and Electronic Visit Verification (EVV).

During the care planning process, we educate all of our enrollees with eligible services on their care plan about the participant directed option. After confirming the enrollee's preparedness for PDO (including the assignment of a representative if needed) we leverage the capabilities of our PDO specialist and F/EA to ensure timely service authorization and reduce gaps in care. Once PDO services begin and agency services are terminated, our F/EA, CMs, and PDO Specialists monitor for potential fraud, waste and abuse (FWA), supported by the capabilities of EVV. Our claims processing and payment procedures are optimized to provide the prompt and accurate resolution of claims and submission of encounter data.

==========

3. The extent to which lessons learned have been utilized to improve the respondent's participant direction of services delivery model.

==========

We evolve and adapt our PDO policies and procedures as we learn what is best for our enrollees. During the past four years of supporting LTC enrollees to use PDO in Florida, we have continually adapted our program to incorporate lessons learned. These include:

- A team approach to management of enrollees using PDO is crucial to improving care coordination and oversight. From our experience providing PDO, we have learned that strong communication between the CM, F/EA, and PDO Specialist enables us to quickly identify and resolve any issues. This lesson learned has led to the introduction of more regular meetings and communications between all those involved in the enrollee's PDO experience. From the initial face-to-face meeting between the CM, enrollee, and F/EA, to PDO Specialists' monthly Joint Operating Committee meetings with the F/EA, we rely on our working relationships between all parties to ensure that our enrollees use PDO in a safe, effective manner that meets their needs.

- Enrollees should be aware of when they need to contact the F/EA or CM. For example, if an enrollee is having difficulty with management of the DSW, the F/EA can help to resolve and diffuse the situation, including resolving any miscommunications, clarifying responsibilities, and terminating the DSW, if needed. We have incorporated this lesson learned into our PDO approach through a concerted effort to remind our enrollees how and when to contact us. Throughout their initial meeting and all subsequent communications, the F/EA and CM remind the enrollee of how they can reach the F/EA and CM with any questions or concerns. Additionally, we emphasize the situations in which doing so is imperative, including failure to provide services or any safety concerns. Our CM's monthly contact with the enrollee provides a recurring opportunity to check in on the enrollee's satisfaction with PDO and to resolve any issues.

- Enrollees with cognitive needs who are approved for PDO require more hands-on assistance and follow-up from the CM and F/EA. We have used this lesson learned to adjust the approach used by the F/EA and CM to support enrollees with cognitive needs and to ensure they understand their responsibilities as the employer. In addition to the face-to-face training on employer responsibilities provided by the F/EA upon the enrollee's initiation of PDO, the F/EA and CM continue to provide regular and ad hoc support to anticipate, prevent, and respond to communication difficulties or other issues these enrollees may encounter in PDO. Our screening tools are also designed to identify those enrollees with cognitive needs who may benefit from a representative to manage PDO on their behalf. A representative may also be assigned if the CM and/or F/EA feel that it is necessary, based on their observations of the enrollee's ability to manage employer responsibilities.

- The prevention and detection of fraud, waste, and abuse in PDO requires a specialized approach. We have learned that the nature of PDO services, including their provision in the enrollee's home by non-traditional workers, requires special monitoring to prevent and detect FWA. To strengthen our approach to FWA monitoring, we will introduce EVV to our PDO program in Florida. EVV is a powerful tool that reduces FWA through real-time confirmation of service delivery while improving the PDO experience for both the enrollee and DSW. For the enrollee, it ensures that they are receiving services in conjunction with their care plan, and provides an extra layer of accountability on which they can rely. For the DSW, it helps them to easily and conveniently track their hours and services provided.

- Enrollees may refuse provision of services by DSWs, as outlined in their care plan. For a number of reasons, enrollees may refuse the provision of services that are outlined in the care plan. This can create a frustrating experience for both the enrollee and DSW, in addition to having negative effects on the enrollee's health and well-being. We have incorporated this lesson learned into our DSW onboarding, during which we train the DSW on how to respond to this situation, including immediately informing the F/EA of any issues. When this problem is encountered, the CM and F/EA will work together with the enrollee and DSW to ensure that the enrollee receives services in accordance with their care plan.

==========

4. The extent to which the described experience demonstrates past innovations or planned innovations in the participant direction of services (e.g., mobile telephone applications, implementation of electronic access/training to complete required forms, and electronic visit verification).

==========

Our PDO experience across diverse markets has helped us to identify innovations that have improved quality and outcomes for our LTC enrollees in Florida and across our markets. As we continue to grow our experience with PDO, we will continue to identify innovations that can improve outcomes for our enrollees. Our past and planned innovations include:

- PDO Specialist: Because of the success that Humana has had with this role in both our Illinois and Florida programs, the PDO Specialist role will continue to play an essential part in our LTC program. PDO specialists are dedicated to working solely with PDO services, and serve as the key point of contact between the Humana CM, the F/EA, and the enrollee to resolve any PDO-related issues. Their expertise in PDO allows us to efficiently refer our enrollees who are interested in and suited for PDO to the F/EA, expediting the delivery of PDO services to our enrollees.

- Integrated PDO service back up plan: Humana has developed an innovative approach in which the back-up plan is fully integrated within the enrollee's plan of care within our Clinical Guidance eXchange (CGX) case management system. This integration allows any Humana staff member who has access to our CGX platform the ability to access an enrollee's plan of care and back-up plan. In the event that a PDO enrollee needs to call upon their back-up plan, the enrollee can receive real-time answers as to how to implement the back-up plan from their CM or Customer Care.

- Electronic transmission of service authorization: After learning that our vendors in Florida relied on fax to receive service authorizations, and having successfully usinusedg electronic transmission in our Virginia PDO program, Humana initiated the introduction of electronic transmission of service authorizations with both GT Independence and PPL as vendors in Florida. The electronic transmission of service authorizations has several benefits for our PDO program, including the elimination of data entry on the part of PPL and GT Independence for service authorizations, accompanied by a reduction in errors. In addition, this method of transmission delivers quicker and more efficient processing of service authorizations, allowing our enrollees to receive PDO services rapidly.

- Electronic visit verification: We have partnered with F/EAs who have experience in EVV administration, and will introduce this innovation to our LTC enrollees. EVV delivers improved accountability and oversight to our PDO program. By requiring the DSW to check-in and check-out with each visit via a mobile application, we increase accountability and responsibility for that individual. In addition, the use of EVV allows our CMs, PDO Specialists, and F/EAs to verify when hands-on services are being provided by a DSW who resides with the enrollee. We can confirm that services are being provided in the time slot preferred by the enrollee (e.g., in the morning or afternoon), that the DSW is staying with the enrollee for the appropriate amount of time, and that there is no overutilization or underutilization of services.

==========

5. The extent to which the respondent's monitoring approach ensures that fraud, waste, and abuse is monitored and prevented, including over utilization of services.

==========

We continually monitor utilization of PDO services with an eye towards detecting and preventing any FWA. Our associates receive specialized training on prevention and detection of FWA in

PDO services and our CMs, PDO Specialists, and F/EAs work collaboratively to monitor for FWA. This includes the prevention of overutilization through face-to-face visits, check-ins with the enrollee, and standard reviews of timesheets and EVV data.

Our process to prevent FWA begins with the development of the plan of care and the authorization of PDO services. Our PDO Specialist and CM authorize only services that are in line with the plan of care and are consistent with the services the enrollee had previously received through an agency. This reduces the likelihood of any unnecessary increase in the hours of service provided by the DSW. Through the CM's regular check-ins, the enrollee confirms that services are being completed in accordance with the care plan. Further, the CM monitors duplication of PDO and non-PDO services, missed services, and the enrollee's satisfaction with services.

Once the enrollee begins receiving PDO services, the CM seeks to schedule the ninety (90)-day face-to-face visits during the time in which the DSW should be present at the enrollee's residence. The CM looks for any indications that the enrollee may not be receiving adequate services, such as a messy home. Additionally, if there is a suspicion that the DSW may not be providing the authorized services, the CM may drop in visitat a time outside of the ninety (90)-day face-to-face visit (after obtaining permission from the enrollee to enter the home) to confirm that the DSW is present during scheduled hours.

The F/EA monitors the utilization of services based on the DSW's timesheets, data collected through EVV, and the enrollee's care plan to guard against overutilization or underutilization of services. Any issues detected by the F/EA are immediately relayed to the CM and PDO Specialist. Additionally, the PDO specialist holds a monthly Joint Operating Committee meeting with each F/EA to review their activities and reports, and to discuss any emerging issues that need to be resolved.

Any potential FWA is escalated to Adult Protective Services and Humana's Florida-dedicated Special Investigations Unit (SIU), which will undertake a comprehensive investigation of the allegations. The SIU is part of Humana's Claims Cost Management department. The SIU conducts pre- and post-payment reviews of claims paid to the F/EA, and uses data analytics through our Claims Adjudication system to identify potentially fraudulent activity that may warrant further investigation. SIU is responsible for investigating, resolving, and elevating any suspected fraudulent activities, including recovery or denial of payment for claims deemed to be fraudulent or inappropriately billed.

Evaluation Criteria:

1. The extent to which the respondent's description includes experience with managing a participant direction of service delivery model.

2. The extent to which the respondent's flowchart provides a description that addresses the following components:

(a) Care planning;
(b) Service authorization;
(c) Involvement of the Fiscal Employer Agent;

(d) Electronic Visit Verification;
(e) Claims processing;
(f) Claims payment; and
(g) Encounter data submission.

3. The extent to which lessons learned have been utilized to improve the respondent's participant direction of service delivery model.

4. The extent to which the described experience demonstrates past innovations or planned innovations in participant direction of services (e.g., mobile telephone applications, implementation of electronic access/training to complete required forms, and electronic visit verification).

5. The extent to which the respondent's monitoring approach ensures that fraud, waste and abuse is monitored and prevented, including over utilization of services.

Score: This section is worth a maximum of 55 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

LTC SRC# 2 – Performance Measures (Statewide):

a. The respondent shall describe its experience in measuring performance and achieving quality standards with populations similar to the target population for the long-term care (LTC) component of the SMMC program. Describe experience with and performance on measures of the following elements of LTC:

(1) Comprehensive LTC assessment and update (the percentage of LTC plan enrollees who have documentation of a comprehensive assessment within the appropriate time frame);

(2) Comprehensive LTC Care Plan (the percentage of LTC enrollees who have documentation of a Comprehensive LTC Care Plan within the appropriate time frame);

(3) Shared Care Plan (the percentage of LTC plan enrollees with a care plan for whom all or part of the care plan was transmitted to key LTC providers and the primary care provider within the appropriate time frame);

(4) Re-Assessment and Care Plan Update after Discharge (the percentage of discharges from inpatient facilities in the measurement year for LTC plan enrollees resulting in a re-assessment and care plan update within 30 days of discharge);

(5) Admission to an Institution from the Community among LTC enrollees (the percentage of LTC enrollee admissions to an institution (nursing facility or intermediate care facility for individuals with intellectual disabilities (ICF/IID)) from the community that result in a short-term or long-term stay during the measurement year);

(6) Successful Transition after Short-Term Institutional Stay among LTC enrollees (the percentage of LTC enrollee institutional admissions that result in successful discharge to the community (community residence for 30 or more days) within 100 days of admission); and

(7) Successful Transition after Long-Term Institutional Stay among LTC enrollees (the percentage of LTC enrollees who are long-term residents (101 days or more) of institutions who are successfully discharged to the community (community residence for 30 or more days)).

b. The respondent shall describe any instances of failure to meet Contract-required quality standards for these types of measures, actions taken to improve performance, and how improvement was measured. (See Section 409.966(3)(a)2., Florida Statutes)

c. The respondent shall describe its experience with and performance on other LTC performance measures, any instances of failure to meet Contract-required quality standards for these measures, actions taken to improve performance, and how improvement was measured.

d. The respondent shall describe the data sources used for collecting and reporting LTC performance measures.

e. The respondent shall describe how the respondent has obtained data needed to track measures related to care plan updates after hospital admissions and discharges, and emergency department visits.

Response:

Humana has developed our Long-term Care (LTC) Quality Improvement Plan (QI Plan) utilizing our experience of more than fifteen (15) years managing LTC services in Florida. Our mission is to provide comprehensive, effective, cost-efficient healthcare and support services through a community-based program tailored to the individual.

The purpose of Humana's Long-term Care's Quality Improvement Program is to monitor, evaluate, and facilitate improvement in the quality of healthcare services provided to Humana enrollees receiving LTC services enrolled in our Comprehensive Plan. Our program is based on the development and implementation of person-centered care plans that promote enrollees' ability to remain in a community setting as long as their needs can be safely met. We evaluate the success of our program through continuous monitoring of performance measures. We track and analyze Healthcare Effectiveness Data and Information Set (HEDIS), Agency-defined, and other LTC-related performance measures to ensure we are caring for our enrollees in the most appropriate setting, and while delivering most appropriate services. We utilize a team approach across departments (such as, Quality, Utilization Management and Case Management) to ensure high quality, appropriate services are geared to maintaining and improving the enrollees' independence. Our integrated case management platform, Care Guidance eXchange, (CGX), allows our case managers to have an integrated view of medical, behavioral, and LTC for our enrollees. Our ability to assess our enrollees' entire spectrum of care allows us to better manage and monitor the type and quantity of services we should provide. Our approach to quality leads to improved outcomes. In 2017, seventy-six percent (76%) of our enrollees indicated that their quality of life has improved as a result.

==========

a. The respondent shall describe its experience in measuring performance and achieving quality standards with populations similar to the target population for the long-term care (LTC) component of the SMMC program. Describe experience with and performance on measures of the following elements of LTC:

(1) Comprehensive LTC assessment and update (the percentage of LTC plan enrollees who have documentation of a comprehensive assessment within the appropriate time frame);

(2) Comprehensive LTC Care Plan (the percentage of LTC enrollees who have documentation of a Comprehensive LTC Care Plan within the appropriate time frame);

(3) Shared Care Plan (the percentage of LTC plan enrollees with a care plan for whom all or part of the care plan was transmitted to key LTC providers and the primary care provider within the appropriate time frame);

(4) Re-Assessment and Care Plan Update after Discharge (the percentage of discharges from inpatient facilities in the measurement year for LTC plan enrollees resulting in a re-assessment and care plan update within 30 days of discharge);

(5) Admission to an Institution from the Community among LTC enrollees (the percentage of LTC enrollee admissions to an institution (nursing facility or intermediate care facility for

individuals with intellectual disabilities (ICF/IID)) from the community that result in a short-term or long-term stay during the measurement year);

(6) Successful Transition after Short-Term Institutional Stay among LTC enrollees (the percentage of LTC enrollee institutional admissions that result in successful discharge to the community (community residence for 30 or more days) within 100 days of admission); and

(7) Successful Transition after Long-Term Institutional Stay among LTC enrollees (the percentage of LTC enrollees who are long-term residents (101 days or more) of institutions who are successfully discharged to the community (community residence for 30 or more days)).
==========

EXPERIENCE ACHIEVING QUALITY STANDARDS WITH SIMILAR TARGET POPULATIONS

Humana has a long history of serving elderly and high needs populations, and performance monitoring is integral to measuring the effectiveness of our programs. As a previous Nursing Home Diversion Program health plan from 2007 to 2014, and now a statewide LTC plan, Humana has more than a decade of experience in creating opportunities to achieve positive healthcare outcomes and monitoring enrollees' progress in achieving those outcomes. Humana currently serves more than twenty thousand (20,000) of Florida's most vulnerable individuals through the LTC program. We serve similar populations in Virginia and Illinois Duals Demonstration programs, where we provide dual eligible enrollees with medical, behavioral, and LTC benefits. Through our Illinois Integrated Care Program (ICP), we provide medical, behavioral, and LTC benefits to non-dual Medicaid enrollees.

Additionally, Humana has long-standing experience serving Florida enrollees in Medicare Advantage (MA) and Special Needs Plans (SNP). Both populations have many similarities with Florida LTC enrollees. Nationally, as of April 2017, Humana's MA membership was approximately three point two million (3.2M) enrollees throughout all fifty (50) states and Puerto Rico. Of those, more than one hundred thousand (100,000) enrollees were enrolled in SNPs that serve dual eligible populations. The information below illustrates our LTC programs, along with the number of enrollees and years active for each program, and the program summary. For each area that follows, we have laid out our response with our Florida experience followed by our similar experience managed through our affiliate organizations under our mutuual parent organization, Humana Inc. Our shared services and national leadership model enables us to apply models, learnings, and best practices from these programs directly to the benefit of our Florida SMMC enrollees.

- Florida Long Term Care
-- 21,239 enrollees
-- 2014 – present
-- Medicaid LTC

- Virginia Duals Demonstration
-- 8,621 enrollees
-- 2014 – present
-- Duals – CMS Financial Alignment Demo (medical, behavioral, and LTC benefits)

- Illinois Duals Demonstration
-- 6,355 enrollees
-- 2014 – present
-- Duals – CMS Financial Alignment Demo (medical, behavioral, and LTC benefits)

- Illinois Integrated Care Program (ICP)
-- 5,626 enrollees
-- 2014 – present
-- Medicaid LTC (non-duals only)

In accordance with the Centers for Medicare and Medicaid Services' (CMS) and the National Committee for Quality Assurance's (NCQA) proposed strategy for performance measurements focusing on vulnerable populations, Humana has focused on monitoring, evaluating, and improving quality performance in several areas. Many of these requirements are highly relevant to the proposed ITN, and include:

- Ongoing evaluation of Quality Improvement (QI) Program structure and processes to meet contract requirements

- Annual assessment of HEDIS measures, tied to national benchmarks

- Annual Enrollee Satisfaction Survey

FLORIDA EXPERIENCE MONITORING AND MEASURING MEASURES IN THIS SRC
Humana currently monitors all seven (7) specific measures listed in this SRC. Below is our experience with each of these measures, as well as our outcomes.

==========
(1) Comprehensive LTC assessment and update (the percentage of LTC plan enrollees who have documentation of a comprehensive assessment within the appropriate time frame)
==========

We currently monitor this measure in our Florida Medicaid program through the HEDIS measure – Required Record Documentation (RRD)-701B Assessment. Below is our rate for measurement year (MY) 2016.
-- RRD – 701B Assessment 2016 rate = 90.24% (Benchmark = 90.0%)

==========
(2) Comprehensive LTC Care Plan (the percentage of LTC enrollees who have documentation of a Comprehensive LTC Care Plan within the appropriate time frame)
==========

We monitor a similar, stricter measure in our Florida Medicaid program through the HEDIS measure – RRD-Care Plan-Enrollee Participation. Below is our rate for MY 2016.
-- RRD – Care Plan-Enrollee Participation = 95.00% (Benchmark = 90.0%)

==========

(3) Shared Care Plan (the percentage of LTC plan enrollees with a care plan for whom all or part of the care plan was transmitted to key LTC providers and the primary care provider within the appropriate time frame)
==========

We monitor the HEDIS measure – RRD-Care Plan-PCP Notification. Below is our rate for MY 2016.
-- RRD – Care Plan-PCP Notification = 63.57% (Benchmark = 90.0%)

==========
(4) Re-Assessment and Care Plan Update after Discharge (the percentage of discharges from inpatient facilities in the measurement year for LTC plan enrollees resulting in a re-assessment and care plan update within 30 days of discharge);
==========

We monitor and track this measure in our Florida LTC operations. For measurement year 2016, fifty-seven-point seven three percent (57.73%) of Humana enrollees discharged from inpatient facilities resulted in a re-assessment and care plan update within thirty (30) days of discharge.

==========
(5) Admission to an Institution from the Community among LTC enrollees (the percentage of LTC enrollee admissions to an institution (nursing facility or intermediate care facility for individuals with intellectual disabilities (ICF/IID)) from the community that result in a short-term or long-term stay during the measurement year);
==========

We monitor and track this measure in our Florida LTC operations. For measurement year 2016, seventeen-point four five percent (17.45%) of LTC enrollee admissions to an institution (nursing facility or intermediate care facility for individuals with intellectual disabilities (ICF/IID)) from the community resulted from a short-term stay, and eighty-two point five five percent (82.55%) resulted from a long-term stay.

Overall in 2016, there were twelve thousand and fifteen (12,015) enrollees who were receiving home and community-based services (HCBS). There were two hundred and twelve (212) transitions from the community to an institution meaning, more than ninety-eight percent (98%) of our enrollees receiving HCBS services remained in the community.

==========
(6) Successful Transition after Short-Term Institutional Stay among LTC enrollees (the percentage of LTC enrollee institutional admissions that result in successful discharge to the community (community residence for 30 or more days) within 100 days of admission)
==========

We monitor this measure in our Florida LTC operations. For measurement year 2016, Humana successfully transitioned sixty-two-point four eight percent (62.48%) of our enrollees who had a short-term institutional stay (one hundred (100) days or less) back into the community for thirty (30) days or longer.

==========

(7) Successful Transition after Long-Term Institutional Stay among LTC enrollees (the percentage of LTC enrollees who are long-term residents (101 days or more) of institutions who are successfully discharged to the community (community residence for 30 or more days)).
==========

We monitor and track this measure in our Florida LTC operations. For measurement year 2016, Humana successfully transitioned thirty-seven-point five two percent (37.52%) of our enrollees who had a long-term (one hundred (100) days or more) institutional stay back into the community for thirty (30) days or longer.

EXPERIENCE MONITORING SIMILAR MEASURES TO THOSE IN THIS SRC

In addition to our Florida experience, Humana has broader experience with LTC measures through our plans in other states. Since 2014, Humana has been providing medical, behavioral health, and long-term care services to Illinois dual eligible enrollees through our Illinois Duals Demonstration. Since 2014, we have also operated a Duals Demonstration program covering the same services in Virginia. Since 2014, Humana has been providing LTC, behavioral, and medical benefits to Medicaid eligible enrollees in our Illinois Integrated Care Program (ICP). In these programs, we monitor and track transitions from facilities into the community, as well as enrollee success in the community.

In these programs, we monitor and assess the following LTC measures:

- Enrollee movement to or maintenance in the community
- Enrollees moving from nursing facility to community
- Enrollees moving from community to nursing facility

We also track measures related to plan of care completion, case manager engagement, transitions between levels of care, and between service settings, to ensure our enrollees are receiving the right care, in the right place, at the right time. While we are not contractually required to report on measures that specifically align with the measures listed in a. 1-7 above, we do monitor and analyze outcomes related to overall coordination of care for these enrollees. The components of this coordination of care are similar to the measures a. 1-7 in this SRC: completion of a care plan, ensuring primary care physicians (PCPs) and facilities have access to the care plan, and striving to successfully transition enrollees back into the community from facilities.

==========
b. The respondent shall describe any instances of failure to meet Contract-required quality standards for these types of measures, actions taken to improve performance, and how improvement was measured. (See Section 409.966(3)(a)2., Florida Statutes)
==========

HUMANA'S APPROACH TO IMPROVING QUALITY

Humana utilizes a total quality management ("TQM") approach to QM. All employees are encouraged to identify areas and strategies for improvement and submit their suggestions to the

QIC. We employ the nationally recognized, standardized four-step management method of plan-do-study-act (PDSA) as the guiding philosophy for Quality Management.

Detailed steps include, but are not limited to:
- Monitor for system-wide issues
- Identify opportunities for improvement
- Determine the root cause
- Explore alternatives and develop a plan of action
- Activate the plan, measure the results, evaluate effectiveness of actions, and modify the approach as needed

The Humana QI Program is a framework for the organized, ongoing and systematic measurement, assessment and performance improvement activities. Humana utilizes the following as part of its TQM process:
- A quick fix process is used for problems that do not need a comprehensive approach to problem solving and solution implementation

- Quality assessment activities, such as enrollee and associate satisfaction surveys, utilization management, and enrollee record review, help ensure that standards are met and maintained, and identify areas for review by quality improvement committee

- Performance measure data reports specific to the measures chosen to be evaluated

- Review of utilization management data

- Review of the Florida Agency for Healthcare Administration reports

The QIC reviews suggestions, as well as its own data, to determine areas for potential improvement. Upon selection of an area for potential improvement, a top-level strategy is determined and implementation is directed to the Director of Quality Management, or appropriate Department manager as determined by the QIC in conjunction with the Medicaid LTC Market Clinical Director and the Medicaid LTC Market Operations Director.

The Quality Manager oversees the quality management team to ensure that all quality initiatives are monitored and corrective action plans are implemented and followed up on in a timely manner. Upon direction from the QIC, the Quality Manager develops an implementation strategy utilizing the PDSA method, in conjunction with the appropriate departmental associates. At a minimum, at each quarterly QIC meeting, the Manager reports on the status of the improvement project. The QIC reviews and makes modifications based on these reports.

Findings that have a significant negative effect on enrollees' quality of care are reported to the Florida Medicaid LTC Clinical Director and the Florida Medicaid LTC Operations Director by the Quality Management team and the QIC members immediately following the discovery.

SPECIFIC MEASURES FAILING TO MEET THE BENCHMARK
In 2016, Humana only failed to meet quality standards for one of the measures similar to those listed in a. 1-7 of this SRC, Plan of Care – PCP Notification. As mentioned above, our CY 2016 rate for this measure was sixty-three-point five seven percent (63.57%), falling below the ninety percent (90%) benchmark set by AHCA. Following the PDSA cycle, we identified this measure

as an area for improvement, and determined increased support and education for our case managers would improve our performance. Humana has undertaken the following initiatives in 2017 to improve our rate on this measure:

- Clinical and Authorization Data Analyst (ADA) teams track Plan of Care (POC) completion daily, so the POC can be sent to the PCP timely

- System enhancement to CGX to add POC to PCP automation implemented in September 2017

- Daily team meetings and weekly one-on-one meetings by all direct reports to review compliance and identify any gaps

- Mandatory adherence to using available reports and tools in our care management software, CGX

- Continuous education and reinforcement for the clinical associates on end to end process of the FL LTC program and the contract requirements;

- Increasing administrative support to Case Managers

In calendar year 2017, we have tracked compliance monthly as a part of our improvement plan. As of October 2017, our rate for Plan of Care – PCP Notification is twenty-two percent (22%) higher than the rate at this time last year, indicating that our interventions over the course of 2017 have increased performance in this measure.

==========

c. The respondent shall describe its experience with and performance on other LTC performance measures, any instances of failure to meet Contract-required quality standards for these measures, actions taken to improve performance, and how improvement was measured.

==========

EXPERIENCE ACHIEVING QUALITY STANDARDS FOR OTHER LTC MEASURES

Humana has strong experience measuring, monitoring and analyzing other LTC performance measures, as well as medical HEDIS measures associated with MMA-eligible enrollees. We have experience in producing thorough, audited results that exceed State and federal requirements.

FLORIDA LONG-TERM CARE PROGRAM

In our current Florida LTC program, Humana tracks the following additional measures for all our LTC enrollees on a monthly basis and compares them to national benchmarks. Our 2016 results for these measures (compared to the benchmarks) are included below.

- Advanced Care Planning – Total = 69.52% (Benchmark = 31.6%)
- Medication Review – Total = 98.84% (Benchmark = 80.9%)
- Functional Status Assessment – Total = 93.89% (Benchmark = 61.8%)
- Call Answer Timeliness = 97.75% (Benchmark = 81.50%)

- Required Record Documentation – Freedom of Choice Form = 90.71% (Benchmark = 90.0%)
- Face-to-Face Encounters (F2F) = 93.95% (Benchmark = 90.0%)
- Case Manager Training (CMT) = 83.50% (Benchmark = 90.0%)
- Timeliness of Service (TOS) = 93.27% (Benchmark = 90.0%)

For 2016, Humana only performed below the benchmark for one measure: Case Manager Training. To improve our performance on this measure, we have undertaken the following initiative in 2017:

- A Case Manager trainer will ensure all Case Managers complete the required training modules at Regional trainings held throughout the year.

As of October 2017, we have conducted Case Manager Trainings in ten (10) out of the eleven (11) Regions in Florida; one hundred and twenty-two (122) Case Managers have been trained year-to-date. As a part of our year-end HEDIS analysis, we will analyze our performance on this measure to determine if our interventions yielded improved results.

EXPERIENCE IN OTHER PROGRAMS ACHIEVING QUALITY STANDARDS FOR OTHER LTC MEASURES

Dual Demonstration Programs
The Humana Virginia and Illinois duals populations are very similar to those of the Florida Comprehensive Plan enrollee population we currently manage. We provide medical, behavioral health, and LTC services, and we all monitor a broad range of performance measures. We currently monitor and track fifty (50) performance measures in our Virginia and Illinois dual demonstration programs, four (4) of which are LTC measures. These measures are:

VA Dual Demonstration
- Care of Older Adults (COA) – Advance Care Planning = 19.74%
- Care of Older Adults (COA) – Functional Status = 73.89%
- Care of Older Adults (COA) – Medication Error = 38.94%
- Care of Older Adults (COA) – Pain Assessment = 76.87%

IL Dual Demonstration
- Care of Older Adults (COA) – Advance Care Planning = 50.12%
- Care of Older Adults (COA) – Functional Status = 82.97%
- Care of Older Adults (COA) – Medication Error = 80.29%
- Care of Older Adults (COA) – Pain Assessment = 90.02%

We track and monitor these measures, and report performance through the Corporate Quality Improvement Committee (CQIC). We also conduct an annual Quality Improvement Evaluation (QIE) where we:

- Analyze our performance against benchmarks
- Identify barriers to performance improvement
- Identify interventions that will overcome barriers and improve outcomes

==========

d. The respondent shall describe the data sources used for collecting and reporting LTC performance measures.

==========

DATA SOURCES USED TO COLLECT AND REPORT LTC PERFORMANCE MEASURES

To monitor progress towards achieving the healthcare outcomes listed above, Humana collects both qualitative and quantitative data through a variety of methods. Examples of data collection methods include:

- Data collected on health service utilization, including frequency of selected services, from the Florida Event Notification System (ENS). Utilization data includes, but is not limited to: admissions, readmissions, emergency department admissions.

- Integrated care delivery platform, CGX
-- Allows for case manager to case manager communication and data sharingacross medical and LTC services, providing a comprehensive view of our enrollees
-- Seamless communication and data sharing between Care Managers
-- Case managers can access acute and LTC service information via CGX, including care plans and service history

- Submitted 701B captures – Assessment and Care Plan

- Data collected from plans of care and chart review on continuity and coordination between settings of care, and in transitions of care from one provider to another.

- A quarterly review on the long-term care records of enrollees who have received services during the previous quarter. These audits include appropriateness and timeliness of enrollee assessments and contacts, comprehensiveness of and compliance with the plan of care, and appropriate and timely provision of services.

- A quarterly QI Work Plan Status Report submitted to the Humana Internal Board of Directors through the CQIC. The QI Program Status Report highlights accomplishments, including achievements on healthcare outcomes, revisions to the Work Plan, and regulatory updates to further improve performance.

- Data collected on the case management program to ensure that the program provides effective education, support, and coordination of care to enrollees.

- Provider “process” and “rate-based” measures, tracked through a Reporting Portal that creates quarterly reports for review and analysis. If a provider’s trends appear outside of the average or fail to meet measure targets, further analysis and action may be taken to help the provider achieve measure targets.

- Data collected from enrollee grievances and appeals, complaint logs from provider representatives, clinical complaints, and mandatory incident reports, which help deliver a more holistic summary of healthcare outcomes.

We also monitor our progress by conducting peer audits, supervisory audits, quality assurance audits, utilization management audits, and implementing and evaluating performance improvement plans. Many of these audits are conducted by individuals reviewing and assessing individual enrollee records utilizing auditing tools developed by our quality improvement department. Other audits are conducted utilizing quantitative data, and we utilize claims and encounter data or other data elements in our system such as diagnosis, activities of daily living (ADL) function, medications, and others. Enrollee satisfaction is also used to measure progress towards positive outcomes.

ENROLLEE SATISFACTION SURVEYS
We use enrollee satisfaction surveys to inform how we are performing against certain LTC measures. Humana partners with DSS Research, an NCQA-certified survey vendor, to develop Consumer Assessment of Healthcare Providers and Systems (CAHPS) custom questions, provide results for our Florida Comprehensive Plan, and conduct extensive analysis of the results.

Humana collects and analyzes data on these CAHPS scores and produces a report that includes the goal, time-period, previous and current results by plan type, barrier analysis, specific plans that are market outliers, and a plan of action to help each plan reach the goal by a set timeframe. Based on these analyses, a list of opportunities and barriers, improvements and changes, and conclusions and recommendations are made to improve CAHPS performance. Analysis of our 2017 CAHPS results follows.

The majority of enrollees rated the plan highly and have seen improvements in their health and quality of life.

- 77% rated the plan an 8, 9, or 10 (on a scale of 0 to 10, in which 0 is the worst).

- Since enrolling:
-- 59% indicated that their overall health has improved.
-- 76% indicated that their quality of life has improved.

Ratings of the Long-term Care services and case managers are driving the overall plan rating.
- Scores on 2 of the 3 most important measures increased significantly:
-- The overall rating of the case manager – 80% in 2017 versus 72% in 2016 (8, 9, or 10 on a 0 to 10 scale).
-- The overall rating of long-term care services – 80% in 2017 versus 71% in 2016 (8, 9, or 10 on a 0 to 10 scale).

- Performance on other measures is stable:
-- The timeliness of long-term care services is the most important measure and received a score of 89%.
-- The ease of contacting the case manager and the helpfulness of customer service (both at 78%).
-- More than 9 of 10 indicated that the customer service associates were courteous and respectful.

==========

e. The respondent shall describe how the respondent has obtained data needed to track measures related to care plan updates after hospital admissions and discharges, and emergency department visits.
==========

As a Comprehensive Plan, we have an integrated view of our enrollees, allowing us to easily obtain data needed to track measures related to care plan updates after hospital admissions and discharges and emergency department visits. As mentioned above, our integrated care delivery platform, CGX, allows for case manager to case manager communication across medical and LTC services, providing a comprehensive view of our enrollees. There is seamless communication between case managers, providing a repository for up-to-date data on admissions and discharges. Case managers access acute and LTC service information via CGX, including care plans, care plan updates and service history. We can document all care plan updates following an admission and discharge via CGX.

Data collected on health service utilization from the Florida ENS helps us track and monitor care plan updates following an emergency department visit. We receive real time notification on emergency department visits through the ENS. Once notified, our case managers follow up with the enrollee, assess any changes in services necessary and update the care plan accordingly.

For those enrollees who are particularly complex, we convene MDTs to discuss care plans and transitions after an admission. The MDTs review complex discharges for comprehensive enrollees to ensure the enrollees obtain necessary services. Care plan updates are discussed during MDT meetings. We can extract data from the MDT meeting minutes, as well as the associated care plan updates to monitor and track our performance related to post-discharge and post-emergency department visit care planning.

We also obtain data through chart reviews on continuity and coordination between settings of care, and in transitions of care from one provider to another.

Evaluation Criteria:

1. The extent of experience (e.g., number of Contracts, enrollees or years) in achieving quality standards with similar target populations, for measures related to the elements of LTC identified as number a.(1) through a.(7).

2. The extent of experience (e.g., number of Contracts, enrollees, or years) in achieving quality standards with similar target populations for other LTC performance measures.

3. The extent to which the described experience demonstrates the ability to effectively measure quality improvement.

4. The extent to which the described experience demonstrates the ability to improve quality in a meaningful way.

5. The extent to which the respondent met all quality measures or successfully remediated all failures.

6. The extent to which the respondent has used multiple data sources and has obtained data needed to collect and report on LTC performance measures, including those that require information related to care plan updates after hospital admissions and discharges, and emergency department visits.

Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

B. AGENCY GOALS

LTC SRC# 3 – Transitions of Care (Statewide):

The respondent shall describe how it will address transition and discharge planning for an enrollee going from a hospital or nursing facility rehabilitation setting and returning to a community setting. The respondent should identify specific strategies for ensuring that transition and discharge planning incorporates assessment of appropriate supports in the home, provision of supplies and home care/nursing services. The respondent shall include an example of an effective transition plan with appropriate timeframes for each step of the process.

Response:

Individuals are most vulnerable when transitioning between care settings and levels of care. A For individuals receiving Home and Community Based Services (HCBS) who are hospitalized, the transition back to the community can be complicated. For these enrollees, the reinstatement of HCBS (in addition to traditional transition needs) must be addressed in order for the transition back to the community to be safe and sustainable. We have worked to identify communication challenges that can occur during the transition process and to develop practices aimed at addressing them.

Together, our utilization management and care management teams serve as the link that connects the various care settings and levels of care through which an enrollee moves. They facilitate the coordination of information and transfer of knowledge necessary to ensure a safe and effective transition by sharing discharge plans, plans of care, medication lists, and other clinical reports. Processes are integrated within our Clinical Guidance eXchange (CGX) documentation platform [1] to ensure continuous information sharing among all involved parties.

For transitions from inpatient acute and long-term care facilities to the community, our transitions are based on the Dr. Eric Coleman Care Transitions Model, which is grounded on improving quality and safety during transitions. At the foundation of our transition processes are the following five (5) pillars of care:

- Coordinated and proactive discharge planning, including communication among all stakeholders, referral to needed post-discharge services and collaboration with community based agencies

- Timely and appropriate primary and specialty care follow-up post discharge

- Medication management and medication reconciliation between and during transitions

- Establishment of the medical home with a focus on prevention and proactive health management in the outpatient setting

- Enrollee and caregiver empowerment through heightened awareness and knowledge of their health condition, including exacerbation triggers

We have created transition processes that meet the needs of our enrollees and their families during these critical times when they are most likely to seek education and help with care coordination. Our transition planning actions start as soon as we are made aware that an enrollee is hospitalized and continue throughout the admission as well as post-discharge. Our transition planning activities promote high quality, cost-effective outcomes as evidenced by care occurring in the most appropriate setting, at the most appropriate time, with timely follow-up with treating physicians, and with prevention of emergency services or readmission.

Associates involved in transition of care between service settings include the following, who together guide enrollees and their caregivers from admission to discharge to recovery:

- Long-term Care (LTC) Case Manager (CM), who serves as the enrollee's primary CM and leads the transition team

- Utilization Management (UM) Nurses, who lead UM functions during all stages of the transition planning, from inpatient to permanent residence

- RN Specialists, who act in a consultative role for the medical components of the enrollee's care as needed

- Behavioral or other Disease Management CMs, as applicable

- Transition Coordinator (TC), who serves as our housing specialist and facilitates community placements as needed for enrollees at risk of custodial placement

In the remainder of this response, these associates are sometimes referred to collectively as the "transition team." Humana's Medical Directors work with the team to ensure approvals between levels of care and to communicate with physicians in the community and inpatient settings.

Each transition team (as well as the enrollee's ongoing care team) is regionally based as each member of the team is assigned to a specific region or small regional grouping. This regional configuration facilitates team familiarity with the localities they serve, effective and long-standing working relationships among team members, and optimal communication across the team.

The remainder of our response is organized as follows.

- Initially, we will walk through Humana's *process* for addressing transition and discharge planning for an enrollee going from a hospital or nursing facility rehabilitation setting and returning to a community setting

- Following the discussion of our process, we will present an *example* showing how our process was used to successfully transition one of our enrollees this past year

==========

1. The extent to which the respondent's *process* addresses the following components of transition and discharge planning:
(a) Assessment criteria for making sure the enrollee can be served safely in the community;

==========

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana strives to provide efficient, enrollee-centered, and safe care planning for all individuals transitioning between service settings. Throughout an enrollee's transition from one level of care or setting to another, Humana Utilization Management and Case Management Nurses review all relevant clinical information including assessments, care plans, discharge plans, and medications to address barriers to care and to ensure services are in place to facilitate a seamless transition between care settings. They facilitate the transfer of information and knowledge across care settings and levels of care, coordinating with facilities and providers to ensure medication reconciliation occurs and all other necessary appropriate communication among providers takes place.

The transition team may be notified of an enrollee admission through a variety of means, including the following:

- For comprehensive enrollees and dual eligible enrollees in a Humana Medicare plan, UM Nurses receive notification through the daily hospital census and alert the LTC CM.

- The LTC CM, through regular contact with the enrollee or caregiver, will be aware of most scheduled admissions

- The enrollee, enrollee's family or caregiver, or LTC providers may also notify the primary CM of an unscheduled admission

Discharge planning begins on admission to an inpatient stay. The enrollee's CM, in coordination with the Humana UM Nurse and hospital associates, begins to develop a discharge plan as soon as the enrollee is admitted into the hospital. As part of that plan, we assess barriers that may impact the enrollee's ability to stay in the community. The CM addresses identified barriers and assists the enrollee to maintain an optimal level of health and wellness, addressing all post-discharge needs.

Transition associates complete a comprehensive assessment of the enrollee and family or caregiver needs through completion of the Discharge Planning Assessment Tool in CGX. The assessment gathers information on criteria that determine whether the enrollee can be served safely in the community. This includes but is not limited to the following:

- Availability of support from family and friends

- Access to Primary Care Physician (PCP) and specialists

- Potential barriers to discharge such as:
-- Confusion, cognitive impairment, or memory loss
-- Exacerbation of behavioral health condition
-- Diagnosis resulting in significant lifestyle change or educational needs
-- Substance abuse
-- Environmental risk (pediatric or dependent member in risk environment)
-- Financial barriers
-- History of falls
-- Lack of relationship with PCP
-- Inconsistent and unreliable caregiver support

- Healthcare behaviors and challenges such as:
-- Limited access to healthcare, resides in rural area
-- History of non-compliance with plan of care or medications

==========

1. The extent to which the respondent's *process* addresses the following components of transition and discharge planning:
(b) Collaboration with providers' discharge planning staff (e.g., hospitals, institutional settings, assisted living facilities, ancillary providers)

==========

Humana's transition team members have extensive experience collaborating with facility discharge planning associates to ensure smooth transitions for our LTC enrollees in Florida. The transition team reviews initial discharge planning information from the facility and works closely with facility discharge planning associates to identify and review potential barriers to discharge through communications with the enrollee, their family or caregivers, providers and hospital nurses and social workers. Humana's transition team also shares relevant information regarding enrollees with the facility discharge planning associates (e.g., information on known barriers to discharge that may be available in our integrated CGX documentation platform). The Discharge Planning assessment referenced above is a working document that is updated throughout the inpatient stay as additional information becomes available, up to and including the final facility discharge plan.

Humana's transition team ensures the appropriate exchange of information to facilitate transitions to new settings or levels of care, including changes in medications and the discharge plan. In anticipation of discharge, the assigned CM communicates with a variety of individuals about the enrollee's health status and any potential coordination needs following discharge, who may include the attending provider, the PCP or treating specialist, behavioral health providers, hospital social workers and discharge planners, and the enrollee and applicable caregivers. The CM will schedule a Multidisciplinary Team (MDT) conference to solicit the expertise of the various MDT members in discussing the discharge plan of enrollees with complex cases. Before the meeting, the CM documents the identified issues prompting the meeting and the guidance being sought.

As a result of this ongoing collaboration while the enrollee is hospitalized, the assigned CM determines whether to maintain or update the enrollee's plan of care. If the enrollee's plan of care changes, the CM tasks the UM department to review and document the action in CGX. The CM communicates the discharge plan and any plan of care changes with the enrollee, facility, caregivers, and PCP in order to effectively transition the enrollee home or to another facility and to ensure understanding of the plan by all parties.

Humana maintains detailed procedures for facility transfers, including hospital to hospital, Long-Term Acute Care Hospital (LTACH), Inpatient Rehabilitation Facilities (IRF), Skilled Nursing Facilities (SNF), and Psychiatric Facilities. Our procedures ensure effective collaboration and outline transition associates' responsibilities. This includes but is not limited to PCP notification as well as facilitation of communication between the transferring facility and the accepting facility to ensure a smooth transfer.

==========

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1. The extent to which the respondent's *process* addresses the following components of transition and discharge planning:
(c) Referral and scheduling assistance;
(d) Coordination with home and community-based providers, including DME and home health providers as appropriate to meet the enrollee's needs;
==========

Upon notification of an admission, the CM is responsible for suspending HCBS services during the period the enrollee is hospitalized. The CM is also responsible for determining the enrollee's discharge needs. These may include, but are not limited to, the following:

- Scheduled follow-up appointment with the enrollee's PCP or specialist

- Access to prescribed medications

- Comparison with current prescriptions to identify duplication of therapy, drug interactions, and contra-indications (Medication Review)

- Home care, Durable Medical Equipment (DME) or other services post-discharge

- Access to transportation

- Appropriate community resources to address non-covered or exhausted benefits post discharge

- Need of additional HCBS services due to functional decline

- Need of medically necessary "in lieu of" services

Humana's transition team provides referral and scheduling assistance both prior to and post discharge. Prior to discharge, the CM ensures the timely reinstatement of the services the enrollee had been receiving, and ensures authorizations for additional post-discharge services as ordered by the treating physician (such as home health and durable medical equipment (DME)). The CM also provides referral and scheduling assistance as follows:

- Referral and scheduling assistance with our home care partners

- Referral and scheduling assistance to ensure necessary post discharge appointments are arranged with the PCP, behavioral health providers, and other specialists

- Consideration for and referral to Humana Medicaid and Medicare care management programs such as disease management and other clinical programs if enrollees meet eligibility and program criteria

- Notification and coordination of discharge orders with providers, social supports and community resources (e.g., home health, DME), the enrollee and/or authorized representative, the enrollee's family or caregivers, and Humana Clinical Programs

Post-discharge, the CM continues to provide referral and scheduling assistance to ensure follow-up doctors' visits and outpatient care are arranged according to post-discharge instructions. The CM also assists with removing barriers to keeping appointments (e.g., by ensuring the enrollee has required transportation for follow-up visits and understands their transportation benefit).

As discussed in section (e) below, post-discharge transition activities include a post-discharge visit to the enrollee within five (5) business days following discharge. The CM ensures that follow-up doctors' visits and outpatient care are arranged according to post-discharge instructions. The CM continues to communicate, as needed, with the enrollee, their caregiver, PCP, behavioral health provider, and other relevant stakeholders to continually assess, maintain, and intervene proactively, ensuring that enrollees are receiving necessary care and services.

==========

1. The extent to which the respondent's *process* addresses the following components of transition and discharge planning:
(e) Processes to prevent unnecessary hospital or nursing facility readmissions.

==========

We begin to assess and plan for discharge needs upon notification of an admission. Along with reviewing the enrollee's current clinical status, we identify potential readmission risk using Humana's proprietary Readmission Predictive Model (RPM). For more detail on our RPM, please see Attachment LTC 3-1. Available on admission, the RPM augments clinical review and helps identify enrollees who may benefit from more intensive support.

The goal of all post-discharge intervention is to identify and close any gaps in care that may lead to a poor quality outcome such as complications or readmissions and to ensure the enrollee has a full support system in place for successful community re-entry. Humana's program is based on best practices identified in the clinical literature and on our own internal studies, which suggest that the more closely the post-discharge intervention follows the discharge, the more likely it os that the intervention will have a positive impact on quality of care and will reduce avoidable and costly readmissions.

Face-to-face post-discharge outreach is made to all enrollees discharged home. Our goal is for the CM to complete a change in condition (CIC) visit within forty-eight (48) hours after discharge whenever possible, and always within five (5) business days following discharge. During the CIC visit, the CM:

- Completes a new 701b assessment, which includes assessment for any changes in ADLs and IADLs, a medication review and an assessment of the enrollee's caregiver supports and natural supports

- Updates the Plan of Care, authorizing additional services that may be needed

- Identifies any symptoms or issues that need to be documented and notifies the enrollee's PCP

- Assesses for barriers to access and treatment and schedules appointments with the PCP, specialists, therapy providers, and with transportation to appointments

The CM also ensures that the following items are in place:

- Enrollee received discharge instructions and fully understands their condition(s) and post-discharge care

- Enrollee is in a safe environment and a caregiver or support system is able to adequately provide post-discharge support

- Enrollee was able to obtain all post-discharge medications and understands how to take them, can identify side effects and complications, and knows when to report concerns. Additionally, if the enrollee cannot afford medications, the case management team works with the enrollee on obtaining medications from community resources, pharmaceutical companies, or contacts the physician's office for assistance.

- Home health services and DME are in place

- Follow-up doctor's visits, outpatient care and all HCBS, supports, and supplies are arranged according to post-discharge instructions

- Enrollee has needed transportation for follow-up visits, and understands his or her transportation benefit

- No complications or new problems have occurred without being reported to the physician

- Enrollee understands when to report any complications to their physician and when to seek medical care

We have recently added a new component to the face-to-face post-discharge visit which we believe will further enhance our strong transition process by promoting PCP engagement. While we encourage our enrollees to schedule a follow-up appointment, some enrollees may face barriers that prevent them from doing so. For these enrollees, the CM attempts to call the PCP during the post-discharge visit to schedule the follow-up appointment, to confirm changes in the enrollee's medications, and to share and receive other pertinent information.

We are focused on effective transitions for all of our enrollees, but we understand that certain populations require enhanced transition planning. As appropriate, enrollees are engaged in disease management programs. If behavioral health needs, such as depression or anxiety, are identified after the inpatient stay, then the enrollee is referred to our Behavioral Health program for support. As noted above, the CM may decide to schedule a formal MDT conference to solicit the expertise of the various MDT members in discussing the discharge plan of enrollees with complex cases and transition of care concerns, to prevent readmissions and unplanned nursing home placement. The MDT panel participants for these enrollees may include the enrollee, the enrollee's caregiver (if applicable), Medical Director, all care team members, Front Line Leader, HCBS providers and any other participants involved in the enrollee's care (e.g., PCP, specialists, behavioral health provider, Medicare Advantage health plan).

==========

2. The extent to which the respondent's *process* ensures the protection of the enrollee's privacy consistent with confidentiality requirements.

==========

Humana places the utmost importance on enrollee privacy and confidentiality. Ethics and the protection of enrollee privacy are integral to case management, and all of our associates receive comprehensive training that includes protection of the enrollee's privacy consistent with confidentiality requirements. All Humana associates and contractors must complete Humana's Ethics and Compliance training within thirty (30) days of hire and annually thereafter. This mandatory training is tracked for every associate. Topics include, but are not limited to: Privacy and Information Protection Policies including the Acceptable Use Policy, role of Enterprise Information Protection (EIP) and the Privacy Office, key definitions and responsibilities, social engineering tactics such as phishing, physical safeguards, and security incident and privacy breach reporting. Humana also holds an annual Cyber Security Awareness event each October for the enterprise. This event is a weeklong focus on all key topics related to information protection. Renowned information security experts share their knowledge throughout the week with presentations, expo halls, and interactive activities.

We also offer our contracted healthcare providers and business partners an important part of our Enterprise Compliance Program: Ethics Every Day for Contracted Healthcare Providers and Business Partners. This document outlines our program's standards of conduct requirements, including reporting of improper disclosure of or access to enrollee information. It also addresses the safeguarding of information used to perform functions for or related to Humana, including following the privacy and security rules of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and the more recent Health Information Technology for Economics and Clinical Health Act (HITECH). Healthcare providers and business partners are expected to have policies and procedures in place to affirm the integrity of their organizations' information.

Examples include:

- Privacy and security training program for employees and business partners

- Confidentiality agreements, where applicable

- A procedure for the required return or destruction of protected health information (PHI) if an agreement involving the support of Humana is terminated

- A procedure for restricting the marketing of PHI

Several safeguards are in place to ensure that enrollees' privacy rights are guaranteed at all times. We have both inbound call and outbound call authentication processes to ensure we are speaking with the enrollee, as follows:

Inbound Call Authentication (require at least 3):
- Enrollee identification number
- Medicaid identification number
- Enrollee date of birth
- Enrollee zip code

- Enrollee group name, group number, or product type (only if needed)

Outbound Call Authentication:
- Dial the enrollee's number on file
- Ask to speak with the enrollee, addressing by full name
- Ask for other appropriate identification such as zip code or DOB
- If unable to provide zip code or date of birth, ask for enrollee identification number, group name, group number or product type, Medicaid identification number, or social security number

If we do not have a complete Power of Attorney consent form or a signed PHI consent form in our documentation system, the CM and other members of the Humana team obtain verbal consent from the enrollee at each contact to speak to anyone other than the enrollee. Authentication of the consent is documented in CGX at each contact.

The CM may request that the enrollee complete a PHI consent form if the enrollee requests that the CM speak to another person on an ongoing basis regarding their health status and concerns. A PHI consent form is then mailed to the enrollee with a self-addressed, stamped envelope. The PHI consent form allows Humana to obtain an enrollee's permission to discuss personal health information with a specific person named on the PHI form.

Humana employees are prohibited from disclosing any medical information to anyone inside or outside the health plan, except when required by law. Humana employees are educated on ensuring appropriate PHI and sign a confidentiality statement upon hire and on an annual basis. Enrollee and provider specific information is used solely for the purposes of utilization management, quality management, disease management, discharge planning, care management and coordination, and claims payment. It is shared only with those individuals who need access to such information in order to conduct utilization management and related processes. Agreements with providers functioning in a peer review capacity specifically address and uphold the confidential nature of all enrollees' medical information.

Humana operates a framework of internal IT controls and information security policies and procedures to maintain the health information system's compliance with HIPAA and other privacy laws, as well as commonly accepted professional standards of health information management. We rely on secure software systems to protect and maintain our enrollees' sensitive medical information. The CGX system contains our enrollees' care plans, which can only be accessed by the enrollee's care manager, the UM Nurse, and the enrollee's PCP. Following a defense-in-depth methodology, Humana utilizes numerous controls that are used to prevent data loss and breach of confidentiality. These include, but are not limited to: firewalls, De-Militarized Zones (DMZs), intrusion prevention, intrusion detection, group policies within active directory (least privilege), role-based access control (RBAC), data segmentation, anti-virus, anti-malware, full disk encryption, data loss prevention (DLP) tools, active data-in-use monitoring, monitoring of dark web activity, and Web content filtering to protect endpoints from malicious websites. Humana undergoes many internal and third party audits including the National Institute of Standards and Technology (NIST), the Health Information Trust Alliance (HITRUST), the Payment Card Industry Data Security Standard (PCI DSS), and various state department of insurance audits. Humana is currently certified as being compliant with NIST, HITRUST, and PCI DSS standards.

==========

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

The respondent shall include an example of an effective transition plan with appropriate timeframes for each step of the process.

1. The extent to which the respondent's *example* addresses the following components of transition and discharge planning:

3. The extent to which the respondent's *example* provides appropriate timeframes for each step of the transition and discharge planning process.
==========

We present our case example, including appropriate timeframes for each step of the transition and discharge planning process, below.

"Edward" is a fifty-seven (57) year old male with a history of anoxic encephalopathy due to a cardiac arrest in July of 2016, chronic respiratory failure which required a tracheostomy, and was status post aspiration with a feeding tube. Edward also has a history of subarachnoid hemorrhage, seizure disorder, Stage III sacral ulcer and Stage II pressure ulcer to bilateral buttocks, hypertension, atrial fibrillation, and congestive heart failure.

Edward had been in case management in Humana's MMA program since 2016, and the MMA CM had assisted Edward and his daughter in applying for the LTC program. Edward was hospitalized in February 2017 due to wound infections and remained hospitalized until July 2017. It was during this hospitalization that he was approved for the LTC program. The MMA CM contacted Humana's LTC team to inform them of Edward's imminent eligibility and to review his case with the team. Humana's LTC team received Edward's eligibility record in mid-June 2017 for a July 1, 2017 start date and assigned an LTC CM within twenty-four (24) hours of receipt of his information.

The LTC CM reviewed Edward's case record in Humana's CGX clinical platform (where she could review what had been done with Edward while in the MMA program) and reached out to his daughter with a welcome call the day after she received Edward's eligibility record (two (2) weeks prior to his start date with the LTC program). She explained the program to Edward's daughter, discussed how she would work with her and Edward to support his transition back to home, and would continue as Edward's primary CM throughout his LTC enrollment. Edward's daughter provided updates on his status and indicated she was still unsure of Edward's discharge date. The CM also provided his daughter with her contact information and advised her that she would be reaching out to the hospital social worker and would follow Edward during his hospital stay to monitor for discharge orders. She also encouraged Edward's daughter to call her with any questions and informed her that she would complete a new enrollee orientation once Edward was discharged to home.

The CM immediately scheduled an MDT Conference (which included the MMA and LTC UM Nurses, the MMA and LTC CMs, the MMA and LTC Front Line Leaders, and the Medical Director) to review Edward's current condition and discharge plans. A second MDT Conference was held prior to Edward's discharge, which also included Edward's daughter and attending physician to develop an appropriate tentative Service Plan and Plan of Care to meet Edward's and his daughter's needs.

==========

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1. The extent to which the respondent's *example* addresses the following components of transition and discharge planning:
(a) Assessment criteria for making sure the enrollee can be served safely in the community;
==========

In the week following the LTC team's receipt of Edward's eligibility record, and two (2) weeks prior to his start date in the LTC program, Humana's transition team, led by the LTC CM, reviewed all relevant clinical information. The LTC CM completed the 701B Comprehensive Assessment, the Discharge Planning Assessment Tool, and the Caregiver Assessment tool to determine what Edward and his daughter would require in order for Edward to be safely discharged to his home. During the hospitalization, Edward's wounds were debrided, and then treated conservatively, his nutritional status was optimized, and Edward and his daughter were educated on the prevention and management of pressure injuries. Edward was in need of a Clinitron (or Air-Fluidized Bed) prior to discharge for the management of his pressure injuries and prevention of further infection. Edward's LTC CM arranged for the DME company to evaluate his home to ensure it could structurally and electrically accommodate the Air-Fluidized Bed. She also arranged for the reinstatement of skilled nursing services, which Edward would require because of his ventilator.

==========
1. The extent to which the respondent's *example* addresses the following components of transition and discharge planning:

(b) Collaboration with providers' discharge planning staff (e.g., hospitals, institutional settings, assisted living facilities, ancillary providers)
==========

Both the MMA UM Nurse and the LTC CM collaborated with hospital discharge associates, including the hospital social worker, monitoring discharge orders and identifying, reviewing, and addressing potential barriers to discharge. During the three (3) weeks prior to Edward's discharge (the point at which the LTC CM had become involved), they had daily communication with hospital discharge planning associates and were made aware of the date and time of Edward's planned discharge.

==========
1. The extent to which the respondent's *example* addresses the following components of transition and discharge planning:
(c) Referral and scheduling assistance;
(d) Coordination with home and community-based providers, including DME and home health providers as appropriate to meet the enrollee's needs;
==========

Edward's CM coordinated all prescriptions for DME, wound care orders, and skilled service requests prior to his discharge from the hospital. These were reviewed for medical necessity, approved, and delivered to Edward's home prior to his discharge and scheduled to commence on day of discharge. The CM arrived at Edward's home one (1) day after he was discharged from the hospital to complete the new enrollee orientation and finalize Edward's plan of care to include his personal goals. The CM also provided Edward's daughter information on resources including caregiver support groups, hospice, and palliative care. Edward's daughter was

hesitant to discuss these issues at that time so the CM provided emotional support and reviewed the Member Handbook with her to ensure she had all the information she needed. The CM also showed Edward's daughter how to access Humana's Caregiver Support Portal for helpful information and caregiver resources. The CM confirmed that all services were in place, registered Edward with the local special needs shelter, and created a backup plan to ensure Edward would remain safe in the home setting. She also made sure that Edward had a scheduled PCP follow-up appointment and set up an appointment for Edward with a wound care specialist.

==========

1. The extent to which the respondent's *example* addresses the following components of transition and discharge planning:
(e) Processes to prevent unnecessary hospital or nursing facility readmissions.

==========

Edward's transition team engaged in a number of processes and activities aimed at maintaining Edward safely in his home and preventing hospital readmission or nursing facility placement:

- Two (2) MDT conferences were held in the three (3) weeks prior to Edward's discharge. The first included the MMA and LTC UM Nurses, the MMA and LTC CMs, the MMA and LTC Front Line Leaders, and the Medical Director to review Edward's current condition and discharge plans. A second MDT Conference was held prior to Edward's discharge, which also included Edward's daughter and attending physician to develop an appropriate tentative Service Plan/Plan of Care to meet Edward's and his daughter's needs.

- The CM conducted a visit to Edward's home one (1) day after his return home to ensure all necessary services were in place, to provide support and information to Edward's daughter, to create a back-up plan, and to schedule follow-up appointments with Edward's PCP and wound care specialists.

- As a high acuity enrollee, Edward and his daughter receive weekly telephonic contact from his CM during the first month following his discharge, with a face-to-face visit at the end of his first month back home.

- Because of Edward's complex needs, we also extended and formalized the role of his MDT to ensure that his care is regularly reviewed through a team approach, ensuring that any gaps in his care are addressed and resolved. Edward's MDT panel participants included Edward and his daughter, our Medical Director, Edward's CM and Front Line Leader (CM Supervisor), and Edward's PCP as needed. The MDT met monthly for the first two (2) months following Edward's discharge. Because no issues of concern were identified, the next MDT conference was scheduled to occur three (3) months after the last conference, unless Edward's CM identifies any urgent or emergent situations in the interim.

==========

2. The extent to which the respondent's *example* ensures the protection of the enrollee's privacy consistent with confidentiality requirements.

==========

During Edward's stay at the hospital, Humana's UM Nurse provided and reviewed the Discharge Management Tools with Edward and his daughter and obtained consent for the release of PHI to Edward's daughter. Once Edward was discharged home, the CM followed Humana's outbound and inbound call authentication processes and all other privacy procedures, including sharing information with Edward's PCP via secure email.

Footnotes

---

[1] CareHub is Humana's enterprise solution for complete program integration for our provider community and enrollees. CGX supports an integrated, comprehensive approach to medical, behavioral health, pharmacy, utilization, and care management. Full system integration allows our care team the capability to identify potential enrollees for programs, document gaps in care, automate care planning, monitor plan compliance, and identify opportunities for intervention.

Evaluation Criteria:

1. The extent to which the respondent's process and example address the following components of transition and discharge planning:

- **(a)** Assessment criteria for ensuring the enrollee can be served safely in the community;
- **(b)** Collaboration with providers' discharge planning staff (e.g., hospitals, institutional settings, assisted living facilities, ancillary providers);
- **(c)** Referral and scheduling assistance;
- **(d)** Coordination with home and community-based providers, including DME and home health providers as appropriate to meet the enrollee's needs; and
- **(e)** Processes to prevent unnecessary hospital or nursing facility readmissions.

2. The extent to which the respondent's process and example ensure the protection of the enrollee's privacy consistent with confidentiality requirements.

3. The extent to which the respondent's example provides appropriate timeframes for each step of the transition and discharge planning process.

Score: This section is worth a maximum of 35 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Attachment LTC 3-1: Humana's Readmission Predictive Model

Humana calculates the Readmission Predictive Model (RPM) to assess the probability of an enrollee being readmitted into a facility within 30 days. A score is generated on the day of admission. Generating scores at the time of admission gives more time to intervene and prevent the next potential admission, and helps improve the "reach rate," since the enrollee will still be in the hospital when the score is generated.

Trade Secret as defined in Section 812.081, Florida Statutes

Readiness Model – *Complexity*

This is an example of how a predictive model works:

Memb

Memb

[redacted]

Traditional, diagnosis-only approaches treat enrollees A and B equally.

The take away

Humana's readmission predictive modeling approach, built on a database of a half million admissions, allows stratification and prioritization to those enrollees in the most need.

Humana.

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

LTC SRC# 4 – Provider Network Agreements/Contracts (Regional):

The Agency has identified some the key network provider types that will be critical in order for the respondent to promote the Agency's goals.

The respondent shall demonstrate its progress with executing agreements or contracts it had with providers in the region by submitting **Exhibit A-4-c-1**, Provider Network Agreements/Contracts (Regional) (10-2-2017):

Response:

Please refer to the attached Exhibit A-4-c-1, which directly follows this document for our response.

Evaluation Criteria:

For each service type the respondent may receive up to 60 points as described below. There are four (4) service types available in a region.

Percentage of agreements/contracts for each service type	Points
0.0%	0
1.0% - 25%	15
25.1% - 50%	30
50.1% - 75%	45
75.1% or greater	60

Score: This section is worth a maximum of 240 raw points based on the above point scale.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

General Instructions:

Each Respondent shall complete the Long-term Care Agreements/Contracts scoring template worksheet. The respondent is required to submit the total number of individual Service Provider Type with whom they have agreements/contracts by using column 'b' on the worksheet

LTC Service Providers Scoring Workbook Explanation:

Service Provider Types
Assisted Living Facility
Adult Day Care Center
Home Health Agency
Nurse Registry

Nurse Registry	4	4	100%	**60**

C. RECIPIENT EXPERIENCE

LTC SRC# 5 – Transition from Nursing Facility to Community (Statewide):

The respondent shall describe its experience with transitioning individuals from institutional to community settings and strategies to ensure individuals maintain successful community placement including:

a. Experience and strategies pertaining to deploying transitional care teams and using evidence-based practices with support from other clinical resources and community-based organizations.

b. Experience and strategies pertaining to individuals who reside in an institutional setting for rehabilitation, or have otherwise resided in a facility for less than one year.

c. Experience and strategies pertaining to individuals who have resided in an institutional setting for more than one year.

Response:

Long-term Care (LTC) plans have a responsibility to help enrollees age reside or age in their most appropriate setting of choice. Through our statewide LTC plan, Humana has helped more than one thousand seven hundred (1,700) Florida Medicaid enrollees transition out of institutions into community settings. Providing a systematic referral, coordination, and continuity of care system is essential to ensure that enrollees transitioning from institutional to community settings will continue to receive timely and appropriate care. When an enrollee desires to move back to his or her home and can live safely in that environment, services to coordinate a smooth transition are important in order to prevent hospitalizations or deterioration of conditions that may prevent him or her from maintaining stability in a home or community-based setting. Following a transition, services to ensure the enrollee has the support structure needed to remain and thrive in the community become critical to prevent readmission.

==========
a. Experience and strategies pertaining to deploying transitional care teams and using evidence-based practices with support from other clinical resources and community-based organizations.
==========

Humana has extensive experience with transitioning individuals from institutional to community settings across various states and programs. Through a partnership with the Florida Department of Elder Affairs, Humana participated in the Nursing Home Diversion (NHD) program for Florida's frail and elderly population from 2007 to 2013. The coordination of LTC services in the NHD program helped enrollees maintain their residence in the community and prevented unnecessary transitions into nursing facilities. The state transitioned the NHD program to the LTC program in 2013 and today Humana provides managed LTC services to approximately twenty-one thousand (21,000) enrollees across all eleven (11) Florida Medicaid regions, serving

as the only statewide LTC health plan. We cover LTC benefits for Aged, Blind, and Disabled (ABD) as well as dual eligible enrollees in the LTC program. Humana manages LTC benefits for another twenty thousand (20,000) Medicaid enrollees in Virginia and Illinois through our affiliate health plans under Humana, Inc..

In the remainder of this response, we provide detail on the strategies we use to provide effective and safe transitions for enrollees.

==========
1. The extent to which the respondent identifies how it will coordinate care with all individuals and/or entities necessary.
==========

Transitioning enrollees from institutions into community settings carries risks of acute incidents and hospitalizations if not appropriately planned. To mitigate those risks, we assign a specialized, experienced team to manage all aspects of each transition. Through our multidisciplinary team (MDT) structure (which incorporates all medical, behavioral, and LTC aspects of an enrollee's care) we ensure that the transition takes into account all of an enrollee's needs. The MDT includes the enrollee and their caregivers, case manager (CM), transition coordinator (TC), Frontline Leader, Utilization Management representative, primary care provider (PCP), Medical Director, and other service providers as needed.

Humana's Transitions Program is for transitions from long-term facilities to the community. Based on the evidence-based Dr. Eric Coleman Care Transitions Model®, which is grounded in improving quality and safety during transition periods, our program identifies enrollees residing in a nursing facility who express the desire to and can safely transition into a community setting. We then support each enrollee's transition into an independent home, an apartment, an assisted living facility (ALF), or a group home. Our Transitions Program incorporates the following evidence-based practices [1] (which we describe throughout our response):

- Assignment of a Transition Coordinator (TC) who provides one-on-one assistance with the enrollee's transition process

- Coordinated and proactive discharge planning, including communication among all stakeholders, referral to needed post-discharge services, and collaboration with community-based agencies

- Timely and appropriate primary and specialty care follow up after the transition

- Medication management and medication reconciliation during transitions

- Enrollee and caregiver empowerment by educating them on their health conditions, including exacerbation triggers

- Enhanced oversight through increased face-to-face and telephonic contacts as outlined in the transition risk stratification and as needed

The goal of the Transitions Program is to ensure our enrollees receive services in their preferred and most appropriate setting. TCs join the enrollee's MDT when we identify that the enrollee is a

transition candidate. As our housing specialists, TCs are familiar with the housing options and community resources available to enrollees and the steps necessary to ensure a smooth transition. They work exclusively on providing person-centered, one-on-one assistance with the transition process.

We initiated our Transitions Program in Florida immediately upon LTC program implementation in 2013. Prior to implementation, the Humana transition team and plan leadership identified many barriers to successfully transitioning enrollees. Nursing facility staff were often either unaware of or resistant to the program. CM associates required additional training and education. Enrollees and family members were unsure about their options and also benefited greatedly from additioinal education. We also needed to identify community resources to maintain successful placement. To address these barriers, we devoted significant time and resources to accomplishing the following:

- Conducted outreach, led by our provider relations department, to develop strong and effective relationships with nursing facility staff and provide education on our program

- Trained CMs on identifying enrollees who may be eligible to transition and on providing information to address concerns of enrollees who may be apprehensive about (or unaware of) their eligibility to transfer to a less intensive environment

- Developed a formal and rigorous Transition Program training module

- Involved the enrollee and family members from the beginning of the process, providing individualized education

- Identified and developed relationships with community-based organizations and engaged in reciprocal education and information-sharing about our programs and services

Humana TCs collaborate with CMs when an enrollee is transitioning from a custodial nursing facility or other institutional care setting back to a community setting. Both the CM and TC record all information within Humana's clinical workflow system, Clinical Guidance eXchange (CGX). CGX supports an integrated, comprehensive approach to utilization and case management, providing the TC, CM, and other Humana associates secure access to pertinent information at any time. As a Comprehensive Medicaid plan that also serves many dual-eligible enrollees in Medicare plans, we use CGX to effectively coordinate acute, primary, behavioral, and social services with long-term services and supports necessary for a successful transition. Our CMs and TCs also identify and coordinate with any non-Humana health plans serving our enrollees, including non-Humana Dual Eligible Special Needs Plans (D-SNPs), Medicare Advantage (MA) plans, and Fee-For-Service (FFS) Medicare. Below we summarize key steps in the transition process.

IDENTIFICATION OF ENROLLEES FOR TRANSITION

We identify enrollees for transition through the Case Management process:

- CMs identify enrollees' interest in and ability to transition through our contact processes that include initial, monthly, quarterly, annual, and as-needed assessments. During the in-facility

visit, the CM educates the enrollee and family members regarding Home and Community-Based Services (HCBS), the Participant Directed Option (PDO), and Freedom of Choice, using talking points Humana's transition team has developed for this purpose.

- CMs and TCs receive direct referrals from nursing facility staff during their regular visits to nursing facilities.

- Our TCs also play a key role in the identification process. They review the 701T assessment administered to all nursing facility residents, review the facility's minimum data set (MDS), which is updated quarterly with information about enrollees' expectations for facility discharge, and perform monthly nursing facility "sweeps" (facility visits alongside CMs) to provide additional insight as to which enrollees may be candidates for transition.

- We may also identify enrollees for potential transitions through CM grand rounds with nursing facility staff and through referrals from treating physicians, other providers, family members, and enrollee self-referrals.

If an enrollee expresses a desire to transition out of a nursing facility, his or her CM completes the first section of our Transition Screening Tool (Attachment LTC 5-1) to ensure the enrollee can safely reside in a new setting. Our CMs complete the Transition Screening Tool for enrollees residing in nursing facilities during the initial and annual health assessments, and as needed. The CM documents the results of this assessment in the enrollee record contained in CGX. This section of the tool includes an assessment of the enrollee's desire to enter the new setting, the enrollee's health status and functional limitations, and identification of supports necessary and available to aid the transition. For enrollees who are transitioning to live with a caregiver who works during the day or for enrollees who will be left alone at any time, our CMs administer the LTSS Risk Ranking Tool (Attachment LTC 5-2), which assesses the enrollee's needs for assistance with a variety of tasks to determine their risk level and corresponding level of CM contact. We are now completing the Transition Screening Tool for one hundred percent (100%) of our enrollees residing in nursing facilities. This is done so that we may track and report on candidates for safe transition. Additionally, we track transition candidates who choose to remain in the nursing facility. As applicable, the CM also administers Humana's Caregiver Support Survey (as discussed in more detail below) to assess caregiver willingness and availability to support the transition. If the enrollee has the desire to transition and meets the criteria, the CM refers the enrollee to the TC and informs the enrollee of what to expect.

PROCESSES FOR IMPLEMENTING THE TRANSITION

Upon receipt of a referral, the TC completes the full Repatriation Survey within seven (7) days, to determine whether enrollees can safely transition into the community. We use:

- An evaluation of whether the enrollee will have sufficient support systems in their new service setting

- A thorough safety check at the enrollee's new home, with authorizations for necessary modifications prior to the transition

- A projection of necessary services needed to accomplish the transition

- A financial screening to ensure the enrollee is capable of accessing all necessary services in their new service setting

- A risk assessment to identify potential health risks during the transition, and a determination of steps to mitigate each risk

After the TC collaborates with the CM to determine that the enrollee can safely transition, they meet face-to-face with the enrollee and authorized representative, their family, nursing facility staff, and social services staff to coordinate the transition. The TC completes the following:

- Risk Agreement – Instructs the enrollee on the risks involved in transitioning. The TC obtains the enrollee's signature on the Risk Agreement.

- Home Monitoring Assessment – If the enrollee is transitioning to a private home, then the TC assesses the physical environment and completes the checklist.

- Home-like Environment Assessment – If the enrollee is transitioning to an ALF or Adult Family Care Home (AFCH), the TC assesses the setting for home-like environment and completes the checklist.

The TC coordinates with the PCP, nursing facility staff, community resources, and providers throughout the transition process, which takes an average of four (4) weeks. During this time, the TC develops a draft plan of care to identify services, supports, and other needs of the enrollee. This plan of care helps the TC:

- Ensure that all required durable medical equipment (DME) and any home modifications needed are complete prior to the transition

- Arrange physician appointments in the home if needed

- Conduct medication review and education to ensure compliance with the medication regimen

- Update the enrollee's new address

- Refer the enrollee to Disease Management (DM) as appropriate to decrease readmission risk

- Terminate nursing facility authorizations that are in place

- Arrange for any needed service authorizations to avoid a delay in care

- Upon transition, the TC finalizes the plan of care in collaboration with the CM and the MDT

To further support a move into the community, Humana offers an enhanced benefit to offset the costs associated with transitions. Humana's Nursing Facility Transition enhanced benefit helps pay for things like security and utility deposits, household supplies, and moving costs. As applicable, the TC arranges for the family to visit ALFs, senior apartments, or an independent home to choose which they prefer.

PROVISION OF OTHER CLINICAL RESOURCES TO SUPPORT TRANSITION

Humana is committed to doing what is necessary to help our enrollees live in the least-restrictive, while still fully supportive environment possible. For example, some enrollees may be considered “borderline” candidates for transition. This means they have a desire to move to a community setting, but are not yet medically prepared to do so. In this instance, we will support our enrollees to transition through the provision of tailored therapy (such as physical and occupational therapy) to prepare them to successfully reside in a community setting.

ENROLEE EXAMPLE
Paolo is an insulin-dependent, diabetic LTC enrollee who had a recent below-the-knee amputation. Since November 2016 he resided in a Miami nursing facility. Paolo had a strong desire to transition back into the community. After careful assessment and collaboration with his TC and other stakeholders, Paolo determined transition to an ALF was his best option.

Finding an ALF to accept Paolo was not easy. He needed to manage his insulin and blood sugar regimens for ALFs to accept him. Paolo also required a wheelchair until a prosthetic leg could be ordered and fitted. Humana Medicare had agreed to cover the prosthetic leg as an outpatient. To make this transition work, the Humana LTC plan paid for Paolo’s skilled nursing where he learned insulin self-management skills and purchased a wheelchair. After Paolo transitioned to the community and received his prosthesis, the Humana LTC plan covered physical therapy (PT) services so he could learn to walk with his new prosthesis.

MAINTAINING ENROLLEES IN THE COMMUNITY

TCs remain actively involved during the first ninety (90) days post-transition. The first ninety (90) days following transition is a crucial time, as enrollees are at the highest risk of re-institutionalization. During this period, CMs and TCs frequently monitor enrollees' statuses. Based on needs identified through enrollee assessment and using a risk ranking tool we developed specifically for nursing facility transitions, TCs and CMs determine the contact schedule with the enrollee for the first ninety (90) days:

- All enrollees receive a change in condition visit within five (5) days following their transition. For those transitioning to a home setting, we aim to conduct this visit within twenty-four (24) to forty-eight (48) hours following the transition. During this joint visit by a TC and CM, we complete all post-transition assessments and use them to update the plan of care, including a new 701B, fall risk screening, risk ranking, signed new Freedom of Choice certification, caregiver assessment tool, and medication review and reconciliation. The TC and CM complete a new care plan, obtain signatures from the enrollee or their representative, and provide copies of this plan to the enrollee, their providers, and the facility (if the enrollee has moved to an ALF). We also prepare an emergency preparation plan.

- Enrollees at Low Risk (generally ALF placements with no skilled care): We contact monthly at a minimum, with a face-to-face visit by day thirty (30) as needed.

- Enrollees at Moderate Risk (generally discharges to home with family or natural supports): Receive, at minimum, weekly calls with a face-to-face visit by day thirty (30).

- Enrollees at High Risk (generally discharges to home, with minimal natural supports): Receive, at a minimum, weekly calls, with face-to-face visits by day fourteen (14) and day thirty (30).

- If there is a safety concern regarding an enrollee transitioning from a nursing facility to home, we hold an MDT meeting to work through safety issues. We may also visit these enrollees weekly to ensure a safe transition.

CUSTODIAL PREVENTION PROGRAM

For all enrollees living in the community, Humana's Custodial Prevention Program helps prevent or delay custodial placement. When an enrollee's CM is concerned with the potential for institutionalization, they engage the TC. The TC visits the enrollee and caregivers in their community residence to review the enrollee's current needs and always addresses the enrollee's choice. The TC may recommend an increase in services to provide additional support to the member and discusses alternative placement such as an ALF, if appropriate. The CM also notifies the TC of any hospital or rehabilitation facility admissions. The CM and TC monitor the enrollee's stay in the acute care setting to ensure that the enrollee is able to return to his or her preferred place of residence. The TC may visit the enrollee in the facility, coordinate with facility discharge planners, and recommend increases in HCBS services to address the enrollee and caregiver's additional needs. Our Custodial Prevention Program has been successful. For enrollees identified as being at risk for placement in an institutional setting and referred to a TC, the program has resulted in the prevention or delay of up to fifteen (15) custodial placements per month.

COLLABORATING WITH COMMUNITY-BASED ORGANIZATIONS

A key aspect of ensuring a safe transition and maintaining enrollees in the community setting is identifying and connecting the enrollees with community organizations and resources that provide the support they need and help them connect to their community. Community supports are wide-ranging and include organizations and programs such as food banks, adult day health, caregiver respite, faith-based organizations, and community centers. Community supports are crucial, especially for enrollees who have resided in a custodial setting for a long period of time and no longer have natural supports in place in the community.

Our TCs and CMs focus on collaboration with community-based organizations as a primary aspect of the transition process. We hire our HCBS CMs from within the communities they serve so they are familiar with the organizations and services available to our enrollees. Our CMs also have multiple tools available to them to identify community supports, including the online United Way 211 Community Resource Directory and auntbertha.com (a comprehensive database of community programs covering every ZIP code in the United States). In addition to these national social service search and referral software platforms, Humana also has a home-grown and easily searchable Community Resource Directory that our CMs can directly edit and update based on their most up-to-date knowledge of local community resources and the services they provide. These resource guides provide information on the community-based organizations and state and local agencies and their services. These include food, clothing, furniture, medical equipment, housing/shelter, home repairs, cell phones, counseling services, social contact and

adult day care. Our CMs do more than refer our enrollees to these organizations they connect them to these services and coordinate with the organizations on an ongoing basis.

"I've used the United Way 211 Directory for additional resources for enrollees. There's a live chat option that I've utilized during a visit and was able to get a few contacts for assistance with utilities before I left the enrollee's home that day. It was a quick process. Enrollees can also dial 2-1-1 to receive the same assistance." - Humana Case Manager

==========

2. The extent to which the respondent assesses potential caregiver willingness and availability in supporting the transition.

==========

Humana recognizes that families and caregivers play a critical role in supporting enrollees in the community. In addition to administering the enrollee assessment for potential transitions, the CM also administers a caregiver support tool completed for all natural supports involved in the enrollee's care. The tool collects information on each enrollee's caregiver, including their health, work schedule, emotional support system, available assistance hours, and the functions the caregiver needs help with such as bathing, dressing, and grooming. Attachment LTC 5-3 is a copy of Humana's Caregiver Support Tool.

In addition to assessing the caregiver's potential and willingness to support the transition, we offer extensive education and support for caregivers. An often-overlooked aspect of LTC is the caregiver's well-being, as enrollees and caregivers are often part of the same family unit with shared needs and concerns. Thus, we engage in caregiver support interventions, including the following:

- Caregiver education to ensure caregiver is knowledgeable about the enrollee's needs and risk factors.

- Referral to Humana's Caregiver Support Portal (Attachment LTC 5-4 includes screenshots of the Portal).

- Information on enrollees' Consent for Release of Protected Health Information form. Once Humana files the form, designated caregivers will receive:

-- Permission to view the enrollee's plan information
-- Information on free support services
-- A free subscription to Humana's quarterly caregiver newsletter

- Assistance and intervention if enrollee is at risk for placement because of caregiver burnout. In this event, the CM requests an MDT conference to discuss the current plan of care, review gaps, and discuss interventions. If the enrollee is at risk for placement, the CM may escalate to the TC to review the enrollee's current plan of care, address need for additional support, arrange respite care, or assist with alternate placement as needed.

- Using the online resource directories described above to assist caregivers in accessing free or reduced cost community services, and educating and empowering caregivers to use the online resources available.

==========

3. The extent to which the respondent's description addresses transitioning enrollees with special circumstances or medical conditions (e.g., complex needs); enrollees with ongoing needs; and enrollees who at the time of their transition have existing prior authorization or approval for ancillary services.

==========

Transitioning enrollees with special circumstances or medical conditions requires unique considerations. For instance, for enrollees with the following issues, ALFs are typically not an appropriate setting:

- Diagnosed with communicable disease (excluding HIV)

- Unable to perform Activities of Daily Living (ADLs) with assistance or supervision

- Bedridden

- Unable to transfer with assistance

- Have Stage three (3) or four (4) pressure ulcers, including surgical incisions or wounds that have not been stabilized

- Danger to themselves or others (real or potential)

- Feeding tubes

- Tracheotomy, oral, nasopharyngeal suctioning

- Flight risk (real or potential) – a lockdown-type ALF may be a consideration

- Impaired cognitive ability that limits understanding or communication

- More than minimal staff assistance required to take medications

If such enrollees want to go home with a caregiver who is willing and able to learn how to provide care safely, they may be able to transition home after discussions with the Plan Medical Director and an MDT discussion. We provide more frequent monitoring for enrollees with co-morbidities and complex medical conditions, high-utilizing enrollees, enrollees with special health care needs, and enrollees with hospitalizations to maintain the enrollee's health during the transition period. We will assess enrollees with emergency department visits to determine contributing reasons for these visits, and take actions to prevent avoidable emergency department visits and inpatient admissions post-transition.

Humana is aware that the Agency for Health Care Administration (AHCA) will consolidate individuals in three (3) HCBS waivers into the LTC program by January 1, 2018: The Project AIDS Care (PAC) waiver, Adult Cystic Fibrosis (ACF) waiver, and Traumatic Brain Injury and Spinal Cord Injury waiver. In preparation for managing the care for such enrollees, we have staffed our Utilization Management (UM) team with nurses who have experience with these

waiver programs and will do a review of all high-end DME. We will also hire nurse-trained CMs with experience with these waiver populations. We will place each specially-trained CM in the region with the highest volume of the applicable special needs enrollees. These specialized CMs will provide their expertise and support to CMs in all regions.

As detailed above, the TC's role ensures effective transitions for enrollees with ongoing needs and for enrollees who, at the time of their transition, have existing prior authorization or approval for ancillary services. TCs review existing authorizations and services the enrollee receives and discusses them with the enrollee's PCP. TCs' responsibilities include ensuring that all required DME is ordered prior to the transition, scheduling and confirming physician appointments, arranging transportation services, terminating nursing facility authorizations in place, conducting medication review and education to ensure a pharmacy is secured, prescriptions are obtained and enrollee is compliant with the medication regimen, and referring the enrollee to DM as appropriate to decrease readmission risk. The CM who works with the enrollee post-transition continues to ensure we meet the enrollee's ongoing needs, and consults with the TC to support the enrollee in their new home and prevent readmission to a nursing facility.

==========

4. The extent to which the respondent demonstrates through data its success rate at transitioning individuals from institutional to community settings.

==========

Since 2014 we have helped more than one thousand seven hundred (1,700) Florida Medicaid enrollees successfully transition from institutions to community settings. Humana collects, tracks, and reports on relevant data throughout all our operational areas to evaluate the effectiveness of our programs and interventions. To improve transition data, we now use the Transition Screening Tool for one hundred percent (100%) of our enrollees residing in nursing facilities. This allows us to track and report the number who are candidates for safe transition.

Attachment LTC 5-5 displays total transitions from institutional to community settings per year from 2014 through 2016. As these data points demonstrate, we have continually increased the number of enrollees who have transitioned via the various strategies for improvement we have employed. Our success rate is continuing in 2017, with three hundred seventy-five (375) transitions as of August 31, 2017.

Number of transitions, 2014:	204
Number of transitions, 2015:	486
Number of transitions, 2016:	665

Over the past two (2) rate years, we have achieved an average annual transition rate (reflecting the percentage of enrollees residing in a nursing facility who have transitioned to a community setting) of eight percent (8%). Additionally, we have decreased the percentage of our enrollees residing in a nursing home by four percent (4%) over the past year and a half, from forty-one percent (41%) in January 2016 to thirty-seven percent (37%) in July 2017. We are on track to achieve AHCA's goal of maintaining sixty-five percent (65%) of our enrollees in a community setting and thirty-five percent (35%) of our enrollees in a nursing facility.

==========

5. The extent to which the respondent demonstrates through data its success rate at maintaining individuals who have transitioned from an institutional placement to community placements.

==========

For measurement year 2016, the rate of maintaining enrollees in the community after transitioning from a short-term placement, one hundred (100) days or less, in an institutional setting was sixty-two percent (62%). For the same year, the rate of maintaining enrollees in the community after transitioning from a long-term institutional placement, more than one hundred (100) days, was thirty-eight percent (38%).

We continually enhance data capabilities to capture a full picture of our enrollees' experience. Using the data captured in CGX, we can identify the reasons why some enrollees have been re-admitted to an institution, and can develop targeted population- and individual-level strategies to better support their transitions. Additionally, we will institute post-transition reviews of individual enrollees who have reverted to the institutional setting, enabling TCs and CMs to identify necessary actions to prevent future institutional placements.

==========

b. Experience and strategies pertaining to individuals who reside in an institutional setting for rehabilitation, or have otherwise resided in a facility for less than one year.

==========

Enrollees who have resided in an institutional setting for rehabilitation or have otherwise resided in a facility for less than one (1) year are more likely to have active social supports in the community and have maintained a residence outside of the community. We have developed strategies for these enrollees to overcome barriers to bring the enrollee back to their prior environment in the community, whether that is an independent home, an apartment in a senior living facility, an adult family care home, or an ALF.

Humana's experience transitioning so many enrollees to community settings has shown us that a safe living environment is essential for a successful transition back into the community. Prior to transitions, we arrange for a home environment assessment by an occupational therapist. Additionally, we assess if the enrollee may be more successful in a senior apartment, with fewer maintenance duties, than in an independent home. To ensure that our enrollees and their support system are ready for and comfortable with this transition, our CMs arrange for a day trip to the new environment. This helps enrollees test their new environment and gives their CM an opportunity to identify any modifications or supports necessary for a successful transition.

When available, natural support systems are also critical to transitioning back to the community after a short institutional stay. While enrollees who have resided in an institutional setting for less than one (1) year may have a tighter connection to their support system in the community than enrollees who have been in an institutional setting for a greater period, they may still re-enter the community with new needs. Therefore, our TCs take steps to prepare the support system for the transition, including the arrangement of services, such as adult day care, that serve the enrollee as well as the caregiver.

==========

c. Experience and strategies pertaining to individuals who have resided in an institutional setting for more than a year.
==========

Our TCs and CMs commit themselves to helping our enrollees transition to a community environment at an appropriate time, whether the enrollee has been in an institutional setting for months or years. Through regular assessments and facility visits by our TCs, we evaluate all enrollees residing in an institutional setting for their interest in and preparedness to transition.

We apply the same core strategies used to support enrollees who have been in an institutional setting for less than one (1) year to enrollees who have resided in that setting for more than one (1) year. However, we also recognize the unique circumstances of these enrollees and have implemented strategies that provide the additional support they may require post-transition. Enrollees who have resided in a facility for more than one (1) year may not have maintained as strong support system or a home outside of the institution.

Therefore, our TCs (working in collaboration with the CM and the MDT) are generally involved in these transitions for a longer period. The enrollee's risk score, adjustment to community living, and stability in their environment determine the frequency of touchpoints and monitoring by the TC, beyond the minimum contacts described above. This flexible model allows us to tailor our approach to suit each enrollee's unique needs after transitioning to a community setting.

SUMMARY

Helping enrollees who have the desire and ability to transition safely from an institutional setting to the community achieve their goals is rewarding and critically important. We are proud of our success helping enrollees transition out of institutions reside or age. Humana continually strives to improve our processes and help more enrollees make the transition.

[1] See, for example, Exploring Transitional Care: Evidence-Based Strategies for Improving Provider Communication and Reducing Readmissions. Rupal Patel Mansukhani, Mary Barna Bridgeman, Danielle Candelario, Laurie J. Eckert. P T. 2015 Oct; 40(10): 690–694.

Evaluation Criteria:

1. The extent to which the respondent identifies how it will coordinate care with all individuals and/or entities necessary.

2. The extent to which the respondent assesses potential caregiver willingness and availability in supporting the transition.

3. The extent to which the respondent's description addresses transitioning enrollees with special circumstances or medical conditions (e.g., complex needs); enrollees with ongoing needs; and enrollees who at the time of their transition have existing prior authorization or approval for ancillary services.

4. The extent to which the respondent demonstrates through data its success rate at transitioning individuals from institutional to community settings.

5. The extent to which the respondent demonstrates through data its success rate at maintaining individuals who have transitioned from an institutional placement to community placements.

Score: This section is worth a maximum of 25 raw points with each of the above components being worth a maximum of 5 points each.

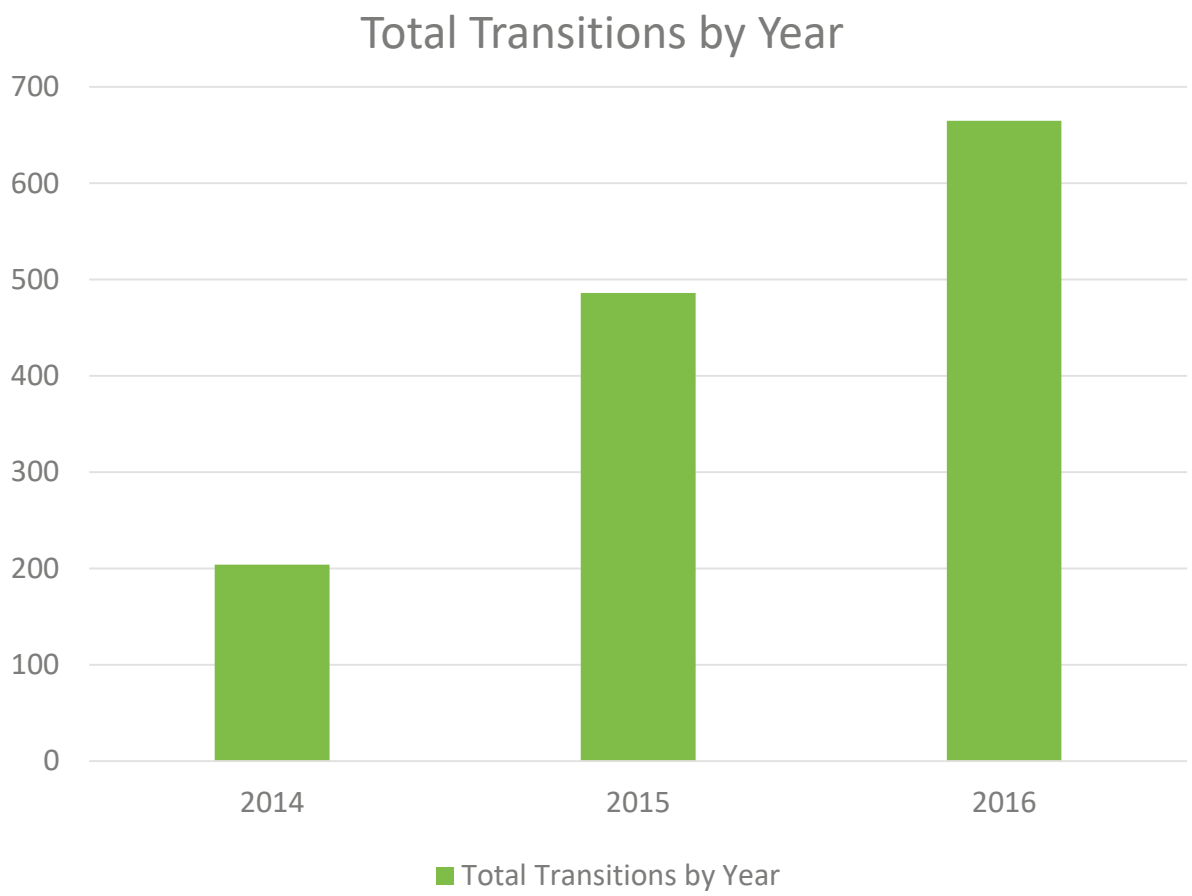
Attachment LTC 5-5: Annual Institutional to Community Setting Transitions from 2014-2016

Humana has continually increased the number of enrollees who have transitioned via the various strategies for improvement. Humana's success rate is continuing on pace in 2017.



Strategies for Improvement:

- Nursing home sweeps conducted monthly by regional TC (Transitional Coordinator)
- TC visit all newly enrolled NF enrollees to introduce self and explain Transition option
- Weekly TC attendance on regional CM meetings to engage staff in referral process
- TC builds relationship with NF providers
- Education of CM staff on importance of explaining Freedom of Choice to enrollee/ POA in NF
- Build relationship with ALFs in region for ease of transitioning enrollees

TC = Transition Coordinator
CM = Case Manager
ALF = Assisted Living Facility

Humana

LTC SRC# 6 – Care Planning (Statewide):

The respondent shall provide a flowchart depicting how it will use the information contained in the State of Florida approved assessment (Florida Department of Elder Affairs 701B Comprehensive Assessment), the respondent's supplemental assessment (if applicable), and any additional information collected in its utilization and case management processes for LTC services, in order to properly complete the initial care planning process for a recipient in a facility-based setting and in a community-based setting.

Response:

Understanding each enrollee's unique needs, personal goals, care goals, and resources when developing the plan of care (POC) is critical to addressing the enrollee's health and well-being. In addition to using the State of Florida's approved assessment, 701B or 701T, Humana also includes our supplemental assessments, when applicable, and information collected in the case management processes to assess the enrollee's risk level, preferences, and cultural needs. We use these sources of information in order to develop a POC tailored to each individual living in both community and facility-based settings.

Humana's Case Manager (CM) determines the appropriate assessment to conduct based on the enrollee's location, whether that be community (701B) or facility (701T). The assessment helps the CM understand an enrollee's individual demographics, living situation, and supports as well as the enrollee's care needs in areas such as memory, general health, activities of daily living/instrumental activities of daily living (ADL/IADLs), health conditions, mental health, nutrition, and medications.

Additional mini-assessments appropriate to the enrollee's situation are used to uncover additional personal and health-related information. Data components captured in supplemental assessments such as the Falls, Domestic Violence, Readmission Risk, Homelike Environment, Disaster, and Participant Directed Option (PDO) assessment are crucial for creating a full picture of an enrollee's needs and preferences.

One of the most critical components of the POC is the enrollee's personal health and well-being goals. This element of the POC becomes the roadmap to improve enrollees' clinical outcomes and quality of life. Humana understands that enrollee-centered, tailored care is not only desirable, but critical to driving positive health and well-being outcomes. Humana CMs leads this process and encourage enrollees' participation from start to finish.

Appropriately incorporating natural supports can also make a significant difference in an enrollee's health and overall well-being. We use the Caregiver Support Tool to understand the caregiver's schedule, type of assistance provided, health status, and other relevant information. This enrollee-centered process of gathering information from the assessments, building a thorough POC, and including natural supports in an informed way contributes to a holistic approach to the enrollee's care and, ultimately, drives positive outcomes.

Please see Attachment LTC 6-1 for a flowchart that illustrates the data components collected using the 701B and 701T in addition to supplemental assessments, participants, and specific actions resulting from the process.

Evaluation Criteria:

1. The extent to which the flowchart outlines specific data components it will use from the State of Florida approved assessment in the development of the plan of care for enrollees.

2. The extent to which the flowchart outlines specific data components it will use from the respondent's supplemental assessment, and/or any additional informational sources, in the development of the plan of care for enrollees.

3. The extent to which the flowchart incorporates specific data components it will use to ensure a person-centered approach is achieved in the care planning process, including documenting personal goals.

4. The extent to which the respondent uses the caregiver assessment to determine the availability of family/informal support systems, and the amount of assistance the existing support systems are able to provide the enrollee, in making authorization decisions.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

AND EVALUATION CRITERIA (10-2-17)

LTC SRC# 7 – Freedom of Choice & Residential Settings (Statewide):

The respondent shall describe how it will address the enrollee's preference in residential settings (i.e., home, adult family care home, assisted living, or nursing facility). The respondent shall describe the safeguards it will have in place during the implementation of the re-procurement of the SMMC program to ensure enrollees do not have to move out of their current residence, by residential setting.

Response:

Individuals face a deeply personal choice when deciding where to live. An enrollee's freedom to choose is not just limited to residential setting. It also extends to the specific facility or provider that delivers the enrollee's Long-term Care (LTC) services, whether that provider is a specific nursing home, a specific assisted living facility (ALF), a community-based agency provider, or a provider under a participant directed option (PDO). Empowering enrollees with freedom of choice in residential and provider settings has a positive impact on their emotional state and perspective while supporting favorable outcomes. Humana's processes and system of care work to support enrollees in their chosen place to live.

Humana understands that during the implementation of the SMMC (Statewide Medicaid Managed Care) re-procurement, there may be switching among health plans by the State's eligible LTC recipients. By putting appropriate safeguards in place, it is our intent to honor the enrollee's preferred living arrangements and to ensure enrollees do not have to move out of their current residences.

==========
1. The extent to which the respondent's description addresses the process it will use to ensure enrollees are educated about their choice in residential setting, including freedom of choice.
==========

Humana understands that our enrollees have the right to choose where they live, and we ensure that enrollees understand that and other rights. We train all of our associates on that right and our new enrollee materials include information on enrollees' freedom of choice rights.

Our Florida Medicaid new enrollee materials include the following statement:

"Your Case Manager ensures that you or your caregiver are the only ones who can choose where you live. It is your choice to live in the community or a long-term care facility. The Case Manager can provide you with information on where to live. They can also provide you with Humana participating providers and/or cost compares of where to live."

Humana's Case Managers (CMs) identify and support each enrollee's individual goals by incorporating them throughout the care coordination process. CMs provide enrollees with assistance and guidance in selecting a living situation that best meets their goals, taking into consideration each enrollee's medical needs, desired location (e.g., near relatives or friends), and other preferences. Our goal is to support and educate enrollees to achieve self-advocacy wherever possible.

CMs review the Freedom of Choice certification with enrollees and their authorized representatives during initial enrollee orientation. This often occurs prior to enrollment start date but is always completed within five (5) business days of enrollment for enrollees in the community and within seven (7) business days of enrollment for those in a nursing facility. Thereafter, the CM reviews the Freedom of Choice certification annually and when there is a change in the enrollee's living arrangement. During the review, the CM determines whether enrollee and their authorized representatives have received information about Medicaid services available in the community. If an enrollee or authorized representative responds that they have not received information about Medicaid services available in the community, then the CM reviews home and community-based services (HCBS) and options for receiving Medicaid services in the community, as applicable, with the enrollee before completing the Freedom of Choice Certification. If the enrollee or authorized representative has received information, then the CM reviews and reinforces the information and answers any questions they have. Following this review, the CM requests that the enrollee or authorized representative read and review the Freedom of Choice Certification, indicate enrollee choice for receiving Medicaid services, and sign the form. We provide a copy of the completed and signed certification to the enrollee or authorized representative via hand delivery or mail within five (5) business days from the date of certification.

In our current Florida LTC program, Humana tracks the Required Record Documentation (RRD) measure for the Freedom of Choice form and compares our performance to national benchmarks. Our 2016 performance on this measure was ninety-point seven one percent (90.71%), above the ninety percent (90%) Agency for Health Care Administration (AHCA) benchmark.

==========

2. The extent to which the respondent describes initial or ongoing case manager training to confirm enrollee preference in residential setting.

==========

Freedom of Choice is a key topic in the new CM training curriculum. We require all CMs to complete this training, which educates them on the importance of residential choice for enrollees. During the training, we give CMs instructions on how to complete the Freedom of Choice form and how to educate enrollees about their choice in residential setting. Additionally, the resource tools we make available to all CMs in our integrated clinical platform, Clinical Guidance eXchange (CGX), contain mandatory fields with prompts to review and certify Freedom of Choice forms to ensure they do not miss this important review.

We reinforce this education on enrollee choice in residential settings during annual refresher trainings mandated for all Humana CMs. The following training sessions also reinforce various topics, including enrollee preference of residential setting and freedom of choice:

- Monthly clinical team meetings to discuss key LTC processes, during which every department presents

- Weekly Front Line Leader (FLL) training meetings for associates who supervise CMs

- Ongoing training from FLLs for CMs, including regular monthly meetings and weekly touch-base meetings

==========

3. The extent to which the respondent's description addresses how all residential settings are considered for enrollee placement.

==========

Humana is committed to ensuring that enrollees not only have the right to choose their care setting, but also the right to choose their specific residence. When CMs work with enrollees and their authorized representatives to develop a plan of care, they consider all options available. We assign CMs by region and they generally live in the regions they serve. This enables them to have intimate knowledge of what is available to each enrollee. CMs also understand the service options, interventions, and programs available that may help make it possible for each enrollee to succeed in a particular setting. For instance, our CMs are aware of adult day health services and of the enrollee's natural supports.

CMs also consult with our Transition Coordinators (TCs), who are also Humana's housing specialists, to find the best housing options for enrollees. CMs and TCs review all residential options with enrollees, calling attention to safety factors that may inform their decision. The team of CMs and TCs help enrollees understand the services and supports available at each residential setting, such as PDO for enrollees transitioning into the community. Through this collaboration, we help enrollees find the most appropriate option to meet their needs and goals.

Sometimes the expense of moving into a new community setting is the biggest barrier. Humana offers up to two thousand five hundred dollars ($2,500) to help an enrollee move out of a nursing facility and into their own home. This benefit helps pay for items like security and utility deposits, household furnishings and supplies, and moving expenses.

Humana currently serves LTC members through the SMMC program in all eleven (11) regions throughout the State. Through this experience, we have developed strong capabilities to accommodate each enrollee's choice, regardless of current location or preferences to relocate. The following examples demonstrate how Humana CMs consider all residential settings for enrollee placement:

- One of our enrollees shared a home with her husband for decades, but he recently passed away. Afterward, the enrollee wanted to consider finding a new home. Following several discussions with her CM, the enrollee decided an ALF would be her best option. Unfortunately, many ALFs do not allow pets and she did not want to give up her dog, who was her faithful companion and brought her much joy. Her CM found an ALF that accepted dogs and met the enrollee's other needs and preferences.

- Another enrollee had been doing well at home, but his mobility had recently declined and he was unable to get upstairs to his bedroom. Further, his friend who had been mowing his lawn had recently moved away, and the enrollee felt that lawn upkeep had become more of a problem than it was worth. He did not wish to move into an institutional setting or even an ALF, so his CM and TC transitioned this enrollee to a senior living apartment, where he is happy and doing well.

- An 83-year-old enrollee with an end-stage cancer diagnosis resided in a nursing facility (NF). Her only son lived in New York, and she had no other support system. While at the NF, the CM

worked with the enrollee to ensure access to clinical services and appointments for services outside of the NF. At one point, the enrollee expressed her desire to transfer to a facility she preferred over the one she currently lived in. Although she had no complaints about the current facility, she preferred to spend her last weeks in a different one. The CM maintained regular communication with the son, who agreed with the transfer. The CM facilitated the transfer for the enrollee to get her into the location of her choice. The enrollee passed away several weeks afterwards at her facility of preference.

==========

4. The extent to which the respondent's description includes safeguards the respondent has in place to ensure enrollees will not have to move out of their current residence, by residential setting.

==========

Humana has a number of safeguards in place to ensure our enrollees will not have to move out of their current residence. We categorize the safeguards we implement into two groups: those for enrollees residing at their own home or an adult family care home and those for enrollees residing at ALFs or NFs. For enrollees in both groups, we conduct an initial assessment, during which we discuss the enrollee's personal goals, where the enrollee would like to live, and the enrollee's freedom of choice to remain in their current residence. We confirm the enrollee's preference and obtain a signed Freedom of Choice certification from the enrollee.

HOME AND ADULT FAMILY CARE HOME

For our enrollees who reside in their own home or an adult family care home, we have designed safeguards that address the financial, safety, and support issues that may otherwise result in relocation to an ALF or a nursing home. These safeguards include the following:

- We engage natural supports in the enrollee's care, including family members and friends. We maintain the HCBS services the enrollee is currently receiving, and add services that may be necessary to maintain the enrollee safely in their home, apartment, or adult family care home. As needed, we arrange for home modifications, such as ramps, that reduce falls and increase enrollee mobility.

- As needed, we arrange for the provision of a companion care benefit. To reduce strain on any home-based caregivers and provide a social outlet for our enrollees, we also arrange for respite care and contract with adult day care centers throughout the State.

- We offer expanded benefits to assist the enrollee in staying healthy and safe. Some examples include:

-- Non-medical transportation to provide enrollees with access to community events or other social and emotional supports to avoid social isolation

-- Pill organizer to assist enrollees in administering and maintaining their medication regimens.

ASSISTED LIVING FACILITIES AND NURSING FACILITIES

If an enrollee is residing in an out-of-network facility when they enroll in our plan, or if an existing enrollee requests a specific provider not in our network, we engage our provider contracting team and make every effort to contract with that facility unless there are quality of care concerns (e.g., facility is unlicensed or we have previously terminated the facility due to quality issues). If this is the case, we educate the enrollee or their representative, but understand that it is ultimately the enrollee's decision whether to remain in the facility. We strive to guarantee transparency in all our contracting processes, and will update the enrollee on progress in contracting with the facility.

Evaluation Criteria:

1. The extent to which the respondent's description addresses the process it will use to ensure enrollees are educated about their choice in residential setting, including freedom of choice.

2. The extent to which the respondent describes initial or ongoing case manager training to confirm enrollee preference in residential setting.

3. The extent to which the respondent's description addresses how all residential settings are considered for enrollee placement.

4. The extent to which the respondent's description includes safeguards the respondent has in place to ensure enrollees will not have to move out of their current residence, by residential setting.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

D. PROVIDER EXPERIENCE

LTC SRC# 8 Home and Community-Based Services (HCBS) Performance and Credentialing (Statewide):

The respondent shall describe how its staff will create, collect, report and use internal provider performance measures and/or criteria for home and community-based, residential, and participant direction provider types. The respondent shall include how the performance measures will improve network quality and be utilized in recredentialing activities, and if/how the respondent will use the internally-developed performance measures to limit its provider networks pursuant to Section 409.982(1)(c), Florida Statutes.

Response:

To achieve our goal of providing quality care that meets the needs of our enrollees, Humana has invested in systems and processes to ensure a high-performing network of providers. We apply a continous approach to monitoring the quality of services delivered by Long-Term Care (LTC) providers, using tools that draw data from a number of sources to provide a comprehensive picture of our providers' performance. This data is captured in actionable tools, that enable our associates to identify high-performing providers, support low-performing providers to improve their performance, and ultimately create a network comprised of quality, experienced providers to meet our enrollees' needs.

In 2015, after one year of SMMC LTC operations, Humana conducted an extensive analysis of our LTC network's performance. As a result of this analysis, we developed a plan that identified performance indicators and providers in need of intervention, with the goal of increasing our enrollees' quality of care. These interventions led to a marked reduction in quality of care incidents reported to our Quality Operations department each quarter, from two hundred fourteen (214) in fourth quarter of 2015 to forty-six (46) in fourth quarter of 2016. During 2016, we issued three Corrective Action Plans (CAP); as of October first, 2017, we have not issued any CAPs.

==========
1. The extent to which the respondent's description includes a plan to create, collect, report and use provider performance measures.
==========

Data on provider performance is captured through our Provider Performance Engagement (PPE) tool. Our PPE tool collects provider performance data from several sources and generates a score between zero (0) and one hundred (100). This data gives our Provider Relations department a complete view of our LTC providers' performance, enabling the continuous monitoring of provider performance and identification of areas for improvement.

The PPE tool is designed to capture a range of metrics to evaluate all aspects of our providers' performance. These metrics have been developed through years of experience serving Florida's elderly and LTC populations who receive care from home health providers, assisted living facilities (ALFs), nursing facilities (NFs), and adult day care providers. Recognizing the unique role of each of these provider types, we include specific metrics for each. These metrics, broken

down by provider type, are described further below. Attachment LTC 08-1 provides a description of the scoring methodology and indicates where the data is stored.

HOME HEALTH PROVIDERS, ASSISTED LIVING FACILITIES, NURSING FACILITIES, AND ADULT DAY CARE PROVIDERS:

Trade Secret as defined in Section 812.081, Florida Statutes

HOME HEALTH PROVIDERS AND NURSING FACILITIES ONLY:

Trade Secret as defined in Section 812.081, Florida Statutes

HOME HEALTH PROVIDERS ONLY:

Trade Secret as defined in Section 812.081, Florida Statutes

ASSISTED LIVING FACILITIES ONLY:

Trade Secret as defined in Section 812.081, Florida Statutes

NURSING FACILITIES ONLY:

Trade Secret as defined in Section 812.081, Florida Statutes

ADULT DAY CARE ONLY:

Trade Secret as defined in Section 812.081, Florida Statutes

USING PPE DATA

Our Provider Relations department meets quarterly to review individual and global provider results and provide a quarterly reporting summarizing PPE results for discussion with the Quality Improvement Committee (QIC). The QIC can recommend actions for poor performing providers, and can assess systemic issues for further action by our Provider Relations department, such as revisions to our provider education tools. Individual provider PPE scores will also be made available to our Credentialing department to be used in the LTC provider recredentialing process.

Additionally, the Provider Relations leader will report findings related to the PPE tool to the Provider 360 Committee. Our Provider 360 Committee is a cross-functional team that meets monthly and includes representation from executive leadership and our Quality, Provider Relations, and Claims departments. This Committee uses data and results from the PPE to gauge provider performance and collaborate with our Provider Relations department to develop performance improvement interventions.

Humana takes quality of care and provider performance seriously. Therefore, any provider who has achieved a PPE score of seventy (70) or below or who has an identified quality of care issue (which results in an automatic PPE failure) will automatically be placed on a Corrective Action Plan (CAP) to ensure improvement on the measured metrics. Case Managers receive a list of PPE scores to share with enrollees to assist with choosing quality providers.

FUTURE PPE ENHANCEMENTS

USING ELECTRONIC VISIT VERIFICATION TO COLLECT DATA
Electronic Visit Verification (EVV), used by our home health and participant-directed providers, will be integrated into our PPE tool as a source of missed visit data. With EVV, our providers use a mobile application to check in and check out when delivering services to an enrollee. This provides an extra level of accountability for our providers delivering home-based services, and will enable us to easily verify that the authorized services have been provided to enrollees.

ADDITION OF SPECIFIC METRICS FOR PARTICIPANT-DIRECTED PROVIDERS
Humana is examining innovative financing mechanisms for participant-directed providers. As we explore implementing these programs, we will update the PPE tool to add data points that will

support the calculation of incentive payments for participant-directed providers. These data points may include:

Trade Secret as defined in Section 812.081, Florida Statutes

==========

2. The extent to which the respondent describes how performance measures are reported and trended for each participating provider type and incorporates utilization data, quality of care concerns, performance measure scoring, and provider and enrollee satisfaction in recredentialing activities.

==========

QUALITY MEASURES IN RECREDENTIALING ACTIVITIES

While maintenance of required certifications forms the core of Humana's recredentialing criteria, we also incorporate quality-related information for each specific provider into recredentialing decisions. Our PPE tool, which covers the HCBS and institutional provider types listed above, will be used to measure each provider's performance in conjunction with other quality-related information (i.e., grievances and complaints, medical record audits, historical CAPs, enrollee satisfaction measures) to offer provider-specific information for recredentialing functions. At the time of recredentialing, the Provider Relations department and Quality Managament Committee meet to review trend reports on individual provider performance and quality-related information. Jointly, this team uses the PPE score to provide a recommendation to the Credentialing Committee for approval or denial of recredentialing status.

RECREDENTIALING METRICS SPECIFIC TO NURSING FACILITIES

In accordance with AHCA guidelines, we incorporate additional metrics into the recredentialing process for NFs. For any NF that does not meet the CMS stars rating standard defined by AHCA, or internal quality measures, we refer the provider to our QIC for a CAP. The guidelines used for NF recredentialing are described below:

1. If the NF has an overall rating of two (2) or more stars, the NF has met this measure. If the NF has less than two (2) overall stars, proceed with the review.

2. If the NF has a rating of less than two (2) stars in the Quality Measures category within the Long-Stay Residents section, the NF has not met this measure. If the NF has a rating of two (2) or more stars in the Quality Measures category within the Long-Stay Residents section, proceed with the review.

3. Determine under the Quality Measures category within the Long-Stay Residents section, if the percentage of long-stay residents who receive an antipsychotic medication at the NF is the same as the statewide average or less. If the percentage is more than the statewide average percentage, the NF has not met this measure. If the percentage is the same or less than the statewide average percentage, the facility has met this measure.

Nursing facilities that do not pass the AHCA requirements under recredentialing are placed on a CAP. If the facility is not compliant with the CAP, the facility will be brought before the QIC, which will make a determination regarding decredentialing and possible exclusion from our network.

==========
3. The extent to which the respondent's description includes a plan to communicate the performance measure results to providers, including any provider incentives or alternative payment methodology opportunities available.
==========

COMMUNICATION OF PERFORMANCE MEASURE RESULTS TO PROVIDERS
Individualized scorecards will be delivered to each home health, ALF, NF, and adult day care provider on a quarterly basis by their Provider Relations Representative. These scorescards summarize the provider's performance on each metric captured in the PPE tool, as well as:
- Comparison to the provider's scores from the last measurement period
- Comparison to the top ten (10) percent of their peers on each indicator
- Areas of strong and poor performance

An example of this scorecard is in Attachment LTC 08-2.

In addition to the individualized scorecard, aggregated findings by provider type regarding quality outcomes and measurements will be communicated with providers in a variety of ways, including:
- Provider bulletins, notices, and newsletters
- Online and hard copy reports
- Provider educational sessions
- Written instructive communications
- Clinical and provider association newsletters

PROVIDER INCENTIVES
Humana is exploring how we can use the PPE tool as the foundation for value-based purchasing (VBP) opportunities for our LTC providers. These models are described below.

VBP FOR HOME AND COMMUNITY BASED SERVICES (HCBS): HCBS providers play a pivotal role by in reducing unecessary residential nursing facility and hospital utilization. Given that enrollees receiving HCBS typically spend more time with their direct service workers (DSWs) than with their PCPs, Humana is considering using VBPs for DSWs employed through participant-direction or through an agency. HCBS VBP arrangements may be structured to encourage DSWs to take a more vocal, proactive role in enrollees' care. DSWs who visit enrollees on a daily or weekly basis can identify subtle changes that are indicative of health concerns that need urgent treatment. We hope to incentivize DSWs to report this information to Case Managers to determine the appropriate course of action.

VBP FOR NURSING FACILITIES (NF): Humana has also developed VBP models that incentivize nursing facilities to help enrollees avoid hospitalization and, when appropriate, return to a community setting. We are exploring ways to extend a program that has been successful in our Medicare plans to our Medicaid providers. Humana is currently operating an incentive

program in North Florida for our Medicare Advantage plan that offers rewards for Skilled Nursing Facilities (SNFs) based on achieving performance targets on measures such as discharge rates, re-hospitalization rates after discharge, post-discharge follow-up within seven (7) days, as well as appropriate documentation. Awards are paid on a quarterly basis. Currently, Humana has seventy-nine (79) SNFs included in the North Florida-based program. On average, we award a bonus payout to seventy (70) to seventy-five (75) facilities each quarter. Our Provider Relations Representatives provide education and training to help NFs achieve their goals.

==========

4. The extent to which the respondent's description includes the establishment of data-based targets to determine the completion of provider corrective action plans and utilization of these targets pursuant to Section 409.982(1), Florida Statutes, including the ability for providers to be notified of performance issues prior to termination.

==========

Through the PPE tool, Humana can identify providers who are not meeting performance targets or that are underperforming relative to their peers. Underperforming providers presenting quality concerns receive written notification from the Provider Relations department. The Provider Relations department works with the provider to develop a CAP that identifies specific non-compliance issues; the staffing responsibilities, resources, and timeline to correct the situation; and data-based targets tailored to the provider's specific situation. Examples of these targets include:

- Greater than ninety (90) percent of services delivered, per authorization
- Less than one (1) percent rate of enrollee substantiated grievances within one quarter
- One hundred (100) percent of provider staff completion of required training

Each performance target has a specific timeline for completion, with most targets scheduled for completion in thirty (30) days or less. Provider Relations Representatives reach out to providers to explain the CAP and provide ongoing support to help providers achieve their targets.

The provider is monitored for a period of ninety (90) days following the development of a CAP in order to document the improvement in performance. Achievement of CAP performance targets is also monitored through subsequent PPE reports. Once all deficiencies are corrected, the provider is sent written notification and the CAP is closed. Providers who do not address deficiencies within the ninety (90) days receive a letter of non-compliance from the Provider Relations department and are presented to the Quality Improvement Committee for extension of the CAP or termination. Our goal is always to assist providers in reaching performance targets in a constructive manner. We only resort to contract termination after all other options have been exhausted.

Evaluation Criteria:

1. The extent to which the respondent's description includes a plan to create, collect, report and use provider performance measures.

2. The extent to which the respondent describes how performance measures are reported and trended for each participating provider type and incorporates utilization data, quality

of care concerns, performance measure scoring, and provider and enrollee satisfaction in recredentialing activities.

3. The extent to which the respondent's description includes a plan to communicate the performance measure results to providers, including any provider incentives or alternative payment methodology opportunities available.

4. The extent to which the respondent's description includes the establishment of data-based targets to determine the completion of provider corrective action plans and utilization of these targets pursuant to Section 409.982(1), Florida Statutes, including the ability for providers to be notified of performance issues prior to termination.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

LTC SRC# 9 – Claims Submission and Payment (Statewide):

The respondent shall describe how it will educate and train LTC providers about claims submission and payment processes.

Note: Pursuant to Section 409.966(3)(c)6., Florida Statutes, response to this submission requirement will be considered for negotiations.

Response:

==========
The respondent shall describe how it will educate and train LTC providers about claims submission and payment processes.

Note: Pursuant to Section 409.966(3)(c)6., Florida Statutes, response to this submission requirement will be considered for negotiations.
==========

Humana believes that when we partner with our providers and support them with the tools and education they need to succeed, we empower them to deliver sophisticated, high quality, clinically integrated care and supports models to our enrollees while also creating administrative simplicity. As such, Humana has developed a multifaceted and comprehensive claims training and education program specifically for our Long-term Care (LTC) providers. Our statewide LTC presence and experience working with LTC providers, both in Florida and through our health plans nationally, has provided us with insight on the challenges and barriers providers may experience when billing for services for Medicaid enrollees. The lessons we've learned from these programs have informed the design and evolution of our training model.

Our training program begins at the point of initial contracting, with ongoing trainings that provide frequent opportunities for our providers to refresh their knowledge on claims submission and payment processes. Our Provider Relations Representatives are fully trained on all applicable claims and payment processes, including rate changes, patient responsibility, Medicare coordination and crossover, AHCA's third-party claims dispute resolution contract, and medical necessity criteria, enabling them to provide individual support and training for our network. Humana continuously monitors the effectiveness of our provider education and training activities through provider satisfaction surveys and trend reports on claims submissions, as well as by gathering input from Provider Relations Representatives, Humana's leadership team, and provider associations. We adjust our trainings based on these inputs to ensure we are meeting the needs of all our providers and guarantee our updated materials are available to providers in both print and online formats. Finally, Humana uses several communication outlets to ensure that providers are continuously aware of any identified system changes or outages that may impact billing or payment, including those from our subcontractors.

We are proud of our relationships with LTC providers across the State of Florida and will continue to work diligently to ensure their long-term viability and value. This commitment is evidenced in our provider network's results. In December 2016, our average electronic clean claim processing and payment for our long-term care providers averaged ninety-nine point six eight percent (99.68%) of all electronic claims submitted. We will continue to evolve our training

approach to meet and exceed the needs of these providers, and are eager to maintain and improve upon these results.

==========

1. The extent to which the respondent describes the initial and ongoing training targeted to LTC providers, including the type, location, and frequency of training.

==========

INITIAL TRAINING

Humana has an established and comprehensive process to train and educate all new LTC providers (including sub-capitated providers, subcontractors, atypical providers and out-of-network providers) on claims processes. The goal of this approach is to ensure accuracy, timeliness, and completeness of claim submission and payment processes in both rural and non-rural areas.

Upon negotiation of the provider agreement or during a single case agreement, Humana initiates the training process. Once the provider is considered active and participating, our credentialing department will send a welcome packet with a copy of the monthly training calendar and a list of all “on-demand” online trainings offered. At that point, a Provider Relations Representative will schedule an orientation meeting within thirty (30) days.

During the orientation, the Provider Relations Representative reviews training materials, such as the Provider Handbook, and familiarizes the provider with links to educational materials on our provider-facing website.

Our Provider Handbook is available to all providers via the provider website and contains detailed information on claims submission and payment processing. This includes but is not limited to:

- Information regarding claims submission and payment processes, as well as an explanation of a clean claim and standards for submitting a clean and complete claim and following correct coding requirements

- Information on how to submit a claim directly through Availity or through their existing clearinghouse to Availity
--Information on how to submit a standard CMS 1500 and UB04 for web and paper claims submissions (for those providers who elect to submit claims electronically, companion guides are made available for 837i and 837p transactions)

- Information on the correct use of ANSI X12 837 transactions, CMS 1500 or UB04 forms, and Availity electronic claims submission to ensure required data for a clean claim

ONGOING TRAINING

Our ongoing trainings are designed to refresh providers’ knowledge on claims submission and payment processes, explain updates to these processes, and ensure that any new provider staff

are aware of our processes. We provide these trainings at various frequencies in three main forms: webinars, online modules, and telephonic and face-to-face sessions.

Humana conducts webinars for our LTC provider network twice a week. All webinars have an opportunity for provider questions and answers. Webinar schedules are posted in advance on our provider website, as shown in Attachment LTC 9-1. This posting includes a description of the subject matter, date, and time of the training. Among the topics reviewed during these sessions are:
- Common submission errors
- Techniques for avoiding errors
- Claims and payment processes
- Prohibited marketing and outreach activities
- Mandatory reporting under the contract
- Other provider responsibilities

Additionally, we conduct Availity training webinars twice a week. The Availity subject matter of these webinars is determined by requests from providers, trends observed by our Provider Relations department, and system or programmatic changes.

If after any webinar we identify that a provider still needs or desires additional training, we offer follow-up telephonic and face-to-face sessions.

In addition to our standing webinars, we offer online modules, available through our computer-based training system, which offer twenty-four (24) hours a day seven (7) days a week access to trainings on topics such as abuse and neglect, Medicaid orientation, LTC managed care overview, Availity, and fraud, waste, and abuse training.

==========

2. The extent to which the respondent's initial and ongoing training addresses characteristics unique to facility-based vs. community-based providers' claims submission and payment (e.g., rate changes, patient responsibility, Medicare coordination and crossover).

==========

ADDRESSING THE UNIQUE CHARACTERISTICS OF FACILITY-BASED PROVIDERS

Humana ensures that facility-based providers are educated on the appropriate use of UB-04 claims form, electronical funds transfers (EFT), and electronic claims submission methods to ensure timeliness and accuracy of payment. Additionally, our training includes specific information and requirements on facilities regarding patient responsibility, crossover payments, and AHCA annual and retroactive rate changes. Our Provider Relations Representatives work with the owners of these facilities to assess their familiarity with managed care. When a provider has less experience in managed care, we work with them closely on the payment rates and billing processes to ensure they receive timely reimbursement. We also reach out for follow-ups to ensure these providers are accurately submitting claims. For facilities that have more experience with managed care, the Provider Relations Representative continues to focus on supporting the use of existing electronic claim submission. Should AHCA implement changes to the existing nursing facility payment structure, our Provider Relations Representatives will adjust

our training and provide in-person, telephonic, and web-based trainings to educate our providers accordingly.

ADDRESSING THE UNIQUE CHARACTERISTICS OF HCBS PROVIDERS

Historically, many Home and Community Based Services (HCBS) providers were small, cash-only businesses, and some remain that way today. Due to many of them being largely unfamiliar with Managed Care, Humana has made educating HCBS providers on Healthcare Common Procedure Coding System (HCPCS) and AHCA fee schedules, and electronic claims submission a priority. Our HCBS trainings cover requirements specific to certain HCBS provider types, for instance our Assisted Living facilitiy (ALF) training and educational materials specify that ALFs are required to collect patient responsibility. Additionally, our trainings provide procedural information on how to bill utlizing authorizations that match an enrollee's plan of care.

We provide additional training and education to ensure that HCBS providers have the appropriate tools and knowledge needed to complete electronic claims submission rather than submitting CMS 1500 paper forms. During our initial training, we provide an overview presentation on the Availity portal and its functionality, that includes screen shots of shortcuts on how to submit corrected claims, how to void claims, how to set up EFT and electronic remittance advice (ERA), how to check claims status, remittance advises, and companion guides for providers who want to submit claims as 837 batches. We also provide claims guidelines for submission data requirements and guidelines on how to add units and date spans.

MEDICARE COORDINATION AND CROSSOVER

For both HCBS and facility-based providers, our claims submission and payment trainings include information on Medicare coordination and crossover. The Florida Mediciad Provider Handbook includes a description of Medicare coordination of benefits procedures. This is a regular topic of discussion during telephonic and face-to-face communications from our Provider Relations Representatives. We assist our providers with understanding plan payment and their responsibility for patient payment, as well as Medicaid versus Medicare payments. Further, because we offer Medicare Advantage and cover all eleven (11) regions for managed LTC, our Provider Relations Representatives are able to assist providers in understanding the coordination and crossover between payments.

==========

3. The extent to which the respondent will provide ongoing education and training, including problem resolution, responding to provider requests for training and how the respondent will evaluate the effectiveness of its education and training activities, including provider satisfaction.

==========

RESPONDING TO PROVIDER REQUESTS FOR TRAINING

Providers can request additional training at any time through their assigned Provider Relations Representative or through our Provider Call Center staff. These requests are then communicated to our Provider Relations team (which oversees our webinars and online training module) to create or adjust a training addressing that topic. If the provider has requested tailored support, the request is shared with the responsible Provider Relations Representative for individual telephonic or in-person support. They are specifically trained to answer questions and provide support on LTC claims, rate changes, patient responsibility, and Medicare coordination and crossover.

During the initial provider orientation, we administer an assessment to determine if providers are correctly billing for services in accordance with State guidelines and the requirements of the provider contract. We then offer trainings and support tailored to the identified areas of improvement for that provider.

Throughout the provider's contract, Humana continuously monitors each provider's compliance with clean claim submission requirements via our claims data and analytics system. This system allows Humana to track claims-related performance measures such as timeliness of claims submission, percentage of clean claims, and percentage of denied claims for each individual provider. Our claims department sends the Provider Relations team a daily LTC claim denial report which includes the denial reason, the codes billed, and the amount billed and denied. We use the report to track trends and identify needs for additional provider education on an individual or group level. If a provider is identified as requiring assistance with claims submission, our Provider Relations staff offers education either by phone or through a visit to the provider's office.

Ensuring our providers receive adequate and timely problem resolution to billing submission, answering payment questions and training requests is critical to maintaining provider engagement. Providers have access to an Avality technical support line (1-800-Availity) which is available twenty-four (24) hours a day seven (7) days a week. Upon calling, the provider will receive real-time support from an Availity representative. For non-technical issues, our Providers Relations Representatives and Provider Call Center staff are available to answer questions and resolve concerns.

EVALUATION OF EFFECTIVENESS OF EDUCATION AND TRAINING ACTIVITIES

Humana uses two primary methods to evaluate the quality and effectiveness of its claims and payment training.

First, we administer a satisfaction survey following each webinar, workshop, and group training session. This survey offers an opportunity for our providers to evaluate the quality of the training session that they attended, including the handouts and information received. The information obtained through these surveys enables our team to evaluate the quality of the training from the provider's standpoint, identify opportunities for additional education, and develop action plans to remediate any gaps identified. Additionally, this input helps our Provider Relations team to modify our training types to meet our providers' needs. For example, based on the feedback we have received from past trainings, we have added additional time to our training sessions for provider questions and one-on-one support from a Humana representative.

Second, our Provider 360 Committee reviews statewide provider trends to identify any global issues providers are encountering with submitting claims. Our Provider 360 Committee is a cross-functional team, chaired by the President of our Florida Medicaid Operations, and meets on a monthly basis. The purpose of these meetings is to review provider trends from our claims department, as well as Availity usage, quality measures, provider system usage, and provider grievances and inquiries. The committee includes representatives from our executive leadership and our Quality, Provider Relations, and Claims departments. Based on our review of claims submissions, the committee informs our Provider Relations department of any concerns or needs to implement additional claims submission training sessions for providers.

CASE STUDY: ONE-ON-ONE TRAINING TO IMPROVE PROVIDER PERFORMANCE

An ALF provider was submitting paper claims with incorrect date ranges and procedure codes. Because their claims were consistently being denied, they contacted their Provider Relations Representative and requested support. The representative visited the provider in-person and helped them register for our online claim submission portal, Availity. We walked the provider through the steps to submit original claims electronically and the provider corrected the procedure codes and date ranges for the denied claims. The provider has successfully used Availity to submit electronic claims since the training without any problems. This case study demonstrates the effectiveness of our hands-on claims submission support in improving provider satisfaction and the resulting improvement to the quality of care and supports delivered to our enrollees.

==========

4. The extent to which the respondent ensures training materials and tools are transparent and easily accessible.

==========

To ensure the transparency of our training materials and tools, we have instituted processes to collect and apply feedback from our providers. We collect feedback on our training materials through Provider Relations Representatives, provider satisfaction surveys, our Provider Services department, provider association meetings, and through interaction with Humana leadership. This input is used to inform changes in our training materials, including clarifying language, adding updated information, and providing clearer descriptions of Humana processes. As part of our commitment to transparency, all updated materials are shared with our providers online and through our Provider Relations Representatives. If we are unable to make a change requested by a provider for any reason, we communicate this to the requesting provider. Additionally, to assist our providers we offer provider training and educational materials in Spanish.

Along with ensuring transparency in our materials, we are committed to making our training materials and tools accessible to our entire network of LTC providers. During our initial orientation, we educate our providers on the tools that we have available (such as our Provider Handbook and reference guides), how they can access them twenty-four (24) hours a day seven (7) days a week online, or how to contact their Provider Relations Representative for a printed copy. Additionally, our online modules are available through our computer-based training system at all times, allowing our providers to access them at a time that is convenient for them.

These modules cover topics such as abuse and neglect, Medicaid orientation, LTC managed care overview, Availity, and fraud, waste, and abuse.

==========

5. The extent to which the training materials provided to LTC providers include information on how to access the Agency's third party claims dispute resolution contract (Maximus).

==========

The following LTC provider training materials are used to convey information on how to access the Agency's third-party claims dispute resolution contract, Maximus:

- Provider Handbook: The Florida Medicaid Provider Handbook is distributed in our provider orientation packet and is always available on Humana's website.

- Face-to-face and telephonic support: Our Provider Relations Representatives and provider call center staff will also direct providers to the State's training on Maximus, available on AHCA's website upon request. Our provider relations staff is trained annually on third party claims disputes and can assist in providing additional education to our long-term care providers.

- Provider Services Leader: Humana's Provider Services Leader is charged with oversight of all provider dispute resolution teams to ensure compliance with AHCA requirements as well as implementation of best practices across our provider organization.

To date, Humana has never received a complaint through Maximus. This speaks to the success of our process in training our providers on claims processing, as well as communication of the reason for any denied claims to our providers and our resolution process.

==========

6. The extent to which the respondent will provide training to providers on medical necessity criteria, as defined in the Contract pursuant to 42 Code of Federal Regulations 447.45 and in 59G-1.010(166), Florida Administrative Code.

==========

Provider understanding of medical necessity criteria is key to ensuring appropriate and timely service provision for our enrollees. Therefore, we use a variety of training methods to educate our providers on AHCA's definition of medical necessity, including our provider handbook and our provider orientation.

In addition to covering the definition of medical necessity, our provider orientation and ongoing trainings explain Humana's own medical necessity review process, how medical necessity reviews intersect with claims processing and payment, and how providers can provide the information needed for medical necessity reviews.

As with all of the content we include in our provider trainings, we constantly look for opportunities to refresh our providers' knowledge on this content. If our Provider 360 Committee or Utilization Management department recognize trends related to the medical necessity criteria that indicate a need for further education, we may conduct tailored training for individual providers. Following these trainings, the responsible Provider Relations Representative tracks

the provider's progress and trends monthly, offering additional training and support to respond to further needs.

==========

7. The adequacy of the respondent's notification process when system issues are identified/resolved by the respondent and/or its subcontractor(s), including notification to all impacted parties of estimated time for resolution, and updates and notification to providers prior to launching system changes that may impact billing and payment.

==========

We recognize that system issues may cause frustration or inconvenience for our provider network. Therefore, in addition to taking measures to reduce the number of Humana and subcontractor system issues, we take measures to notify all impacted parties of the estimated time for resolution as quickly as possible. When a system issue is identified that impacts our providers, this information is relayed to our providers through fax blasts, e-mails, our website, and our Availity portal. We update this information with the estimated downtime as soon as it is available. We have found that these are reliable ways to disseminate this information to our providers; thus far in 2017, the uptime of our Availity portal has been ninety-nine point seventy-eight percent (99.78%).

If we expect that an issue will last for an extended period of time and have a notable impact on claims submission, our Provider Relations Representatives reach out to our high-volume providers on a one-on-one basis to explain the situation and discuss how we can work with the them to ensure timely claims processing and payment upon resolution of the systems issue. Additionally, our Provider Call Center staff are made aware of all systems issues so they can provide accurate, up-to-date information upon receipt of a call from a provider. For example, during Hurricane Irma, we posted information on the front page of our Humana Health Care Provider webpage (www.humana.com/provider) about Humana's policy for continuity and payment of services for LTC enrollees during and outside of the disaster grace period for Hurricane Irma.

In addition to unexpected systems issues, we are committed to providing advance notification to our providers of planned systems changes that may impact billing and payment. To the extent possible, these systems changes take place at night and during the weekend, when claims submission is more infrequent. As with unplanned outages, we inform our providers of upcoming systems changes through fax blasts, e-mails, our website, and the Availity portal. Our Provider Relations Representatives also conduct one-on-one outreach to high-volume providers as warranted.

Evaluation Criteria:

1. The extent to which the respondent describes the initial and ongoing training targeted to LTC providers, including the type, location, and frequency of training.

2. The extent to which the respondent's initial and ongoing training addresses characteristics unique to facility-based vs. community-based providers' claims submission and payment (e.g., rate changes, patient responsibility, Medicare coordination and crossover).

3. The extent to which the respondent will provide ongoing education and training, including problem resolution, responding to provider requests for training and how the respondent will evaluate the effectiveness of its education and training activities, including provider satisfaction.

4. The extent to which the respondent ensures training materials and tools are transparent and easily accessible.

5. The extent to which the training materials provided to LTC providers include information on how to access the Agency's third party claims dispute resolution contract (Maximus).

6. The extent to which the respondent will provide training to providers on medical necessity criteria, as defined in the Contract pursuant to 42 Code of Federal Regulations 447.45 and in 59G-1.010(166), Florida Administrative Code.

7. The adequacy of the respondent's notification process when system issues are identified/resolved by the respondent and/or its subcontractor(s), including notification to all impacted parties of estimated time for resolution, and updates and notification to providers prior to launching system changes that may impact billing and payment.

Score: This section is worth a maximum of 35 raw points with each of the above components being worth a maximum of 5 points each.

Attachment LTC 9-1: LTC Provider Training Dates

Humana Long-Term Care Plan offers training for providers regarding managed long-term-care (MLTC) plan requirements, processes and procedures. You can contact the provider contracting specialist in your region to set a time and date for training. You also can attend one of our scheduled webinars by clicking its registration link below.

For questions related to registration, please contact provider relations at 1-561-665-4435 or email LTCProviderrelations@humana.com.

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

LTC SRC# 10 – Claims Submission and Payment (Statewide):

The respondent shall describe how it will ensure that electronically-submitted nursing facility and hospice claims processes will enable claims payment within ten (10) business days after receipt of clean claims. (See Section 409.982 (5), Florida Statutes) The respondent shall provide the specific data metrics it will use to ensure compliance with this provision.

Response:

Timely payment is critical to reducing our provider's time spent on administrative issuesand enabling their focus on delivering high-quality care to our enrollees. Timely payment is also key for Humana as we work to maintain a strong relationship with providers who care for some of our highest need enrollees. Our broad and deep experience in serving multiple lines of businesses has allowed us to design, refine, and deliver sophisticated claims processing systems and internal reports to continually monitor our claims payment timeliness (among other metrics) with particular attention provided to nursing home and hospice claims. Through our systems, we can monitor our claims through all phases in their lifecycle and review them at any point as they are being processed through real-time and drill-down reports. We have also designed reports and additional monitoring tools to ensure that our claims system is properly functioning and accurately processing and paying claims.

We strive to ensure one hundred percent (100%) of all nursing home and hospice electronic claims are processed within ten (10) business days. In 2016, nearly ninety-nine percent (99%) of our electronic clean claims were paid within ten (10) business days. We have continued this trend thus far in 2017.

In the past three (3) years, we have enhanced our claims process and have supported Long-term Care Providers in electronic claim submission by implementing an online provider engagement portal, Availity. We are continuing to support nursing home and hospice providers with the latest and most advanced tools, while supporting our smaller providers who may not have sophisticated billing capabilities. We have built easy-to-use direct data entry capabilities enabling our providers to key in fields to submit a claim for processing, eliminating the need for use costly tools to create an 837 file. We also accept claims via batch submission from a number of clearinghouses and billing agencies. We also accept business-to-business claims submissions directly to our electronic Hub (eHub) which is the gateway to our claims processing system. Our efforts to support our provider's accurate and complete submissions has helped increase the rate of clean claims.

In addition, during administration of the current contract, we have invested heavily in order to streamline our claims processing and payment process. LTC claims have been mitigated to our internal Claims Adjudication System (CAS), enabling our claims teams to utilize tools for inventory tracking, workflow, adjudication logic, internal controls, and financial recoveries. As a result of this increased integration, we do not foresee additional system changes to support operation as a Florida comprehensive plan.

==========

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1. The extent to which the respondent describes the systems that will be used to measure timeliness of claims payment.

==========

Humana diligently tracks key claims payment metrics to ensure providers are paid in a timely fashion. Humana has the systems and processes in place to ensure that we pay clean nursing facility and hospice claims within the deadline in Florida Statutes §409.982(5) of ten (10) business days. We closely track all nursing facility and hospice claims on a real-time basis, from the time we receive them until they are paid. Humana's monitoring systems are designed to track claims through all phases in the lifecycle of each claim and review them at any point during processing. Our systems offer automated and ad-hoc reporting that can be drilled down to a claim level, claims processing system level, or aggregated in other ways. On a routine basis, responsible departments monitor key metrics to validate all claims are being processed accurately and are on track for timely payment. These metrics roll-up into daily, weekly, and monthly dashboards that are reviewed and assessed by multiple departments across the company via cross functional forums, including Claims, Encounters, Provider Relations, and Regulatory Compliance.

Humana has a dedicated corporate LTC Claims Operations Performance Manager responsible for monitoring only LTC claims. The LTC Operations Performance Manager works with operational stakeholders and our local market to share reports and engage in root cause identification and process improvement discussions on a routine basis. Our Performance Manager is an active participant on Florida Medicaid Local Market Operating Committee meetings, reporting out on Florida LTC claims performance metrics and informing leadership of process improvement opportunities.

DESCRIPTION OF REPORTS THROUGHOUT CLAIMS LIFECYCLE

Humana uses multiple systems throughout the lifecycle of claims payment to measure timeliness, including claims clearinghouses, processing system, and workflow system.

Claims are received and undergo an initial review by a range of clearinghouses. We have designed proactive reporting mechanisms, whereby Humana receives reports from our trading partners every four (4) hours with the number of claims processed and the number of claims that are still in queue. Through these reports we can monitor for the volume of claims to anticipate for and identify system issues when lower than expected volumes are reported; allowing us to monitor for systemic issues and anticipate volume to ensure timeliness of processing of all claims.

To support providers' ability to submit clean electronic claims, we have designed a claims feedback tool for our providers to receive real-time feedback by submitting key elements of their 837 file. Availity, Humana's preferred clearinghouse and provider engagement portal, allows our providers to test whether a claim will reject for any reason through the Claims Code Editor. This tool offers providers guidance on how to improve coding and helps reduce instances in which claims are denied or marked as dirty.

eHub, our front end system that receives all claims from our Availity and other trading partners, performs HIPAA edit validation and member eligibility verification and routes successful claims to the Claims Adjudication System (CAS). Throughout our claims processing system, we have metrics to ensure all claims submitted through eHub are received and (for the claims that have passed all edits within eHub) are submitted to CAS in a timely fashion. We monitor eHub exception reports, as well as daily and weekly performance reports, to assess for processing issues in real-time, alerting our Claims Processing Organization of systematic issues that need further attention.

Claims may require pending if they do not have all the required information, including authorizations for services delivered. These claims are pended in CAS to ensure they are processed with all the correct information. We have also identified common pend codes for claims to ensure the maximum number of nursing facility and hospice claims that are submitted electronically can be paid within ten (10) days when clean. Humana closely monitors this process and maintain a status record for all open claims for the purpose of real-time monitoring to offer status updates to providers on their claims in an easy-to-find fashion. MACESS is our primary operational workflow system that queues all pended claims to the appropriate and qualified team, where one or more associates work the claims on a first-in, first-out basis. We also maintain a historical record of all processed claims for ten (10) years, offering detailed explanation of the life of a particular claim and notes passed between our departments to resolve any issue associated with adjudicating the claim.

An additional key monitoring and strategy tool our claims team utilizes are the real-time reports we can generate from MACESS. MACESS is a workflow processing system that delivers pended claims into queues based on a predetermined hierarchy. Electronic, clean nursing facility and hospice claims that have not been paid by day seven (7) are escalated for review and root cause analysis. Our Team Leads review each pend code queue for these outstanding claims and ensure we have adequate staff to work these claims and ensure payment by the tenth day of the claim submission date.

REGULAR MONITORING AND OVERSIGHT OF NURSING FACILITY AND HOSPICE CLAIMS

We have equipped our Front Line Associates and Team Leads with smart analytics to continuously monitor claims performance. We have QlikView business intelligence dashboards which include nursing home and hospice claims metrics on auto-adjudication rates and claims processing cycle times.

These reports can be filtered by facility (nursing home and hospice) and by reason for pending to assess the volume impact of that pend code and the age of claims that have pended. These dashboards pull from our source of truth, the Enterprise Data Warehouse (EDW), and offer the ability to support any root cause analysis through additional drill-down analytics.

On a daily basis, these reports are reviewed by our Front Line Associates and Team Leads to ensure our claims process is functioning optimally. On a weekly basis, Team Leads of each department review dashboards and performance reports to ensure

appropriate assignment of resources and to identify issues to initiate root-cause analysis. Any issues that require the attention of our Information Technology Team or our Florida Leaders are brought up with the respective teams immediately to identify root causes of any issues and resolve matters in a rapid fashion.

On a monthly basis, summary reports showing open and recently resolved issues are developed and shared with the respective teams. Our Local Market Operating committee brings together each of our operational departments to discuss performance against contract Service Level Agreements (SLA) and national benchmarks. Additional drill-down capabilities and root-cause analyses are conducted using the previously mentioned business intelligence dashboards. Information gathered and actions identified from these meetings are reported to our Medicaid Compliance Committee, Quality Improvement Committee, and Corporate Operational Governance Committee. These cross-functional forums include our Florida leadership team and provide an avenue to discuss claims and encounter processing metrics, identify opportunities for improvements, and assess process improvements. Identified issues are immediately addressed during these meetings, with follow-up meetings to rapidly address low-performing metrics. Associates from our Corporate Claims Processing Teams also participate in these meetings.

==========

2. The extent to which the respondent's data metrics demonstrate an ability to comply with Section 409.982(5), Florida Statutes.

==========

Humana closely tracks all claims submitted by nursing facility and hospice providers to determine if we have paid them within ten (10) business days as required by section 409.982 (5), Florida Statutes. In 2016, we achieved ninety-nine point eight nine percent (99.89%) compliance with this requirement attesting to the success of systems and process enhancements implemented. 2017 year-to-date performance is in excess of ninety-nine percent (99%), and moving forward, we will continue to strive for payment of one hundred percent (100%) of clean nursing facility and hospice claims within ten (10) business days.

==========

3. The extent to which the respondent describes how it will work with providers when the timeliness standards are not met.

==========

Humana understands the importance of paying claims in a timely manner. We have designed reports to inform and pre-empt any clean, electronic nursing facility and hospice claims that may pay outside the timeframes of the contract so that we can communicate and inform the provider about the late payment and anticipated payment date. When Humana is unable to meet a state claims payment deadline such as the one for nursing home and hospice claims, our claims processing department will provide a daily Retail Services Operations Compliance (RSOC) report of clean electronic nursing facility and hospice claims by age. The claims are benchmarked to seven (7) business day and ten (10) business day thresholds.

To offer a proactive communication strategy, our Provider Relations Department will communicate the status of claims that are at day eight (8) in the lifecycle. Claims that are lagged at these timeframes are identified for outbound telephonic outreach by our Provider Relations Team and will be tracked in our provider engagement tracking tool, Customer Relationship Managers. The Provider Relations Representative will offer transparency to the provider as to the status of the claim and will affirm that we will work the claim through our process with the goal of paying it within the ten (10) business day timeframe. A follow-up phone call will be made to providers for claims that have not been paid within ten (10) business days, with an anticipated date for payment. These phone calls will be logged in our system to track and monitor completeness of communication.

Humana has worked hand-in-hand with our nursing facility and hospice providers to ensure timely payment of claims. Our working relationship is exemplified by Dana McHugh, Executive Director of FAHA Health and Service, “Our experience working with the Humana provider relations team has been consistently professional and positive. The FAHA H&S providers greatly appreciate Humana’s common sense provider and member centric approach.”

ROOT-CAUSE ANALYSES OF CLAIMS PAYMENT LAGS

Humana also has a structured mechanism to review trends in our claims metrics and report claims issues to our cross-functional Provider 360 Committee. The Provider 360 Committee is also an avenue for our Florida market team and our corporate resources to discuss processes and performance to achieve our overarching claims goals. The sole objective of the Provider 360 Committee is to review performance measures that contribute to our provider’s experience with Humana. Claim Timeliness reports are reviewed during Provider 360 Committee meetings to assess the need for internal process improvements, additional provider education, and to support our efforts to ensure provider satisfaction. During these meetings, information reported from our claims performance are discussed cross-functionally, with perspective shared by our Provider Relations Team and local market staff who then offer additional strategies and avenues to improving performance. As a result, our Claims Team and Provider Relations Team work closely together to identify providers who have difficulty submitting claims and providers who have submitted claims with higher than expected levels of denials. Our Claims and Provider Relations Team also review trended denial reports on a weekly basis, which can be drilled down to the provider level. During these discussions, the Provider Relations Team also identifies change of ownership of existing providers to assess how well their claims submissions are being processed and to identify if they have applied for a new provider number. Based on findings from this analysis, the Provider Relations Team offers targeted education.

CONTINUAL PARTNERSHIP TO IMPROVE PAYMENT TIMELINESS

Additionally, our Provider Relations Team has created workgroups with our providers. Upon request staff from the provider’s office as well as our Claims and Provider Relations Team work one-on-one to conduct root-cause analysis and offer provider education to resolve claims processing issues in an effective and manner.

Humana participates in the Florida Association of Health Plan's forums and meetings to discuss operational claims payment opportunities. Information from the meetings is shared with our Provider Relations Team. Humana's LTC Operations Director and Provider Relations Team attend the Florida Association of Hospice and Palliative Care meetings where claims issues are discussed. During these meetings, we have an opportunity to engage with our key providers to discuss claims payment issues or provider issue trends in an effort to improve claims payment timeliness.

Humana has a strong working relationship with our major clearinghouses to address quality of claims submission. Most recently, we have worked with our major clearinghouses to educate them about the complete submission of the service dates required as part of nursing facility and hospice claims.

To address the administrative burden of submitting, waiting, and receiving approvals on cross-over claims from both the Centers for Medicare and Medicaid Services and from Humana separately, we have implemented an initiative to streamline the process for our providers so that claims are submitted only once. Humana is coordinating the transmission of the provider claim along with Coordination of Benefits data to Emdeon using Medicaid COBA ID, which is shared with our systems for processing. This process creates efficiencies within the systems between payers and reduces the administrative and monitoring burden on our nursing facility providers.

==========

4. The extent to which the respondent ensures that billing systems platform changes will be limited.

==========

Humana offers a unified billing system platform for all medical and Long-term Care claims. Humana has no plans to make any significant changes to our preferred clearinghouse and provider engagement portal, Availity, or our claims processing platform, Claims Adjudication System (CAS), in the foreseeable future. Humana understands the disruption that can occur when a payer transitions to a new billing system platform and the impact on providers. While we continually update the logic and codes we have designed with Availity and built into CAS, we are very cautious to test these changes thoroughly before they are implemented.

Evaluation Criteria:

1. The extent to which the respondent describes the systems that will be used to measure timeliness of claims payment.

2. The extent to which the respondent's data metrics demonstrate an ability to comply with Section 409.982(5), Florida Statutes.

3. The extent to which the respondent describes how it will work with providers when the timeliness standards are not met.

4. The extent to which the respondent ensures that billing systems platform changes will be limited.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

E. DELIVERY SYSTEM COORDINATION

LTC SRC# 11 – Case Vignette (Statewide):

The respondent shall review the below case vignette, which describes potential Florida Medicaid recipients. Note: The vignette included below is fictional.

> *Alisha is a 35-year old single mother who suffered from a major car accident when she was 27 years old, which resulted in incomplete paraplegia. Until she received Medicaid coverage, Alisha was unable to afford the recommended level of physical and occupational therapy treatments that would have assisted her in maintaining maximum mobility in her upper extremities. As such, Alisha requires assistance with almost all self-care tasks. Alisha has suffered from clinical depression since her accident. She is cognitively intact and since starting individual therapy sessions with a licensed mental health clinician, she has started to express a desire to be more engaged in her community. Alisha has a primary care physician (who specializes in internal medicine) and is also seen by a neurologist. Alisha's physician has ordered ongoing maintenance physical therapy; she also receives personal care services and durable medical equipment. Alisha gave birth to a son, Noah, one year before the accident. Alisha's mother assists with Noah's care as often as she can, but her mother recently accepted a job in a different city, which will mean Alisha will have less supports (both for herself and Noah). Alisha and Noah currently live with her mother. Because her mother is moving, Alisha has been looking for a new place to live, but she is having trouble finding a home that is functional for her needs. Since Alisha is experiencing changes in her support system and living situation, she requests assistance from her case manager.*

The respondent shall describe its approach to coordinating care for an enrollee with Alisha's profile, including a detailed description and workflow demonstrating notable points in the system where the respondent's processes are implemented:

a. Comprehensive Assessment;
b. Caregiver Assessment;
c. Person Centered Care Planning;
d. Transition Planning;
e. Disease Management;
f. Utilization Management/Service Authorization; and
g. Grievance and Appeals.

Where applicable, the respondent should include specific experiences the respondent has had in addressing these same needs in Florida or other states.

Response:

ALISHA

Alisha is a 35 year old, disabled, single mom who has been living with her mother after having an accident, sustained at 27. This accident left Alisha with a T-10 incomplete paraplegia. Alisha

has control of her hands and arms, and good control of her abdominal muscles and trunk. While things are clearly very different than before her accident, she still leads a very fulfilling life. She has an active nine year old son, Noah, who her mother has been helping with since the accident.

Alisha enrolled in Humana's comprehensive plan eight months ago and is established with the Long Term Care (LTC) program. Alisha has a strong relationship with her case manager, "Nina", which is evident in her case record in Humana's proprietary clinical workflow system, CareHub Clinical Guidance Exchange (CGX) [1]. CGX supports an integrated and comprehensive approach, which gives Nina the ability to see all applicable elements of Alisha's record. This includes medical, behavioral health, long term services and supports, pharmacy, and utilization and care management in one system. Nina maintains monthly contact, keeps Alisha's assessments and individualized plan of care (POC) updated, and knows Alisha and her current status very well.

Nina is part of a case management team that includes a Transition Coordinator, Manuel. Manuel is an expert on community based services, advocacy, nursing, social work, and housing. He has attended additional training in transition services that include home modifications and housing options available in his area. Manuel will be able to support Alisha in applying for subsidized or low income housing, moving assistance, and utility assistance (including her deposits and ongoing subsidies), all while keeping her preferences at the forefront.

DAY 1: ALISHA'S MOTHER IS MOVING; ALISHA CALLS NINA

Alisha calls Nina and tells her that her mother is moving within the next two months. Alisha says she has been looking for a place to live, but she is having difficulty finding a place that will accommodate her functional limitations. She would like to stay in her current neighborhood or at least in the same school district so Noah does not need to change schools. Nina knows that one of Alisha's primary goals is to be more involved in the community and, more specifically, at Noah's school. Nina also knows how much support Alisha's mother provides for her and Noah and that Alisha wants her mom to be able to speak with Nina. Nina reviews Alisha's case record to ensure there is a current release of information (ROI) for her mother and schedules a face-to-face visit due to Alisha's significant change in social circumstances.

DAY 5: NINA VISITS ALISHA

Nina visits Alisha within five days to review and update the comprehensive assessment. Nina completes the caregiver assessment on Alisha's mother. With this information, Nina and Alisha work together to start on Alisha's transition plan and create a "draft" POC to be implemented when Alisha's mother moves. Nina learns Alisha's mother will help support her by letting them stay in the house through the end of the school year (in four months).

In order to update her "draft" POC, Nina addresses upcoming changes and updates Alisha's current medical, functional and behavioral health status, as well as her strengths and needs. After her mother leaves, Alisha will need more personal care hours, more help with Noah, and a new place to live that will accommodate her and Noah's needs. Nina educates Alisha on Noah's

Medicaid benefits, as he may be eligible for additional services (like meal preparation) due to Alisha's disability. Nina discusses the importance of Noah's health care and provides resources for Alisha to access an Early and Periodic Screening, Diagnostic and Treatment (EPSDT) periodicity schedule. Nina informs Alicia that Humana will support her continuity of service with her current providers after she transitions to her new location and makes sure that all service providers are informed of Alisha's new address and date of transition.

Nina knows Alisha is in individual therapy sessions for clinical depression and has been doing very well. She encourages Alisha to discuss her mother's move with her licensed mental health clinician and also encourages her to keep these sessions as a priority, even with all the activity around the move.

Nina updates Alisha's current POC with her newly identified goals to include increasing her independence, finding a new house or apartment, accessing transportation, and finding after school care for Noah. Based on Alisha's upcoming changes, Nina and Alisha identify participants of her Multidisciplinary Team (MDT). Participants include Alisha, Nina, the Transition Coordinator Manuel, as well as her primary care physician (PCP), neurologist, physical and behavioral health therapist, Humana's Medical Director, a utilization care coach, and Alisha's mother. The MDT provides input and feedback as Alisha's POC is reviewed and updated. The POC updates are documented in CGX and provided to Alisha and her PCP. They can also be accessed through our member and provider portal.

DAY 6 – 49: MONTHLY CONTACT WITH ALISHA

In anticipation of Alisha's change in residence, frequent outreach will be necessary. Through Humana's integrated system, Nina and Manuel easily see all contacts, visits, and updated documents and have the ability to message each other. All visits and contacts are scheduled with Alisha at the end of each interaction and documented in CGX. Each month Nina discusses timely service delivery, satisfaction of services, anticipated service disruptions, and any changes in condition or upcoming appointments. With Alisha's mother's support, she is able to stay in their home until school ends.

DAY 50: HOME MODIFICATIONS

With Manuel's assistance, Alisha secures a new home that allows for home modifications. Nina coordinates with Alisha's PCP to obtain a prescription for a Physical Therapy (PT) evaluation to assess Alisha's new residence for home accessibility needs. Alisha already has many assistive devices that allow her to independently care for herself, including a motorized wheelchair. After completion of the PT evaluation, the recommendations for home modifications include installation of a portable wheelchair ramp, two shower grab bars, a hand held shower, and widening of the bathroom door. Nina collaborates with Alisha's landlord to obtain written consent to allow for the recommended home modifications. Nina explains to Alisha that home modification requests are routinely processed through utilization management for medical necessity determination and are approved within seven calendar days; and that if the request is denied, she will have the right to file an appeal. Alisha's home modifications are approved and three contractors are selected for estimates. A contractor is selected based on its reputation, past work, quality of reviews, cost, and timeliness of completion. Alisha is notified of the

selected contractor and is informed that the modifications are expected to take two to three weeks. Once the date is confirmed, all providers are notified of the transition date to ensure there are no gaps in services, including Alisha's PT maintenance therapy. Long Term Care homemaker/chore benefits will be utilized to assist Alisha in packing and cleaning of her home. Manuel assists in locating movers for Alisha. Alisha and Nina also discuss how great it is that the new home is within the same school district and the bus runs a route following after-school care for Noah.

DAY 70: POC FINALIZATION AND SERVICE AUTHORIZATION

Nina updates and finalizes Alisha's POC based on her assessment and utilization tools. The need for additional services is determined based on standard of care criteria and medical necessity. Humana utilizes a risk ranking tool to determine service hours based on individual needs such as bathing, dressing, grooming, meal preparation, and the amount of time needed to perform these tasks. The fact that Alisha's mother is no longer able to provide caregiving support is factored into her service hour determination. Upon completion of this needs assessment, Alisha is assigned a risk ranking of moderate, with a range of potential service hours using a standardized tool as a guide. Nina triggers CGX to automatically send the updated POC to Alisha's PCP.

Nina enters authorization requests in CGX with the identified service hours and sends them for utilization review. Should the requested hours be greater than the recommended range of service hours, an assigned Utilization Care Coach will complete an additional review and base the approval on medical necessity. If the Utilization Care Coach determines the requested number of hours require additional review, a medical director will be asked to make the final determination. Only a medical director has the authority to deny these requests.

Upon approval of the requested service hours, CGX automates a faxed authorization to the existing service provider. Nina explains to Alisha, that in the event the request for service hours is denied, Alisha would receive a notice of adverse benefit determination letter, providing information on grievance and appeals and her rights to a Medicaid Fair Hearing. Nina would provide assistance with this process if Alisha chose to file an appeal. If Alisha decided to appeal the decision, she would receive a written acknowledgement from Humana within five business days from the receipt of her appeal. She would be advised that her request would be reviewed and a decision would be communicated to her within 30 calendar days. Alisha's appeal would be submitted through the clinical appeal review process and would be reviewed by a medical director not previously involved in the original decision. Alisha would be notified of the decision of her request for appeal, both verbally and in writing. Should the adverse decision be upheld, she would be advised of her right to a Medicaid Fair Hearing. In this instance the requested hours were determined to be medically necessary and all Alisha's hours were approved.

Nina also explains to Alisha that if at any time she would like (or requires) a change in service providers, Nina will make the necessary referrals to ensure there is no disruption in care. Nina also informs her that she would address any service provider complaints within 24 hours and, if she is unable to resolve them, would facilitate the process for filing any grievances identified by Alisha. She tells Alisha that this includes assisting with the coordination of new Home and Community Based Service (HCBS) providers, a new PCP, or new behavioral health services. She will also guide Alisha in updating her address with relevant sources like her pharmacy,

service providers, specialists, physical and occupational therapists, and durable medical equipment companies. Along with these updates, Nina assists her in modifying transportation arrangements and identifying supportive community resources within her new community. Humana case managers have access to a number of resource directories to help locate services and resources that may not be covered by the comprehensive plan. These include the Humana Community Resource Directory, Local 2-1-1 resources and online local community resources. Nina tells Alisha about her transportation benefit and her enhanced transportation benefits for additional transportation needs. Nina assists Alisha in scheduling her next appointments.

DAY 90: ALISHA'S NEW HOME

Within five days of Alisha's move into her new home, Nina conducts a face-to-face visit. In addition to finalizing her POC, Nina assists Alisha with her disaster preparedness and emergency plan by helping her notify emergency management services of Alisha's circumstances and registering her for a special needs shelter and transportation in case of emergency evacuation. Nina obtains Alisha's electronic signature on the updated POC and provides a copy to her. Additionally, the POC is automatically sent to Alisha's PCP from CGX. Nina lets Alisha know that she and her physician can also access the POC on Humana's member and provider portal. Nina calls within fourteen (14) days to confirm Alisha's providers are delivering services as authorized and Alisha is satisfied with the services being provided.

DAY 91 – 110: ALISHA'S NEW SURROUNDINGS & SUPPORT SYSTEM

Nina continues to monitor and reassess Alisha's needs as she continues to adapt to the many changes in her life and with her support system. Nina is able to identify and address Alisha's needs through the following activities:

- Annual and change in condition medication reviews

- Reviewing and coordinating application completion for Medicaid renewal

- Ongoing education of plan benefits

- Resources simplifying self-health management such as telemedicine

- Medical transportation and mail order pharmacy services

- Assessing and educating Alisha on medical risks specific to her paraplegia, like urological and digestive complications, skin care, and feeding issues

- Education and information on breathing and coughing techniques to maintain good airway clearance

- Offering information on preventive measures for herself like mammogram and cervical cancer screenings

- Providing relevant health education to promote ongoing health literacy and access to care emergency department and urgent care diversion and self-management planning

At this time, Alisha does not qualify for any disease management programs, but if she were identified as needing referrals through re-assessment, self-referral, or the Humana Medicaid Risk scoring algorithm, Nina would encourage participation and submit the referral. Nina assists Alisha in identifying other possible avenues of coverage and benefits, such as Supplemental Security Income to support benefit and income maximization. Nina will quickly find out if Alisha has had to visit the emergency room through the Health Information Exchange – Electronic Notification System (HIE-ENS) daily report. Nina also receives alerts through CGX of a hospital admission or discharge. Upon finding out about a hospital admission Nina will suspend services and generate a notice of adverse benefit determination letter (NOABD), which is sent to Alisha and the provider.

Nina tells Alisha about Humana's One Medication Experience which provides her access to create and update all prescribed medications and supplements within a feature called One Medication List (OML) by accessing her profile via computer or mobile application. This application not only gives Alisha the ability to manage her own medical information, but reconciles her medication list within CGX, establishing a single source of truth that can be utilized by Alisha and her Humana clinical care team.

As Alisha's needs and priorities change Nina will provide resources and supports as needed to support these changes. Nina will also be on the look out for any changes in health care status as well as with behavioral health issues that may require coordination with clinical and behavioral health specialists. CGX allows Nina to complete real time updates to assessments, POC and service needs while meeting Alisha in her home. The system also permits electronic signature capture and in home printing for providing POC copies to Alisha at the time of visit rather than depending upon delivery via post mail. The system also allows Nina to send a copy of the updated POC to Alisha's PCP. Recent enhancements now allow for the generation of authorization notices to Home and Community Base Service (HCBS) providers. Therefore, service need changes and progress notes can be captured, updated, and shared electronically for faster implementation.

DAY 115 – 159: CONTINUING MONTHLY CONTACT

Nina maintains monthly contacts and has open discussions with Alisha to find out how she feels her POC is working. Together, they review any barriers to the achievement of her goals and expectations and make POC changes as needed. These contacts may occur more frequently if Alisha experiences a significant change in her health, care needs, or circumstances. Nina always likes to be updated on Noah's activities and school progress and encourages Alisha to contact her if she has any problems, questions, or concerns.

DAY 160: NINA'S QUARTERLY FACE-TO-FACE VISIT WITH ALISHA

After three months in her new home, Nina visits Alisha and finds her adapting quite well to her new environment. Alisha expresses an interest in becoming more engaged in her community and involved with Noah's school and activities. Nina assesses Alisha's progress with her

existing behavioral health provider and explores additional community supports closer to her new home to empower Alisha in self-managing her care. Maintaining this added support and connecting her with others will be important for Alisha as she manages her symptoms of depression. This includes supporting Alisha's interest of being more involved with Noah, and his school. Alisha identified increased independence as one of her goals, which includes the ability to care for her son as essential to her goal. Nina reminds Alisha about Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) for Noah and links Alisha to community resources, support groups, and volunteer opportunities.

In addition to Alisha's goal to be more involved with Noah, she desires to be more productive and Noah's school would like her to volunteer. Nina provides community resources to help Alisha access these services, including an opportunity for vocational rehabilitation. Noah's school welcomes Alisha as a volunteer.

Alisha contacts Nina after this recent visit and expresses her gratitude for her help and support during her transition, which at times felt overwhelming to her. Alisha said she is now more optimistic and less apprehensive about her and Noah's future. Alisha is more involved in making decisions about her life and her care. She volunteers weekly at Noah's school and participates in all therapy sessions and treatments, and is compliant with her medications and doctors' appointments. Alisha is the happiest she has been since her accident and visits with her mom monthly.

Footnote

[1] CareHub is Humana's enterprise solution for complete program integration for our provider community and enrollees. CGX supports an integrated, comprehensive approach to medical, behavioral health, pharmacy, utilization, and care management. Full system integration allows our care team the capability to identify potential enrollees for programs, document gaps in care, automate care planning, monitor plan compliance, and identify opportunities for intervention.

Evaluation Criteria:

1. The adequacy of the respondent's approach in addressing the following:

- **(a)** Description of the sources of data/information that would be utilized in the assessment process, including timeframes for completion;
- **(b)** Application of the respondent's case management risk stratification protocol, including a rationale for the decision;
- **(c)** Application of a person centered care planning approach;
- **(d)** Identification of service needs (covered and non-covered) and a description for service referral processes that the plan has in place;
- **(e)** Description of the interventions and strategies that would be used to facilitate community integration and transition planning;
- **(f)** Application of coordination protocols utilized with other insurers (when applicable), primary care providers, specialists, other service providers, and community partners particularly when referrals are needed for non-covered services;

(g) Description of the assessment of provider capacity to meet the specific needs of enrollees;

(h) Identification of strategies that promote self-management and compliance with the plan of care;

(i) Application of utilization management protocols (i.e., identification of the criteria that will be utilized, processes to ensure continuity of care, etc.); and

(j) Application of strategies to integrate information across the plan and various subcontractors when the respondent has delegated functions.

2. The extent to which the respondent's workflows/narrative descriptions include timeframes for completion of each step in the care planning process.

3. The extent to which the respondent demonstrates innovative processes that it has in place to enhance communication among all service providers and subcontractors (for delegated functions).

4. The extent to which the respondent demonstrates experience providing services to enrollees with complex medical needs and provide evidence of strategies utilized that resulted in improved health outcomes.

5. The extent to which the respondent demonstrates a system of coordinated health care interventions designed to achieve cost savings through the organized and timely delivery of high quality services.

6. The extent to which the respondent describes innovative strategies to integrate information across all systems/processes into its workflows.

Score: This section is worth a maximum of 75 raw points with each of the above components being worth a maximum of 5 points each.

Attachment LTC-11-1: Alisha's Visual Story Guide

We have provided this document as a visual guide to our response. The key timelines from our core response are duplicated here in a format intended to supplement and enable a comprehensive review of Humana's approach to Alisha.

About Alisha:

Alisha is a 35-year-old, disabled single mom who has lived with her mother since an accident she had at 27, which left her with a T-10 incomplete paraplegia. She has suffered from clinical depression since her accident and sees a licensed mental health clinician. She has an active nine-year-old son, Noah, who her mother has helped with since the accident. However, Alisha's mother recently accepted a job in another city, meaning she'll have less support for herself and Noah and must secure new housing that is functional for her needs. Established with the Long-term Care (LTC) program, Alisha enrolled in Humana's comprehensive plan eight months ago and is requesting assistance from her CM, "Nina."

Key Components of Care

- **Ongoing, Highly Engaged CM-Enrollee relationship** for open, frequent contact, and timely access to support, especially as Alisha's situations change
- **Dedicated Transition Coordinator (TC)** with expertise in community-based services, advocacy, nursing, social work, and housing, including home modifications
- **Plan of Care (POC)** continuously updated to include Alisha's needs, accessible by her Multidisciplinary Team (MDT)
- **Keeping Alisha's newly identified goals at forefront,** helping connect her to community organizations, and opportunities to get more involved with her son

Alisha's Support System

- **Nina** CM
- **Manuel** TC
- **Alisha's Mother**
- **Alisha's MDT**
- **Noah** (Alisha's son)

Alisha's Timeline:

1 — Long-term Care (LTC) Status
Established with Humana's LTC program, Alisha enrolled in Humana's comprehensive plan 8 months ago.

2 — Day 1: Housing Needs Change
Alisha notifies Nina that she needs a new place to live; Nina schedules a face-to-face visit to discuss and determine necessary changes, as well as any updated goals.

3 — Day 5: Review & Update Comprehensive Assessment
Nina completes caregiver assessment with Alisha's mother and creates a draft POC, including resources for Alisha's son to access an EPSDT periodicity schedule.

4 — Days 6-49: Monthly Contact
Nina and TC Manuel use Humana's proprietary workflow system, CGX, to stay in contact; Nina discusses timely service delivery, satisfaction of services, anticipated disruptions, and any changes of condition with Alisha.

5 — Day 50: Secures Home That Allows For Modifications
Manuel assists in securing a new home for Alisha; Nina helps her obtain a prescription for a PT evaluation of the home's accessibility. Home modifications are approved, a contractor is selected, and providers are notified of transition date.

6 — Day 70: POC Finalization and Service Authorization
Nina determines needs for additional service hours using risk ranking tool and needs assessment; Alisha is assigned a risk ranking of moderate. Nina informs Alisha on next steps to include updating providers with her new address, modifying transportation requests, identifying community support, and scheduling her next appointments.

7 — Day 90: New Home
Nina visits Alisha within 5 days of moving into her new home and assists her with disaster preparedness and emergency planning. Alisha electronically signs her finalized POC. Nina follows up in 14 days to ensure providers are delivering services as authorized.

8 — Day 91-110: New Support System
Nina monitors and reassesses Alisha's needs as she adapts to her new surroundings through multiple processes: annual and change in condition medication reviews, ongoing education of plan benefits, medical transportation, and mail-order pharmacy, among others.

9 — Day 115-160: Continuing Monthly & Quarterly Contact
Nina maintains monthly contact around the effectiveness of her POC, and has quarterly face-to-face visits to check in while also providing community resources for Alisha.

LTC SRC# 12 – Case Vignette (Statewide):

The respondent shall review the below case vignette, which describes potential Florida Medicaid recipients. Note: The vignette included below is fictional.

> *Mr. and Mrs. Smith are a husband and wife, both in their early 70s. They have an adult daughter who lives in State. The Smiths are both enrolled in Medicaid managed care and are dual-eligible for Medicaid and Medicare. The Smiths are enrolled in Medicare FFS. Mr. Smith is enrolled in a Managed Medical Assistance plan, while Mrs. Smith is newly enrolled in your LTC Plus Plan or Comprehensive Plan. Mrs. Smith has moderate to severe dementia that is progressing. She is able to walk with the aid of a walker and she can feed herself. However, she needs assistance with bathing and dressing, and she needs supervision due to wandering. Mrs. Smith was admitted to the hospital three months ago for pneumonia but was discharged to a nursing facility, as her husband was unable to care for her on his own anymore. Mrs. Smith would like to move home. Mr. Smith would like for her to move home, but he is concerned that he cannot meet all of her needs on his own. Mr. Smith has a single, below-the-knee amputation, but is otherwise healthy. Their small home is cluttered, and they have many pets. Mr. Smith says he is overwhelmed because she needs more care than he can provide by himself.*

The respondent shall describe its approach to coordinating care for an enrollee with Mrs. Smith's profile, including a detailed description and workflow demonstrating notable points in the system where the respondent's processes are implemented:

a. Comprehensive Assessment;
b. Caregiver Assessment;
c. Person Centered Care Planning;
d. Transition Planning;
e. Disease Management;
f. Utilization Management/Service Authorization; and
g. Grievance and Appeals.

Where applicable, the respondent should include specific experiences the respondent has had in addressing these same needs in Florida or other states.

Response:

MR. AND MRS. SMITH

Mrs. Smith is a new enrollee to Humana and brand new to the Long-term Care (LTC) program after experiencing an acute episode of pneumonia requiring hospitalization, inpatient rehabilitation, and subsequent placement into a nursing facility (NF). She has a history of moderate to severe dementia, and has been known to wander. She uses a walker for assistance and can feed herself. Enrollees like Mrs. Smith benefit from Humana's proven success with transitioning enrollees back to the community. Since 2014,has helped more than one-thousand seven hundred (1,700) LTC enrollees transition from institutional settings back into the community. (See Attachment LTC 12-2 – Transitions Graph).

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

DAY 1: MRS. SMITH'S NEW ENROLLEE IDENTIFICATION

After electronic notification of the 834 enrollment file, Humana loads Mrs. Smith's eligibility information and auto-creates a case in Humana's proprietary clinical workflow system, Carehub's Clinical Guidance eXchange (CGX) [1]. CGX supports an integrated and comprehensive approach that allows our case managers (CMs) to more effectively serve enrollees. Being fully integrated helps Humana identify enrollees for case and disease management and monitor enrollees for compliance. Concurrently, this electronic transmission triggers Humana to mail our new enrollee materials within five (5) days of notification.

Following the auto-case creation, we assign the file to "Sally," one of Humana's LTC CMs. We consider Sally's education, experience, and geographic location, as well as Mrs. Smith's language preference in making this assignment. Sally manages Humana enrollees at this LTC facility and has available caseload capacity, as defined by the contractually defined caseload ratios. Through our experience in the Florida Managed LTC program, we recognize the need to assign local CMs like Sally that are familiar with unique circumstances of the nearby facilities, their region, and the enrollees they serve.

To add to the experience Sally brought to Humana when hired, she also underwent Humana's comprehensive onboarding program, which includes twelve (12) weeks of LTC-focused training. Senior CMs mentored Sally, counseling her on strategies to identify and resolve barriers to access to care and health literacy, guidance on ways to prioritize immediate needs, and advice on ways to display empathy and emotional support. We have also provided Sally with ongoing training to keep her up to date and continuously learning through monthly half-day education, training, and oversight sessions to ensure she has access to the most up-to-date information and her mentors.

DAY 2: INITIAL OUTREACH

Sally receives an electronic alert to notify her of Mrs. Smith's assignment. Because Sally is managing other Humana enrollees in this facility, she has established relationships with many workers at the facility and can effectively collaborate with admissions to verify Mrs. Smith's enrollment, eligibility, and location. In reviewing Mrs. Smith's information with the facility Social Worker, she learns that there is a diagnosis of progressing moderate to severe dementia, and that she needs to involve Mr. Smith, Mrs. Smith's husband, in the assessment process. Sally also notes Mrs. Smith's recent hospitalization and inpatient rehabilitation for pneumonia. Mr. Smith has power of attorney (POA), so Sally obtains his contact information to call, introduce herself and her role with Humana, and welcome Mrs. Smith to Humana's plan while discussing plan specifics with Mr. Smith.

During Sally's welcome call with Mr. Smith, she outlines the need for an in-person visit with him and Mrs. Smith. Sally works around Mr. Smith's schedule and sets up an appointment for later

in the week. She asks Mr. Smith if he would like others present to participate in Mrs. Smith's initial evaluation. Mr. Smith mentions they have a daughter, who works full time and helps, but also that she lives an hour away and will not be able to attend at this time. Sally makes sure that Mr. Smith received Humana's new enrollee materials and identification (ID) card for Mrs. Smith, confirms the appointment date and time at the facility, and provides her contact information in case Mr. Smith has any questions or needs to reschedule.

DAY 6: INITIAL ASSESSMENT

Sally arrives early at the facility on the day of the appointment to speak with the facility staff and review Mrs. Smith's medical records, medication list, and minimum data set (MDS) assessment. She also obtains copies of Mrs. Smith's POA, Advance Directive, and pre-admission screening resident review (PASRR) I and II for Humana's case record. This gives Sally a comprehensive picture of Mrs. Smith's medical, behavioral, and social needs, as well as the current facility care plan.

Sally meets with Mr. and Mrs. Smith privately in her room, while her roommate is at physical therapy (PT). She completes the comprehensive assessment, reviews and completes Mrs. Smith's Freedom of Choice form, and reviews the new enrollee materials. These materials include the enrollee handbook, which provides detailed information about benefits, enrollee rights and responsibilities, grievance and appeals, and rights to a Medicaid Fair Hearing. This assessment and discussion gives Sally a picture of Mrs. Smith's current medical condition, functional limitations, behavioral health, and social circumstances, as well as strengths, needs, goals and informal supports available.

With these determinations in mind, Sally ensures the following actions are completed:

- Mrs. Smith's dementia is worsening

- Mrs. Smith has completed her PT and Occupational Therapy (OT), and continues to use a walker

- Mrs. Smith's respiratory condition has shown improvement post-pneumonia

- Mr. Smith would like to bring his wife back home with him, but is afraid he cannot take care of her because of his own functional limitations

- The Smiths own their home, which is walker- and wheelchair-accessible

- Mrs. Smith has a history of wandering and gets lost in the neighborhood

- Mr. Smith completes a release of information (ROI) to allow Sally to discuss Mrs. Smith with their daughter

- Sally obtains a list of participants Mr. Smith would like to include in the Multidisciplinary Team (MDT) for Mrs. Smith. This includes Mr. and Mrs. Smith, their daughter, Community Primary Care Physician (PCP), LTC CM, Humana's Medical Director, Humana's utilization management care coach, and the NF's medical director

- Sally completes the Caregiver Support Tool with Mr. Smith

- Sally completes and submits the initial 2506A state form

Sally documents all information she gathers during the visit into CGX and creates an initial plan of care, indicating that the goal is for Mrs. Smith to return home. Additionally, the system allows her to capture any identified cultural or ethnic preferences. Sally collects electronic signatures on the plan of care and provides one (1) copy each to Mr. Smith, the facility, and Mrs. Smith's Community PCP. The CGX system allows Sally to send a fax of the plan of care (POC) to the PCP. Sally explains that at Humana, there are also Transition Coordinators (TCs) that assist with transition planning. Mr. Smith expresses interest in this, so Sally gains Mr. Smith's approval and makes a referral so they can begin the transition process.

DAY 18: MRS. SMITH'S INITIAL TRANSITION PLANNING

Amy, one of Humana's TCs, receives Sally's referral for Mrs. Smith. Amy and Sally collaborate to review Mrs. Smith's assessment, caregiver and informal support, and healthcare needs for her to safely transition back home. Amy contacts Mr. Smith to introduce herself and set a date for their initial meeting. Amy notifies Sally of the meeting date and time so she can participate and help facilitate Mrs. Smith's transition.

Amy will be of unique value to the Smiths, as she has received additional training in transition services such as home modifications and prevention of readmissions. She can also help enrollees like Mrs. Smith appropriately access the two thousand five hundred dollars ($2,500) in transition funds available to her as an expanded benefit. Amy, as would be the case with all Humana TCs, is part of Mrs. Smith's MDT, because of her broad experience and deep knowledge of community resources that may be helpful to provide support in transitioning, while taking Mrs. Smith's individual preferences into consideration.

DAY 25: MDT MEETING

Amy and Sally coordinate an MDT meeting that includes the participants identified during the first assessment. During the meeting, the MDT reviews her current status and identifies transition needs, including barriers to care and concerns with her transition home. Amy completes a repatriation screening tool within CGX, which captures key information like how long Mrs. Smith has been in the NF, her desire and ability to transition, her available caregiver support, and her functional limitations.

DAY 34: POST-MDT DISCUSSION

After the MDT meeting, Amy, Sally, Mr. and Mrs. Smith, and their daughter review and address the needs of both Mr. and Mrs. Smith to ensure that they have addressed all potential barriers.

The discussion focuses on educating Mr. Smith on the importance of taking care of himself. Amy explains that he needs to be at his optimal health to properly support and maintain Mrs. Smith at home. She explains to Mr. Smith the importance of taking care of his own health and health care needs including attending medical appointments, adhering to his medication, and maintaining his activity level. To this end, Sally adds respite care as a service to provide Mr. Smith a break from time to time so that he can attend to his own health and well-being needs.

Mrs. Smith needs daily assistance for bathing, ambulation, and meal preparation. The group discusses options for personal care services and adult day health centers (ADHC). The Smiths' daughter is an occasional caregiver on weekends, but her role is limited by her job and family needs. Amy educates Mr. Smith on the Participant Directed Option (PDO) for personal care services, but Mr. Smith requests agency support. They also need homemaker services for meal preparation and housekeeping. Mr. Smith developed a back-up plan for the provided services in case the authorized provider is unable to provide service. Amy uses the Humana services guide and her assessment to take into account Mrs. Smith's current functional abilities and gaps. She uses these to develop appropriate hours for her personal care services. Amy provides several nearby personal care agency names for the family to select from so they can choose a provider that has experience in managing enrollees with dementia. Mr. Smith and his daughter say they want to discuss care options for Mrs. Smith before making a decision.

Amy offers a referral to Humana's Alzheimer's/Dementia Disease Management (DM) program that can assist him in managing Mrs. Smith's increasing dementia and confusion, as well as educate him on sundown syndrome, which is common with Alzheimer's. Mr. Smith accepts the referral for DM. Sally makes a referral for DM and provides the website for Alzheimers.org for Mr. Smith and their daughter, as the site includes community resource information for support services.

DAY 45: ADULT DAY HEALTH CENTER (ADHC) DISCUSSION

Sally meets with Mr. Smith and his daughter to discuss the ADHC option for Mrs. Smith, as it would provide her with socialization, and enable Mr Smith to be successful with his caregiving role. Mr. Smith and their daughter agree that would be beneficial. Sally explains the transportation benefit to and from the ADHC, with the addition of personal care services before and after ADHC. Sally provides names of several in-network ADHC providers, with experience in dementia for the family to visit so they can select one that meets their needs to help plan for Mrs. Smith's transition home.

Sally asks about Mrs. Smith's life before the onset of dementia and what activities she enjoyed. Mr. Smith shares that she always enjoyed being outdoors and fresh air. Together, Sally works with Mr. Smith to identify a personal goal for Mrs. Smith to take a fifteen- (15) minute outdoor walk twice a week with the supervision of her personal care aide.

DAY 50: AMY FOLLOWS UP – ADDITIONAL TRANSITION SUPPORT NEEDS

Amy follows up on additional needs to support Mrs. Smith's transition back home. Through Amy's evaluation of the Smith's home, she learns Mrs. Smith currently has a walker, a raised toilet seat, shower chair, grab bars, and a handheld shower, and the home is equipped with a wheelchair ramp. She then works with the NF's physical therapists to evaluate Mrs. Smith for additional durable medical equipment (DME). They find the only additional item needed was adjustable bed rails. Amy will follow up with the NF Social Worker and Medical Director to obtain a prescription for bed rails and ensure delivery occurs prior to Mrs. Smith's return home.

Mrs. Smith requires adult pull-ons for incontinence, so Amy makes the necessary arrangements to have them delivered to her home. Amy secures a PCP appointment within seven (7) days of Mrs. Smith's discharge date to get her re-established with her PCP, to review and reconcile medications, and to ultimately decrease her risk for readmission. Amy assists in scheduling transportation to and from the PCP visit to remove any barriers to access to care. Amy obtains a prescription for a registered nurse (RN) to evaluate for medication review and reconciliation.

Discussions about safety in the home prompt Amy to review safety concerns with Mr. Smith and their daughter in regards to the potential for Mrs. Smith to fall or wander. She also makes suggestions for how to keep her safe including installing door chimes, purchased using Humana's transition expanded benefit. Since a personal emergency response system is not appropriate for Mrs. Smith because of her dementia, Amy explores the idea of a wandering GPS watch, which can also be purchased using this benefit. Mr. Smith agrees this would be a helpful item. Mr. Smith also shares they have had four (4) dogs for years, and consider them his family too; he agrees to keep them outside as much as he can.

DAY 51-64: MRS. SMITH'S TRANSITION PLAN

Together, Amy and Sally collaborate on Mrs. Smith's transition plan. Sally continues seeing Mrs. Smith monthly in the facility, and updates Mr. Smith while waiting for her transition plan and services to be in place prior to discharge. She maintains regular contact with Amy so each stays updated on Mrs. Smith's care through Humana's integrated system.

In preparation of Mrs. Smith's return home, Amy also reviews the disaster plan and emergency evacuation. Amy also assists in registering the Smiths with a special needs shelter, through the Special Needs Registry.

DAY 65- 77: MRS. SMITH'S PLAN OF CARE

Sally updates the POC based on Mrs. Smith's assessment and utilization tools. She determines the need for additional services based on standard of care criteria and medical necessity. Humana uses a risk ranking tool to determine service hours based on individual needs such as bathing, dressing, grooming, meal preparation, and the amount of time needed to perform these tasks. Upon completing this comprehensive assessment, Mrs. Smith is stratified as moderate, with a range of potential service hours using a standardized tool as a guide.

Sally enters authorization requests in CGX with the identified service hours and sends them for utilization review. She knows that if the requested hours end up being greater than the recommended range of service hours, an assigned Utilization Care Coach will complete an additional review and base the approval on medical necessity. If that Utilization Care Coach determines the requested number of hours requires additional review, we will ask a Medical Director to make the final determination within seven (7) days, as only a Medical Director has the authority to deny these requests.

When Sally's requested number of service hours is approved, CGX automates a faxed authorization to the current service provider. Sally knows that if the request for service hours is denied, Mr. Smith will receive a notice of adverse benefit determination letter, providing information on grievance and appeals and rights to a Medicaid Fair Hearing. Sally explains this to Mr. Smith and informs him that she can provide assistance with this process if Mr. Smith chooses to file an appeal, and that if he does so, he will receive a written acknowledgement from Humana within five (5) business days from the receipt of the appeal. We would advise him that we will review his request and communicate a decision within thirty (30) calendar days. In that case, we would submit Mr. Smith's appeal through the clinical appeal review process, and a Medical Director not previously involved in the original decision would review it. Once there is a decision, we would notify Mr. Smith of Humana's decision of her request for appeal, both verbally and in writing. Should we uphold an adverse decision, we would advise him of his right to a Medicaid Fair Hearing.

In Mrs. Smith's case, we determined that Sally's requested hours were medically necessary and that we approved all of Mrs. Smith's hours. We approved the ADHC for three (3) days each week to allow for socialization. Sally reviews this completed POC with Mr. Smith to ensure he agrees with the services, which he finalizes with his electronic signature. This prompts CGX to update the authorizations with the determined start date of services. Applicable providers then received authorizations via fax.

Sally informs Mr. Smith that if at any time he requests or requires a change in service providers, she will make the necessary referrals to ensure there is no disruption in care. Sally will also collaborate with Humana Provider Relations to address any service provider complaints within twenty-four (24) hours. If she is unable to resolve, Sally will facilitate the process for filing any

grievances identified by Mr. Smith, including assisting with the coordination of new Home and Community Based Service (HCBS) providers, her PCP, and any behavioral health services. Sally will also assist him with modifying transportation arrangements and identifying supportive community resources within her new community. Humana CMs have access to resource directories to help locate services and resources that the comprehensive plan may not cover. These include the Humana Community Resource Directory, Local 2-1-1 resources, and online local community resources. Sally provides information on Mrs. Smith's transportation benefit and on how to use her enhanced transportation benefits for additional transportation needs.

Sally tells Mr. Smith about Humana's One Medication Experience, which gives enrollees access to create and update all prescribed medications and supplements within a feature called One Medication List (OML). Enrollees access their enrollee profile via computer or mobile phone application. Mr. Smith informs Sally he is not very good with computers, but he will have their daughter update her medication list. Sally reaches out to the daughter and educates her on using this application so she can review and keep up to date on her mother's medicine, and reconcile her medication list within Humana's system, establishing a single source of truth that the Smiths and the Humana Clinical Care team can all use. Sally also coordinates with the Smith's Medicare plans to secure a mail order pharmacy delivery.

DAY 78 THROUGH DAY 168: MRS. SMITH'S TRANSITION HOME (FIRST 90 DAYS)

Day 78: After much coordination, Mrs. Smith is ready to go home. Amy ensures approval and scheduling or delivery of the following items and services prior to Mrs. Smith's transition:

- Personal Care Agency identified and authorization on file with start date to align with date of Mrs. Smith's return home

- Adult Day Care scheduled to begin one (1) week after transition per Mr. Smith's request. Transportation to and from adult daycare was scheduled

- Nurse visit for medication reconciliation scheduled within the first week

- Consumable medical supply order placed for the adult pull-ons and that the first shipment has arrived

- Mrs. Smith is wearing her ID band and wandering GPS watch

- Door chimes installed throughout the house

- Mr. Smith has been working with the Disease Management RN as part of the Alzheimer's/Dementia program and has taken steps to make the home safer for Mrs. Smith

DAY 82: Upon successful transition home, Sally remains Mrs. Smith's CM because she manages a mixed caseload and the Smith's home is within close proximity of the NF. Amy has

already been in contact with Sally and they coordinate a face-to-face review to take place on Mrs. Smith's fourth day home. During this visit, they review and sign the finalized POC. Sally leaves a copy with Mr. Smith and faxes a copy to Mrs. Smith's community PCP.

DAY 89: The next week, Sally calls the Smiths to ensure that she is receiving all authorized services and that Mr. Smith is satisfied with the services provided.

DAY 92: Mr. Smith receives a call from the disease management CM checking to see if everything is going well after Mrs. Smith's transition. Mr. Smith says both the wind chimes on the doors and Mrs. Smith's GPS watch have been helpful and provide him peace of mind. Mr. Smith appreciates having the time now to reconnect with his friends at the senior center and has begun realizing how many other families are dealing with similar concerns.

Amy ensures completion of the CF-ES 2506A Form within ten (10) days of discharge from the NF and the CF-ES 2515 Form (Certification of Enrollment Status HCBS) within ten (10) business days of receipt of the applicable enrollment file from the agency.

DAY 100: Amy, the Transition Coordinator, maintains contact with the Smiths and closes out the Smith's transition plan during their thirty (30)-day face-to-face POC review. Because there are no new or urgent issues related to the transition, Amy is no longer involved. Sally continues to work with the Smiths.

Sally continues monthly contacts and has open discussions with Mr. Smith to gain his perspective on how Mrs. Smith's POC is working. They review any barriers to the achievement of their goals and expectations, and make POC changes as needed. Sally informs Mr. Smith that these contacts may occur more frequently if Mrs. Smith experiences a change in condition in her health, care needs, or circumstances. Sally encourages and reminds Mr. Smith to notify her as soon as possible if service delivery isn't timely, services are missed, if there is a change in circumstances, or if they are not happy with the current providers or service plan.

Sally can track and monitor any activity Mrs. Smith may have in an emergency department or hospital, should they occur. She would receive notification of each emergency department visit via a daily report called the Health Information Exchange – Electronic Notification System (HIE-ENS) and receive info from CGX alerting her of any admission or discharge from the hospital or a skilled nursing facility (SNF). Sally would suspend services and generate a notice of adverse benefit determination letter (NOABD), which would go to Mr. Smith and the provider should Mrs. Smith have any interruption in services.

Additionally, Sally reviews utilization and missed visit reports to identify patterns of services so we can correct any deviations from optimal usage of healthcare services. Sally monitors Mrs. Smith's condition and continues to ensure services meet her needs. For example, she will check whether the current consumable medical supply order is sufficient, and whether the ADHC or personal care aides are appropriately scheduled for her changing needs. She will also determine if there is caregiver stress or burnout for Mr. Smith.

Sally continues her quarterly face-to-face visits with Mr. and Mrs. Smith, which include the following:

- Reviewing Mrs. Smith's current medical/functional/behavioral health status, including strengths and needs

- Identifying any changes or updates of family/natural support system or community resources and their availability to assist Mrs. Smith and her family, including barriers to such assistance

- Re-assessing Mrs. Smith's environment, including fall risk screening

- Reviewing any needed provider appointments or medical needs and assisting with scheduling or transportation as needed

- Discussing medication reconciliation

- Reviewing current service delivery and satisfaction of those services

- Updating/revising Mrs. Smith's POC

DAY 108 AND BEYOND: ONGOING ENGAGEMENT AND RELATIONSHIP

At Sally's quarterly face-to-face visit with Mr. and Mrs. Smith, Mr. Smith shares that Mrs. Smith has been attending ADHCs on Mondays, Wednesdays, and Fridays, where she is engaged with activities at the center. While the ADHCs care for Mrs. Smith, Mr. Smith socializes with his friends at the local senior center. He is grateful and feels fortunate to have his wife at home while enjoying quality time with his family and friends. Their daughter is thankful that her mom is socializing and visits her parents on the weekend with the grandchildren. Mrs. Smith's move back to her home has been fantastic for her and her family.

Footnote

---

[1] CareHub is Humana's enterprise solution for complete program integration for our provider community and enrollees. CGX supports an integrated, comprehensive approach to medical, behavioral health, pharmacy, utilization, and care management. Full system integration allows our care team the capability to identify potential enrollees for programs, document gaps in care, automate care planning, monitor plan compliance, and identify opportunities for intervention.

Evaluation Criteria:

1. The adequacy of the respondent's approach in addressing the following:

(a) Description of the sources of data/information that would be utilized in the assessment process, including timeframes for completion;
(b) Application of the respondent's case management risk stratification protocol, including a rationale for the decision;
(c) Application of a person centered care planning approach;
(d) Identification of service needs (covered and non-covered) and a description for service referral processes that the plan has in place;
(e) Description of the interventions and strategies that would be used to facilitate community integration and transition planning;
(f) Application of coordination protocols utilized with other insurers, (when applicable) primary care providers, specialists, other service providers, and community partners particularly when referrals are needed for non-covered services;
(g) Description of the assessment of provider capacity to meet the specific needs of enrollees;
(h) Identification of strategies that promote self-management and compliance with the plan of care;
(i) Application of utilization management protocols (i.e., identification of the criteria that will be utilized, processes to ensure continuity of care, etc.); and
(j) Application of strategies to integrate information across the plan and various subcontractors when the respondent has delegated functions.

2. The extent to which the respondents workflows/narrative descriptions include timeframes for completion of each step in the care planning process.

3. The extent to which the respondent demonstrates innovative processes that it has in place to enhance communication among all service providers and subcontractors (for delegated functions).

4. The extent to which the respondent demonstrates experience providing services to enrollees with complex medical needs and provide evidence of strategies utilized that resulted in improved health outcomes.

5. The extent to which the respondent demonstrates a system of coordinated health care interventions designed to achieve cost savings through the organized and timely delivery of high quality services.

6. The extent to which the respondent describes innovative strategies to integrate information across all systems/processes into its workflows.

Score: This section is worth a maximum of 75 raw points with each of the above components being worth a maximum of 5 points each.

Attachment LTC 12-1: Mr. and Mrs. Smith's Visual Story Guide

We have provided this document as a visual guide to our response. The key timelines from our core response are duplicated here in a format intended to supplement and enable a comprehensive review of Humana's approach to Mr. and Mrs. Smith.

About Mr. and Mrs. Smith:

Mrs. Smith is in her early 70s, dually eligible for Medicaid and Medicare, enrolled in Medicare FFS, and newly enrolled in Humana's comprehensive plan. After experiencing an acute episode of pneumonia, Mrs. Smith required hospitalization, inpatient rehabilitation, and subsequent placement into a nursing facility (NF). She has a history of moderate to severe dementia and has been known to wander. She uses a walker for assistance and can feed herself. Mrs. Smith's husband, Mr. Smith, is also in his early 70s, dually eligible for Medicaid and Medicare, enrolled in a non-Humana MMA plan, and has power of attorney (POA) for Mrs. Smith. Mr. Smith wants to move his wife home, but is concerned he cannot meet her needs. Their home is cluttered, they have many pets, and have an adult daughter who lives in state.

Key Components of Care

- **All Necessary Services and Supports in Place** while helping transition Mrs. Smith from the NF back to her home
- **Enrollee and Caregiver's Needs and Goals** at heart of her plan of care (POC)
- **Disease Management (DM) Referral and DM CM** pulled in to help educate Mr. Smith on how to manage Mrs. Smith's worsening Alzheimer's/dementia conditions
- **Ongoing Engagement and Relationship** with the Smiths to ensure we meet care goals, while keeping enrollee and caregiver abilities and preferences in mind

The Smith's Support System

- **Mr. Smith** — Husband with POA
- **Sally** — LTC Case Manager (CM)
- **Amy** — Transition Coordinator (TC)
- **Disease Management CM** (CM)
- **The Smiths' Daughter**

Mr. and Mrs. Smith's Timeline:

1 — Pre-Humana: Health Status
Mrs. Smith has a history of moderate to severe dementia. She needs daily assistance for bathing, ambulation, and meal preparation. Hospitalized with an acute episode of pneumonia, she needed inpatient rehabilitation and was placed in a NF.

2 — Day 1: Enrollment
New enrollee materials triggered within 5 days of enrollment; CGX assigns case to an LTC CM, Sally.

3 — Day 2: Initial Outreach
Sally contacts the facility and notes hospitalization reason; she has welcome call with Mr. Smith, who has POA. She sets up an in-person meeting, confirms materials receipt, and learns about the Smith's daughter.

4 — Day 6: Initial Assessment
At the NF, Sally obtains copies of all documents for Humana's records, and meets with the Smiths to assess and make initial determinations.

5 — Day 18: Transition Plan
Sally brings in a Transition Coordinator (TC), Amy, and adds her to the multidisciplinary team (MDT). Amy sets up time with the Smiths to plan her transition home.

6 — Day 25-34: MDT & Post-MDT
MDT reviews status, needs and barriers. Amy fills out repatriation screening tool; team educates Mr. Smith and sharing options including PDO; DM referral.

7 — Day 45: ADHC
Sally meets with Mr. Smith & daughter to discuss Adult Day Health Center options and suggest activities for Mrs. Smith following discharge.

8 — Day 50-64: Additional Transition Planning
Amy assesses the Smith's home and DME, arranges delivery, secures PCP appt in 7 days post-discharge, reviews safety concerns with Mr. Smith. Amy and Sally collaborate on plans.

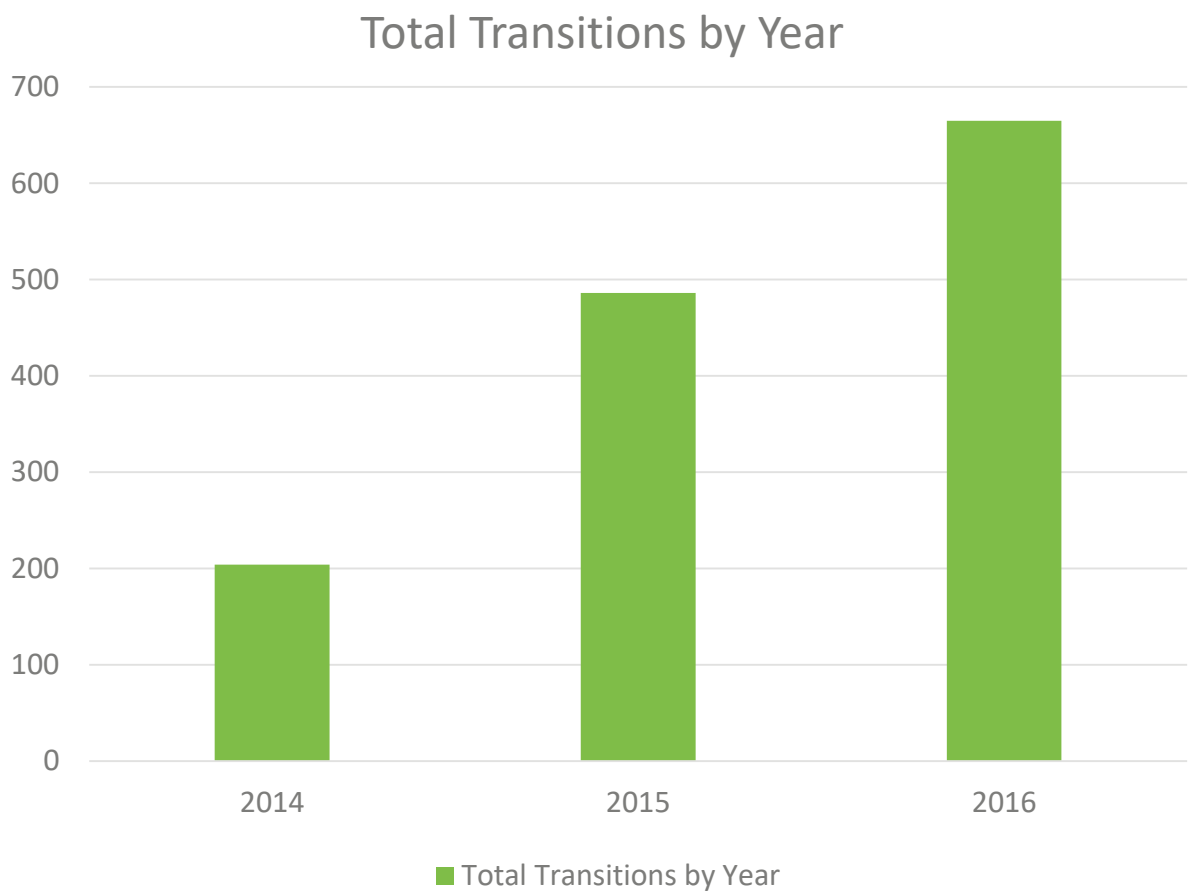
9 — Day 65-77: POC Updates
Sally updates the POC based on transition plan. She adjusts approved service hours and educates Mr. Smith on One Medication List.

10 — Day 78-168: Transition Home (First 90 Days)
Amy ensures approval, scheduling and deliveries of services. Sally coordinates meeting for 4 days post-transition. MDT has 30-day face-to-face POC follow-up. Disease Management (DM) follows up with Mr. Smith.

11 — Ongoing:
Sally continues quarterly face-to-face visits with the Smiths to check in on POC status and additional needs.

Attachment LTC 12-2: Annual Institutional to Community Setting Transitions from 2014-2016

Humana has continually increased the number of enrollees that have transitioned through the various strategies for improvement. Humana's success rate is continuing apace in 2017.



Methods for Improvement:

- Nursing home sweeps conducted monthly by regional TC (Transitional Coordinator)
- TC visit all newly enrolled NF enrollees to introduce self and explain Transition option
- Weekly TC attendance on regional CM meetings to engage staff in referral process
- TC builds relationship with NF providers
- Education of CM staff on importance of explaining Freedom of Choice to enrollee/ POA in NF
- Build Relationship with ALFs in region for ease of transitioning enrollees

F. OVERSIGHT AND ACCOUNTABILITY

LTC SRC# 13 – Management Experience and Retention (Statewide):

The respondent shall describe its approach to the hiring and promoting retention, throughout the Contract term, of executive managers (e.g., CEO, COO, CFO, CMO, vice presidents, senior managers) who have expertise and experience in serving elders and adults with disabilities who require LTC, and document such expertise and experience. The respondent shall describe the relevant experience of their current management team. [See Section 409.981(3)(a), Florida Statutes]

Response:

APPROACH TO HIRING EXECUTIVES WITH LONG-TERM CARE (LTC) EXPERIENCE

Humana's approach to hiring executives requires a thorough examination of each candidate's qualifications including education, experience, and a proven track record of success. We seek healthcare executives who have demonstrated LTC experience, a deep understanding of the unique challenges in the Florida Medicaid market, and a capacity to innovate and grow as part of a team dedicated to our goal of the perfect provider, stakeholder, enrollee, and associate experience.

Humana's recruiting model focuses on placing the right applicants into the right positions to enhance our Perfect Experience: a commitment to helping our enrollees achieve their best health and lifelong well-being. During the executive search process, we use an internal executive search team, external executive search firms, and various research and hiring vendors to deploy a comprehensive recruitment strategy. Our internal Enterprise Talent Development (ETD) team specifically focuses on talent development and internal mobility of executive managers. We have aligned our external Talent Acquisition team to recruit and hire executive managers. Whenever specialized training or licensure is required, we identify and recruit individuals with the appropriate certifications and background.

PROMOTING FROM WITHIN
Humana has more than fifty thousand (50,000) diverse associates serving enrollees nationwide; ten thousand (10,000) of these associates are in Florida. We dedicate significant time and resources to internal leadership development, maintaining internal talent pools from which to source qualified candidates for key executive vacancies as top positions in the organization shift. We maintain our internal talent pools by tracking and monitoring Talent Profiles, experiential moves, and the Humana Way Executive Leader Assessment. Talent Profiles, our self-led talent and performance management system, provide a platform for our leaders and associates to regularly highlight accomplishments, showcase their skills, and create a development plan. Experiential moves, which are internal job changes that allow our leadership to gain experience across all departments, are part of our foundational executive development methodology. Our Human Resources team manages the internal executive candidate slating process. This process includes gathering requirements, building candidate slates, and ensuring cross-organizational vetting of potential candidates. They integrate candidate slating activities

with the succession planning process, preparing the CEO to highlight the top leadership pipeline to the Board of Directors. We then select and extend an offer to the final candidate.

==========

3. The degree to which the respondent provides evidence, data, or metrics to demonstrate the effectiveness of its approaches to staff retention, including staff tenure, by contract, for the respondent's two (2) most recent contracts.

==========

PROMOTING RETENTION THROUGHOUT THE CONTRACT TERM

The retention of key executives is vital for our enrollees' continuity of care. Humana promotes retention through career development, recognition programs, financial incentives, and an exceptional organizational culture. These retention strategies ensure that we have a deep pool of candidates capable of sustaining our care delivery systems. Humana begins promoting retention during the onboarding process, and continues to assist our associates in increasing their value, experience, and expertise throughout their careers at Humana. According to the most recent Bureau of Labor Statistics from January 2016, the average employee with a job in management occupations stays with an employer six point three (6.3) years. Our current Medicaid executives, profiled in this narrative, have an average tenure of more than ten (10) years, and a total of three hundred fifteen (315) years with Humana. In addition to their long tenure with Humana, our executives boast more than seven hundred fifty (750) years of industry experience. We sustain our strong retention and experience data and metrics through our dedication to maintaining exceptional retention strategies, culture and versity

Humana is a place where people can grow, develop, and take on broader responsibilities. Overall, the Florida Medicaid team members have averaged three (3) advancements in roles over their tenures. These changes represent developmental opportunities and accomplishments, many of which you can read about in each executives' biography. John Barger, who leads our national Medicaid program, has developed his career working in and leading different businesses across the enterprise. He has spent the last seventeen (17) years based in Florida. Ten (10) other Florida Medicaid executive managers have also made experiential moves during their tenure with Humana. This speaks to the quality of our Leader Training and Development programs.

CAREER DEVELOPMENT

Humana has maintained strong associate retention, as described in Attachment 4, during our two (2) most recent contracts:
- Florida Medicaid LTC contract implemented on August 1, 2013
- Florida Medicaid Managed Medical Assistance (MMA) contract implemented on January 1, 2014

Humana is dedicated to growth-based careers, prioritizing experiences to increase career satisfaction, loyalty, and a flexible, higher quality workforce. We regularly offer required and optional programs, workshops, and webinars focused on career cultivation. During their first year in an executive management position, we require our executive managers and associates

to complete our Required First-Year Curriculum. Comprised of three (3) programs, Humana Leadership Orientation, Fundamentals of Employment Law, and Leadership Essentials, this curriculum provides the foundation our associates need to thrive in their new roles.

HUMANA LEADERSHIP ORIENTATION
The Humana Leadership Orientation (HELLO) program is a dynamic virtual orientation experience for new Humana leaders. Whether newly promoted or newly hired into a leadership role, this program helps guide their leadership journey. Areas HELLO addresses include the Humana culture and leadership expectations of growth and development, along with a focus on behaviors that drive associate engagement and well-being.

LEADERSHIP ESSENTIALS
Leadership Essentials is a virtual learning experience for our executive managers and associates who are interested in developing the fundamentals of leadership. The program focuses on the essential leadership practices of interpersonal effectiveness, leading positively, business acumen, and talent development.

After executive managers and associates complete our Required First-Year Curriculum, they can access our second tier of career development programs. These programs build upon the skills and knowledge acquired during the executive manager's first year, and focus on transitional innovation for developing the next generation of Humana leaders. We update new opportunities regularly on our leadership development website, The Leader Connection, which focuses on growth and development, leadership connection, and leading and retaining talent with tools, resources, and opportunities. The diversity and abundance of our programs allow executive managers to hone their skills in specific areas. See Attachment 2 for a description of selected second-tier development programs. See Attachment 3 for a selection of Medicaid and LTC-specific courses.

Our executive managers and associates identified in this response have taken advantage of the abundance of career development available. Since January 1, 2013, these leaders have completed a cumulative total of one thousand one hundred eighteen (1,118) courses specific to job and career growth, with an average of thirty-six (36) courses completed per leader. Many courses are specific to their current positions, Medicaid, and LTC, as shown below.
- 382 completed Medicaid courses, averaging 12 per leader
- 152 completed LTC and Elder Care courses, averaging 5 per leader
- 287 completed executive development courses, averaging 9 per leader
- 297 completed other relevant courses, averaging 7 per leader

Humana employs a variety of programs and strategies to encourage retention among all associates, including executives. These include recognition programs for tenure, financial incentives, diversity opportunities, and an exceptional culture that enables associates to thrive in an environment of support and recognition. Many groups have recognized our strong associate retention, culture, and mission, including 2016 Military Times, Temkin Group Customer Experience Excellence Awards, RobecoSam Sustainability Award (Gold Class 2017), and others.

==========

1. The extent to which executive managers have expertise and experience in implementing innovative care delivery systems serving elders and adults with disabilities who require LTC

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

==========

EXPERIENCE IMPLEMENTING INNOVATIVE LTC CARE DELIVERY SYSTEMS

Humana's leadership has experience implementing innovative care delivery systems serving adults with disabilities and elders who require LTC in Florida. Humana managed the Nursing Home Diversion (NHD) program for Florida's frail and elderly population from 2007 to 2013 before the state transitioned to an expanded and fully-capitated Long-term Care (LTC) model in 2013. Today we contract to provide managed LTC across all eleven (11) regions in Florida. Among numerous national and local managed care organizations (MCOs), Humana had the highest-rated plan in Florida Medicaid from 2011 to 2015, according to the National Committee on Quality Assurance (NCQA).

In both Illinois and Virginia, our national Medicaid leaders led the partnership with local Community Service Boards to coordinate behavioral health needs of the long-term services and supports (LTSS) enrollees, as well as able-bodied elderly and disabled in both state's demonstration programs. We describe the implementation of our Illinois and Virginia programs below.

ILLINOIS IMPLEMENTATION
Humana provides managed LTSS (MLTSS) under Illinois' Integrated Care Program (ICP) for more than five thousand one hundred (5,100) older adults and adults with disabilities who are not dual eligibles. This program integrates medical services and LTSS for enrollees using a coordinated care model, which we implemented alongside the Illinois (CMS) Dual Eligible Financial Alignment Demonstration.

VIRGINIA IMPLEMENTATION
Through Humana's leadership team, the organization maintains a similar experience implementing innovative care delivery systems serving elders and adults with disabilities who require LTSS services in Virginia through our Commonwealth Coordinated Care (CCC) Program, a CMS Financial Alignment Demonstration program. We implemented an LTSS program with clinical social workers and nurses to provide monitoring and comprehensive reviews for nursing facility residents that incorporated medical, behavioral, and social needs. Humana offers coverage in all current CCC regions, providing fully-integrated care management and service coordination to nearly ten thousand (10,000) enrollees.

Examples of our executive managers' experience implementing innovative care delivery systems serving elders and adults with disabilities who require LTC include:

- Developing and implementing an LTC case manager (CM) assignment algorithm and management tool accounting for geolocation, enrollee exceptions, associate status, language preferences, and regional panel targets. This resulted in a reduction in average distance to enrollees and increased CM satisfaction.

- Developed MLTSS physician-based "aligned incentive" models for clinical management of comprehensive non-dual and dual demonstration enrollees improving physician engagement, improved clinical documentation, and care quality.

- CareHub – Humana's integrated technology solution is available to associates using our cutting-edge CareHub infrastructure. As Humana's clinical management platform, CareHub includes all the clinical and care management documentation. All designated care management associates, including acute CMs, utilization management (UM) associates, Humana CMs, Community Health Educators, and Field Case Managers, can create and update enrollee records using this platform. We can track enrollee health status using the Clinical Tools function, which collects important information such as measurements and generates trend reports for associates and enrollees. This function is part of a menu of applications that ties all enrollee experiences, including pharmacy encounters and communications, eligibility status, claims and utilization, and power of attorney documentation, into a centralized electronic enrollee record repository.

The objective of the CareHub "ecosystem" is to improve enrollee outcomes and achieve quality objectives by addressing gaps in care through integration at the point of care. Our CareHub infrastructure leverages technology to enhance clinical delivery. It uses technology solutions to enable integration, collaboration, and data-sharing throughout the healthcare delivery lifecycle.

- Clinical Guidance eXchange (CGX) – The CareHub CGX clinical workflow system supports an integrated, comprehensive approach to utilization and care management. As a fully integrated approach, this enterprise solution provides enhanced capabilities to monitor over- and underutilization, identify candidates for programs, document gaps in care, automate care planning, monitor plan compliance, and identify undesirable outcomes for further intervention. Our CGX system documents both medical and LTC information, allowing us a full view of our comprehensive enrollees.

- Atlas – The Atlas Clinical Rules Engine allows us to identify, stratify, and route enrollees for:
-- Chronic Condition Management:
--- Diabetes – both disease management and education
--- Coronary Artery Disease – both disease management and education
--- Cancer – both disease management and education
--- End-stage Renal/Chronic Kidney Disease
-- Asthma
-- Transplant Management
-- Rare Disease
-- Emergency Department (ED) Case Management (Complex Case Management)

- Anvita – Humana has established a first-of-its-kind clinical infrastructure that optimizes technology to enhance enrollee engagement and clinical delivery. Anvita converts diverse enrollee data into real-time, actionable insights that drive change and arm world-class clinicians to deliver industry-leading programs and services.

The Anvita engine and CareHub deliver personalized analyses that identify enrollees who (1) are at risk for adverse medical events, including hospitalizations; (2) are taking contraindicated therapies; (3) are missing preventative services; (4) have cost-saving interchange opportunities to lower costs; (5) need electronic, automated prior authorization of expensive services; and (6) have resolvable data gaps in their electronic record.

When deployed at the point of care, Anvita can identify, rank, and score competing treatments by safety, efficacy, and cost in real-time, using virtually all known clinical data. Anvita also

translates confusing industry terminology into consumer-friendly language, in real-time, to help physicians and enrollees have symmetrical views while enabling shared decision-making.

- Availity – Network providers in Florida have access to the Availity web-based platform. Availity is one of the leading health information networks in the country, optimizing information exchange between multiple healthcare stakeholders through a single, secure network. The Availity Health Information Network encompasses business and clinical services, and supports nationwide real-time and batch electronic data interchange via the web and through business-to-business integration.

The Availity Care Profile includes claims information associated with office visits and hospitalizations, diagnoses and associated procedures, prescription history, lab event history, radiology event history, immunization history, and clinical messaging. This information is critically important when a first-time enrollee presents, or during an emergency department visit, post-hospital discharge, or natural disasters. Use of the Availity Care Profile also improves enrollee safety by eliminating duplicate or unnecessary procedures to improve coordination and continuity of care. This allows more rapid closure of gaps in care for enrollees, greater opportunity for preventive care services, and chronic condition management.

- Humana's Medicaid Severity Predictive Model – We run new eligible enrollee information, such as claims, pharmacy, demographic, and diagnosis, within the first thirty (30) days of enrollment and monthly thereafter, through our proprietary Medicaid Risk Score algorithm. This score provides guidance for enrollees with high-risk factors and triggers them for case management and/or disease management outreach and participation efforts. By stratifying enrollees based upon future risk and high cost for case management, Humana can reduce cost and effort and improve care quality and health outcomes using appropriate intervention strategies for enrollees predicted to have high healthcare costs. If an enrollee is not eligible for case management and/or disease management at initial enrollment, our Medicaid Severity Predictive Model will continue to run in the background to assess changes in condition that may make the enrollee eligible for referral into case management and/or disease management.

- Area Agency on Aging (AAA) Partnerships – A barrier we faced in implementing the Virginia CCC program was the availability of qualified care management associates to meet contractual care coordinator eligibility requirements. As we enrolled tens of thousands of enrollees in the program, there was a significant need to hire additional care coordinators to meet initial care planning requirements and provide ongoing care management services afterward. To alleviate this issue, Humana partnered with local area agencies on aging (AAAs) for many care management functions, including facility-to-community transitions. In effect, Humana and the AAAs co-located care management associates and responsibilities. In addition to alleviating a workforce shortage, the AAAs also provided historical expertise on the population, which further aided in effectively serving our enrollees. This partnership also allowed us to maintain and further develop existing enrollee relationships while allowing us to enhance, rather than supplant, local healthcare resources.

==========

1. The extent to which executive managers have expertise and experience in implementing innovative care delivery systems serving elders and adults with disabilities who require LTC.

2. The extent to which executive managers have expertise and experience for their respective positions.

==========

CURRENT MANAGEMENT TEAM RELEVANT EXPERIENCE

Our Florida executive management team has a combined one hundred thirty-three (133) years of expertise and experience serving elders and adults with disabilities who require LTC services. See Attachment 1 for leader biographies with photos.

FLORIDA MEDICAID LEADERS

Our Florida Medicaid leaders provide executive oversight and management for the current Humana Florida Medicaid contracts. Our national Medicaid leadership supports them, which we briefly profile below.

JAIMIE WHITE, PRESIDENT, FLORIDA MEDICAID OPERATIONS
As a lifelong Florida resident, Ms. White is a highly engaged professional with more than seventeen (17) years of experience in leadership, program development, and business analytics within the Florida Medicaid and Medicare environments. She has LTC expertise serving the dual-eligible and senior populations, leading strategies to reduce financial barriers to care and to leverage community-based resources to meet social needs, allowing enrollees to focus on their health. Ms. White is skilled in analyzing problems, developing and simplifying procedures, and finding innovative solutions that guide overall business strategy.

Ms. White started her career in health care with Physicians Healthcare Plans, Inc. (PHP), a Florida-based health maintenance organization (HMO), which administered Medicaid and Florida Healthy Kids benefits to more than two hundred thousand (200,000) recipients. PHP promoted her to positions with increasing management responsibility through Amerigroup's purchase of PHP's Medicaid business in 2002, in which the company became CarePlus. When Humana acquired CarePlus in 2005, Ms. White was already in a leadership role, where she continued to progress to her current role. She has accumulated expertise and experience in serving the dual-eligible and senior populations in Florida, including:

SERVICE OPERATIONS
- Customer Care center leader, driving development of programs focused on enriching quality within the Dual Eligible Special Needs Plan (D-SNP) enrollees' service experience.

DUAL ELIGIBLE SERVICE AND SUPPORT STRATEGY
- Contract owner for CarePlus' D-SNP contract with the State of Florida. Responsible for D-SNP plan design, implementation, and execution of D-SNP contractual requirements and administration of D-SNP benefits.

- Implemented Social Services Outreach program to educate enrollees on State and Federal resources available to address financial insecurity.

- Developed process to proactively identify recertification dates for dual-eligible enrollees and assist enrollees with recertification

- Supported implementation of an Access Community partnership with Department of Children and Families in Miami-Dade County

PROCESS IMPROVEMENT AND TECHNOLOGY IMPLEMENTATIONS
- Led strategic technology initiatives across operations to create process efficiencies, enabling the successful absorption of forty percent (40%) growth in enrollment over a thirteen (13)-month period

- Led implementation of the CMS 837 Encounter Data reporting

- Managed conversion of paper-based claims to an electronic 837 record, supported improved accuracy in encounter data reporting to CMS, and generated administrative cost savings of more than five hundred thousand dollars ($500,000) per year

DR. IAN NATHANSON, LEAD MEDICAL DIRECTOR, FLORIDA MEDICAID MARKET
Dr. Nathanson is dedicated to and passionate about improving the health of children through direct clinical care, education and rsearch. He has forty-five (45) years of experience in healthcare and has written forty-nine (49) publications (including one book chapter and 36 abstracts). He has an extensive education and background in medicine, with specializations in pediatrics, pediatric pulmonology and pediatric sleep, and leadership positions in more than four (4) professional medical societies. Dr. Nathanson has received three (3) prestigious research grants from the National Institutes of Health (NIH), the Cystic Fibrosis (CF) Foundation, and the Agency for Healthcare Research and Quality. As well as two (2) Clinical/Research fellowships from the CF Foundation, Cardiovascular Research Institute at the University of California at San Francisco, and the Visiting Scientist Department of Physiology University of London, England.

DR. LOUIS FERNANDEZ, CHIEF MEDICAL OFFICER, FLORIDA MEDICARE/MEDICAID
Dr. Fernandez has more than twenty (20) years of experience driving clinical results and leading diverse cross-functional teams in outcome-based clinical management. During this time, he has maximized profitability through cost containment and performance optimization. He has also led institutional decision-making by effectively influencing committees on enrollee care and quality assurance. Dr. Fernandez also has a passion for leading stakeholders to integrate healthcare into a model that provides value and service to all. He is board-certified in obstetrics and gynecology (OB/GYN).

DR. CLINTON JULES, MEDICAL DIRECTOR, FLORIDA MEDICAID MARKET
Dr. Jules has more than fourteen (14) years of experience in the Florida Medicaid, Medicare, and LTC markets. He is skilled in providing medical services for enrollees, with a deep understanding of LTC services, home care services, nursing facilities, and assisted living facilities (ALFs). He has demonstrated experience leading teams to implement plans, policies, and procedures regarding LTC and transitions between facilities. He is board certified in internal medicine.

NATALIA ARESU, DIRECTOR, FLORIDA MEDICAID OPERATIONS
Ms. Aresu is an innovative leader with more than ten (10) years of experience in LTC and healthcare operations. She joined Humana in 2013 through the America Eldercare acquisition

and has experience in the implementation of operations for LTC and Statewide Medicaid Managed Care (SMMC) programs, as well as nursing facility diversion. A subject matter expert in the development and implementation of LTC clinical and operational software, Ms. Aresu has extensive knowledge of Agency for Health Care Administration (AHCA) requirements and Medicaid Benefits and Policy, and more than sixteen (16) years of experience in the healthcare industry. She has developed and implemented all case management and operational training programs for new associates. She also designed, developed, and implemented customized case management software to manage the LTC population. She serves on the Advisory Board of Impact Broward, a non-profit organization that provides respite services for elderly adults and veterans, and mentorship programs to children. As an Advisory Board member Ms. Aresu is heavily involved with numerous community and outreach events.

ELA ALARCON-CABRERA, CLINICAL DIRECTOR, FLORIDA MEDICAID OPERATIONS
Ms. Alarcon-Cabrera has more than thirteen (13) years of experience in LTC, healthcare and medical management. In her various roles leading clinical management and operations of large health plans, she identified Medicaid overpayment resulting in an estimated ninety-two million dollars ($92M) in savings of medical and prescription claims; developed Florida's first Institutional Equivalent SNP coordinating with LTC programs; established a national clinical management program to manage high cost claims; and supported the Mergers & Acquisitions team with the clinical integration of a newly acquired international health organization.

AMARILIS FERNANDEZ, MANAGER, FLORIDA MEDICAID CARE MANAGEMENT
Ms. Fernandez has extensive knowledge of Managed Care, Medicaid, Medicare, commercial insurance, and LTC programs, with more than thirty (30) years of experience in the healthcare industry. She holds a registered nurse (RN) certification in Florida, and is skilled in Complex Case Management, Nursing Facility Diversion, SNPs, and Disease Management including oncology, diabetes, congestive heart failure (CHF)/coronary artery disease (CAD), Alzheimer's/dementia, asthma/chronic obstructive pulmonary disease (COPD), and end of life care.

ANNIE SINANAN, CONTRACT MANAGER, FLORIDA MEDICAID OPERATIONS
Ms. Sinanan has more than twenty-five (25) years of experience overseeing and reporting audit activities and compliance issues with Humana healthcare plans in Florida. She has extensive knowledge of AHCA reporting and contract requirements, and a proven history of promoting positive relationships between AHCA and Humana. She is skilled in coordinating compliance with ad-hoc requests, special projects, and conflict resolution and communication.

LINDA LAWRENCE, COMPLIANCE OFFICER, FLORIDA MEDICAID MARKET
Ms. Lawrence has been with Humana since 1985. She was a Medical Center Administrator prior to joining the Compliance team, where she has served for the past twenty-five (25) years. She has worked in both the Commercial and Medicare areas in addition to Medicaid, and has been dedicated to Medicaid and LTC for the last eight (8) years.

SHANNON CHILDERS, RISK ADVISOR, FLORIDA MEDICAID MARKET
Ms. Childers has extensive knowledge of compliance risks and contractual requirements for LTC Medicaid programs, with seventeen (17) years of experience reviewing and preparing legal documents. She is skilled in reimbursement issues, fraud allegations, and Medicaid program integrity audits, and has experience implementing Corrective Action Plans (CAPs) to address noncompliance.

JASON FENNEMORE, STRATEGIC CONSULTANT, FLORIDA MEDICAID OPERATIONS
Mr. Fennemore has more than ten (10) years of experience leading healthcare management teams. He has demonstrated ability to develop efficient strategies and execute marketing plans. Mr. Fennemore is knowledgeable about the clinical, case management, and financial aspects of LTC programs. His background and education are in healthcare management and operations.

JULIE LOSEE, CLINICAL DIRECTOR, FLORIDA MEDICAID OPERATIONS
Ms. Losee has more than thirty-five (35) years of experience in the healthcare industry, with a background and education in nursing. She has experience leading multiple teams responsible for one hundred thousand (100,000) Florida Medicaid enrollees.

DANIELLE ANTALOCY, CLINICAL MANAGER, FLORIDA MEDICAID OPERATIONS
Ms. Antalocy has close to ten (10) years of experience in the healthcare industry. She is a skilled RN with a proven track record of positive, engaging leadership and exceeding goals. Ms. Antalocy has a strong commitment to providing education and ongoing training to associates, as demonstrated by her ability to implement new processes per State requirements, as well as her background and education in healthcare.

SHARON MECOLI, MANAGER, FLORIDA MEDICAID QUALITY OPERATIONS
Ms. Mecoli has thirty-five (35) years of experience as a certified RN. She is knowledgeable about Case Management and Quality of Care improvement, and skilled in Regulatory Compliance, Medicaid LTC, Operations Management, Grievance and Appeals, Process Improvement, and Policy Development.

SHARON COOK-MCEWEN, DIRECTOR, FLORIDA MEDICAID OPERATIONS
Ms. Cook-McEwen is a highly motivated executive leader who has demonstrated ability to analyze trends, develop new processes, and collaborate with large teams to improve outcomes for enrollees and healthcare providers alike. She has more than twenty (20) years of experience in healthcare management, with a background and education in nursing and business administration. She assumes direct responsibility for quality and operational metrics, and successfully leads teams to increase efficiency and prevent losses.

MICHAEL PRATT, VICE PRESIDENT, FLORIDA MEDICAID OPERATIONS
Mr. Pratt has more than twenty (20) years of experience providing detailed analyses of financial statements and reports for healthcare companies. His quality leadership and management of large teams provide healthcare services to Medicaid enrollees. He is highly skilled in financial analysis, cost savings, compliance, and project management, and has been working with the Humana Medicaid program since 2014.

JOE PIEMONTE, VICE PRESIDENT, FLORIDA MEDICAID OPERATIONS
Mr. Piemonte has more than twenty-five (25) years of experience in the healthcare industry and more than ten (10) years of experience in contracting, contract administration, and provider relations for more than one hundred fifty (150) hospitals and more than nine hundred million dollars ($900M) in annual spend in various lines of business. He has expertise in cross-functional team management, strategic planning and execution, and process and design improvement. He has demonstrated ability to negotiate large contracts and achieve positive outcomes while reducing budgets.

SHARON COLEMAN, DIRECTOR, FLORIDA MEDICAID PROVIDER RELATIONS AND CONTRACTING
Ms. Coleman has twenty-two (22) years of experience negotiating physician, ancillary, and hospital agreements and leading physician engagement strategies, including complex process resolution. She led the development of Humana's Medicaid and Duals expansion states, which allowed for involvement in all aspects of network build. Currently, she leads the Central Florida contracting team responsible for commercial, Medicare and Medicaid, as well as overseeing Medicaid operations and compliance for North Florida.

KATRINA KNIGHT-VERA, DIRECTOR, FLORIDA MEDICAID PROVIDER RELATIONS AND CONTRACTING
Ms. Knight-Vera has more than seventeen (17) years of experience in the managed care industry. During that time, she has led provider network contracting, re-contracting, compliance, and operational activities with physician, ancillary, and hospital providers. In her current role, she is responsible for all Medicaid network service level agreement requirements, which include provider education, network adequacy and state reporting, as well as contracting and re-contracting initiatives. Additionally, she collaborates with Health Services, Finance, and Medicaid leadership on developing clinical and network strategies to improve quality outcomes for our enrollees.

EDWARD MILLER, MANAGER, FLORIDA MEDICAID PROVIDER RELATIONS AND CONTRACTING
Mr. Miller has extensive experience managing home health, home infusion, and durable medical equipment (DME) companies, with six (6) years of experience in LTC and an additional five (5) years of experience in the healthcare industry. Since 2015 he has overseen Humana's Florida Medicaid LTC Provider Relations and Contracting teams to ensure network adequacy and provider engagement program improvements, among other responsibilities.

MEDICAID NATIONAL LEADERS

Our national Medicaid leaders support all Humana Medicaid contracts, partnering with our Florida management team to provide an integrated approach to care for our Florida enrollees.

ALAN WHEATLEY, PRESIDENT, RETAIL SEGMENT
Mr. Wheatley has more than twenty (20) years of experience at Humana. He created Humana's new Dual Eligible, Medicaid, and LTC business, and has deep knowledge of Medicaid programs. Mr. Wheatley has developed strategy for Humana's Medicare Prescription Drug Plan program encompassing three point two million (3.2M) enrollees. As Humana's leading President encompassing Medicare/Medicaid, he led all aspects of the business including developing the growth strategy that led to a fifteen percent (15%) compound annual growth rate (CAGR) since 2008, enabled by focus on enrollee and provider experiences.

DR. ROY BEVERIDGE, CHIEF MEDICAL OFFICER, NATIONAL MEDICARE/MEDICAID/DUALS
Dr. Beveridge has an extensive medical research background, with more than forty (40) years of experience in medicine and healthcare, and extensive publications in the fields of medical oncology, stem cell transplantation, quality design, and population health. He is known for creating collaborative environments among physician communities and providing thought

leadership around population health. He is board certified in medical oncology and internal medicine.

JOHN BARGER, VICE PRESIDENT, DUAL ELIGIBLE AND MEDICAID PROGRAMS
Based in Tampa, Florida, Mr. Barger has more than twenty (20) years of executive leadership in healthcare and significant experience working with traditional Medicaid, LTC, Medicare, Dual Demonstrations, commercial insurance programs, and care delivery organizations. He is knowledgeable in clinical operations management, quality programs, network contracting, provider relations, and finance. Mr. Barger is committed to serving vulnerable populations both personally and professionally, taking an active role in inner-city mentoring and faith-based initiatives in Tampa Bay for more than ten (10) years. His leadership development has focused on impacting the corporate culture by valuing associates and empowering them to make a meaningful difference in society through their work.

MARISSA CHILDERS, DIRECTOR NATIONAL MEDICAID/DUALS CLINICAL DELIVERY & QUALITY IMPROVEMENT
Ms. Childers is an accomplished healthcare professional with twenty (20) years of healthcare experience. She demonstrates success in employer-based workplace health and wellness management, clinical program management, case management, ambulatory and clinical nursing, and academia. She has extensive experience in LTC and worker's compensation case management, including program development, implementation and evaluation, quality improvement processes, and risk assessment.

ANDY NICHOLS, DIRECTOR, NATIONAL MEDICAID/DUALS STRATEGY AND COMMUNITY DEVELOPMENT
Mr. Nichols has six (6) years of experience in Medicaid, LTC, and duals strategy and development, and nearly a decade with Humana in total. He has been highly engaged in the growth of Humana's Medicaid and Duals program, participating in or leading business development efforts in all new and prospective markets, including the development of community-based stakeholder relationships, local care and support model partnerships, and proposal submissions. With a background in engineering and community development, Mr. Nichols is an entrepreneurial-minded strategic leader with a demonstrated skillset in relationship building, growth planning, delivery systems analysis, portfolio management, cost optimization, and civic planning.

RON WEEDEN, DIRECTOR, NATIONAL MEDICAID/DUALS FINANCE
Based in Tampa, Florida, Mr. Weeden has an extensive background in strategic planning, financial analysis, project management, forecasting, and budgeting specifically within Florida Medicaid, with twenty (20) years of healthcare experience. He is an extremely motivated, results-driven financial professional with exceptional leadership skills. Mr. Weeden demonstrates ability to proactively produce and lead exceptional performance within a team environment, and creatively resolve problems while capitalizing on opportunities.

JEB DUKE, DIRECTOR, NATIONAL MEDICAID/DUALS PROGRAM MANAGEMENT
Mr. Duke has ten (10) years of experience in Medicaid, Duals, and LTC, and is knowledgeable about contracts, developing segment structures, and facilitating process change. He is an experienced leader with an education in accounting and background in leading large teams as a United States Marine Corps (USMC) Commanding Officer. He has demonstrated ability to coordinate and improve processes that facilitate administrative savings.

DEBORAH BEAVIN, DIRECTOR, NATIONAL MEDICAID/DUALS STRATEGIC PARTNERSHIPS AND IMPLEMENTATION

Ms. Beavin has more than thirty (30) years of experience in business operations, with expertise in cross-functional team management, strategic planning and execution, and process and design improvement. She joined Humana as our Chief Procurement Officer in 2004. Ms. Beavin is a proven operational Leader, procurement expert, and Six Sigma Master Black Belt with extensive experience delivering productivity, driving process improvement and design initiatives, and collaboratively contributing notable business benefit in various roles. She led the organization's Corporate Procurement team in the introduction of a best-in-class Procurement process, which resulted in eight percent (8%) year-over-year supplier-related savings, a transition of ninety-two percent (92%) of spending to e-enabled methods, and a supply base reduction of sixty percent (60%). Since 2015 she has been serving as Medicaid's Culture leader, leading a group of Culture Champions across Medicaid to bolster associate engagement, belonging, and health.

JEFF LAYMAN, VICE PRESIDENT, NATIONAL OPERATIONS PROCESS TRANSFORMATION

Mr. Layman has nearly twenty (20) years of experience with Humana. He has led a variety of successful efforts creating a culture that both anticipated and responded to Humana's customers' needs. Mr. Layman has designed flexible business processes to meet an ever-changing business environment; established strategic development of service and process innovations; and led teams of associates dedicated to implementing innovation.

CHERYL D. GALLON, VICE PRESIDENT, VIRGINIA MEDICAID/DUALS MARKET & NATIONAL MEDICAID STRATEGIC PROJECTS

Ms. Gallon has a background and education in healthcare and business management, with more than twenty-two (22) years of experience in managed care, strategic planning, and operations. She has extensive knowledge of government programs such as Medicaid Fee-For-Service (FFS), Medicaid managed care, and Medicare, and is highly skilled in federal and state Medicaid regulations, compliance, project management, problem identification, and solutions.

ROSS WESTREICH, VICE PRESIDENT, ILLINOIS MEDICAID/DUALS MARKET & NATIONAL MEDICAID STRATEGIC PROJECTS

Throughout his twenty (20)-year tenure with Humana in Illinois, Ross Westreich is a seasoned executive and leader in the healthcare industry. Since joining Humana, Ross has gained experience working across the board in the senior products space, including market operations, product development, financial analysis, and strategic planning. Throughout his career, Mr. Westreich has built strong relationships with Illinois providers, enrollees, and the community.

HUMANA'S EXECUTIVE TEAM OFFERS EXPERIENCE AND EXPERTISE

Our dedication to rigorous recruiting, associate development, and retention has ensured that we have talented people, world-class associate engagement and commitment to service. Our Florida executive management team offers a wealth of knowledge and experience specific to Medicaid, Florida, elders, and adults with disabilities who require LTC. Our team is poised to deliver the highest level of service to Florida Medicaid enrollees.

EXHIBIT A-4-c
LTC SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The extent to which executive managers have expertise and experience in implementing innovative care delivery systems serving elders and adults with disabilities who require LTC.

2. The extent to which executive managers have expertise and experience for their respective positions.

3. The degree to which the respondent provides evidence, data, or metrics to demonstrate the effectiveness of its approaches to staff retention, including staff tenure, by contract, for the respondent's two (2) most recent contracts.

Score: This section is worth a maximum of 15 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Attachment LTC 13-1: Resumes – Florida Medicaid Leaders

Jaimie White

Upon Award: President, Florida Medicaid Operations

Qualifications

- Increased STAR ratings on 80% of CMS contracts, which resulted in greater reimbursement from CMS and increase the marketability of our products

2008-2011 Humana's Vice President of the Central Illinois Market

- Successfully grew the Medicare business an average of 20% per year by expanding the service area, provider base, and product offerings
- Increased profitability of the acquired business by strategically migrating members from networked PPO products to more tightly managed HMO plans resulting in a 5% increase in margin
- Through strategic planning and emphasis on local market intelligence, successfully retained 96% of the acquired lives at a higher margin

Education and Certifications

- Bachelor's of Science in Business and Public Administration from Drake University
- Oracle 8i: SQL and PL/SQL from Oracle University

Attachment LTC 13-2: Second-Tier Development Programs

Once executive managers and associates have completed our Required First-Year Curriculum, they can access our second-tier of career development programs. The second-tier development programs build upon the skills and knowledge acquired during the executive manager's first year and focus on transitional innovation to developing the next generation of Humana leaders. New opportunities are regularly updated on our leadership development website, The Leader Connection. The site is dedicated to growth and development, leadership connection, and leading and retaining talent with tools, resources, and opportunities. The goal of the program is to create leaders dedicated to Enrollee well-being and qualified to solve difficult health care system problems.

The descriptions below provide insight into selection of our second-tier development programs.

Experiential Moves

The Experiential Moves program gives high-potential executive managers opportunities to move to other areas of the company to build their overall understanding of the business and facilitate their ability to take over greater scope in the organization.

Leading Virtually

This 6-week program designed leaders or aspiring leaders with direct reports working remotely or virtually. During the course of this program, we will cover the main components of leading virtually-results, process, relationships, and communication. This course will equip you with techniques and strategies to help you become a better virtual leader.

Coaching

This program focuses on the practical application of coaching skills. During the session, participants will work in small teams to navigate a variety of leadership coaching scenarios, and take away tools and tactics to implement in their approach to coaching.

Change

We offer a comprehensive curriculum to help associates and leaders navigate the personal aspects of change to help others, help others develop capabilities to thrive through change, apply a process to link behaviors to business results and drive a successful change.

The Change Curriculum includes:

- Leading Change: Setting the Foundation (Self-Paced and In-Person)
- FIT for Change (Self-Paced , Virtual and In-Person)

Healthcare Leaders 2020

The genesis for Health Care Leaders 2020 (HCL 2020) occurred during Humana Executive Committee Succession Management Reviews. In the reviews, Humana Senior Executives identified the need to evolve high potential executive managers – leaders – who were out-of-industry hires, and functional experts to fully understand the health insurance industry and be grounded in solid business acumen.

Humana began partnering with Harvard Business School (HBP) and other leading institutions to develop and deliver a best in class, health care leader curriculum that would transform Humana and influence change in the health care system. HBP and Humana mounted a needs assessment among internal and external executives, and business partners of Humana.

HCL 2020 develops and mobilizes leaders to deal with the challenges that lie ahead and leverage opportunities to redefine health care. Some goals for HCL 2020 include:

- Provide a transformational experience for leaders, in their perspective, skills, and careers
- Develop leaders who will influence not just Humana but the entire industry, through a future focus with a broad vision that incorporates systems thinking
- Create visible change that demonstrates Humana's commitment to real business impact for Humana and its stakeholders and healthier communities that we serve

Thrive Here

This innovative workshop, facilitated by a distinguished industry expert, prepares executives for the twenty-first century. In an intimate cohort of 20 key leaders, participants deepen their understanding of Humana's changing member needs, cultivate Gender Balance initiatives (to make communities we serve healthier), and experience mindful sponsorship of Humana's executive talent.

Participants will be equipped with the skills to sponsor and be sponsored and experience custom opportunities for growth through a 6-month sponsorship pairing. Our business leaders will better enable collaboration, empowerment, and candor; reflect and represent Humana's Medicaid and LTC member base; and sponsor the next generation of talent by leveraging the skills of gender balance and gender bilingualism.

Development Acceleration Program (DAP)

The Development Acceleration Program (DAP) is a talent development experience for high potential executive managers wherein participants are placed in matrix teams and complete project work for a business sponsor. The DAP experience is 12 weeks and the business sponsor creates a context for accelerating development. Through the DAP journey DAP participants build enterprise acumen, increase their leadership networks, and get to showcase their talents while solving real world challenges.

Physician Executive Development Program (PEDP)

The Physician Executive Development Program (PEDP) is a two-phased experience for physician leaders of leaders, addressing the leadership challenges faced by our physician leaders, and increasing the Humana and business acumen of participants.

Physician Leadership Development Program (PLDP)

The Physician Leadership Development Program is a blended learning experience designed to develop fundamental leadership capabilities of participants. Participants also complete AAPL online courses aligned to course focus areas to receive CME credit

Attachment LTC 13-3: Select Courses on Medicaid and LTC

Selection of Courses Specific to Medicaid, Long-Term Care, and Florida

The sample listing of training courses (below) speak to our dedication to the training and development of our Medicaid and LTC leaders (and associates). These and other courses provide continual learning opportunities that align to each person's level of experience or tenure with Humana.

Medicaid Basics

- Online Class
- Medicaid Basics information including eligibility and benefits.

Florida Medicaid Contract

- Senior Products Learning & Development
- SPLD-Florida-Medicaid Basic

Medicaid 110: Medicaid Plan Product Training

- Senior Products Learning & Development
- This course covers an Industry overview of Medicaid Plans including the program overview, population information, program principles, benefits, and the Humana landscape.

Medicaid 112: Medicare-Medicaid Plan Product Training

- Senior Products Learning & Development
- This course covers an Industry overview of Dual Eligible Plans including the program overview, population information, program principles, benefits, and the Humana landscape.

Medicaid Product Training: Florida Medicaid Plan

- Senior Products Learning & Development
- This course reviews the Florida Medicaid Plan. This course covers a plan summary, landscape, and benefit details for the plan.

Medicaid 111: Long Term Services and Supports Product Training

- Senior Products Learning & Development
- This course covers an Industry overview of Long Term Services and Supports including the program overview, population information, program principles, benefits, and the Humana landscape.

Medicaid: Florida Contract Training

- Senior Products Learning & Development
- Description: ELearning course. Definitions and abbreviations; Florida Medicaid; General Responsibilities of the Managed Care Plan; enrollment/disenrollment specifications; unborn/newborn enrollment; marketing and outreach; enrollee materials; required Medicaid benefits; Humana expanded benefits; Humana Healthy Behavior Program; Incentive programs; and more.

Attachment LTC 13-4: Tenure and Retention Rates

Item	Tenure Metrics	Total Years	Years of Experience per FL Leader
1	Humana Years of Service	315.3	10.2
2	Years in Health Care outside of Humana	434.6	14.0
3	Total Years of Experience in Health Care	749.9	24.2
4	Years of Long Term Care Experience	238.6	7.7

Item	Retention and Mobilizing Talent Metrics	Total Career/ Role Changes	Avg. Career Moves per FL Leader
5	Career 'moves' since joining Humana	95	3.1
6	Humana Leadership Retention Rate for 2016 was 92%		

Source for items 1-5: Humana Capital Analytics Population Tool (as of 9/27/17)

Source for item 6 - Humana Investor Day, 2016 Report on HR Retention and Engagement

Exhibit A-4-d, Specialty Submission Requirements and Evaluation Criteria

Humana did not complete **Exhibit A-4-d, Specialty Submission Requirements and Evaluation Criteria and Applicable Attachments/Exhibits** as we are submitting our response as a Comprehensive Plan.

Introduction to Exhibit A-5: Summary of Respondent Commitments

Introduction to Exhibit A-5: Summary of Respondent Commitments

Due to formatting restrictions within the Exhibit A-5: Summary of Respondent Commitments Excel document for Region 2 and Regions 4 through 11, we were unable to fully display our commitments within Exhibit A-5 for the Hard Copy response. However, our commitments will be viewable in the Electronic response by clicking on each cell.

In addition, the Exhibit A-5 Excel document would not allow us to add additional lines to the document. Therefore, we added any remaining commitments to additional Exhibit A-5 Excel documents. For each of our regional responses, you will find multiple, signed Exhibit A-5 documents.

EXHIBIT A-5
SUMMARY OF RESPONDENT COMMITMENTS

PURPOSE: The Agency will review and utilize this Exhibit during the negotiation process, for respondents who are invited to negotiations, to capture commitments made by the respondent in response to this solicitation.

INSTRUCTIONS: The respondent shall identify each commitment made/proposed in the solicitation. Commitments include, but are not limited to: innovations that assist in achieving the Agency goals, improvements in service delivery coordination and quality outcomes for enrollees, improving the enrollee experience, commitments made in the respondent's provider engagement approach which result in an improved provider experience, and commitments reducing overall costs to the Medicaid program. The respondent shall identify the solicitation section/sub-section (Attachment X, Exhibit Y, Subsection Z), as applicable where the commitment can be found.

Category	Commitment (Brief Summary/Description)	Solicitation Section Reference
Example: Agency Goals	(Respondent to complete)	Exhibit A-4-a, Section B., Agency Goals, MMA SRC# 1 - Potentially Preventable Events (Regional)
Recipient Experience	Humana will offer sixteen (16) Additional Expanded Benefits as detailed in Exhibit A-4-a-3.	Exhibit A-4-a, Section C., Recipient Experience, SRC #10 - Additional Expanded Benefits (Regional)
Recipient Experience	In 2018, to support the smart phone technology-dependent Medicaid population, Humana will expand MyHumana mobile application to our Medicaid plans.	Exhibit A-4-a, Section C., Recipient Experience, SRC #11 - Online Provider Directory (Statewide)
Recipient Experience	Additional improvements to the Humana Florida Medicaid website will be prioritized for implementation by October 1, 2018.	Exhibit A-4-a, Section C., Recipient Experience, SRC #11 - Online Provider Directory (Statewide)
Recipient Experience	Humana, upon receipt of NCQA certification for its physician measurement program, will display performance ratings within Physician Finder Plus.	Exhibit A-4-a, Section C., Recipient Experience, SRC #11 - Online Provider Directory (Statewide)
Recipient Experience	Humana will offer its MyHumana mobile application allowing enrollees to: view benefit information; access enrollee identification (ID) cards; find a provider; access health information; view clinical alerts; and send secure messages to a team of Humana associates	Exhibit A-4-a, Section C., Recipient Experience, SRC #11 - Online Provider Directory (Statewide)
Recipient Experience	Humana will offer RXMentor a new mobile application enabling enrollees to manage their prescription medication list, vitamins or supplements list, and over-the-counter medication list. RxMentor includes details about medications (strength, dosage, allergic reactions); images of the pills to make them easier to distinguish; and options to discussion medications with a pharmacist.	Exhibit A-4-a, Section C., Recipient Experience, SRC # 13 - Social Media (Statewide)
Recipient Experience	Humana will launch a Medicaid Facebook Page as well as a Medicaid YouTube Playlist within our corporate YouTube channel	Exhibit A-4-a, Section C., Recipient Experience, SRC # 13 - Social Media (Statewide)
Recipient Experience	Humana's CRM will serve as the central point for the planning, implementation, fulfillment, and tracking of member communication across all of our channels. CRM will allow Humana to compliantly deliver targeted and personalized messaging based on member preferences and needs.	Exhibit A-4-a, Section C., Recipient Experience, SRC # 13 - Social Media (Statewide)
Provider Experience	Humana will develop a reference guide to help hospice works understand the coordination betweem medical and long-term care as it related to claims, authorization, and enrollee responsibility.	Exhibit A-4-a, Section D., Provider Experience, SRC # 15 - Provider Engagement Model (Statewide)

EXHIBIT A-5
SUMMARY OF RESPONDENT COMMITMENTS

Provider Experience	To support adherence to processing requirements, CRM will offer summary and detailed status reporting of all provider complaints	Exhibit A-4-a, Section D., Provider Experience, SRC # 16 - Dispute Resolution (Statewide)
Provider Experience	Humana will offer AHCA access to an on-line, secure portal and business intelligence tools to make available on demand Humana's claims process and payment data and metrics.	Exhibit A-4-a, Section D., Provider Experience, SRC # 17 - Claims Processing and Payment Process (Statewide)
Delivery System Coordination	Humana will pilot the mPulse HIPAA-compliant platform in Florida to extend our EPSDT outreach.	Exhibit A-4-a, Section E, Delivery System Coordination, SRC #22 - EPSDT (Statewide)
Delivery System Coordination	We will design a detailed EPSDT module that will cover the federal and state EPSDT requirements and EPSDT operations throughout the plan.	Exhibit A-4-a, Section E., Delivery System Coordination, SRC #22 - EPSDT (Statewide)
Delivery System Coordination	Humana will adopt the Project ECHO model.	Exhibit A-4-A, Section E., Delivery System Coordination, SRC #23 - Behavioral Health/Primary Care Integration (Statewide)
Delivery System Coordination	We plan to pursue the credentialing of at least one BH therapist in all Federally Qualified Health Centers (FQHCs) in accordance with guidelines issued by the Centers for Medicare and Medicaid Services.	Exhibit A-4-A, Section E., Delivery System Coordination, SRC #23 - Behavioral Health/Primary Care Integration (Statewide)
Oversight and Accountability	Humana will comply with AHCA's desire to implement EVV capability for both personal care and home health services.	Exhibit A-4-a, Section F., Oversight and Accountability, SRC # 32 - SIU (Statewide)
Agency Goals	To increase access in Region 1, Humana is partnering with Health First Network (HFN) to initiate a pilot to serve HFN's high-risk and high-need enrollees.	Exhibit A-4-b, Section B., Agency Goals, MMA SRC #1 - Potentially Preventable Events (Regional)
Agency Goals	In continuing efforts to improve integration, Humana will: • Create a mental health provider scorecard showing mental health-related admissions, readmissions, and length of time from discharge to follow-up care visits (PCP or mental health provider). • Analyze which providers offer effective care and where there is an opportunity for our nurses, QINs, and BH subcontractors to educate and offer support by looking at Early Indicator Report (EIR) data for behavioral health to understand utilization by provider. Pairing these data with our medical data, including claims and encounters, to create a comprehensive report card will help us see a full picture of the enrollee's health. • Collaborate on BH discussions by holding regional bi-annual grand round meetings hosted by Humana, inviting mental health providers and top MSOs (based on PCPs with the most mental health-utilizing enrollees) to discuss best practices and current challenging issues.	Exhibit A-4-b, Section B., Agency Goals, MMA SRC #1 - Potentially Preventable Events (Regional)
Agency Goals	Humana currently contracts with AHCA for the Florida Health Insurance Exchange's (HIE) ENS for Regions 9, 10, and 11 and is receiving daily ED visit information from more than sixty (60) facilities. We will expand our use of the ENS to Region 1.	Exhibit A-4-b, Section B., Agency Goals, MMA SRC #1 - Potentially Preventable Events (Regional)
Agency Goals	Humana will monitor procedures and services in Region 1 that may be inappropriately prescribed, or may be delivered in a lower-cost setting.	Exhibit A-4-b, Section B., Agency Goals, MMA SRC #1 - Potentially Preventable Events (Regional)

SUMMARY OF RESPONDENT COMMITMENTS

PURPOSE: The Agency will review and utilize this Exhibit during the negotiation process, for respondents who are invited to negotiations, to capture commitments made by the respondent in response to this solicitation.

INSTRUCTIONS: The respondent shall identify each commitment made/proposed in the solicitation. Commitments include, but are not limited to: innovations that assist in achieving the Agency goals, improvements in service delivery coordination and quality outcomes for enrollees, improving the enrollee experience, commitments made in the respondent's provider engagement approach which result in an improved provider experience, and commitments reducing overall costs to the Medicaid program. The respondent shall identify the solicitation section/sub-section (Attachment X, Exhibit Y, Subsection Z), as applicable where the commitment can be found.

Category	Commitment (Brief Summary/Description)	Solicitation Section Reference
Example: Agency Goals	(Respondent to complete)	Exhibit A-4-a, Section B., Agency Goals, MMA SRC# 1 - Potentially Preventable Events (Regional)
Agency Goals	Humana and HFN will collaborate in a regional demonstration to close care gaps and reduce potentially preventable events.	Exhibit A-4-b, Section B., Agency Goals, MMA SRC # 4 - Telemedicine (Regional)
Agency Goals	We will create a mental health provider score card conveying mental health-related admissions, readmissions, and length of time from discharge to follow-up care visits for providers to review and use to identify opportunities for improvement.	Exhibit A-4-b, Section B., Agency Goals, MMA SRC # 3 - Patient Centered Medical Homes (Regional)
Agency Goals	DOCTOR ON DEMAND: Humana is launching a telemedicine partnership with Doctor on Demand, effective October 2018,	Exhibit A-4-b, Section B., Agency Goals, MMA SRC # 4 - Telemedicine (Regional)
Agency Goals	Humana will be designating a Provider Services Leader who will provide oversight on disputes.	Exhibit A-4-b, Section B., Agency Goals, MMA SRC # 5 - Provider Network Development (Statewide)
Provider Experience	Humana is implementing an improved provider information verification process to ensure we have updated provider demographic and participation status information available to our enrollees, enhancing their access to care.	Exhibit A-4-b, Section D. Provider Experience, MMA SRC #12 - Provider Credentialing (Statewide)
Delivery System Coordination	With AHCA's approval, we will enhance our handbook to include a list of Medicaid FFS benefits alongside the list of Humana's covered benefits.	Exhibit A4b, Section E., Delivery System Coordination, MMA SRC #17 - Coordination of Carved Out Services (Statewide)
Delivery System Coordination	With AHCA's approval, our online enrollee portal will be enhanced to provide a clear description of the services covered through Medicaid FFS and the prepaid dental plan, including information on how enrollees can obtain any necessary referrals through their provider and instructions for how to complete applications for the waiver process. We will also provide Humana contact phone numbers that enrollees can call to ask questions about or request assistance with referrals.	Exhibit A4b, Section E., Delivery System Coordination, MMA SRC #17 - Coordination of Carved Out Services (Statewide)
Delivery System Coordination	As MMA shifts from a carved-in to carved-out model of dental services, we will ensure that all associates and subcontractors understand this and other changes to the contract through our training program.	Exhibit A4b, Section E., Delivery System Coordination, MMA SRC #17 - Coordination of Carved Out Services (Statewide)

EXHIBIT A-5
SUMMARY OF RESPONDENT COMMITMENTS

Recipient Experience	We will hire nurse-trained CMs with experience with these three (3) waiver populations (The Project AIDS Care (PAC) waiver, Adult Cystic Fibrosis (ACF) waiver, and Traumatic Brain Injury and Spinal Cord Injury waiver). We will place each specially-trained CM in the region with the highest volume of the applicable special needs enrollees.	Exhibit A-4-c, Section C., Recipient Experience, LTC SRC #5 - Transition from Nursing Facility to Community (Statewide)
Recipient Experience	Additionally, we will institute post-transition reviews of individual enrollees who have reverted to the institutional setting, enabling transition coordinators and case managers to identify necessary actions to prevent future institutional placements. SUMMARY OF MANAGED CARE SAVINGS

PURPOSE: The Agency will review and utilize this Exhibit during the negotiation process, for respondents who are invited to negotiations, to identify managed care savings included by the respondent in response to this solicitation.

THE AGENCY RESERVES THE RIGHT TO INCLUDE ANY OR ALL MANAGED CARE SAVINGS LISTED HEREIN, OR AS NEGOTIATED, AS PART OF THE RESULTING CONTRACT.

INSTRUCTIONS: THE RESPONDENT SHALL IDENTIFY EACH MANAGED CARE SAVINGS PROPOSED IN ITS RESPONSE TO THIS SOLICITATION AND IDENTIFY BOTH THE SOLICITATION SECTION(S)/SUBSECTION(S)/ITEM(S), AND THE SECTION/COLUMN OF THE COST PROPOSAL TEMPLATE (ATTACHMENT C) IN WHICH THE MANAGED CARE SAVINGS IS PROPOSED. (SEE EXAMPLE BELOW) ADDITIONAL PAGES MAY BE INCLUDED AS NEEDED.

Managed Care Savings Activity (Brief Summary/Description)	Solicitation Section Reference	Cost Proposal Template (Attachment C) Reference
Hospital Readmissions	**Example:** *Exhibit A-4-b., MMA Submission Requirements and Evaluation Criteria - SRC# 1 Potentially Preventable Events (Regional)*	**Example:** *Cost Proposal Template (Attachment C)., Managed Care Savings Adjustments, #1*
Comprehensive Disease and Case Management: Reduces preventable admissions, readmissions, ER visits, and other avoidable costs. Also improves birth outcomes. Case management and care plan review for LTC members ensures appropriate setting of care and effective use of home health and transportation services for home based membership. Although incremental administrative expenses are necessary to support such programs, there is a favorable return on investment relative to medical expenses in addition to providing higher quality and better outcomes.	Exhibit A-4-b., MMA Submission Requirements and Evaluation Criteria - SRC# 1 Potentially Preventable Events (Regional), Exhibit A-4-b., MMA Submission Requirements and Evaluation Criteria - SRC# 2, Birth Outcomes (Statewide), Exhibit A-4-b., MMA Submission Requirements and Evaluation Criteria - SRC# 7 MMA Physician Incentive Program (MPIP) (Statewide), Exhibit A 4-c., LTC Submission Requirements and Evaluation Criteria - SRC# 3 Transitions of Care (Statewide), Exhibit A 4-c., LTC Submission Requirements and Evaluation Criteria - SRC# 5 Transition from Nursing Facility to Community (Statewide)	Cost Proposal Template (Attachment C)., Managed Care Savings Adjustments, #1
Comprehensive Utilization Management and Social Work: Reduces preventable admissions, readmissions, and emergency department visits, and also ensures appropriate treatment setting (e.g. office visit, outpatient, inpatient, and SNF). Although incremental administrative expenses are necessary to support such programs, there is a favorable return on investment relative to medical expenses in addition to providing higher quality and better outcomes.	Exhibit A-4-b., MMA Submission Requirements and Evaluation Criteria - SRC# 1 Potentially Preventable Events (Regional)	Cost Proposal Template (Attachment C)., Managed Care Savings Adjustments, #1
Increase PCP reimbursement for after-hours visits and real-time notification of emergency department visits for PCPs.	Exhibit A-4-b., MMA Submission Requirements and Evaluation Criteria - SRC# 1 Potentially Preventable Events (Regional)	Cost Proposal Template (Attachment C)., Managed Care Savings Adjustments, #3
Network Contracting: reducing costs and preventable events through significant value-based provider relationships and other strategic contracting initiatives.	Exhibit A-4-b., MMA Submission Requirements and Evaluation Criteria - SRC# 1 Potentially Preventable Events (Regional), Exhibit A-4-b., MMA Submission Requirements and Evaluation Criteria - SRC# 7 MMA Physician Incentive Program (MPIP) (Statewide), Exhibit A 4-b., MMA Submission Requirements and Evaluation Criteria - SRC# 13 Value Based Purchasing (Regional)	Cost Proposal Template (Attachment C)., Managed Care Savings Adjustments, #3
Front End Review (FER) and Prior Authorization List (PAL): Review facility, physician, and ancillary authorizations as well as pharmacy dispensing for appropriateness of treatment and place of treatment. Although incremental administrative expenses are necessary to support such programs, there is a favorable return on investment relative to medical expenses.	Exhibit A-4-b., MMA Submission Requirements and Evaluation Criteria - SRC# 1 Potentially Preventable Events (Regional)	Cost Proposal Template (Attachment C)., Managed Care Savings Adjustments, #1

EXHIBIT A-7
CERTIFICATION OF DRUG-FREE WORKPLACE PROGRAM

In the event of Identical or Tie Bids/Proposals: Preference shall be given to businesses with drug-free workplace programs. Whenever two or more bids which are equal with respect to price, quality, and service are received by the State or by any political subdivision for the procurement of commodities or contractual services, a bid received from a business that certifies that it has implemented a drug-free work place program shall be given preference in the award process. Established procedures for processing tied awards will be followed if none of the tied vendors have a drug-free workplace program. In order to have a drug-free workplace program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2) Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3) Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).

4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5) Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community by, any employee who is so convicted.

6) Make a good faith effort to continue to maintain a drug-free workplace through implementation of this section.

As the person authorized to sign the statement, I certify that this firm complies fully with the above requirements.

EXHIBIT A-9
REGIONAL PREFERENCE HIERARCHY

RESPONDENT NAME: Humana Medical Plan, Inc.

The Agency shall award one (1) additional Contract in a region to each successful respondent who receives a Region 1 or 2 Contract award. The Agency shall award the additional Contract in the respondent's highest desired region of preference in which the respondent submitted a responsive reply and negotiates a rate acceptable to the Agency.

Respondents shall complete the Regional Preference Hierarchy Table below, to indicate its preference for receipt of additional Contract awards.

If the Regional Preference Hierarchy Table is left blank, the respondent indicates that it does not desire any additional region awards.

Respondents shall indicate the region(s) in hierarchy order (highest desire being 1 and lowest desire being 10).

Humana Medical Plan, Inc.
October 1, 2018 to September 30, 2019 (RY 18/19) MMA Program Cost Proposal
For
Florida Agency for Health Care Administration
Statewide Medicaid Managed Care (SMMC)
Managed Medical Assistance (MMA) Program
Actuarial Certification
Regions 1-11

I, C. Jo Erwin, am an Actuarial Director with Humana, Inc. I am a member of the American Academy of Actuaries and a Fellow in the Society of Actuaries. I meet the Qualification Standards for Statement of Actuarial Opinion established by the American Academy of Actuaries. I reviewed the calculated capitation rates and am familiar with the relevant requirements of 42 CFR 438; the CMS Checklist - "Documentation Requirements for Actuarially Sound Capitation Rates, Edit Date: November 10, 2014", the 2017-2018 Medicaid Managed Care Rate Development Guide and Actuarial Standard of Practice (ASOP) 49.

This actuarial certification is provided in response to the Agency for Health Care Administration's (AHCA's) Statewide Medicaid Managed Care (SMMC) Managed Medical Assistance (MMA) Program Invitation to Negotiate (ITN) for Regions 1-11 for the effective period October 1, 2018 through September 30, 2019. This certification may not be appropriate for other purposes.

To the best of my information, knowledge and belief, the RY 18/19 cost proposals developed by Humana are in compliance with the relevant requirements of 42 §CFR 438.3(c), 438.3(e), 438.4 (excluding paragraphs (b)(3), (b)(4) and (b)(9)), 438.5, 438.6 and 438.7 (excluding paragraph (c)(3)).

I have examined the information in the data book and the adjustments made to develop the proposed rates as applied in the included cost proposals. I have also reviewed the ITN instructions and current experience for current managed care companies.

For purposes of this certification, actuarially sound capitation rates are defined as rates that:

- have been developed in accordance with generally accepted actuarial principles and practices; and
- are appropriate for the Medicaid populations to be covered, and the services to be furnished under the contract;

In developing the actuarially sound capitation rates, I relied upon the accuracy of data and information from AHCA and associates of Humana, Inc. I evaluated that data for reasonableness and consistency. I did not audit the data.

In my opinion, the capitation rates are actuarially sound, as defined in ASOP 49. They have been developed in accordance with generally accepted actuarial principles and practices, and are

appropriate for the populations to be covered and the services to be furnished under the contract. The assumptions used in the development of the capitation rates have been documented in the Actuarial Memorandum.

The certification includes rates for the following populations: TANF non-SMI, TANF SMI, SSI Medicaid Only non-SMI, SSI Medicaid Only SMI, SSI Dual Eligible, Child Welfare, HIV/AIDS Medicaid Only, HIV/AIDS Dual Eligible, LTC Medicaid Only, and LTC Dual Eligible.

Humana's cost proposal development excludes adjustments for the following items based on Section II.F (MMA) of the cost proposal instructions and rate methodology narrative.

- Seasonality adjustments needed for the differences in timing between the RY 18/19 period assumed for the cost proposal and the actual program implementation schedule.
- Adding nursing facility services for adults that are excluded from the SMMC LTC program as a covered benefit under MMA. This applies to MMA nursing facility and hospice services.
- Subject to CMS approval, transition of the Medicaid recipients receiving home and community-based waiver services through Project AIDS Care, Traumatic Brain Injury, and Adult Cystic Fibrosis waivers into the LTC Program, which will move these members into the LTC Medicaid Only or LTC Dual Eligible rate groups.
- Implementation of LTC program Express Enrollment, which will transition more members into the LTC Medicaid Only and LTC Dual Eligible rate groups faster.
- The enrollment of certain CMSN members into MMA capitated plans resulting from the Florida Department of Health's rescreening process that identified CMSN members that did not meet current CMSN enrollment criteria. This program change transitioned more members into MMA capitated plans during the second half of 2015.
- Restructuring of the existing MMA rate group structure, risk adjustment process, or other changes, if necessary, to develop actuarially sound rate mechanisms for any new specialty populations covered by one or more Specialty Plans.
- Application of final rate cell factors to final negotiated rates by rate group and region.
- Florida Medicaid FFS hospital, physician, and other provider reimbursement rates in effect for RY 18/19.
- Costs related to the inclusion of the Federally Qualified Health Center (FQHC) and Rural Health Clinic (RHC) wraparound payments which make up the difference between capitated plan payments and the Agency's encounter reimbursement rates.
- Costs related to the MMA Physician Incentive Program (MPIP). The MMA data book data reflects a time period prior to the October 2016 implementation of the MPIP and therefore fully excludes all costs associated with the MPIP.
- Compliance with the Medicaid managed care regulation published by the Centers for Medicare and Medicaid Services that disallows capitation payments eligible for the federal match for members aged 21 to 64 with a stay of more than 15 days in a given calendar month in an Institute for Mental Disease (IMD).
- The July 1, 2016 program change that provided Medicaid eligibility to lawfully residing children if they meet all other eligibility requirements (previously, most children had to be lawfully residing in the United States at least five years before they qualified for Medicaid services).

- Development of the medical school faculty physician group value based purchasing arrangement (if necessary).
- Development of the revised organ transplant kick payment amount.
- Development of the Behavioral Health Reform Waiver Services enhanced payment amount for temporary housing assistance and other supportive behavioral health services.
- Other program changes excluded from the cost proposal instructions and rate methodology narrative.
- Costs related to the federal health insurance provider fee (HIPF).

We understand that the Agency will adjust the final negotiated capitation rates to reflect the impact of these items and they therefore have been excluded from Humana's cost proposal development.

Per ITN instructions the submitted rates reflect a standard 1.0 risk based on information provided in the datebook.

Actuarial methods, considerations, and analyses used in forming my certification conform to the appropriate Standards of Practice as promulgated from time to time by the Actuarial Standards Board, whose standards form the basis of this Certification.

The actuarially sound capitation rates are based on a projection of future costs based on a set of assumptions. The rates are reasonable based on historical results for the managed Medicaid industry. Actual experience will vary from the assumptions in the rate development. I am not certifying that Humana Medical Plan, Inc. will achieve the target assumptions documented in our Actuarial Memorandum.

This Opinion assumes the reader is familiar with the Florida Medicaid program, Medicaid eligibility rules, and actuarial rating techniques. The Opinion is intended for the State of Florida Agency for Health Care Administration and should not be relied on by other parties. The reader should be advised by actuaries or other professionals competent in the area of actuarial rate projections of the type in this Opinion, so as to properly interpret the projection results.

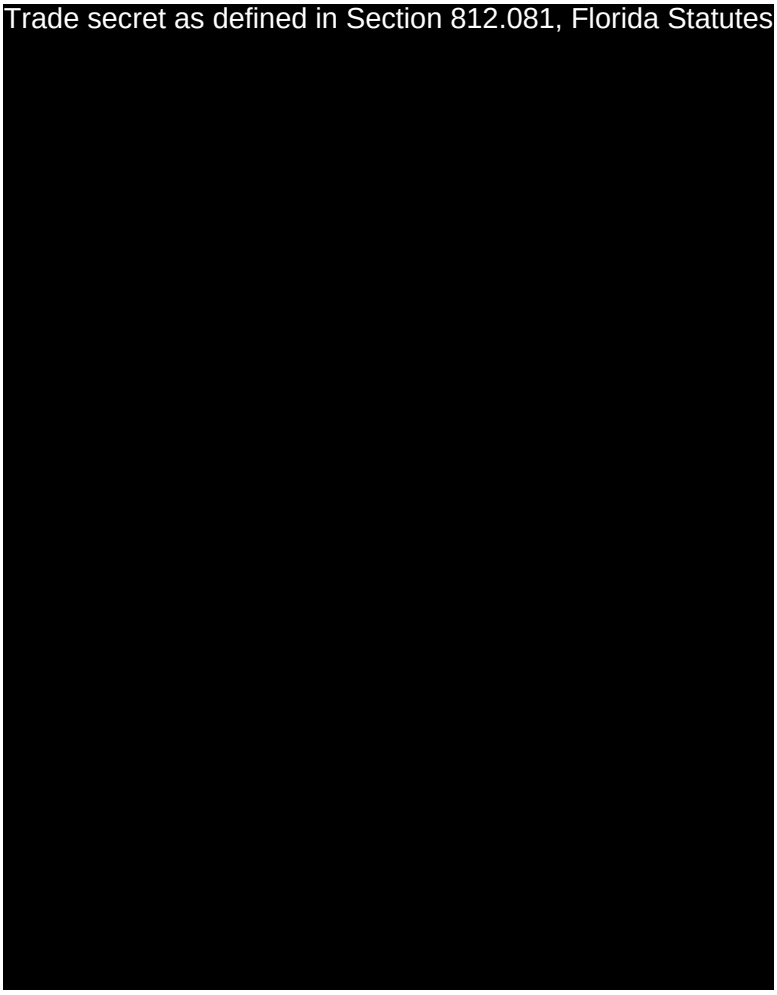
Exhibit 1: Summary of LTC RY 18/19 Capitation Rates by Region

Exhibit 2: Summary of LTC RY18/19 Results of Sensitivity



Humana Medical Plan, Inc.
October 1, 2018 to September 30, 2019 (RY 18/19) LTC Program Cost Proposal
for
Florida Agency for Health Care Administration
Statewide Medicaid Managed Care (SMMC) Long Term Care (LTC) Program
Actuarial Certification - Regions 1-11

I, C. Jo Erwin, am an Actuarial Director with Humana Medical Plan, Inc. I am a member of the American Academy of Actuaries and a Fellow in the Society of Actuaries. I meet the Qualification Standards for Statement of Actuarial Opinion established by the American Academy of Actuaries. I reviewed the calculated capitation rates and am familiar with the relevant requirements of 42 CFR 438; the CMS Checklist - "Documentation Requirements for Actuarially Sound Capitation Rates, Edit Date: November 10, 2014", the 2017-2018 Medicaid Managed Care Rate Development Guide and Actuarial Standard of Practice (ASOP) 49.

This actuarial certification is provided in response to the Agency for Health Care Administration's (AHCA's) Statewide Medicaid Managed Care (SMMC) Long Term Care (LTC) Program Invitation to Negotiate (ITN) for Regions 1-11 for the effective period October 1, 2018 through September 30, 2019. This certification may not be appropriate for other purposes.

To the best of my information, knowledge and belief, the RY 18/19 cost proposals developed by Humana are in compliance with the relevant requirements of 42 §CFR 438.3(c), 438.3(e), 438.4 (excluding paragraphs (b)(3), (b)(4) and (b)(9)), 438.5, 438.6 and 438.7 (excluding paragraph (c)(3)).

I have examined the information in the data book and the adjustments made to develop the proposed rates as applied in the included cost proposals. I have also reviewed the ITN instructions and current experience for current managed care companies.

For purposes of this certification, actuarially sound capitation rates are defined as rates that:

- have been developed in accordance with generally accepted actuarial principles and practices; and
- are appropriate for the Medicaid populations to be covered, and the services to be furnished under the contract;

In developing the actuarially sound capitation rates, I relied upon the accuracy of data and information from AHCA and associates of Humana Medical Plan, Inc. I evaluated that data for reasonableness and consistency. I did not audit the data.

In my opinion, the capitation rates are actuarially sound, as defined in ASOP 49. They have been developed in accordance with generally accepted actuarial principles and practices, and are appropriate for the populations to be covered and the services to be furnished under the contract. The

assumptions used in the development of the capitation rates have been documented in the Actuarial Memorandum.

The certification includes rates for the following two mutually exclusive rate groups:

- Home and community based services (HCBS)
- Non-HCBS

These rate groups cover individuals 18 years or older and eligible for placement in a nursing facility based on the Comprehensive Assessment and Review for Long-Term Care Services tool. In addition, initial LTC enrollment included transition of members from the following Medicaid Waivers:

- Assisted Living
- Aged and Disabled Adult Waiver or the Consumer-Directed Care Plus part of this waiver
- Adult Day Health Care Waiver
- Nursing Home Diversion Waiver
- Channeling Services for Frail Elders Waiver

The cost proposal does not include rates for the following waiver populations that are being added subject to CMS Approval:

- Project AIDS Care
- Traumatic Brain and Spinal Cord Injury
- Adult Cystic Fibrosis

Humana's cost proposal development excludes adjustments for the following items based on Section III.F (LTC) of the cost proposal instructions and rate methodology narrative. The Agency will adjust the final negotiated capitation rates to reflect the impact of these items.

- Nursing Facility/Hospice Rate changes
- Community High Risk Pool (CHRP) – no adjustment was made to reflect projected withholds or recoveries from the CHRP.
- Transition Percentages – no adjustments were applied for the blending of the HCBS and non-HCBS rates.
- Patient Responsibility Changes
- Seasonality adjustments needed for the differences in timing between the RY 18/19 period assumed for the cost proposal and the actual program implementation schedule.
- The following program changes are expected to have a material impact on the LTC program.
    1. New waiver populations that pending CMS approval will transition into the LTC program January 1, 2018 for receipt of their home and community-based services.
        a. Project AIDS Care
        b. Traumatic Brain and Spinal Cord Injury
        c. Adult Cystic Fibrosis
    2. Implementation of LTC program Express Enrollment, which will enroll members into the LTC program more quickly.
    3. Other program changes excluded from the cost proposal instructions and rate methodology narrative.

Exhibit 3: LTC Actuarial Certification

We understand that AHCA will adjust final negotiated rates to reflect the impact of these items and they therefore have been excluded from Humana's cost proposal development. In addition, the submitted rates do not reflect any expanded benefit costs.

Actuarial methods, considerations, and analyses used in forming my certification conform to the appropriate Standards of Practice as promulgated from time to time by the Actuarial Standards Board, whose standards form the basis of this Certification.

The actuarially sound capitation rates are based on a projection of future costs based on a set of assumptions. The rates are reasonable based on historical results for Humana and the managed Medicaid industry. Actual experience will vary from the assumptions in the rate development. I am not certifying that Humana Medical Plan, Inc. will achieve the target assumptions documented in our Actuarial Memorandum.

This Opinion assumes the reader is familiar with the Florida Medicaid program, Medicaid eligibility rules, and actuarial rating techniques. The Opinion is intended for the State of Florida Agency for Health Care Administration and should not be relied on by other parties. The reader should be advised by actuaries or other professionals competent in the area of actuarial rate projections of the type in this Opinion, so as to properly interpret the projection results.

Exhibit C-1: Capitated Plan Cost Proposal Template
Statewide Medicaid Managed Care (SMMC) Invitation to Negotiate (ITN)
Cost Proposal Template Basic Instructions & General Inputs
Region 1 Cost Proposal

General Inputs:

Respondent Organization Name: Humana Medical Plan, Inc.
Region: 1

Basic Instructions:

1. The purpose of this capitated plan cost proposal template, as part of the SMMC ITN, is to provide Respondents with a means for completing the SMMC Cost Proposal ("cost proposal") required in Attachment A of the SMMC ITN. This template is intended only for Respondents proposing to become a capitated plan in the SMMC program. Respondents proposing to become a Fee-for-Service (FFS) Provider Service Network (PSN) should fill out a different template.

2. **Respondents must follow the instructions presented in the SMMC ITN document " Attachment C: Cost Proposal Instructions and Rate Methodology Narrative."** That document includes both strict instructions for completing the cost proposal, as well as other information about the cost proposal and rate negotiation process that Respondents may find useful when completing their cost proposals. Please refer to that document for comprehensive instructions for completing the capitated plan cost proposal template.

3. **Under the "General Inputs" section above, Respondents should enter their organization name, as well as the region to which this cost proposal template applies.** Respondents must submit a separate capitated plan cost proposal template (with each of the necessary components completed) for each individual rate region in which they are proposing to participate in the SMMC program. The Respondent organization name and region entered on this tab will cause values in other tabs of the capitated plan cost proposal template to populate accordingly.

4. This single capitated plan cost proposal template Excel file includes tabs for three distinct components (the MMA cost proposal template, the LTC cost proposal template, and the non-benefit expense cost proposal template) that are required for different SMMC plan types. Please see the "Tab Structure" section below for details on the tabs included in this file, as well as a listing of which tabs should be completed by Respondents depending on their chosen SMMC plan type. Complete definitions for the SMMC plan types and additional instructions can be found in the SMMC ITN document "Attachment C: Cost Proposal Instructions and Rate Methodology Narrative."

5. In tabs that are not required for the Respondent's chosen SMMC plan type, Respondents should leave all inputs blank.
6. The capitated plan cost proposal template is password protected to allow Respondents to enter information only in cells shaded peach. Respondents must not change any formulas in the capitated plan cost proposal template and must submit the capitated plan cost proposal template with the original sheet and workbook protection intact. A formatting key is shown below and is also shown on each tab throughout the template for reference.
7. Respondents must enter a numeric value into each and every peach cell on all required tabs for their chosen SMMC plan type (except for the Respondent Organization Name input, the Proposed Specialty Population input in Worksheet M.11, and the adjustment factor name inputs on the various tabs, which can be input as text). If numeric values are not entered into each and every required peach cell, the cost proposal template will not appropriately calculate a proposed capitation rate from the Respondent's input base data and adjustments. If a particular adjustment factor, per member per month (PMPM) amount, or per delivery amount does not apply for a given region, rate group, or service category, Respondents should enter a 1.000 multiplicative adjustment factor or a $0.00 additive cost in the required input cells to allow the cost proposal template to appropriately calculate a proposed capitation rate.

8. Do not insert rows or columns in the template, or use the "cut" command on any cells within the template. If the Respondent requires more columns for adjustments than provided, please combine adjustments so that they can be entered into the number of columns in the template and include a description of each adjustment and its value in the Actuarial Memorandum that accompanies the cost proposal template (along with Excel numerical support as needed).

9. Respondents should complete the applicable MMA cost proposal template and LTC cost proposal template worksheets before completing the non-benefit expense cost proposal template worksheet. The non-benefit expense cost proposal template for capitated plans uses conditional formatting to apply dark shading to the rows for the rate groups that do not include a calculated projected service cost in the MMA or LTC worksheets. As a result, after a Respondent completes the appropriate MMA and LTC worksheets (depending on the Respondent's chosen SMMC plan type), Respondents only need to complete the rows for the rate groups that are not shaded. Respondents should enter 0 member months, 0 deliveries, $0.00 PMPM, or $0.00 per delivery in the peach cells in the rows that are shaded.

10. The final proposed capitation rates are shown in cells X23 through X42 of the 'N.1 Admin, Gain, Loss' tab.

11. Respondents should use the following file naming convention when submitting their cost proposal templates:
   a. Respondents should replace the "Region XX" portion of the cost proposal template Excel file name with the region to which the particular cost proposal template applies (e.g., "Region 1").
   b. Respondents should replace the "Respondent Name" portion of the cost proposal template Excel file name with their own organization's name.
   c. Aside from the file name changes described in items 11.a and 11.b, Respondents should not change the name of the cost proposal template Excel file.

Formatting key:

Peach shading indicates information to be input by Respondents.
White and other shading indicates information that Respondents are not permitted to change.
Yellow highlighting indicates formula-driven total projected cost or final capitation rate.

Blue font indicates values input by Respondents, or hard-coded inputs in the starting template.
Black font indicates formula-driven results automatically populated in the cost proposal template.

Tab Structure:

The capitated plan cost proposal template is set up to include the following tabs:
MMA Cost Proposal Template tabs
- M.1 through M.10, Section A: One tab for each existing MMA rate group (excluding the Maternity Kick Payment) where Respondents should enter their proposed base data and various adjustments as part of their cost proposals.
- M.1 through M.10, Section B: One tab for each existing MMA rate group (excluding the Maternity Kick Payment) which includes a condensed summary of the information in Section A for each rate group. No input by Respondents is needed on the Section B tabs.
- M.11, Section A: One tab where Respondents proposing to become a Specialty plan covering a new customized specialty population should, to the best of their ability, enter their proposed base data and various adjustments as part of their cost proposals.
- M.11, Section B: One tab for a proposed new customized specialty population that includes a condensed summary of the information in Worksheet M.11, Section A. No input by Respondents is needed on this tab.
- M.12: One tab for the Maternity Kick Payment where Respondents should enter their proposed base data and various adjustments as part of their cost proposals.

LTC Cost Proposal Template tab - L.1: One tab where Respondents should enter their proposed base data and various adjustments as part of their cost proposals for both the HCBS and Non-HCBS rate groups.
Non-Benefit Expense Cost Proposal Template tab - N.1: One tab where Respondents should enter their proposed administrative allowance and gain/loss margin for the relevant rate groups.

The following table illustrates which tabs in the capitated plan cost proposal template should be completed by Respondents for each SMMC plan type (please refer to the SMMC ITN document " Attachment C: Cost Proposal Instructions and Rate Methodology Narrative" for complete details):

SMMC Cost Proposal Submission Requirements for Each SMMC Plan Type ("Yes" = Required, "No" = Not Required, "N/A" = No Respondent Inputs)

Tab Name	Comprehensive Plan	LTC Plus Plan	MMA Plan	HIV/AIDS Specialty Plan	Child Welfare Specialty Plan	SMI Specialty Plan	Other Customized Specialty Plan[1]
M.1 Sec A - TANF NonSMI	Yes	No	Yes	No	No	No	No
M.1 Sec B - TANF NonSMI	N/A	No	N/A	No	No	No	No
M.2 Sec A - TANF SMI	Yes	No	Yes	No	No	Yes	No
M.2 Sec B - TANF SMI	N/A	No	N/A	No	No	N/A	No
M.3 Sec A - SSI Med Only NonSMI	Yes	No	Yes	No	No	No	No
M.3 Sec B - SSI Med Only NonSMI	N/A	No	N/A	No	No	No	No
M.4 Sec A - SSI Med Only SMI	Yes	No	Yes	No	No	Yes	No
M.4 Sec B - SSI Med Only SMI	N/A	No	N/A	No	No	N/A	No
M.5 Sec A - SSI Dual Elig	Yes	No	Yes	No	No	Yes	No
M.5 Sec B - SSI Dual Elig	N/A	No	N/A	No	No	N/A	No
M.6 Sec A - Child Welfare	Yes	No	Yes	No	Yes	Yes	No
M.6 Sec B - Child Welfare	N/A	No	N/A	No	N/A	N/A	No
M.7 Sec A - HIVAIDS Med Only	Yes	No	Yes	Yes	No	Yes	No
M.7 Sec B - HIVAIDS Med Only	N/A	No	N/A	N/A	No	N/A	No
M.8 Sec A - HIVAIDS Dual Elig	Yes	No	Yes	Yes	No	Yes	No
M.8 Sec B - HIVAIDS Dual Elig	N/A	No	N/A	N/A	No	N/A	No
M.9 Sec A - LTC Med Only	Yes	Yes	No	No	No	No	No
M.9 Sec B - LTC Med Only	N/A	N/A	No	No	No	No	No
M.10 Sec A - LTC Dual Elig	Yes	Yes	No	No	No	No	No
M.10 Sec B - LTC Dual Elig	N/A	N/A	No	No	No	No	No
M.11 Sec A - New Specialty	No	No	No	No	No	No	Yes
M.11 Sec B - New Specialty	No	No	No	No	No	No	N/A
M.12 - Maternity Kick Payment	Yes	Yes	Yes	Yes	Yes	Yes	Yes
L.1 - LTC	Yes	Yes	No	No	No	No	No
N.1 Admin, Gain, Loss	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Work Area[2]	Optional	Optional	Optional	Optional	Optional	Optional	Optional

[1] Respondents proposing to become a new customized type of Specialty plan should submit a full MMA cost proposal to the best of their ability.
[2] The 'Work Area' tab is an unprotected work space that is optional for Respondents to use when completing the cost proposal template.
