EMOTIONAL SUPPORT

DM CMs are trained to conduct phone consultations, during which he or she assesses the enrollee and caregiver's emotional needs and gives support as necessary. The enrollee's psychosocial situation is assessed for emotional support systems, not only from the parent or legal guardian or significant other, but also to extended family, friends, neighbors, community groups, and faith-based organizations. The DM CM also provides information on community resources, including emotional support groups. In addition, social workers are available to assist with connecting enrollees to community resources.

Example: Our enhanced care coordination nurses provide additional support for parents in need of respite services as well as support groups for parents who have children with special and complex needs. They also work closely with both Humana social workers and social workers in

Skilled Nursing Facilities (SNF) to help guide parents to resources provided within the community to obtain services that may not be covered by the plan such as home modifications or Prescribed Pediatric Extended Care (PPEC) services.

BEHAVIOR CHANGE

The focus of self-supported care is shifting from simply providing knowledge of condition-specific care to developing strategies to effect behavior change. The combination of knowledge, disease skill abilities, level of interest, and motivation of the enrollee impacts his or her choices and desirable behavior in self-supported care. DM CMs work with each enrollee and his or her caregiver(s) to identify and address barriers to compliance with the plan of care, such as poor understanding of the treatment regimen and difficulty remembering to take medications. DM CMs also utilize techniques such as motivational interviewing to engage the enrollee in self-management of his or her condition. The sensitivity and cultural competency training our DM CMs receive fosters their ability to motivate behavior change. Finally, identified behavioral changes result in the convening of the multidisciplinary care team, during which such changes can be addressed by all persons involved in the enrollee's care.

Example: For our Sickle Cell enrollees, the DM CM nurse works with the enrollee to identify key behaviors that contribute to exacerbation of the disease process or result in higher utilization of resources such as the emergency department or hospital. By identifying these behaviors, the DM CM nurse is able to suggest alternate behaviors that may result in reduced exacerbations and/or utilization. The DM CM educates the enrollee about the signs and symptoms of a sickle cell crisis and works with the enrollee to gain an increased awareness of behaviors that could produce positive or negative outcomes.

COMMUNICATION WITH PROVIDERS

Giving providers the tools and knowledge necessary to encourage self-management of chronic disease is another crucial aspect of our Disease Management programs. We inform providers of services offered to enrollees who have the conditions addressed by our DM programs, including:

- Provider manual
- Provider newsletters
- Provider meetings and presentations

We also send an introductory letter to enrollees' PCPs informing them when one of their patients has been offered participation in the DM program, whether the enrollee accepted or declined enrollment, and providing information on accessing clinical guidelines on our website. In addition, we offer innovative tools and programs to our providers to assist in management of enrollees with chronic conditions, including the following:

- Enrollee Summary: The Humana Enrollee Summary is a physician tool that gives a high-level overview of a patient's key quality-related metrics and medically relevant information in a consolidated format for use by a provider as a quick reference when care is delivered. Providers will have access to print or print to file a summary of enrollee-specific information (e.g., Enrollee

Demographics, Healthcare Effectiveness Data and Information Set (HEDIS) Stars, Care Alerts, Lab History, Prescription History, and Patient Admissions/Readmissions History). The purpose of the Enrollee Summary is to assist providers in identifying additional actionable opportunities for improving clinical outcomes when care is delivered.

- Provider Action Lists and Care Gap Reports: Currently, provider action lists are created for various HEDIS measures, including the following that are pertinent to our enrollees in Disease Management:
-- CCS: Cervical Cancer Screening
-- CDC – eye: Comprehensive Diabetes Care, eye exam performed
-- CDC – A1c: Comprehensive Diabetes Care, hemoglobin A1c testing
-- CDC – LDL: Comprehensive Diabetes Care, LDL-C screening
-- ASM: Use of Appropriate Medications for People with Asthma

Action lists identify enrollees who appear non-compliant with measures based on claims and encounter data. Depending on the specific measure, the action list may include information alerting the provider to a certain condition or diagnosis. The action lists include a call to action for the specific measures and, depending on the measure, are produced on a monthly cycle. These are delivered to providers on a monthly basis. Humana has placed Quality Improvement Nurses (QINs) throughout the state of Florida who visit provider offices to discuss and support accurate and complete medical record documentation, close gaps in care, and promote referrals into our clinical programs. Discussion of the action lists by the QINs includes an overview of measures identified in the action list and additional HEDIS measures applicable to the Medicaid population. Available provider education and reference documents are also discussed and shared by the QINs. Additionally, our Medical Director for Physician Education and Compliance visits targeted offices in conjunction with the QINs.

==========

6. The extent to which the respondent has described a methodology for evaluating the impact of the disease management programs and provided results/data based on previous experience that supports the reduction of potentially preventable events.

==========

DM PROGRAM EVALUATION METHODOLOGY

A key component of our DM program is evaluation. The primary goals for self-management education vary by disease, as do the outcomes we measure to assess the effectiveness of the program (for an example, please see Attachment 5-5). We continuously evaluate operational, humanistic, clinical, and economic outcomes to improve overall enrollee health and well-being. Below we summarize examples of metrics used for each of these categories of evaluation, and follow with a brief discussion of each.

OPERATIONAL OUTCOMES EVALUATION
- Definition: Efficient operations, high participation rate, effective outreach
- Sample Metrics: Program participation, outreach frequency

The potential DM enrollment is compared to the actual DM enrollment as a core quality indicator of enrollee engagement, and trends are tracked over time. As an example, the following presents recent Diabetes DM participation results.

MEASUREMENT PERIOD AND PROCESS
The total measurement period is from October 2015 through September 2016. Potential enrollees were identified monthly and contact attempts were made by a non-clinical Specialist and/or a DM CM to encourage enrollees to participate in the Disease Management Program.

PARTICIPATION RATE FOR DM PROGRAM:

MEDICAID
Diabetes 2015
- Potential Enrollees: 3,101
- Enrolled in DM: 514
- Percent Enrolled: 17%
- Goal: 20%

Diabetes 2016
- Potential Enrollees: 1,219
- Enrolled in DM: 733
- Percent Enrolled: 60%
- Goal: 20%

ANALYSIS:
- Potential enrollees decreased from 2015 to 2016 by 61%

- Participation Rate (Enrollment) of potential enrollees in the Diabetes DM Program for 2016 was 60%, exceeding the goal of 20%. These enrollees sign consent and disclosure, receive an assessment and participate in creating a care plan

- Enrollees in the Diabetes DM Program increased by 43% from 2015 to 2016

HUMANISTIC OUTCOMES EVALUATION
- Definition: Positive trends in patient-reported indicators (subjective measures).
- Sample Metrics: Participation satisfaction, improved quality of life, readiness to change.

Humana conducts enrollee surveys to assess satisfaction among enrollees who participate in our DM programs. In August and September 2016, Humana conducted a survey to assess satisfaction among enrollees who participated in the Humana Medicaid Disease Management Program. Evaluated measures included program's impact on enrollees' likelihood to make changes in their health and enrollees' preparedness to manage their health, as well as overall case manager ratings. As with previous DM Enrollee Satisfaction Surveys, our most recent results are very positive. The percentages below reflect percent of enrollees who gave ratings of four or five (4 or 5) (the top two ratings) on a scale of one to five (1 to 5):

- DM Case Manager Rating – Overall: 94%
- DM Case Manager Rating – Knowledgeable: 90%

- Likely to make change in how you take care of your health: 78%
- Whether you feel more prepared to manage your own health: 87%

SPOTLIGHT ON INNOVATION: In an effort to track enrollee satisfaction with our DM programs throughout the year, and not just rely on the annual survey, we recently developed and obtained approval from AHCA to implement a mini-satisfaction survey to enrollees seven to thirty (7 to 30) days following closure of a DM case (i.e., enrollee has met their goals and case is closed). The mini-survey is essentially a shortened version of the annual survey, but it provides more timely information on what is happening throughout the year and allows us to make ongoing improvements as needed. Since we just started administering the mini-survey in the past several weeks, we only have five (5) completed surveys thus far. However, we are pleased to report that all five (5) enrollees who completed the survey gave the highest possible rating on each of the survey questions.

CLINICAL OUTCOMES EVALUATION
- Definition: Achievement of clinical standards of care (objective measures)
- Sample Metrics: Increased medication compliance, reduction in adverse events (e.g., ED visits, hospital stays)

Healthcare status of disease management program participants is evaluated through case notes, care plans, hospitalizations, and length of active enrollment in the program as an appraisal of the program's effectiveness. Individual case audits are performed no less than quarterly to identify, correct, or improve quality of care in the program.

Humana also selects measures or processes that have significant and demonstrable bearing on a defined portion or subset of the disease management population or processes so that appropriate interventions will result in significant improvement for the population. Analysis of findings includes comparison of results against the goal and the cause of any deficiencies. Outcomes are reviewed by the Corporate Quality Improvement Committee. Healthcare Effectiveness Data and Information Set (HEDIS) is the most widely used set of performance measures in the managed care industry, developed and maintained by the National Committee for Quality Assurance (NCQA).

For adult and pediatric enrollees participating in our MMA disease management programs between January 1, 2016 and June 30, 2017, we looked at annualized admissions per thousand (APT) and emergency room visits per thousand (EPT), as well as per member per month (PMPM) costs, in the six (6) months prior to their enrollment in DM and in the twelve (12) months following their enrollment in DM. Results by program are as follows (please see Attachment 5-6 for additional detail):

Asthma DM
- For adult Asthma DM enrollees, APT decreased 66%, EPT decreased 36%, and PMPM costs decreased 58% from the pre-DM enrollment period to the post-DM enrollment period.

- For pediatric Asthma DCM enrollees, APT decreased 84%, EPT decreased 54%, and PMPM costs decreased 47% from the pre-DM enrollment period to the post-DM enrollment period.

Diabetes DM

- For adult Diabetes DM enrollees, APT decreased 45%, EPT decreased 34%, and PMPM costs decreased 10% from the pre-DM enrollment period to the post-DM enrollment period.

- For pediatric Diabetes DM enrollees, APT decreased 67%, EPT decreased 59%, and PMPM costs decreased 31% from the pre-DM enrollment period to the post-DM enrollment period.

CHF DM
- For adult CHF DM enrollees, APT decreased 50%, EPT decreased 17%, and PMPM costs decreased 39% from the pre-DM enrollment period to the post-DM enrollment period.

HIV DM
- For adult HIV DM enrollees, APT decreased 54%, EPT decreased 52%, and PMPM costs decreased 35% from the pre-DM enrollment period to the post-DM enrollment period.

Hypertension DM
- For adult Hypertension DM enrollees, APT decreased 70%, EPT decreased 53%, and PMPM costs decreased 51% from the pre-DM enrollment period to the post-DM enrollment period.

EXAMPLES OF BEHAVIORAL HEALTH DM PROGRAM RESULTS

- The impact of ABH special programs serving high risk enrollees in Region 1 include:

-- Reduction in 1-day Behavioral Health-related Hospital Stays for Humana enrollees (Adults). There has been a reduction in 1-day hospital stays (from a high of almost 20%) in July 2015 to a low of 7% in May 2017), indicating inappropriate admissions have been reduced due to the interventions of the special programs.

-- Reduction in 1-day Behavioral Health-related Hospital Stays for Humana enrollees (Children and Adolescents). There has been a reduction in one-day hospital stays (from 32% in December 2015 to 20% in May 2017), indicating inappropriate admissions have been reduced due to the interventions of the special programs.

-The 30-day readmission rate for our enrollees with primary behavioral health diagnoses is below goal (below 22%) and has been trending favorably throughout the State. In Region 1, the rate has decreased from 18% in 2015 to 16% year to date in 2017. In all other regions, the rate – which had been consistently above 22% in late 2016 – is now consistently under 22% and is approaching 20%.

We intend to leverage our Florida analytics team to track, trend, and report on disease-specific clinical outcomes measures, such as HbA1C control and LDL cholesterol level for enrollees in Diabetes DM, HIV lab results for enrollees in HIV/AIDS DM, etc. This will supplement the granular clinical outcomes evaluation conducted through case notes with a more aggregate assessment of clinical impact.

ECONOMIC OUTCOMES EVALUATION

- Definition: Healthcare cost savings
- Sample Metrics: Reduction in overall costs per member per month, by condition

For adult and pediatric enrollees participating in our MMA disease management programs, we have provided under Clinical Outcomes Evaluation, above, the per member per month (PMPM) costs in the six (6) months prior to their enrollment in DM and in the twelve (12) months following their enrollment in DM. Please see Attachment 5-6 for additional detail.

We recently conducted an analysis of our LTC DM programs, where we looked at per member per month (PMPM) claims cost for our comprehensive enrollees in our DM programs (i.e., those enrollees in both our LTC plan and our MMA plan). For an appropriate sample size the analysis grouped all of our DM enrollees in each DM program together. The analysis looked at both LTC PMPM costs and MMA PMPM costs both during the period prior to the enrollee's participation in the DM program and during the period after their enrollment in the DM program. Results were as follows:

- Average MMA PMPM costs decreased by more than fifty percent (50%) between the pre enrollment period to the post enrollment period ($582 in pre vs. $246 in post). MMA costs PMPM decreased after enrollment in DM for sixty-six percent (66%) of participating enrollees. Findings strongly point to the effectiveness of the DM programs.

- Average LTC PMPM costs were relatively unchanged from the pre-enrollment to the post enrollment period ($1,039 vs. $1,059). This result was not surprising, since LTC costs are generally less related to disease state than are medical costs.

SUMMARY

The ultimate goal of Humana's DM program is to improve enrollee quality of life, reduce healthcare costs by preventing unnecessary utilization, and proactively address chronic issues. To accomplish this, our program is built upon an enrollee-centered model with support from knowledgeable DM Case Managers who work with other Care Management team members to address complex enrollee needs and strive for seamless continuity of care. This includes an emphasis on delivering the right care at the right time, improving access to care across providers and community resources, and enabling enrollees to take control of their own care. Humana is committed to continually identifying, incorporating, and evaluating program innovations to enhance the effectiveness of our DM programs.

Evaluation Criteria:

1. The extent to which the respondent proposes an innovative and evidence-based approach to disease management for the following conditions:

(a) Cancer (Section 409.966, Florida Statutes);
(b) Diabetes (Section 409.966, Florida Statutes);
(c) Asthma;
(d) Hypertension;
(e) Mental health; and
(f) Substance abuse.

2. The adequacy of the respondent's description of how its respective disease management programs will be incorporated into its overall approach to advance the Agency's goals.

3. The extent to which the respondent's algorithm and risk stratification approach is well defined and describes the data sources that will be utilized.

4. The adequacy of the respondent's description of how its disease management programs will be integrated into case management/care coordination programs.

5. The extent to which the respondent's disease management programs include the following components:

(a) Symptom management;
(b) Medication support;
(c) Emotional support;
(d) Behavior change; and
(e) Communication with providers, including the PCP/specialists.

6. The extent to which the respondent has described a methodology for evaluating the impact of the disease management programs and provided results/data based on previous experience that supports the reduction of potentially preventable events.

Score: This section is worth a maximum of 75 raw points with each component being worth a maximum of 5 points each.

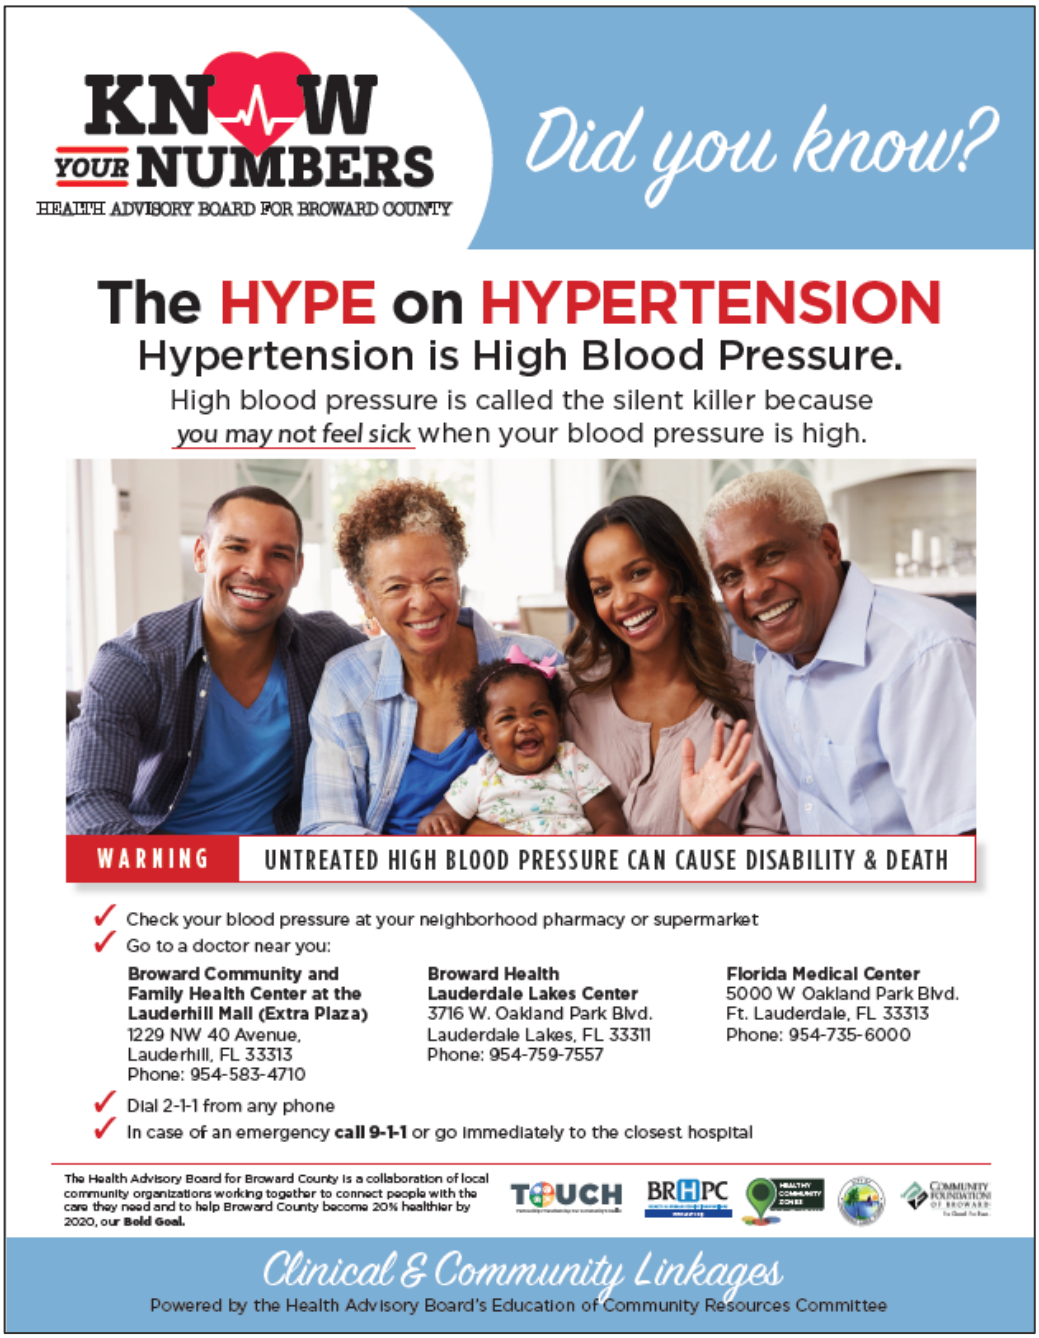
Attachment 5-2: Bold Goal Initiative Flyers

Humana's Bold Goal initiative is focused on making the communities we serve 20 percent healthier by 2020. Broward County is one of Humana's Bold Goal communities. The current campaign we are conducting through our Broward Bold Goal Health Advisory Board is a "Know Your Numbers/Did You Know" campaign that includes a series of flyers that provide medical information and link the audience to free services in the community. Below are some examples.



DIABETES
Did you know?
HIGH BLOOD SUGARS from DIABETES can cause stroke, blindness, or even loss of limbs.
RISK FACTORS
for diabetes are lack of activity/exercise, being overweight, or if your parents or siblings have diabetes.
SYMPTOMS
may be blurred vision, tingling of toes or fingers, and sores that take long to heal.
Have your BLOOD SUGAR checked at:
BROWARD COMMUNITY AND FAMILY HEALTH CENTER AT THE LAUDERHILL MALL (Extra Plaza), 1229 NW 40 Avenue, Lauderhill, FL 33313 or contact them at 954-583-4710
BROWARD HEALTH LAUDERDALE LAKES CENTER at 3716 Oakland Park Blvd., Lauderdale Lakes, FL 33311 or contact them at 954-759-7557
FLORIDA MEDICAL CENTER at 5000 W Oakland Park Blvd., Ft. Lauderdale, FL 33313 or contact them at 954-735-6000
Broward's Bold Goal is a collaboration of local community organizations working together to connect people with the care they need and help Broward County become 20 percent healthier by 2020?

Attachment 5-3: Humana Disease Management Protocols based on Acuity Level

With all factors in mind, including predictive model scores and information gathered during a comprehensive assessment, a case manager makes a final determination on acuity of an enrollee based on clinical judgment. Within each level, there are specific sets of enrollee and provider initiatives and interventions. Below is a chart of the acuity levels and related contact frequencies used in our DM programs administered in-hous

Risk Level	Definition	Outreach Frequency
Complex	• At least 2 hospitalizations w/in 30 days • Medical, educational and psychosocial barriers that lead to emergency department/readmissions • Collaboration w/multidisciplinary teams and Associate Medical Directors • Present during monthly MDT call • Complex needs for care coordination	Weekly
High	• At least 2 hospitalizations within the last 3 months • Medical, educational and psychosocial barriers that lead to ED/Readmissions • Ongoing needs for care coordination	Monthly
Medium	• At least 2 previous hospitalizations within the last 6 months • Provide reinforcement about plan of care • Barriers to educational and self-healthcare management	Every other month
Low (short-term, episodic clinical management, and participation)	• No hospital admissions, but has emergency department utilization greater than 2 per 30 days • Knowledge deficit of the use of emergency department vs. urgent care and PCP visits for follow up care and sick visits	Every three months
Low (nonclinical monitored and pending High Utilizer Report monitoring status) Case Management Assistant	• No hospital admission within last 6 months • Stable with mild or no symptoms • Understands their disease and plan of follow up. Follow up every 6 months • Compliant with their plan of care and/or do not require assistance with care coordination	Six months following enrollment into DM, then annually

Disease Management Resource Guide

An Introduction

This Disease Management Resource Guide is for case/disease managers and the members they serve. Its purpose is to supply tools to aid the development of self-management skills. Inside you will find **evidence based guidelines** and **treatment goals**, **disease basics**, **websites**, **print materials**, **educational programs**, **videos**, **phone apps**, **support groups** and **games**. Almost everything listed is free. Instructions are provided so that assistance can be given to help members find each tool.

The contents are not designed to replace the need for case management or PCP visits. The tools are to enhance self-management skills. Everyone learns differently. For this reason, a variety of educational tools are provided. Most print materials meet the plain language (PCP) requirement for health literacy.

Attachment 5-5: Disease-Specific Program Goals and Outcomes Measured

A key component of our DM program is evaluation. The primary goals for self-management education vary by disease, as do the outcomes we measure to assess the effectiveness of the program. We continuously evaluate operational, humanistic, clinical, and economic outcomes to improve overall enrollee health and well-being.

Disease	Program Goals *Ensure Each Enrollee:*	Outcomes Measured
Asthma	• Has an understanding of asthma triggers and how to minimize such triggers • Is encouraged to work with his/her Primary Care Physician (PCP) to develop and adhere to an Asthma Action Plan • Participates in goal setting and appropriate lifestyle modification around exercise and smoking • Understands his/her medication regimen, including the use of rescue controller and beta agonist • Verbalizes an understanding of disease process and the complications associated with non-compliance of a provider issues treatment plan	The Asthma Disease Management Program is measured by the following outcomes: • Decreased inpatient utilization • Decreased average length of stay for inpatient services • Decreased ER utilization for a primary diagnosis of asthma • Decreased Per Member Per Month (PMPM) costs • Improved Healthcare Effectiveness Data and Information Set (HEDIS) rate for use of appropriate medications for enrollees with asthma
Diabetes	• Has a working blood glucose meter and contact number for additional supplies • Is testing his/her blood sugar as recommended by their PCP or specialist • Has Hemoglobin A1C (HbA1c) testing done yearly or more often for enrollees whose therapy has changed or who are not meeting their individualized glycemic goals, in accordance with current ADA guidelines • Has a dilated eye examination at least yearly if indicated • Has a foot examination performed by the PCP/specialist at each visit as indicated • Receives education on the disease process and potential end organ damage • Can verbalized signs & symptoms of hyper/hypoglycemia and actions to take for each • Has received education related to diet and food choices and can verbalize a diabetic compliant diet • Has microalbumin and Low-density Lipoprotein (LDL) levels tested at least yearly	The Diabetes Disease Management Program is measured by the following HEDIS rates for comprehensive diabetic care outcomes: • HbA1c testing • HbA1c poor control • HbA1c good control • Eye examination • LDL cholesterol screening • LDL cholesterol level <100mg/dL • Nephropathy screening • Blood pressure control • Medication adherence

Attachment 5-5: Disease-Specific Program Goals and Outcomes Measured

Hypertension	• Is obtaining blood pressure readings daily or as recommended by the PCP and/or specialist • Is monitoring lab work regularly (lipid profile) • Is following the appropriate nutritional and exercise regimens • Understands and is compliant with treatment plan and medication regimen • Is having active treatment and communication with doctors and/or specialists (cardiologist and/or nephrologist)	The Hypertension Disease Management Program is measured by the following outcomes: • Decreased inpatient utilization • Decreased average length of stay for inpatient services • Decreased ER utilization for a primary diagnosis of Hypertension • Decreased PMPM costs • Adequate control of blood pressure • Medication adherence
CHF	• Is obtaining blood pressure reading daily or as recommended by PCP and/or specialist • Is monitoring lab work regularly • Is weighing himself/herself daily • Is following appropriate nutritional and exercise regimens • Understands and is compliant with treatment plan and medication regimen • Is having active treatment and communication with doctors and/or specialists (cardiologist and/or pulmonologist • Does not smoke or participates in a smoking cessation program	The CHF Disease Management Program is measured by the following outcomes: • Decreased inpatient utilization • Decreased average length of stay for inpatient services • Decreased ER utilization for a primary diagnosis of congestive heart failure • Decreased PMPM costs • Medication adherence
HIV/AIDS	• Has an understanding of progression of illness and opportunistic infections • Is monitoring HIV lab work regularly • Is compliant with treatment plan, inclusive of medication regimen (HAART) • Is having active treatment and communication with doctors and/or specialists (PCP and/or infectious disease) • Verbalizes understanding of transmission prevention • Does not smoke or participates in a smoking cessation program	The HIV/AIDS Disease Management Program is measured by the following outcomes: • Decreased inpatient utilization • Decreased average length of stay for inpatient services • Decreased ER utilization for a primary diagnosis of HIV/AIDS • Decreased PMPM costs • Medication adherence • HIV lab results (Viral Load, T-cell counts)

Attachment 5-5: Disease-Specific Program Goals and Outcomes Measured

Sickle Cell Disease	• Understands the importance of regular health checkups with PCP • Takes appropriate steps to prevent infections (e.g., hand-washing, food safety, vaccines) • Verbalizes understanding of healthy habits that will help them stay as healthy as possible (e.g., maintaining hydration, proper nutrition, and balanced body temperature, participating in but not overdoing physical activity) • Is aware of patient support groups and community organizations that can provide information, assistance and support	The Sickle Cell DM Program is measured by the following outcomes: • Decreased inpatient utilization • Decreased average length of stay for inpatient services • Decreased ED utilization for a primary diagnosis of Sickle Cell Disease • Decreased PMPM costs • Medication adherence • Improvement in acute pain
Cancer	• Has an understanding of the diagnosis and recommendations of specialist with symptom triggers and how to manage pain • Understands pain regiment. • Understands the importance of nutrition. • Participates in goal setting and appropriate lifestyle modification around exercise and smoking • Verbalizes an understanding of disease process and the complications associated with non-compliance of a provider issued treatment plan. • Encouraged to work with their PCP	The Cancer DM Program is measured by the following outcomes: • Decreased inpatient utilization • Decreased ED utilization for a primary diagnosis of cancer. • Control of Pain • Measure of BMI • Medication adherence
Alzheimer/Dementia	• Explores options to increase support for caregivers • Builds strong partnership with the health community • Caregivers to learn and has an understanding about financial and legal impacts • Maintain maximum ADL's • Home environment reflects safe/secure/ familiarity. • Enrollee/Caregiver has an understanding of disease progression • Is following the appropriate nutritional and exercise regimens • Understands and is compliant with treatment plan and medication regimen	The Alzheimer DM Program is measured by the following outcomes: • Impact ADL decline • Use of PERS • Use of Pill Organizer • Measure BMI Medication adherence

Attachment 5-5: Disease-Specific Program Goals and Outcomes Measured

COPD	• Has understanding of early warning signs of COPD exacerbation; sputum amount, thickness, color, or presence of blood. Increased shortness of breath during ADL's and at rest • Has understanding of medication, routine blood work, compliance of diet, PCP follow-up, Flu and pneumonia vaccine • Participates in goal setting and appropriate lifestyle modification around exercising and smoking. Understands medication regime, including the use of bronchodilators and systemic or inhaled corticosteroids	The COPD DM Program is measured by the following outcomes: • Decreased inpatient utilization • Decreased average length of stay for inpatient services • Decreased ED utilization for a primary diagnosis of COPD • Enrollment into a smoking cessation program. • Enrollee is under the care of a pulmonologist. • Medication adherence
End of Life	• Has understanding of advanced directives • Has understanding of disease entity • Has family support • Has goal oriented quality of life directives • Religious support available • Enrollee reports pain control. • Have financial affairs in order • Barriers to care addressed	The End of Life DM Program is measured by the following outcomes: • Enrollee is participating palliative/ hospice program • PCP accessibility and medical support. • Has pain control. • 5 Wishes given to enrollee

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 6 – HEDIS Measures (Statewide):

The respondent shall describe its experience in achieving quality standards with populations similar to the target population described in this solicitation. The respondent shall include, in table format, the target population (TANF, ABD, dual eligible), the respondent's results for the HEDIS measures specified below for each of the last two (2) years (CY 2015/ HEDIS 2016 and CY 2016/ HEDIS 2017) for the respondent's three (3) largest Medicaid Contracts (measured by number of enrollees). If the respondent does not have HEDIS results for at least three (3) Medicaid Contracts, the respondent shall provide commercial HEDIS measures for the respondent's largest Contracts. If the Respondent has Florida Medicaid HEDIS results, it shall include the Florida Medicaid experience as one (1) of three (3) states for the last two (2) years.

The respondent shall provide the data requested in **Exhibit A-4-a-1**, General Performance Measurement Tool to provide results for the following HEDIS measures:

- Adults' Access to Preventive/Ambulatory Health Services (Total);
- Child and Adolescent Access to PCPs (all 4 age bands reported as separate rates);
- Medication Management for People with Asthma (75% - Total);
- Controlling High Blood Pressure;
- Comprehensive Diabetes Care – HbA1c Control (<8%);
- Follow-up after Hospitalization for Mental Illness (7 day);
- Initiation and Engagement of Alcohol and Other Drug Dependence Treatment (Initiation – Total);
- Antidepressant Medication Management – Acute Phase; and
- Adherence to Antipsychotic Medications for Individuals with Schizophrenia

Response:

Humana is committed to providing high quality care for our enrollees. Our performance and experience meeting quality standards in Florida, and nationally, demonstrate our commitment to quality:

- Humana is ranked 2nd in quality among Florida's Medicaid plans according to the National Committee for Quality Assurance (NCQA)[1], serving approximately 325,000 enrollees in Florida

- Humana's Florida Medicaid plan has been NCQA accredited since 1997. We are in the process of seeking an additional NCQA certification for Long-term Care Case Management.

- We are one of the top quality Medicare Advantage plans in the State of Florida, according to the Centers for Medicare and Medicaid Services' (CMS) Star rating, having achieved 4.5 (of five 5.0) Stars. On our respondent plan, Humana Medical Plan, Inc., we serve more than 365,000 Medicare beneficiaries across the state. Across all of our plans in the State of Florida, we serve more than 620,000 Medicare beneficiaries, including more than 105,000 who are eligible for both Medicare and Medicaid.

- Nationally, two point four (2.4) million, or approximately seventy-four (74) percent, of Humana Medicare Advantage members are in 4-plus Stars contracts. Humana has received a four point five (4.5) -star rating for five (5) of our Medicare Advantage contracts offered in eight (8) states.

HEDIS data plays a major role in how we measure, monitor, and improve the quality of care being provided to enrollees. Humana's robust quality improvement program promotes quality of care and patient outcomes performance for all of our Medicaid membership. We regularly measure, monitor, and evaluate our performance against AHCA and NCQA benchmarks in order to conduct oversight and improvement of medical and behavioral health care and support services.

==========
The extent of experience (e.g., number of Contracts, enrollees or years) in achieving quality standards with similar target populations, for the HEDIS performance measures included in this submission requirement.
==========

Humana has extensive experience achieving quality standards with similar target populations for HEDIS measures listed in this SRC. We have monitored and tracked HEDIS measures in our Florida SMMC plan for more than twenty (20) years, in our Florida Group Commercial plan for more than twenty (20) years, and in our Florida Commonwealth Marketplace (Exchange) plan since it went live in 2014. Below we have included a brief overview of the top three (3) largest Medicaid and Commercial contracts for our respondent plan in Florida, Humana Medical Plan, Inc. These correlate to the three (3) contracts shown in attached Exhibit A-4-a-1.

- Florida Medicaid Managed Care
-- Approximately 325,000 enrollees
-- Program Summary and Populations Served: Medicaid, Temporary Assistance for Needy Families (TANF) and Aged, Blind, and Disabled (ABD)

- Florida Group Commercial
-- 167,336 enrollees
-- Program Summary and Populations Served: Commercial group benefits for ages 0 to 64

- Florida Marketplace (Exchange)
-- 19,998 enrollees
-- Program Summary and Populations Served: Exchange benefits for commercial ages 0 to 64

DETAILED DESCRIPTION OF PERFORMANCE MEASURE EXPERIENCE
FLORIDA STATEWIDE MEDICAID MANAGED CARE (SMMC)

Humana currently operates as a Managed Medical Assistance (MMA) plan across five (5) regions, serving approximately three hundred thirty thousand (330,000) Florida enrollees. We provide the full range of Medicaid preventive services for Medicaid TANF-eligible individuals, as well as those who are ABD. We have operated as a Medicaid plan in Florida since 1997. We currently monitor the following forty-two (42) measures in our Florida SMMC operations, including those measures listed in this SRC:

- Adolescent Well Care Visits – (AWC)
- Adults' Access to Preventive/Ambulatory Health Service – (AAP)
- Annual Dental Visits (ADV)
- Antidepressant Medication Management - (AMM)
- Adult BMI Assessment – (ABA)
- Breast Cancer Screening – (BCS)
- Cervical Cancer Screening - (CCS)
- Childhood Immunization Status – (CIS) – Combo 2 and 3
- Comprehensive Diabetes Care – (CDC)
-- Hemoglobin A1c (HbA1c) testing
-- HbA1c poor control
-- HbA1c control (<8%)
-- Eye exam (retinal) performed
-- Medical attention for nephropathy
- Controlling High Blood Pressure – (CBP)
- Follow-up Care for Children Prescribed ADHD Medication – (ADD)
- Immunization for Adolescents – (IMA)
- Chlamydia Screening in Women – (CHL)
- Prenatal and Postpartum Care – (PPC)
- Medication Management for People with Asthma – (MMA)
- Well-Child Visits in the First 15 Mos. of Life – (W15)
- Well-Child Visits in the Third, Fourth, Fifth and Sixth Years of Life – (W34)
- Children and Adolescents' Access to Primary Care Practitioners – (CAP)
- Initiation and Engagement of Alcohol and Other Drug Dependence Treatment – (IET)
- Ambulatory Care – (AMB)
- Lead Screening in Children – (LSC)
- Annual Monitoring for Patients on Persistent Medications – (MPM)
- Frequency of Ongoing Prenatal Care – (FPC)
- Adherence to Antipsychotic Medications for Individuals With Schizophrenia – (SAA)
- Metabolic Monitoring for Children and Adolescents on Antipsychotics – (APM)
- Use of Multiple Concurrent Antipsychotics in Children and Adolescents – (APC)
- Follow-Up After Emergency Department Visit for Mental Illness – (FUM)
- Follow-Up After Emergency Department Visit for Alcohol and Other Drug Dependence Treatment – (FUA)
- Diabetes Screening for People Schizophrenia or Bipolar Disorder Who are Using Antipsychotic Medications – (SSD)

HEDIS & AHCA-Defined
- Follow-Up after Hospitalization for Mental Illness – (FHM)

AHCA-Defined
- Mental Health Readmission Rate – (RER)
- Transportation Timeliness – (TRT)
- Transportation Availability – (TRA)
- Highly Active Anti-Retroviral Treatment – (HAART)
- HIV-Related Outpatient Medical Visits – (HIVV)

Child Health Check Up Report (CMS-416)
- Dental Treatment Services – (TDENT)

- Sealants – (SEA)
- Preventive Dental Services – (PDENT)

Child Core Set
- Dental Sealants for 6-9 yr. old children at Elevated Carries Risk – (SEAL)
-Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents: Body Mass Index Assessment for Children/Adolescents – (WCC)

Adult Core Set
- Plan All-Cause Readmissions – (PCR)
- HIV Viral Load Suppression – (VLS)
- Medical Assistance with Smoking and Tobacco Use Cessation – (MSC)

FLORIDA GROUP COMMERCIAL

Humana currently operates as a Group Commercial plan statewide in Florida, serving more than one hundred sixty-seven thousand (167,000) Florida enrollees. We provide the full range of commercial benefits for enrollees aged zero (0) to sixty-four (64). We currently monitor the following measures in our Florida Group Commercial operations:

- Adult BMI Assessment
- Child and Adolescent BMI, Nutrition, Physical Activity
-- BMI Percentile Total
-- Nutrition Counseling Total
-- Physical Activity Counseling Total
- Childhood Immunization
-- DTaP
-- IPV
-- MMR
-- HIB
-- Hepatitis B
-- Varicella
-- Pneumococcal Conjugate
-- Combination 2
-- Combination 3
- Adolescent Immunization
-- Combo 1
-- Meningococcal
-- Tdap/Td
- Human Papillomavirus Vaccine (HPV) for Female Adolescents
- Breast Cancer Screening
- Cervical Cancer Screening
- Colorectal Cancer Screening
- Chlamydia Screening in Women: Ages 16-20 yrs., 21-24 yrs., and total
- Appropriate Testing for Pharyngitis
- URI Treatment
- Acute Bronchitis Treatment
- Spirometry Testing

- Pharmacotherapy for COPD
-- Bronchodilator
-- Corticosteroid
- Appropriate Medication for Asthma: Ages 5-11 yrs., 12-18 yrs., 19-50 yrs., 51-64 yrs., and total
- Medication Management for People With Asthma
-- Medication Compliance 75%
- Controlling High Blood Pressure
- Persistence Beta-Blocker Treatment
- Comprehensive Diabetes Care
-- Blood Pressure Control < 140/90
-- Eye Exam
-- Good HbA1C Control < 8.0
-- HbA1c <7.0% Special Population
-- HbA1c Testing
-- Monitoring Diabetic Nephropathy
-- Poor HbA1c Control
- Imaging Studies for Low Back Pain
- Antidepressant Treatment
-- Acute Phase Treatment
-- Continuation Phase Treatment
- Follow-up Care for ADHD Medication
-- C&M
-- Initiation
- Follow-up Mental Illness Discharges
-- 7 Days
-- 30 Days
- Monitoring for Long Term Med ACE or ARBs
-- Digoxin
-- Diuretics
-- Total
- Adult Access to Preventive Care: Ages 20-44 yrs., 45-64 yrs., 65 yrs. and older, and total
- Children's Access to Primary Care: Ages 12-24 mos., 25 mos.-6 yrs., 7-11 yrs., 12-19 yrs.
- AOD Treatment
-- Initiation
-- Engagement
- Prenatal and Postpartum Care
-- Postpartum Care
-- Prenatal Care
- Well-Child Visit in first 15 mos. of life
-- Six or More Visits
- Well-Child Visit, 3-6 yrs.
- Well-Care Visit, Adolescent
- Plan All-Cause Readmissions
-- Total (Obs-to-Expct Ratio)

FLORIDA COMMERCIAL MARKETPLACE (EXCHANGE)

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana currently operates as a Florida Commercial Marketplace plan statewide, serving more than one hundred ninety thousand (190,000) Florida enrollees. We provide the full range of commercial benefits for enrollees aged zero (0) to sixty-four (64). We currently monitor the following measures in our Florida Commercial Marketplace operations:

- Child and Adolescent BMI, Nutrition, Physical Activity
-- BMI Percentile Total
-- Nutrition Counseling Total
-- Physical Activity Counseling Total
- Cervical Cancer Screening
- Chlamydia Screening in Women: Ages 16-20 yrs., 21-24 yrs., and total
- Appropriate Testing for Pharyngitis
- URI Treatment
- Controlling High Blood Pressure
- Comprehensive Diabetes Care
-- Eye Exam
-- Good HbA1C Control < 8.0
-- HbA1c Testing
-- Monitoring Diabetic Nephropathy
- Imaging Studies for Low Back Pain
-- Total
- Follow-up Mental Illness Discharges
-- 7 days
- Monitoring for Long Term Med
-- ACE or ARBs
-- Digoxin
-- Diuretics
-- Total
- AOD Treatment
-- Initiation
-- Engagement
- Prenatal and Postpartum Care
-- Postpartum Care
-- Prenatal Care
- Well-Child Visit, 3-6 yrs.
-- 6 or More Visits

EXPERIENCE MEASURING HEDIS IN OTHER MEDICAID PLANS

In addition to our experience as Humana Medical Plan, Inc. in Florida, Humana has broad experience measuring HEDIS performance in our Medicaid plans in other states. We describe our experience in Kentucky and Illinois below.

KENTUCKY MEDICAID

Humana has served as a Medicaid health plan in Kentucky since 2013, and currently covers the physical and behavioral health services for more than one hundred forty thousand (140,000) enrollees statewide. We currently monitor the follow measures in our Kentucky program:

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

HEDIS measures
- Well-Child Visits in the 1st 15 mos. of life
- Well-Child Visits, 3-6 yrs. old
- Well-Child Visits, 12-21 yrs. old
- Lead Screening in Children
- Annual Dental Visit, 2-21 yrs. old
- Ht. and Wt. Measurement, 3-17 yrs. old
- BMI Measurement, 3-17 yrs. old
- Counseling for Nutrition, 3-17 yrs. old
- Counseling for Physical Activity, 3- 7 yrs. old
- Timeliness of Prenatal Care
- Frequency of Prenatal Care Visits, >=81%
- Timeliness of Postpartum Care
- Screening for Tobacco Use
- Counseling/Education for Tobacco Use
- Antidepressant Medication Management, Acute and Continuation Phase
- Adherence to Antipsychotic Medications for Individuals with Schizophrenia
- Diabetes Monitoring for People with Diabetes and Schizophrenia
- Diabetes Screening for People with Schizophrenia or Bipolar Disorder who are Using Antipsychotics
- Cardiovascular Monitoring for People With Cardiovascular Disease and Schizophrenia
- Follow-Up Care for Children Prescribed ADHD Medication, Initiation and Continuation Phase
- Follow-Up After Hospitalization for Mental Illness within 7 days and within 30 days of Discharge
- Initiation and Engagement of Alcohol and Other Drug (AOD) Dependence Treatment
- Use of Appropriate Meds for People with Asthma, Total
- Med Management for People with Asthma, Compliance 75%
- Asthma Medication Ratio, Total
- Hemoglobin A1c (HbA1c) Testing
- HbA1c Poor Control (>9.0%)
- Eye Exam (Retinal) Performed
- Medical Attention for Nephropathy
- Blood Pressure Control (<140/90 mm Hg)
- Adult BMI Assessment
- Breast Cancer Screening
- Cervical Cancer Screening
- Persistence of Beta-Blocker Tx After a Heart Attack
- Cholesterol Management for Patients With Cardiovascular Conditions
- Controlling High Blood Pressure Appropriate Testing for children with Pharyngitis
- Appropriate Treatment for Children with Upper Respiratory Infections (URI)
- Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis
- Use of Spirometry Testing in the Assessment and Diagnosis of COPD
- Pharmacotherapy Management of COPD Exacerbation
-- Systemic Corticosteroid
-- Bronchodilator
- Adult Access to Preventive/Ambulatory Health Services: Ages 20-44 yrs., 45-64 yrs., 65+ yrs.
- Children and Adolescent Access to PCP: Ages 12-24 mos., 25 mos.-6 yrs., 7-11 yrs., 12-19 yrs.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

KY HEALTH OUTCOME PERFORMANCE MEASURES
- Screening and/or Counseling for Tobacco
- Screening and/or Counseling for Alcohol/Substance Use
- Screening and/or Counseling for Sexual Activity
- Screening for Depression
- Annual Dental Visit in CSHCN, 2-21 yrs.
- Well-Child Visits in CSHCN, in the 1st 15 mos., 3-6 yrs., 12-21 yrs.
- Access to PCP in CSHCN: Ages 12-24 mos., 25 mos.-6 yrs., 7-11 yrs., 12-19 yrs.
- Screening for Tobacco Use
- Positive Screening for Tobacco Use
- Received Intervention for Tobacco Use
- Screening for Alcohol Use
- Positive Screening for Alcohol Use
- Received Intervention for Alcohol Use
- Screening for Substance/Drug Use
- Positive Screening for Substance/Drug Use
- Received Intervention for Substance/Drug Use
- Assessment/Education/Counselling for Nutrition
- Assessment/Education/Counselling for OTC/Prescription Med
- Screening for Domestic Violence
- Postpartum Depression
- Healthy Weight for Height
- Counselling for Nutrition
- Counselling for Physical Activity
- LDL-C/Cholesterol Screening

ILLINOIS INTEGRATED CARE PROGRAM (ICP)
Humana has served as a Medicaid health plan in the Illinois Integrated Care Program (ICP), and currently covers the medical and LTC services for more than five thousand six hundred (5,600) enrollees in the state. We currently monitor the following measures in our ICP program:

- Avoidance of Antibiotic Treatment in Adults With Acute Bronchitis
- Adult BMI Assessment
- Annual Dental Visit
- Antidepressant Medication Management
-- Acute
-- Continuation
- Asthma Medication Ratio
- Disease-Modifying Anti-Rheumatic Drug Therapy for Rheumatoid Arthritis
- Adolescent Well-Care Visits
- Breast Cancer Screening
- Controlling Blood Pressure
- Cervical Cancer Screening
- Comprehensive Diabetes Care

- Use of Imaging Studies for Low Back Pain
- Medication Management for People With Asthma
-- 50%COMPLI
-- 75%COMPLI
- Annual Monitoring for Patients on Persistent Medications
-- ARBs
-- Digoxin
-- Diuretics
- Non-Recommended Cervical Cancer Screening in Adolescent Females
- Persistence of Beta-Blocker Treatment After a Heart Attack
- Pharmacotherapy Management of COPD Exacerbation
-- Bronchodil
-- SCsteroid
-- Prenatal and Postpartum Care
-- Postpartum
-- Prenatal
- Adherence to Antipsychotic Medications for Individuals With Schizophrenia
- Cardiovascular Monitoring for People With Cardiovascular Disease and Schizophrenia
- Diabetes Monitoring for People With Diabetes and Schizophrenia
- Statin Use in Patients with Cardiovascular Disease
- Statin therapy for patients with diabetes
- Use of Spirometry Testing in the Assessment and Diagnosis of COPD
- Diabetes Screening for People With Schizophrenia or Bipolar Disorder Who Are Using Antipsychotic Medications

==========

The extent to which the respondent exceeded the national mean and applicable regional mean for each quality measure reported and showed improvement from the first year to the second year reported.

==========

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Exhibit A-4-a-1 contains our HEDIS 2016 and HEDIS 2017 performance for the measures listed in this SRC.

Footnotes

[1] http://healthinsuranceratings.ncqa.org/2017/search/Medicaid/FL

Evaluation Criteria:

1. The extent of experience (e.g., number of Contracts, enrollees or years) in achieving quality standards with similar target populations, for the HEDIS performance measures included in this submission requirement.

2. The extent to which the respondent exceeded the national mean and applicable regional mean for each quality measure reported and showed improvement from the first year to the second year reported.

Score: This section is worth a maximum of 160 raw points with component 1 worth a maximum of 10 points and component 2 worth a maximum of 150 points as described below:

Exhibit A-4-a-1, General Performance Measurement Tool, provides for seventy-two (72) opportunities for a respondent to report prior experience in meeting quality standards (twelve (12) measure rates, three (3) states each, two (2) years each).

For each of the measure rates, a total of 10 points is available per state reported (for a total of 360 points available). The respondent will be awarded 2 points if their reported plan rate exceeded the national Medicaid mean and 2 points if their reported plan rate exceeded the applicable regional Medicaid mean, for each available year, for each available state. The respondent will be awarded an additional 2 points for each measure rate where the second year's rate is an improvement over the first year's rate, for each available state.

An aggregate score will be calculated and respondents will receive a final score of 0 through 150 corresponding to the number and percentage of points received out of the total available points. For example, if a respondent receives 100% of the available 360 points, the final score will be 150 points (100%). If a respondent receives 324 (90%) of the available 360 points, the final score will be 135 points (90%). If a respondent receives 36 (10%) of the available 360 points, the final score will be 15 points (10%).

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

EXHIBIT A-4-a-1
SRC# 6 - GENERAL PERFORMANCE MEASUREMENT TOOL (10-2-2017)

INSTRUCTIONS:

Respondents should submit calendar year 2015/HEDIS 2016 and calendar year 2016/HEDIS 2017 performance measure data for the selected HEDIS measures for the respondent's three (3) largest Medicaid contracts (measured by number of enrollees).

If the respondent does not have HEDIS results for at least (3) three Medicaid Contracts, the respondent shall provide commercial HEDIS measures for the respondent's largest Contracts. If the respondent has Florida Medicaid HEDIS results, it shall include the Florida Medicaid experience as one of three (3) states for the last two (2) years.

The performance measures that respondents are required to report on can be found on the Performance Measure Group A tab.

Use the drop-down box to select the state for which you are reporting and enter the performance measure rates (to the hundredths place, or XX.XX) for that state's Medicaid population for the appropriate calendar year.

Children and Adolescents' Access to Primary Care Practitioners - 7-11 years	**91.60**	**87.59**	**93.92**	**94.16**		
Children and Adolescents' Access to Primary Care Practitioners - 12-19 years	**87.99**	**84.69**	**87.68**	**89.00**		
Adults' Access to Preventive/Ambulatory Health Services - Total	**81.67**	**79.29**	**94.92**	**94.67**		

Total Points	**164**

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 7 – HEDIS Measures (Statewide):

In addition to providing HEDIS measure data, describe any instances of failure to meet HEDIS or Contract-required quality standards for the measures listed below and actions taken to improve performance. Describe actions taken to improve quality performance when HEDIS or Contract-required standards were met, but improvement was desirable.

- Adults' Access to Preventive/Ambulatory Health Services (Total);
- Child and Adolescent Access to PCPs (all 4 age bands reported as separate rates);
- Medication Management for People with Asthma (75% - Total);
- Controlling High Blood Pressure;
- Comprehensive Diabetes Care – HbA1c Control (<8%);
- Follow-up after Hospitalization for Mental Illness (7 day);
- Initiation and Engagement of Alcohol and Other Drug Dependence Treatment (Initiation – Total);
- Antidepressant Medication Management – Acute Phase; and
- Adherence to Antipsychotic Medications for Individuals with Schizophrenia.

Response:

Humana employs continuous quality improvement (CQI) strategies to ensure we are constantly improving the care and outcomes for our enrollees. Through our CQI approach, we execute a planned sequence of systematic and documented activities aimed at both resolving identified variances and improving processes. To address areas where we have performed below the state or national target, we employthe following high-level processes to address those issues:

- Analysis of plan demographics, including clinical, geographical, and cultural, to identify high-risk populations, areas of network need, enrollee education opportunities, and performance improvement opportunities

- Analysis of access and availability issues including after-hours availability of Primary Care Physicians

- Analysis of continuity and coordination of care

- Review of other non-clinical areas of performance, such as Customer Care call statistics and other enrollee services functions, marketing and outreach, claims processing timeliness and accuracy, and provider satisfaction

FLORIDA SMMC

Per the SMMC Contract, plans are required to meet the National Committee for Quality Assurance (NCQA) 50th percentile in order to be in compliance with contract quality standards. In calendar year (CY) 2015, Humana performed below Healthcare Effectiveness Data and Information Set (HEDIS) or Contract-required quality standards for the following measures listed in this SRC in our Florida SMMC program:
- Adults' Access to Preventive and Ambulatory Health Services (Total)

- Children and Adolescents' Access To Primary Care Physician (PCP) 12-19 yrs.
- Children and Adolescents' Access To PCP 12-24 mos.
- Follow Up After Hospitalization For Mental Illness – 7 days
- Initiation and Engagement of Alcohol and Other Drug Dependence Treatment – Initiation Total
- Medication Management for People With Asthma: Medication Compliance 75% Total

In CY2016, Humana performed below HEDIS and/or contract required quality standards for the following measures listed in this SRC in our FL SMMC program:
- Adults' Access to Preventive/Ambulatory Health Services (Total)
- Children and Adolescents' Access To PCP 12-19 yrs.
- Children and Adolescents' Access To PCP 12-24 mos.
- Children and Adolescents' Access To PCP 25 mos. - 6 yrs.
- Children and Adolescents' Access To PCP 7-11 yrs.
- Comprehensive Diabetes Care - HbA1c Control < 8%
- Follow Up After Hospitalization For Mental Illness – 7 days
- Initiation and Engagement of Alcohol and Other Drug Dependence Treatment - Initiation Total
- Medication Management for People With Asthma: Medication Compliance 75% Total

COMPARISON TO FLORIDA ALL-PLAN AVERAGE
Each year, AHCA releases the SMMC HEDIS all-plan averages, providing the average for all SMMC plans in the state, by measure. In 2015, we performed at or above the all-plan average for the following measures listed in this SRC:

- Adults' Access to Preventive/Ambulatory Health Services (Total) – Performed above all-plan average
- Children and Adolescents' Access To PCP (7-11 yrs.) – Performed above all-plan average
- Children and Adolescents' Access To PCP (12-19 yrs.) – Performed above all-plan average
- Comprehensive Diabetes Care - HbA1c Control (<8%) – Performed above all-plan average
- Controlling High Blood Pressure – Performed above all-plan average
- Antidepressant Medication Management – Acute Phase – Performed above all-plan average
- Follow Up After Hospitalization For Mental Illness – 7 days – Performed above all-plan average

In 2016, we performed at or above the all plan average for the following measures listed in this SRC:
- Adults' Access to Preventive/Ambulatory Health Services (Total) – Performed above all-plan average
- Children and Adolescents' Access To PCP (12-24 Months) – Performed at all-plan average
- Children and Adolescents' Access To PCP (12-19 Yrs) – Performed at all-plan average
- Comprehensive Diabetes Care - HbA1c Control (<8%) – Performed above all-plan average
- Follow Up After Hospitalization For Mental Illness – 7 days – Performed above all-plan average
- Controlling High Blood Pressure – Performed above all-plan average
- Antidepressant Medication Management – Acute Phase – Performed above all-plan average

STRATEGIC ACTIONS TAKEN TO IMPROVE PERFORMANCE MEASURES
Humana actively monitors and takes action to improve performance measures. We hold a monthly Medicaid Strategy meeting, which includes the Medicaid Medical Director, to review HEDIS measures and discuss successes and areas for improvement. Our Florida HEDIS team

holds monthly meetings on specific HEDIS measures to drill down on root causes of any performance issues. We continuously monitor performance through HEDIS dashboards, showing real time performance on measures and our compliance with NCQA and AHCA standards. Finally, HEDIS performance is a discussion topic at the quarterly comprehensive Quality Improvement Committee (QIC) meetings. We discuss how improvements on the medical and Long-term Care (LTC) components of care can improve outcomes for both populations.

SPECIFIC ACTIONS TAKEN IN FL SMMC PROGRAM TO IMPROVE HEDIS PERFORMANCE
Following our analysis of where we performed below targets, we identified opportunities for improvement and barriers that may be impeding improvement. We conducted quarterly Florida QIC meetings to initiate and evaluate various action plans specific to various performance metrics and quality benchmarks.

We identified the following opportunities and barriers between CY 2015 and CY 2016.

ENROLLEE-BASED OPPORTUNITIES
- Failure to schedule or keep appointments for chronic conditions or preventive care.

- Failure to establish initial appointment; enrollee has no established relationship with a primary care physician (PCP)

- Lack of health education regarding the importance of preventive screenings, immunizations, or warning signs for chronic conditions.

- Lack of transportation, which varies, but some examples include the enrollee being allowed only one escort or enrollee and children may have different provider and health plan, making it difficult to coordinate transportation in this situation.

- Denial of chronic conditions and ignoring health issues.

PROVIDER-BASED OPPORTUNITIES
- No available office staff to contact enrollees for preventive screenings, immunizations, or follow up on chronic conditions.

- Incorrect demographic data received from the plan or state and unable to locate enrollee.

- Lack of knowledge of the enrollee incentives offered by plan.

IMPROVEMENTS, INTERVENTIONS, ACTIONS:
We have developed a HEDIS improvement roadmap, Years 2015 through 2017, included in Attachment 7-1, to outline initiatives for all HEDIS measures where we identified areas for improvement. We have included only the measures included in this SRC in Attachment 7-1, but Humana's HEDIS roadmap includes all measures for the Florida SMMC program. We have also included three (3) years of roadmaps to illustrate Humana's ongoing commitment to continuously improve quality for our enrollees. The measures in which we performed below targets were predominantly focused on getting enrollees preventive care and treatment and ensuring access to such care. Accordingly, we focused our interventions on those that encourage and incentivize enrollees to seek preventive services. Below, we discuss the

initiatives undertaken between Calendar Year 2015 and 2016 for the measures where we performed below Contract-required standards.

ENROLLEE BASED INITIATIVES

- Conducted welcome calls in 2016 to new Medicaid enrollees and caregivers to encourage them to schedule their recommended routine and disease specific screenings and immunizations. The enrollee and caregiver are also offered assistance with scheduling the visits and transportation (This initiative was started in 2015.)

- Conducted Birthday Wellness and Postpartum calls –automated calls specific to enrollee having a birthday or having given birth that month – to remind enrollees to make an appointment for their checkup and screenings.

- Continued distribution of Wellness wallet and immunization cards for convenient enrollee access to health information in 2016.

- Childhood Check-up Call Campaign for education and appointment initiatives was on-going throughout 2016.

- Continued the Targeted Women and Children Outreach Campaign in 2016 in order to reach the non-compliant woman of child-bearing age with and without children in order for them to receive cervical cancer screening, breast cancer screening, and chlamydia screening.

- Revised the Healthy Behavior Programs, provider-based programs that were revised as of February 1, 2016. These programs include: Baby Well Visits Program, Pediatric Well Visit Program, MomsFirst Prenatal and Post-Partum Program, Smoking Cessation Program, Substance Abuse Program, and the Humana Family Fit Program. These programs are aimed at improving our healthy enrollee behaviors. Once the enrollee meets the requirements of the program, they receive a gift card.

- Identified enrollees who have asthma through claims and outreach by our disease management team to encourage enrollees to enroll into the disease management program. The program will stratify the enrollee in accordance with the level of severity and manage the enrollees who opt-in to the program telephonically. The frequency of the outbound call will depend on the level of severity. The program will educate enrollees on disease process, self-management, and medication management and adherence.

- Letters and flyers are sent to enrollees identified to the denominator of the HEDIS Measure – Medication Management for People with Asthma (MMA). The goal is to educate enrollees on asthma management.

- Asthma: Targeted Voice Activated Technology (VAT) call conducted by a vendor to adult enrollees with asthma medication. The goal is to improve medication adherence, remind enrollees to refill medication, and address barriers if they are adhering to their medication regimen.

- Clinical Alert (enrollees): The clinical alert is a reminder banner with different message each month. The banner is placed on the enrollee portal. (Attachment 7-2)

PROVIDER-BASED INITIATIVES
- Throughout 2016, action lists in the form of Tool Kits and gap reports were distributed and discussed with Medicaid providers to include performance measures that are required by the Agency for Health Care Administration. Providers are encouraged to fax in documents and lab results as supplemental data to close the gaps.

- PCP quality bonus encouraging providers to meet quality standards.

- Continued to distribute Provider Education for Asthma Management Communication to the providers during 2016.

- Continued use of Enhanced Medicaid specific performance report card to show the provider how they compare to peers.

- Continued distribution of a childhood checkup up provider tool.

- Distribution of Provider Medicaid HEDIS checklist, a one-page document that allows providers to keep track of what services has been completed. (Attachment 7-3)

- Clinical Alert (Providers): The clinical alert is a reminder banner with different well-being message each month. The banner is placed on the provider portal. (Attachment 7-4)

CONCLUSIONS AND RECOMMENDATIONS:
- Continue the Welcome, Birthday, and Postpartum Calls.

- Maintain the PCP bonus to engage Medicaid provider offices to submit medical records to close enrollee gaps.

- Continue Provider Rewards – The programs will be continued and we will look at increasing rewards.

- Continue with the quarterly Medicaid Quality Improvement Committee to target measures related to performance and quality metrics and sanctions or liquidated damages.

- Maintain Provider Organized Delivery System (PODS) and have representatives continue to complete provider visits and distribute educational materials related to improving patient experience and provide guidance through data, tools, and resources. Extend the program to reach providers through virtual visits by PODS representatives.

- Continue to evaluate and enhance enrollee and provider-specific programs in order to optimize results.

- Communicate with providers – Continue to monitor all proposed provider communication and engagement activities to promote the best provider experience.

ONGOING IMPROVEMENT INITIATIVES FOR MEASURES THAT MET BENCHMARKS
Humana continuously strives to improve quality outcomes, including areas where we have met contract-required benchmarks but improvement is still desirable. We can always improve the quality of care provided to our enrollees. Each year, we develop our HEDIS roadmap,

containing strategies and initiatives to improve all of our HEDIS measures. Our roadmaps include ongoing improvement initiatives for those measures where we have fallen below contract standards, as well as those where we have met contract standards, but we are seeking to improve. Below, we include an example of initiatives from our 2018 roadmap, based on HEDIS 2017 results, where we met the benchmark for the measure, illustrating how we are constantly working to improve quality outcomes.

Antidepressant Medication Management - Effective Acute Phase Treatment
HEDIS 2016
- Humana: 54.34
- NCQA 50th Percentile: 53.38

HEDIS 2017
-Humana: 55.12
-NCQA 50th Percentile: 51.89

For this measure, we met the benchmark for HEDIS 2016 and HEDIS 2017 and even improved from one year to the next. Despite the successful results we felt we could improve even further. Going into HEDIS 2018 reporting year, we identified the following initiatives to increase our performance on this measure and fully expect marked improvement:

- Monthly Action List delivered to Behavioral Health Subcontractors
- 2017 Medicaid HEDIS/CAHPS Guide & Checklist delivered to Providers
- VAT call to remind enrollee to refill medication

FLORIDA GROUP COMMERCIAL

While there are no contractually required benchmarks for our Florida Group Commercial plan, we monitor our performance against the NCQA Health Maintenance Organization/Point of Service Option (HMO/POS) fiftieth (50th) percentile to identify areas for improvement. In CY2015 and CY2016 we monitored and measured all HEDIS measures listed in this SRC, except Adherence to Antipsychotic Medications for Individuals with Schizophrenia.

In CY2015 (HEDIS 2016), Humana performed below the NCQA Fiftieth (50th) percentile standard for the following measures listed in this SRC in our Florida Group Commercial program:

- Antidepressant Medication Management - Acute Phase Treatment
- Children and Adolescents' Access To PCP (Twelve (12) – Nineteen (19) Years)
- Controlling High Blood Pressure – Total
- Follow Up After Hospitalization For Mental Illness – Seven (7) days
- Initiation and Engagement of Alcohol and Other Drug Dependence Treatment – Initiation Total
- Medication Management for People With Asthma: Medication Compliance seventy-five (75) percent (Total)

In CY2016 (HEDIS 2017), Humana performed below the NCQA fiftieth (50th) percentile standard for the following measures listed in this SRC in our Florida Group Commercial program:

- Antidepressant Medication Management - Acute Phase Treatment
- Children and Adolescents' Access To PCP (Twelve (12) – Twenty-four (24) Months)
- Children and Adolescents' Access To PCP (Twelve (12) – Nineteen (19) Years)
- Follow Up After Hospitalization For Mental Illness – Seven (7) days
- Initiation and Engagement of Alcohol and Other Drug Dependence Treatment – Initiation Total
- Medication Management for People With Asthma: Medication Compliance seventy-five (75) percent (Total)

SPECIFIC ACTIONS TAKEN IN FLORIDA GROUP COMMERCIAL PROGRAM TO IMPROVE HEDIS PERFORMANCE
We conducted an analysis of our performance, and identified the following opportunities and barriers, improvements and changes, and conclusions and recommendations:

Opportunities and Barriers:
- Lack of knowledge of plan coverage, particularly for preventive services.
- Limited scope and effectiveness of provider-directed initiatives.
- Early stages of provider reward program building awareness to engage providers in quality improvement.

Improvements and Changes:
- Dedicated chart chase team resulted in closure of nearly four thousand four hundred (4,400) open gaps.

- Continue connections with other areas, such as ProActive and Marketing, to multi-message enrollees on topics of importance, such as plan coverage and preventive services.

- Increase provider relationships by engaging with existing PODS groups or Virtual PODS; partner with Provider Development Center of Excellence to expand rewards coverage.

- Leverage website for wellness related educational opportunities (e.g., Humana Beginnings, Smoking Cessation, and Personal Nurse).

- Expand blood pressure and maternity care email campaigns.

CONCLUSIONS AND RECOMMENDATIONS:
- Focus on expansion of successful pilots throughout remainder of the year with specific emphasis on highest Federal Employees Health Benefits prioritized markets and measures. For priority measures, move towards a proactive approach that limits future penalties and corrective action plans.

- Focus on enrollee awareness of preventive services, maternity, and diabetes related initiatives.

- Leverage PODS model and other market resources to engage in communication and relationship-building with Commercial providers to broaden range of message.

While there are no contractually required benchmarks for our Florida Commercial Marketplace plan, we monitor our performance against the NCQA HMO/POS fiftieth (50th) percentile to identify areas for improvement. In CY2015 and CY2016 we monitored and measured all HEDIS measures listed in this SRC, except for the following:
- Adults' Access to Preventive/Ambulatory Health Services (Total)
- Adherence to Antipsychotic Medications for Individuals with Schizophrenia
- Children and Adolescents' Access To PCP 12-24 mos.
- Children and Adolescents' Access To PCP 25 mos. - 6 yrs.
- Children and Adolescents' Access To PCP 7-11 yrs.
- Children and Adolescents' Access To PCP 12-19 yrs.

In 2015 (HEDIS 2016), Humana performed below the NCQA fiftieth (50th) percentile standard for the following measures listed in this SRC in our Florida Commercial Marketplace Plan:
- Antidepressant Medication Management - Acute Phase Treatment
- Comprehensive Diabetes Care - HbA1c Control (<8%)
- Controlling High Blood Pressure - Total
- Follow Up After Hospitalization For Mental Illness – 7 days
- Medication Management for People With Asthma: Medication Compliance 75% Total

In 2016 (HEDIS 2017), Humana performed below the NCQA fiftieth (50th) percentile standard for the following measures listed in this SRC in our Florida Commercial Marketplace Plan:
- Antidepressant Medication Management - Acute Phase Treatment
- Comprehensive Diabetes Care - HbA1c Control < 8%
- Controlling High Blood Pressure - Total
- Follow Up After Hospitalization For Mental Illness – 7 days
- Medication Management for People With Asthma: Medication Compliance 75% Total

SPECIFIC ACTIONS TAKEN IN FLORIDA COMMERCIAL MARKETPLACE PROGRAM TO IMPROVE HEDIS PERFORMANCE
We conducted an analysis of our performance, and identified the following opportunities and barriers, improvements and changes, and conclusions and recommendations:

Opportunities and Barriers:
- High turnover rate among Marketplace membership decreases effectiveness of quality initiatives, especially enrollee experience focused initiatives

- Data indicates high out-of-network utilization, emergent care services, and a low number of PCP visits

- Out-of-network emergent access to care leads to a higher financial burden for enrollees and does not link to positive changes in health outcomes

- Lack of education on how and where to utilize health insurance. Coverage levels and clarity on out of pocket costs as it relates specifically to preventive screenings

- Provider attribution issues, specifically auto-assignment to a PCP when an enrollee is unfamiliar with their assigned physician, or physician hours, costs, and geography are primary driving factors. Strong PCP relationships are critical to gap closure

- Providers are unfamiliar with QRS measure specifications

Improvements and Changes:
- Quality Improvement Strategy (QIS) focused on enrollee-PCP engagement has been submitted to CMS. Enrollee-PCP relationships are key to enrollee retention and gap closure

- Preliminary data indicates increased enrollee experience scores versus 2014 beta test results. Increased focus on enrollee perception related initiatives throughout the year played a contributing factor

- Increased scope of Provider outreach initiatives aimed at improving HEDIS scores

- Commercial team dedicated to chart chase activity resulted in increased gap closure for reporting year 2015 versus reporting year 2014

Conclusions and Recommendations:
- Continued focus on improving enrollee experience scores related to Enrollee Survey, which is heavily weighted in the calculation in overall quality star scores.

- QIS Strategy to enhance enrollee-PCP engagement remains a priority and improves the opportunity to coordinate care.

- Continued focus on tactics to drive up results in specific HEDIS preventive areas and Qualified Health Plan (QHP) Enrollee Scores.

- Better understand emergency department utilization to effectively encourage enrollees to engage in PCP relationships.

- Continued maturity of Commercial rewards program.

Evaluation Criteria:

1. The extent to which the described experience demonstrates the ability to improve quality in a meaningful way and to successfully remediate all failures for the HEDIS performance measures included in this submission requirement.

2. The extent to which the described experience demonstrates the ability to improve quality in a meaningful way even when HEDIS or Contract-required standards were met, but improvement was desirable, for the HEDIS performance measures included in this submission requirement.

Score: This section is worth a maximum of 10 raw points with each component worth a maximum of 5 points each.

Attachment 7-2: Member Portal Clinical Alerts

The clinical alert is a reminder banner with a different message each month. The banner is placed on the member portal.

Clinical Timeline 2016 – Clinical Alerts Member Portal

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec
Cervical Health Awareness	Healthy Heart Month	Colorectal Cancer Awareness	Alcohol Awareness Month	High Blood Pressure Education	Mid-Year Wellness Reminder	Promote Eye Exam	Immunization Awareness Month	Healthy Eating & Lifestyle	Breast Cancer Awareness	Diabetes Awareness Month	National Influenza Vaccination

All Year Round (Except June): *Don't forget to schedule yours and/or your child's free yearly well-visit and dental checkup. Call your doctors or call Customer Service at 1-800-477-6931 (TYY: 711) to schedule appointments today, and remember these visits are at no cost to you!*
Jan: If you are a female, consult your doctor or an OB/GYN for an annual Pap smear testing
Feb: This is Healthy Heart Month. Time to think about eating healthy and exercising to keep your heart strong. Consult your doctor on lifestyle changes.
Mar: If you are age 50 and older, it is important to talk to your doctor about a colon screening.
Apr: If you or someone you love struggles with drugs and/or alcohol, speak with your physician. You may also call our Customer Services at 1-800-477-6931 and ask about the Healthy Behavior Reward Program.
May: Is your blood pressure below 120/80? If not or you are not sure, consult your doctor to discuss treatment options.
Jun: We are half way through the year. Have you schedule yours and/or your child's free yearly well0visit and dental check-up. *Call your doctors or call Customer Service at 1-800-477-6931 (TYY: 711) to schedule appointments today, and remember these visits are at no cost to you!*
Jul: Have you or your child had an eye exam this year? If not, we encourage you to schedule with an in-network eye doctor. Yearly eye exam is important to maintain good vision.
Aug: Are you or your child up to date on all immunization? Consult your doctor about the importance of getting immunized.
Sept: It is important to maintain a healthy diet and weight. Humana offers nutritional counseling for free. Call Customer Services at 1-800-477-6931 and ask about the benefit.
Oct: Are you a female age 50-74? Have you had a mammogram done this year or last year? If not, consult your doctor about a mammogram.
Nov: If you or someone you love are living with diabetes, education and support are important to help you stay in control and healthy. Humana offers a Diabetes Disease Management Program for free. To learn more about our program, call at 1-800-322-2758
Dec: It's not too late! A yearly flu vaccine is recommended for everyone 6 months and older. Consult your doctor and get your flu vaccine today.

1.0.9.5 12/2015 Katie Wetherington – SMCC Contract Manager

2017 ADULT MEDICAID SCREENINGS, SERVICES AND EDUCATION CHECKLIST

MEMBER NAME: _____ DOB: _____ HUMANA ID:_____

PREVENTION AND SCREENINGS	DESCRIPTION OF REQUIREMENT	DATE COMPLETED
❑ Adult body mass index (BMI)	BMI assessment for adults ages 18 to 74 between Jan. 1, 2016, and Dec. 31, 2017	___/___/___ **Result:**
❑ Breast cancer screening	Mammography for women ages 50 to 74 between Oct. 1, 2015, and Dec. 31, 2017, or exclusion due to bilateral mastectomy	___/___/___
❑ Cervical cancer screening	Pap smear evident for women ages 21 to 64 between Jan. 1, 2015, and Dec. 31, 2017, or pap/human papillomavirus co-testing for women ages 30 to 64 between Jan. 1, 2013, and Dec. 31, 2017, or exclusion due to complete/total/radical hysterectomy	___/___/___
❑ Chlamydia screening	At least one test for chlamydia in women ages 16 to 24, who are sexually active, before Dec. 31, 2017	___/___/___
❑ Ambulatory or preventive care visit	An ambulatory or preventive care visit as defined for adults ages 20 and older before Dec. 31, 2017	___/___/___
RESPIRATORY CONDITIONS	**DESCRIPTION OF REQUIREMENT**	**DATE COMPLETED**
❑ Medication management for people with asthma	Monitor adherence to asthma controller medication regimen for members ages 5 to 64 diagnosed with persistent asthma **Asthma controller medications:** **Antibody inhibitor:** omalizumab; **Inhaled steroid combinations:** Symbicort®, Advair®, Dulera®; **Inhaled corticosteroid:** beclomethasone, Pulmicort®, fluticasone CFC-free, mometasone; **Leukotriene modifiers:** montelukast, zafirlukast; **Mast cell stabilizers:** cromolyn; **Methylxanthines:** theophylline	___/___/___ **Rx:**
CARDIOVASCULAR CONDITIONS	**DESCRIPTION OF REQUIREMENT**	**DATE COMPLETED**
❑ Controlling high blood pressure	Blood pressure controlled in adults ages 18 to 85 (target depends on age and diabetes diagnosis) prior to Dec. 31, 2017, with a diagnosis of hypertension prior to June 30, 2017	___/___/___ **Result:**
DIABETES CARE (ADULTS 18 AND OLDER)	**DESCRIPTION OF REQUIREMENT**	**DATE COMPLETED**
❑ Annual diabetic retinal eye exam	Diabetic retinal eye exam before Dec. 31, 2017	__/__/__ **Result:**
❑ Annual HbA1c testing	Testing and control of HbA1c lower than 8 percent before Dec. 31, 2017	__/__/__ **Result:**
❑ Medical attention for nephropathy	Nephropathy screening test or evidence of nephropathy as per claim/ encounter, nephrologist visit, urine protein test or ACE inhibitor/ARB therapy before Dec. 31, 2017	__/__/__ **Result:**
BEHAVIORAL HEALTH MANAGEMENT	**DESCRIPTION OF REQUIREMENT**	**DATE COMPLETED**
❑ Antidepressant medication management	Encourage and monitor compliance with antidepressant medications for members ages 18 and older, newly diagnosed with major depression	__/__/__
❑ Initiation and engagement of alcohol and drug dependence treatment	Initiate treatment through an inpatient alcohol or other drug dependence (AOD) admission, outpatient visit, intensive outpatient encounter or partial hospitalization within 14 days of diagnosis and have two or more additional services with a diagnosis of AOD within 30 days of the initial visit	Initial: __/__/__ Follow-ups: __/__/__ __/__/__
❑ Diabetes screening for people with schizophrenia or bipolar disorder who are using antipsychotic medications	One blood glucose or HbA1c test for members ages 18 to 64 years old with schizophrenia or bipolar disorder, who were dispensed an antipsychotic medication before Dec. 31, 2017	Glucose/HbA1c: __/__/__

Please note: This is for office use only and should not be submitted to Humana to close Healthcare Effectiveness Data and Information Set (HEDIS®) gaps in care for your patients.

2017 MEDICAID PEDIATRIC SCREENINGS, SERVICES AND EDUCATION CHECKLIST

MEMBER NAME: _____ DOB:_____ HUMANA ID: _____

PREVENTION AND SCREENINGS	DESCRIPTION OF REQUIREMENT	DATE COMPLETED
❑ Chlamydia screening	At least one test for chlamydia in women ages 16 to 24, who are sexually active, before Dec. 31, 2017	____/____/____
❑ Immunizations (childhood and adolescent)	• Childhood immunizations are up to date by the child's second birthday • Adolescent immunizations are up to date by the child's 13th birthday	____/____/____
❑ Lead screening	At least one blood lead screening before the child's second birthday	____/____/____ **Result:**
❑ Well-care visit (childhood and adolescent)	• At least six well-child visits prior to **15 months** of age • At least one well-child visit for children/adolescents 1 to 21 years of age before Dec. 31, 2017 *(Note: Documentation should include complete history, including physical and mental health, physical exam, BMI/BMI percentile, nutrition counseling and anticipatory guidance.)*	____/____/____
❑ Annual dental visit	An annual dental visit with a dental practitioner for all members ages 2 to 20 before Dec. 31, 2017	____/____/____
RESPIRATORY CONDITIONS	**DESCRIPTION OF REQUIREMENT**	**DATE COMPLETED**
❑ Medication management for people with asthma	Monitor adherence with asthma controller medication regimen for members ages 5 to 64 diagnosed with persistent asthma **Asthma controller medications:** **Antibody inhibitor:** omalizumab **Inhaled steroid combinations:** Symbicort®, Advair®, Dulera® **Inhaled corticosteroid:** beclomethasone, Pulmicort®, fluticasone CFC-free, mometasone **Leukotriene modifiers:** montelukast, zafirlukast **Mast cell stabilizers:** cromolyn **Methylxanthines:** theophylline	____/____/____ **Rx:**
BEHAVIORAL HEALTH MANAGEMENT	**DESCRIPTION OF REQUIREMENT**	**DATE COMPLETED**
❑ Follow-up management for children with newly prescribed attention deficit disorder/ attention deficit hyperactivity disorder (ADD/ADHD)	• An in-person outpatient visit within 30 days of prescription fill • Two additional in-person outpatient follow-up visits between days 31 and 300 of prescription fill	____/____/____ ____/____/____ ____/____/____
❑ Initiation and engagement of alcohol and drug dependence treatment	• Initiate treatment through an inpatient alcohol or other drug dependence (AOD) admission, outpatient visit, intensive outpatient encounter or partial hospitalization within 14 days of diagnosis and • Have two or more additional services with a diagnosis of AOD within 30 days of the initial visit	Initial: ___ /____ / ____ Follow-ups: ___ /____ /____ ___ /____ /____
❑ Metabolic monitoring for children and adolescents on antipsychotics	One blood glucose or HbA1c test and one LDL-C or cholesterol test for children/adolescents 1 to 17 years old who had two or more antipsychotic prescriptions before Dec. 31, 2017	Glucose/HbA1c: ___/___/___ LDL-C/cholesterol: ___/___/___

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec
Cervical Health Awareness	Healthy Heart Month	Colorectal Cancer Awareness	Alcohol Awareness Month	High Blood Pressure Education	Mid-Year Wellness Reminder	Promote Eye Exam	Immunization Awareness Month	Healthy Eating & Lifestyle	Breast Cancer Awareness	Diabetes Awareness Month	National Influenza Vaccination

Jan: Jan is Cervical Health Awareness Month. Please help us raise awareness on the importance of getting an annual well-woman check.
Feb: February is Healthy Heart Month. Please educate your patients to make heart-healthy choices to prevent the nation's leading killers.
Mar: March is Colorectal Cancer Awareness Month. Please help us raise awareness on the importance of getting colorectal cancer screening regularly.
Apr: April is Alcohol Awareness Month. Humana offers a Healthy Behavior Substance Abuse Program. To refer a member, please call 1-800-221-5487.
May: May is High Blood Pressure Education Month. Please educate your patients about contributing lifestyle factors and healthy choices.
Jun: We are halfway through the year. Please be sure to reach out to those patients who have not had a yearly check-up.
Jul: Encourage your patients to schedule an annual eye exam with an in-network optometrist or ophthalmologist to maintain good vision.
Aug: August is Immunization Awareness Month. Please educate patients and caregivers about the value of immunization throughout their lifespans to prevent dangerous and deadly diseases.
Sept: It is important to maintain a healthy diet and weight. Patients can learn more about Humana's free nutritional counseling by calling Customer Service at 1-800-477-6931.
Oct: October is Breast Cancer Awareness Month. Please help us raise awareness on the importance of getting a mammogram.
Nov: November is Diabetes Awareness Month. Refer patients to our free Diabetes Disease Management Program by calling 1-800-322-2758.
Dec: It's not too late! A yearly flu vaccine is recommended for everyone 6 months old and older. Please encourage your patients to get vaccinated today.

SRC# 8 – Vignette (Statewide):

The respondent shall review the below case vignette, which describes potential Florida Medicaid recipients. Note: The vignette included below is fictional.

> *Robert, a 50-year-old man, was diagnosed with chronic obstructive pulmonary disease (COPD) five (5) years ago. His symptoms have been worsening recently, and he has presented at the emergency department three (3) times during the past thirty (30) days. Robert previously smoked twenty-five (25) cigarettes per day for thirty (30) years, but cut down to ten (10) cigarettes per day after his first COPD exacerbation two (2) years ago. He has attempted to quit smoking on several occasions without any success. Robert is prescribed several regular medications for his COPD, as well as for hypertension and hypercholesterolemia. He is pre-diabetic and obese with a BMI of 35. His last appointment with his specialist was ten (10) months ago. Robert has difficulty taking his medications regularly, as he is sometimes unable to get his prescriptions in his rural community and he lacks transportation. After his last visit to the emergency department, Robert was prescribed oxygen treatments and a new medication; however, he has not filled these orders. Robert lives with his 15-year old son and is a single parent. Robert and his son have been on Medicaid for the last four (4) years since he lost his job. Robert has been a member of the plan since December 2016.*

The respondent shall describe its approach to coordinating care for an enrollee with Robert's profile, including a detailed description and workflow demonstrating notable points in the system where the respondent's processes are implemented:

a. New Enrollee Identification;
b. Health Risk Assessment;
c. Care Coordination/Case Management;
d. Service Planning;
e. Discharge/Transition Planning;
f. Disease Management;
g. Utilization Management; and
h. Grievance and Appeals.

Where applicable, the respondent should include specific experiences the respondent has had in addressing these same needs in Florida or other states.

Response:

LOOKING BACK: HUMANA'S INTRODUCTION TO ROBERT

Robert's eligibility, effective December 1, 2016, comes to Humana via the 834 enrollment file sent by the Florida Agency for Health Care Administration (AHCA) and is an automated electronic transmission into our Customer Interface (CI) enrollment system. Robert's eligibility information loads into the CI system within twenty-four (24) hours of receipt of his enrollment.
Our processes ensure Robert's information is accessible in real-time and that the information flows downstream into our CareHub Clinical Guidance Exchange (CGX) [1] and Client

Relationship Management (CRM) [2] systems, advising our Humana clinical and customer care teams that Robert is a newly eligible, non-LTSS, MMA Medicaid enrollee.

LOOKING BACK: WELCOME CALL OUTREACH TO ROBERT

Robert's phone number was automatically loaded into Humana's auto dialer software upon enrollment. Anna, a Customer Care Specialist (CCS) in our Florida-based Humana Medicaid Administration Education and Satisfaction Unit (ESU), calls Robert to welcome him to Humana. After securing Robert's permission to continue the call, Anna completes a Health Risk Assessment (HRA) to quickly identify his needs and confirms his current providers, noting that an appointment is scheduled with his Primary Care Provider (PCP). Anna also reviews Robert's available benefits, confirms he has received his enrollee ID cards, and welcome materials, and updates his demographic information. After Anna informs Robert of his eligibility to participate in Humana's Disease Management (DM) program, Robert agrees to speak with a DM Registered Nurse (RN). Anna informs him that he will receive a call from a DM RN within seven to ten days, as well as a letter in the mail.

LOOKING BACK: STRATIFYING ROBERT'S NEEDS FOR APPROPRIATE CARE

In addition to Anna's Welcome call, Robert's new enrollee information (such as claims, pharmacy, demographic, diagnosis) is run within the first thirty (30) days of enrollment and monthly thereafter, through our proprietary Medicaid Severity Score algorithm. The resulting score provides insight to identify Medicaid enrollees with higher complexity (projected higher utilization and cost in the upcoming year) triggering them for case management outreach and participation efforts. Additionally, his information from claims diagnosis and current pharmacy National Drug Codes (NDC) is captured in a monthly "Potentials Report" that identifies disease management candidates for outreach to discuss program benefits and enrollment. We stratify Robert's information to pro-actively apply case and disease management resources to his specific needs and he is identified as being a candidate for the COPD disease management program. Robert's clinical information identifying him for case or disease management can come from other sources including: Utilization Management data, Health Risk Assessment completion, 24/7 Nurse line referral, pharmacy data, self-referral, and provider referral.

LOOKING BACK: ROBERT JOINS THE DISEASE MANAGEMENT PROGRAM

The next week, Robert receives a call from his assigned disease management case manager, David, a Humana-employed nurse who has extensive training and expertise working with enrollees with chronic conditions such as Robert's. Robert is one of fifteen complex patients David supports. In addition to his experience, David has completed the Humana Clinical Learning and Development (CLD) team's two-week orientation. This orientation includes training on Medicaid, Humana's systems, ethics, cultural competency, motivational interviewing, and other computer based training. He then was mentored by senior case managers through onsite-office, field-based, and online training. This training equips David to find and locate appropriate community resources and help resolve Robert's issues. Through half-day monthly meetings of continuous education and training, he also learns strategies to identify access-to-care barriers, prioritize immediate needs, identify enrollee health literacy, and display empathy and emotional support.

After David confirms Robert's consent for participation in the program, they complete a comprehensive assessment which addresses multiple body systems, including the pulmonary system, and they discuss Robert's hypertension and hypercholesterolemia. David also provides condition-specific education and reviews supports available to help Robert manage his care.

Together, they develop a plan of care (POC). David sends an introductory letter to Robert's PCP letting him know that Robert is participating in the program and providing information on accessing related clinical guidelines on the Humana website.

LOOKING BACK: ROBERT'S PROGRAM ENGAGEMENT

Robert's initial reaction to the call was positive and as they conversed, Robert voiced no concern about his overall health. However, as time passed David had a hard time contacting Robert, who was reluctant to acknowledge the severity of his diagnosis and risks. Robert eventually stopped responding to contact attempts altogether. Due to Robert's reluctance to engage in the program, David places his case in monitoring status, ensuring he would continue to receive notifications of a change in Robert's clinical status such as emergency department visits. David enters a note in the file saying that Robert was unreachable, so that if he later calls Customer Care, then the specialist will be able to connect him with David via a conference call.

DAYS 1 – 30: ROBERT'S VISITS TO THE EMERGENCY DEPARTMENT

In January of 2019, Robert's condition suddenly begins to worsen, resulting in three trips to the emergency department within thirty (30) days. David, Robert's DM RN Case Manager, receives notification of each emergency department visit via a daily report called the Florida Health Information Exchange-Event Notification Service (HIE-ENS). David makes outreach attempts as soon as he receives notification of the first emergency visit, but is unsuccessful at reaching Robert. These contact attempts continue with the second ER notification.

DAY 31 – 32: DAVID SUCCESSFULLY ENGAGES ROBERT

After the third emergency visit, David is successful at reaching and engaging Robert in a discussion about his current health. David gleans that Robert is worried about his serious condition and is now ready to discuss and learn about it and his broader health and well-being. Robert reveals that the past thirty (30) days have been very frightening for him, and he tells David he wants to be there for his fifteen (15) year old son, who he is raising on his own. Knowing this is a crucial time of engagement, David leverages his training and experience along with the skills and techniques of motivational interviewing to take a holistic approach to his conversation with Robert. David focuses on understanding Robert's health issues, identifying his key social determinants, assessing his situation for urgent behavioral health needs requiring referral, and determining his overall challenges and barriers to meeting his goals. David assesses that Robert requires more frequent outreach and that it is appropriate to classify him at a complex acuity level in the disease management program, due to his COPD exacerbation, emergency room utilization, and lack of knowledge about condition management.

David updates the comprehensive assessment and additional disease-specific assessments applicable for COPD and hypertension within CGX. David employs his training to address critical components of care first. He starts with assessing Robert's understanding and knowledge of his current status and overall health. He also understands that Robert has several new medications to fill and that he has been told he must use oxygen for treatments, but has not yet obtained an oxygen source. This information is also captured in Robert's assessments and POC in CGX. Robert is making some progress on his own by decreasing his smoking to 10 cigarettes per day, but continues to struggle to keep up with other important health maintenance

activities, such as attending appointments with his pulmonologist. During this conversation, Robert shares the difficulty he's experienced getting transportation to his appointments. David reminds Robert he has a non-emergent medical transportation benefit available to him, as well as the option for prescription delivery.

Together, David and Robert:

- Update Robert's PCP information

- Schedule a ride for Robert to pick up his medications at the earliest available time

- Confirm Robert's appointments with his Primary Care Provider (PCP) and pulmonologist

- Schedule transportation to Robert's follow up appointments

- Walk through the process of downloading a transportation scheduling app to Robert's smart phone

- Facilitate the processing of the oxygen orders through Humana's Clinical Intake Team, who set up the provider and delivery

- Review risks of smoking while using oxygen and cover safety protocols to prevent injury

- Determine key members of the Multidisciplinary Team (MDT): Robert, David, PCP, and pulmonologist

David's actions help Robert to better understand ways to navigate these components of the complex health care delivery system.

The day after David and Robert's discussion, David reviews the approved DME authorizations for oxygen concentrators in CGX. He looks for a home unit, as well as a portable unit he can carry on his hip. David understands the importance of oxygen therapy, as well as the importance of getting it delivered and in place quickly to stabilize Robert's condition. David requests an expedited authorization for the portable unit as it will allow Robert to begin using the oxygen but remain mobile. David recognizes that without the delivery, Robert could experience an adverse event such as another emergency room visit or even admission to the hospital, which would limit his ability to care for his son. For this reason, David calls Robert on the scheduled delivery date to confirm the delivery of the portable unit, as well as the nasal cannulas and necessary supportive supplies.

DAY 33 – 150: DAVID'S ONGOING CONTACT WITH ROBERT

David continues to work closely and frequently with Robert and ensures all the identified components of Robert's care are quickly addressed and Robert's plan of care is fully implemented. Robert's appointments are kept with both his PCP and his pulmonologist, the medications are obtained, the home oxygen concentrator was also delivered the next week, and he has begun taking the medications and using the oxygen routinely.

DAY 151: ENGAGING ROBERT'S SON

Robert had shared his primary personal goal of being healthy enough to be there for his son and makes clear that he does not want to burden his son. David understands that Robert's fifteen (15) year-old son is not an appropriate caregiver, however, the family unit should be educated on critical components of Robert's POC for added safety and in case of an urgent or emergent need. David works with Robert to identify the critical components of his POC and helps Robert plan for a discussion about them with his son once he returns home from school. Throughout the conversation, David also explains how each of the actions derived from his POC will help Robert in achieving his goal of being healthy enough to be available and supportive to his son.

At this time David, also completes a medication reconciliation to identify any concerns and important components to educate Robert about his conditions, medications, and oxygen. As Robert was started on a metered-dose inhaler, which can be difficult to use, David educates him on a helpful spacer device that will make it easier for Robert to breathe in the correct dose. David also educates Robert on mail order pharmacy and the benefit of obtaining a one hundred (100) day supply of medications, which will decrease the need to go to the pharmacy. Robert also downloads the Humana RX Mentor pharmacy application for his smart phone, granting him easy access to his full medication list if he is in the doctor office or out in the community.

DAY 160: ESTABLISHING AND MAINTAINING AN EFFECTIVE SELF-MANAGEMENT PLAN FOR ROBERT

As part of his plan of care, David helps develop a self-management plan so Robert can identify early indicators, triggers to avoid, symptoms of worsening breathing status and exacerbation of his COPD, ways to monitor and potentially improve his blood pressure, and an action plan for times when his COPD deteriorates despite self-intervention. The discussions include environmental triggers such as how Robert heats his home (for example, a wood stove is not advisable), whether he has any allergies, how Robert handles cutting the grass, or if he lives in a wooded area where flora might lead to an allergic reaction. Robert reports he is still smoking ten (10) cigarettes per day but has not increased his smoking. David confirms cigarettes are Robert's only type of tobacco use and that Robert drinks alcohol moderately. To determine pulmonary status, David discusses Robert's ability to sleep through the night and asks if he sleeps in an upright or a sitting position, or if he is able to tolerate lying down for sleep. David asks Robert to notify him of any change in his sleeping or symptom status at any point during his engagement so he can cpmtact Robert's PCP and pulmonologist as needed to facilitate scheduling appointments and corresponding transportation.

Access-to-care is a critical part of Robert's overall plan of care, so David and Robert also discuss some options for him to receive very timely care, even in his home, in the event that his health deteriorates. Since Robert's PCP is engaged in a value-based relationship with Humana, she will have aligned incentives to ensure Robert has the right care, at the right place and in the right time and sends a nurse practitioner directly to his home for assessment. Additionally, Robert could take advantage of Humana's new partnership with Doctor on Demand, which allows him to talk with a physician from the comfort of his home, via live video feed, within five

minutes of his request. This telemedicine option provides Robert with an effective alternative to seeking urgent care or an emergency department.

As part of his crisis plan, Robert is also able to identify a neighbor with a generator in case of loss of power and knows to call 9-1-1 for emergency services if he becomes acutely short of breath. In Robert's area, another in-home option is for Robert to sign up for the Transitional Health Solutions Program. This is a program that allows Robert to call a nurse practitioner who can be to his home within thirty (30) minutes, to enable Robert to avoid making an urgent care or emergency department visit. If the nurse practitioner's visit determines Robert should go to a hospital, he may have the option of going to his pulmonologist's preferred hospital, rather than the closest hospital where the emergency response team would take him.

At the end of each call, David and Robert schedule their next contact and David creates a self-task within CGX as a reminder to contact Robert and to follow up on the agreed upon action items. Because of the discussions with David in his critical first week of engagement, Robert begins to understand how his medications work together when taken consistently. David coaches Robert on ways to pair scheduled medications and supplemental oxygen with daily activities like brushing his teeth, drinking his mid-morning coffee, and watching the evening news. He also advises Robert on other mechanisms to remind himself, such as cell phone alarms and a pill box. With Robert's new understanding of his treatment plan, he begins to follow a personalized reminder system and now remembers to take his medications and treatments very close to the schedule.

Throughout the process, and as part of his overall approach to disease management, David ensures that Robert's PCP stays informed of David's actions and Robert's progress. He also ensures that the PCP remains engaged in the care planning process so that they can work together effectively to coordinate his care. David also schedules regular MDT meetings to ensure he will have support in the discussion of the complexities of Robert's case, the interventions to date, Robert's progress towards goals, and determinations of potential additional resources to be offered.

DAY 161 – 179: ROBERT'S PROGRESS

Robert starts making significant progress toward managing his symptoms and reports he is beginning to breathe with less effort and is feeling a little better overall. He is prepared with several options to receive urgent care conveniently if needed. His pulmonologist orders a pulmonary rehabilitation and Robert uses his new smart phone app to arrange his own transportation. David compliments Robert on his impressive progress. Robert shares that he was able to have a conversation with his son about his condition, including his needs to avoid environmental triggers, his crisis plan, proper use of his rescue medications, and the proper times his son should call 9-1-1 if Robert needs emergency assistance. His son also created a list of medications with times due and instructions for how to take the medications or treatment. He places one on the refrigerator and one in the garage above Robert's workbench.

David introduces Robert to the Disease Management (DM) Program Resource Guide. This guide contains evidence-based guidelines and treatment goals, and other helpful resources Robert can view from his phone. Robert is able to easily find information on local support groups and the benefits of having access to a behavioral health counselor. Robert is not interested in a

counselor now, but verbalizes that he may consider attending a support group. David also provides Robert with several sets of pertinent, internationally-recognized educational materials written by the American College of Chest Physicians (ACCP).

David and Robert leverage their MDT meetings as an additional source of support. The MDT reviews Robert's history, conditions, risks, barriers, resolved issues, and current status. They also discuss financial and community resources available to Robert to help alleviate some of the stress Robert has been experiencing. David shares his concern about Robert's underlying anxiety and depression. The MDT discusses methods of motivating Robert to become more accepting of additional interventions such as involvement in support groups or therapy. The team concurs that the best approach is to tie Robert's needs back to his motivation to ultimately be healthier and to be there for his son.

DAY 180 – 360: ROBERT'S ONGOING DISEASE MANAGEMENT AND NEW GOAL

Over the next six months, and leading up to the next MDT meeting, David maintains contact according to Robert's schedule, reviews his progress, and updates the plan of care and personal goals within CGX. David continues educating Robert on his benefits, such as the benefit of twenty-five dollars per month toward over-the-counter (OTC) medication including items for cough, cold, allergy, aches, and pain relief. David watches for any changes to Robert's condition, while monitoring CGX for any potential flags or alerts such as missed medication refills. Through their discussions, David educates Robert on diabetes and risk factors which place him at risk for developing diabetes. On one call, Robert voices that he is ready to take the next steps toward quitting smoking. David offers a referral to the Healthy Behaviors smoking cessation program, which is a six-month program with tiered incentives for participation and milestone achievements, as he feels these incentives may bolster Robert's efforts to quit smoking. Although Robert would also benefit from the Humana Family Fit weight loss program, David recognizes that to be the most successful, Robert should tackle one lifestyle change at a time. David holds off referring Robert, but notes that once he completes the smoking cessation program, he will introduce him to the Humana Family Fit program and eventually encourage him to enroll, as David recognizes weight loss and improved nutrition may prevent Robert from developing diabetes.

Robert is actively working through the smoking cessation program and has been able to schedule and keep his follow-up appointments with doctors. Robert tells David that he feels like he might be able to regain control over his COPD and continue to improve his health. Robert has not visited the emergency department in the last nine months.

Robert communicates to David that he has a new personal goal, which is to get a part-time job. David provides community resources available, such as vocational rehabilitations and local organizations for job skills training and employment assistance, as well as transportation provided for those activities. David also encourages Robert, as he knows that taking on a part-time job will help to re-engage Robert in his community, may boost his confidence, and may improve his overall well-being as part of a comprehensive approach to work towards a healthier lifestyle.

Additionally, because Humana's approach is to work with both the individual enrollee and the family unit, David recognizes that Robert's son qualifies for Early and Periodic Screening

Diagnosis and Treatment. David makes Robert aware of this and gives him information and helpful guidance on accessing this care and what benefits his son may be eligible for through his son's plan.

DAY 361 AND BEYOND: ROBERT'S IMPROVED OUTLOOK

Robert's improving health status has resulted in a lowered acuity level. This is reflected in CGX as Robert moving from "complex" to "moderate", and he has a large variety of resources available. Robert's story exemplifies our approach to care management, which engages enrollees in lifelong self-management and is timely, personalized, and flexible to suit changing circumstances. The ultimate goal for Robert is self-management and supporting his son. He has demonstrated his ability to achieve it. Robert will remain in case management for periodic outreach and reassessments to identify any new issues and to continue to help Robert improve his overall health and well-being.

Footnotes

---

[1] CareHub is Humana's enterprise solution for complete program integration for our provider community and enrollees. CGX supports an integrated, comprehensive approach to medical, behavioral health, pharmacy, utilization, and care management. Full system integration allows our care team the capability to identify potential enrollees for programs, document gaps in care, automate care planning, monitor plan compliance, and identify opportunities for intervention.

[2] CRM is Humana's documentation system for enrollee support activities, providing message optimization, enrollee-centric prioritization, data mining and reporting, and enhanced processes for quality management to streamline the flow of data to other internal systems.

Evaluation Criteria:

1. The adequacy of the respondent's approach in addressing the following:

- **a.** Identification processes for enrollees with complex health conditions or who are in need of care coordination;
- **b.** Description of the sources of data/information that would be utilized in the assessment process, including timeframes for completion;
- **c.** Application of the respondent's case management risk stratification protocol;
- **d.** Identification of service needs (covered and non-covered) and a description for service referral processes;
- **e.** Description of the interventions and strategies that would be used to facilitate compliance with the plan of care, including use of incentives, healthy behavior programs, etc.;
- **f.** Application of discharge and aftercare planning protocols that facilitate a successful transition;
- **g.** Application of coordination protocols utilized with other insurers (when applicable), primary care providers, specialists, other services providers, and

community partners particularly when referrals are needed for non-covered services;

h. Description of the assessment of provider capacity to meet the specific needs of enrollees;

i. Identification of strategies that promote enrollee self-management and treatment adherence;

j. Application of utilization management protocols (i.e., identification of the criteria that will be utilized, processes to ensure continuity of care, etc.); and

k. Application of strategies to integrate enrollee information across the plan and various subcontractors when the respondent has delegated functions.

2. The extent to which the respondent's workflows/narrative descriptions include timeframes for completion of each step in the care planning process.

3. The extent to which the respondent demonstrates innovative and evidence-based processes that it has in place to enhance communication among all service providers and subcontractors (for delegated functions).

4. The extent to which the respondent describes an approach that supports care delivery in the most appropriate and cost-effective setting and avoids unnecessary institutionalization (i.e., hospital or nursing facility care) or emergency department use.

5. The extent to which the respondent demonstrates experience in providing services to enrollees with complex medical needs and provides evidence of strategies utilized that resulted in improved health outcomes.

6. The extent to which the respondent demonstrates a system of coordinated health care interventions designed to achieve cost savings through the organized and timely delivery of high quality services.

7. The extent to which the respondent describes innovative and evidence-based strategies to integrate information across all systems/processes into its workflows.

Score: This section is worth a maximum of 85 raw points with each of the above components being worth a maximum of 5 points each.

Attachment SRC 08-1: Robert's Visual Story Guide

We have provided this document as a visual guide to our response. The key timelines from our core response are duplicated here in a format intended to supplement and enable a comprehensive review of Humana's approach to Robert.

About Robert:

Robert is a fifty (50)-year-old, MMA Medicaid enrollee and has been with Humana's plan since December 2016. He was diagnosed with COPD five (5) years ago, a smoker for the past thirty (30) years, is pre-diabetic and obese, with hypertension and hypercholesterolemia, and is non-compliant with his treatment plan and medications. He has presented at the emergency department three (3) times during the past thirty (30) days, was prescribed Oxygen treatments and new medications, but hasn't filled these orders. He is a single parent to his son. Both live in a rural community, and have both been on Medicaid the last four (4) years since Robert lost his job.

Key Components of Care

- Humana's **proprietary Medicaid Severity Score** quickly stratifies him for disease management, triggering proactive case management and participation efforts
- **Welcome call HRA rapidly identifies needs** and confirms Robert's DM participation
- **DM-specific case management and monitoring** keep outreach open even during low engagement and especially when his conditions worsen
- **Holistic plan of care (POC)** helps identify all health issues, social determinants, and behavioral health needs, and tie in Robert's goals to get healthier and un-burden son
- **Multidisciplinary team (MDT)** includes DM CM, PCP, pulmonologist, and Robert in supporting Robert's improving health and stated objectives, including lifelong self-management

Robert's Support System

Anna
Education and Satisfaction Unit (ESU) Customer Care Specialist (CCS)

David
Disease Management Case Manager

Robert's MDT including PCP, pulmonologist, David, Anna, & Robert

Robert's Son

Robert's Timeline:

1 — Looking Back: Welcome Call Outreach
ESU CCS Anna calls Robert to welcome him; completes Health Risk Assessment (HRA); gets him to agree to DM

2 — Looking Back: Robert Joins DM program
DM CM David calls Robert; confirms participation; completes comprehensive assessment; develops POC

3 — Looking Back: Reluctant to Engage
Robert becomes hard to contact and reluctant to engage; David places his case in monitoring status

4 — Day 1-30: Robert Visits Emergency Department Three Times
Robert makes 3 trips to the emergency department, recorded in HIE-ENS; David attempts outreach

5 — Days 31-32: Successfully Engages
David reaches a concerned Robert; takes holistic approach to understanding health issues, social determinants, BH needs; places him at complex acuity level and updates the comprehensive, DM-specific POC

6 — Day 32: Educates on Benefits
David shares non-emergent medical transportation benefit and prescription delivery benefits; reviews and approves DME; identifies and involves MDT; confirms DME delivery & appointments

7 — Days 33-150: Ongoing Contact
David ensures all components of Robert's care are addressed and implemented

8 — Day 151: Engaging Robert's Son
David educates on care components; completes medication reconciliation and equipment education

9 — Day 160: Self-Management Plan
David & Robert co-develop plan to self-manage, including crisis plan, neighbor supports, and access to care options

10 — Days 180-360: Ongoing Disease Management
David maintains monthly contact, refers to smoking cessation program. Robert's successful management helps lower his acuity level to moderate

C. RECIPIENT EXPERIENCE

SRC# 9 – Expanded Benefits (Regional):

Based upon the expanded benefits listed in **Exhibit A-4-a-2**, Expanded Benefits Tool, the respondent shall identify the benefits it proposes to offer its enrollees for all eligible populations (TANF, ABD, dual eligible, and LTC populations). **Exhibit A-4-a-2**, Expanded Benefits Tool outlines specific expanded benefits, including category, procedure code descriptions and procedure codes. When electing to offer expanded benefits included in **Exhibit A-4-a-2**, Expanded Benefits Tool, the respondent must offer the benefit in its entirety, including all procedure codes (and minimum quantity limits) listed in **Exhibit A-4-a-2**.

Response: The respondent shall select the following expanded benefits it will offer, as listed in **Exhibit A-4-a-2**, Expanded Benefits Tool (Respondent shall check all that apply):

☒ Dental benefits for adults
☒ Over-the-counter benefits
☒ Occupational Therapy benefits for adults
☒ Physical Therapy benefits for adults
☒ Hearing benefit for adults
☒ Vision benefit for adults
☒ Prenatal benefit
☒ Respiratory Therapy benefit for adults
☒ Speech Therapy benefit for adults
☒ Additional Primary Care services benefit
☒ Newborn Circumcision benefit

Evaluation Criteria:

Score: This section is worth a maximum of 190 raw points as outlined below.

(a)	Election of the Dental benefit for adults:	50 pts
(b)	Election of the Over-the-counter benefit:	25 pts
(c)	Election of the Occupational Therapy benefits for adults:	20 pts
(d)	Election of the Physical Therapy benefit for adults:	20 pts
(e)	Election of the Prenatal benefit:	20 pts
(f)	Election of the Hearing benefit for adults:	10 pts
(g)	Election of the Vision benefit for adults:	10 pts
(h)	Election of the Respiratory Therapy benefit for adults:	10 pts
(i)	Election of the Speech Therapy benefit for adults:	10 pts
(j)	Election of the Additional Primary Care services benefit:	10 pts
(k)	Election of the Newborn Circumcision benefit:	5 pts

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 10 – Additional Expanded Benefits (Regional)

The respondent shall identify each additional expanded benefit that it proposes to offer its enrollees by eligible population (TANF, ABD, dual eligible, and LTC populations). For the purposes of this SRC, the respondent must not select expanded benefits that are included in **Exhibit A-4-a-2,** Expanded Benefits Tool described in SRC# 9. The respondent shall include the name of the benefit, procedure code descriptions, procedure codes and any limitations (frequency/duration, etc.).

The respondent shall submit documentation that includes the calculations used to determine the per-member-per-month (PMPM) cost and the data source used for the calculations (e.g. previous SMMC experience, commercial experience). The submitted PMPM cost must be developed on a "total member" basis, rather than a "per user" or "per benefit eligible" basis (e.g., if the benefit is for adults only, do not submit the expected monthly cost per adult but rather the expected cost per member; or, if the benefit is for the household, its expected monthly cost must be converted to the expected cost per member) and should exclude administrative costs. The respondent shall submit **Exhibit A-4-a-3**, Additional Expanded Benefits Template (Regional).

Response:

Through two (2) decades serving Florida Medicaid populations, Humana identified and continuously refined our understanding of expanded benefits that improve enrollee health outcomes and overall well-being. In addition to our commitment to offer all of the Expanded Benefits in SRC #9, we will offer sixteen (16) Additional Expanded Benefits, as detailed in Exhibit A-4-a-3. These benefits align with Humana's and AHCA's goals to promote preventive care, reduce preventable emergency department visits and hospitalizations, and improve enrollee experience.

Humana's Additional Expanded Benefits are also designed to improve social determinants of health, particularly for enrollees eligible for Long-Term Care (LTC) services. For example, most LTC enrollees prefer to age in their homes, rather than a nursing facility, so Humana offers a Nursing Facility Transition benefit that helps enrollees overcome the financial barriers to moving back into a community setting. For enrollees receiving home and community-based services, Humana offers a non-medical transportation benefit to visit friends, family, faith-based organizations, or community events. These benefits reduce social isolation, a particularly important determinant of health for disabled populations.

Calculations used to determine the per-enrollee-per-month costs for these Additional Expanded Benefits, along with data sources used for the calculations, can be found in Attachment 10-1.

Evaluation Criteria:

a. The extent to which the respondent identifies the expanded benefits it will provide and the information included in **Exhibit A-4-a-3**, Additional Expanded Benefits Template (Regional).

Score: This section is worth a maximum of 5 raw points with the above component being worth a maximum of 5 points.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Note: Pursuant to Section 409.966(3)(c)6., Florida Statutes, response to this submission requirement will be considered for negotiations.

Trade Secret as defined in

Non- Medical Transportation	N/A	N/A	0	999	None	1 round-trip service per month; enrollee must reside in a home and community-based setting; limited to trips within the enrollee's home county/local area; subject to prior authorization	None		TC Eligibles	Ensure positive member experience by offering access to community events and other social/emotional supports
Nursing Facility Transition	N/A	N/A	0	999	None	Up to $2500 per lifetime to help an enrollee move out of a nursing facility. This benefit is to help pay for things like security and utility deposits, household furnishings/supplies and moving expenses. Plan approval needed. Enrollee must be moving out of a nursing facility into their own home where they are responsible for their own living expenses.	None		TC Eligibles	Rebalance long-term services and supports systems by helping members transition from settings to live in the community
Emergency Meal Supply	N/A	N/A	0	999	None	10 shelf-stable meals prior to a hurricane or other disaster for enrollees at significant nutritional risk; benefit applies in lieu of home delivered meals covered by the managed care plan; subject to medical necessity.	None		TC Eligibles	Ensure a positive member experience by offering benefits that help people stay healthy
Pill Organizer	N/A	N/A	0	999	None	1 seven-day pill organizer at initial enrollment for each community-based enrollee taking more than 5 medications	None		TC Eligibles	Ensure a positive member experience by offering tools that help people stay healthy
Caregiver Information/Support	N/A	N/A	0	999	None	1 caregiver toolkit to all home and community-based enrollees with a caregiver actively involved in their care.	None		TC Eligibles	Ensure a positive member experience by offering tools that help people stay healthy

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 11 – Online Provider Directory (Statewide):

The respondent shall describe the provider search function for the online provider directory, including submission of:

a. A description outlining the transparency and accessibility of the online provider directory, including the parameters upon which enrollees may search. Include whether or not the online provider directory is mobile friendly.

b. Screen shots for each mouse click required from the start of the respondent's home page to actual search results for a provider, using durable medical equipment providers and zip code as the search elements.

c. A list of performance indicators the respondent will include for each provider type listed in its provider directory.

d. A description of the respondent's process for verification of provider information in the online provider directory, including delegated subcontractor provider information, and the method(s) the respondent uses to ensure the weekly network file submission to the Agency is accurate.

Response:

Humana's network of high quality providers is one of our greatest strengths. For decades, Humana has measured and identified the strongest providers and facilities to serve our enrollees. As the single most popular resource for use by Humana enrollees, our online provider directory, Physician Finder Plus (PFP), serves as the gateway to identify and locate these providers. Humana's PFP supported nearly twenty-five million (25M) visitor interactions in 2016, with 2017 data to-date showing enrollee utilization well in excess of those levels.

Maintaining an accurate directory saves enrollees, providers, and Humana time and energy, helping enrollees connect to in-network providers quickly and easily. This is why Humana invests significant resources in our online provider directory and the proprietary systems that support it. Our robust search capability gives enrollees the parameters they need to quickly find the providers they are looking for, with added tools to help them more easily access those providers and the care they need and want. Sophisticated tools and systems support providers and Humana in keeping provider data as up-to-date as possible.

Finally, knowing how providers perform across standard quality performance metrics and having access to enrollee feedback on these providers helps enrollees make informed decisions about which providers to use. Humana's online provider directory (including enhancements underway) is designed to meet or exceed all Agency for Health Care Administration (AHCA) requirements and demonstrate Humana's commitment to ongoing improvements to best serve enrollees.

==========

1. The extent of the respondent's search functions for the respondent's online directory and ease of access for enrollees' navigation of the online provider directory, including whether or not the online directory is mobile friendly.

==========

Humana makes it easy for enrollees to navigate our online provider directory and find in-network providers quickly and easily. Equally essential is making the provider directory accessible via mobile technology.

SEARCH FUNCTIONS AND NAVIGATION

Ensuring enrollees can easily find a provider through relevant, useful, and accessible search functions is an essential element to a strong online directory. As an example, Attachment 11-1 demonstrates how an enrollee can find durable medical equipment providers by zip code. From the Humana Florida Medicaid home page, an enrollee clicks on the quick link, “Find a Provider,” and is taken directly to Physician Finder Plus (PFP). The directory asks for a zip code, the type of health insurance program, and type of network they are looking for. If the enrollee is logged in to Humana’s secure portal, their home zip code, insurance program, and network are automatically populated for them. "Mouseovers", or hover boxes, exist to support enrollees if any of the search parameters are unclear or confusing. There is also a Portable Document Format (PDF) document on the PFP search page that provides additional enrollee support for using the tool.

Next, enrollees are given several options from which to begin their search: provider name, specialty, and condition. If an enrollee searches by specialty, Humana’s database intuitively draws from related specialties. For example, if an enrollee searches for “Primary Care,” Humana’s system will display all primary care specialities, including “Internal Medicine.”

Once an initial list of results is generated, an enrollee has numerous ways to filter those search results. Specifically, a provider’s location can be refined in increments between three (3) and one hundred (100) miles of a zip code or a specific address. Enrollees can further narrow results by the following parameters:
- Provider last name
- Gender
- Whether the provider is accepting new patients
- Languages spoken
- Specialty
- Medical group affiliations
- Hospital affiliations
- Board certification
- City and state
- Accessibility

Of the above search parameters, several categories are especially important to Florida Medicaid’s diverse enrollee population. Within Florida, many residents speak languages other than English and may, for example, prefer a provider who is fluent in Spanish or Creole. Humana’s PFP allows for that level of selection.

Humana’s PFP also works with accessibility tools and screen readers to ensure that disabled enrollees are not limited in their access to the tool. Of particular relevance to Medicaid enrollees is not simply how far a provider may be from an address, but how truly accessible those

providers are. For this reason, Humana enables enrollees to further filter their provider search results by whether the provider:
- Is close to any form of public transportation
- Is handicap-accessible
- Offers mental or physical impairment services
- Serves the hearing impaired

When an enrollee selects a provider from the search results, additional relevant information can be viewed about that provider, including: full contact information, office hours, all locations where the provider works, specialties, education, certifications and certifying body, langauge spoken within their office, and whether the provider has completed Humana's cultural competency training. To help easily access these providers, "Get Directions" provides door-to-door directions to the enrollee.

To aid enrollees on deciding on a provider, Humana's PFP allows enrollees to compare up to three (3) providers across all of these attributes.

MYHUMANA© MOBILE APPLICATION

In 2018, to support the smart phone technology-using Medicaid population in Florida, Humana will expand its MyHumana© mobile application to our Medicaid plans. Available for iOS and Android, the MyHumana application gives enrollees easy and intuitive ways to understand their coverage, check the status of their claims, view identification (ID) cards, research drug pricing, and find in-network providers. The provider search tool within the MyHumana application includes the same search functions and filters that are currently available online through Humana's PFP, putting access to in-network providers and care at our enrollees' fingertips. Humana leverages lessons learned on our mobile technology through various lines of business to benefit all enrollees and to realize economies of scale when improvements are implemented. Furthermore, as Humana implements improvements to search functionality and expands information within the PFP, similar improvements will follow within the MyHumana application.

ENHANCING THE ENROLLEE EXPERIENCE

Humana's Provider Center of Excellence performs a comprehensive evaluation of our web-based directories for clarity and usefulness to enrollees and prospective enrollees at least every three (3) years – or more often in response to changes in requirements, complaints, and quality initiatives, or to reflect advances in technology. This comprehensive evaluation considers reading level, intuitive content organization, ease of navigation, and font size. Our most recent comprehensive update took place in 2016. After monitoring enrollee usage of the PFP tool, Humana identified opportunities to further enhance the enrollee experience. The highest priority improvements were identified by speaking with enrollees and cross referencing their feedback with data analysis of the user experience.

In response, Humana immediately simplified the log-in process to automatically populate an enrollee's plan into the pre-search fields if an enrollee identification (ID) number was used to initiate the search. This decreased the time it took for enrollees to reach a list of relevant providers to choose from.

Other opportunities to improve the PFP were addressed with the start of a comprehensive update in 2017. Humana invested in critical infrastructure improvements to the provider data architecture (the back-end of PFP) to improve the user interface and customer experience within the PFP search and display functions. These near-term investments are intended to continuously improve how Humana systems display information in a manner that is organized and easy to understand based on how an enrollee searches for providers, minimize information gaps between back-end systems, and strengthen Humana querying systems for accurate and timely provider display.

In parallel, Humana will continue to conduct focus groups and usability testing to design the future search experiences our customers desire. The ultimate goal of these investments is to ensure that enrollees can more easily and intuitively find the providers they are looking for, decreasing delays in getting the care they need.

Humana has initiated several additional steps to improve access to and usability of the online provider directory. First, Humana has implemented an improved design of the Humana Florida Medicaid home page, eliminating extraneous text and focusing the enrollee on what they access most via quick links at the top of the page. These include the provider directory, the enrollee handbook, and additional support from Humana associates. By streamlining the home page, enrollees can more easily and intuitively find and use key resources, thereby reducing the time and effort required to access the care and information they need. Additional improvements to the Humana Florida Medicaid website will be prioritized for implementation by October 1, 2018, adding new functions and features based on feedback from enrollees and Humana associates serving those enrollees in Florida.

Second, to systematically improve enrollee experience, Humana has initiated its "Member 360" Committee for Florida Medicaid plans. Comprised of Florida market leadership and Humana corporate functional partners, the committee meets monthly to review all metrics applicable to enrollees (such as grievance and appeals data, Customer Care call trends, Care Coordination reports, and web and mobile application usage reports), conduct root cause analysis, and identify process improvement opportunities. In concert with the "Member 360" Committee, Humana also initiated the Provider 360 Committee for Florida. This committee reviews provider-related data and metrics to evaluate opportunities to improve the provider experience and strengthen our provider network. Leadership within Humana's corporate divisions may also present matters to this committee that are relevant to specific providers within Florida or that may have a particular impact on them. For example, if the Provider Network Operations team, who oversees the PFP, notices trends of enrollee disatifaction about providers within Florida, it will work with the Florida market's "Member 360" and Provider 360 Committees to discuss probable causes and next steps to mitigate issues.

==========

2. The extent to which the number of clicks it takes recipients to access the search results, as indicated by the screen shots provided, is less than five (5).

==========

Attachment 11-1 demonstrates an enrollee's navigation through Humana's online provider directory, Physician Finder Plus, to find in-network durable medical equipment providers by zip code. Using Humana's search options and within three (3) clicks, an enrollee can access a list

of providers within these specific parameters, and then: refine search results further, compare providers, and access detailed information about each provider to assist that enrollee in finding providers who speak a specific language or whose office locations offer public transportation options.

Starting Point: Humana Florida Medicaid Home Page
- (https://www.humana.com/medicaid/florida/mma)

CLICK #1:
- From the Quick Links at top of page, Enrollee *clicks* on “Find a Provider”

CLICK #2:
- Enrollee selects Coverage Type as “Medicaid”
- Enrollee enters zip code
- Enrollee selects Network as “Florida Humana Medical Plan”
- Enrollee selects Specialty and types in “Durable Medical Equipment”
- Enrollee *clicks* “Search”

CLICK #3:
- System displays results for Durable Medical Equipment within a 15-mile radius (default distance)
- Enrollee can refine search by numerous criteria, and compare up to three (3) providers
- Enrollee can view detailed provider information by clicking on provider name
- Enrollee *clicks* “South Beach Orthodics Prosthetics”

Enrollees can view full contact and related information about providers, including: public transportation options, office locations and contact information, languages spoken, whether the provider is accepting new patients, and other enrollees’ feedback. If logged into their Humana account, the enrollee can provide feedback on providers. Additionally, the secured login enables Humana to prepopulate the Coverage Type, enrollee’s home Zip Code, and Network, enabling enrollees to more easily search for and find in-network providers.

==========
3. The extent and relevance of the performance indicators available in the respondent’s provider directory for each provider type listed.
==========

For nearly thirty (30) years, Humana has been actively measuring our network providers and facilities, paying careful attention to their effectiveness and efficiency. Within the PFP, enrollees can view provider credentials such as education and board certification, as well as the certifying body. During Humana’s current contract with Florida to serve the Medicaid population, Humana partnered with vitals.com to give enrollees access to provider performance data. This data is available via a link to vitals.com from the provider’s information within Humana’s PFP.

To bring provider performance data to our enrollees, in Spring of 2017, Humana launched the Physician Performance Measurement initiative, developed in consultation with current Humana providers. The initiative intends to evaluate providers on evidence-based clinical measures developed by credible organizations such as National Committee for Quality Assurance (NCQA) and the AQA Alliance (formerly known as the Ambulatory Care Quality Alliance), and endorsed

by the National Quality Forum (NQF). To support this initiative, Humana has invested in Optum Symmetry EBM Connect software and embarked on an 18-month project to secure NCQA certification for our physician measurement program to assure the quality of provider performance data.

Providers will be evaluated by effectiveness measures specific to their specialty and compared to peers within similar geographic locations. Providers will be placed into four (4) performance tiers based on Humana's effectiveness performance index, calculated by dividing the actual compliance rate by the expected compliance rate. The expected compliance rate is a composite value derived by multiplying the peer's compliance rate by the provider's prevalence rate for each given measure. Physicians with an effectiveness index significantly below their peer average are referred to Humana's Quality department for physician outreach geared toward performance improvement. In addition, these physicians may not be eligible for participation in Humana's Medicaid network.

When displayed within the PFP, these performance tiers will be color-coded and will form the foundation for how Humana translates complex and complicated provider performance data into useful and understandable formats for enrollees. Humana intends to solicit input from network providers and AHCA as it works through this important initiative prior to our planned implementation in the first quarter of 2019. Attachment 11-2 includes the preliminary list of performance measures by specialty that may be translated for display within the PFP. As Humana moves forward with this initiative, launches it, and learns how best to communicate provider performance to enrollees, it is expected that the effectiveness measurements will evolve over time.

ENROLLEE FEEDBACK

Humana has built a feedback mechanism whereby any logged-in enrollee can submit feedback on a provider. Two data elements are collected, each on five (5)-point scales, with five (5) being the highest possible score for each. These elements are: 1) enrollee's experience and 2) enrollee's likelihood to recommend that provider to others. A logged-in enrollee may only submit one rating per individual provider, but they can update the rating over time. While the ability to provide feedback is only available via the secure portal to ensure only enrollees are submitting feedback, submitted feedback can be viewed by anyone, whether logged in or not. Humana also reviews this information to help identify poor performing providers. Within a twelve (12)-month period, providers receiving a rating of two (2) or below for five (5) consecutive instances are referred to the Provider Relations team, which has accountability for oversight of the Humana Florida Medical Plan network and responsibility for taking appropriate action.

==========

4. The extent of the respondent's efforts to ensure information in the respondent's online provider directory is accurate, including type and frequency of monitoring activities, and delegated subcontractor provider information. Include the frequency of outreach efforts to remediate incorrect provider demographic information and accepting new patient status.

==========

Humana is committed to meeting all contractual obligations related to our provider directory, including working in partnership with AHCA to ensure accuracy of the provider data within the

directory. In 2016, AHCA conducted an audit of Humana's MMA and LTC online searchable directories with respect to accessibility and completeness and layout. Humana worked immediately to address open gaps and continues to improve our provider data accuracy process. Those processes are described further below, and include ongoing monitoring and outreach to ensure the PFP is always up-to-date.

ENSURING ACCURACY: LOADING AND AUDITING PROVIDER DATA

An accurate provider directory relies on maintenance of up-to-date provider data as well as robust systems and processes that support timely updates. When a provider first contracts with Humana, provider contract and demographic information is loaded into Humana's data system. Provider Information Management System (PIMS) is the primary database used to store provider information and houses the source data for the PFP. Specific logic is used to generate the most accurate list of current providers: the system first looks for an active Medicaid contract and then verifies active credentialing status for the provider. It then ensures a valid service location within the designated county (or counties), a valid phone number, and specific display filters applied to reflect the information within the PFP.

TOOLS FOR MONITORING AND UPDATING PROVIDER DATA

Humana uses multiple resources to monitor changes to provider data, including Humana associates, Humana data systems and algorithms, providers, and enrollees. Providers and subcontractors alike are obligated to inform Humana of any changes in demographic information and accepting new patient status per their contracts with Humana. To make the updating process as easy as possible, in January 2017, Humana released Availity Provider Data Management to all of our providers. Availity enables providers to update, validate, and attest to their provider demographics. The information is then validated through Humana's Data Collection and Verification (DCAV) process, described further below.

Humana has recently initiated a Directory Data Cleansing project, aimed at piloting a combination of in-house and vendor solutions that enable Humana to partner in the development and implementation of effective data cleansing strategies. Humana's efforts in this pilot include the use of an advanced analytics algorithm to identify potential provider data errors and even recommend corrections automatically. The algorithm uses data sources like web searches (e.g., Google) and the Drug Enforcement Agency (DEA) with our own claims and call data to find these errors. We are currently automating the process of producing a list of providers with potential data errors every month. In the next phase, we plan to recommend the change that needs to be made when an error is detected using internal and open source data.

The scope of this pilot with vendors includes a multi-phased approach where the vendor will utilize their data cleansing analytical model to provide Humana with accurate provider data. Phase One of the project encompasses the exchange of data and the performance of vendor's analytical data model on base data sets, in addition to source data from vendor. Phase Two incorporates lessons learned regarding Phase One results, determination of additional source data (e.g., Claims, Referral), and an updated data sampling for repeat of Phase One steps to be performed. This multi-phased initiative will continue until Humana and vendor are satisfied with the results of the program or end of 2018, whichever comes first.

Humana associates who visit every network primary care physician (PCP) and large group practices on a monthly basis gather necessary provider information updates at each visit and feed those updates to the data load team. This creates another avenue for providers to easily ensure the accuracy of their data within Humana's systems and PFP.

Humana may also receive updates about a provider's information directly from an enrollee. Information from enrollees about potential errors or inaccuracies triggers Humana to make necessary corrections to provider data within our system. Enrollee reports of provider information errors are given directly to Humana associates within that provider's region. As soon as information is validated or corrected, it is communicated to the data load team and included within Humana's nightly update process.

MANAGING DELEGATED SUBCONTRACTOR DATA

Humana's Delegated Vendor Oversight Committee (DVOC) plays a key role in managing subcontractor activities by oversight of delegated vendor activities relating to utilization management, credentialing, customer services (enrollee and provider), contractual compliance, and claims processing and payment. This is accomplished through a comprehensive, plan-wide system of ongoing, objective, and systematic monitoring (oversight program). Opportunities for vendor performance improvement and enhancement are identified and resolved during Joint Operational Committee meetings with vendors. It is through this oversight that Humana ensures that subcontractors meet contractual obligations to communicate their provider network files to Humana in a timely fashion. Subcontractors either submit a verified provider file within Humana's required Provider Network Verification (PNV) layout or submit a weekly network report of their own that is then integrated into Humana's provider directory. If the former, Humana compares the subcontractor's file to the Florida Medicaid directory file to ensure the provided Medicaid identification (ID) numbers are in the directory. This example applies to behavioral health providers that are integrated into Humana's PFP. The latter approach is taken when subcontracted providers, such as pharmacies and dentists, are listed outside of Humana's PFP. Examples of how two of Humana's dental and behavioral health providers communicate and ensure provider data accuracy are offered below.

SUBCONTRACTOR EXAMPLE 1: DENTAQUEST
DentaQuest serves as Humana's dental care provider. It maintains an active provider listing that details provider and practice specialties, licensing and credentialing statistics, language capacities, as well as the office's ability to serve enrollees with special needs. This listing is updated constantly using data gathered through the service accessibility survey, direct provider request, Provider Engagement Representatives, provider termination reports, and other data sources.

DentaQuest monitors network adequacy every month using several data sources including, but not limited to:
- Geo maps: These maps provide a detailed overview of the provider network, including the number of enrollees who have access to care in the required distance criteria and average distances to the three closest provider options.

- Monthly/Quarterly provider listing: This report provides a snapshot of the current network, showing the number of providers accepting new patients (number with open panels) and the number of providers accepting existing patients only (number with restricted panels, existing patients only). Additionally, DentaQuest has a dedicated resource based in Florida who audits the Florida database of providers on an ongoing basis, checking for office hours, open and closed status, and also any other updates applicable or education required.

- Monthly provider encounter submissions: This report provides a snapshot of the current encounter errors, if any. Provider Engagement and Client Data Management work together to identify the root causes of those errors. If it is related to provider data, Provider Engagement takes responsibility to correct the provider data in the DQ system. Furthermore, DentaQuest loads all 277/999 files to scrub the systems to meet the ninety-eight (98) percent to one hundred (100) percent acceptance rates requirements.

- Provider communication and office visits: DentaQuest's Provider Engagement staff are continually in touch with network providers and their staff to ensure that they have the knowledge and tools to provide high quality care.

To ensure accurate data, DentaQuest conducts quarterly and annual surveys of all providers to verify their participation in the network. DentaQuest's Provider Engagement Representatives also conduct outreach to all offices that have not returned their verification of information document. Information is updated via DentaQuest's system during this annual campaign, when changes are discovered during the re-credentialing process, and at any time a provider makes us aware of a change. When this information is updated in DentaQuest's Windward system, it simultaneously updates the information in real time available through DentaQuest's online Find-A-Dentist tool in addition to provider extracts submitted to Humana.

SUBCONTRACTOR EXAMPLE 2: BEACON HEALTH OPTIONS
Beacon Health Options (Beacon) serves as one of Humana's primary behavioral healthcare providers covering ten (10) out of twelve (12) SMMC regions. Beacon uses quarterly canvassing of prescribers and demographic attestations to ensure accuracy of provider network data.

Beacon has initiated a plan to ensure that Medicaid enrollees have timely access to providers. Beacon Provider Relations staff contact all network providers each quarter and ask questions to determine the provider's ability to accommodate a Beacon Medicaid enrollee. If a provider is unable to accommodate an enrollee according to Medicaid access standards, Beacon ensures that the provider has an alternate plan in place to help enrollees access care during urgent, emergent, and routine situations. Once the calls have been made to the prescribers, any changes that need to be made in the system are documented via Beacon's management information system. If additional documentation is needed, Beacon's Provider Relations staff follows up to obtain it from the provider. The script includes the following questions:

- Can you accommodate a Beacon Medicaid enrollee who has an emergency twenty-four (24) hours a day, seven (7) days a week?

- Can you accommodate a Beacon Medicaid enrollee in need of an urgent care within one (1) day of the request?

- Can you accommodate a Florida Medicaid enrollee in need of a routine initial evaluation within one (1) week of the request?

- Can you accommodate a Florida Medicaid enrollee in need of a routine follow up appointment within one (1) month of the routine initial evaluation request?

Beacon also requires providers to update and maintain demographic attestations to ensure Beacon's network directory of providers is accurate and meets Humana and AHCA's standards. Each quarter, every clinician is sent a demographic attestation that lists the provider's demographic information, all assigned provider identification numbers, and the health plans and lines of business that the provider is contracted with Beacon to serve. The providers are asked to attest to the information and return it to Beacon's Provider Relations team, whether changes are indicated or not. Once the attestations have been received, any changes that need to be made in the system are documented in Beacon's management information system. If additional documentation is needed prior to creating these events, the Provider Relations team follows up to obtain them from the provider.

OUTREACH EFFORTS

On a quarterly basis, Humana's Data Collection and Verification (DCAV) department performs outreach communication to all participating professional offices in Humana's networks, including Florida Medicaid. The outreach is a request for provider offices to review the information Humana has on file and posted within its provider directory, and for the provider's office and practitioners to identify errors, make corrections, and provide updates. Providers respond to these requests at their discretion. The focus of the quarterly review is to ensure accuracy of directory demographics like address and appointment phone number, as well as verify the practitioners that work in that office.

Humana recently secured BetterDoctor to support these outreach efforts and ensure provider data accuracy. BetterDoctor's purpose is to reduce the administrative burden of maintaining provider data for both Humana and our providers. To do this, it conducts quarterly outreach to all providers, and uses validation tools to make the updating and validation process as easy as possible for providers. This data is shared with Humana and integrated into PIMS for rapid verification and uploading into the PFP.

==========

5. The extent to which the respondent's online provider directory updates are performed daily and the extent to which the updates are communicated to the Agency as required to ensure the information the respondent displays on its website align with the Agency's Information.

==========

As Humana's PFP is the top accessed tool for enrollees, Humana works on a daily basis to ensure information in the provider online directory is accurate. This includes daily processing of updates Humana receives from providers (including demographic information and accepting new patient status) and nightly refreshes of the data within PFP. This daily exercise minimizes delays for enrollees to access the most up-to-date information on providers.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana's PFP includes the following provider information, any and all of which can be updated through Humana's nightly PFP refreshes:
1. Name
2. Gender
3. Accepting new patients status
4. Languages spoken by the physician or clinical staff
5. Specialty
6. Medical group affiliations (if applicable)
7. Hospital affiliations
8. Board certifications
9. Office locations and contact information
10. Cultural competency training
11. Feedback from each provider's patients

Humana continually works to ensure that provider and subcontractor provider information is the same between the PNV file Humana submits to AHCA on a weekly basis and Humana's PFP. For example: previously, Humana staff in both Florida and at the corporate level would share responsibility for reconciling provider information often through separate processes and across more than one database, and the weekly Florida Medicaid PNV file submission to AHCA would be generated from Florida's MMA and LTC databases rather than Humana's corporate PIMS system. This approach necessitated several workarounds and could cause delays in provider updates being reflected within the online provider directory. In response, Humana initiated a process whereby provider data is automatically extracted from our centralized database to produce the weekly PNV file for reconciliation with AHCA's information. As Humana implements this new and improved process and validates this transition to be sound, Florida's MMA and LTC databases will be sunset. This new process will extend to subcontractors.

The PNV file generation process is conducted in phases and in partnership with AHCA to ensure the utmost data integrity and accuracy. Every Tuesday, the PNV file is generated and submitted to AHCA as a test file. A response file is sent from AHCA on Wednesday morning. If there are errors, the records are fixed and the corrected file is regenerated on the same day. Any discrepant providers are removed from the PFP or the PNV file to ensure that these data sets are a perfect match. The final and accurate PNV file is submitted to AHCA every Thursday, with supporting attestations by Florida Market leadership as to the file's accuracy.

Evaluation Criteria:

1. The extent of the respondent's search functions for the respondent's online directory and ease of access for enrollees' navigation of the online provider directory, including whether or not the online directory is mobile friendly.

2. The extent to which the number of clicks it takes recipients to access the search results, as indicated by the screen shots provided, is less than five (5).

3. The extent and relevance of the performance indicators available in the respondent's provider directory for each provider type listed.

4. The extent of the respondent's efforts to ensure information in the respondent's online provider directory is accurate, including type and frequency of monitoring activities, and delegated subcontractor provider information. Include the frequency of outreach efforts to remediate incorrect provider demographic information and accepting new patient status.

5. The extent to which the respondent's online provider directory updates are performed daily and the extent to which the updates are communicated to the Agency as required to ensure the information the respondent displays on its website align with the Agency's information.

Score: This section is worth a maximum of 25 raw points with each of the above components being worth a maximum of 5 points each.

2nd CLICK

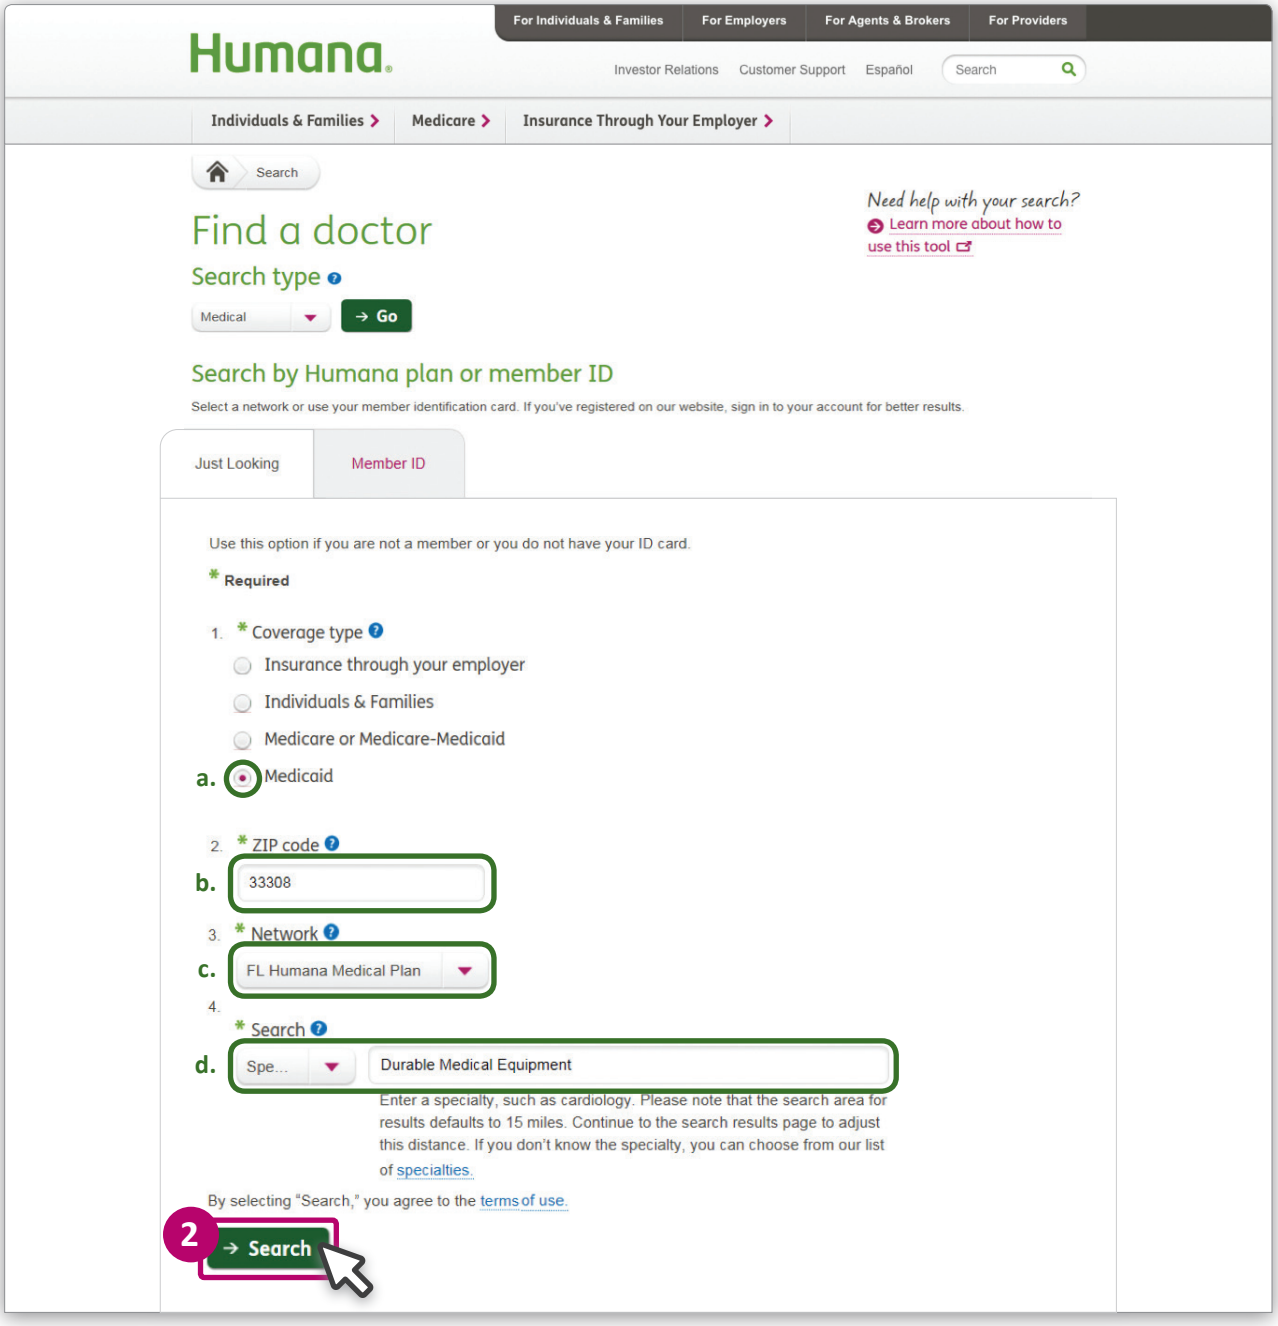
a. Enrollee selects Coverage Type as “Medicaid”

b. Enrollee enters ZIP code

c. From Network drop-down menu, enrollee selects “FL Humana Medical Plan”

d. Enrollee selects Specialty from drop-down menu and types in “Durable Medical Equipment”

Enrollee clicks → Search



Attachment 11-1: Statewide Online Provider Directory Screenshots

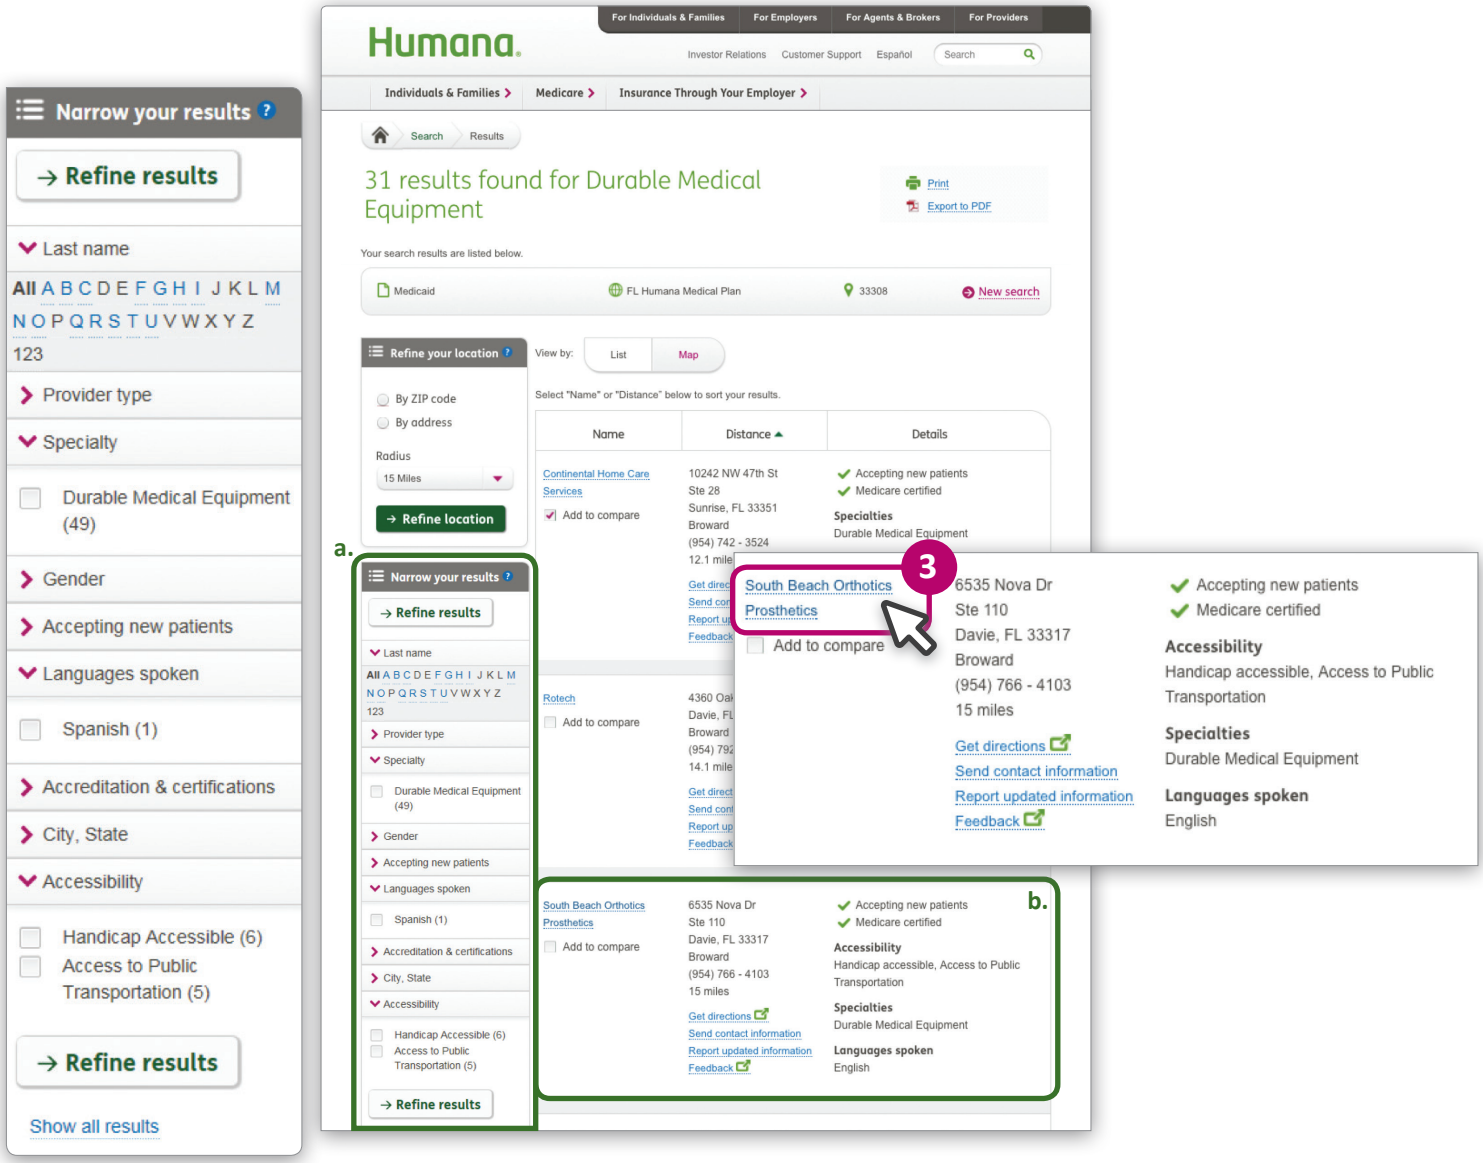
3rd CLICK

System provides results for Durable Medical Equipment within a 15-mile radius (default mileage).

a. Enrollee can refine search with numerous criteria

b. Enrollee can view detailed provider information by clicking on provider name

Enrollee clicks South Beach Orthotics Prosthetics



Attachment 11-1: Statewide Online Provider Directory Screenshots

After clicking the provider name, enrollees can view full contact and related information about providers, including:

a. Whether the provider is accepting new patients

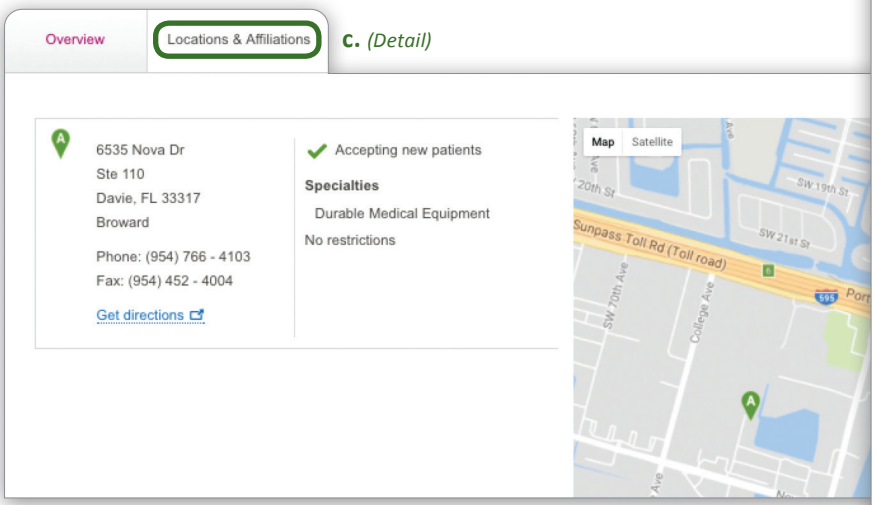
b. Other enrollees' feedback

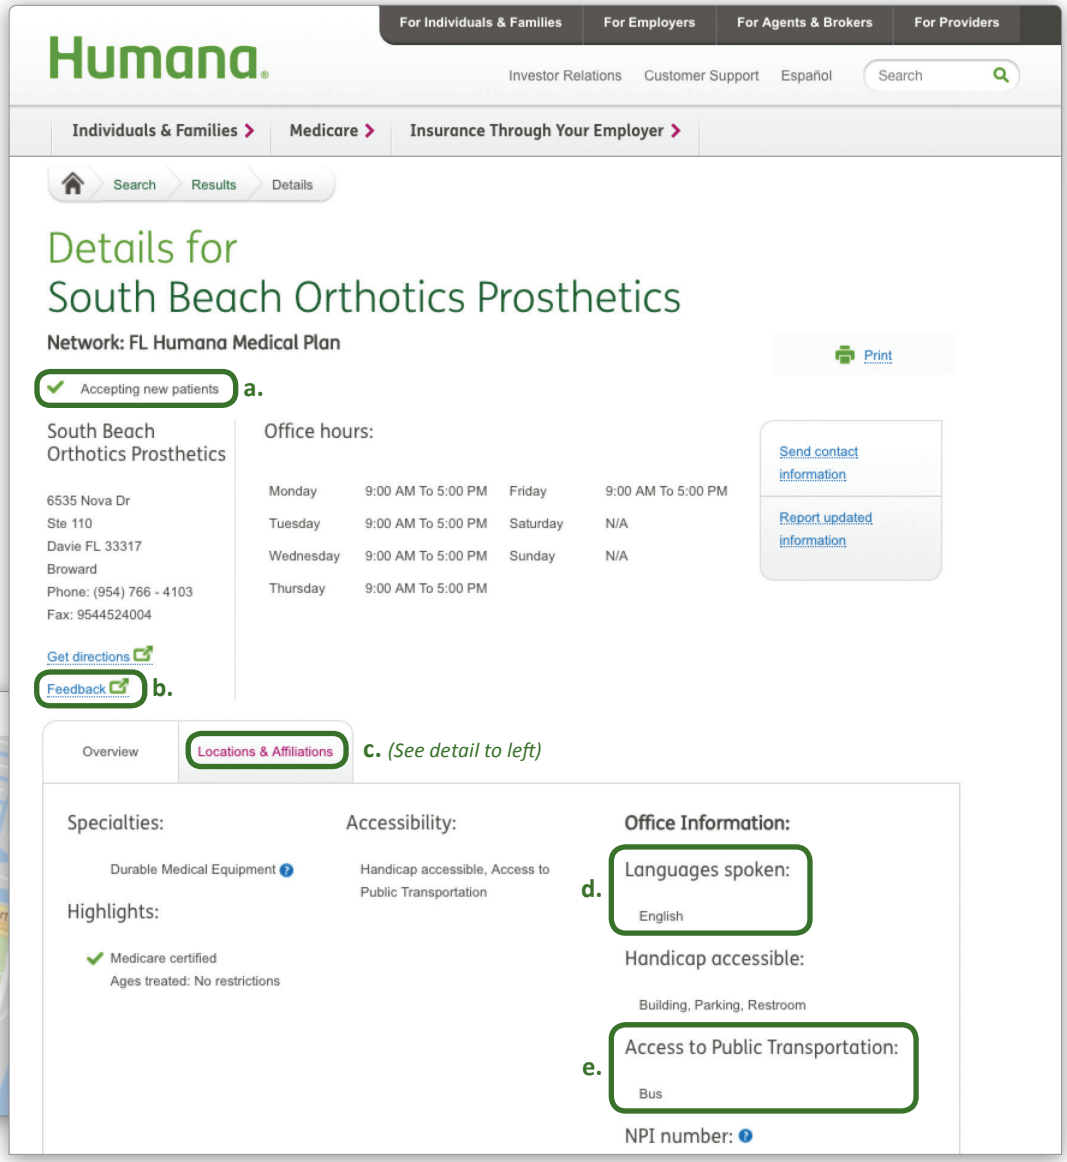
c. Office locations and contact information

d. Languages spoken

e. Public transportation options

If logged into their Humana account, the enrollee can provide feedback on providers. Additionally, the secured login enables Humana to prepopulate the Coverage Type, ZIP Code, and Network, allowing the enrollee to more easily search for and find in-network providers.





Attachment 11-1: Statewide Online Provider Directory Screenshots

Enrollees can compare up to three (3) providers at a time

	South Beach Orthotics Prosthetics	Ambient Healthcare of S Florida Inc	Advanced Care Solutions
Address	6535 Nova Dr Ste 110 Davie, Florida, 33317 Broward (954) 766 - 4103	15951 SW 41st St Ste 500 Davie, Florida, 33331 Broward (800) 670 - 6922	4001 NW 124th Ave Coral Springs, Florida, 33065 Broward (877) 748 - 1977
Specialty	Durable Medical Equipment	Durable Medical Equipment Home Infusion Therapy	Durable Medical Equipment
Certifications, accreditations and recognitions	No data available. Please contact the medical facility.		No data available. Please contact the medical facility.
Accessibility	Handicap Accessible Access to Public Transportation	Handicap Accessible Access to Public Transportation	No data available. Please contact the medical facility.

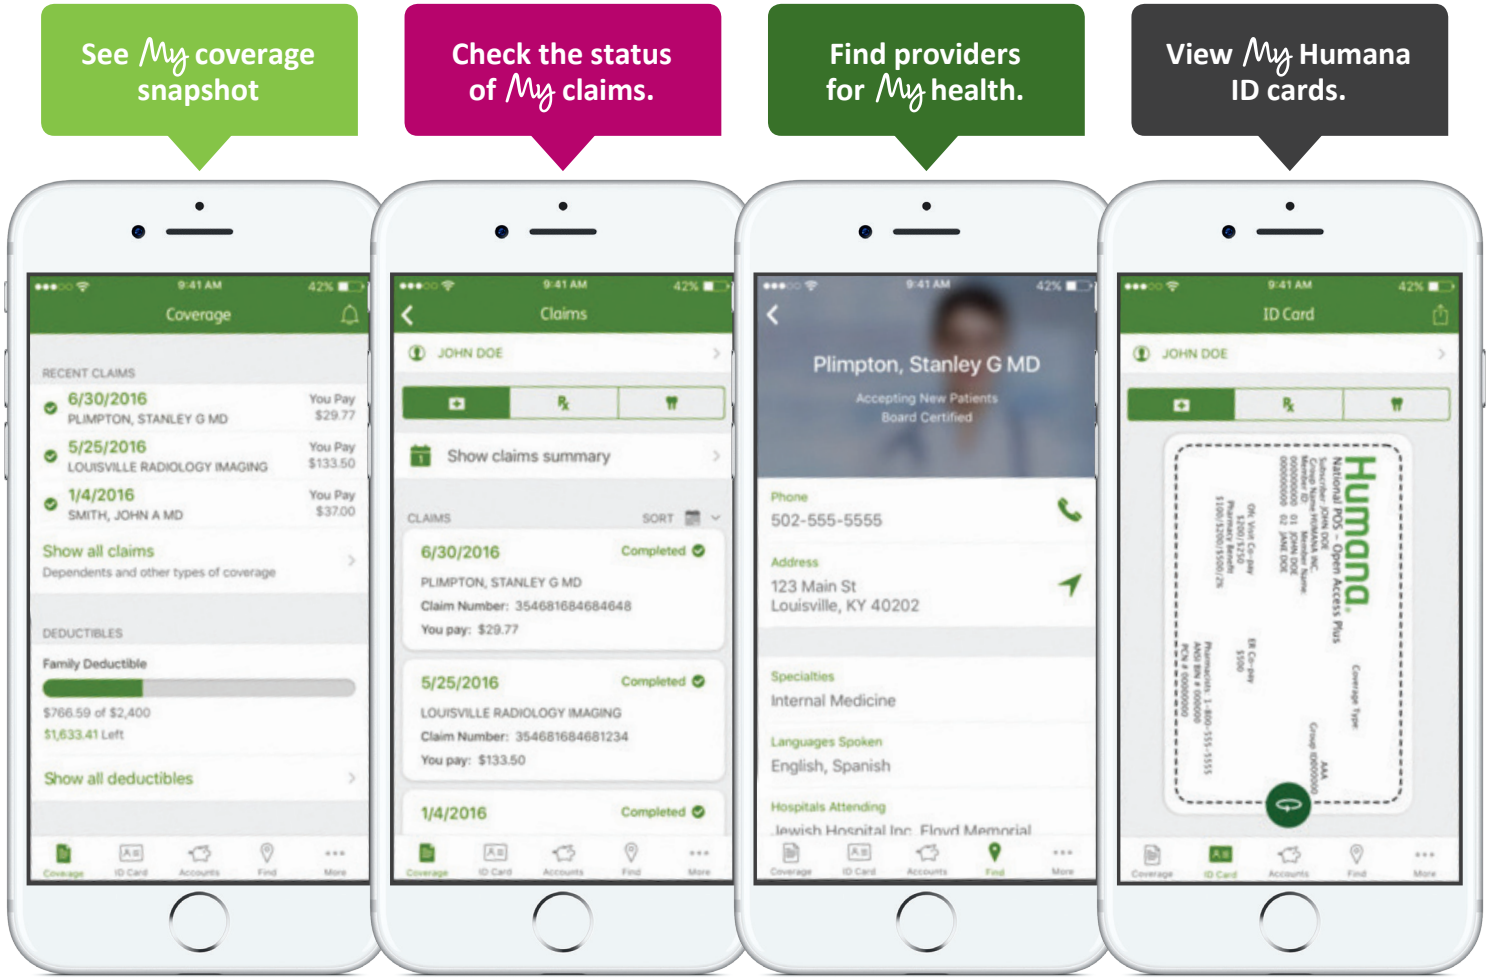
MyHumana

Mobile Application (iOS and Android)

The MyHumana Mobile Application puts access to care at enrollees' fingertips. They can search for providers just as they do via the Humana Online Provider Directory, view their coverage, see the status of claims, research drug pricing, and access their ID cards on the go.

Easy access to:

- claims
- drug pricing
- ID cards
- in-network providers
- and more



Attachment 11-2: Preliminary List of Performance Measures by Specialty

Humana Physician Performance Measurement Effectiveness Measures (obtained from the EBM Connect program)

Author and Rule Release Date

Specialty	Condition Description	Measure Description	Category	NCQA/HEDIS	PQA
Allergy & Immunology	Bronchitis, Acute, Avoidance of Antibiotic Treatment in Adults (National Standard)	Patient(s) with a diagnosis of acute bronchitis that did not have a prescription for an antibiotic on or three days after the initiating visit.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 12 - 24 months of age that had a PCP visit during the 12 months prior to the end of the report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 12-19 years of age that had a PCP visit during the 24 month report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 25 months to 6 years of age that had a PCP visit during the 12 months prior to the end of the report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 7-11 years of age that had a PCP visit during the 24 month report period.	National Standard		
	COPD, Use of Spirometry Testing in Assessment and Diagnosis (National Standard)	Patient(s) that had appropriate spirometry testing to confirm COPD diagnosis.	National Standard		
	Pharyngitis, Appropriate Testing for Children (National Standard)	Patient(s) treated with an antibiotic for pharyngitis that had a Group A streptococcus test.	National Standard		
	Upper Respiratory Infection (URI), Appropriate Treatment for Children (National Standard)	Patient(s) with a diagnosis of upper respiratory infection (URI) that did not have a prescription for an antibiotic on or three days after the initiating visit.	National Standard		
Cardiology	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 12 - 24 months of age that had a PCP visit during the 12 months prior to the end of the report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 12-19 years of age that had a PCP visit during the 24 month report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 25 months to 6 years of age that had a PCP visit during the 12 months prior to the end of the report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 7-11 years of age that had a PCP visit during the 24 month report period.	National Standard		
	Persistence of Beta-Blocker Treatment after a Heart Attack (National Standard)	Patient(s) hospitalized with an acute myocardial infarction (AMI) persistently taking a beta-blocker for six months after discharge.	National Standard		
	Statin Therapy for Patients with Cardiovascular Disease (National Standard)	Patient(s) with cardiovascular disease that received a high or moderate-intensity statin medication.	National Standard		
Chiropractic	Low Back Pain, Use of Imaging Studies (National Standard)	Patient(s) with uncomplicated low back pain that did not have imaging studies.	National Standard		
Endocrinology/ Diabetes & Metabolism	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 12 - 24 months of age that had a PCP visit during the 12 months prior to the end of the report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 12-19 years of age that had a PCP visit during the 24 month report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 25 months to 6 years of age that had a PCP visit during the 12 months prior to the end of the report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 7-11 years of age that had a PCP visit during the 24 month report period.	National Standard		
	Diabetes Care (National Standard)	Patient(s) 18 - 64 years of age with evidence of good diabetic control, defined as the most recent HbA1c result value less than 7.0% in selected populations.	National Standard	HEDIS 2016	
	Diabetes Care (National Standard)	Patient(s) 18 - 75 years of age that had a HbA1c test in last 12 reported months.	National Standard	HEDIS 2016	

Attachment 11-2: Preliminary List of Performance Measures by Specialty

Specialty	Condition Description	Measure Description	Category	NCQA/HEDIS	PQA
Endocrinology/ Diabetes & Metabolism	Diabetes Care (National Standard)	Patient(s) 18 - 75 years of age that had annual screening for nephropathy or evidence of nephropathy.	National Standard	HEDIS 2016	
	Diabetes Care (National Standard)	Patient(s) 18 - 75 years of age with evidence of poor diabetic control, defined as the most recent HbA1c result value greater than 9.0%.	National Standard	HEDIS 2016	
	Diabetes: Appropriate Treatment of Hypertension-Part D (National Standard)	Patient(s) with diabetes and HTN who had a Renin Angiotensin System (RAS) Antagonist dispensed during the report period.	National Standard		2015
	Osteoporosis Management in Women Who Had a Fracture (National Standard)	Women 67 - 85 years of age who were treated or tested for osteoporosis within six months of a fracture.	National Standard		
	Renin Angiotensin System (RAS) Antagonists-Part D Medication Adherence (National Standard)	Patient(s) compliant with prescribed RAS antagonist medication (minimum compliance 80% or higher).	National Standard		2014
	Statin Therapy for Patients with Cardiovascular Disease (National Standard)	Patient(s) with cardiovascular disease that received a high or moderate-intensity statin medication.	National Standard		
	Statins-Part D Medication Adherence (National Standard)	Patient(s) compliant with prescribed statin medication (minimum compliance 80% or higher).	National Standard		2014
Family/General Practice	ADHD, Follow-Up Care for Children Prescribed ADHD Medication (National Standard)	Patient(s) with an outpatient, intensive outpatient or partial hospitalization follow-up visit with a prescribing provider during the 30 days after the initial ADHD prescription.	National Standard		
	Annual Monitoring for Patients on Persistent Medications (National Standard)	Adult patient(s) persistently taking angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) who received a serum potassium AND serum creatinine within the last 12 reported months.	National Standard		
	Annual Monitoring for Patients on Persistent Medications (National Standard)	Adult patient(s) persistently taking diuretics who received a serum potassium AND serum creatinine within the last 12 reported months.	National Standard		
	Antidepressant Medication Management (National Standard)	Patient(s) with a major depression who start an antidepressant medication that remained on treatment for at least 6 months (continuation phase treatment).	National Standard		
	Antidepressant Medication Management (National Standard)	Patient(s) with major depression who start an antidepressant medication that remained on treatment for at least 12 week (acute phase treatment).	National Standard		
	Breast Cancer Screening (National Standard)	Patient(s) 52 - 74 years of age that had a screening mammogram in last 27 reported months.	National Standard		
	Bronchitis, Acute, Avoidance of Antibiotic Treatment in Adults (National Standard)	Patient(s) with a diagnosis of acute bronchitis that did not have a prescription for an antibiotic on or three days after the initiating visit.	National Standard		
	Cervical Cancer Screening (National Standard)	Women that had appropriate screening for cervical cancer (Commercial enrollment).	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 12 - 24 months of age that had a PCP visit during the 12 months prior to the end of the report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 12-19 years of age that had a PCP visit during the 24 month report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 25 months to 6 years of age that had a PCP visit during the 12 months prior to the end of the report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 7-11 years of age that had a PCP visit during the 24 month report period.	National Standard		
	Colorectal Cancer Screening (National Standard)	Patient(s) 50 - 75 years of age that had appropriate screening for colorectal cancer.	National Standard

	Pharyngitis, Appropriate Testing for Children (National Standard)	Patient(s) treated with an antibiotic for pharyngitis that had a Group A streptococcus test.	National Standard		
	Potentially Harmful Drug-Disease Interactions in the Elderly (National Standard)	Elderly patients who had an accidental fall or hip fracture who took an anticonvulsant, nonbenzodiazepine hypnotic, SSRI, antiemetic, antipsychotic, benzodiazepine, or tricyclic antidepressant after the incident.	National Standard	HEDIS 2016	
	Potentially Harmful Drug-Disease Interactions in the Elderly (National Standard)	Elderly patients with chronic kidney disease who took a Cox-2 selective or nonaspirin NSAID after the earliest record of chronic kidney disease.	National Standard	HEDIS 2016	
	Potentially Harmful Drug-Disease Interactions in the Elderly (National Standard)	Elderly patients with dementia who took an antiemetic, antipsychotic, benzodiazepine, tricyclic antidepressant, H2 receptor antagonist, nonbenzodiazepine hypnotic or anticholinergic agent after the earliest record of dementia.	National Standard	HEDIS 2016	
	Renin Angiotensin System (RAS) Antagonists-Part D Medication Adherence (National Standard)	Patient(s) compliant with prescribed RAS antagonist medication (minimum compliance 80% or higher).	National Standard		2014
	Statin Therapy for Patients with Cardiovascular Disease (National Standard)	Patient(s) with cardiovascular disease that received a high or moderate-intensity statin medication.	National Standard		
	Statins-Part D Medication Adherence (National Standard)	Patient(s) compliant with prescribed statin medication (minimum compliance 80% or higher).	National Standard		2014
	Upper Respiratory Infection (URI), Appropriate Treatment for Children (National Standard)	Patient(s) with a diagnosis of upper respiratory infection (URI) that did not have a prescription for an antibiotic on or three days after the initiating visit.	National Standard		
	Use of High-Risk Medications in the Elderly (National Standard)	Patients 66 years of age and older that received one or more high-risk medications in the elderly in the last 12 reported months (HEDIS criteria).	National Standard		
Gastroenterology	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 12 - 24 months of age that had a PCP visit during the 12 months prior to the end of the report period.	National Standard		
	Children and Adolescents' Access to Primary Care Practitioners (National Standard)	Patient(s) 12-19 years of age that had a PCP visit during the 24 month report period.	National Standard

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 12 – Enrollee Grievance and Appeal System (Statewide):

The respondent shall provide a flowchart and written description of how the respondent will execute its enrollee grievance and appeal system, including identifying, tracking and analysis of enrollee complaints, grievances, appeals and Medicaid fair hearing data. The respondent shall include in the description detail regarding how data resulting from the grievance and appeal system are used to improve the operational performance of the respondent.

Response:

Humana strives to process and resolve complaints, grievances, and appeals within timeframes that are less than those specified in federal and State requirements. We have designed our Grievance and Appeal System to ensure we treat enrollees fairly and with respect, and that we communicate regularly with them throughout the process. It is essential for all parties involved in the delivery of care – providers, enrollees, and Humana associates – to understand enrollees' rights and the steps to initiate a complaint, grievance, or appeal. This system is the voice of the enrollee, and one of the most important aspects of delivering Humana's vision of the Perfect Experience. Caring for enrollees and their health is at the heart of Humana's goal to create the Perfect Experience. Humana's collective commitment is to help people achieve their best health and lifelong well-being.

It is Humana's policy to maintain complaint, grievance, appeal, and Medicaid Fair Hearing standards in compliance with the rules and regulations set forth by the Contract, Federal, and State statutes and accreditation bodies. We have designed Humana's Grievance and Appeal System in accordance with State and Federal requirements: s.641.511, F.S., 42 CFR Part 431, Subpart E (Fair Hearings for Applicants and Beneficiaries) and 42 CFR 438, Subpart F (Grievance System), and Rule 59G-1.100, F.A.C. The goal is to provide enrollees with a process to address areas of dissatisfaction with Humana, a provider, or subcontractor. Neither enrollees nor their authorized representatives are subject to punitive or retaliatory actions as the result of exercising their grievance and appeals rights.

==========

1. The extent to which the respondent's grievance and appeal system flowchart reflects ease of access for individuals with complaints, grievances and appeals, including ease of access for persons with disabilities of who speak other languages.

==========

EASE OF ACCESS

There are multiple ways an enrollee or the enrollee's authorized representative can submit a complaint, grievance, or an appeal. Humana has implemented processes to ensure that no matter how the enrollee submits, whether in person, by phone, in writing by the enrollee or the enrollee's authorized representative, through the Agency for Health Care Administration (AHCA), or through a subcontractor, that we adequately and efficiently address every complaint, grievance, and appeal. We also ensure that we communicate steps and decisions to enrollees.
Humana assists enrollees submitting a complaint, grievance, or appeal. For the hearing impaired, we provide a teletype (TTY) line to ensure smooth communication between the enrollee and the Humana associate. Humana provides a Spanish-speaking associate to any

caller requesting one at the start of the call, and will connect an enrollee to oral interpretation services in two hundred (200) languages, video interpretation in twenty-four (24) languages including American Sign Language (ASL), and translated written materials of vital documents based on threshold languages and auxiliary aids that disabled enrollees require. Humana also provides additional accommodations for any enrollee with special needs who is unable to follow the standard process. For example, should enrollees have difficulty writing because of physical impairment, literacy, or language barriers, Humana associates at local Humana offices and Case Managers (CMs) assist in writing and filing the formal grievance. The flowcharts in Attachment 12-1 demonstrates ease of access for enrollees and their authorized representatives, offering several avenues through which they may file a complaint, grievance, or appeal.

Humana seeks to develop associates' abilities to meet the cultural and linguistic needs of enrollees, and has undertaken quality improvement efforts to enhance workforce sensitivity to diversity, disparities, and the need to provide appropriate and effective services. Humana recognizes that associate training is a key component in providing culturally competent care. We require all associates to take Humana's Cultural Competency training upon hiring and annually thereafter in concert with Ethics re-training. We also administer additional and specialized training to specific areas, including the Grievance and Appeal department, to associates who have direct contact or interaction with enrollees. In addition to proactive training initiatives, Humana's Quality committee reviews documentation and data we receive from complaints, grievances, and appeals to determine and ensure continued ease of access.

Cultural, linguistic, and disability customer care training helps ensure that we deliver covered services in a culturally competent manner to the target population. This is especially important for enrollee-facing associates with regular contact with disabled and non-English speaking enrollees. Examples of training include:

- Policies and procedures for accessing language assistance and working effectively with Limited English Proficiency (LEP) enrollees;

- Training on how to work effectively with in-person and telephonic interpreters, and information on cultural differences and diversity within our enrollee population;

- How to access TTY, video relay services, and remote interpreting services;

- How to access oral interpretation services and written materials in prevalent languages; and

- How to access materials for blind, limited sight, and deaf enrollees.

Humana also recognizes that enrollees interact with many of our subcontractors' associates. For this reason, all subcontractors also receive training on Cultural Competency and Ethics as well as the enrollee complaint, grievance, and appeal process. This occurs upon contracting, whenever there are revisions to the process, and annually thereafter. Periodic trainings ensure subcontractors understand the timeframes, manner, and method that enrollees may file complaints, grievances and appeals and how to assist with the intake.
Humana plans to conduct a Structured Submissions pilot to assist with ease of access. An online intake form hosted on Humana.com will guide enrollees through the submission process and enable them to track the status of their complaint, grievance, or appeal. This ensures that

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana receives all the correct information when the enrollee first files and reduces the need to have to ask for additional information. When the enrollee completes this form or files it through the website, the enrollee can track the status of their case from when we receive it, assign it to a representative, review it and make a decision. Attachment 12-2 displays the proposed intake form and status tracker.

GRIEVANCE AND APPEALS SYSTEM PROCESS

Humana informs enrollees of their right to file a complaint, grievance, or appeal and specific instructions for how to do so in all enrollee communications. Approved by AHCA, these communications include the Enrollee Handbook, enrollee website, and all communications related to a filed grievance or appeal. In addition, CMs explain to enrollees the right to file a complaint, grievance, or appeal. Attachment 12-1 depicts Humana's complaint, grievance, and appeal submission and resolution system. Enrollees and their authorized representatives may file a complaint, grievance, or appeal by calling Customer Care, mailing the request to Humana, visiting a local Humana office, asking their provider to submit on their behalf, speaking with their CM, or filing with AHCA so the matter can communicate directly to Humana. We discuss the process for complaints from AHCA in further detail under Evaluation Criteria 5. We strive to ensure that we track and resolve all complaints, including those submitted to Humana by AHCA or Humana's subcontractors, as part of Humana's established complaint, grievance, and appeal process.

All complaints, grievances, and appeals are stamped with the date we receive and enter them into our Customer Relationship Management tool (CRM) along with the enrollee’s name, Medicaid identification (ID) number, type of complaint, grievance or appeal, and expedited status. If we do not resolve a complaint by the end of the business day we receive it, we re-categorize the complaint and transition it to the grievance process.

Humana’s Grievance and Appeals team, which includes the Medicaid Fair Hearing specialists, relies on twenty-two (22) trained and highly experienced Grievance and Appeals full-time associates to effectively track and resolve all complaints, grievances, and appeals from enrollees or their authorized representatives, whether they are submitted directly to Humana or to our subcontractors. Our Grievance and Appeals team represents a combined one hundred fifteen (115) years of experience and an average tenure of nearly twelve (12) years with Humana. They work closely with Humana CMs who may support enrollees voicing issues. Our Critical Inquiry (CI) team, which works complaints and grievances filed directly with AHCA, consists of eleven (11) full-time associates with a combined ninety-five (95) total years of experience, and an average of more than eight (8) years with Humana.

GRIEVANCE PROCESSING

We have established the grievance process to address and resolve all enrollee concerns in a thorough and timely manner. The process meets all requirements set forth by the State of Florida and covers an enrollee’s expression of dissatisfaction about:

- Availability, quality of care, delivery or quality of healthcare services, including a written complaint regarding an adverse determination made by Humana pursuant to utilization review;

- Any matter other than an adverse benefit determination;

- Aspects of interpersonal relationships such as provider or Humana associate rudeness;

- Failure to respect the enrollee's rights;

- Dispute of an extension of time to make an authorization decision; or

- Claims payment, handling, or reimbursement for healthcare services.

All enrollee-facing areas throughout Humana can receive grievances, which we route to our centralized Grievance and Appeals department. When the enrollee submits a grievance, we send an acknowledgement letter confirming receipt of the grievance, written in the enrollee's preferred language, to the enrollee within five (5) business days of receipt. When someone other than the enrollee submits a grievance, our Grievance and Appeals department obtains an Appointment of Representative (AOR) form or other legal document to validate the authorized representative's authority to act on behalf of the enrollee before sending an acknowledgement letter to the enrollee, if it is not already on file.

When Humana receives a grievance, a Grievance and Appeals specialist researches authorization, claims, and enrollment systems, as well as enrollee certificate and provider contract information. The team then contacts the appropriate department(s) or subcontractor to gather additional information to resolve the enrollee's grievance.

The Grievance and Appeals associate ensures enrollees and their authorized representatives:

- Have a reasonable opportunity to present evidence and allegations of fact or law in person, as well as in writing;

- Understand any time limits that may apply; and

- Can examine the case file, including medical and case records, and any other material to consider during the process.

Receipt date of a written grievance is the date that Humana, any of its subcontractors, or its designee receives a grievance or upon receipt of the AOR form. Upon receipt, the receiving department date stamps, scans or attaches all written grievances; we note oral grievances as the date and time we received the enrollee's call. We use the date and time of receipt to calculate the resolution due date and timely filing requirements.

GRIEVANCE RESOLUTION

Upon resolution of the grievance, a Grievance and Appeal associate communicates a written resolution to the enrollee. We send notices to the enrollee as expeditiously as possible considering the enrollee's health condition while adhering to the required timeframes:

- We resolve the grievance and notify the enrollee within ninety (90) calendar days.

- We may extend the grievance up to fourteen (14) calendar days at the enrollee's request or if we determine and document that the extension is in the best interest of the enrollee.

- If the timeframe extends other than at the enrollee's request, Humana provides oral notice of the reason for the delay to the enrollee by close of business on the day of the determination, and written notice of the reason for the delay to the enrollee within two (2) calendar days of the determination.

- Humana completes the grievance process in time to permit the enrollee's disenrollment to be effective in accordance with the timeframes specified in 42 CFR 438.56(e)(1).

APPEAL RESOLUTION

Once Humana's Grievance and Appeal associates receive and research an appeal, they may determine that the appeal falls under one of the following scenarios, which we handle according to the guidelines described below:

- The requested services for a pre-service appeal request have been rendered; therefore, we will handle the case according to the appropriate process.

- An appeal has been previously submitted and the appeal process has been exhausted. We will conduct an internal courtesy review if we receive additional information.

- An expedited appeal was previously submitted and the decision was upheld. The resolution letter gives the next level of appeal rights. If the enrollee later submits a post-service appeal, we process the appeal as a first-level post-service appeal.

- The request includes new or additional information such as medical records, and is submitted after a decision has been rendered. The case will be subject to a courtesy review by a qualified reviewer.

- The appeal has already been resolved by another area prior to receipt by the Grievance and Appeals department, or was resolved after receipt by the Grievance and Appeals department but prior to issuing a determination letter. We will not code these cases as a complaint or correspondence, but instead as an appeal resolved as an overturn, using the letter appropriate to the previously resolved issue.

Humana ensures that we resolve appeals by healthcare professionals with relevant clinical expertise. We also ensure that we did not involve decision-makers on grievances and appeals in previous levels of review or decision. Communication protocol for appeals matches those of grievances, as described above.

EXPEDITED APPEALS

If the appeal meets the expedited criteria, the Grievance and Appeals associate conducts further research to understand the initial decision. Humana then implements an expedited

review process for that appeal. This process takes place when Humana determines or the provider indicates that following the standard resolution timeframe could seriously jeopardize the enrollee's life, health, or ability to attain, maintain, or regain maximum function. If Humana is unable to obtain a supporting statement from the provider, then a Grievance and Appeals associate sends an expedited appeal request to our Medical Director for review, ensuring that clinical expertise informs the decision.
Enrollees may file expedited appeals either orally or in writing with no additional follow up required. Humana will:

- Inform the enrollee of the limited time available to present evidence and allegations of fact or law, in person, and in writing;

- Resolve each expedited appeal and provide notice, as expeditiously as the enrollee's health condition requires, not to exceed seventy-two (72) hours;

- Provide written notice of disposition; and

- Make reasonable efforts to also provide oral notice of disposition immediately after the decision.

If the services have already been rendered or if the case does not meet expedited criteria, we handle the case as a standard appeal. For written requests or oral requests allowed by Florida regulations, reclassifying the expedited appeal to the standard appeal process does not change the received date. We verbally notify the enrollee immediately and provide written notice, which includes an explanation that we will automatically transfer and process the request under the standard appeal time frame, and that the enrollee may file an expedited grievance if they disagree with the decision to not handle the case as such. Humana will also inform the enrollee of the right to resubmit the request with support from the treating provider and explain that if the provider indicates that applying the standard review process could seriously jeopardize the enrollee's life or health, we will automatically expedite the request if the service has not been rendered.

NOTIFICATION OF RESOLUTION

The enrollee or the enrollee's authorized representative may request a copy of the complete file containing documents, records, and any clinical guidelines we use in the case decision. The enrollee or authorized representative can review and examine the information before and during the appeal process. Humana will provide the records free of charge, within seven (7) calendar days of receiving the request.

Following resolution of the issue, the Grievance and Appeals associate issues a written response. Humana issues all resolution letters according to the type of case and specific timeframes for resolution. The letter gives a brief overview of the issue and any actions taken that we can disclose, as well as any supporting documentation. Humana maintains records of all complaints, grievances, and appeals, including resolutions for at least ten (10) years as required by Federal and state requirements. Humana will make all records available to AHCA and CMS upon request.

MEDICAID FAIR HEARING

An enrollee or their authorized representative has the right to request a Medicaid Fair Hearing after completing the appeal process.

Our Grievance and Appeals department and Medical Director are responsible for preparing an appeal summary for Medicaid Fair Hearings. The appeal summary includes all facts and documents relevant to the issues and all documentation to support our decision. Our Grievance and Appeals department and Medical Director will participate in the Medicaid Fair Hearing in person or by telephone and complete the required forms and documentation. In 2016 Humana participated in a total of thirty-nine (39) Florida Medicaid Fair Hearings, thirty-six (36) of which were upheld. Thus far in 2017, there have been a total of ten (10) Florida Medicaid Fair Hearings, eight (8) of which have been upheld.

If Humana determines, or if we receive notification from a Florida Fair Hearing Board, that the criteria for a continuation of benefits has been met, the Grievance and Appeals associate updates Humana systems to recognize that the enrollee's benefits should continue until receiving the outcome of the hearing. For appeals decided in favor of the enrollee, Humana will authorize or provide the disputed services promptly and as expeditiously as the enrollee's health condition requires if the services were not furnished while the appeal was pending. Humana will also pay for the disputed services if the enrollee received the services while the appeal was pending.

==========

2. The extent to which the respondent's timelines for acknowledging and responding to complaints, grievances and appears are less than those specified in federal and State requirements.

==========

Humana complies with all Federal and State requirements for acknowledging and responding to complaints, grievances, and appeals, and does so in less than the timeframes specified in Federal and State requirements.

For January through August of 2017, we resolved forty-four percent (44%) of the complaints received before the end of the next business day following receipt of the complaint, and classified the remaining fifty-six percent (56%) as grievances.

Per Contract requirements, Humana acknowledges standard enrollee appeals within five (5) business days and expedited appeals within twenty-four (24) hours. We provide oral notification to the enrollee within seventy-two (72) hours or less. To support enrollees during this process, Humana will allow coverage for any denied medication during the review process. We provide the resolution letter, written in the enrollee's primary language, within two (2) calendar days of the oral notification. Appeal determinations are rendered as expeditiously as the enrollee's health condition requires, but no later than thirty (30) calendar days from receipt, whether we receive them orally or in writing.

Humana's average acknowledgement times over the past ninety (90) days compared to required timeframes are:

- Grievances – Requirement: within 5 business days; Humana's average: 4 business days

- Standard Appeals – Requirement: within 5 business days; Humana's average: 4 business days

- Expedited Appeals – Requirement: within 24 hours; Humana's average: 8 hours

Humana's average written resolution times over the past 90 days compared to required timeframes are:

- Grievances – Requirement: no later than 90 calendar days; Humana's average: 26 calendar days.

- Standard Appeals – Requirement: within 30 calendar days; Humana's average: 21 calendar days.

- Expedited Appeals – Requirement: within 72 hours; Humana's average: 35 hours.

We program AHCA's required timeframes for resolution of verbal and written enrollee complaints, grievances, and appeals in CRM, creating alerts and reminders so that we review and resolve matters as expeditiously as the enrollee's health conditions require. Attachment 12-3, visuals 1a and 1b show examples of Humana's Medicaid Dashboard, which offers a point-in-time snapshot of the status of all of Humana's active grievances, including response times.

Compliance ratings for both of our Florida Managed Medical Assistance (MMA) and Long-term Care (LTC) membership display a positive trend and attest to the impact of process improvements we have made during the current contract administration. August 2017 compliance ratings highlighted below capture our best performance to date:

- Grievance acknowledgment letter sent within 5 business days: over 98%
- Grievance resolution letter sent within 90 calendar days: 100%
- Appeal acknowledgment letter sent within 5 business days: over 97%
- Appeal resolution letter sent within 30 calendar days: 100%
- Expedited Appeal verbal acknowledgement within 24 hours: 100%
- Expedited Appeal resolution (verbal and written acknowledgment) within 72 hours: 100%
- All complaints received from AHCA were responded to on time: 100%

To ensure the Grievance and Appeals and the CI teams are aware of and compliant with any relevant regulatory changes that impact any part of the processes or systems, Humana dedicates many resources to monitoring regulatory changes and implementing any necessary changes. Some examples of these resources include: the Florida Market team, the Contract Management Unit (CMU), a Compliance department, Quality Operations, and Accreditation.

==========

3. The extent to which the respondent's complaint, grievance and appeal and Medicaid Fair Hearing data are aggregated so that results are actionable, protect enrollee privacy and are reviewed by the appropriate associates or committee for analysis and prioritization of correction action and/or improvement initiatives.

==========

Humana aggregates all complaint, grievance, and appeal and Medicaid Fair Hearing data so we can swiftly resolve issues while simultaneously protecting enrollee privacy. Market- and corporate-level committees regularly review data to ensure quality of service and prioritized improvements.

CREATING ACTIONABLE DATA

Humana's Grievance and Appeal System generates daily, quarterly, and annual reports, which our Customer Care, Grievance and Appeal, and CI teams continuously review to ensure timely and appropriate resolution, and to identify emerging or recurring trends that warrant root cause analysis. The reports include open inventory arranged by nature of case, due date, enrollee's name, Medicaid ID number, case type, and expedited status. We also log disposition type and the disposition date. Attachment 12-3, visual 2 is a point in time view of the daily report.

The Grievance and Appeals department conducts monthly and quarterly root cause analysis, which escalates to market- and corporate-level quality committees. Attachment 12-3, Visual 3 includes aggregate data of the top five (5) grievances and top five (5) appeals submitted to Humana in 2017.

In addition, Humana uses Grievance and Appeal System reports to monitor quality of care issues, access to care, improper billing, and oversight of subcontractors. Humana has processes in place for ongoing monitoring and detection of risk to inform the Grievance and Appeals System. Potential risks that may impact enrollees may include claims issues related to providers and subcontractors and internal system errors. While Humana proactively informs enrollees of major issues that may impact their claims or services, ensuring Customer Care Specialists (CCS), CI, and Grievance and Appeal associates are aware of all current issues will allow them to quickly and easily resolve related enrollee complaints, grievances, and appeals.

Our Grievance and Appeals System considers the perspectives of both the market and corporate levels, further ensuring all teams involved have thoroughly researched the issues and provide input regarding how Humana can best serve enrollees. Because the market team represents where the enrollees live and work, the partnership between market and corporate Medicaid leadership provides the necessary context to best understand and most effectively resolve enrollees' issues.

PROTECTING ENROLLEE PRIVACY

Humana protects all enrollee information. As a first step, Humana's Privacy Policy incorporates all Federal and State regulations.

Humana's Privacy Policy details, among other items: the authentication process required for enrollee and authorized representative communication; consent requirements for the release of protected health information (PHI); de-identification of enrollee information for the sake of data aggregation and analysis; specifications of Humana associate roles and permissions related to enrollee PHI; and subcontractor requirements for abiding by Humana policies.

We restrict access to PHI, granting access to associates based on the minimum necessary to perform their assigned responsibilities. All Humana associates undergo ethics training to ensure they understand and comply with all laws that protect enrollee privacy and PHI. From the start of the grievance and appeals process, Humana associates authenticate the enrollee's identity and ensure that for any complaint, grievance, or appeal submitted on behalf of the enrollee, that proper legal documentation is on hand, including an AOR form or Power of Attorney (POA) form. The only exception is for expedited appeals that the enrollee's provider submits. Associates also ensure that we communicate any information regarding resolution of complaints, grievances, or appeals through a secure process solely to the enrollee and the authorized representative.

We transmit all internal e-mail communication related to a complaint, grievance, or appeal via a secure email server. Additional safeguards are in place for Medicaid Fair Hearing submissions, using AHCA's secure database to upload relevant enrollee information. We limit access to this database to the Grievance and Appeals Medicaid Fair Hearing specialist, the team Frontline Leader, and the team Production Lead.

We de-identify aggregated data for regular reporting and analysis to protect enrollee privacy. To identify and mitigate any threats to the security of enrollee information or Humana's information systems, Humana's Enterprise Information Protection (EIP) team continually monitors subscription-based threat feeds, subcontractor-provided security websites, and mailing lists. EIP reviews these threats and searches asset inventories to determine whether the threat is applicable to Humana. EIP tracks remediation progress by reviewing reports the Information Technology (IT) team provides as well as through subject matter experts, and validates remediation through vulnerability scanning tools.

USING DATA TO SUPPORT IMPROVEMENTS

Numerous cross-departmental forums, including the Process Council, discuss aggregated data for prioritization and implementation. As the governing body for Humana's Resolution team, the Process Council connects the overall goals and strategies of Humana's lines of business with performance of the individual business processes. The Process Council also provides a mechanism for allocation of scarce resources, prioritization, implementation strategy approval, oversight of post-implementation process change performance, and change control management.

Another forum for cross-departmental collaboration on potential improvements is the 811 Committee, which meets on a weekly basis. The purpose of 811 Committee meetings are to provide preemptive risk mitigation. Committee members assess the impact of proposed process changes prior to their implementation. Delegates from relevant business areas within the Resolution team participate to review system and downstream impacts.

Both the Process Council and the 811 Committee offer opportunities for Medicaid Grievance and Appeals and CI leadership to discuss compliance and reporting risks associated with implementation of improvements. This allows Humana to leverage capabilities based on efforts relevant to other plans and business processes. These forums allow for the Resolution teams to discuss compliance and reporting risk associated with any changes.

Humana has created the new Florida Medicaid Member 360 Committee to systematically improve the enrollee experience. The Committee meets monthly to review all metrics applicable to enrollees, including grievance and appeals data, and provides a forum for review of enrollee-related metrics, root cause analysis, process improvement opportunities, and escalation of enrollee concerns.

Additionally, we cover issues we need to address with subcontractors via Joint Operations Committee (JOC) meetings. These meetings provide an opportunity to address subcontractor needs, such as additional training, that Humana can provide to mitigate future issues.

Quarterly, our Grievance and Appeals department provides reports and recommendations to our corporate Quality Improvement Committee (QIC) for review. The QIC then either approves the recommendations or suggests alternative action. Our Decision Support and Informatics department provides aggregated reporting to the appropriate committees to ensure enrollee privacy. The appropriate committees use the aggregated reporting to initiate process improvements.

Additional options for improvements include Quality Improvement (QI) Plans and process improvement initiatives. Approved by and reported to the QIC, QI Plans are initiated for key process improvements. The Business Owner of the QI Plan is responsible for ensuring actions established in the QI Plan take place within the timeframes established and that we report results accordingly. We initiate process improvement initiatives for smaller improvements that a workgroup can perform.

Finally, for quality improvement efforts specific to Florida, the Florida Medicaid QIC provides operational oversight for the Quality Improvement program activities and recommends policy decisions. The Committee oversees the Florida-market Quality Improvement program and measurement of quality activities on a regular basis. Specifically, the Florida QIC will review data to determine trends and follow up with relevant departments to identify areas for improvement and develop initiatives.

From an enterprise perspective, Humana prioritizes and executes process improvements at various levels following specific business policies. We initiate and require an “issue or opportunity” (IOP) when Humana is noncompliant on a regulatory issue; for all internal Corrective Action Plans (CAPs); for all self-reported issues; and for all external notices, external CAPs, and fines or penalties. Improvement Action Plans (IAPs) document how Humana will remediate an IOP, governed by a specific workflow. Humana logs and monitors IOPs and IAPs via Enterprise Solution Point (ESP), an internal platform used to assist in tracking such efforts.

Florida Medicaid Compliance associates oversee the remediation of open issues or opportunities. Business owners provide anticipated remediation dates as well as status updates, and report the status of issues or opportunities regularly to senior leadership. If

appropriate, we escalate IOPs to the Medicaid Compliance Committee, which we discuss in further detail in Evaluation Criteria 4 below.

==========

4. The extent to which the respondent's complaint, grievance and appeal process imposes deadlines on completion of corrective action plans implemented as a result of verified complaints, grievances or appeals and have set quality controls in place to review outcomes.

==========

As discussed above, Humana uses actionable data to identify compliance gaps in internal processes. Such situations typically result in the implementation of a CAP.

Humana places CAPs into two (2) categories: 1) CAPs put in place at AHCA's request to remedy contractual non-compliance; and 2) CAPs that Humana puts in place internally to resolve problems or remedy a deficiency in the performance of one of our internal business units or subcontractors.

Humana works cooperatively with AHCA to remediate identified issues subject to a CAP put in place at AHCA's request. We require responsible business owners to promptly conduct root cause analyses and develop detailed action plans for remediation. Compliance associates monitor all CAPs received from AHCA to ensure the CAP remains on track for timely remediation.

CAPs developed internally are the result of data and input from multiple levels within the organization. We aggregate and report out data to numerous committees such as the market-level and corporate-level QICs. Our Florida QIC and corporate Grievance and Appeals department report to the corporate QIC on a quarterly basis. By reporting quarterly, Humana can quickly identify trends and make changes where necessary using CAPs or smaller improvement efforts as described above. Once issued, the impacted business area responds rapidly by setting an appropriate deadline and developing a work plan for the issued CAP.

The scope of a CAP can include any service provided to enrollees; can relate to one (1) or more treatment, process, or outcome; and include an awareness of factors that impact healthcare utilization and wellness for diverse populations related to ethnic, racial, and socioeconomic influences. We include all populations in the scope and content of the plan, and analyze demographic data to address any specific needs related to cultural, racial, or ethnic differences. Performance monitoring is the key to measuring the effectiveness of any improvement effort. We monitor CAPs regularly to track progress against set goals throughout the implementation of the work plan, and even after closing the CAP to ensure the solutions have appropriately addressed the issue. This monitoring includes input from all departments involved in enrollee care and services, relying on interdisciplinary Quality Improvement teams, both market- and corporate-based, to produce the best outcomes. As a result of this performance monitoring, AHCA has not requested that Humana submit any external CAPs for complaints, grievances, or appeals.

Humana's Medicaid Compliance Steering Committee meets each month, coordinated by the Operational Risk Management (ORM) team. Meeting invitees include but are not limited to leaders that are critical to the escalation process: Medicaid Operational Leadership; Florida Medicaid Vice President; Medicaid Segment Vice President; Compliance associates; and

Operational Risk Management Vice President. We invite all applicable business owners for each team that handle complaints, grievances, and appeals to this meeting monthly. Its purpose is to provide a forum to present, review, analyze, and make recommendations on issues pertaining to Humana Medicaid programs. The agenda includes discussion of pressing compliance issues in each Medicaid program, including Florida Medicaid. The vehicle used to drive discussion by the Medicaid Compliance Committee enrollees is the Medicaid Integrated Compliance Scorecard. Part of ORM, the Metrics team compiles the Scorecard monthly which includes a point-in-time assessment of compliance for each contract and performance on compliance metrics including current compliance measurements for the reporting month. Florida Medicaid Compliance associates can issue internal CAPs to compel a business owner to create a plan that identifies root cause deficiencies for non-compliance on a specific metric, and the corresponding action plan to bring Humana to a compliant state.

The Scorecard facilitates the success of external and internal CAPs and other notifications of non-compliance. We share Scorecards, Dashboards, and the results of the Medicaid Compliance Committee discussion with senior leaders across Humana, including our Chief Compliance Officer, Chief Operating Officer, President of Medicare and Medicaid Operations, and the Vice President of Medicaid. Attachment 12-3, visual 1a and 1b, provide the Grievance and Appeals summary extracted from the Florida Medicaid Compliance Dashboard.

Given the importance of resolutions for complaints, grievances, and appeals as well as CI processes within our Medicaid program, Humana's Compliance team organizes a monthly Medicaid Grievance and Appeals Compliance Subcommittee to ensure ongoing communication about Grievance and Appeal System-related issues across business units. Some of the topics the subcommittee cover include issue status, upcoming or recently implemented process changes, and recent internal and external audit results.

We address CAPs that are consistently in a non-compliant status as separate agenda items to give in-depth attention to the issues and assist in remediation. The subcommittee includes representation from all areas, so productive discussion helps drive the escalation, accountability, and resource allocation to move the issue along to successful completion.

Finally, as described above, Humana also uses IOPs, IAPs, QI Plans, and process improvement initiatives to tackle issues that do not require a CAP, and tracks their progress using similar and appropriate goals and deadlines. For example, if we identify an overarching departmental issue through a complaint, grievance, or appeal, Compliance associates handle it through their team IOP process.

==========

5. The extent to which the respondent is able to ensure all complaints (including those submitted to the respondent by the Agency or respondent's subcontractors) are tracked and resolved as part of the respondent's established complaint, grievance and appeal process.

==========

Enrollees have numerous ways of submitting complaints. No matter how Humana receives complaints (in person, by phone, in writing by the enrollee or the enrollee's authorized representative or through AHCA or a subcontractor) we ensure that we adequately and efficiently address every complaint, grievance, and appeal, and communicate related steps and

decisions to enrollees. Humana addresses, logs, tracks, and trends all complaints, regardless of the nature of the complaint or whether the enrollee expressly requests filing one.

For MMA enrollees, when we receive an oral complaint through Customer Care, we send it to the Oral Grievance Oversight (OGO) team, which assists Customer Care in maintaining its compliance with Federal and State regulations and guidelines for appropriately resolving enrollee oral complaints. The OGO team reviews all oral complaints either resolved during the call or still pending. The team also confirms that we addressed all issues if the CCS marked it as "complete," and works toward resolution of pending complaints if the CCS could not resolve the issue during the call. If we do not resolve the issue by the end of the next business day, the OGO team ensures that we recategorize the complaint as a grievance and transfer it to the Grievance and Appeals team for resolution.

When an LTC enrollee files an oral complaint through Customer Care, we send it to the Case Manager (CM). If the complaint happens to be about the enrollee's CM, we route it to the CM's Supervisor. If the Care Management team does not resolve the complaint by the close of business the next business day, they route the complaint to the Grievance and Appeals team for reclassification and resolution as a grievance.

Humana CCSs have access to Grievance and Appeal cases and resolution letters to efficiently support enrollees with questions or update requests. Subcontractors can also help enrollees initiate complaints, but only Humana handles research and resolution of grievance and appeal requests. This includes complaints reported to subcontractors that cannot be resolved by the end of the following business day of receipt of the complaint. Because Humana is responsible for all research and resolution, it is imperative that subcontractors report complaints and grievances in a timely manner. Subcontractors use a fax process to send complaints and grievances to Humana. Additionally, subcontractors submit expedited grievances via email to Humana. Humana partners with the subcontractor when we need more information to drive resolution. To ensure compliance, Humana has a monthly operational call with each subcontractor to discuss numerous topics, including the Grievances and Appeals System. If we identify and attribute a trend to the subcontractor, we convene an ad-hoc meeting to discuss and resolve the issues. Subcontractors train annually on Humana's submission process and on an ad-hoc basis to support subcontractors' new hires and Contract amendments.

We resolve complaints by the end of the following business day of receipt of the complaint, and date stamp and manually enter all requests received for complaints, grievances or appeals with the date received as well as the enrollee's name, Medicaid ID number, type of complaint, grievance or appeal, expedited status, disposition type, and the disposition date. We recategorize complaints that are not resolved by the end of following business day as grievances. The Grievance and Appeals Reporting team generates reports and forwards them to the Medicaid Compliance Reporting team, which submits the reports to AHCA as contractually required.

ENROLLEE COMPLAINTS RECEIVED FROM AHCA

Enrollees can submit complaints directly to AHCA, which AHCA then routes to the CI team. Humana ensures a timely response by using a separate fast-track process for AHCA requests. We log all AHCA inquiries in the same system used by the Grievance and Appeals department.

For reporting purposes, we integrate enrollee complaints and grievances from AHCA with other enrollee complaints and grievances, and include them in monthly and annual reports.

Led by the department manager, Humana's CI team consists of two (2) coordinators, five (5) analysts, a lead analyst, a consultant, and the Frontline Leader. We train the full team on AHCA's contractual requirements. Associates receive retraining when there are changes to processes and procedures or as needed based on audit results and Contract amendments.

The CI team follows the same contractual and best-known methods that the Grievance and Appeals department uses. CI works closely with AHCA as we address the complaint. We assign all complaints immediately to analysts on the team. In addition, CI personally guides each inquiry to resolution. For every AHCA inquiry, the CI analyst places a courtesy acknowledgment call to the enrollee. These calls assure enrollees that we are handling their inquiry and allows them to ask questions and provide any additional information. We give the CI analyst's direct phone number to the enrollee for any questions or concerns during the review process.

Upon receipt of the complaint, the CI analyst sends an acknowledgment to AHCA. The analyst, who can provide status updates to AHCA during the review process, researches the issue, engages the enrollee for additional information, determines the resolution, and oversees the implementation of the resolution, including claim adjudication, if applicable. The CI team ensures a timely response to AHCA through daily monitoring of the status of research and resolution, working with other subject matter experts across Humana to address and resolve issues. The analyst notifies both AHCA and the enrollee of the resolution. In addition to required written resolution letters, we also place a courtesy resolution call to the enrollee. This is an opportunity to ensure satisfaction and answer any enrollee questions.

AHCA assigns a severity level to each complaint. The CI analyst provides an update status to AHCA based on severity level due dates of "High" (close of the next business day), "Medium" (close of the third business day), and "Low" (close of the fifth business day). For the month of August 2017, the CI team had a total of seventy-eight (78) complaints. Of those, eleven (11) were "High" severity, seven (7) were "Medium" severity, and sixty (60) were "Low" severity. We completed one hundred percent (100%) of these complaints in a timely manner. If we do not resolve a complaint by the end of the business day after receipt, then we transition the complaint to the grievance process, and send a grievance acknowledgment letter by the fifth business day after receipt. Since these grievances are worked within AHCA severity level due dates, we complete all of them within the ninety (90) days allowed for grievances.

Tracked in CRM, the Manager, Frontline Leader and Production Lead of each team can access and pull reports of inquiries at any time of their inventory. These reports can include specific elements such as open inventory arranged by nature of case, due date, enrollee's name, Medicaid ID number, case type, and expedited status. In addition to the reports, the Grievance and Appeal and CI leadership also uses SPLUNK Inventory Manager, which is a real-time inventory management tool. This tool allows leadership to pull real-time data, which can include the number of cases that are pending with the Letter Review team, have an acknowledgement due, have a status due, or are pending for a resolution. Attachment 12-3, visuals 4a, 4b, and 4c are a point-in-time view sample of the information that SPLUNK displays for leadership.

Metrics are tracked through ESP on a monthly basis. Once the metrics are entered by the individual business owners, the Medicaid Compliance Reporting (MCR) team combines the data into appropriate AHCA report template and submits to the state.

==========

6. The extent to which the respondent's grievance and appeal system data resulted in operational improvements of the respondent.

==========

Humana's ongoing analysis of the Grievance and Appeals System data helps identify both market-specific and corporate-level operational improvements, detailing which points of service to enhance to improve the enrollee experience.

In the last year, Humana has identified and implemented several operational improvements in response to Grievances and Appeals data trends that helped to expose processes requiring adjustments. One of those improvements was via collaboration between Customer Care and the OGO team to significantly enhance the system and process for routing verbal complaints and grievances to the Grievance and Appeals team for our MMA enrollees. Previously, the routing process was manual and time-consuming, leading to potential delays in complaint resolution.

We implemented specific improvements in stages beginning in November 2016. One (1) month later, the OGO developed reporting mechanisms to capture data on all grievances regardless of the method through which we first collected the grievance. After some time using these improvements, Humana realized that we could do even more to improve call routing. In April 2017 we implemented automated mechanisms to correctly route and queue Florida Medicaid complaints directly to the OGO. Shortly thereafter, Humana committed resources to review routing of Florida Medicaid verbal complaints, resulting in higher complaint resolution, reducing the number of grievances for our MMA enrollees, and reducing the timeframe for resolution of the enrollee's issue(s). Pending improvements for verbal complaints will support improved documentation and resolution. Thanks to these targeted improvements, the current process is more efficient, helps Humana comply with acknowledgement timeframes, increases complaint resolution, and has significantly less room for error. Since complaint resolution increased, the number of complaints reclassified as grievances decreased, and enrollees received their resolution in a more timely manner.

We made additional improvements in 2016 and 2017 to ensure we properly manage grievances and appeals:

- Previously, we routed Medicaid inquiries to a joint team that had Medicare and Medicaid inventory. In 2016, we implemented a system enhancement to route all Medicaid grievance and appeal mail directly to the Medicaid Grievance and Appeals team, eliminating potential delays in handling of case upon receipt.

- In 2016 the Grievance and Appeals team developed a process to communicate to the enrollee's assigned Case Manager (CM) when we receive a complaint, grievance, or appeal that would impact the enrollee's access to care or where they need service arrangement, closing potential communication gaps between associates. If the enrollee does not have an assigned CM but needs assistance, the CM team reaches out to the enrollee and assigns a CM to assist.

- Similarly, we developed a new process for CMs to assign grievances or appeals to the Grievance and Appeals team directly via Clinical Guidance eXchange (CGX), Humana's system that houses enrollee medical pre-authorization data. This enables the CM to better assist the enrollee in filing a grievance or appeal during outreach.

- The Medicaid Grievance and Appeals team currently uses a Letter Review team to ensure accuracy prior to mailing the resolution letter. In addition to the second layer of review, this process allows Humana to track resolution letters we send to the enrollee or authorized representative. The Letter Review team supports all of Humana's work and is one of many processes that demonstrate the capacity and best practices that Humana leverages for Medicaid.

- In the last year, we have used grievance and appeal data to create a better experience for both MMA and LTC enrollees. For MMA enrollees, in the third quarter of 2016, the Grievance and Appeals department reported an increase in pharmacy appeals because of not meeting formulary exceptions and clinical criteria. An internal audit with our Pharmacy department revealed opportunities for improved alignment on medication reviews. As a result of this analysis, the overturn percentage of appeals is currently twenty-three percent (23%) lower than in August 2016, which reduces enrollee appeal resolution turnaround time. To support ongoing alignment and mitigate future issues, the Grievance and Appeals department continues to work with the Pharmacy department, reviewing prescription orders as soon as they are submitted.

- In working with our transportation subcontractor for our LTC enrollees, we identified a need for additional drivers to fulfill the trip requests submitted. The shortage of drivers resulted in missed and late pick-ups, which in turn led to an increase in complaints and grievances. The subcontractor increased its associates to meet this need, and related complaints and grievances decreased.

Humana takes all our Medicaid Fair Hearings very seriously. Since 2015 Grievance and Appeals added an additional step in the Medicaid Fair Hearing procedure, where a Medical Director performs a courtesy review of all Medicaid Fair Hearings. The additional step in the process ensures the initial decision provided by the Grievance and Appeals department was accurate and verifies that any additional information provided for the hearing does not change the outcome of the case

In September 2016, the Grievance and Appeal team identified an opportunity to add additional quality oversight of our Medicaid Fair Hearings by implementing an internal auditing process, which audits one hundred percent (100%) of the cases. The National Quality Auditors (NQA) perform these audits on all Medicaid Fair Hearing cases to verify we process each case according to the policies and procedures put in place to ensure contractual compliance. We provide results of the audits to the Frontline Leader and the Medicaid Fair Hearing associate weekly. In addition to this quality control, Humana also added additional internal compliance metrics to monitor adherence to the Contract requirements, including changes that may occur through a Contract Amendment. SPLUNK monitors the compliance of Medicaid Fair Hearing cases in real-time. We also capture and monitor them daily in a dashboard.

In August 2017, Humana initiated its Member 360 Committee to systematically improve the enrollee experience including the complaint, grievance, and appeal process. This Committee

provides a forum for review of enrollee-related metrics, root cause analysis, process improvement opportunities and escalation of enrollee concerns. Composed of Florida market leadership and Humana functional areas, the Committee meets monthly to review all metrics applicable to enrollees, such as grievance and appeals data, Customer Care call trends, Care Coordination reports, and web and mobile application usage reports, to conduct root cause analysis and identify process improvement opportunities. Monthly metrics and root cause analysis of what drives enrollees to file a complaint, grievance, or appeal will be critical to measure success. The sole objective of the Committee is for Humana to better understand concerns from enrollees and look for opportunities to improve their experience.

These examples demonstrate how internal and external collaboration allows Humana to ensure a positive enrollee experience. By using data to inform improvements, we can more easily identify barriers. Understanding the structure of internal areas also helps create efficiencies within our processes to further reduce resolution times. These improvements make Humana's Grievance and Appeals System stronger and consistently compliant with both AHCA's requirements and with the high expectations of Humana's enrollee-centered approach.

Evaluation Criteria:

1. The extent to which the respondent's grievance and appeal system flowchart reflects ease of access for individuals with complaints, grievances and appeals, including ease of access for persons with disabilities or who speak other languages.

2. The extent to which the respondent's timelines for acknowledging and responding to complaints, grievances and appeals are less than those specified in federal and State requirements.

3. The extent to which the respondent's complaint, grievance and appeal and Medicaid Fair Hearing data are aggregated so that results are actionable, protect enrollee privacy and are reviewed by the appropriate staff or committee for analysis and prioritization of corrective action and/or improvement initiatives.

4. The extent to which the respondent's complaint, grievance and appeal process imposes deadlines on completion of corrective action plans implemented as a result of verified complaints, grievances or appeals and have set quality controls in place to review outcomes.

5. The extent to which the respondent is able to ensure all complaints (including those submitted to the respondent by the Agency or respondent's subcontractors) are tracked and resolved as part of the respondent's established complaint, grievance and appeal process.

6. The extent to which the respondent's grievance and appeal system data resulted in operational improvements of the respondent.

Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 13 – Social Media (Statewide):

The respondent shall describe its approach for engaging enrollees by using innovative communication methods and technologically advanced resources, including, but not limited to the use of social media, texting and smartphone application platforms.

Response:

Humana has built meaningful relationships with Medicaid enrollees across Florida thorugh face-to-face interactions, phone calls, and other traditional communication. To enhance this approach, we have progressively rolled-out our digital strategy to supplement these connections. For the upcoming contract, we have designed a Florida Medicaid-specific digital engagement and social media strategy to enhance our current methods. Across our enterprise, Humana has experience offering a range of innovative technologies including a social media presence, text messaging platform, and mobile applications. We have leveraged the insights gained throughout the current contract, our enterprise-wide efforts, and feedback from enrollees to design this strategy. The strategy is focused on improving access to care, enhancing health literacy and education, improving engagement in care, and enhancing quality of care, all while protecting enrollee privacy and protected health information (PHI) and respecting enrollee communication preferences.

Our digital strategy includes: use of our Customer Relationship Management (CRM) tool health literacy training for employees, regular audits and enrollee feedback surveys to ensure we exceed standards, a redesigned health and well-being website, social media platforms for enrollee education and engagement, and mobile-friendly access to Humana resources.

Humana's award-winning digital team – the Digital Center of Excellence (DCoE) – will manage these efforts. The team comprises individuals from areas across our organization, such as digital outreach, messaging, and Information Technology. This team also includes a predictive analytics team which leverages enrollee data.

==========
1. The extent to which the respondent described how these technology investments will be used to improve health literacy and promote improved health outcomes.
==========

Our digital engagement strategy is designed to engage all enrollees, with special attention directed at hard-to-reach enrollees. We use technology to inform enrollees on the importance of timely and regular care and how to access it. Our innovative engagement techniques build on our prior experience using both automated and live agent calls to notify enrollees of needed care and the avenues they have available when a barrier to care is determined.

Humana is investing the following to enhance our engagements: a Medicaid health and well-being website, Medicaid focused social media platforms, improved digital communication platforms, and digital campaigns designed specifically to improve both health literacy and health outcomes.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

HUMANA'S INTEGRATED HEALTH AND WELL-BEING WEBSITE

Humana is developing a fully redesigned, integrated health and well-being website that will offer information and improved functionality for Florida Medicaid Enrollees. This integrated site will be created using the latest standards to ensure an engaging experience and allow all enrollees, including those with low health literacy, to navigate the pages and find the information that they need.

Our redesigned website will be available by October 1, 2018, ahead of the new contract start date. Changes include adding "Quick Links" at the top of every page that navigate to the most used features: Find a Provider, Enrollee Handbook, and Contact Us. We will continue to offer a translation function so that the website will be available in both English and Spanish. Enrollees can also call our Customer Care Center, which will connect them to oral interpretation services in two hundred (200) languages, video interpretation in twenty-four (24) languages (including American Sign Language), and translated written materials of vital documents based on threshold languages and auxiliary aids required by disabled enrollees. Since language is not the only barrier to access, website users may also adapt font sizes for easier viewing.

Our new website will utilize our proprietary search engine, "AskHumana," which actively engages with enrollees based on past search behavior. AskHumana uses intelligent algorithms to include results that are related to the enrollee's search topics, in hopes of guiding the enrollee to the information they need rather than only what they typed. This best in class feature is especially important for enrollees with lower literacy levels and those with less experience searching online. Our goal is to further adapt AskHumana to include enrollee-specific information, such as the enrollee's specific primary care provider's (PCP) name and the PCP's phone number in response to a search for "PCP."

SOCIAL MEDIA PLATFORMS

Humana has a company-wide presence on social media platforms including Facebook, YouTube, Twitter, Instagram, and LinkedIn. Social media is a primary information and communication vehicle for many generations, and it serves an especially critical and connective purpose for the younger generation of enrollees. With more than two hundred twenty-one thousand (221,000) Florida Medicaid enrollees under the age of twenty-one (21), Humana continues to innovate in its approaches to engaging this young age group and their caregivers.

We deliver tailored messaging to followers who opt-in to our feeds based on their interest in Humana and their desire to receive information and content from us, ensuring compliance with Medicaid and Agency for Health Care Administration (AHCA) standards. The following section details our plans for social media and other innovative engagement techniques.

FACEBOOK

On October 1, 2018, our new Florida Medicaid Facebook page will go live. This page will include information that is focused on topics specific to Medicaid enrollees. We will leverage organic content in addition to content based on location, interests, behaviors, and demographics. Our Facebook page will be curated by our award-winning DCoE, which leverages its extensive expertise in this area.

We will tailor social media messages and campaigns to address key health topics that are relevant to Florida enrollees. Some examples include:

- Flu Shot Campaign: Our goal is to educate enrollees about the importance of getting a flu shot, especially in warm weather markets, and to drive traffic to the Humana.com/flu website. In 2016, we ran a Facebook paid advertising campaign for flu shot awareness. From October through December, we spent approximately thirty-five thousand dollars ($35,000) to reach an audience throughout the U.S. and delivered messages encouraging individuals to get their flu shot to protect themselves and their loved ones. Through this campaign, we earned more than three (3) million impressions and nearly thirteen thousand (13,000) clicks to the Humana flu website with more information on the benefits of flu shots. We are currently running a similar campaign for the 2017 through 2018 flu season.

- More Healthy Days Campaign: We are implementing a data-driven social media campaign to drive Center for Disease Control (CDC) Healthy Days by empowering enrollees to take control of their own health and self-assess what having more Healthy Days means to them. This campaign was designed in response to enrollee reports of poor health status. As data points, we will use six (6) Facebook posts, including one (1) pre-campaign Healthy Days Facebook Live poll, four (4) interactive video posts that offer an opportunity to assess an aspect of the user's health (vision, balance, hearing, and stress), and one (1) post-campaign Healthy Days Facebook Live poll. Through the pre- and post-campaign polls, we will be able to measure the impact of our campaign on our target audience. That is, if the messages resonated with them and if they chose to engage in their health using a Facebook ad.

YOUTUBE
To share detailed video content to Medicaid-eligible individuals through YouTube, we plan to create a Medicaid-specific playlist within our corporate YouTube channel. This playlist will allow us to post and share health literacy videos providing education and information about key topics such as navigating the healthcare system, questions to ask during a routine visit, and recommended screenings. We can increase the visibility of this content by creating shortened versions of the same content to share on Facebook. Humana's YouTube channel currently has approximately two hundred (200) videos and nearly one point five (1.5) million views. These videos address the importance of Healthy Days, how to access care, demonstrations of the MyHumana mobile application, and more.

CUSTOMER RELATIONSHIP MANAGEMENT

CUSTOMER CARE
Humana has invested heavily in a state-of-the-art, award winning Customer Relationship Managerment (CRM) system in order to provide Customer Care representatives with a 360-degree view of the consumer that can be leveraged to better serve our enrollees and deliver a personalized care experience. Our CRM is integrated with more than ninety (90) data sources and, through a combination of automation and advanced analytics, delivers a comprehensive record of each enrollee to our representatives. CRM enables connected, meaningful interactions so we can help enrollees, particularly those with healthcare needs, to get the care and support they need, engage in appropriate health and clinical programs, and receive a consistent, positive experience throughout their health journey.

MEMBER OUTREACH

CRM will serve as the central point for a consistent, enterprise-wide approach for the planning, implementation, fulfillment, and tracking of communication across all of our channels. CRM will allow Humana to compliantly deliver targeted and personalized messaging based on member preferences and needs. CRM leverages a real-time member view that ensures we are messaging to the most accurate phone numbers, email addresses, and physical addresses. CRM also connects to a preference management system to utilize appropriate preferences and opt-ins as part of the fulfillment process. CRM will then coordinate the fulfillment of the communication to the member in their desired format (whether that is through automated calls, emails, mobile push notifications, texts, or by mail), and track that the communication occurred. All of the communications fulfilled via CRM are stored in a central repository that allows associates to see the communications that a member has received.

To inform effective member outreach incorporated within CRM platform is IBM's Watson Campaign Automation system that includes:

- A centralized management and workflow tool to track campaigns from intake through reporting activities, regardless of the team completing the activity

- A campaign eligibility tool to select and target the appropriate population for personalized messaging

CELL PHONE PROGRAMS

TEXT MESSAGING

To support our digital outreach strategy for the new contract, we will continue our partnership with Safelink Wireless to offer a free smartphone and cell phone service to all enrollees. We will also use text messaging to engage enrollees in obtaining their prescriptions, setting up appointments, reminding enrollees of appointments, and providing directions to appointments. All messages offer enrollees instructions on how to opt-out.

Upon approval by AHCA in 2018, we will launch a pilot program to solidify our approach to text messaging Medicaid enrollees. We will send text messages to engage a subset of Florida Medicaid enrollees who are due or overdue for their annual wellness visit. We will monitor the pilot’s ability to engage our enrollees via text message to both schedule and attend their yearly wellness visit compared to a control group of enrollees who are not participating in the pilot program and have only received a reminder via our Medicaid wellness letter. The goal of this data collection is to refine and enhance our systems to better assist our enrollees’ in attaining their health goals.

MOBILE APPLICATIONS

MYHUMANA© MOBILE APPLICATION AND MYHUMANA PORTAL

The MyHumana portal allows the enrollee to: access health information to improve health education and literacy; increase engagement and self-service in care; view benefit information; access enrollee identification (ID) cards; find a provider; view clinical alerts and plans of care;

and send secure messages to a team of Humana associates. Humana enrollees can access the portal through the website, a mobile device, or within the MyHumana mobile application. In the first half of 2017, enrollees actively using the MyHumana app nearly tripled to one hundred forty thousand (140,000) from fifty-six thousand (56,000) in 2016. Humana will extend the use of mobile apps to all Medicaid enrollees by October 1, 2018.

The MyHumana portal has a built-in algorithm to remind enrollees of critical health-related activities such as screenings, exams, and medication reminders. Enrollee data is compiled from care plans and claims. We then run this data through our algorithms to determine what care the enrollees should be receiving. Each time the enrollee logs on to MyHumana, he or she will see a gap-in-care alert if he or she has at least one gap.

RXMENTOR
RxMentor, a new application which will be available to our Florida Medicaid enrollees in 2018, allows enrollees to add to their prescription medication list, vitamins or supplements list, and over-the-counter medication list. RxMentor includes details about medications (strength, dosage, allergic reactions), images of the pills to make them easier to distinguish, and options to discussion medications with a pharmacist. Between April 2017 (the time the program launched) and August 2017, over eighty thousand (80,000) verified medication lists were added to the database.

EFFORTS TO INCREASE HEALTH LITERACY AND PROMOTE HEALTH OUTCOMES

Humana is developing the following multi-channel, enrollee-centric engagement efforts for Florida Medicaid by utilizing digital channels and customized messaging to impact health literacy and health outcomes. We will use the results of these efforts to drive future engagement efforts.

- Digital Tool Promotion: In recognition of how our enrollees function in today's digital world, our goal is to engage enrollees and drive awareness of our numerous electronic health tools and resources (MyHumana portal, MyHumana app, RxMentor). We will include reminders about our various resources on each of our current platforms to drive enrollees to the tools. We also plan to train and engage all areas of our organization, such as Customer Care, the Education and Satisfaction Unit (ESU), and Care Managers, to be ambassadors in encouraging, training, and assisting our enrollees with the use of our redesigned website and digital health tools.

- MyHumana Gap-in-Care Alerts: These alerts promote awareness of preventive screenings, their importance to enrollee health, and guidance for how to complete needed screenings. When enrollees log in to their MyHumana account, they will receive customized alerts based on their health profile.

- Women's Health Campaign: To decrease barriers to accessing care, we have an extensive women's wellness education program that includes information on coverage so that our female enrollees can make informed decisions for themselves and their families. We are focusing on women who are actively engaged in care by contacting them with texts and emails to drive them to the Humana website for information about specific conditions relevant to their health.

- Maternity Program Collaboration: Early pregnancy is the ideal time to contact women and engage them in care that is essential to both the baby and developing fetus. Expanding our existing maternity program, our goal is to conduct outreach to pregnant women to provide them with information and education on what to expect during their pregnancy, the risks in pregnancy, and conditions and changes to look for to have a successful, healthy birth.

- Child Wellness Campaign: With the goal of providing education on child wellness and benefit coverage, this campaign will send texts and emails to parents and caregivers that have customized reminders based on the child's milestones (birthday, age group, back to school, or season).

- Doctor on Demand: This telemedicine enhanced benefit gives enrollees with twenty-four (24) hours a day, seven (7) days a week access to physicians from their phone or computer. This will help prevent enrollees from making unnecessary trips to the Emergency Department by offering appointments with PCPs, internists, Emergency Medicine physicians, Allergy and Immunology physicians, and preventive health clinicians. Providers are board-certified in Florida.

==========

2. The extent to which the respondent provides data that supports the efficacy of the proposed approach in achieving the intended goals/health outcomes (e.g., increase in appointment compliance) for the target population.

==========

DIGITAL CENTER OF EXCELLENCE AND INNOVATION TEAMS

The foundation of our online and other electronic platforms is our dedicated DCoE comprising teams of experts in their disciplines who work across Humana to provide a well-informed, integrated approach to technology that aligns with Humana's and AHCA's goals and continuously reviews the efficacy of our efforts. The DCoE vets and reviews all innovative enhancements to our technology landscape including social media pages, texting campaigns, and other new technologies. Importantly, each of our local markets, including our Florida Market, has extensive input in the strategy of the DCoE and retains leadership about Florida-specific needs. In 2016, as a testament to our team's successes and capabilities, our DCoE earned accolades from:

- PR Daily (Best Multi-Media Campaign, Best Use of Digital and Social Media for Healthcare, Best Use of Digital and Social Media for Internal Communications)

- Ex Award (Best Use of Digital and Social Media)

- Halo (Best Video Award)

- SABRE (Best Sponsorships Campaign)

Our Proactive Care Strategies team designs digital outreach campaigns based on proprietary predictive algorithms. We use the following data points to craft our algorithms: claims, outreach efforts, clinical outcomes, historical compliance in care routines, and medication adherence. From the data, we create outreach efforts that are individually crafted to ensure we have the

greatest impact on the enrollee, and we utilize their desired communication pathway from the information we have stored in our CRM platform. An example of one of these models is our Predictive Emergency Department Use Model. This allows us to predict the likelihood of an enrollee utilizing the Emergency Department when another form of care, such as urgent care or an office visit would be more appropriate. We reach out to enrollees identified as being likely to use the Emergency Department for a non-emergent reason to educate on the proper uses of the Emergency Department and the other avenues to care that are available.

Humana has a specific approach to design, test, implement, and continuously monitor our digital engagement. Our proactive strategy includes the following steps to support clinical and quality initiatives:

- Intake: Each week, we review requests for new engagements to support clinical and quality initiatives that are informed by the DCoE and Clinical Analytics team

- Strategy: Our strategy is guided by data points from multiple sources, including predictive models that look at enrollee behavior and use trends

- Content and Campaign Build: We use our dedicated teams to develop content and implement campaigns or enhancements

- Launch: We implement our engagement and begin outreaching to enrollees

- Monitoring: We review reach, response, email open, click, intent to schedule, and appointment schedule rates to determine the effectiveness of our campaign. We adjust our approach based on these rates, if needed

- Outcomes: We monitor clinical outcomes six (6) months and onward after the campaign ends to determine overall the effectiveness of our campaign on enrollee actions

Our strategies in action: Since we recognized that smartphones are an integral part of today's society and often a preferred outlet to electronic resources, we created the MyHumana application. This involved determining how to best display the MyHumana portal in a mobile friendly way. We piloted use of the application with our Medicare population and we've achieved great results—with over one hundred forty thousand (140,000) active users as of August 2017, compared to just fifty-six thousand (56,000) in all of 2016.

EFFICACY OF OUR APPROACH

We measure the impact of our new technologies on enrollee health. We do this by reviewing whether our various platforms are effective in reaching our enrollees and providing them with the tools they need and want to determine future innovations.

PRIOR EXPERIENCE

We have seen success with the efforts mentioned above in increasing health literacy and promoting health outcomes:

- Flu shot campaign: reached sixty-five percent (65%) of enrollees and made over three (3) million impressions

- Florida Medicaid Well-care visit campaign: seventy percent (70%) gap closure rate

- Non-Digital Women's Health Campaign: seventy-five percent (75%) of our Florida enrollees who were messaged closed their gap in care

- Women and Child Campaign: seventy-nine percent (79%) appointment schedule rate among those reached

To align these prior campaigns with our updated digital outreach strategy, we now use multi-channel campaigns across our lines of business. Specifically, we have found that our emails have a thirty-three percent (33%) open rate, substantially higher than the health industry's overall email open rate of just twenty-two percent (22%) [1]. However, we seek to continually improve upon our successes. We've found that when we pair emails, or other engagements, with phone calls, we have a significantly higher gap closure rate. Examples of emails include informing the enrollee that they've missed a needed appointment and that there are screening kits available. We are piloting adding links to schedule appointments and order kits to determine if these are effective in engaging enrollees in care.

WEBSITE
In addition to our insights into engaging enrollees through phone calls and emails, we have successfully implemented new website strategies that engage enrollees. We increased our year-over-year conversion rate by twenty-one percent (21%), meaning that visitors to our website are reaching desired information goals, engaging them in their own health journey—whether that is through taking a survey, logging-in to the MyHumana portal, or accessing health education information.

CUSTOMER CARE CENTER
We support our Customer Care Representatives (CCRs), who receive thirteen (13) weeks of intensive training, with an Artificial Intelligence (AI) assistant designed by Mattersight. This AI assistant improved the rate at which enrollees were helped the first time by eight percent (8%). Now, over ninety percent (90%) of enrollees report that the Customer Care Center usually or always solved their questions.

The assistant identifies an individual caller's personality type based on collected behavioral data. It then instantly routes that call to the available agent who is best able to successfully communicate with that personality type, based on past performance data. This personality-based approach pairs callers and agents who are most likely to have natural, effortless chemistry. This allows calls to be succinct, yet impactful.

Our new AI assistant guides CCRs and gauges the receptivity of the conversation and our enrollee's emotions. During the call, the AI signals CCRs in real-time about the experience the enrollee is having during the interaction. The AI assistant helps CCRs identify enrollees who may have low literacy, low health literacy, or who are not following along in the conversation. CCRs are alerted to slow the pace of the conversation and ask if the enrollee comprehends the conversation.

The AI technology does not replace how we monitor the performance of our Customer Care Center associates. Rather, it supports them with real-time feedback and avoids enrollee dissatisfaction with the call experience. The Customer Care Center uses data to assess Individual CCR performance on a weekly basis. Led by the Front-Line Leader and Production Lead, we evaluate CCRs by listening into live phone calls, monitoring that systems are used correctly, ensuring processes are followed based on call need, and verifying appropriate documentation of the inquiry.

MOBILE ENGAGEMENT

According to The Kaiser Family Foundation, seventy-eight percent (78%) of cell phone users earning an annual income of less than thirty thousand dollars ($30,000) send and receive text messages and forty-eight percent (48%) use internet or email mostly on their cell phones [3]. We understand the importance of an engaged population and have confirmed that most of our enrollees have access to smart phones. Humana currently offers SafeLink Wireless internet-enabled smart phones to each of our LTC enrollees at no cost. Of those who have requested and received information on the cellphone program, thirteen percent (13%) have completed the process of obtaining a phone—above the ten percent (10%) typical utilization rate. Our enrollees currently registered in this program averaged nearly twenty (20) minutes of calls to Customer Care, one hundred seventy-one (171) minutes per month of regular calls, sixty (60) texts, and twenty-one (21) MB of data use per month. Enrollees have called us to praise the SafeLink phones, their ability to connect in rural areas, and the number of minutes provided. One of our LTC enrollees shared, “I receive enough minutes to last through the month and the phone doesn’t have any connection issues even though I live in a rural area.”

With the recent addition of cell phone numbers into enrollment files, we have built modules within Clinical Guidance eXchange (CGX), our proprietary clinical software system, to add this data to our files for access by care managers. We’ve also added fields for email addresses, should the enrollee provide one. This increased information from the enrollment files has prompted Humana to increase efforts to engage enrollees via mobile platforms.

TEXT MESSAGING

Our research has demonstrated that text messaging is thirty (30) times more effective than voice calls and ninety-five percent (95%) of text messages are read within three (3) minutes of receipt. This makes text messaging the superior mode of communication for many of our enrollees. Therefore, we plan to implement a text messaging platform after AHCA approves vendors for this engagement pathway.

MOBILE APPLICATIONS

We launched the MyHumana application in 2016 for a pilot audience. We enrolled fifty-six thousand (56,000) users in 2016, and expanded to over one hundred forty thousand (140,000) in 2017. We also launched RxMentor in early 2017. By the summer, we had over eighty thousand (80,000) medication lists stored within the application. Because of these successes, we are expanding these services to our Florida Medicaid enrollees.

TELEHEALTH PLATFORM

We partner with Doctor on Demand to offer access to providers using telemedicine technology. In studying a population similar to our Florida Medicaid enrollees, we found that: five percent (5%) of enrollees would have gone to the emergency department forty-one percent (41%) to urgent care, thirty-six percent (36%) to a PCP, twelve percent (12%) not gone anywhere, and

six percent (6%) to another location had they not used the platform. Thanks to this partnership, enrollees were able to get the care and direction they needed without having to physically travel to a physician office.

TRAINING ASSOCIATES ON HEALTH LITERACY
Our Florida-based Customer Care Center and clinical care managers have completed the health literacy training course. Our Customer Care Center associates are equipped with technologies that alert them of key warning signs of low health literacy, including but not limited to: frequently missed appointments incomplete registration forms noncompliance with medication and lack of follow-through on tests or referrals. Customer Care Center Associate orientation includes New Enrollee Communication training and Clinical Health Literacy Training. Further, associates who engage with enrollees in-person are asked to consider issues with health literacy based on whether the enrollee is hesitant to ask questions or is unable to provide coherent, as well as their sequential clinical hostory and whether the enrollee identifies pills by looking at them rather than reading the label; or if the enrollee brings bags of medicines that contain duplicates.

Associates are also trained to focus enrollee engagement on what the enrollee needs to know and needs to do, ensuring they have concrete next steps. To address overall literacy levels, our teams are equipped with pictures and equipment to demonstrate what is being asked of the enrollee. Associates provide enrollees with educational materials that they can understand based on how they prefer to learn information and based on language preferences. Enrollee preferences will soon be entered into our CRM to ensure we always communicate with enrollees via their desired pathway. This allows us to effectively communicate with our enrollees regardless of their literacy skills and improve our communication with our enrollees overall.

==========

3. The extent to which the respondent describes how social media, texting and smartphone app(s) will be mobile friendly and made available on all operating systems (iOS, Android, Windows, etc.) and interoperable with other technologies currently used by the Medicaid population (e.g., Lifeline).

==========

Humana's website, mobile applications, and portals have been thoughtfully designed to ensure that they work regardless of the user's operating system. We recognize that our enrollees may be using multiple types of devices and computers, including public computers in schools and libraries, or mobile devices to access our systems. We perform testing on externally-facing platforms through Internet Explorer, Google Chrome, and iOS and Android operating systems prior to launching any initiative or tool to ensure our enrollees will have access on as many of their devices as possible. Our adaptive website is viewable on any device with an internet connection, automatically adjusting font size, placement, and page width based on screen size and user settings. Humana is certified in HITRUST CSF v7, which is more comprehensive than HIPAA standards and demonstrates our commitment to protecting enrollee data.

MOBILE-FRIENDLY
Humana's website is designed to ensure our enrollees have access to key pieces of information without navigating through several pages. The website responds to the type of device the enrollee is using—whether that is a smartphone, tablet, or computer. This ensures that all content available on our desktop site is viewable through adapted versions. Through the mobile-

friendly MyHumana secured portal page, enrollees can access their enrollee ID card, be reminded who their PCP is, view prescription drugs, and set communication preferences.

MOBILE APPLICATIONS
Humana's mobile applications, MyHumana and RxMentor, are designed to work on both iOS and Android. We have thoroughly tested them to ensure they are interoperable with our current systems. This allows them to pull enrollee-specific data, such as their PCP's name and phone number. Our applications offer the same resources as our online versions, but in a mobile friendly manner. These applications work on the free SafeLink phone, which ensures all enrollees have access to them.

DOCTOR ON DEMAND
Humana is launching a telemedicine partnership with Doctor on Demand, to encourage telemedicine as a means ability to limit out-of-network utilization and enhance non-emergency ED diversion. Doctor on Demand is a platform that provides enrollees with access to physicians twenty-four (24) hours per day, seven (7) days a week from the enrollee's phone or computer. The platform allows enrollees to see or speak with a physician immediately using video or phone services or to make an appointment for a later time. Additionally, the platform allows an enrollee to upload medical history, send images if necessary, and obtain a prescription. Enrollees may access Doctor on Demand via a mobile application that is compatible with both iOS and Android operating systems.

==========
4. The extent to which the respondent is able to provide routine performance data to support member usage trends.
==========

The DCoE is the home of our digital technologies performance data monitoring. The DCoE works with our Predictive Analytics team to determine the optimal courses of action to take for our enrollee engagement strategies. During engagement efforts, the Predictive Analytics team uses our predictive algorithms to form our approach to enrollee outreach. We perform pre-, mid-, and post-engagement surveys and regularly monitor operational performance dashboards to determine how effective our campaigns are. If we are not satisfied with the progress we are making based on the results of our mid-engagement survey, we adjust our approach.

The DCoE also uses performance data to enhance future technological innovation strategies. This has led to our texting pilot, which is our proactive response to the fact that texting is thirty (30) times more effective than voice calls. However, when our enrollees feel that they would benefit from a phone call, our CCRs are able to help as efficiently and correctly as possible the first call. With the help of our AI assistant, Mattersight, we have reduced the occurrence of required call backs after the first call by eight percent (8%). In the coming months, we will be able to measure just how impactful these two (2) programs have been for our enrollees. We will utilize the knowledge gained by the DCoE through their own research and through the active engagement of the Florida Market team to drive additional partnerships and pilots.

We regularly monitor and evaluate the efficacy of our website and social media pages to measure engagement through traffic, engagement and response rate, retention time, number of clicks, and features used. We create future campaigns based on current issues, enrollee needs, and projected future health trends. We utilize pre- and post-initiative polls for certain campaigns

to measure their success and to guide future campaigns based on the lessons learned from previous ones. On a yearly basis, we compare our website statistics, such as number of visits and conversion rate, to our previous year metrics. We then compare these results to what we expected based on the innovations we implemented to help shape future changes. We have had great success in our strategies as evidenced by our twenty-one percent (21%) increase in our conversion rate.

Finally, enrollees can directly rate the variety of applications we make available to them—the MyHumana App, Doctor on Demand, and RxMentor. We always consider the feedback on these platforms for future iterations of them.

Evaluation Criteria:

1. The extent to which the respondent described how these technology investments will be used to improve health literacy and promote improved health outcomes.

2. The extent to which the respondent provides data that supports the efficacy of the proposed approach in achieving the intended goals/health outcomes (e.g., increase in appointment compliance) for the target population.

3. The extent to which the respondent describes how social media, texting and smartphone app(s) will be mobile friendly and made available on all operating systems (iOS, Android, Windows, etc.) and interoperable with other technologies currently used by the Medicaid population (e.g., Lifeline).

4. The extent to which the respondent is able to provide routine performance data to support enrollee usage trends.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 14 – CAHPS Results (Statewide):

The Respondent (including respondents' parent, affiliate(s), or subsidiary(ies)) shall include in table format, the target population (TANF, ABD, dual eligible) and the respondent's results for the Consumer Assessment of Healthcare Providers and Systems (CAHPS) items/composites specified below for the 2017 survey for its adult and child populations for the respondent's three (3) largest Medicaid Contracts (as measured by number of enrollees). If the Respondent does not have Medicaid CAHPS results for at least three (3) states, the respondent shall provide commercial CAHPS results for the respondent's largest Contracts. If the Respondent has Florida Medicaid CAHPS results, it shall include the Florida Medicaid experience as one (1) of three (3) states reported. Respondents shall provide the data requested in **Exhibit A-4-a-4**, Standard CAHPS Measurement Tool, to provide results for the following CAHPS items/composites:

a. Health Plan Rating;
b. Health Care Rating;
c. Getting Needed Care (composite);
d. Getting Care Quickly (composite); and
e. Getting Help for Customer Service (composite).

Response:

Humana is committed to continuously improving the quality of care, supports, and outcomes for our Florida Medicaid enrollees. One of the best ways to determine our level of success at achieving this goal is to ask the enrollees themselves. Through our Consumer Agreement of Healthcare Providers and Systems (CAHPS) survey processes, we understand how we are best serving our enrollees and identify areas where we can improve enrollee experience.

In 2016, Humana contracted with Decision Support System (DSS) Research, the National Committee for Quality Assurance (NCQA) certified vendor that conducted the CAHPS survey for the Florida Medicaid Adult and Child markets. DSS has thirty-five (35) years' experience successfully developing and administering research surveys for the healthcare industry. DSS is certified and approved for administration of MEdicaid CAHPS.

Enrollees were most recently surveyed between February and May of 2017, using a combined mail and telephonic methodology.

CAHPS RESULTS

Our three (3) largest Medicaid contracts, including our respondent, Humana Medical Plan, Inc., its affiliates, subsidiaries, and parent company, Humana Inc., and its subsidiaries and affiliates, include those listed here. These correlate to the three (3) contracts shown in attached Exhibit A-4-a-4.

1. Florida Medicaid Managed Care
 - Three hundred twenty-five thousand nine hundred and nine (325,909) enrollees
 - Populations served - Medicaid TANF, ABD, Dual Eligible

2. Kentucky Medicaid Managed Care
- One hundred forty-five thousand eighty-eight (145,088) enrollees
- Populations served - Medicaid TANF, ABD, Expansion, Dual Eligible

3. Virginia Commonwealth Coordinated Care
- Eight thousand six hundred twenty-one (8,621) enrollees
- Populations served - Dual eligibles (CMS Financial Alignment Demo), ABD

Our Florida Medicaid Managed Care contract illustrates our experience serving the exact population included in this ITN. The additional two (2) contracts – Kentucky Medicaid Managed Care and Virginia Commonwealth Coordinated Care - closely resemble the populations included in this ITN and in our current Florida SMMC Comprehensive program. In our Kentucky Medicaid program, we serve the same TANF population, consisting of pregnant women and children under the age of twenty-one (21), as well as those enrollees who are aged, blind or disabled. In our Virginia Commonwealth Coordinated Care, we cover a population very similar to our current Florida Comprehensive enrollees receiving long-term care (LTC) services; however, it should be noted that the Virginia Commonwealth Coordinated Care does not include certain populations included in the SMMC program, such as children under the age of twenty-one (21). We do not perform a child CAHPS survey in that program, and as such, we do not have child CAHPS scores for our third Medicaid contract.

Humana's Adult and Child CAHPS results can be found in Exhibit A-4-a-4.

Evaluation Criteria:

1. The extent to which the respondent exceeded the national Medicaid mean for each CAHPS survey item/component reported.

Score: This section is worth a maximum of 20 raw points as described below.

Exhibit A-4-a-4, Standard CAHPS Measurement Tool, provides for thirty (30) opportunities for a respondent to report prior experience in providing desirable experiences with health care (five (5) measures, three (3) states each, adult population for each, and child population for each). For each of the five (5) measures, a total of six (6) points are available.

The respondent will be awarded 1 point if their reported plan rate exceeded the national Medicaid mean, for each available state, for adults and for children, respectively. An aggregate score will be calculated and respondents will receive a final score of 0 through 20 corresponding to the number and percentage of points received out of the total available points. For example, if a respondent receives 100% of the available 30 points, the final score will be 20 points (100%). If a respondent receives 27 (90%) of the available 30 points, the final score will be 18 points (90%). If a respondent receives 3 (10%) of the available 30 points, the final score will be 2 points (10%).

EXHIBIT A-4-a-4
SRC#14 - STANDARD CAHPS MEASUREMENT TOOL

INSTRUCTIONS:

Respondents should provide results for the Consumer Assessment of Healthcare Providers and Systems (CAHPS) items/composites specified below for the 2017 survey for its adult and child populations for the respondent's three (3) largest Medicaid contracts (as measured by number of enrollees).

If the respondent does not have Medicaid CAHPS results for at least three (3) states, the respondent shall provide commercial CAHPS results for the respondent’s largest Contracts. If the respondent has Florida Medicaid CAHPS results, it shall include the Florida Medicaid experience as one (1) of three (3) states reported.

The CAHPS items/composites that the respondent is required to report on are located in the CAHPS Results tab.

Use the drop-down box to select the state for which you are reporting and enter the CAHPS results (to the hundredths place, or XX.XX) for that state's Medicaid population for the 2017 survey.

Getting Care Quickly Composite (the percentage of respondents reporting it is usually or always easy to get care quickly)	**78.62**	**86.94**	**85.57**	**92.59**	**74.75**	
Getting Help from Customer Service Composite (the percentage of respondents reporting it is usually or always easy to get help needed from customer service)	**90.63**	**91.09**	**92.02**	**94.82**	**89.92**	

Total Points	**16**

D. PROVIDER EXPERIENCE

SRC# 15 – Provider Engagement Model (Statewide):

The respondent shall describe in detail its provider engagement model. The respondent shall include the following elements in its description, at a minimum:

a. The respondent's staff that play a role in provider engagement;
b. The presence of local provider field representatives and their role;
c. The mechanism to track interactions with providers (electronic, physical and telephonic);
d. How the respondent collects and analyzes utilization data and provider feedback, including complaints received, to identify specific training needs;
e. The metrics used to measure the overall satisfaction of network providers with the respondent; and
f. The approach and frequency of provider training on respondent and Agency requirements.

Response:

Humana's team recognizes the importance of a strong Provider Engagement model. Our partnership empowers providers to deliver a high quality, clinically integrated healthcare model while helping us achieve our common goal to provide quality care to enrollees. To support this goal, we focus on administrative simplicity, financial partnership, and strong provider satisfaction. Humana has a proven record of quality initiatives and successful enrollee outcomes while serving Florida's Medicaid population over the past twenty (20) years. We currently rank second in NCQA quality rankings among MMA Medicaid plans in Florida.

Humana dedicates more than one thousand (1,000) full-time employees nationwide to provider network management, recruitment, operations, education, and value-based contracting. Our Medicaid Provider Relations teams in Florida have significant experience. Our current team has an average of over eight (8) years of provider relations experience in the state of Florida and an average of over seventeen (17) years of experience in the healthcare industry. Humana's Florida-based Provider Relations teams include approximately seventy (70) full-time employees. Humana reviews our staffing model on an ongoing basis to ensure we have adequate resources to meet the needs of our providers.

Our investments in associates and information system technologies enable us to offer efficient and cost-effective support to our providers across our spectrum of products in Florida, including Medicaid, Medicare, and Commercial plans, while enhancing our connection to the provider community. When we recruit providers for our Medicaid network, they often have had exposure to Humana through other lines of business. The scope of Humana's Florida Operations gives us a larger volume of relationships with providers, enables more frequent interactions between our associates and provider associates, and fosters more sophisticated, aligned, performance-based financial arrangements aimed at improving quality outcomes while containing cost.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

==========

1. The extent to which plan leadership are involved in provider engagement.

2. The extent to which local provider field representatives are incorporated into the model, including the ratio of local provider representatives to providers.

==========

Our successful Provider Engagement model focuses on establishing and maintaining a one-on-one relationship between each provider and our local Provider Relations representative. Provider Relations representatives are assigned geographically at a ratio of one (1) representative per fifty-seven (57) providers which represents monthly visits to high touch providers such as primary care, personal care, assisted living facilities, and skilled nursing facilities. For high volume specialists visited quarterly, including OB/GYNs, cardiology, orthopedic, urology, adult day care, and respite care, the ratio is one (1) representative per eighty-nine (89) providers. Our partnership works toward a common goal: delivering quality care to enrollees. Humana's comprehensive Provider Engagement model includes our leadership team's direct and frequent interaction with providers and participation on our internal Provider 360 Committee. In addition to our leadership, Humana's Florida-based Provider Relations team currently consists of approximately seventy (70) experienced and talented full-time associates. Our local Provider Relations Representative has the one-on-one relationship with the provider and is assisted by both local and corporate support teams. Humana dedicates more than one thousand (1,000) full-time associates nationwide to support teams including provider network operations, finance, provider development, value-based contracting, and claims resolution.

Attachment 15-1 shows Florida Provider Relations representatives' footprint across the state. Attachment 15-2 illustrates our provider support system which includes local and corporate support.

LEADERSHIP COMMITMENT

Humana has a long-standing presence in Florida serving Medicaid, Medicare, and Commercial populations. We have served enrollees through our Medicaid plan for twenty (20) years and offered Medicare plans for thirty (30) years in Florida. Provider satisfaction and engagement are critical to our success serving enrollees. Humana's local leadership team is committed to provider engagement and has established strong relationships with our providers in Florida through extensive interactions. Humana leadership regularly attends Joint Operating Committee (JOC) meetings, provider association meetings, and individualized strategy meetings with providers to discuss new initiatives and opportunities to achieve our common goals.

JOINT OPERATING COMMITTEE (JOC) MEETINGS: Humana holds JOC meetings with our value-based, high volume, delegated, and subcontractor provider partners to review their financial, quality, and service level agreement performance. During these JOC meetings, we discuss topics including, but not limited to, health services, quality, Healthcare Effectiveness Data and Information Set (HEDIS), Medical Risk Adjustment (MRA), pharmacy, provider network, finance, and emerging industry trends. Our JOC meetings are an opportunity to develop and enhance our collaborative partnerships. These meetings offer insight, enabling us to evaluate opportunities to improve our provider experience and address specific provider needs. For instance, if Humana's Finance team recognizes that a provider has specific reporting

needs, we will discuss tailoring the report to meet the provider's need as a JOC action item. Another JOC meeting action item example is to discuss ad hoc reporting by our pharmacy team to assist providers experiencing a spike in prescription drug or prior authorization requests. JOC meetings may be scheduled monthly, every other month, or quarterly depending on the needs of the provider network or Humana. Our Provider Relations Director and the representative responsible for the provider partnership attend all JOCs in person. Our Regional Vice Presidents, Market Presidents, and Humana's Medicaid Segment President also frequently attend JOCs with our providers.

STRATEGY MEETINGS: Humana's senior leadership team initiates meetings with provider groups to discuss specific quality improvement, administrative simplicity, and financial initiatives in support of our common goals. Examples of these strategy meetings and their outcomes are described below.

- Humana leadership worked directly with our contracted providers to support improved birth outcomes. Since 2016, Humana's Chief Medical Officer and Market Vice President, along with our Provider Relations directors, have conducted a series of strategy meetings with targeted OB/GYN providers, to partner on Humana's quality and HEDIS initiatives, including our goal of lowering our overall medically unnecessary C-section rate. This collaboration has resulted in a decrease in our C-section rate from forty percent (40%) in 2015 to thirty-seven percent (37%) in May 2017. We have also experienced an improvement in our HEDIS prenatal and postpartum care rates. In 2015, Humana's Frequency of Ongoing Prenatal Care score was sixty-nine percent (69%), and in 2016, this score increased to seventy-one percent (71%). In 2015, Humana's Postpartum Care score was sixty-seven percent (67%), and in 2016, this score increased to seventy percent (70%).

- Following MMA implementation in Region 1, we received feedback during our provider education town halls that there were administrative challenges with the pre-authorization process. In response, our leadership conducted strategy meetings with providers throughout the region to further understand the challenges and develop a tailored solution. As a result, a customized pre-process was created for Region 1, including significant cross-functional involvement and IT infrastructure enhancements.

- Humana leadership met with Pediatric Associates, a large, statewide pediatric group serving over fifty-six thousand (56,000) Humana Medicaid enrollees, to discuss their new telemedicine program which was launched in July 2017. They partnered with American Well, a telehealth company, to develop their system and use a mobile application called Kids Now for their patients to schedule a telemedicine appointment. The application is connected to their EMR and appointment scheduling system. They have four (4) dedicated full-time physicians who provide telemedicine services via video conferencing for their patients across the state. In our strategy meeting, Humana and Pediatric Associates agreed to partner together to expand their program for all Humana pediatric and adult enrollees statewide. Follow-up meetings have been scheduled to further develop the strategy for a possible 2018 implementation.

ASSOCIATION MEETINGS: Humana's long-standing relationships with provider associations contribute to our ability to maintain provider engagement. Our partnerships with physician, hospital, long-term care, and ancillary provider associations enable open and ongoing communications. Humana engages with provider associations through regularly scheduled conference calls and meetings, frequently attended by Humana's senior leadership team.

Association meetings are a particularly effective way to work with medical and long-term care providers on issues unique to these providers, such as Medicare crossover claim processes. Below are a few examples of our outcomes working with provider associations:

- A Humana leader was recently elected to the Florida Assisted Living Association (FALA) advisory board, as well as the advisory board to the Florida Area Agencies on Aging. This relationship has enabled Humana to play an instrumental role in improving coordination between various Councils on Aging.

- Humana's Market Director and National Medicaid Director also meet monthly with Leading Age and Florida Association of Homes for the Aging to work through open items, such as provider concerns, possible innovations to payment arrangements, and stay updated with the Nursing Facility and Assisted Living Community.

- Humana leaders attend the annual Florida Hospice and Palliative Care Association (FHPCA) meeting, where we have developed an improved understanding of and relationship with hospice providers. During the most recent FHPCA meeting, we received positive feedback on our claims and referral processes. As a result of this meeting, we also recognized hospice providers' need to better understand the coordination between medical and long-term care as it relates to claims, authorizations, and enrollee responsibility. We are developing a quick reference guide for these providers to assist in clarifying the process.

INTERNAL ENGAGEMENT SUPPORT MODEL

Our Provider Relations associates meet biweekly to discuss trends, initiatives, and opportunities to train and educate frontline Provider Relations representatives. Educational opportunities include Medicaid related topics such as AHCA alerts, fee schedule changes and monthly AHCA agenda topics. This meeting serves as a forum to discuss best practices and provider specific challenges like those we have experienced with specialty providers. These meetings enable Humana Provider Relations leaders to obtain frontline information to inform the development of new educational materials or the presentation of an issue or concern to the Provider 360 Committee for consideration.

- For example, in March 2017, our long-term care providers were receiving authorization faxes multiple times due to the conversion from the American ElderCare (AEC) system to the Clinical Guidance eXchange (CGX) system. Provider Relations representatives escalated the concerns to a cross-functional Command Center team and several of our representatives visited providers' offices to resolve their issues.

Beyond established relationships with our providers, Humana is continually advancing our internal infrastructure to support provider engagement and satisfaction. We have established the Provider 360 Committee, a multifunctional team representing provider support areas, which is chaired by our Medicaid Market Vice President. The committee's objective is to review all functional areas to improve provider experience through review of provider metrics, identification of process improvement opportunities, and development of provider education initiatives and materials. The committee includes representation from Market Executive Leadership, Regulatory Compliance, Market Provider Relations and Contracting, Market Hospital Contracting, Market Service Alignment managers, Provider Customer Care, Provider Directory,

Claims Processing, Availity Liaison team, eHUB team, Physician Performance Management, Market Quality Operations, Market Clinical leaders, Corporate Medicaid Implementation, Critical Inquiry team, Provider Communications, and the Quality Improvement Committee (QIC).

ASSOCIATES WHO PLAY A ROLE IN HUMANA'S PROVIDER ENGAGEMENT MODEL

Recognizing the challenges and barriers our providers face, our Provider Relations associates deliver cross-functional support to ensure we are aligned with our providers in achieving our mutual goal of improved quality outcomes for our enrollees. Following is a description of the roles of our team members who interface with providers, serving as the face of our Provider Engagement model, including the Humana leadership team.

REGIONAL VICE PRESIDENT OF NETWORK OPERATIONS AND PROVIDER EXPERIENCE – Regional Vice President of Network Operations and Provider Experience oversees Provider Relations functions and associates.

PROVIDER RELATIONS DIRECTORS – Provider Relations directors oversee contracting and provider education strategies, develop goals for the department, assist in developing relationships with our providers and are responsible for translating national initiatives to our local market. Our current six (6) Provider Relations directors have been in this role for an average of ten (10) years and have established relationships with providers throughout Florida.

PROVIDER RELATIONS MANAGERS – Provider Relations managers are responsible for driving our provider goals, directives, and strategies. They are also available for coaching providers to help resolve the escalation of any provider issues. We currently have nine (9) Provider Relations managers, who have served in this role for an average of over ten (10) years.

PROVIDER RELATIONS REPRESENTATIVES – Provider Relations representatives are the direct liaisons and field representatives responsible for meeting with designated providers monthly. In this frontline position, they are also responsible for educating our providers, clarifying provider inquiries, and relaying provider concerns to the broader Provider Relations team. We currently have more than fifty (50) Provider Relations representatives who have established strong relationships with providers throughout the State.

PROVIDER RELATIONS CONSULTANTS – Consultants lead provider-focused operations and processes in support of a broad, quality provider network. Our Consultants manage projects and drive successful outcomes. They spearhead various projects, including but not limited to, development and revision of departmental policies and procedures, provider education materials, provider communications, internal associate Medicaid training and updates, surveys and tracking and trending of service level agreements. They also focus on departmental data analytics, including data reconciliation of the Provider Network Verification (PNV) file and identification of potential network gaps.

QUALITY IMPROVEMENT NURSES (QINS) AND CARE COACHES – Humana QINs effectively develop, enhance, and maintain our provider clinical relationships. QINs work collaboratively with provider groups to guide, recommend, and develop practice-specific strategies to improve all aspects of quality. They meet with our PCPs and high-volume

specialists monthly to deliver provider and enrollee-specific metrics, such as care gaps and HEDIS measures. QINs also work with provider practices to identify specific practice needs and supports, then communicate these needs to Humana internal associates. Humana currently has eighteen (18) QINs in Florida. We have three hundred thirty-one (331) Humana Care coaches who interact with providers and enhance our Long-Term Care (LTC) provider relationships. They meet with our LTC providers on a routine basis and support providers in delivering enrollee care.

COMMUNITY OUTREACH REPRESENTATIVES – Community Outreach representatives are responsible for organizing provider-based events encouraging and targeting enrollee wellness. This is accomplished through events such as health fairs, which target HEDIS measures and back to school campaigns to encourage vaccinations. One of our newer initiatives currently piloting is Humana Storks program which targets enrollees who have just given birth by educating the new mother on how to access health services that will help ensure the best health outcomes for her and her baby.

ENTERPRISE AND FLORIDA-BASED PROVIDER SUPPORT – Humana's Provider Engagement model includes local Provider Relations representatives, as well as additional local and corporate support. This cross-functional support model includes representatives from Clinical, Pharmacy, and Finance services. Health Services Case Managers also play a role in connecting our providers to our enrollees. Our centralized provider services include our provider Customer Care. Our provider Customer Care associates are trained to assist providers with questions, as well as directing them to appropriate resources as needed.

==========
c. The mechanism to track interactions with providers (electronic, physical, and telephonic);

d. How the respondent collects and analyzes utilization data and provider feedback, including complaints received, to identify specific training needs;

3. The extent to which the method the respondent uses to track interactions with providers is capable of producing meaningful data the respondent will use to address both clinical and administrative problem areas.

4. The extent to which the method the respondent uses to track interactions with providers addresses potential provider field representative training needs.
==========

We monitor and review provider interactions to gauge the effectiveness of our provider support processes. We use these reviews to identify external and internal opportunities to address clinical and administrative issues. To support our Provider Engagement model, we track provider interactions through a number of avenues, as described below.

PROVIDER DISPUTE RESOLUTIONS – Provider complaints and disputes, which are received telephonically, electronically, and physically (through mail or Provider Relations representatives) are tracked through our Customer Relationship Management (CRM) system by Provider Relations or Customer Service. CRM enables concerns, which may involve issues relating to procedures, claims, or specific issues related to a given enrollee's situation, to be routed to the appropriate area for resolution. We identify, track, and trend for root cause analysis to resolve

concerns. We record the full interaction in our CRM for reporting purposes, including response resolution time, which is reported to AHCA.

CLAIMS – We capture and track claims interactions, whether paper or electronic, from receipt of a claim to payment and delivery of remittance advice. The processing of provider claims transactions is tracked through the Availity portal, e-Hub, and Claims Administrative System (Humana's claims adjudication platform). Our claims data and analytics system enables Humana to track claims-related performance measures such as timeliness of claims submission, percentage of clean claims, and percentage of denied claims for each individual provider. In 2016, nearly ninety-nine (99) percent of our electronic clean claims were paid within ten (10) days.

Our Service Alignment Manager (SAM) addresses service and operational issues. The SAM's role is to work across enterprise support services and market representatives to drive resolution across processes and technology while identifying opportunities for improvement. Support services areas include, but are not limited to, Provider Relations, Claims, Financial Recovery, Clinical, and Customer Service. The SAM analyzes various provider interactions and touch points across these matrixed teams to resolve immediate, identified issues and to proactively identify trends and opportunities for process improvement with the ultimate goal of enhancing the provider service experience by reducing escalations of issues.

SERVICE FUND DATA ANALYTICS – Humana developed a proprietary Service Fund risk sharing management application for providers engaged in a risk or capitated arrangement. We use this innovative tool to calculate reimbursements to providers in these arrangements by tracking and aggregating information on capitation payments, claims expensing, claims payment, reconciliation, and settlement for all PCP contracts.

Service Fund makes monthly data files available containing information regarding provider membership, funding, claims activity, progress toward value-based payments, and capitation payments at both individual provider and group levels. Humana tailors the reports to providers in risk or value-based arrangements. Providers can access these reports through an online portal, as well as through our Provider Relations representatives. Humana also educates providers using Service Fund by walking through standard reports during initial training to show providers the data they can access and how to use it to help manage their financials. Our Provider Relations representatives meet monthly with PCPs to review Service Fund reports and to discuss any concerns or barriers they may be facing.

CUSTOMER CARE – Customer Care provider and enrollee calls are tracked by our Customer Service representatives in CRM. The Customer Service representative logs the call topic and outcomes of the call, routing the call, if needed, through CRM to the appropriate associate for resolution. We log, monitor, and trend the entire interaction for analysis and review.

PROVIDER RELATIONS REPRESENTATIVE VISITS – Provider Relations representative visits are recorded in a database, which includes the topic of the provider conversations and identified future education needs. Our Provider Relations leadership monitors this database weekly to ensure that Provider Relations representatives are completing visits, identifying training needs, and tracking visit subject matter.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

CREDENTIALING, RECREDENTIALING, AND APPLICATION LOADING – Our proprietary workflow management tool, APEX, tracks provider credentialing and application information. This tool initiates communication with providers when credentialing or recredentialing information is needed, and offers Humana associates insight into a provider's credentialing status. Once the credentialing or recredentialing application is complete, it is input into our APEX workflow. Our Provider Relations and our Customer Service associates use APEX as a resource when an inquiry is received from a provider regarding credentialing/recredentialing and participation status. We reduced the average credential and load time to thirty-two (32) days following recent implementation of system efficiencies.

We recently implemented a Provider Data management feature on our Availity web portal. In this workflow, the provider can update their demographic information including service locations, any new providers joining the organization, contact information, and panel status. Once the provider attests to the information, Humana will have access to the updated information through APEX.

CLINICAL DATA ANALYTICS – Providers can request authorizations telephonically or electronically. Our Clinical Intelligence Analytics team uses a combination of authorization and claim data to capture utilization trends and generate reports on short hospital stays. Our Hospital Opportunity Tool reviews readmission rates, re-hospitalization rates, emergency department rates, and daily inpatient census. We use the collected data to develop clinical initiatives, implement trend benders, and enhance case and disease management programs. We share this data which is stored and tracked in CGX and CareHub, with our provider partners during JOC meetings.

QUALITY IMPROVEMENT NURSES – Our QINs are assigned to providers based on geography and meet with providers at least quarterly. During these meetings, QINs discuss quality measures and performance gaps in care reporting. They also discuss provider performance reports, which are generated by our HEDIS reporting process. We use these reports to identify provider training and education needs (example provided in Attachment 15-3). We record QIN visits in a database which contains the provider group name, date of visit, detail of visit, and follow-up details.

Humana business leaders review reports summarizing interactions with providers on an ongoing basis. Each interaction with a provider, whether administrative or clinical, drives future interactions. If we see negative trends in any of our reports from a provider or if we receive negative feedback, we arrange for a more in-depth training session with Provider Relations representatives. For example, if a provider is below the county average on HEDIS scores, we engage our QINs and Provider Relations representatives to provide detailed training on HEDIS measures. If we see that a provider is prescribing drugs outside of the formulary or is outside of the county average in generic prescriptions, our Pharmacy associates contact the provider and review drug alternatives for enrollees. Once an issue is identified, we proactively reach out to the provider for resolution.

Humana maintains multiple forums to review data regarding the provider experience and gain insights from trended data points including provider portal usage, claims, complaints from providers, provider call center metrics, provider quality measures, and contract load metrics. Our Provider 360 Committee is one of these forums, which uses data and representatives from all provider areas in the company to survey the provider experience and proactively improve it.

This committee's sole objective is to improve the provider's experience with Humana. Other forums addressing provider issues include the Local Operating Committee, Quality Improvement Committee, Command Center and local Provider Relations associate meetings.

PROVIDER TRAINING AND PROVIDER RELATIONS TRAINING

Humana's robust associate recruitment and training program supports our Provider Engagement model. We recruit Provider Relations representatives with extensive network experience to ensure our associates can fully support providers. Provider Relations associates are required to complete our Provider Contracting University to understand Humana's processes and model for interacting with providers. During this process, our Provider Relations representatives participate in virtual and in-person training. Further, our representatives are required to complete the same annual compliance training modules our network providers complete.

As we track and trend provider interactions with Humana to improve our processes and provider experience, we also use this data to develop training for Provider Relations associates. On a monthly or more frequent basis, our Provider Relations associates meet internally, and we educate our representatives on contract changes, programmatic changes, and educational needs.

==========

e. The metrics used to measure the overall satisfaction of network providers with the respondent; and

5. The extent to which the metrics used produce actionable data for measuring provider satisfaction, increasing provider performance, improving the provider engagement model, and identifying areas of improvement for provider related communications or written materials.

==========

Our support and engagement model enables our providers to accomplish our mutual goal of improving quality outcomes for enrollees and containing costs. Our model is built around attaining improved quality outcomes by aligning on the common tenets of this goal, including financial incentives, provider partnership, administrative simplicity, and provider satisfaction. Our model is designed to ensure providers are satisfied with our level of support and attentiveness offered through our responsive and comprehensive Provider Engagement model. We continually measure provider satisfaction to identify opportunities for improvement in how we interact with and support our providers. A key measure of provider satisfaction is our provider termination rate. For example, since SMMC inception, month-to-month provider termination rates are less than one (1) percent. Additionally, our hospital network has remained stable since the implementation of the MMA program.

PROVIDER ENGAGEMENT IN OUR VALUE-BASED PURCHASING (VBP) MODEL

An effective provider engagement strategy enables the formation of true partnerships and optimizes the payer-provider relationship. Humana has extensive experience in creating value-based, engaged provider partnerships that involve substantial financial risk/reward sharing and

performance-based incentives for providers, which support our provider retention goals. Our program is designed to support the needs of providers, working constructively with providers regardless of their organizational size or level of technological sophistication. Humana provides a step-by-step opportunity to earn financial rewards for achieving certain clinical measures of success. As providers mature in their ability to achieve basic milestones, additional measures are added or increased outcome performance targets are established which enable providers to earn even greater rewards.

Humana's sophisticated value-based models in Florida establish financial and quality aligned incentive contracts with our providers. The number of Florida providers in Humana's VBP arrangements has increased dramatically over the past decade. Today, Humana has more than eight hundred thousand 800,000 Florida Medicaid and Medicare enrollees attributed to PCPs engaged in VBP arrangements. We anticipate that our volume of VBP contracts will continue to grow.

These agreements include full risk (global) capitation, shared savings models, a quality-cap bonus program, and MMA Physician Incentive Program payments to reward our providers for providing high quality care. Humana's model is designed to drive greater provider engagement and improve clinical outcomes based on the concept that reward incentives, packaged with consultative provider guidance and care gap alerts, helps providers raise the quality bar. We support providers in these models using various resources including in-person assistance and data analytics. Our Provider Engagement program enables Humana to truly partner with our network partners and optimize the payer-provider relationship, which keeps providers satisfied with their financial incentives and the care they are delivering.

PROVIDER SATISFACTION SURVEY

The Provider Relations team conducts an annual provider satisfaction survey in all our contracted regions in accordance with contractual obligations and state approved sample methodology and metrics. The survey enables Humana to evaluate and measure satisfaction across the following service metric areas: provider relations and communication, clinical management processes, authorization processes including denials and appeals, timeliness of claims payment and assistance with claims processing, complaint resolution process, and care coordination/case management support. In 2017, the response rate increased to thirty percent (30%) from seventeen percent (17%) the year prior.

Humana has received positive feedback in our provider satisfaction survey regarding our Provider Engagement model. For example, in 2017, ninety-nine percent (99%) of MMA respondents said their Provider Relations representative was able to answer all their questions and was professional and courteous. Additionally, ninety-eight percent (98%) of respondents said the educational and training materials are easy to understand. For LTC respondents, eighty-six percent (86%) were satisfied with Humana's service. Eighty-three percent (83%) responded that the Provider Relations representative was knowledgeable and able to answer their questions and eighty-one percent (81%) felt that their needs and concerns were addressed.

Attachment 15-4 offers a snapshot of results of Humana's 2017 provider satisfaction survey. Also see Attachment 15-5 for letters of support from Florida Medicaid providers.

IDENTIFICATION OF PROVIDER ENGAGEMENT AND PROVIDER COMMUNICATION IMPROVEMENT OPPORTUNITIES

Humana uses multiple provider input sources to improve our provider engagement and communication. These sources inform how we interact, train, and communicate with our providers to ensure we fully support them and keep them satisfied as they deliver care to our enrollees.

PROVIDER SATISFACTION SURVEY – Our provider survey results help identify potential areas of opportunity for Humana. We share results of the survey across all the service teams for development of an action and improvement plan, which we then send to AHCA. Based on the 2017 MMA results, for example, one (1) of the areas identified as an opportunity of improvement in the Provider Relations and Communication category was where forty-two percent (42%) of the providers surveyed responded negatively to the question "In the last twelve months I received or viewed the Humana Medicaid newsletter." To improve penetration of this important communication tool, Humana has started collecting current email addresses and fax numbers for our PCPs, obstetric and gynecologists, and our high-volume specialist providers so that we can send these newsletters, as well as other important updates like AHCA alerts, fee schedule changes, and policy changes to them through this additional communication avenue instead of relying on regular mail.

JOC, STRATEGY, AND ASSOCIATION MEETINGS – Humana uses our meetings with providers to identify opportunities to improve provider satisfaction, training and communication.

PROVIDER 360 COMMITTEE – Our monthly Provider 360 Committee meetings seek to advance our provider support to improve provider engagement and satisfaction. During these meetings, committee members review administrative improvement opportunities and functional areas to improve provider experience through review of provider metrics, identification of process improvement and provider performance opportunities, and development of provider education initiatives and materials.

PROVIDER RELATIONS REPRESENTATIVES AND LEADERS – Through our frequent provider interactions, our Provider Relations representatives and leaders provide insightful opportunities for us to adjust our Provider Engagement model and provider communication to meet the needs of our providers.

==========

6. The extent to which the training includes service coverage guidelines, service authorization requirements, billing procedures, claims processing, payment timeframes and respondent's dispute resolution process and timeframes, including corresponding requirements in scope of services.

==========

Humana's comprehensive provider training program helps us achieve more sophisticated, integrated, and engaged partnerships. Humana offers a variety of training formats to ensure that information is accessible and convenient. We have structured training programs to support providers' varying knowledge bases, needs, and learning styles. Our trainings are flexible and

scalable. We provide web-based trainings for busy providers, conference-style trainings, and one-on-one trainings. The training formats used include face-to-face orientation and monthly meetings, Humana's Provider Handbook, materials available on our website and our Availity portal, quarterly provider newsletters, and ongoing support available from our Provider Relations representatives.

INITIAL PROVIDER TRAINING PROGRAM

Our strong relationships with providers strengthen the SMMC program by enhancing access and improving quality outcomes for our enrollees. We use a cross-functional, integrated, and "high-touch" approach to support and train our providers. This approach begins once a provider is credentialed and contracted. Within thirty (30) days of their contract effective date, all providers new to Humana's network receive orientation training from their assigned Provider Relations representative, who will also serve as their point of contact for all future trainings. This training is an opportunity for providers to understand Humana operations and processes, provider roles and responsibilities, and the vast resources available to them. We conduct the initial orientation in the provider's office, which includes information on all necessary topics to help guarantee a mutually successful partnership. Below is a comprehensive list of all the topics covered during the orientation training:

- Introduction to the Florida SMMC program
- Contracting and credentialing
- Access to care requirements
- Web resources
- Preauthorization and notification process
- Claims processing and claims resolution process
- Continuity of care
- Enrollee special needs consideration
- Enrollee screening for alcohol and substance abuse
- Clinical management programs
- Patient-centered medical home
- Medicaid risk adjustment
- Medicaid Advisory Panel
- Service level agreements
- Agency for Health Care Administration (AHCA) provider based guidelines
- Annual compliance trainings
- Cultural Competency
- Health, Safety, and Welfare (HSW)
- Fraud, Waste, and Abuse (FWA) and Business Ethics
- OB/GYN training (for OB/GYNs only)
- Critical incident reporting
- Disenrollment or transfer of member
- Helpful numbers and regionally specific Quick Reference Guides
- Florida Medicaid Provider Handbook
- Behavioral health tool kit for Primary Care Providers (for PCPs only)
- MMA physician incentive program (MPIP)
- Electronic Health Records (EHR) and Health Information Exchange (HIE)

Since 2013, we have conducted provider orientation training for more than four thousand (4,000) providers in Florida. We use provider feedback to continually modify and improve our provider training content, materials, and delivery sources. We have attached copies of our MMA provider orientation training modules and new provider orientation checklist in Attachment 15-6.

ONGOING PROVIDER TRAINING PROGRAM

Humana's provider training program is ongoing and we are continuously adding new providers to our network. Providers also often experience associate turnover or growth, which may result in a need for additional training activities. We have many avenues for providers and their associates to receive training or supplemental training. Humana's Provider Relations representatives develop an open dialogue that allows us to meet each of a provider's ongoing and specific training needs.

We recognize that provider education is not a static process and we have to reach providers in different ways, at different times, and through different delivery methods. We use four simultaneous avenues of training to ensure we support our providers in delivering the best care to our enrollees, which include:

1. Face-to-face training
2. Web-based individual training
3. Webinars
4. Available resources and "on-demand" training

FACE-TO-FACE TRAINING

Providers are assigned a Provider Relations representative who is their point of contact for all training. In addition to the initial orientation training, we routinely review internal policy changes and those of governing agencies to ensure that our trainings are capturing up-to-date and relevant information. We seek to schedule these training sessions at the provider's convenience, at a time when there is minimal patient care activity and where as many provider associates as possible can attend. We may conduct one-on-one trainings in the provider's offices or at a Humana location. Conference-style, region-based trainings are held in a centrally located location (e.g. hotel conference room or Chamber of Commerce facility). We welcome and encourage AHCA representatives to attend any education seminars we conduct.

Additionally, Humana's Provider Relations representatives visit our providers regularly. During these visits, we deliver information to help the provider understand their overall performance metrics and ascertain whether their associates have any questions or training needs. During visits that follow a recent training session, we ask whether there are any issues related to the prior training that they would like more information about, or refresher information. We also use these visits as a mechanism to hand deliver important communications and publications that may previously have been mailed or posted to our provider website.

Recognizing that PCPs serve as a medical home, our Provider Relations representatives visit PCPs monthly. Below is a list of reports and data they share with PCP offices monthly:

- Performance profile and report card – snapshot used to review encounter rates, admits and days per thousand, average length of stay, ER visits per thousand, and pharmacy opportunities

- New enrollment and disenrollment reports – reports listing all new and disenrolled enrollees from the PCP's panel

- Top 40 enrollees – report identifying the top 40 enrollees with highest incurred cost

- Top 40 drugs – report identifying the top 40 drugs prescribed and evaluation of any opportunities for generic equivalencies

- HEDIS reports including identification of gaps

- Encounter data – provides a 12-month trend and benchmark analysis for PCP encounters and fee for service claims by incurred and processed dates

- ER trends – report identifying enrollees who have had repetitive and excessive ER visits during a specific period

- Delivery system reports – provides a list of highly utilized, efficient specialists, and mandatory networks available for enrollees

- Network changes – report that outlines changes to the network that may impact the PCP and enrollees

- Newsletters – quarterly publications that summarize topics vital to provider practices

- Mailings – various imperative communications that we may have mailed to their office and reinforce during visits

WEB-BASED INDIVIDUAL TRAINING

Humana provides web-based training through the Availity portal, which is our health information network that optimizes information exchange between multiple healthcare stakeholders through a single, secure network. The Availity portal encompasses business and clinical services, and supports nationwide real-time and batch electronic data interchange via the web and through business-to-business integration. Recorded web-based trainings may be taken anywhere and are available twenty-four (24) hours a day/seven (7) days a week. In addition, instructor-led training is available at least one (1) day per week. Through Availity, providers and their associates may access training related to:

- Claims management
- Authorizations management
- ERA and EFT management
- Clinical Solutions
- Electronic Data Interchange (EDI)
- Eligibility and Benefits Inquiry
- Patient Responsibility Estimator Tools

- Payment Collection and Processing
- 5010 Overview
- Annual Compliance training
- Humana Orientation
- Cultural Competency
- Health, Safety, and Welfare
- Fraud, Waste and Abuse and Business Ethics

During orientations we train providers on compliance concepts and materials that they are also required to complete on an annual basis. Humana sends multiple reminders to providers through email, fax blast, and phone calls throughout the year using multiple communication mechanisms to ensure these important compliance topics are met.

WEBINARS

Humana continuously offers interactive webinars throughout the year. The subject matter of these webinars is determined by requests from providers, trends observed by our Provider Relations department, and system or programmatic changes. For example, we offer Availity claims webinars twice a week for our LTC providers.

AVAILABLE RESOURCES AND ON-DEMAND TRAINING

In addition to face-to-face training, webinars, and web-based training, Humana offers resources and on-demand training through our provider handbook, provider website, quick reference guides, service fund trainings, and self-guided modules.

EDUCATIONAL PROVIDER MATERIALS

Humana distributes a provider handbook to all our providers, which includes a comprehensive review of educational topics, quick reference guides regarding prior authorizations, and enrollee covered services materials. After a provider executes an agreement with us and during their orientation training, we review the handbook contents as well as any other information related to our health plan. Our handbook contains comprehensive information about a variety of topics and is a contractual extension to their provider agreement. Below is an overview of the topics covered in the handbook:

- MMA Program Description
- Covered Services
- Emergency Service Responsibility
- Child Health Checkup
- Provider Complaints
- Grievance System
- Chronic and Complex Conditions
- PCP and Other Provider and Subcontractor Responsibilities
- Telemedicine Protocols and Requirements
- Delegation or Subcontract Function
- Florida Health Information Exchange (HIE)
- Preauthorization and Referral Procedures

- Medical Records Requirement
- Claims and Encounter Submission Protocols and Standards
- Cultural Competency Plan
- Member Rights and Responsibilities
- Fraud and Abuse Policy
- Health, Safety, and Welfare
- Patient-Centered Medical Home (PCMH)
- Medicaid Advisory Panel
- Provider Rewards and Incentives
- Provider Resource Website
- Provider Training
- Availity
- Helpful Numbers

Humana sends out quarterly provider newsletters as well as email blasts containing important information on policy changes, quality, industry changes, and medical protocols. Examples of recent newsletters are included in Attachment 15-7.

PROVIDER WEBSITE MATERIALS
Humana has a dedicated webpage where providers can easily access Medicaid provider materials. We also prominently display urgent updates and specific quality initiatives for our providers, such as annual checkups or breast cancer screenings, see Attachment 15-8.

Humana measures and tracks how often the website is accessed to understand whether this delivery method is a valuable avenue for our providers. Between Jan. 1, 2015, and June 30, 2017, Humana's provider website had one hundred ninety-five thousand, five hundred ninety (195,590) views. The following is a list of some of the information available on our provider website:

- Provider Handbook
- Region-Specific Quick Reference Guides
- Assistive Care Quick Reference Guides
- Medicaid preauthorization and notification list
- Enrollee Handbook
- Cultural Competency Plan
- Provider tools to address gaps in care
- Prescription Drug Guide
- Florida Medicaid Preferred Drug List
- Behavioral Health Tool Kit
- Home Health visit information
- Referral to Medicaid Case Management Form
- Urgent Updates
- Breast Pump Coverage
- Minority recruitment and retention information
- Provider nomination form
- Florida Medicaid Vaccines for Children (VFC) Program and child blood lead screening
- Crossover claims
- Child health checkup
- Medicaid eligibility for newborn babies

- Healthy Behavior Programs
- Quality Resources
- Program information
- Provider Directory
- Helpful Numbers
- Provider Training Calendar
- Electronic Billing
- Provider ebilling Companion Guide

Evaluation Criteria:

1. The extent to which plan leadership are involved in provider engagement.

2. The extent to which local provider field representatives are incorporated into the model, including the ratio of local provider representatives to providers.

3. The extent to which the method the respondent uses to track interactions with providers is capable of producing meaningful data the respondent will use to address both clinical and administrative problem areas.

4. The extent to which the method the respondent uses to track interactions with providers addresses potential provider field representative training needs.

5. The extent to which the metrics used produce actionable data for measuring provider satisfaction, increasing provider performance, improving the provider engagement model, and identifying areas of improvement for provider related communications or written materials.

6. The extent to which the training includes service coverage guidelines, service authorization requirements, billing procedures, claims processing, payment timeframes, and respondent's dispute resolution process and timeframes, including corresponding requirements in scope of services.

Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 5 points each.

Quotes from Letters of Support:

"We have had excellent customer service when dealing with our Humana Medicaid area representatives….We have also had excellent customer service with the Prior Authorization team. Due to our EHR we are unable to upload supporting medical documents to the Humana website. When a PA pends, we receive a call and we have a decision within a few hours of us faxing in the supporting documentation."

Christina Averhart, LPN, CLC
Clinical Team Lead
Fort Walton Beach Pediatrics, Sacred Heart Medical Group, Region 1 Walton County

"The provider website, especially the authorization submission portion, is very straight forward and easy to use. Our provider rep Jerred visits the office regularly to notify us of any recent changes to policy as well as make sure there is nothing that we need."

Amber Singh
Patient Accounts Genesis OB/GYN, Region 6 Hillsborough County

"The patients that we see here with Humana are genuinely happy with the options of the healthcare management Humana provides them… I would also like to add that the face to face contact that I have had with John Paul and Justin have been helpful, insightful and informative. Lastly Tori Woods, is always a joy to have here for our patients' education of Humana and Humana Plans."

Jennifer Johnson
Cantonment Medical Clinic, Site Coordinator, Region 1 Escambia County

"The Humana Medicaid program team has been responsive, professional and willing to work collaboratively to ensure that operational processes are timely for our patients. Humana demonstrates a real commitment to quality of care for their members. Humana has done an outstanding job delivering a MMA education program for our staff and physicians, and they have continued to our support our sites with ongoing programs."

Evan C. Jones

Executive Vice President/CFO, Region 6 Polk County

Humana continues to partner with our organization and provide ongoing education, support, and guidance. Our organizations regularly collaborate on many initiatives which benefit Pediatric Medicaid recipients in the communities we serve.

Scott Farr, COO and Peter Shulman, CEO

Pediatric Associates, Regions 4, 6,9,10, and 11

"We have the pleasure of working hand and hand with our provider relations representative Marianne Hall. The provider relations representative has always gone out of her way to assist us with provider related issues such as but not limited to Claim issues, Authorization issues, and she also makes personal visits throughout the year to ensure we maintain an open relationship with American Eldercare of Humana and keep the lines of communication open."

Jessenia Velez

CEO Quality Family Care, Region 9 Palm Beach County

"Humana's quality of services is outstanding, providing our elderly population and their members with superior quality of care. I say without a doubt that Humana is one of the finest organization, and there group of staff are people of very good moral character. Humana Health Plan operates with integrity, dignity and respect."

Wilma Rivera

Assistant Administrator, Suky Health Care Services, Inc., Region 11 Miami-Dade County

Good Afternoon Justin,

I would like to say that the experience that I have had with Humana in the past couple of years has been a pleasant one. The pt.'s that we see here with Humana are genuinely happy with the options of the healthcare management Humana provides them. I have always experienced the best quality of customer service when I have had to call any of the help desks to better help our pt.'s here. I would also like to add that the face to face contact that I have had with John Paul and Justin have been helpful, insightful and informative. Lastly Tori Woods, is always a joy to have here for our pt.'s education of Humana and Humana Plans.

Thank you and have a Great Day.

We have had excellent customer service when dealing with our Humana Medicaid area representatives. They are always able to answer questions, provide written information, and chase up issues that have previously been reported. It is wonderful that they round on a monthly basis, this gives us the chance to ask questions.
We have also had excellent customer service with the Prior Authorization team. Due to our EHR we are unable to upload supporting medical documents to the Humana website. When a PA pends, we receive a call and we have a decision within a few hours of us faxing in the supporting documentation.

Christina Averhart, LPN, CLC

I just wanted to take the time to say that I really appreciate Humana's customer service. Any time that I need to call them, they are always extremely helpful and courteous. The provider website, especially the authorization submission portion, is very straight forward and easy to use. Our provider rep Jerred visits the office regularly to notify us of any recent changes to policy as well as make sure there is nothing that we need.

Thank you,
Amber Singh
Patient Accounts Genesis OB/GYN

Justin,

Our initial going live with Humana was not without a few glitches, these issues were addressed to our Provider Relations Specialist and was corrected immediately, which was additional training from Humana side.

We have been very satisfied with the Provider Specialist John-Paul Shaddock and his replacement Justin Donato.

Our claims are being paid in a very timely manner. access to the website is available to all of my employees to search for eligibility before the patient visit.

My over all assessment of Humana is a positive one. I will say the key to the success between our practice and Humana is the ease in which we can communicate with all department and not feel frustrated.

We are happy to be a provider of Humana Health Care.

Sincerely,

Jeanette Mobley

To Whom It May Concern,

Over the past few years dealing with Humana Medicaid my experience has been overall very well. When I need guidance or assistance with something, whether it is for a prior authorizations or getting a patient assigned to us through provider/customer services, it has was handled promptly and efficiently. Justin Donato is always there to assist my office in any way, shape, or form. When I need help locating a specialist in our area, or if I just need him to look at a claim for me, he is always so helpful and assertive. Since this managed care plan has been in effect, I have had no problems with the service that was provided to me. The level of service that Justin extends to your company is far beyond my expectations. I am so impressed by customer service provided throughout the last year. It appears that it was simply Justin's extraordinary commitment to excellence in customer service and support that motivates him. Should you have any comments, questions, or concerns feel free to reach me at the office a The information

RE: Support for Humana Health Plans ITN

On behalf of Doctors Health Group of South Florida, I am pleased to submit a letter of support for Humana Health Plans' submission of the Florida Agency for Health Care Administration Medicaid ITN. We are proud of our almost five year Medicaid partnership with Humana for Regions ten and eleven. In that time, we have seen Humana's provider relations department works tirelessly to achieve a Medicaid delivery model that aligns with the needs of providers and patients.

Humana has created a delivery model that drives innovation and favorable outcomes while improving care and reducing costs by developing improved processes. Case management, chronic disease management, patient education and health improvement initiatives are just some of the overall services that as a provider we are leveraging to meet our objective to deliver the very best possible care.

Notably, Humana's support services help our organization achieve mutual objectives. We are aligned on quality of care and services to our Medicaid patients. Our organizations stand committed to continuing our work on behalf of Medicaid recipients to deliver the highest quality healthcare possible.

We appreciate your consideration of Humana's Medicaid ITN and are pleased to add our name in support of this award.

Sincerely,

Jorge L. Basto

June 22, 2017

To Whom It May Concern:

I am pleased to have the opportunity to attest to my relationship and experiences with Humana. I have been contracted with Humana since the company expanded to Florida in the late 1980's. I have watched it grow and change to meet the needs of the community and the State of Florida as the demands and expectations have changed.

The one constant has been the quality of their Provider Relations Department, which prepares all new providers for the delivery of quality care to their members, by giving them the tools with which to meet the established standards. They, continually, update the new and seasoned providers by providing on-going support, by keeping Centers up to date and informed of new criteria, guidelines and services available that impact our Patients, their members, your Medicaid recipients.

They visit our Centers on a monthly basis and alert us, as the MSO, along with those with whom we are contracted, of all changes and new strategies that need to be implemented. They provide monthly data to every Center regarding their status and goals met. They are supportive of our needs and make every effort to resolve our concerns. We are better providers of care because of their determination to make us the best. Our being the best ensures that every Medicaid member receives quality care and services in every area.

Our goal is the same. We are their vehicle to the provision of care and they are our support while delivering it. Humana encourages Centers to become certified as PCMH. Many of our Centers are now certified, or are becoming certified, due to their support and that of the special people with whom our Centers work to attain this goal.

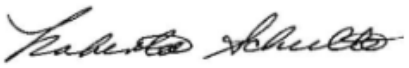
We know the importance of doing the best we can to keep our Patients healthy. Humana's special departments help us to do so by supporting the members and providers of care by identifying those in need of additional support and care. We, with their support, have been able to change lives by removing barriers for those that are viewed as "non-compliant" and/or "needy". When barriers are identified we, together, try to remove those barriers and find ways to change their path. We know that we will not always be successful due to circumstances, medical or social, that we, Humana and the Patient cannot control. When facing situations we, alone, cannot impact, we look to the special

teams to help us find the best way to help the members through these times, even if it is to help them accept what cannot be changed. We cannot touch all of those in need, although we try, but do not stop in our attempts to locate and serve.

We are grateful for being among those providers chosen to deal with the unique needs of the Medicaid recipients in the State of Florida and value those at Humana that support us and our efforts to meet the needs of those Medicaid lives entrusted to us and Humana.

I, again, thank you for the opportunity to express to you the role Humana plays in making us able to better serve Medicaid recipients and to help improve the delivery of care to this deserving population. They are our partners in meeting challenges and celebrating successes.

Sincerely,



Roberta Schulte

Re: HUMANA

To whom it may concern,

Independent Living Systems ("ILS") would like to express our support for HUMANA in their bid for the Medicaid ITN in Florida. ILS and HUMANA have worked for over 16 years in Florida and nationally to provide quality and compassionate care to its members.

ILS enjoys open lines of communication with HUMANA. HUMANA is committed to maintaining these lines open with monthly meetings, education and guidance. We have worked jointly on various collaborations and initiatives for their members. Through their many years of service, HUMANA has been an excellent partner in the care of the Medicaid population.

A subsidiary of LeadingAge Florida

October 6, 2017

Mark Henry, Director
Network Development, LTSS
Humana Long Term Care
777 Yamato Road, Ste. 510
Boca Raton, FL 33431

Dear Mark,

This letter is written in support of Humana for the Statewide Medicaid Managed Care Long Term Care program bid. Florida Association of Homes for the Aging Health and Services Corporation (FAHA Health & Services) is a network of nursing homes consisting of approximately 2,900 beds. FAHA Health & Services has been in network with Humana serving the long term care residents since September 2013.

Our experience working with the Humana provider relations team, specifically Mark Henry and Ed Miller, has been consistently professional and positive. The FAHA H&S providers greatly appreciate Humana's common sense provider and member centric approach. We look forward to continuing to work with the Humana Long Term Care team after the new SMMC contract renewal.

Please feel free to share this letter in support of Humana's continued participation in the SMMC LTC program.

Sincerely,

Dana McHugh

Humana

1. About Humana

- Insurance products
- Health and wellness services
- $39 billion in annual revenues
- 50,000 employees
- Plans for employer groups, individuals and government agencies
- Commercial, Medicare and Medicaid (in select markets)
- Plans include health, dental, vision and behavioral health
- 14.3 million medical members
- 7 million specialty members

Humana

2. Statewide Medical Managed Care Program (SMMC) – Purpose and Eligibility

SMMC is designed to care for all eligible individuals by providing access to:

Long-Term Care

- Care in a nursing home or a less-restrictive environment in the community.

Eligibility requirements:

- 21 years of age or older
- Reside in Florida
- Meet physical and financial requirements as determined by the state

Humana
Long-Term Care

MMA

- Comprehensive Medicaid services

Eligibility requirements:

- Beneficiaries ages birth to 21 and 21 and over
- Reside in Florida
- Meet the eligibility requirements as established by the Agency for Health Care Administration (AHCA)

Humana

Humana

2. SMMC Program – Overview

The SMMC Program has two components:

- **Long-Term Care (LTC)**
  Medicaid recipients who qualify and become enrolled in the Florida Long-Term Care Managed Care (LTCMC) program will receive LTC services through an LTC managed care plan.
- **Managed Medical Assistance (MMA)**
  Medicaid recipients who qualify and become enrolled in the Florida MMA program will receive all health care services other than long-term care though a managed care plan.

Humana

3. Florida's Managed Medical Assistance Program

- Florida's MMA program is designed to provide a statewide managed care delivery system that will improve outcomes, improve consumer satisfaction and reduce and control costs.
- The Florida MMA program focuses on four key objectives in order to support successful implementation:
  1. Preserving continuity of care.
  2. Requiring sufficient and accurate networks under contract and taking patients, allowing for an informed choice of plans for recipients and the ability to make appointments.
  3. Paying providers fully and promptly to preclude provider cash flow or payroll issues and giving providers ample opportunity to learn and understand the plan's prior authorization procedures.
  4. Coordinating with the Choice Counseling Call Center and website operated by the Agency's contracted enrollment broker.

Humana

4. Humana's foundation for Florida Medicaid

- Our focus on member well-being through a coordinated care and engagement strategy and strong support infrastructure simultaneously benefits each of our members on his or her journey to better health.

MEMBER ENGAGEMENT
- Continuity of care
- Member outreach
- Healthy behavior incentives
- Case management
- Disease management
- Care coordination (LTC)
- Interdisciplinary care team (LTC)

PROVIDER ENGAGEMENT
- Initial and ongoing training
- Town halls for each region
- Monthly primary care provider (PCP) staff visits
- Quality bonuses
- Preferred PCP network

COMMUNITY ENGAGEMENT
- Advisory panels
- Healthy Start collaboration
- Community outreach

SUPPORT INFRASTRUCTURE
- Member and provider services
- Quality management and improvement
- Compliance
- Administrative services
- Collaboration and alignment with AHCA

STRATEGY & IMPLEMENTATION APPROACH

How Humana will provide a seamless transition and continuity of care for Florida members:
- Organizational structure
- Clinical staffing support
- Florida training program
- Transition/continuity of care
- Leveraging behavioral health expertise

Humana

Keys to success

- Humana has the proven track record to provide high-quality care to Florida members.
  - Florida-based market support team
  - Experience with Florida and its unique populations
  - Seamless and scalable network
  - Community integration and outreach
  - Dedication to lifelong well-being
  - Focus on measureable outcomes

Humana

5. Contracting and credentialing

Humana.

Contracting process

Humana MMA

Visit:

www.humana.com/provider/medical-providers/network/learn-more/

- Click on "Complete our online form"
- Complete the form

Humana LTC

Call:

- Customer Service at 1-888-998-7735
- Provider Relations at 1-561-860-8660 to connect with a provider service representative

After receipt and review of the submitted form, a provider contracting specialist will contact you.

Humana

Contracting process – required information

- Physician/practice/facility name
- Service address with phone, fax and email information (for LTC – provide counties served)
- Mailing address, if different than service address
- Taxpayer identification number (TIN)
- Specialty
- Medicaid provider number (enrolled or limited with correct specialty and type)
- National Provider Identifier (NPI)
- CAQH number
- For LTC: Florida state license and proof of insurance
- Lines of business (e.g., Medicaid, Medicare, etc.) of interest
- Type of contract (e.g., individual, group, facility)

Humana

Credentialing

- Health care providers must be credentialed prior to network participation in order to treat Humana members.
- Provider office site evaluations must be completed for all PCP and OB-GYN provider locations prior to participation with Humana and during recredentialing.
- Recredentialing occurs at least every three years.
- Some circumstances require shorter recredentialing cycles.
- Humana participates with CAQH® (Council for Affordable Quality Healthcare) for applicable provider types.

✓ Further details regarding Humana's credentialing/recredentialing requirements can be found in Humana's Provider Manual at https://www.humana.com/provider/support/publications

Humana

CAQH ProView®

- Physicians and health care professionals need to use the Council for Affordable Quality Healthcare (CAQH) ProView tool to provide credentialing information to Humana. Note: This excludes facilities.
- CAQH ProView is the trusted source and industry standard for self-reported provider data and eliminates redundant applications, including state applications, required by a health care professional's contracted health plans, including Humana. Using CAQH reduces the amount of time health care professionals spend on credentialing and recredentialing by allowing them to submit information to the tool once and then update it via the attestation process.

Humana

CAQH ProView (cont'd)

- How this affects health care professionals:
  - **Initial applicants** must use CAQH for requests submitted **Jan, 1, 2017, and after.**
  - Health care professionals due for **recredentialing Sept. 1, 2017, and after** will need to submit their information through CAQH.
  - The use of **CAQH will reduce the amount of time involved with credentialing and recredentialing, as well as costs.**
  - Network health care professionals who have not used CAQH or who have outdated information have been notified via fax to their credentialing point of contact.

Humana

CAQH ProView (cont'd)

- How this affects health care professionals:
  - If you are **already registered** with CAQH, then please ensure your information is current and complete and that you have granted Humana authorization to review/receive the credentialing information.
  - If you **are not registered** with CAQH, then please complete a registration form via https://proview.caqh.org/PR/Registration. Once the registration is submitted, you will receive an email from CAQH with a CAQH Provider ID. You will then need to complete the online CAQH application and grant Humana authorization to review/receive your information.
  - Questions may be emailed to CredentialingInquiries@humana.com.

Humana

Contacts for contracting/credentialing

- **For Humana MMA**: To check the status of your credentialing or contract, please call Humana Provider Relations at 1-800-626-2741 (Monday through Friday, 9 a.m. to 6 p.m. Eastern time) or contact your local contracting representative.
- **For Humana LTC**: To check the status of your credentialing or contract, please contact your local contracting representative or call Humana Provider Relations at 1-561-860-8660 (Monday through Friday, 8 a.m. to 5 p.m. Eastern time).

Humana

6. Access to care requirements

- Participating primary care physicians (PCP) and specialists are required to ensure adequate accessibility for health care 24 hours per day, seven days per week and shall not discriminate against members. An after-hours telephone number must be available to members (voice mail is not permitted). Members should be triaged and provided appointments for care within the following time frames:
  - **Urgent care** – member must be provided an appointment within 24 hours.
  - **Routine sick member care** – member must be provided an appointment within seven calendar days of making a request.
  - **Well-care and routine visits** – member must be provided an appointment within 30 calendar days of making a request.

Humana

Humana

Working with Humana online? Use the multipayer Availity Web Portal

The Availity Web Portal is Humana's preferred method for online transactions.

- ✓ Use one consistent site to work with Humana and other payers
- ✓ Check eligibility and benefits
- ✓ Submit referrals and authorizations (MMA)
- ✓ Manage claim status
- ✓ Use Humana-specific tools

About Availity

- Cofounded by Humana
- Humana's clearinghouse for electronic transactions (EDI) with providers

How to register

- Go to **www.Availity.com**.

Join us for a training session

- Visit **www.Availity.com/Humana** to learn about training opportunities and reserve your space.

Questions?

- Availity help with registration and tools: Call 1-800-AVAILITY (1-800-282-4548).
- Questions for Humana: Email eBusiness@Humana.com.

Humana

8. Preauthorization and notification

Humana.

Preauthorization and notification

- Allows Humana to provide members' benefit information. (For LTC, contact provider relations at 1-561-860-8660.)
- Required for many services and medications.
- Access lists at **Humana.com/PAL**
  - Select the current "Medicaid Preauthorization and Notification List."

Humana

Preauthorization for medical procedures

Humana MMA

- Call 1-800-523-0023 (available 24 hours a day) for automated requests
- Representatives available 8 a.m. to 8 p.m. Eastern time, Monday through Friday (excluding major holidays)
- Press "0" or say "representative" for live help
- Have tax ID number available

Humana LTC

- Authorizations are requested through the provider or the member's care manager
- Provider receives a faxed copy of the authorization

Humana

Drug prior authorization and notification

- Get forms at **www.humana.com/pa** or call 1-800-555-2546 (Monday through Friday, 8 a.m. to 6 p.m. Eastern time)
- For drugs delivered/administered in physician's office, clinic, outpatient or home setting (fee-for-service providers only):
  - **www.humana.com/medpa**
  - 1-866-461-7273 (Monday through Friday, 8 a.m. to 6 p.m. Eastern time)

Humana

Online authorizations for MMA

- **Online submission**
  - Fast and easy entry of authorizations
  - Express entry feature
  - Real-time responses
  - Ability to add attachments
  - Quick print feature

Sign into Humana's secure provider portal at:
Availity.com

Email questions to:
eBusiness@humana.com

- **Online management**
  - Access to last 18 months of authorization history
  - Ability to update authorizations
  - Status updates on submitted authorizations

This process does not apply to Humana LTC providers.

Humana

9. Claims processing

Humana.

Electronic claim submission

- Claims clearinghouses:*

Behavorial health claims
Region 1 only
Access Behavioral Health
1221 W. Lakeview Ave.
Pensacola, FL 32501

Behavorial health claims
Regions 6, 9, 10 and 11
Beacon Health Options
Attn: Claims Dept.
10200 Sunset Drive
Miami, FL 33173-3033

Humana LTC claims
Humana Long-Term Care Plan
P.O. Box 14732
Lexington, KY 40512-4732

Humana

Importance of encounter submissions in Medicaid

- AHCA requires 100 percent encounter submissions.
  - 95 percent must pass through state system.
    - Necessitates proper AHCA registration and billing.
      - Accurate NPI, taxonomy and ZIP code (including the last four digits of ZIP code) must be submitted on all transactions.
  - Fee-for-service and capitated providers included.
- Encounters and claims identify members who received services.
  - Decreases the need for medical record review during Healthcare Effectiveness Data and Information Set (HEDIS).
  - Will be critical for future world of Medicaid Risk Adjustment.
  - Helps identify members receiving preventive screenings – decreases members listed in GAP reports.
- Providers may receive sanctions for noncompliance.
  - Can include liquidated damages and even enrollment freezes.

Humana

Claims submission errors and how to avoid them

- Common rejection or denial reasons:
  - Patient not found.
  - Insured subscriber not found.
  - Patient birthdate is incorrect.
  - Invalid Healthcare Common Procedure Coding System (HCPCS) code submitted.
  - No authorization or referral found.
  - Billed amount missing.
- How to avoid these errors:
  - Confirm that patient information received and submitted is accurate and correct.
  - Ensure that all required claim form fields are complete and accurate.
  - Obtain proper authorizations and/or referrals for services rendered.
  - Ensure billed amounts are not zero dollar.

Humana

Timely filing

- **MMA**: Fee-for-service claims should be filed as soon as possible, but no later than **six** months, per state guidelines.
- **LTC**: Claims should be filed as soon as possible, but no later than **six** months after the date of service, per state guidelines.
- **Encounter** claims should be filed within **30** days of the date of service.
- Claims timely filing and HEDIS:
  - Providers are required to timely file their claims/encounters for all services rendered to members. Timely filing is an essential component reflected in Humana's HEDIS reporting and can ultimately affect how a plan and its providers are measured in member preventive care and screening compliance.

Humana

Claim status and edit questions

- Sign into Humana's secure provider portal at **availity.com** (registration required) to take advantage of the following self-service tools:
  - View claims status
  - Submit claims
  - View and download remittance advices
- For more information on claims processing edits and how to submit questions regarding them, visit:
  - **Humana.com/edits**

Humana

Claim escalation

- Step 1: Call the number on the back of the member's ID card.
  - Have reference number handy.
  - Ask for front-line leader.
- Step 2: Submit claim dispute to the following address:
  - **MMA**: Humana Provider Correspondence, P.O. Box 14601, Lexington, KY 40512-4601
  - **LTC**: Humana LTC, Attention Grievance and Appeals Dept., P.O. Box 14546, Lexington, KY 40512-4546
- Step 3: If there is a factual disagreement with the response, send an email with the reference number to humanaproviderservices@humana.com.

Humana

Claims payment: Electronic funds transfer (EFT) and electronic remittance advice (ERA)

Receive Humana payments via direct deposit into the bank account of your choice.

Receive HIPAA-compliant ERA transactions.

Get paid up to seven days faster than via mail.

Have remittances sent to your clearinghouse, or view them online.

Reduce the risk of lost or stolen checks.

Reduce paper mail and time spent on manual processes.

Humana

Ebusiness resources

Contact us if your organization needs:

Payments deposited in **more than one bank account.**

Separate remittance information for different providers or facilities.

ERA/EFT setup for **multiple provider groups, facilities and/or individuals.**

An eBusiness consultant can help set up ERA and EFT quickly and accurately.

Send an email to **eBusiness@Humana.com** for assistance.

Humana

Balance billing

- Per Humana's Provider Manual:
  - **Services that are not medically necessary:** The provider agrees that in the event of a denial of payment for services rendered to members determined not to be medically necessary by Humana, that the provider shall not bill, charge, seek payment or have any recourse against the member for such services.

Humana

Crossover claims

- Effective Oct. 1, 2016, providers no longer need to send Medicare crossover claims for dually eligible recipients directly to Humana. Under this initiative, providers only need to submit their claims once to the Centers for Medicare & Medicaid Services (CMS) for processing and are no longer required to submit secondary claims to Humana. This means CMS will automatically forward claims for members who are dually eligible for both Medicare and Medicaid coverage.
  - **Please note:** If a provider submits a claim for a dually eligible member that CMS has already forwarded to Humana, Humana will deny the provider-submitted claim as a duplicate claim.

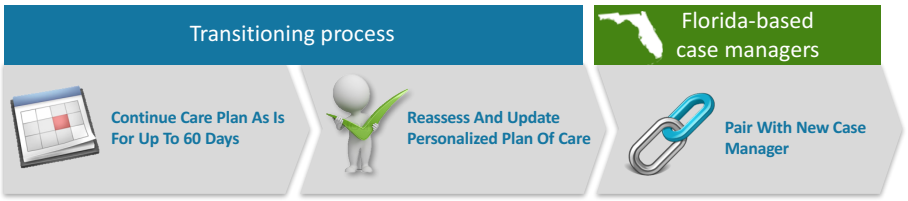
Humana

10. Continuity of care

Humana.

Transition/continuity of care: Enrollee services/care coordination/utilization management

- Through the following process, we will **ensure that transitioning members will still receive care** even if Humana does not have a contract with their current provider:



- Ensure no care disruptions
- Emphasize maintaining member's well-being and safety while addressing unmet needs
- Contract with nonparticipating providers

- Identify members to transition
- Determine unmet needs and put necessary services in place
- Coordinate and build relationships with providers

- Based on location to ensure familiarity with local resources
- Assign PCP Center to facilitate coordinated care with PCP
- Consider cultural and language needs

Humana

11. Member special needs consideration

- Providers must make efforts to understand the special needs required by members. The member may have challenges that include physical compromises as well as cognitive, behavioral, social and financial issues. Multiple comorbidities, complex conditions, frailty, disability, end-of-life issues, end-stage renal disease (ESRD), isolation, depression and polypharmacy are some of the challenges facing these members each day.
- Recognizing the significant needs of members, Humana incorporates person-centered care planning, coordination and treatment in our care coordination program.

Humana

Member special needs consideration (cont'd)

- Care management is delivered within a multidisciplinary team (MDT) structure and holistically addresses the needs of each member.
- The member and/or his/her authorized caregiver are maintained at the core of the model of care, ensuring person-centered care and supported self-care.
- The Humana case manager leads the member's MDT and links closely to the member's PCP to support him/her in ensuring the member gets the care needed across the full spectrum of medical, behavioral health and other services. PCP participation in the MDT is a critical component in the success of the member's care.

Humana

Member special needs consideration (cont'd)

- Humana's predictive model, based on claims history and analytics, is used to determine each member's risk level and level of intervention required in order to channel the member to the required level of coordination.
- A comprehensive assessment is completed for each member to evaluate his or her medical, behavioral and psychosocial status to determine the plan of care.

Humana

12. Screening for alcohol or substance abuse

- Participating PCPs must screen members for signs of alcohol or substance abuse as part of prevention evaluations during the following times:
  - Initial contact with a new enrollee
  - Routine physical examinations
  - Initial prenatal contact
  - When the enrollee shows evidence of serious overutilization of medical, surgical, trauma or emergency services
  - When documentation of emergency room visits suggests the need
- Members who are determined to have met one of the above indicators may be referred to an appropriate participating behavioral health provider.

Humana

13. Clinical management programs

Humana.

Clinical management programs

- Clinical management programs are designed to:
  - Reinforce medical provider's instructions.
  - Promote healthy living.
  - Provide guidance to members with complex conditions.
- To learn more, visit **Humana.com/healthwellness**

Humana

Health services and utilization management

Utilization management

- Provide on-site and telephonic concurrent review and discharge planning.
- Promote effective level of care based on member's individual needs.
- Provide disease-specific education.
- Refer to appropriate Humana programs.

Humana

On-site/telephonic review

- On-site and telephonic nurse reviewers' responsibilities:
  - Reconcile census and updating existing cases as needed.
  - Review clinical information on all new admissions.
  - Perform concurrent review and update UM cases as needed.
  - Facilitate transition to alternate level of care.
- Per-diem and DRG-contracted hospitals' responsibilities:
  - Review clinical information for appropriateness of level of care.
  - Communicate case status to the facility as needed.

Humana

On-site/telephonic review (cont'd)

- Discharge planning associates' responsibilities:
  - Interact with member and member's family at bedside.
  - Collaborate with member's health care team to maximize member's benefits and resources, including referrals to case management and contracting providers.
  - Facilitate referrals to various Humana programs.
  - Provide disease management education and tools for members with diabetes, ESRD, chronic obstructive pulmonary disease (COPD) and congestive heart failure (CHF).

Humana

Health services and case management

Case management:

There is collaboration on cases where there are discharge needs identified when an MMA, LTC or MMA/LTC member is an inpatient.

When the member has both MMA and LTC benefits, LTC case management is primary.

- Receives referrals from on-site/telephonic UM nurses following discharge, PCPs, self-referral, internal/external programs, community partners, etc.
- Bases assignment on PCP/center.
- Completes post-discharge telephonic outreach within three days of discharge (when applicable).
- Identifies gaps in care, addresses post-discharge needs and assists in making follow-up appointment with PCP.
- Stratifies members into various acuities utilizing some of the following criteria:
  - Readmission Predictive Model Score
  - Admission history
  - Metric reports (e.g., high-cost members, etc.)

Humana

Complex case management

- Complex case management responsibilities:
  - Manages and coordinates care for members requiring ongoing case management based on assigned acuity (with varying contact expectations and required time in program for each).
  - Identifies triggers for ER visit/admission.
  - Completes a comprehensive assessment of the member's current health status.
  - Creates an individualized care plan with the member and works toward identified goals.
  - Addresses HEDIS measures for members' gap reports or alerts on file.
  - Refers to internal and external programs and community resources as needed (e.g., Village Health, RxMentor, Beacon Health Options, Access Behavioral Health, bariatric, transplant, etc.).
  - Participates in interdisciplinary case conferences for complex members to identify the best course of action for improved outcomes.

Humana

Complex case management (cont'd)

- Complex case management does not replace or interfere with the care members receive from their physicians.
- Complex case management liaisons will reinforce the physician's plan of care and facilitate the utilization of services that promote wellness and prevent unnecessary hospital admissions.

Humana

Health services and disease management

Disease management

MMA Programs

- Diabetes
- Asthma
- CHF
- Hypertension
- HIV/AIDS
- Cancer

LTC Programs

- Dementia and Alzheimer's issues
- Cancer
- Diabetes
- Chronic obstructive pulmonary disease (COPD)
- End-of-life issues/advanced directives

Goal

- Help our members and family members become empowered through education and the development of self-management skills that foster treatment plan compliance and better health outcomes.

Overview

- Participation is voluntary.
- Referrals received from claims data, on-site/telephonic nurses after discharge, PCPs, self-referral, internal/ external programs, community partners, etc.
- Telephonic outreach.
- Assessment includes health history, cognitive/psychological/ depression screening, medication review, diet compliance.
- Collaborative team approach.
- Members stratified into various acuities utilizing some of the following criteria:
  - Admission history
  - Stability of symptoms
  - Understanding/compliance of disease/plan of care

Humana

Disease management

Disease management programs' responsibilities:

- Completes a comprehensive assessment of the member's current health status.
- Creates an individualized care plan with the member and works toward identified goals.
- Addresses HEDIS measures for members on gap reports or with alerts on file.
- Refers to internal and external programs and community resources as needed (e.g., Village Health, RxMentor, Beacon Health Options, etc.).

Note:

- Disease management does not replace or interfere with care that members receive from their physicians.
- Disease management nurses will reinforce the physician's plan of care and facilitate utilization of services that promote wellness and prevent unnecessary hospital admissions.

Humana

Disease management (cont'd)

Additional features for LTC members in a disease management program:

- Education based on the enrollee assessment of health risks and chronic conditions
- Symptom management, including addressing needs such as working with the enrollee on health goals
- Emotional issues of the caregiver
- Behavioral management issues of the enrollee
- Communicating effectively with providers
- Medication management, including the review of medications that an enrollee is currently taking to ensure that the enrollee does not suffer adverse effects or interactions from contra-indicated medications.

Humana

Health services and other programs for MMA members

Other health services programs

- **MomsFirst**
  - Manages prenatal and postpartum members from onset of pregnancy through the 42nd post-partum day.
  - Facilitates care coordination with WIC, Healthy Start and other internal/external programs.
  - Ensures provision of Healthy Behavior Reward for program participation and visit compliance.
- **Social worker**
  - Assists members with social needs including transportation and community resources.
  - Receives referrals from CM, DM and on-site NL.
- **Pediatric case management and pediatric utilization management**
  - Provides telephonic case and disease management for pediatric members.
  - Manages all pediatric inpatient utilization.

Humana

14. Patient-centered medical home

Humana.

Patient-centered medical home

- A patient-centered medical home is a model of care that strengthens the physician-patient relationship by replacing episodic care with coordinated care and a long-term healing relationship.
- Humana implemented a new patient-centered medical home (PCMH) program to empower patients as they interact with their primary care physicians (PCPs) and health care delivery teams (e.g., family, therapist, specialist, diagnostic center, hospital and laboratory). The PCMH program focuses on a team-based approach to health care delivery. Open communications between the health care team and patient allow for the patient to be more actively involved in health care decisions with a potential for better health outcomes and cost-effective treatment of ongoing health conditions.

Humana

Patient-centered medical home (cont'd)

- According to the Agency for Healthcare Research and Quality, a PCMH program includes the following functions that transform traditional primary care into advanced primary care:
  - **Comprehensive care:** A team that includes physicians, advanced practice nurses, physician assistants, nurses, pharmacists, nutritionists, social workers, educators and care coordinators, guides patients through the health care delivery system.
  - **Patient-centered care:** The patient is primary in the relationship and drives decisions that influence his or her health. Physicians provide education and establish a plan of care.
  - **Coordinated care:** The PCP communicates with the health care delivery team and manages coordination of care.

Humana

Patient-centered medical home (cont'd)

- **Accessible services:** The patient's access-to-care preferences are important. Shorter wait times, urgent needs, after-hours and around-the-clock access, as well as openness to different types of communication besides the telephone, are taken into consideration by the physician.
- **Quality and safety:** The PCP uses evidence-based medicine and clinical decision-support tools to guide the patient and health care delivery.
- PCPs who are interested in the PCMH program, certification requirements and the benefits may contact:

Latoya Powell, PCMH CCE

Phone: 1-305-626-5746

Email: pcmh@humana.com

Humana

15. Medicaid Risk Adjustment

Humana.

Medicaid Risk Adjustment risk model selection: Chronic Illness Disability Payment System (CDPS) + RX

- Medicaid has changed the way it calculates reimbursement.
- The diagnosis code (ICD-10-CM) is now the most critical piece of information on a claim or encounter.
- The MMA program uses CDPS + Rx version 5.4.
  - Diagnostic- and pharmacy-based risk adjustment model.
  - Specifically developed for Medicaid populations.
  - Demographic component based on age and gender.
  - Utilizes 67 CDPS medical condition categories, plus 15 Medicaid Rx categories.
    - Includes Rx categories that improved the predictive power of the diagnostic model.
    - Excludes Rx categories that are relatively more susceptible to variations in practice patterns.

Humana

Include comorbidities

- Medicaid allows up to 12 diagnosis codes on electronic claims.
  - First, code the acute condition(s).
  - Next, add chronic conditions also addressed in the same visit.
  - Finally, include conditions affecting patient management.

Humana

Clinical example

- Example:
  - S- "16 y/o asthmatic male with a sore throat and runny nose." No recent asthma exacerbations. No cough or wheeze or shortness of breath.
  - O-Alert NAD, (-) neck stiffness (-) conjunctival erythema (-) excessive lacrimation, EOMI, (+) red reflex, BIL TM pink with light reflex, BIL pink patent nares (+) clear discharge, (-) pharyngeal erythema uvula midline.
  - A=Allergic Rhinitis
    - Asthma

CODED AS….

Incomplete Coding

- 477.9 Allergic Rhinitis

Complete Coding

- J45.9Ø9 Unspecified asthma, uncomplicated

Humana

Documentation guidelines

- "One of the largest problems following the implementation date for ICD-10 will be documentation insufficient to support the specificity required for the new ICD-10 code sets. We believe a behavioral change in documentation habits for most providers will be necessary – and now is the time to start preparing."
  - **CLEAR:** Communicate to all readers the documenter's intent.
  - **CONCISE:** Use key coding terms, and avoid use of uncommon abbreviations or truncated words.
  - **CONSISTENT:** Record the same diagnoses and other medical information on all documents.
  - **COMPLETE:** Record full information promptly on all appropriate documents.
  - **LEGIBLE:** Use handwriting that can be read and interpreted accurately by others.

Humana

16. Medicaid Advisory Panel

Humana

About our Medicaid Advisory Panel

- Humana recognizes that our Medicaid plan is but one spoke in a wheel of health care providers, community organizations, health plans and other programs that provide essential services, programs and resources to enable Medicaid-qualified members to maintain quality of life and optimal well-being.
- To ensure that the needs of members are being addressed and opportunities for improvement are being identified, Humana has developed a Medicaid Advisory Panel.
- The panel includes community providers, such as medical service organizations and hospital corporations, nonprofit organizations, community agencies that serve the Medicaid population, a member advocate and Humana leaders.

Humana

Medicaid Advisory Panel goals and objectives

- Obtain input from subject matter experts on initiatives and methods that can be used to better serve enrollees.
- Create new ways to approach universal challenges, with the objective of developing pilot projects the committee can track.
- Recommend improvements for health plan processes.
- Discuss topics, such as adolescent engagement, ER overutilization, pregnant women and their access to care, as well as social deterrents.
- Represent local communities by having a panel cover each region.
- Share best practices between regional panels.

Humana

17. Service level agreements

Humana.

Service level agreements

Claims and provider payment

- Electronic clean claims paid/contested within 15 calendar days.
- Nonelectronic clean claims paid/contested within 20 calendar days.
- 50 percent of all clean claims submitted paid in seven calendar days.
- 70 percent of all clean claims submitted paid in 10 calendar days.
- 90 percent of all clean claims submitted paid in 20 calendar days.

Network adequacy

- 90/85 percent of required PCPs by region accepting new members.
- 90 percent of required specialists by region accepting new members.
- 30/35/40 percent of PCPs by region offer afterhours appointments.
- No more than 5/10/8 percent of hospital admissions occur in nonparticipating facilities (excludes continuity of care and ER).
- No more than 8/10 percent of specialty care by region shall occur with nonparticipating specialists.

Note: There is a filling limit of six months for clean claims (electronic and paper)

Humana

Service level agreements (cont'd)

Utilization management

- Standard authorization decisions made within seven days of request.
- Authorization decisions can be extended seven days if the need is justified.
- Expedited decisions processed within 48 hours after receipt of request.
- Expedited decisions can be extended up to two days if the need is justified.
- 95 percent of standard authorizations processed in 14 calendar days with an average turnaround of seven days.

Enrollee/Provider helpline

- Average answer speed not to exceed 30 seconds.
- Wait time for calls placed in system queue not to exceed 60 seconds.
- Average call block rate for direct calls not to exceed .5 percent.
- Average call abandonment rate for direct calls not to exceed 3 percent.

Humana

Electronic health records (EHRs)

- Florida Medicaid-eligible hospitals and professionals as defined by the Health Information Technology for Economic and Clinical Health (HITECH) Act are required to use certified Electronic Health Records in a meaningful manner.
- An electronic health record (EHR) is a digital version of a patient's paper chart. EHRs are real-time, patient-centered records that make information available instantly and securely to authorized users. While an EHR does contain the medical and treatment histories of patients, an EHR system is built to go beyond standard clinical data collected in a provider's office and can be inclusive of a broader view of a patient's care.

Humana

Electronic health records (cont'd)

- Advantages of EHRs:
  - EHRs and the ability to exchange health information electronically can help you provide higher quality and safer care for patients while creating tangible enhancements for your organization. EHRs help providers better manage care for patients and provide better health care by:
  - Providing **accurate, up-to-date and complete information about patients** at the point of care
  - Enabling quick access to patient records for more **coordinated, efficient care**
  - Securely **sharing electronic information** with patients and other clinicians
  - Helping providers more effectively **diagnose patients, reduce medical errors, and provide safer care**

Humana

Electronic health records (cont'd)

- Advantages of EHRs:
  - Improving patient and provider interaction and communication, as well as **health care convenience**
  - Enabling safer, **more reliable prescribing**
  - Helping promote **legible, complete documentation** and accurate, streamlined coding and billing
  - Enhancing privacy and security of patient data
  - Helping providers **improve productivity** and **work-life balance**

Humana

Electronic health records (cont'd)

For assistance:

- Regional extension centers
  - If providers need assistance with selecting an EHR system, they can reach out to their local regional extension center (REC). RECs offer unbiased EHR implementation support throughout the implementation process, from start to finish. These organizations, funded by the Office of the National Coordinator for Health Information Technology (ONC), can also serve as a two-way pipeline to local and federal resources.
  - RECs can help with EHR implementation and project management, vendor selection, workflow redesign, privacy and security, training, ongoing technical assistance and more. Visit https://www.healthit.gov/providers-professionals/get-ehr-implementation-support for more information.
- Florida Health Information Exchange (Florida HIE)
  - If providers need assistance in technically connecting to other providers, they can reach out to the Florida HIE or visit https://www.florida-hie.net. The Florida HIE enables the secure exchange of health information between health care providers.

Humana

18. AHCA provider-based marketing guidelines

Humana.

AHCA provider-based marketing guidelines

- Providers are permitted to make available and/or distribute managed care plan marketing materials as long as the provider and/or the facility distributes or makes available marketing materials for all managed care plans with which the provider participates.
- Providers may engage in discussions with recipients should a recipient seek advice. However, providers must remain neutral when assisting with enrollment decisions.
- Materials that indicate the provider has an affiliation with certain managed care plans and that only list managed care plan names and/or contact information do not require agency approval.

✓ The above information was extracted directly from AHCA contractual requirements.

Humana

AHCA provider-based marketing guidelines (cont'd)

- Providers may distribute printed information provided by the managed care plan to their patients comparing the benefits of all of the different managed care plans with which the providers contract. The managed care plan shall ensure that:
  - Materials do not "rank order" or highlight specific managed care plans and include only objective information.
  - Such materials have the concurrence of all managed care plans involved in the comparison and are approved by the agency prior to distribution.
  - The managed care plans identify a lead managed care plan to coordinate submission of the materials.

✓ The above information was extracted directly from AHCA contractual requirements.

Humana

AHCA provider-based marketing guidelines (cont'd)

- **Providers may:**
  - Provide the names of the managed care plans with which they participate.
  - Make available and/or distribute managed care plan marketing materials.*
  - Refer their patients to other sources of information, such as the managed care plan, the enrollment broker or the local Medicaid Area Office.
  - Share information with patients from the agency's website or CMS' website.

✓ The above information was extracted directly from AHCA contractual requirements.

* Materials must be reviewed/approved by the plan and submitted to AHCA for approval, as necessary, before distributing.

Humana

AHCA provider-based marketing guidelines (cont'd)

- **Providers may not:**
  - Offer marketing/appointment forms.
  - Make phone calls or direct, urge or attempt to persuade recipients to enroll in the managed care plan based on financial or any other interests of the provider.
  - Mail marketing materials on behalf of the managed care plan.
  - Offer anything of value to induce recipients/enrollees to select them as their provider.
  - Offer inducements to persuade recipients to enroll in the managed care plan.
  - Conduct health screenings as a marketing activity.
  - Accept compensation directly or indirectly from the managed care plan for marketing activities.
  - Distribute marketing materials within an exam room setting.
  - Furnish to the managed care plan lists of their Medicaid patients or the membership of any managed care plan.

✓ The above information was extracted directly from AHCA contractual requirements.

Humana

AHCA provider-based marketing guidelines (cont'd)

- Providers may announce new or continuing affiliations with the managed care plan through general advertising (e.g., radio, television, websites).
- Providers may make new affiliation announcements within the first 30 days of the new provider contract.
- Providers may make one announcement to patients of a new affiliation that names only the managed care plan when such announcement is conveyed through direct mail, email or phone.

✓ The above information was extracted directly from AHCA contractual requirements

Humana

AHCA provider-based marketing guidelines (cont'd)

- Additional direct mail and/or email communications from providers to their patients regarding affiliations must include a list of all managed care plans with which the provider contracts.
- Any affiliation communication material that includes managed-care-plan-specific information (e.g., benefits, formularies) must be prior approved by the agency.

✓ The above information was extracted directly from AHCA contractual requirements.

Humana

19. Additional training requirements

Humana.

Additional training requirements

- Providers must complete additional annual required compliance training on the following topics:
  - General Compliance and Fraud, Waste and Abuse
  - Cultural Competency
  - Health, Safety and Welfare (Abuse, Neglect and Exploitation)
  - Others as required
- These trainings can be located on the following secure provider websites: **Humana.com/providers** and **www.availity.com**.
- Be sure to complete the "Medicaid Partner Training Attestation" form to ensure completion is documented.

Humana

20. Fraud, waste and abuse

Humana.

Fraud, waste and abuse reporting requirement and reporting options

- Anyone who suspects or detects an FWA violation is required to report it either to Humana or within his/her respective organization, which then must report it to Humana:
  - **Telephone:**
    - Special Investigations Unit (SIU) Direct Line: 1-800-558-4444 (Monday through Friday, 8 a.m. to 4 p.m. Eastern time)
    - Special Investigations Unit Hotline: 1-800-614-4126 (24/7 access)
    - Ethics Help Line: 1-877-5-THE-KEY (1-877-584-3539)
  - **Email:** siureferrals@humana.com or ethics@humana.com
  - **Web:** www.ethicshelpline.com
  - **Fax:** 1-920-339-3613

All information will be kept confidential.

Entities are protected from retaliation under 31 U.S.C. 3730 (h) for False Claims Act complaints. Also, Humana has a zero tolerance policy for retaliation or retribution against any person who reports suspected misconduct.

Humana

FWA reporting information (cont'd)

Suspected fraud, waste and abuse pertaining to Florida MMA/LTC must be reported to:

- Medicaid Program Integrity (MPI) Administrator by calling 1-850-412-4600
- Florida Agency Consumer Complaint Hotline by calling 1-888-419-3456
- Florida Attorney General by calling 1-866-966-7226
- AHCA FWA Complaint Form through the following website:
  - https://apps.ahca.myflorida.com/inspectorgeneral/fraud_complaintform.aspx. If the suspected fraud appears to be substantial, along with reporting as indicated above, a phone call will be made directly to AHCA immediately.
  - All final resolutions of a case will include a written statement that provides notice to the provider or enrollee that the resolution in no way binds the State of Florida nor precludes the State of Florida from taking further action for the circumstances that brought rise to the matter.

Humana

False Claims Act

- The False Claims Act also permits a person with knowledge of fraud against the U.S. government to file a lawsuit (plaintiff) on behalf of the government against the person or business that committed the fraud (defendant). The state of Florida has a statute matching the Federal False Claims Act that allows for the recovery of Medicaid funds by the state of Florida.
- Individuals who file such suits are known as "**whistleblowers**."
  - If the action is successful, the plaintiff is rewarded with a percentage of the recovery. Retaliation against individuals for investigating, filing or participating in a whistleblower action is prohibited.

Disallowed Actions (31 U.S.C. §§ 3729-3733)
Links to the above provisions of this act are listed within Humana's Compliance Policy for Contracted Health Care Providers and Business Partners, which is available on Humana.com/fraud

Liability (31 U.S.C. 3729(a)(1) and (a)(3)): Liability for the foregoing acts includes:

- A civil penalty of $5,000-$10,000; and
- Three times the amount of damages which the Government sustains because of that act.
- A person or company who violates the False Claims Act is also liable to the government

Humana

21. Critical incident reporting

Humana.

Critical incident reporting

- Humana's Risk Management Program includes a critical and adverse incident reporting and management system for critical events that negatively impact the health, safety or welfare of members.
- Participating providers should:
  - Identify a critical and/or adverse incident:
    - **Examples include** major medication errors; death, major illness or injury; wrong surgical procedure, wrong site or wrong patient; surgical procedure to remove foreign objects remaining from a surgical procedure; involvement with law enforcement; altercations requiring surgical intervention and/or elopement/ missing patient.

Humana

Critical incident reporting (cont'd)

  - Report the critical and/or adverse incident to the appropriate entity (e.g., police, adult protective services).
  - Call 911 if the member is in immediate danger.
  - Report the critical and/or adverse incident to the Agency and Humana's health plan risk management department at 1-855-281-6067 and/or via email to riskmanagementadministration@humana.com within 24 hours of identifying the incident.
  - Report suspected abuse, neglect and exploitation of a member immediately in accordance with s.39-201 and Chapter 415, F.S.
- Humana has the right to take corrective action as needed to ensure its staff, participating providers and direct service providers comply with the critical incident reporting requirements.

Humana

22. Disenrollment/transfer of members

Humana.

Disenrollment for cause of member

- If a PCP or group is requesting the disenrollment of a Florida Medicaid member, the request must be handled in accordance with rules established by the Florida Agency for Health Care Administration (AHCA). The PCP must complete an AHCA "Request for Involuntary Disenrollment" and submit it and all required supporting documentation to Humana's Medicaid Administration office, via his or her provider representative, where it will be reviewed and processed in accordance with AHCA requirements.
  - Humana's disenrollment for cause process must be followed.
  - Provider cannot dismiss member until approved.

Humana

Disenrollment for cause of member (cont'd)

- Humana will work with AHCA to approve all requests.
- Provider must provide detailed documentation of rationale and office attempts to assist member.
- AHCA Involuntary Disenrollment form must be completed.
- Financial or mental-health-related reasons are not acceptable to AHCA.
- Only AHCA-approved letters may be used to communicate with member.

  This means AHCA must approve each individual, member-specific letter prior to the plan sending it to the member.
- PCP office is responsible for all member costs until disenrollment is approved.

Health care providers are not to directly request disenrollment with AHCA, or obtain AHCA-approved disenrollment letters; these matters are handled by Humana.

Humana

Transfer of member

- A member's PCP, a physician group or independent practice association (IPA) acting on behalf of the PCP may initiate a request to Humana to transfer a member to another PCP. In some situations, if the PCP is with an IPA or physician group, the request can be to transfer the member to an entirely different IPA or physician group.
- Generally, the request would be appropriate for situations in which the member and/or power of attorney (POA) or legal guardian have engaged in behavior that is disruptive, unruly, abusive or uncooperative to the extent that it seriously impairs the PCP's ability to furnish services to either the member in question or other members.

Humana

Transfer of member (cont'd)

- Humana's PCP request-to-transfer process must be followed.
- Provider cannot dismiss members without approval.
- Members can be transferred only if they agree or as a result of the grievance process.
- Detailed documentation of rationale and office attempts to assist member must be provided.
- Only AHCA-approved letters may be used to communicate with member.
- PCP office is responsible for all member costs until issue is resolved.

Letters to use for member transfers are obtained and delivered by Humana, not the health care provider.

Humana

23. Managed Medical Assistance Physician Incentive Program

Humana.

Managed Medical Assistance Physician Incentive Program (MPIP)

The MMA Physician Incentive Program's aim is to promote quality of care for our Medicaid members and recognize those physicians who demonstrate high levels of performance for selected criteria.

The MPIP provides the opportunity for designated physician types to earn enhanced payments equivalent to the appropriate Medicare Fee-for-Service Rate, as established by the Agency for Health Care Administration (Agency) based on the achievement of key access and quality measures.

To be eligible for the program:

Pediatricians, family practice providers and general practice providers need to be practicing as a primary care physician with a pediatric panel size of 200 members or greater.

OB/GYNs and pediatric specialists will need to be board-certified by the respective boards as listed below.

Specialty	Certifying Board
OB/GYNs	American Board of Obstetrics and Gynecology or the American Osteopathic Board of Obstetrics and Gynecology
Pediatric Cardiology	American Board of Pediatrics
Pediatric Endocrinology	American Board of Pediatrics or the American Osteopathic Board of Pediatrics
Pediatric Nephrology	American Board of Pediatrics
Pediatric Neurology	American Board of Pediatrics and American Board of Psychiatry and Neurology
Pediatric Psychology	American Board of Psychiatry and Neurology

Humana

Managed Medical Assistance Physician Incentive Program (MPIP) Cont.

- The incentive program will not be extended to any of the following:

1. Physicians not participating in Humana's Medicaid network
2. OBGYNs with less than 10 deliveries for the measurement period
3. Primary care physicians with a pediatric panel size less than 200 Medicaid members during the measurement period
4. Federally Qualified Health Centers (FQHCs)*
5. Rural Health Clinics (RHCs)*
6. County Health Departments (CHDs)*
7. Medical School Faculty Plans*

**Services provided in any of these facilities or faculty plan may not be included in the MPIP, regardless of whether or not the service is billed by the facility or faculty plan as a facility or plan service or by the rendering provider using the provider's own Medicaid ID.*

Once providers meet the selected Medical and Quality criteria, will be in effect for one year from October 1, 2017, through September 30, 2018. Every six months, Humana will reassess all eligible providers to determine if any additional providers qualify for the Incentive Program.

Additional information regarding the incentive program can be found on the Agency for Healthcare Administration (AHCA) website:
http://ahca.myflorida.com/medicaid/statewide_mc/mma_physician_incentive.shtml

Humana

24.
Medicaid enrollment for claims payment

Humana.

Medicaid enrollment for claims payment

- Effective April 10, 2017, claims will be denied for physicians and health care professionals with invalid Medicaid enrollment. To receive Medicaid reimbursement, a physician or health care professional must be fully enrolled in Medicaid or have “limited enrollment status,” as well as meet all provider requirements at the time the service is rendered. Any entity that bills Humana for Medicaid-compensable services provided to Medicaid recipients or that provides billing services of any kind to Medicaid providers must enroll as a Medicaid provider.

Medicaid enrollment for claims payment

- **Proper Medicaid enrollment is critical for claims payment. All physicians and health care professionals need to confirm their Medicaid enrollment with AHCA.**
- Physicians and other health care professionals can verify their enrollment via the AHCA website: http://portal.flmmis.com/FLPublic/Provider_ManagedCare/Provider_ManagedCare_Registration/tabId/77/Default.aspx?linkid=pml

Humana

Medicaid enrollment for claims payment (cont'd)

- Please note the following details regarding the listing:
  - Current listing of Medicaid numbers for all providers confirmed active on the AHCA Portal Provider Master List (PML).
  - Provider must be listed as "ENROLLMENT" or "Limited Enrollment" in Enrollment Type column L and as "ACTIVE (A)" in Current Medicaid Enrollment Status column V.
  - Provider's billing NPI and/or rendering NPI must be accurate and affiliated with the provider's Medicaid ID.

Humana

Medicaid enrollment for claims payment (cont'd)

- Incorrect enrollment can affect the way a physician, health care professional or provider group is identified by AHCA and its Choice Counselors, as well as how a physician, health care professional or provider group is listed in Physician Finder, Humana's online provider directory.
- AHCA's Provider Enrollment area is available to assist with enrollment issues, such as change of address, change of ownership and re-enrollment issues via the AHCA website: http://portal.flmmis.com/FLPublic/Provider_ProviderServices/Provider_Enrollment/tabId/42/Default.aspx

Humana

Medicaid enrollment for claims payment (cont'd)

- Guidelines about how physicians and other health care professionals should enroll with Medicaid can be found in the Provider General Handbook's Reference Chapter 2: https://www.flrules.org/Gateway/reference.asp?No=Ref-02671

Humana

Humana

Appendix

Region-specific information

Humana.

Provider rewards

(Regions 9, 10 and 11 –
Broward, Indian River, Martin, Miami-Dade, Monroe, Okeechobee, Palm Beach and St. Lucie counties)

Humana.

Provider rewards and incentives – Regions 9, 10 and 11 only

- **Provider quality bonus** – Program aims to promote improvement and quality by providing additional financial compensation to PCP centers that demonstrate high levels of performance for select quality factors
  - Eligibility:
    - PCP must have an open panel for Medicaid line of business.
    - PCP serves more than 49 Medicaid enrollees.
  - Implementation:
    - No later than third quarter 2014
    - Letters outlining criteria released April/May 2014
    - Quarterly incentives

Humana

Provider rewards and incentives – Regions 9, 10 and 11 only (cont'd)

- **Platinum provider program** – Annual award and recognition program for PCPs who achieve high levels of performance.
  - Criteria:
    - EHR usage, HEDIS scores, encounter submissions, appointment accessibility, financial performance, etc.
- Criteria and eligibility for all rewards and incentives programs are subject to change at Humana's discretion.

Humana

Patient-centered medical home incentive – Regions 9, 10 and 11 only

- Definition: A patient-centered medical home is a model of care that strengthens the physician-patient relationship by replacing episodic care with coordinated care and a long-term healing relationship.
  - Humana offers financial incentives to providers to promote National Committee for Quality Assurance (NCQA) certification, dependent on the size of the practice.
  - Practices achieving Level 2 or 3 NCQA PCMH certification will be considered a preferred provider for mandatory assignments.
  - Practices with Level 2 or 3 NCQA PCMH certification will be designated as PCMH-certified in Humana's online provider directory.

Humana

Additional clinical management program
(Region 11 – Miami-Dade County)

Humana.

Real-time ER initiative – Region 11 only

Real-time ER initiative

(currently in Region 11 only)

- Receives referrals while member is in the ER or within 24 hours.
- Includes three participating providers (Baptist Urgent Care Centers, North Shore and Palmetto General Hospital).
- Completes post-ER telephonic outreach within 24 to 48 hours or less of ER visit.
- Identifies reason for ER visit, assesses gaps in care, addresses needs and assists in making follow-up appointments with PCP.
- Educates members on disease process, proper utilization of ER and Humana's 24-hour nurse phone line.
- Refers to other clinical programs when applicable.

Humana

Real-time ER initiative – Region 11 only

- ER nurses – For all participating facilities (North Shore, Baptist and Palmetto)
  - Identifies triggers for ER visit
  - Completes an ER assessment of member's current health status
  - Provides members with the following:
    - Education related to alternatives to ER and importance of maintaining physician/patient relationships
    - Help with setting up appointments
    - Assistance with medication issues
  - Refers to internal and external programs and community resources as needed (e.g., SCM, DM, Village Health, Beacon Health Options, etc.)

Humana

Real-time ER initiative – Region 11 only

- ER nurses will reinforce the need to utilize physicians' offices for continuum of care for nonemergent needs.
- ER nurses will contact the PCP to notify of a member's visit to the ER and provide a discharge summary.

Humana Medicaid

First Quarter 2017

Updates for Physicians and Health Care Providers

In this issue

- Complete 2017 compliance training requirements
- CAQH ProView® makes credentialing simpler
- Medicaid orientation training for OB/GYNs
- Patients share tips for improvement in annual surveys
- Help keep your directory information current
- Humana welcomes provider nominations
- Changes announced for physician extender reimbursement
- Member transfer provider training available online
- Humana posts new Florida Medicaid Provider Handbook

Confirm your Medicaid ID for claim payments

Beginning April 10, claims will be denied for physicians and health care professionals with invalid Medicaid enrollment. To receive Medicaid reimbursement, a physician or health care professional must be fully enrolled in Medicaid or have "limited enrollment status," as well as meet all provider requirements at the time the service is rendered. Any entity that bills Humana for Medicaid-compensable services provided to Medicaid recipients or that provides billing services of any kind to Medicaid providers must enroll as a Medicaid provider.

PROPER MEDICAID ENROLLMENT IS CRITICAL FOR CLAIMS PAYMENT. ALL PHYSICIANS AND HEALTH CARE PROFESSIONALS NEED TO CONFIRM THEIR MEDICAID ENROLLMENT WITH THE AGENCY FOR HEALTH CARE ADMINISTRATION (AHCA).

Physicians and other health care professionals can verify their enrollment via the AHCA website:
http://portal.flmmis.com/FLPublic/Provider_ManagedCare/Provider_ManagedCare_Registration/tabId/77/Default.aspx?linkid=pml

Please note the following details regarding the listing:

- Current listing of Medicaid numbers for ALL providers CONFIRMED ACTIVE ON AHCA PORTAL Provider Master List (PML).
- Provider must be listed as "ENROLLMENT" or "Limited Enrollment" in Enrollment Type column L and as ACTIVE (A) in Current Medicaid Enrollment Status column V.
- Provider's billing NPI and/or rendering NPI must be accurate and affiliated with the provider's Medicaid ID.

Incorrect enrollment can affect the way a physician, health care professional or provider group is identified by AHCA and its Choice Counselors, as well as how a physician, health care professional or provider group is listed in Physician Finder, Humana's online provider directory.

AHCA's Provider Enrollment area is available to assist with enrollment issues, such as change of address, change of ownership and re-enrollment issues via the AHCA website:
http://portal.flmmis.com/FLPublic/Provider_ProviderServices/Provider_Enrollment/tabId/42/Default.aspx

Guidelines about how physicians and other health care professionals should enroll with Medicaid can be found in the Provider General Handbook's Reference Chapter 2:

https://www.flrules.org/Gateway/reference.asp?No=Ref-02671

Humana®

Humana.com

CAQH ProView® streamlines credentialing process

Physicians and health care professionals need to use the Council for Affordable Quality Healthcare (CAQH) ProView tool to provide credentialing information to Humana. Note: This excludes facilities.

CAQH ProView is the trusted source and industry standard for self-reported provider data and eliminates redundant applications, including state applications, required by a health care professional's contracted health plans, including Humana. Using CAQH reduces the amount of time health care professionals spend on credentialing and recredentialing by allowing them to submit information to the tool once and then update it via the attestation process.

How this affects you:

- **Initial applicants** must use CAQH for requests submitted **Jan, 1, 2017, and after.**
- Health care professionals due for **recredentialing Sept. 1, 2017, and after** will need to submit their information through CAQH.
- The use of **CAQH will reduce the amount of time involved with credentialing and recredentialing, as well as costs.**
- Network health care professionals who have not used CAQH or who have outdated information have been notified via fax to their credentialing point of contact.
    - If you are **already registered** with CAQH, then please ensure your information is current and complete and that you have granted Humana authorization to review/receive the credentialing information.
    - If you **are not registered** with CAQH, then please complete a registration form via https://proview.caqh.org/PR/Registration. Once the registration is submitted, you will receive an email from CAQH with a CAQH Provider ID. You will then need to complete the online CAQH application and grant Humana authorization to review/receive your information.

Questions may be emailed to CredentialingInquiries@humana.com

Medicaid orientation training for obstetricians and gynecologists available online

Find training specifically for OB/GYNs on Humana's provider website, including information on the following topics:

- Authorization process
- Billing for GYN, OB and high-risk deliveries
- Postpartum visits
- Family planning
- Mom's First program
- HEDIS® measures

Complete 2017 compliance training requirements

Participating physicians and health care professionals are required to complete and attest to understanding and adhering to compliance program requirements available online.

Highlights include:

- **Humana Medicaid provider orientation** details how to do business with Humana and covers subjects such as contracting, credentialing, access to care, clinical programs, web resources, authorizations and claims processing.
- **Health, safety and welfare training** provides definitions of abuse, neglect and exploitation, steps for prevention and instructions for reporting suspected cases of abuse, neglect or exploitation.
- **Cultural competency** information discusses what the terms "culture" and "cultural competence" mean, the benefits of clear communication, strategies for working with seniors and individuals with disabilities and interpretive services.
- **Compliance and FWA training** defines fraud, waste and abuse, outlines steps for prevention and reporting of suspected cases of fraud, waste and abuse and provides information on the Whistleblower Act.

Find the training modules by logging in at **Humana.com/providers** (registration required) or www.availity.com (registration required). More information is available on Humana's website at https://www.humana.com/provider/support/clinical/medicaid-materials/florida by choosing the "Health Care Provider Training Materials" tab.

Patients share tips for improvement in annual surveys

Annual Consumer Assessment of Healthcare Providers and Systems (CAHPS) member surveys run each February through June. Last year's surveys showed the following areas with the most room for improvement:

- Getting Care Quickly
- Getting Needed Care
- How Well Doctors Communicate

Patients shared the following suggestions for improvement:

Getting Care Quickly

Suggested Improvements/Actions: Minimize wait times, communicate the reason for delays and apologize, provide updates on remaining wait times, show respect for the patient's time, offer to reschedule appointments, avoid overscheduling or double-booking, be on time and spend enough time with the patient.

Getting Needed Care

Suggested Improvements/Actions: Provide prompt and efficient care and follow up including referring to other health care professionals, ensure the patient is treated with courtesy and respect, schedule follow-up appointments quickly, follow through on recommendations and requests, schedule appointments with sufficient time to allow question/answer and explanation or review of test results.

How Well Doctors Communicate

Suggested Improvements/Actions: Emphasize good communication skills, make eye contact, use appropriate body language, confirm that the patient understands the topic on which you are trying to educate him/her, write down instructions, use simple language, communicate directly with the patient, provide visit notes, listen actively and respond to the patient's questions/concerns and repeat back what the patient said, explain concepts in layman's terms, address language barriers, educate patients and help them stay informed, avoid interrupting patients and/or multitasking, respect the patient's opinion and values.

Humana.com

Help keep your directory information current

To maintain accurate participating provider directories and reimbursement information, physicians and other health care professionals need to report all changes of address or other practice information (see table below for other examples) at least 30 days prior to the effective date of the change.

Examples of information changes that need to be reported:

Provider information	Adding a provider (i.e., physician or health care professional joining the practice/group)
Tax identification number	Provider deletions (i.e., physician or health care professional no longer participating with the practice/group)
National Provider Identifier (NPI)	Medicare/Medicaid numbers
Address	Office hours/after hours
Phone number	Languages spoken
Practice name	*Please note some of these changes may require a new amendment or agreement depending on the reason for the change.*

There are multiple ways to report changes to Humana:

- If you usually send this type of information to a local market representative or other Humana Provider Relations staff, please continue to do so.
- If your practice is managed by an independent practice association (IPA), management services organization (MSO), physician organization (PO) or physician hospital organization (PHO), please report demographic changes to the administrative office of that organization, which will then update your information with Humana.
- **Additional options:**
  - Submit changes electronically on Humana.com (registration required) using the Manage My Demographics tool under the "Resources" tab.
  - Contact Humana provider relations at 1-800-626-2741, Monday through Friday, 8 a.m. to 5 p.m. Central time.
  - Fax changes to Humana provider relations at 1-800-626-1686.
  - Contact your local Humana provider contracting representative.

For more information, please refer to the Humana provider manual.

If you have questions, please contact Humana provider relations at 1-800-626-2741.

Humana posts new Florida Medicaid Provider Handbook

HEALTH CARE PROVIDERS CAN FIND THE NEW FLORIDA MEDICAID PROVIDER HANDBOOK, ALONG WITH OTHER HELPFUL MATERIALS, ON THE HUMANA FLORIDA MEDICAID PROVIDER WEBSITE AT HTTPS://WWW.HUMANA.COM/PROVIDER/SUPPORT/CLINICAL/MEDICAID-MATERIALS/FLORIDA.

Provider nominations welcome

Humana makes every effort to recruit and retain physicians and health care professionals of all ethnicities to support the cultural preferences of our members. Currently, Humana's Medicaid provider networks are open to new physicians and health care professionals who agree to Humana's contractual requirements and rates, as well as satisfy all credentialing and regulatory requirements.

We review and accommodate all provider nomination requests, when appropriate, from members and others to facilitate equal representation in our provider network. Questions about Humana's recruitment and retention of minority physicians and health care providers may be directed to your provider relations representative.

The status of Humana's networks is subject to change based on continual assessment of our provider network requirements. Therefore, there may be closed panels for select specialties in specific geographic areas.

Member transfer provider training available online

Find training on Humana's member-transfer policy and procedure online, which covers the following topics:

- Appropriate reasons for potential transfers
- Situations for which transfers are not permitted
- How to submit member-transfer requests to Humana
- Documentation required to support a potential transfer
- Sample patient communications

Changes announced for physician extender reimbursement

As you know, Humana follows state-specific regulations regarding fee schedule management and payments to health care providers, and therefore, Humana Medical Plan's fee schedules mirror the Agency for Health Care Administration's (AHCA) provider fee schedules. Consistent with that approach, effective as of March 1, 2017, Humana Medical Plan will reimburse physician extenders in accordance with the current published AHCA fee schedules. Under these AHCA fee schedules, services provided by physician extenders are paid at a different rate under Medicaid than other types of health care providers.

Physician extenders include, but are not limited to, the following:

- Licensed midwives
- Certified nurse midwives
- Advanced registered nurse practitioners
- Registered nurse first assistants
- Physician assistants
- Certified registered nurse anesthetists
- Anesthesiologist assistants

If you have questions about the Humana Medical Plan fee schedule, please contact your provider relations representative or visit the Florida Medicaid Web portal's provider fee schedules page: http://ahca.myflorida.com/medicaid/review/fee_schedules.shtml.

For more information, refer to the list below for your region's contact information:

- Region 1 (Walton and Okaloosa counties), call Jerred Carter at 1-813-294-5886 or email Jerred_Carter@iasishealthcare.com.
- Region 1 (Escambia and Santa Rosa counties), call John Paul Shaddock at 1-813-541-7034 or email JShaddock@iasishealthcare.com
- Region 6 (South Hillsborough, Hardee, Highlands and Manatee counties), call Ramon Paulino at 1-813-309-3581 or email RPaulino@iasishealthcare.com.
- Region 6 (North Hillsborough and Polk counties), call Robert Castillo at 1-813-309-7045 or email RCastillo@iasishealthcare.com.
- Regions 9, 10, 11, contact Katrina Knight-Vera at 1-305-626-5006.

Attachment 15-8: Provider Website Health Banner Example

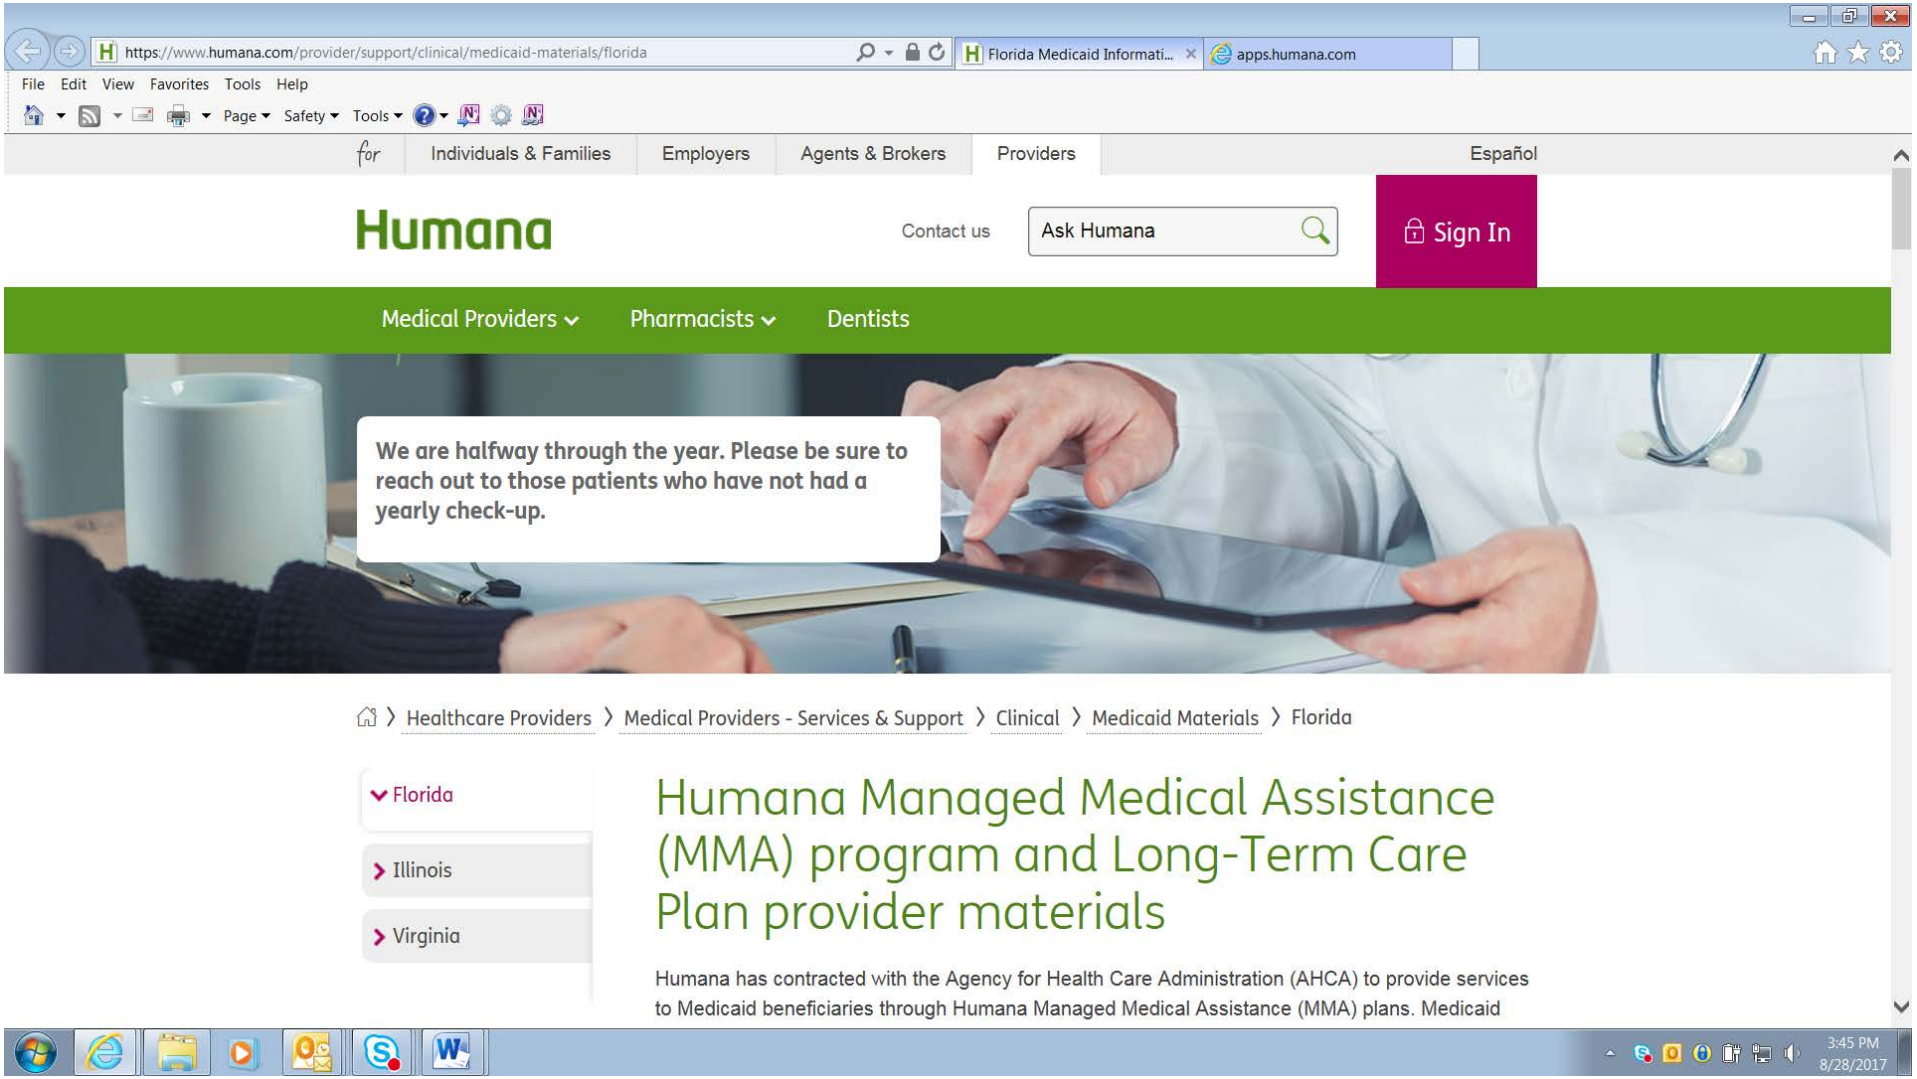

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 16 – Dispute Resolution (Statewide):

The respondent shall describe in detail its provider dispute resolution process.

Note: Pursuant to Section 409.966(3)(c)6., Florida Statutes, response to this submission requirement will be considered for negotiations.

Response:

Humana has a proven process for resolving provider complaints and disputes, hereafter referred to as provider complaints to be consistent with Agency for Health Care Administration (AHCA) terminology. We base our approach to provider complaints on a "no wrong door" policy that ensures that we track and address all provider complaints and that we comply with all contractual and regulatory requirements concerning complaint resolution. We understand that provider complaints are a critical source of information about the quality of our operations and provider satisfaction. Because provider complaints are a window into accurate and timely payment of claims, prior authorization practices, and provider education and training, we review them with the most critical eye on our internal processes to identify what would have prevented this complaint. We have designed our provider-centric approach and strategy to proactively prevent provider complaints, thereby mitigating unnecessary provider complaints.

Humana's provider network delivers high-quality services to our enrollees and provides the foundation for our overall success. It is critical to have a collaborative partnership with our providers and active monitoring and expeditious resolution of all issues that arise. Our regular continuous improvement activities, led by our Florida market team, have identified provider complaints as an opportunity for improvement within Humana. To improve the way we support our providers, we have undertaken a process reengineering effort. The goal is to focus on examining all aspects of our provider relationships including resolution of provider complaints.

To date, our process improvements have resulted in a more effective procedure for resolving provider complaints, from receipt via multiple channels to our tracking systems to our follow-up procedures. Our follow-up procedures include ensuring we make payments and determining if there are additional opportunities for improvement. We handle our provider complaint process separately from our grievance and appeals process so that we ensure we pay attention to our providers by our specially trained Provider Complaint Resolution teams, including the Critical Inquiry (CI) team.

Another outcome has been the establishment of our Florida-hosted forum, the Provider 360 Committee, a cross-functional committee whose primary objective is to improve the interaction between Humana and our providers. The Provider 360 Committee offers an excellent opportunity to improve providers' experience with Humana while delivering executive-level oversight of our provider complaint resolution process for our Florida Medicaid providers. The Provider 360 Committee meets monthly to:

- Discuss and analyze the trend data in our information management and reporting system, Customer Relationship Management (CRM)

- Hear directly from Humana operations associates involved in provider complaint research and resolution

- Receive comments from providers

- Request root cause analysis research

- Identify potential process improvements and system enhancements

The Provider 360 Committee identifies and escalates opportunities to the Medicaid Governance Triage and specific project teams, comprising both market and corporate associates. Chaired by our new Provider Services leader, the committee includes market leadership and a mix of market and corporate support areas, including Florida's Compliance Officer and Compliance associates, Provider Relations, Claims Performance Management, Integrated Provider Solutions, Provider Escalation representatives, which we call Service Alignment Managers (SAMs), and Provider Communications.

- Our Provider Services leader oversees all provider dispute resolution teams to ensure compliance with AHCA requirements as well as implementation of best practices across our provider organization

- Our Florida Compliance Officer and additional Compliance associates monitor our contractual requirements

- The Provider Relations team offers a provider perspective to complaints and identifies complaints that need further provider education on our policies

- Our Claims Performance Management team identifies areas where we can improve our claims processing needs and when there are opportunities for additional provider education on claims submission

- Integrated Provider Solutions (IPS) supports Availity, our secured provider portal, which allows claims to be submitted and status provided via standard Health Insurance Portability and Accountability Act of 1996 (HIPAA) transactions

- SAMs connect the dots between various provider-facing teams and provide support for process improvement

- Provider Communications is the central team that reviews and manages all provider communications through various outlets

Other key components of our strategy to address provider complaints include:

- Thorough training of our associates, including Customer Care and Care Management associates to equip them with the knowledge and resources to address complaints on the spot if possible

- A streamlined system to record and monitor all provider complaints, both claims- and non-claims-related)

- Real-time analytics, including trended data, that alert Humana to issues within our claims processing and payment system

- Leadership recognition and ownership of our Provider 360 Committee that meets monthly to discuss opportunities to improve the provider experience

DESCRIPTION OF HUMANA'S PROVIDER COMPLAINT RESOLUTION PROCESS

Humana's Provider Complaint Resolution process includes an end-to-end tracking system in which we process all provider complaints consistently and within State-mandated timeframes. This is true of both claims- and non-claims-related complaints, regardless of who submits the complaint, the provider, a third party, AHCA, and whether the complaint is a result of the AHCA Claim Dispute Resolution process. On Humana's end, it is irrelevant who receives the provider complaint or the method through which it is received (e.g., telephone, electronic mail, regular mail, or in person) because we process all complaints consistently and within the State's timelines. In our Provider Manual, we suggest to providers that they submit complaints to our Provider Customer Care unit or their Provider Relations representative. However, we have designed our process to ensure that we accept and process complaints regardless of the door through which it enters our organization.

Upon receipt of a complaint, we require our associates to enter it electronically into our CRM system, which will route the complaint via an automated workflow to the Provider Complaint Resolution team within Humana that has the appropriate expertise to resolve the complaint. This ensures that we direct provider complaints to the team with the most appropriate expertise to respond as quickly as possible.

PROVIDER COMPLAINTS RESEARCH AND RESOLUTION BY RESOLUTION TEAMS

Our Provider Complaint Resolution teams are composed of associates with specific knowledge and expertise about each topic for which they are responsible: claims review and payment, clinical authorizations, Managed Medical Assistance (MMA) provider issues, Long-term Care (LTC) provider issues, AHCA contract requirements, and financial recovery. Within three (3) business days of receipt of the provider complaint, the team assigned the provider complaint notifies the provider either orally or in writing, depending upon how we received it, that we have received the complaint and its expected date of disposition.

The Provider Complaint Resolution team thoroughly researches the provider's complaint, reaching out to the provider as necessary to obtain additional information and determining how to resolve the complaint in accordance with applicable statutory, regulatory, contractual, and provider agreement provisions. The Provider Complaint Resolution team, which logs its work in CRM for tracking purposes, has the authority to make resolution decisions, including re-adjudicating claims. The Provider Complaint Resolution team has responsibility for providing all required written notices to the provider and meeting the contract deadlines for complaint resolution. As part of our Provider Dispute Process Improvement, our executive leadership on the Provider 360 Committee reviews summaries from the Provider Complaint Resolution teams to understand the complaint issues and identify process improvements that could improve the provider experience.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

CUSTOMER CARE SYSTEM FOR COMPLAINT INTEGRATION, TRACKING, AND REPORTING

As the repository we use to record, track, and report all provider complaints and disputes, we have designed our CRM to support our provider complaints process. The Complaint Resolution teams use CRM to track receipt of claims-related provider complaints and ensure that we:

- Acknowledge provider complaints within three (3) business days

- Give written notice of the status of the provider complaint to the provider within fifteen (15) days of receipt and every fifteen (15) days thereafter

- Resolve provider complaints within sixty (60) days (claims-related) or ninety (90) days (non-claims related)

- Send written notice of the disposition and basis for resolution to the provider within three (3) business days of resolution

To ensure compliance with timeliness requirements, the daily reports from CRM offer a summary and detailed review of all claims-related provider complaints, including the number of days remaining to complete the next action in the complaint resolution process.

We code non-claims-related provider complaints in CRM to ensure not only that we meet the contractual timeframes for acknowledgement, but to also route the provider complaint to the correct team for resolution. If we have not resolved a provider complaint within the first fifteen (15) days, we document the reason why in a written notice, with written notification to the provider of the status every fifteen (15) days thereafter until we resolve it. We resolve all non-claims-related provider complaints within ninety (90) days and send notice of the disposition and basis for resolution to the provider within three (3) business days of resolution. Humana's ninety (90) day provider complaint timely resolution rate is approximately one-hundred percent (100%) over the last year.

Humana enters all information and documentation concerning provider complaints, from the receipt of the complaint to resolution, including through AHCA’s dispute resolution process, in CRM, where it is stored for reporting, trending analysis, querying, and retrieval by Humana associates.

==========

1. The extent to which the respondent’s process identifies claims related dispute trends and initiatives process improvement activities/system enhancements.

==========

Our provider complaints and disputes monitoring process includes comprehensive, real-time feedback to upstream processes when appropriate and root cause analysis for issues that span multiple providers. CRM reporting will allow us to examine the data for trends and to identify the process improvements necessary to avoid similar complaints going forward.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana's CRM captures and stores all data related to provider complaints, and has the capability to produce summary and drill-down reports based on that data to allow for in-depth analysis. We are still implementing certain elements of functionality within CRM and when fully operational it will provide detailed reports including:

- On a daily basis, CRM will be capable of generating a Daily Provider Complaints Dashboard to identify the status of provider complaints against the contractual processing requirements, regardless of whether the provider's complaint is claims- or non-claims-related.

- On a weekly basis, CRM will generate a Weekly Provider Complaints Dashboard that lists the number of provider complaints not resolved during the previous month, categorized by week for the previous four (4) weeks and by the length of time the case has been open to ensure we address all claims in a timely manner and prior to any required timeframes.

- On a monthly basis, CRM will generate a report concerning claims-related provider complaints submitted by providers to the AHCA Provider Complaint Resolution program. This report will track the date the provider submitted the complaint to AHCA, the date Humana received the provider complaint, and the date we responded to AHCA and the provider.

- CRM will also generate a monthly report detailing the date of requests for information from AHCA's contracted dispute resolution vendor, currently Maximus, the date we responded to such requests, the date of the AHCA order, and the content of the order. This report will also track the timeliness of our payment of AHCA orders in favor of providers to ensure we monitor this payment and identify any trends in these types of orders so that we can address the cause of these trends.

- A Monthly Provider Complaint Dashboard that rolls up data from other reports and displays provider complaint data over each of the prior twelve (12) months, showing trends in provider complaints. The Provider 360 Committee reviews and analyzes this report for trends to be improved on to better the provider experience.

- A Quarterly Provider Complaints Dashboard for review by Humana's Quality Improvement Committee (QIC).

- CRM allows for additional ad hoc drill-down reporting to review all provider complaints over an unlimited period of time, by provider, by provider type, by type of complaint, and other groupings.

The monthly trended data includes Humana's performance on timeliness metrics and the number and percent of provider complaints in each of the following categories:
- Type of provider complaint (claims-related, non-claims-related)
- Reason for the provider complaint
- Type of provider (e.g., hospital, personal care provider)
- Location of provider (region within the state)
- Timeliness metrics and benchmarks for provider complaint acknowledgements
- Status updates to the provider
- Extension requests if applicable
- Provider complaint resolution
- Payment of claims following a complaint resolution

- Disposition

These reports both ensure compliance and initiate our process improvement activities. The following review these daily reports:
- Production Leads of each Provider Complaints Resolution team included in the report
- Frontline Leaders
- Managers of the Provider Complaints Resolution teams included in the report

Humana's lines of accountability are clear. Our Production Leads are responsible for escalating provider complaints that require additional attention. Our Frontline Leaders are responsible for addressing barriers to resolving provider complaints. Business unit managers are responsible for compliance to the Contract requirements. Humana's new Provider Services Leader is responsible for connecting with the Provider Complaints Resolution teams to ensure we adequately address all provider complaints, meet compliance, and initiate process improvements, where needed.

==========
2. The extent to which the respondent's process includes oversight to ensure appropriate plan dispute determinations are made, timely payments are made, and claims disputes resolved within required timeframes.
==========

Humana understands the importance of closely monitoring that our provider complaint dispositions and resolutions are appropriate and made on a timely basis, and that we pay providers promptly following a claims-related complaint resolution in their favor.

The Provider Complaint Resolution teams provide daily oversight of provider complaints, including claims disputes, timely payments, and resolution within the required timeframes, which begins with review of the Daily Provider Complaints Dashboard. We train these teams on applicable requirements in the Contract, statutes and regulations, and our provider agreements. It is each team's responsibility to ensure that we meet these requirements during the complaint resolution process.

To ensure accountability, Humana has put in place several monitoring and oversight redundancies. First, the Provider Complaint Resolution team leaders are accountable to our new Provider Services Leader for the compliance of complaint resolution, including the timeliness of payment determinations when the complaint is claims-related. This allows for a single point of contact for AHCA and executive leadership as needed.

Second, several internal committees with various levels of expertise review our provider complaint performance metrics. For example, the Medicaid Compliance Committee reviews metrics related to provider complaints. Our committees have several options for implementing process improvements, which we prioritize and execute at all levels and ensure they follow a clearly delineated process. We require the issuance of an "issue or opportunity" (IOP) in response to the following:

- We identify an area of regulatory noncompliance

- For all Corrective Action Plans (CAPs)

- For all self-reported issues

- For all external notices

- For all CAPs required by an outside organization such as AHCA or the Centers for Medicare and Medicaid Services (CMS)

- In instances of fines or penalties

Any provider complaint or provider complaint trend that falls into one of the above categories would be subject to this process. We also use Improvement Action Plans (IAPs) to document how Humana will remediate an IOP. We log and monitor all our IOPs and IAPs through Enterprise Solution Point (ESP), an internal tracking platform.

Finally, the Provider 360 Committee reviews the monthly Provider Complaint Dashboard generated by CRM that we describe above. Accompanying the Dashboard are drill-down reports that track compliance with AHCA's and Humana's timeliness metrics and benchmarks for provider complaint acknowledgements, extension requests, status updates, provider complaint resolution, and payment of claims following complaint resolution, both by Humana and AHCA's Complaint Resolution process. The Committee is responsible for making recommendations to the QIC, the Local Market Operating Committee, and the Medicaid Operations Steering Committee for process improvements and system enhancements.

==========

3. The extent to which the respondent's process incorporates timely response to Agency requests related to the complaint resolution in accordance with the scope of services.

==========

Humana prioritizes and works diligently to ensure timely responses to provider complaints received from AHCA. The CI team and specifically, the CI team manager, is the single point of contact for provider complaints we receive via AHCA. The CI team uses a distinct and integrated fast-track process for AHCA requests. Our CI team is uniquely qualified to play this role as we draw CI analysts from internal associates with experience in Humana's operations.

We also ensure these associates have strong investigative and writing skills. We give all new CI analysts specialized training regarding the lines of business relevant to their substantive responsibilities as well as the provider complaint process so they are familiar with every potential avenue of complaint. Finally, we train CI analysts on the contractual requirements for our enrollees and their benefits. CI analysts also receive retraining when there are changes to processes and procedures when contract amendments are added or as needed based on internal audit results or performance analysis.

We mark all AHCA inquiries in CRM as such so the CI team can directly address them. The CI team loads all inquiry documents into CRM so we can integrate them with other provider complaints, include them in reports, and track them by oversight functions, such as the Provider 360 Committee, to identify ongoing process improvements.

Committed to ensuring a true partnership with AHCA, the CI team ensures that associates are available and accessible to AHCA, to providers, and to enrollees. It works in a collaborative manner and strives to exceed performance expectations to address concerns effectively and in a timely manner from the perspective of our provider or enrollee's need. Upon receipt from AHCA, we assign all provider complaints to a CI analyst. Once they receive a provider complaint, the CI analyst researches the issue and reaches out to the provider within three (3) days to acknowledge the complaint and to request any additional information needed to resolve the complaint. The CI analyst also works with other subject matter experts across Humana to address and resolve issues fully and in a timely manner. After researching the issue, the CI analyst drafts a disposition and oversees the implementation of the resolution, including claim adjudication, if applicable. We send a resolution letter to the provider within three (3) days of disposition.

CI leadership ensures a timely response to AHCA requests by daily monitoring of the status of research and resolution. The team notifies both AHCA and the provider of the resolution and ensures that the Provider 360 Committee and other internal committees receive a summary of the issue(s) and resolution for analytical and oversight purposes.

==========

4. The extent to which the respondent integrates all complaints, regardless of the complaint referral source (e.g., Agency, third party).

==========

We process all provider complaints consistently and through the same system, whether the complaint comes to Humana from the provider, AHCA, or a third party, and regardless of the door through which we receive the provider complaint. The integration point for all provider complaints is our CRM, which captures and stores all provider complaint information and routes all complaints directly to the appropriate team. CRM captures the provider complaint referral source and intake team to identify the provider complaint source and to support prioritization and timely resolution. Attached is a flow chart depicting how we handle provider complaints once received to communicating the resolution to the provider or AHCA (Attachment 16-01).

Since Humana offers providers a "no wrong door" entry into the provider complaint process, we train all associates who may receive a provider complaint to enter all the information they receive about a provider complaint directly into CRM in a uniform format. Thus, the information captured about each provider complaint is consistent across all complaints. In addition, we require associates to upload data about the status of the provider complaint to CRM as it is processed. This includes documentation relating to the provider's complaint such as copies of correspondence with providers and AHCA. CRM stores it and makes it available for retrieval. By requiring that we track all provider complaints, regardless of referral sources, through CRM, we ensure that our provider complaint reports capture all complaint data, the data accurately reflects trends in complaints, and that we can identify trends across providers and provider types.

==========

5. The extent to which the respondent's resolution process includes the respondent's participation in the Agency's claims dispute resolution program authorized in Section 408.7057, Florida Statues, as well as includes the following:

a) Responding to requests for information from the State contracted independent dispute resolution organization;

b) A global process for analysis of arbitrated cases for possible identification of process improvement/system enhancements; and

c) Prompt payment of final orders issued by the Agency related to claims arbitration case determinations.

==========

Humana has a successful track record in addressing all claims disputes directed by the State of Florida for our commercial line of business. Further, no claims disputes have routed to AHCA's claims dispute resolution vendor, currently Maximus, which speaks to the success of our process in communicating the reason for any denied claims and our resolution process. Humana will continue to participate in AHCA's Dispute Resolution program, established under Florida Statute (F.S.) §408.7057, and will work closely with AHCA and AHCA's claims dispute resolution vendor to ensure that we respond promptly to requests for information and promptly pay AHCA final orders. We will analyze those orders to identify possible process improvements and system enhancements. Further, as mentioned earlier, Humana's CI team will work to ensure continuous open communications. We will also ensure that we route any provider that goes directly to AHCA, and that has not filed a complaint with Humana, through our internal tracking procedures to support resolution and identification of any process improvements.

One of the results of our Provider Dispute Process Improvement was the identification of a new report that identifies and tracks all claim disputes submitted by providers to the AHCA Claim Dispute Resolution program. As stated earlier, CRM will generate a monthly report that identifies and tracks all claims disputes submitted by providers to the AHCA dispute resolution program, the date the dispute was submitted to AHCA's vendor, the date of requests for information from the vendor, the date we responded to such requests, the date of the AHCA order, the content of the order, and the timeliness of our payment of AHCA orders in favor of providers. This report, along with the Contract, will provide the information needed to comply with the requirements of the statute establishing the AHCA Claims Dispute Resolution program (§408.7057) and the AHCA regulations implementing that statute (F.A.C. §59A-12.030). Our Provider 360 Committee will use this report to identify process changes and will send it to our Florida Compliance associates to support ongoing monitoring.

RESPONDING TO REQUESTS FOR INFORMATION FROM THE STATE CONTRACTED INDEPENDENT DISPUTE RESOLUTION ORGANIZATION

Humana has established a process under which all requests for supporting documentation from AHCA's Claims Dispute Resolution vendor go to the CI team. Notably, to date, we have not yet had a dispute arise under this process. Upon receipt, the CI analyst will acknowledge receipt of the dispute to ACHA's independent dispute resolution vendor, via phone, letter, or email, by the end of the next business day of receipt.

The CI analyst will review the request and work with the appropriate subject matter experts to respond to the information request. Once the CI analyst has received all the requested information, he or she will forward this supporting information to AHCA's independent dispute

resolution vendor by the requested due date or within fifteen (15) days of receipt of the request, whichever is earlier. If the CI Team and Claims team find it will take longer than fifteen (15) days to prepare a response, then the CI Team will submit a request for an extension to the resolution organization vendor.

GLOBAL PROCESS FOR ANALYSIS OF ARBITRATED CASES FOR IDENTIFICATION OF POSSIBLE PROCESS IMPROVEMENTS AND SYSTEM ENHANCEMENTS

The CI team's expertise is particularly important when it comes to analyzing arbitrated cases for process improvements and system enhancements. Arbitrated cases typically involve disputed issues of importance to both parties and are not amenable to resolution without a neutral arbitrator. Consequently, the CI team gives these cases heightened attention. When the CI team receives an order from AHCA at the conclusion of a dispute resolution case, it enters a copy of the order into CRM along with the date of the order to ensure tracking in compliance with our procedures.

The CI analyst will ensure that we overturn and pay the claim within thirty (30) days of the notice from AHCA to pay or adjust. The CI analyst will contact AHCA with resolution on or before the due date to notify them that we have paid the claim. We will forward the requested information to the resolution vendor, including the claim settlement and payment details. If the request or final order indicates that Humana is to notify the provider of the resolution, the CI analyst will contact the provider to notify them of the payment on the claim.

The CI team is responsible for analyzing the order and summarizing its contents in a report that it presents to the Provider 360 Committee, as discussed above. The Provider 360 Committee reviews and discusses these reports at its monthly meetings. If the Provider 360 Committee identifies any issues that indicate we might need a process improvement or system enhancement, it refers the issue to the Medicaid Governance Triage meeting for assignment to a project team. The project team researches the question and reports back to the Provider 360 Committee with research findings and recommendations. The Provider 360 Committee then decides whether to make a recommendation for a process improvement or system enhancement to the Medicaid Operations Committee. If the CI team identifies an issue of critical importance, it will notify Humana's President of Florida Medicaid Operations, who will escalate the issue to national leadership if necessary.

PROMPT PAYMENT OF FINAL AHCA ORDERS

Humana recognizes that when AHCA issues a final order, it is essential to pay these orders promptly in compliance with §408.7057. Upon receipt, Humana will pay an order issued by AHCA in compliance with the order and within thirty (30) days of receiving the notice from AHCA. The CI analyst completes this process and tracks all final orders to ensure payment. Humana's Provider Services Leader is responsible for overseeing this process in conjunction with the CI team to ensure overall accountability for this function.

Evaluation Criteria:

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1. The extent to which the respondent's process identifies claims related dispute trends and initiates process improvement activities/system enhancements.

2. The extent to which the respondent's process includes oversight to ensure appropriate plan dispute determinations are made, timely payments are made, and claims disputes resolved within required timeframes.

3. The extent to which the respondent's process incorporates timely response to Agency requests related to complaint resolution in accordance with the scope of services.

4. The extent to which the respondent integrates all complaints, regardless of the complaint referral source (e.g., Agency, third party).

5. The extent to which the respondent's resolution process includes the respondent's participation in the Agency's claims dispute resolution program authorized in Section 408.7057, Florida Statues, as well as includes the following:

(a) Responding to requests for information from the State contracted independent dispute resolution organization;

(b) A global process for analysis of arbitrated cases for possible identification of process improvement/system enhancements; and

(c) Prompt payment of final orders issued by the Agency related to claims arbitration case determinations.

Score: This section is worth a maximum of 35 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 17 – Claims Processing and Payment Process (Statewide):

In a manner suitable for the provider community, the respondent shall submit key components of its claims processing and payment process, addressing both paper and electronic claims submissions for both participating and non-participating providers.

The response shall include detailed information on the metrics to be employed by the vendor to track timeliness and accuracy of claims adjudication and payment for claims submitted by participating providers and how these metrics will be used by line level and management staff to improve processes and provide for rapid cycle improvement.

The response shall also include a detailed description of how the respondent will make data and metrics regarding claims and payment available to the Agency and will ensure that network providers have access to real-time and trend data regarding claims processing and payment by the respondent and all applicable proposed subcontractors.

Note: Pursuant to Section 409.966(3)(c)6., Florida Statutes, response to this submission requirement will be considered for negotiations.

Response:

Humana's state-of-the-art claims processing systems meet all Federal and State requirements for accuracy and timeliness. Streamlined processes that do not add administrative burden to providers – with an emphasis on ease of navigation – are the foundation of our claims processing strategy. Humana processed one hundred sixty-four million (164,000,000) claims in 2016 for our commercial, Medicare, and Medicaid business. Five million eight hundred thousand (5,800,000) of those claims were for the Florida Medicaid programs. We understand that accurate and timely processing and payment of claims is essential to building and maintaining strong provider relationships.

Humana processes claims received from more than two hundred thousand (200,000) providers remitted through more than one hundred (100) clearinghouses. Humana has a strong reputation for successful "first pass" claims processing and payment. Humana vigorously tracks key claims payment metrics to ensure providers are paid in a timely fashion. Across all our government businesses, we pay more than ninety-nine percent (99%) of all claims within thirty (30) days and ninety-five percent (95%) of all claims within fourteen (14) days. Additionally, ninety-six percent (96%) of our Florida Managed Medical Assistance (MMA) and Long-Term Care (LTC) claims are electronic. Our metrics are achieved in part due to our established and tested processes and in part due to the collaboration and education our Provider Relations representatives and Claims departments offer our providers. We also have a structured mechanism to review trends in our claims metrics and report claims issues to our cross-functional Provider 360 Committee. The Provider 360 Committee is also an avenue for our Florida Market team and our corporate resources to discuss processes and performance to achieve our overarching claims goals.

Periodic system upgrades and improvements that drive efficiency, effectiveness, and interface with our providers are core to our approach. One recent improvement is our move to a new provider portal, Availity. As a partial owner of Availity, a national claims clearinghouse and claims management platform, and in partnership with other plans, we created Payer Space – a

multi-payer provider engagement portal tool to make Availity provider-friendly so that they can access the information and tools they need to run their businesses within their existing workflow across all their payers. Humana has been at the forefront of creating a streamlined process for providers to manage claims. Additionally, Availity offers providers access to real-time status updates on claims, including trended reports on claims.

Critical to the success of our claims processing and payment process is the timeliness and accuracy metrics established to conduct continuous performance monitoring. We have designed reports to closely monitor performance of systems and processes to measure against contractual and internally developed timeliness and accuracy goals. Our associates are guided to identify and resolve issues immediately. Claims dashboards are monitored and reviewed by our Medicaid Governance structure and cross-functional forums to ensure a validated and structured mechanism to maintain the integrity of our claims process. This rigor extends to all cross-functional capability critical to Medicaid's success, inclusive of claims processing and provider relationship management. Close monitoring of performance helps us identify any issues and pinpoint necessary process enhancements, changes in resource allocations, and opportunities for provider training.

To promote transparency in information sharing, Humana is making key components of internally-developed claims-level data and reporting accessible to the Agency. We are creating a secure Business Partner Portal to share these dashboards with AHCA for the new contract.

==========

1. The extent to which the respondent has described key components of its claims processing and payment process in a format suitable for the public, including a description of the processes for claims suitable for the public, including a description of the processes for claims submitted both on paper and electronically.

==========

Humana has designed our claims process and payment methodology to be streamlined and simplified. Our claims process and payment methodology is designed to:

1. Intake a claim from a mechanism of the provider's choosing, which encompasses more than one hundred (100) clearinghouses and billing agencies

2. Pay claims timely through a simple electronic fund transfer or check

3. Offer clear reasons for claims denials with an easy to access and use platform to view remittance files and resubmit denied claims

Our claims process and payment methodology has many back-end rules and edits in place to validate our payment to services rendered.

Humana's claims process and payment methodology is available to providers and the public in our Provider Manual and via easy to understand online videos on our publicly-facing website at https://www.humana.com/provider/. In addition, providers may request a printed copy of the Provider Manual. The claims information outlined in the Provider Manual includes the steps necessary to submit a claim for reimbursement, benefit limits, services which require prior authorization, copay procedures, and third party liability rules and requirements. All materials

have been developed to offer an easy-to-understand manual for our provider offices, including providers, billing staff, and other administrative staff so they can submit proper claims.

As part of Humana's efforts to streamline and simplify the claims submission process, we have retooled Availity, our provider engagement portal, to support providers in the submission of claims as well as throughout the path of a claim (e.g., claims status, payment, claim correction).

Humana's local Provider Relations representatives are also trained on our claims process. They receive rigorous training to develop an understanding of the claims process and the mechanisms we have designed to support accurate and timely processing. Humana's Provider Relations representatives conduct in-office training and follow-up to ensure that providers understand our claims process. The Provider Relations representatives are supported by additional claims associates, as needed.

Non-participating providers can find instructions on billing claims through our website and can call our Provider Relations Call Center for instructions. Our Availity webpage offers specific instructions for non-participating providers on the submission process for claims.

CLAIMS SUBMISSION

Humana's claims processing and payment process begins with a provider submitting an electronic or paper claim. Humana has worked with our providers to educate them on the complete, accurate, and timely submission of an 837 claims file.

Attachment 17-1 offers a diagram of our claims lifecycle process.

ELECTRONIC CLAIMS

If a provider bills electronically, the provider can use a large range of clearinghouses or billing agencies to submit the claim to Availity, our preferred clearinghouse that aggregates claims submitted by eighty percent (80%) of all our providers. Availity also serves as Humana's provider engagement portal and includes a feature to submit claims via direct data entry, a mechanism that is commonly utilized among our smaller LTC providers and is available at no-cost to our providers. We also work with ZirMed and other claims submission platforms to directly submit claims to our eHub platform. These platforms automate the claims conversion via the provider's practice management system to an 837 claims file we can then process.

When Humana receives a claim file from a clearinghouse or billing agency, Availity sends an electronic acknowledgement back to that entity, indicating our receipt of the claim. We acknowledge claims if there is a need for the provider to resubmit the claim. The 999 acknowledgement (a structured ANSI 999 X12 Acknowledgment for Health Care Insurance) offers notice to the submitter that the claim failed Health Insurance Portability and Accountability Act (HIPAA) compliance edits. A 277CA acknowledgement (a structured ANSI 277CA Health Care Claim Acknowledgement) offers a description for failed claims, which are payer-specific, outside of HIPAA compliance edits, providing the provider a clear understanding of reasons for rejections.

Humana has checks and balances in place at the front end of Availity to review the claim for more than one hundred (100) code checks to ensure that the claim has all the necessary fields

filled in and coded fields have valid values. The edits, inclusive of HIPAA level seven (7) edits, ensure that the 837 files submitted by our providers or through clearinghouses and billing agencies are not rejected when they enter our claims adjudication platform. As a result of these edits and front-end review of 837 claim files, we are able to reduce the number of claims denials a provider receives.

Humana has designed Availity, our provider engagement portal, to offer our providers a one-stop shop for claims submission and access to clinical member-level information, performance on care gaps and other quality metrics, authorization submission and status reviews, trainings, and more. Approximately sixty-five percent (65%) of our providers, across all lines of businesses, are registered and use the tools in Availity. As an added mechanism to support first pass of claims, Humana has developed the Claims Code Editor tool to allow providers to test the feedback they would receive for specific claim submission scenarios. The tool offers real-time guidance to providers with claims reject reasons so that providers can fix their 837 files before submission.

Our providers can access the status of any claim submitted to our platform via the Availity provider engagement portal. Providers can also resubmit claims and offer additional details for claims that have been rejected. Providers can download claims reports and filter by member ID and claims status and view amounts paid for each claim.

Throughout gradual and recent transition to Availity, Humana has developed a concerted strategy to help our paper claim submitting providers move to Availity's simple claims submission, a direct data entry form. In 2017, four percent (4%) of all claims submitted were paper claims, as compared to five percent (5%) percent in 2015 and 2016. We offer training to our providers, through a targeted outreach strategy to transition all providers to electronic claims submission.

Claims that successfully pass these and other edits are sent electronically to Humana for processing in our eHub system. All claims are subject to edits that confirm that the procedural and diagnosis codes are valid, the procedural codes are appropriate for the diagnosis code submitted, and the claim is in the correct format (e.g., a structured ANSI 837 X12 Health Care Claim transaction with HIPAA-compliant information). These are known as "HIPAA validation edits." Non-participating providers can submit claims through Availity or other clearinghouses and are processed with the same set of checks and balances.

PAPER CLAIMS

Providers that submit paper claims to Humana using a standard claims form, such as CMS-1500 or UB-04, mail their claims to the P.O. Box that is listed on the back of the member's identification (ID) card. Humana's vendor, Conduent, Inc., manages the paper claims process from the time the claim is received at the Humana P.O Box until the claim is received by eHub after being converted into an electronic format. Today, only four percent (4%) of all our Medicaid claims are submitted via paper.

Humana requires Conduent to retrieve mail from the P.O. Box two times a day between 6:00 am and 10:00 am EST. They open, sort, and scan all documents. Once the documents are sorted, Conduent scans each one and adds a date and time stamp number sequence called a document control number (DCN). Conduent then sends the scanned claim through an optical character recognition (OCR) scanner to extract the data needed by Humana to process the

claim. For claims that cannot be “read” by the OCR scanner, Conduent manually enters the required claims data into their system to accommodate a comprehensive transmission of all necessary details for the claims received. Data is therefore submitted in a format and with the fields Humana requires for claims processing. All paper claims are scanned and processed by Conduent within 24 hours of receipt. Upon receipt of a claim from Conduent, Humana responds with an acknowledgement of receipt which allows them to reconcile and ensure no claims are lost. Providers can also track the status of paper claims through the Availity provider engagement portal.

EHUB – HUMANA’S FIRST STAGE OF CLAIM PROCESSING

All claims, whether originally submitted electronically or on paper, are transmitted as an electronic claim from our clearinghouses and partners to Humana through eHub, Humana’s front-end claims system, where they are stored in their original state of receipt. eHub performs edits in addition to those applied by the clearinghouse or billing agency. These edits include but are not limited to:

- Validation of HIPAA level four (4) edits to validate for claims that are submitted via direct connections from clearinghouses and billing agencies

- Verification of member eligibility for services rendered

- Accurate completion of all key fields, including National Provider Identification (NPI) number, claim type, and others

- Identification of duplicate claims

Availity and eHub work in a complimentary fashion. We have designed Availity and eHub to apply level seven (7) and level four (4) HIPAA edits, respectively, to ensure all claims, regardless of the path of entry to our platform, are properly and thoroughly validated against HIPAA requirements. As noted above, claims received by eHub from Availity, ZirMed, and other claims submission platforms are subject to additional non-HIPAA related edits to address other considerations impacting our ability to successfully and accurately process claims. At every step in our process, we notify providers of claims that are rejected and provide supporting detail.

Claims that have passed eHub are then routed to our proprietary claims processing system, Claims Adjudication System (CAS). When CAS receives a claim from eHub, it sends an electronic acknowledgement back to eHub and maintains one hundred percent (100) percent traceability between systems to ensure no claim is lost.

Additionally, we have designed eHub to match all claims with authorizations if an authorization is required for the service being billed. If authorizations are not found, the 837 file is returned with a note to the provider requesting proof of authorization submission.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

ADJUDICATION

Adjudication is the stage in the claims process when Humana determines whether a claim can be paid and how much to pay the provider. The vast majority of claims that move through Humana's system are processed and paid without any manual intervention. Nearly ninety percent (90%) of all claims we process for our government businesses are automatically adjudicated and pass the first time through our edits.

CAS automatically assesses each claim to: identify the member; identify the provider; verify benefits; complete a series of automatic edits; verify that the member record shows no other insurance; and apply pricing. The following section details this process.

DETERMINING WHETHER A CLAIM CAN BE PAID
When CAS receives a claim from eHub, it determines whether the claim includes all the information necessary for adjudication and for our subsequent encounter submissions to the State. Edits include industry standard applications (e.g. McKesson ClaimsXten to verify accuracy of professional claim coding and iHealth verifies professional, outpatient, and DME claims) as well as internal Humana edits based on internal policies and contract and program parameters.

Edits verify:
- Provider match (e.g., "same provider" checks individual providers with group providers)
- Diagnosis and procedure code appropriateness
- Benefit eligibility and design
- Patient data and procedure and diagnosis code appropriateness (e.g., gender, age)
- Non-automated contract terms
- Manual pricing criteria
- Pricing
- Service authorization
- Duplicate claims

For non-par providers who do not have a single case agreement or contract, claims are pended. Our Provider Pend Group works with our Provider Relations team to load the provider's information into our system to ensure the claims can be processed.

Claims that pass these edits and that do not need further assessment are categorized as clean and are routed for payment. Clean claims may still pend for review.

Claims that are not clean either failed our edits or were rejected because we need additional information to process the claim. Humana may perform outreach to the provider to obtain necessary information to finalize these claims.

CAS finds claims with inconsistent data (such as type code, group number, or contracted provider number) and flags the claim as requiring manual processing. This is known as "pending" the claim. CAS may "pend" a claim for other reasons as well. Pended claims are assigned to our adjustors, who are highly trained within the type of pend reason or code they specialize in. Our Adjustors specialize in addressing our Florida Medicaid claims and are easily

able to identify trends and conduct root-cause analyses to correct issues. Our Adjustors conduct manual research and complete the adjudication guided by documentation.

If a claim fails the CAS edits, Humana may deny it and return the claim to the provider for correction and resubmission. Claims that are rejected are returned to our providers via Humana's Availity Provider Portal and through fax and mail remittance. Humana will clearly indicate to the provider what information is needed and the explanation of benefits so that the provider can readily make the correction and resubmit the claim. Humana never makes any changes to the information that a provider submits on a claim; only the provider can make any corrections and then resubmit the claim.

PRICING THE CLAIM (DETERMINING HOW MUCH TO PAY)
Prior to pricing the claim, the CAS platform verifies the service rendered is within the scope of their benefits. We then price the claim by comparing the total charge submitted for each claim with the total of individually entered amounts for each treatment or service within the claim. If the totals do not balance, the claim cannot be processed. The second step is pricing each service billed in the claim against the fee schedule for that provider and calculating the amount due to the provider. (If a claim has been pended, it may be manually priced by Adjustors using the same steps.) According to the contract and State statutory requirements, once the claim has been priced it is paid and sent to the Payments department for payment issuance.

PAYMENT

Claims that have been finalized will be processed for payment automatically. Prior to claim finalization, we conduct a prepay audit. The prepay audit process reviews an average of one point five percent (1.5%) to two percent (2%) of claims monthly. Selection of the claims are driven by rules that have been developed and coded into our prepay system. We have established rules to stop a claim from being processed that may contain errors. If the claim clears pre-payment, it is finalized and sent for payment. The audit process within our pre-pay area is end-to-end based on the rule that is being audited. Each auditor is assigned rules based on their prior background and experience. The auditor will examine the claim and confirm the appropriate step actions have occurred. The claim is examined from the point of receipt from the provider to completion for both the adjuster and the system.

If it does not clear the check, it is returned to the analyst who conducted the manual review.
If the provider has elected electronic funds transfer (EFT), Humana's Pay Pilot system assigns a payment trace number and pay-by-date and the payment will be automatically transmitted to the provider's bank account on that date. If the provider is not set up for EFT, we generate a paper check and mail it to the provider. Humana generates a Provider Explanation of Remittance (EOR) for both electronic and paper distribution. For electronic remittance, a provider can download the remittance from our provider portal at Availity, the provider's preferred clearinghouse or billing agency. Humana pays providers twice a week.

==========
2. The extent to which the respondent has included detailed metrics to be employed by the respondent to track timeliness and accuracy of the claims processing and payment process.
==========

Since 2016, we have paid more than ninety-five percent (95%) of clean claims within ten (10) days for our MMA services and more than ninety-three percent (93%) of clean claims within ten (10) days for our LTC services. These consistently high performance rates reflect our highly effective claims processing and payment reporting, monitoring, and evaluation mechanisms. Our processes and discussions are informed by conducting smart analytics of our data. Our data are reviewed in different forums and are made available to our Associates, Front Line Leads, Managers, and Executive Level Committees to track performance and identify process improvement opportunities.

We monitor: (1) our claims end-to-end through the lifecycle to ensure timeliness and accuracy; and (2) our claims processing system for capacity and to audit that the rules we have in place are effective. The reports and metrics described in this response achieve both these goals and ultimately ensure timely and accurate claims processing and payment.

BUSINESS INTELLIGENCE

Humana understands the importance of actionable data to effectively monitor and track claims. As such, we have invested heavily in business intelligence architecture to support and oversee our day-to-day functions. Humana's Enterprise Data Warehouse (EDW) and Medicaid Datamart form the foundation for claims analytics. Our Medicaid Datamart strengthens our data by applying logic and validation to our data. Business Intelligence teams use this platform to develop interactive applications and reports that support Associates in data discovery that lead to effective process management and improvement.

MEDICAID OPERATING DASHBOARD

In June 2016, Humana's Medicaid Performance Management and Reporting team launched a Medicaid Reporting Dashboard application on InfoMarket, Humana's home for reporting that is approved by our governing board for quality assurance. This dashboard provides an overview of the operational health of Humana's Medicaid plans over a thirty-six (36)-month period and captures claims processing and payment performance metrics. Summary dashboards guide conversation at cross functional meetings and executive level committees. The metrics measure our performance to support our overall assessment of processes and performance to achieving accuracy and timeliness standards. At a high level, the dashboard offers the volume of claims, our month-end inventory, and top pended and denied reasons. The Medicaid Reporting Dashboard has multiple filters and offers data at a point in time as well as trended data over the life of our contract. The tool also offers drill down capabilities at the line level to research and resolve issues and identify process improvement opportunities.

CLAIMS PERFORMANCE ANALYTICS CATALOG

The Business Informatics Shared Services team has developed a suite of interactive dashboards using QlikView software specifically for the Claims department to monitor claims key aspects of claims performance, including receipts, auto-adjudications, pend inventory, cycle time, and more. Associates can view trended data over a 12-month period and evaluate performance against thresholds and benchmarks to help inform process improvement opportunities.

Attachment 17-2 offers some visuals on our Business Intelligence Tools available to Claims Operations teams.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

CLAIMS LIFECYCLE PROCESS EVALUATION

Throughout the life of a claim, our systems record a comprehensive set of data elements. Teams across our claims organization use this data to develop measures and automated reporting that track key process steps to ensure we accurately process and pay claims timely. Our teams continuously monitor these operational reports to review process performance and are empowered by analytical tools to assess and resolve issues quickly. Listed below are examples of measures we monitor and that support efficient processing and payment.

RECEIPT OF CLAIM

During receipt of a claim, we have a set of key reports that monitor all initial processes that take place during and immediately after receipt of a claim. This includes monitoring mechanisms that: (1) validate all claims submitted were received; (2) reject any claims that were not submitted correctly; and (3) process claims that pass edits to our eHub platform. Key metrics we monitor are listed below:

- Unacknowledged claims within forty-eight (48) hours of receipt (837 Unacknowledged Claims): This metric allows us to monitor all claims correspondences for claims that have been received by eHub. We identify the number of claims received and validate against the number of acknowledgements sent. Claims that have not been acknowledged within forty-eight (48) hours of receipt are tracked for root cause and resolution, ensuring all claims receive an acknowledgement correspondence.

- Paper claims receipt and acknowledgment: Humana monitors the volume of claims acknowledgement receipts submitted to validate against Conduent claims submitted to eHub to identify claims that did not transmit. Every four (4) hours, Humana receives notification from Conduent of all claims submitted that have not been acknowledged. This report helps us validate the number of paper claims received is the same number of paper claims submitted.

- eHub HIPAA and payer-specific (999 and 277) rejects: On a real-time basis, we monitor the edits that are triggered by our eHub platform. Reports indicating HIPAA rejections of claims submitted are produced twice a day. Reports indicating other payer-specific rejections are produced six times a day. These reports and the reasoning for rejections are stored in our systems and communicated to providers. When our team receives inquiries from providers regarding rejected claims, these reports and cataloged notes allows us to retrieve the relevant data quickly, and promptly respond to the providers to support their proper submission.

- Claims transmission batch failure: On a daily basis, we review the claims process and identify any claims submission batches with a failed transmission into our eHub platform. If any batches fail, our eHub PSM team or clearinghouse ensures the batch file is corrected and successfully submitted.

To support monitoring of claims received, Humana has designed a Claims Audit Trail tool to investigate the routing of a particular claim and can provide information such as type of claim, eligibility status, the claim adjudication platform, and the time the claim was routed. This allows our Adjustors the ability to quickly assess potentially conflicted claims and conduct root causes analyses immediately.

CLAIMS PROCESSING SYSTEMS CAPACITY
We also have reports that monitor and assess our systems capacity for handling the volume of transactions and claims we have at any given moment, ensuring all claims are processed in a timely.

- eHub and CAS system claims volume: On a daily basis, we monitor the volume of claims routed to each of our claims processing and adjudication platforms. We trend the volumes to identify issues or gaps in the movement of claims from eHub to CAS, ensuring all claims are moving down the queue in the appropriate steps. Through this mechanism, we identify and resolve back-end technical issues to troubleshoot any barriers of submission to the adjudication platform. Additionally, daily and monthly reports, including yearly averages, are reviewed by leadership to assess for needs to increase resource and technology capacity.

- Availity capacity: This alert is routed to Humana from our Availity platform and notifies us of spikes in claims submission, where processing failure rates exceed thirty percent (30%) or more than one hundred (100) failed transactions. Our team receives these alerts on a real-time basis and on a daily basis. Based on this indication, we may submit communication to our subcontractors or providers alerting them of any slight delays we may foresee in processing their claims.

- eHub daily volume: On a daily basis, we review submission of claims, by clearinghouse or billing agency, to monitor claims submission deficiencies and overages. Special attention is paid to claims not received and claims submission patterns that significantly deviate from historical submission patterns. If the submission of claims deviates by twenty percent (20%) or more, we research the root cause of the deviation, test for special versus common cause variation, and take action, as needed.

CLAIMS PROCESSING
A strong end-to-end claims process consists of multiple systems designed to handle the particular rules and relevant logic by type of claim to effectively manage each claim throughout the claims process. Humana monitors this end-to-end process in a detailed manner. We use multiple reports to ensure that each claim received by Humana is successfully sent to the correct adjudication platform. In fact, we maintain a status record for all open claims for the purpose of real-time monitoring to offer status updates to providers on their claims in an easy to find fashion. We also maintain a historical record of all processed claims for ten (10) years, offering detailed explanation of the life of a particular claim and notes passed between our departments to resolve any issue associated with adjudicating the claim. Our primary workflow system, MACESS, offers this and more. MACESS is a workflow system that queues all pended claims to the appropriate and qualified team and associate.

- Claims aging: To support timeliness of payment, we monitor all pended claims in MACESS by age. We are able to, in real-time, assess the number of claims pended by reason it was pended, by team responsible, by type of claim, and more. Our Operations Manager, Front Line Leaders, and Team Leads can generate, refresh, and review these reports continuously to identify strategies to staff appropriate pend queues and to identify potential claims processing issues. These reports are also filtered by each contract requirement to assess how our claims are performing with regards to standards we have to achieve. We monitor the age of the claims

before it has passed the standard, to adequately staff each pended queue and prioritize claims that are at risk of aging, in our effort to address all claims and meet all contract requirements.

To ensure our edits for pending claims are working as designed and that the pending logic is an effective method to validate claims data, we generate a daily report to identify claims by pend code. The report allows us to ensure the claims pended by the logic are the types of claims the logic is designed to pend and review.

- Pended claims queue logic validation: To assess if claims are pending appropriately, we generate drill-down reports to review the detail and pend codes for all pended claims. Our Claims Operations manager, Front Line Leaders, and Team Leads review these reports on a daily and weekly basis to identify strategies to staff appropriate pend queues and to identify potential claims processing issues.

Humana also monitors two (2) claims adjudication and timeliness reports to identify opportunities for process improvements to our CAS system, including the edits and logic we have designed the system with. These reports offer trended views of data, allowing us to assess performance week over week for the month, quarter, and year range.

- Auto-adjudication abnormalities: To ensure claims that are auto-adjudicated are accurately adjudicated and to ensure that they are paid timely, we monitor a daily and weekly report of claims that are auto-adjudicating.

- Claims processing cycle time: On a weekly basis, we assess cycle time of all claims by various claim filters including clean claims, pended claims, dirty claims or electronic versus paper claim or medical claim, nursing facility claim, among other metrics.

Similar to the above mentioned reports, remittance files that are submitted and enter and exit our Electronic Remittance Advice (ERA) database are reviewed on a daily basis. We ensure that inbound and outbound electronic remit files are at least a ninety-five (95%) threshold for the previous day.

CLAIMS PAYMENT
- Payment cycle time: On a weekly basis, our CAS system generates a metric which informs our Claims Department of all claims that were paid in a given week, filtered by the claim type, and by age. This metric allows us to monitor how we are performing as compared to the contractual requirements and adjust any of our adjudication processes and claims processing edits, as necessary.

- Payment audit: On a monthly basis, we monitor all payments that were submitted to our providers against the amounts from our claims submission. This metric allows us to ensure that all payments were submitted accurately.

CLAIM AUDITS

Humana has instituted a process management control system for our claims operations that defines the claim process, quality controls, and monitoring plan. The control plan is an

important collaborative tool utilized by operations, auditing, and quality engineering associates to target improvement plans.

Humana also conducts five (5) types of audits to ensure all claims are focused on identifying, preventing and correcting errors. They include: performance guarantee audits, platform audits, focused audits, pre-disbursement audits, and performance management audits. Humana conducts an end-to-end claims audit of five hundred (500) claims on the CAS platform on a monthly basis. The sampling methodology for the platform audit includes a dollar-stratified random selection. Under this approach, our claims audit sample consists of a random selection of a pre-determined number of claims within each dollar stratum. Volume, frequency, standard deviation, and variance are considered for each stratum and in the sample size calculations.
Humana reviews and measures financial metrics, payment metrics, processing metrics, and overall accuracy.

- The financial error rate reflects the total payment of the claim that does not accurately reflect the amount of benefits payable

- The payment error rate reflects the number of claims adjudicated with financial errors

- The processing error rate reflects the number of claims that were not processed according to the policy and procedure and has no immediate financial impact but may have future financial implications. These errors may negatively impact the quality of service for the member, benefits for the claim, and fails to meet compliance to the contract. Examples include claims processed to the wrong member provider with the same TIN, claims processed against guidelines and recommendations, or if the claim amount went to the deductible or co-pay but should have denied.

- Monetary errors reflect errors that do result in financial impact and usually occur when there is an incorrect issuance of benefits leading to overpayment or underpayment. Examples include duplicate claim, coordination of benefits (COB) applied improperly, and a claim processed with incorrect provider ID.

When our audits uncover missed opportunities and improperly processed claims, we review the claim to understand if the error was made due to improper process documentation, adjustor error, or other reasons. Where process documentation improvement opportunities exist, we work with various leaders in our Claims department to update our policies and processes and retrain our adjustors on the new policies. For adjustor errors, Team Leads educate the adjustor on the error and monitor the adjustor closely to validate understanding.

For each sample claim that is audited, the following elements are reviewed: claim information, duplicates, eligibility, provider information, contract information, coordination of benefits and other insurance, benefits, co-payments and co-insurance and deductibles, pre-certification, pre-existing conditions, claims remarks, member remarks, claim check, I-health (to check for coding edits), claims member history, eHub, queue and adjuster unit audit trail, information recorded in other systems including MACESS, and use of internally developed process guidelines.

PREPAY AUDIT
The prepay audit process is designed to review a targeted population of claims that meet predetermined criteria. The criterion that is utilized is focused on the identification of claims that

are highly susceptible to error based on past experience. This is a proactive audit that is focused on identifying, correcting, and preventing errors prior to payment. The prepay audit process reviews an average of one point five percent (1.5%) to two percent (2%) of claims monthly. Selection of the claims is driven by rules that have been developed and coded into our prepay system. We have established rules to stop a claim from being processed that may contain errors.

The audit process within our pre-pay area is end-to-end based on the rule that is being audited. Each auditor is assigned rules based on their prior background and experience. The auditor will examine the claim based on logic to validate the appropriate step actions have occurred. The claim is examined from the point of receipt from the provider to completion for both the adjuster and the system. Reports are generated on a weekly and monthly basis that allows us to track dollars and claims in error through this audit process. The management oversight allows us to remove rules where the process, tools, or technology have been improved and monitoring is no longer required. Additional information is supplied by Financial Recovery, National Quality Audit, and a peer review process to identify additional opportunities for future rule determinations.

POST-PAY REVIEW

In addition to pre-payment adjudication processes, paid claims are assessed following payment to identify overpayments and underpayments. Retroactive review may be triggered by a provider inquiry, additional information received by our trading partners, or through automated processes generated when Humana receives updated enrollment and eligibility files. Humana runs queries monthly on all paid claims to identify claims that would have a likeness of being over or underpaid. In addition any retroactive changes to membership or provider contract changes are captured and claims are reviewed for appropriate payment.

Humana's Enterprise Financial Recovery system (EFR), a component of CAS, assesses paid claims for accuracy, and potential overpayment. Overpayments may be identified when Humana receives additional information from Medicare or Medicaid concerning an individual's eligibility or service status.

PERFORMANCE MANAGEMENT AUDIT

Our monthly performance management audit is an edit-driven claims audit covering a sample of ten (10) or more claims processed per month per adjuster (a minimum of two hundred (200) claims monthly) on the CAS platform. These audits are used to independently and objectively evaluate the quality of claims adjusters, to provide feedback and coaching for improvement and to capture trends for people, process, and technology enhancements.

The sampling methodology is a random audit which selects a minimum of one (1) to three (3) claims per week per adjuster. Samples are pulled on a weekly basis (at a minimum) to assist in timely completion of the audits and to ensure an equal distribution of sampled claims throughout the processing month. Claims are selected automatically utilizing a system-created random number generator. These audits are specific to our Florida comprehensive contract requirements.

SUMMARY

These reports help support issue identification and improve our claim processing and payment rates. Our teams and committees meet regularly and are organized around our performance and the processes we have in place to improve our performance. As evidenced, claims processing systems are complex and fed by several ancillary systems, which makes it imperative to be able to track, identify, and reconcile claims as they move through the system. Humana understands that claims processing is at the core of ensuring a strong provider experience.

==========

3. The extent to which the respondent has included a detailed description of how metrics from the claims processing and payment process will be used throughout its organization to provide for rapid cycle improvement.

==========

Rapid-cycle improvement is a quality improvement methodology for accomplishing measurable and meaningful results in an accelerated timeframe, typically less than ninety (90) days. It requires the management of an organization to identify a specific opportunity for improvement, assign a team to gather data about the issue and assess it, select the improvement strategy, implement the strategy, and test whether the strategy was effective. In addition, the organization's management must be committed to supporting the process so that it happens in an expedited manner.

As described earlier, our Front-Line Leaders and Team Leads from responsible departments monitor key metrics to validate all claims are being processed accurately and are on track for timely payment. These metrics roll up into daily, weekly, and monthly dashboards that are reviewed and assessed by multiple departments, including the Claims Operations Department, Claim Process Organization, and Operational Risk Management Department. These departments have individual meetings to discuss areas of opportunity – where Humana's performance is lower than the threshold or where trend data indicates abnormalities. During these meetings, rapid-cycle improvements are immediately put in place, where possible and appropriate. Often times, this requires engagement with our MIS Team to fix a technical or systems issue and can be handled within a matter of days. Any claim issue impacting providers are discussed at our Provider 360 Committee.

As our Frontline Leaders and Team Leads identify outliers and unexpected performance through our multiple monitoring vehicles, they work with our Claims Rework team to support the identification of the claims issue. The Claims Rework team then works with our IT department or within the back-end logic of the claims processing platform to recreate the issue, identify a solution, test the solution, and implement the fix. This team plays a central role to claims with processing lags and issues and creates resolutions for the particular claim at hand to ensure timely processing and conducts root cause analytics to create a solution for the claim issue so that similar claims do not lag in the future.

Recognizing the need to support an end-to-end process to monitor these projects and to build rapid cycle improvement strategy into our Medicaid operations, this past year Humana enhanced its Medicaid governance framework, deploying new processes for risk identification,

and new pathways for issue escalation. As claims issues are identified, the Claims Process Owner raises the issue during the next local Market Operating Committee meeting, where the group determines how the issue should be escalated and resolved. The proposed resolution and issue is presented to our Triage team. This team assesses requests for process improvement and system enhancement projects, determines that additional work is required to determine root cause and resolve the issue, decides whether to approve the project, and if needed refers the proposed project to the Medicaid Operations Steering Committee for approval. Triage teams are comprised of consultants to the process (product or process owners, market representatives, corporate Medicaid and IT staff) and decision makers (governance process facilitator and implementation or process improvement leader).

The new governance structure will enhance claims performance improvement by creating a consistent process for providing progress and status updates and identifying risk and escalation procedures to senior management. We have developed tools to support our framework and to ensure all changes are tracked and meet objectives and goals. The new structure is supported by our Medicaid Implementation Team comprised of experienced process engineers and project managers, this team coordinates corporate and market resources to rapidly implement opportunities identified. Attachment 17-3 provides an overview of the Medicaid Governance framework.

Humana also recently launched the Florida-based Provider 360 Committee. The Provider 360 Committee plays an important role in rapid cycle improvement of claims processing and payment process. Led by local market leadership, the Committee includes a mix of market and corporate support areas, including our Compliance Officers, Provider Relations, Claims, digital, Provider Escalation and Provider Communications. The sole objective of the Provider 360 Committee is to review performance measures that contribute to our provider's experience with Humana. As needed process improvement opportunities will be presented to Triage and overseen via the Medicaid Governance framework.

==========

4. The extent to which the respondent has included a detailed description of its process to make data and metrics regarding the claims processing and payment process available to the Agency and that the described process provides sufficient opportunity for the Agency to access this data.

==========

As described earlier, Humana understands the importance of data and the types of functionalities needed to make the data impactful. Humana has a multitude of QlikView and SSRS data packages that offer smart analysis of claims. As Humana enters the new contract, we will offer the Agency an on-line, secure portal to access these data platforms and more. Humana offers Business Partner Portals to clients across our organization. We will design a portal tailored to meet the reporting requirements of the contract.

The reporting portal will offer access to near real-time data on our claims process and will offer access to line-level claims detail. Claims data are backed-up nightly in our Enterprise Data Warehouse (EDW). On a nightly basis, the Government Partner Portal will be updated to offer as close to real-time and line-level information on all active claims we house in our system, wherever it may be in the claims lifecycle. Our QlikView and SSRS dashboards allow for information to be presented at an aggregate level with an ability to filter and drill-down to the

claims level. These tools will make our reports highly interactive. As an example, we can share and make available claims pend inventory reports. Where the Agency is interested in a specific metric, our SSRS capabilities allows for AHCA to access additional detail about that measure. Attachment 17-4 offers a sample of the types of reporting functionalities that can be made available.

==========
5. The extent to which the respondent has included a detailed description of its process to make data and metrics and trend data regarding claims processing and payment process available to network providers on a real-time basis and that the described process provides sufficient opportunities for network providers to access this data.
==========

Humana has developed a special partnership with Availity to make it easier for providers to care for patients and interact with our platform. As a cofounder and payer-owner, Humana has designed the Provider Engagement Portal to offer ease of use and reduce administrative burden providers are challenged with when trying to access information on their patients across insurance carriers. Humana has worked with Availity to design Payer Space, offering Humana-specific tools to our providers to reduce the administrative burden of analyzing data, tracking claims status, and other administrative functions.

Availity allows our providers to check eligibility, check benefits, submit and receive updates on referrals and authorizations, and submit and manage claims, among other functions. Availity helps practices access information about claims throughout the workflow in real-time. Availity's real-time transmission is mission critical to the delivery of our member's care and is designed to trigger key processes including prior authorization requests and eligibility of services.

Availity's Claims Status Inquiry Summary Page displays high-level information about claims, including date of service, claim number, date processed, check or EFT number, amount billed, and amount paid. Through the platform, providers can access detailed line-level information for each claim. Further, the platform offers all remittances for finalized claims and includes a financial summary. Providers can view claims processing and payment process status for all submitted claims over a time span, allowing them to view trended data and to filter by a member, claim type, claim status, and other indicators.

Providers can also correct claims through Availity, where they are routed to Humana's claims application and supplemental documentation can be submitted to provide additional information. Attachment 17-5 provides screenshots of how providers can access claims information on a real-time basis.

In addition to the data made available through this platform, Humana's Provider Engagement team meets with providers routinely and discusses claims and encounter performance. Our team can typically share county and specialty type benchmarks and performance on key metrics such as average volume of claims or encounters per member.

==========
6. The extent to which the respondent has included its applicable proposed subcontractors in its response, with each component addressed for each applicable proposed subcontractor.
==========

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

As part of our contract with each subcontractor, Humana requires them to meet all AHCA claims processing requirements. A Humana Relationship Manager is assigned to each subcontractor and, in coordination with the key market stakeholders, Delegation Compliance, Regulatory Compliance, and Humana's Internal Audit Consulting Group (IACG), is responsible for managing the subcontractor relationship. We focus on monitoring and driving closure to any gaps to state contract and Humana-established performance standards, inclusive of operational, reporting, and compliance-related requirements.

Key metrics monitored across all our subcontractors who processes claims include, but are not limited to:

- Claims paid and denied
- Claims volume
- Average number of claims received per member
- Clean claims cycle time
- All claims cycle time

For subcontractors serving multiple Humana lines-of-business or markets, the Relationship Managers are dedicated to translating best practices and learnings across the broad Humana footprint. Subcontractor performance is assessed and escalated issues and opportunities are reviewed during regular Joint Operating Committee (JOC) meetings. The JOCs are attended by key market leadership, including the Florida Medicaid Vendor Oversight Manager. The Vendor Oversight Manager is responsible for monitoring the performance of all subcontractors in their collective contribution to Florida Medicaid's operational quality, inclusive of claims and claims-related areas Humana requires the subcontractor to develop a corrective action plan (CAP) to address significant gaps in performance. Through direct engagement in the Quality Improvement Committee (QIC), the Vendor Oversight Manager also contributes to the strategy and planning relative to all elements of subcontractor performance quality, including those relative to claims.

The following response provides an overview of our subcontractor's claims processing mechanism and the metrics they use to ensure accuracy and timeliness of payment. Our key subcontractors include: Access Behavioral Health (ABH) for behavioral health services, Beacon Health Options (Beacon) for behavioral health services, DentaQuest for dental services, DST Pharmacy Solutions for prescription drug claims processing, and LogistiCare for transportation.

While each of our subcontractors have mechanisms to offer insight to their providers on data and metrics, Humana collects all claims data from each of our subcontractors and reports this information to AHCA. Therefore, the Humana process for ensuring AHCA has access to claims metrics and performance (as outlined in #4 above) includes information on our subcontractors.

ACCESS BEHAVIORAL HEALTH (BEHAVIORAL HEALTH SERVICES)

Since 2001, Access Behavioral Health has been serving the mental health and substance abuse needs for Medicaid enrollees in northwest Florida. Access Behavioral Health contracts with an experienced provider network to offer comprehensive, community-based care.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

1. CLAIMS PROCESSING AND PAYMENT PROCESS – KEY COMPONENTS

Access Behavioral Health (ABH) providers upload electronic claims to an established file transfer protocol (FTP) site. Through an automated process, the FTP site periodically throughout the day. When a file is found on the FTP site, the automated process downloads the file into a folder for processing and sends an automated email notification is checked to ABH associates that a new file has been downloaded. Humana sends a daily eligibility feed to ABH.

The claims processing system recognizes new electronic files in the claims processing folder. The files are automatically imported into the claims system. A claim reciept date is populated with a file import date. The 999 response files are automatically generated into a specified outbound folder.

An automated process recognizes new files in the outbound folder. The automated process uploads the 999 response files to the FTP site. An automated email notification is sent to ABH staff when the process is completed. ABH staff run the claims adjudication process. Accounting staff process adjudicated claims for payment every Tuesday. Checks are cut for fee-for-service (FFS) claims and mailed to the provider. Remittance reports for FFS and encounter claims are created and uploaded to FTP site. Email notification is sent to the provider that a remittance report is available on the FTP site.

ABH receives paper claims via US mail, FedEx, UPS, and other carriers at the Lakeview Center mail room. ABH sorts mail directed to ABH claims on the day it is received. An ABH staff member retrieves the mail from the mail room Monday through Friday a minimum of once daily. On the same day claims are retrieved from the mail room, the claims are removed from envelopes, sorted by submitting provider, and stamped with the date received.

On the same day claims are retrieved from the mail room, claims are triaged for misroutes and submission errors. Claims for medical services not covered by ABH are rerouted to the appropriate health plan. Claims with submission errors are returned to the provider with a letter stating the specific reason why the claim cannot be processed as paid or denied. ABH keeps a log of the total number of claims passing triage and sent for processing.

ABH keys claims into the claims payment system. The claims payment system edits for member eligibility, valid diagnosis code, member benefit limit, timely filing (within three hundred sixty-five (365) days of date of service), valid service code, valid rendering provider, and prior authorization (If required).

If a claim fails these edits, it is denied. If a claim passes all the edits, ABH pays the claim. ABH acknowledges, pays, or denies paper claims within fifteen (15) days of receipt. Accounting staff process adjudicated claims for payment every Tuesday.

Checks are cut and mailed to the provider, or EFT payments are made to the provider every Tuesday. Remittance advices for all claims processed as paid or denied are mailed to providers every Tuesday. The remittance advice includes information on how to request a claim correction or file an appeal. If a claim is denied for reasons related to authorizations or non-covered services, a denial letter is also mailed to the member.

2. TIMELINESS AND ACCURACY METRICS
ABH employs proven metrics to track the timeliness and accuracy of its claims processing and payment. The metrics include claims turnaround time (TAT) reports and monthly paid claims review for procedural and financial accuracy.

3. RAPID CYCLE IMPROVEMENT
ABH uses two (2) monthly reports, the Claims TAT report and the Monthly Paid Claims Review to determine whether process improvements or system enhancements are needed. The trigger for rapid cycle improvement (RCI) based on the Claims TAT report is a score of less than fifty percent (50%) processed within seven (7) days, seventy percent (70%) within ten (10) days, or ninety percent (90%) within twenty (20) days for three (3) consecutive months. For the Monthly Paid Claims Review, the trigger for RCI is a score of less than ninety-eight percent (98%) for procedural accuracy or ninety-nine percent (99%) for financial accuracy for three (3) consecutive months.

ABH's RCI process begins with notification to key staff, including the ABH Director, the LCI Business Office Director (or designee), and the IT Director (or designee). A team is assembled and a specific goal for improvement is established. The team brainstorms the current process to determine the problem. Team members identify causes and alternative solutions using the statement, "If we do _____, then _____will happen." The team develops and implements an action plan. The team then re-measures the metric. If the outcome is successful, the improvement is standardized. If the outcome is unsuccessful, ABH restarts the process.

4. DATA AND METRICS AVAILABLE TO AHCA
ABH's claims processing and payment metrics and data will be made available via Humana's reporting portal referenced in evaluation criteria four (4).

5. REAL-TIME DATA TO NETWORK PROVIDERS
Information sent to providers with the remittance advice each time claims are paid or denied includes a direct phone number for claims questions and disputes. This phone number connects providers directly to the Lakeview business office where claims processors are available Monday through Friday 9:00 AM to 6:00 PM CST to answer questions about claims payment or denials. The phone line is set to ring at multiple locations so that all calls may be answered by a live person. A confidential voicemail option is available for high volume time periods and after hours.

BEACON HEALTH OPTIONS

Beacon Health Options (Beacon) serves as a national behavioral health services organization and processes claims for a majority of its clients, averaging more than twenty-two million (22,000,000) claims annually. In 2016, billed claims were submitted to Beacon totaling more than fourteen billion, eight hundred million dollars ($14,800,000,000). Beacon's proprietary FlexCare360 management information system supports managed behavioral health programs starting with the eligibility process through claims adjudication and payment. Humana provides a daily eligibility feed to Beacon.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

1. CLAIMS PROCESSING AND PAYMENT PROCESS – KEY COMPONENTS

Claims Submission
Beacon accepts paper as well as electronic claims. Approximately eighty-eight percent (88%) of all claims are submitted electronically to Beacon. Providers may submit electronic claims through Beacon's web portal in FlexCare360 or an electronic data interchange (EDI) gateway. Once uploaded, electronic claims run through the FlexCare360 claims adjudication engine for processing. For electronic claims, about seventy-five percent (75%) of Beacon's providers use a clearinghouse and twenty-five percent (25%) use direct connections to Beacon's systems.

While submission of paper claims is discouraged, providers can submit them manually, using the national standard format CMS 1500 or UB-04 claim form. Beacon enters the data from these claims into scanned images that are prepared on the day of receipt. In addition, Beacon will create a file (known as an 837) from a paper claim. The scanned images and 837s are entered into Beacon's claims adjudication system, FlexCare360.

Beacon's web portal capabilities allows for claims submission and makes administrative requirements more efficient, user-friendly, and are at no-cost to providers. Any provider with internet access can use the web portal. Through eServices, the web portal, providers can enter claims and receive immediate confirmation of the transaction.

Claims Adjudication
FlexCare360 includes adjudication edits and logic for claims processing, including standard tables that contain HIPAA-compliant codes for diagnosis, procedure, decision, and place of service. FlexCare360 claims processing logic checks for erroneous payments, including duplicate payments, incompatibility between gender and procedure code-diagnosis edits, gender code-diagnosis edits, and payments for the service does not correspond with the pricing schedule on file for the date of service. It also recognizes and automatically denies claims that are duplicate submissions.

If a claim is found during the application of these edits and logic checks to have errors or to be missing required documentation, it will be denied and returned to the provider.

Claims Payment
Claims that pass all the edits and include all the required information are priced according to the provider's negotiated fees and approved for payment.

2. TIMELINESS AND ACCURACY METRICS
Beacon's Claims Supervisors closely monitor claims aging inventory reports daily to ensure work assignments are appropriately prioritized and claims are finalized timely to meet timeliness metrics. Claims staff review turn-around time reports monthly to identify and address where improvements are needed.

Beacon staff performs daily internal quality audits on claims accuracy using an auditing process that mirrors an external audit. There are various levels of audits conducted that focus on the financial outcome of the claim, and on policies and workflows used in the adjudication process. Claims are audited both pre- and post-payment to evaluate the abilities of Claim Processors to consistently meet individual and departmental goals. Each claim audit reviews forty-one (41) elements to check mechanical and financial accuracy. Examples of these elements include the

correct authorization was used, the correct provider record is selected for adjudication, the benefits have been applied correctly, the correct procedure codes have been entered, and the dates of service match the bill lines on the claim image.

Humana's Relationship Manager monitors Beacon's performance on claims processing and payment process on a monthly basis. In August 2017, Beacon processed ninety-seven percent (97%) of their clean claims within twenty (20) days.

3. RAPID CYCLE IMPROVEMENT
Beacon uses an accountable, data-supported continuous quality improvement (CQI) process to refine and improve claims processing across the organization. Beacon delineates thresholds and benchmarks, identifies responsible parties who are accountable to monitor and promote the change process, implements corrective action plans and monitoring procedures, and acts on the results of those plans. Through data collection, measurement, and analysis, Beacon identifies aspects of claims processing that demonstrate opportunities for improvement and prioritizes them for quality improvement activities that are implemented in an accelerated timeframe.

4. DATA AND METRICS AVAILABLE TO AHCA
Beacon's claims processing and payment metrics and data will be made available via Humana's reporting portal referenced in evaluation criteria four (4).

5. REAL-TIME DATA TO NETWORK PROVIDERS
Through Beacon's eServices web provider portal, providers can view aggregate claims information for their entire provider practice or organization, by month. Users can select Provider Reports and Claims Approval with Denial Report. The report displays a table chart and pie charts, showing the number and percentage of claims approved, and of claims denied for various reasons. These calculations are provided by member and by all claims, since any single member may have multiple claims. Providers can view full descriptions of the reasons for the denials of their claims in the portal.

DENTAQUEST (DENTAL SERVICES)

As a national dental health maintenance organization, DentaQuest has experience serving Medicaid, CHIP, and Medicare Advantage enrollees, and partners with over 60 health plans across the country. DentaQuest serves a total of twenty-four million (24,000,000) enrollees with a network of forty-eight thousand (48,000) dentists nationwide. DentaQuest has an overall clean claims accuracy rate of over ninety-nine percent (99%).

1. CLAIMS PROCESSING AND PAYMENT PROCESS – KEY COMPONENTS
Providers can submit dental claims to DentaQuest by three methods: paper (mail or fax), electronically via a clearinghouse, and electronically through direct data entry on DentaQuest's provider portal. Humana provides a daily eligibility feed to DentaQuest.

DentaQuest auto-adjudicates clean claims and authorizations that have been submitted electronically in real time. Providers can access determinations and payment amounts on-line the following business day. DentaQuest Customer Service is able to provide data on these real-time events immediately.

Claims are paid once a week on a day of the week determined by Humana. Claims that have been submitted and have completed processing prior to 5:00 PM EST on the date of payment will be included in the payment run.

2. TIMELINESS AND ACCURACY METRICS

DentaQuest tracks claim processing timeliness and accuracy through multiple reporting mechanisms. DentaQuest utilizes a first-in first-out prioritization of claims in queue. Additionally, DentaQuest reviews age of claims in queue reports on a daily basis to ensure the system is effectively prioritizing claims in queue. Turnaround time reporting is reviewed at a minimum on a monthly basis.

Claims are audited by DentaQuest's Quality Assurance team to ensure processing accuracy. Humana monitors DentaQuest's performance on claims processing and payment process using the standard determined by AHCA on a monthly basis. In August 2017, DentaQuest processed and paid ninety-one point eight percent (91.8%) of clean claims within ten (10) days and ninety-nine point four nine percent (99.49%) of clean claims within twenty (20) days; exceeding contract requirements by twenty-one point eight (21.8) and nine point four nine (9.49) percentage points, respectively.

3. RAPID CYCLE IMPROVEMENT

The age of claims in queue and turnaround time reports are used for problem identification and root cause resolution. Claims determined to be processed outside of service level agreements are reviewed for root cause and action plans are promptly implemented to prevent future occurrences. Humana's Relationship Managers monitor the performance monthly and engage in more frequent discussions, as needed.

4. REAL-TIME DATA TO AHCA

DentaQuest will provide a client web portal to AHCA through which it will have access to data in a transparent and user-friendly manner, along with a more robust menu of self-service reporting options. DentaQuest offers full access to standard reports as well as inquiry-based data through this web portal. Standard reports include claims paid by benefit type, claims paid by procedure class, paid by provider specialty, patient count, provider and network utilization, breakdown of procedure class, and trending metrics. Standard reports are posted on the web portal for review as needed. The client web portal also provides inquiry access, simple list reports for common administrative inquiries, and ad hoc reports as requested.

5. REAL-TIME DATA TO NETWORK PROVIDERS

DentaQuest works with its providers to ensure they understand the claims and payment processing guidelines. The DentaQuest provider manual located on their website and describes how providers can submit claims and monitor payment breakdown and delivery via the provider web portal. DentaQuest educates their providers on its web portal and the ease of filing claims, accuracy of processing claims, speed of claims payment, ability to track claims, and direct deposit.

DST PHARMACY SOLUTIONS (PHARMACY CLAIMS ADJUDICATION)

Humana Pharmacy Solutions® (HPS) is a wholly-owned subsidiary within the Humana Inc. diversified family of health and well-being solutions. Today, HPS provides Pharmacy Benefit

Management (PBM) services for more than ten million (10,000,000) enrollees across our book of business, including approximately seven million, four hundred twenty-two thousand, nine hundred thirty-two (7,422,932) Medicare lives, two million eight hundred fifty-three thousand, three hundred nine (2,853,309) Commercial lives and more than two hundred ninety-seven thousand, six hundred ninety (297,690) Medicaid lives. We process more than three hundred million (300,000,000) prescriptions annually and manage approximately eighteen billion dollars ($18,000,000,000) in prescription drug spend. HPS uses DST Pharmacy Solutions to conduct all functions related to the processing and management of claims. HPS provides twice daily eligibility feeds to DST Pharmacy Solutions.

1. CLAIMS PROCESSING AND PAYMENT PROCESS – KEY COMPONENTS

DST Pharmacy Solutions processes all claims submitted by the pharmacies in the network of Humana's subsidiary, Humana Pharmacy Solutions (HPS) and operates the pharmacy technical help desk on behalf of HPS. HPS requires that all pharmacy claims be submitted electronically at the point of sale using NCPDP standards.

When a claim is submitted to DST Pharmacy Solutions using NCPDP standards via a clearinghouse or through a direct connection, DST Pharmacy Solutions applies the first round of edits to the claim to ensure all required fields are filled in. If a claim clears the first round of edits, a second round of edits is applied. The second round checks the National Drug Code (NDC) file, the prescriber file, deductible information, whether the claim is a duplicate, and whether a prior authorization (if required) is on file. The claims processing system performs an average of one hundred fifty (150) edits in approximately one (1) second of processing time on each submitted claim. Some of these edits include eligibility, pharmacy, prescriber, drug, drug utilization review, benefits, authorizations, and deductible reviews. Some of these edits are "hard," that is, they will result in rejection of the claim if the information is not found or there is an error. Examples of hard edits include whether there is a valid member ID and a valid pharmacy ID. Other edits are "soft" and will not result in rejection; some hard edits allow a pharmacy to override the edit by entering the appropriate override code into the system. An example of this is that the DST Pharmacy Solutions system finds that the claim is being refilled before the allotted time. The pharmacy may know that this is due to a dosage change by the prescriber and can enter a code to override the hard edit.

Claim adjudication is done at the point of sale, giving the pharmacy an immediate electronic decision within fifteen (15) seconds on whether its claim can be paid and the payment amount. Humana adjudicates more than ninety-nine percent (99%) of pharmacy claims electronically in real time at the point of sale. If the pharmacy does not agree with the determinations on claim status and payment amount communicated via the DST Pharmacy Solutions provider portal, the pharmacy can "reverse" the claim and tell the member they cannot fill the prescription. The pharmacy can find out further information about why its claim was rejected from the DST Pharmacy Technical Help Desk.

If the claim is accepted and paid, the pharmacy is paid in a payment cycle run by DST four (4) times a month.

2. TIMELINESS AND ACCURACY METRICS

DST Pharmacy Solutions conducts an audit of a statistically significant sample of claims processed during a reporting period to assess whether the following claims processing rules were followed when adjudicating the claim: pricing, pharmacy, drug utilization review (DUR),

deductible, preauthorization, duplicate claim, member, prescriber, NDC, drug coverage, and customer and client claim edits. Humana also monitors total claims processed accuracy as a result of incorrect claims.

Since all claims coordinate through the same database, we are able to integrate and track all DUR, deductible, and prior authorizations accordingly. This seamless operation provides consistent claim adjudication and reporting services. More importantly, this unified approach provides enrollees with safe and comprehensive pharmaceutical care.

3. RAPID CYCLE IMPROVEMENT
Pharmacy claims are adjudicated in a pre-service environment which means that the patient cannot receive their prescription until the claim is successfully processed. Therefore, the DST RxNova system is very flexible and table-driven to allow for easy changes that influence the system logic. Rapid cycle improvement is imperative in a 24/7 processing environment like pharmacy.

4. DATA AND METRICS AVAILABLE TO AHCA
RxNova's™ claims processing and payment metrics and data will be made available via Humana's reporting portal referenced in evaluation criteria four (4).

5. REAL-TIME DATA TO NETWORK PROVIDERS
The RxNova™ proprietary claims processing system was developed to support automation and offer advanced analytics to create data visualization and real-time benefit checks with physician desktop communication at the point of care.

LOGISTICARE (TRANSPORTATION)

LogistiCare is the largest non-emergency medical transportation manager in the country. They operate in thirty-nine (39) states plus the District of Columbia, regularly serving State Agencies and Managed Care Organizations (MCO), and serve nearly nine hundred thousand (900,000) Humana enrollees.

1. CLAIMS PROCESSING AND PAYMENT PROCESS – KEY COMPONENTS
LogistiCare processes both paper and electronic claims. When a paper claim is received, LogistiCare opens the claim, finds the batch in LCAD (LogistiCare's electronic claims processing system), and enters the date, job number, and trip leg. These fields are automatically populated for electronic claims. Humana provides a daily eligibility feed to Logisticare. The system applies edits to verify the enrollee, date of service, pick up and drop off times, and the enrollee's signature for each leg of each trip. If any of these cannot be verified, the trip is denied and removed from the batch. LogistiCare pends some claims for manual processing.

When a claim has been approved for payment by the manager, a check is issued and mailed to the provider. Checks are issued every week for claims received the prior week.

2. TIMELINESS AND ACCURACY METRICS
LogistiCare has several system controls in place to manage the payment process along with additional backend controls or reports used to manage accuracy and timeliness. LogistiCare

reviews timeliness of payments on a monthly basis through its Prompt Payment report. To reduce the risk of overpayments, LogistiCare processes payments based on the lowest payment between the billed amount from the provider and the calculated amount in the LCAD system (which is generated from the base rate and mileage of the trip's level of service and distance based off Google Maps).

To maintain control over payment accuracy, prior to payment, the Claims team reviews all trips that had an override or payment above the calculated system rate to confirm that proper approval was obtained. Another control is the requirement of sign-off by multiple LogistiCare leaders (the General Manager of the operation, Senior Vice President of Division, and the CAO of LogistiCare) concerning rates used to calculate the trip prior to the rate being included in LCAD.

3. RAPID CYCLE IMPROVEMENT
LogistiCare's Prompt Payment report shows whether the company is paying for trips in a reasonable amount of time and within contract requirements. If LogistiCare finds that it is outside of the requirements, it evaluates the cause of the problem and adjusts processes "on the floor" or through the system to bring it back in compliance. LogistiCare also runs reports and queries to verify that trends in trips have not changed. If abnormalities are found, the company reviews the process and when needed, adjusts the process to eliminate the issues. Prior to all payment submissions, the Claims department reviews trips for overrides or any trips exceeding a certain dollar amount. If there are any discrepancies, the Claims department will work with Operations to confirm the issue and adjust the process accordingly for future periods.

4. DATA AND METRICS AVAILABLE TO AHCA
LogistiCare's claims processing and payment metrics and data will be made available via Humana's reporting portal referenced in evaluation criteria four (4).

5. REAL-TIME DATA TO NETWORK PROVIDERS
Providers have access to LogistiCare's Provider web portal which allows them to see when payment for a trip will be made and the dollar amount of the payment. Providers may also call LogistiCare's claims office to receive information about the status of their claims.

Evaluation Criteria:

1. The extent to which the respondent has described key components of its claims processing and payment process in a format suitable for the public, including a description of the processes for claims submitted both on paper and electronically.

2. The extent to which the respondent has included detailed metrics to be employed by the respondent to track timeliness and accuracy of the claims processing and payment process.

3. The extent to which the respondent has included a detailed description of how metrics from the claims processing and payment process will be used throughout its organization to provide for rapid cycle improvement.

4. The extent to which the respondent has included a detailed description of its process to make data and metrics regarding the claims processing and payment process available to the Agency and that the described process provides sufficient opportunity for the Agency to access this data.

5. The extent to which the respondent has included a detailed description of its process to make data and metrics and trend data regarding claims processing and payment process available to network providers on a real-time basis and that the described process provides sufficient opportunities for network providers to access this data.

6. The extent to which the respondent has included its applicable proposed subcontractors in its response, with each component addressed for each applicable proposed subcontractor.

Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 5 points each.

Attachment 17-2: Business Intelligence Tools

Attachment 17-2: Business Intelligence Tools

Attachment 17-3: Medicaid Governance Framework

Executive Steering

- Establish Medicaid strategy, goals, and objectives
  - Provide strategic leadership and oversight to Medicaid business
  - Pulse Operational Health - Market status updates, metric reviews, etc.
  - Resolve escalated issues and risks

Operations Steering

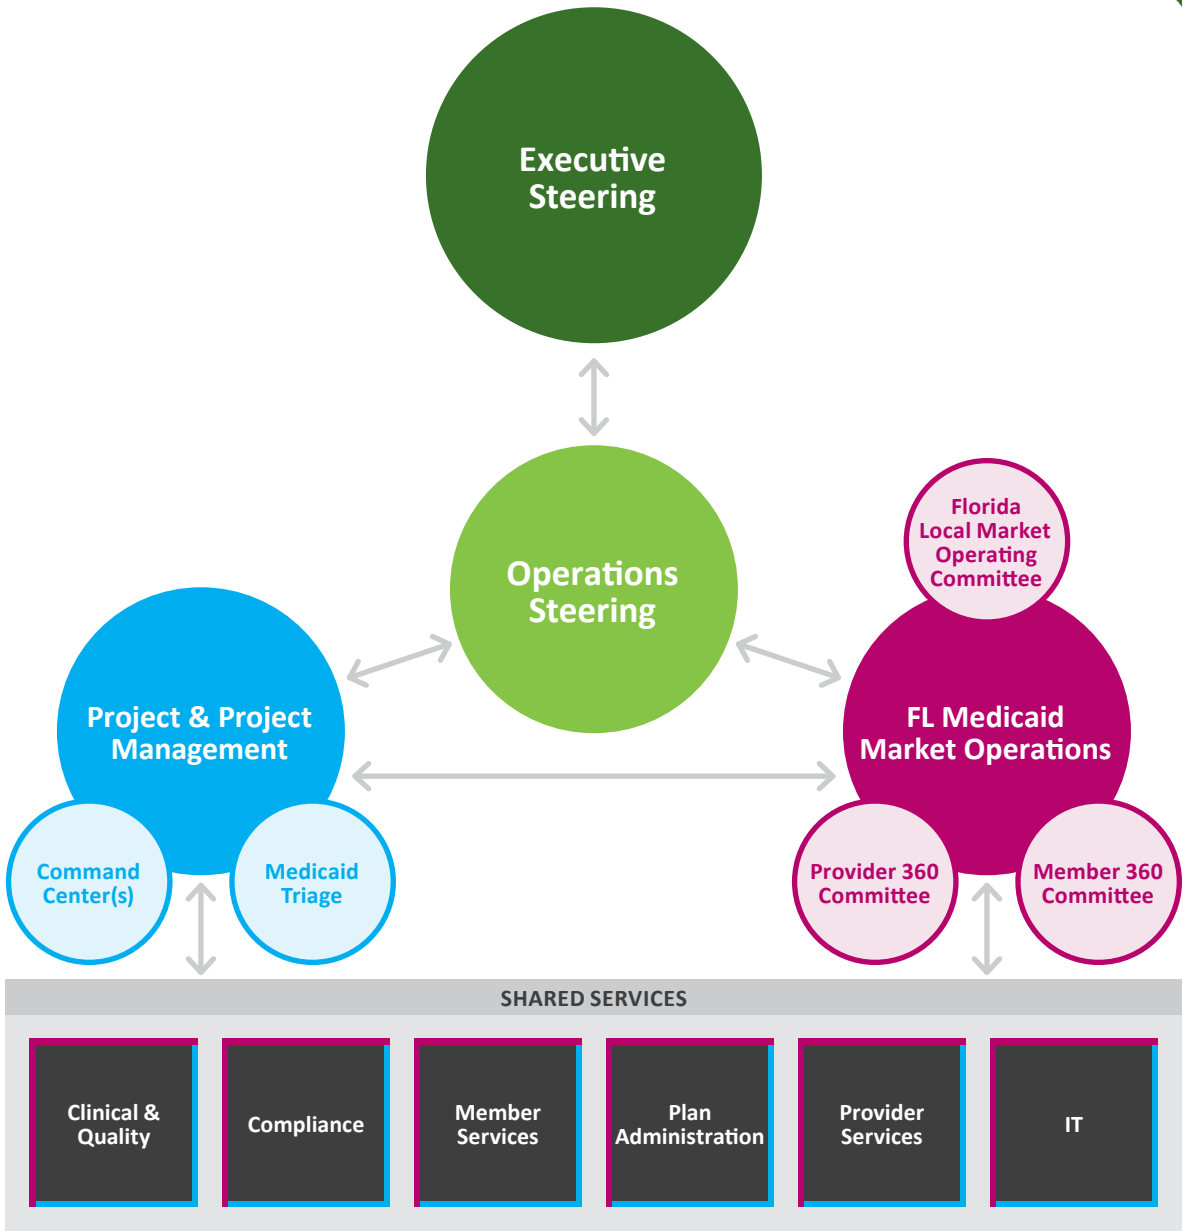
- Review, evaluate, and approve/reject all material Medicaid projects
  - To include IT and non IT related
  - To allocate funding and resources
- Resolve escalated issues and risks
- Communicate - Business Development status, cross-market synergies, strategic opportunities, and planned changes, etc.

Program & Project Management – Implementation & Process Improvement

- Support program implementations and facilitate Command Center (e.g. New Plans & Plan Expansions)
- Host Triage and evaluate process improvement (PI) opportunities:
  - Assess impact to current/future Implementations, market operations, delegate operations, etc.
  - Develop and prioritize business cases
- Present implementation programs and prioritized process improvement business cases to Operations steering
- Provide Program and Project Management support for approved initiatives
- Own and drive closure of all escalated project issues and risks

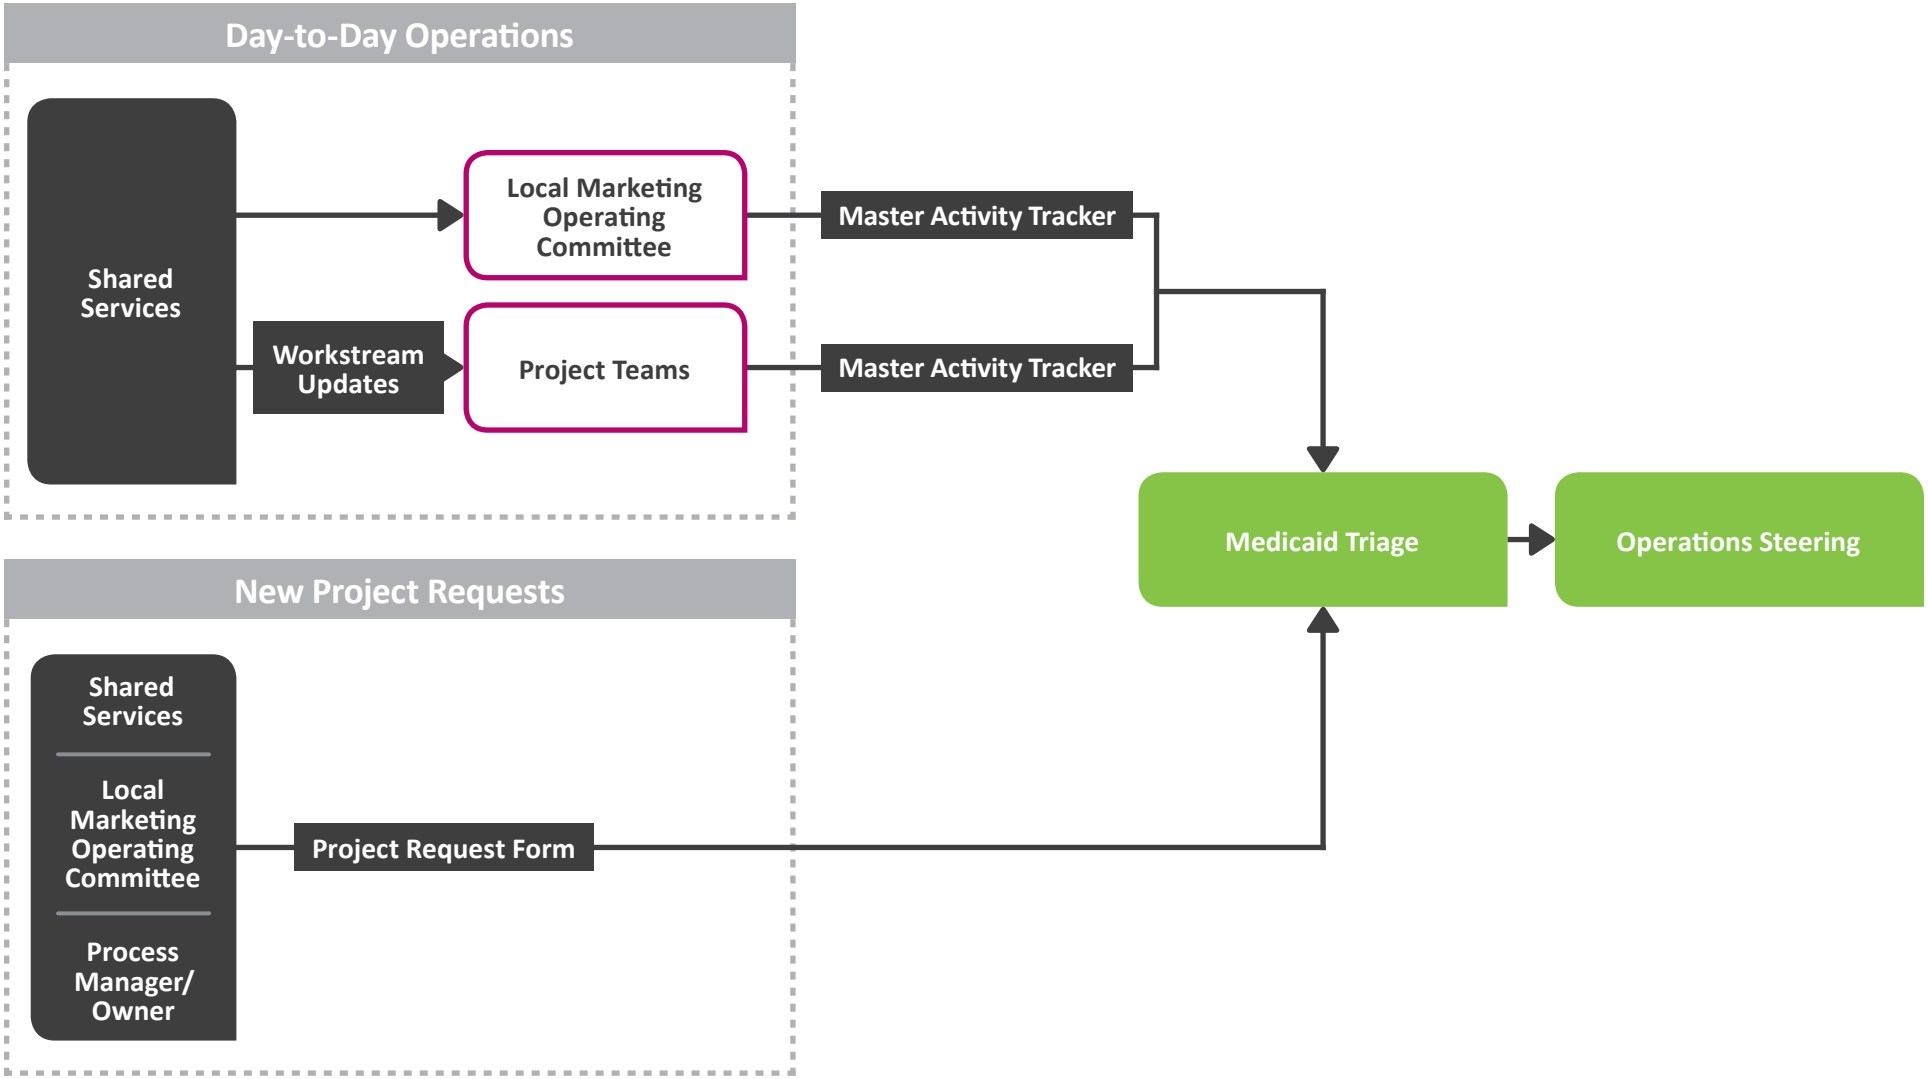
FL Medicaid Market Operations

- Host regular Market Operating and 360 Committee meetings with shared services, IT, and Corporate Medicaid Consultant (no less than bi-weekly)
  - Own and drive closure of all Market issues
  - Identify potential opportunities for process improvements and efficiency

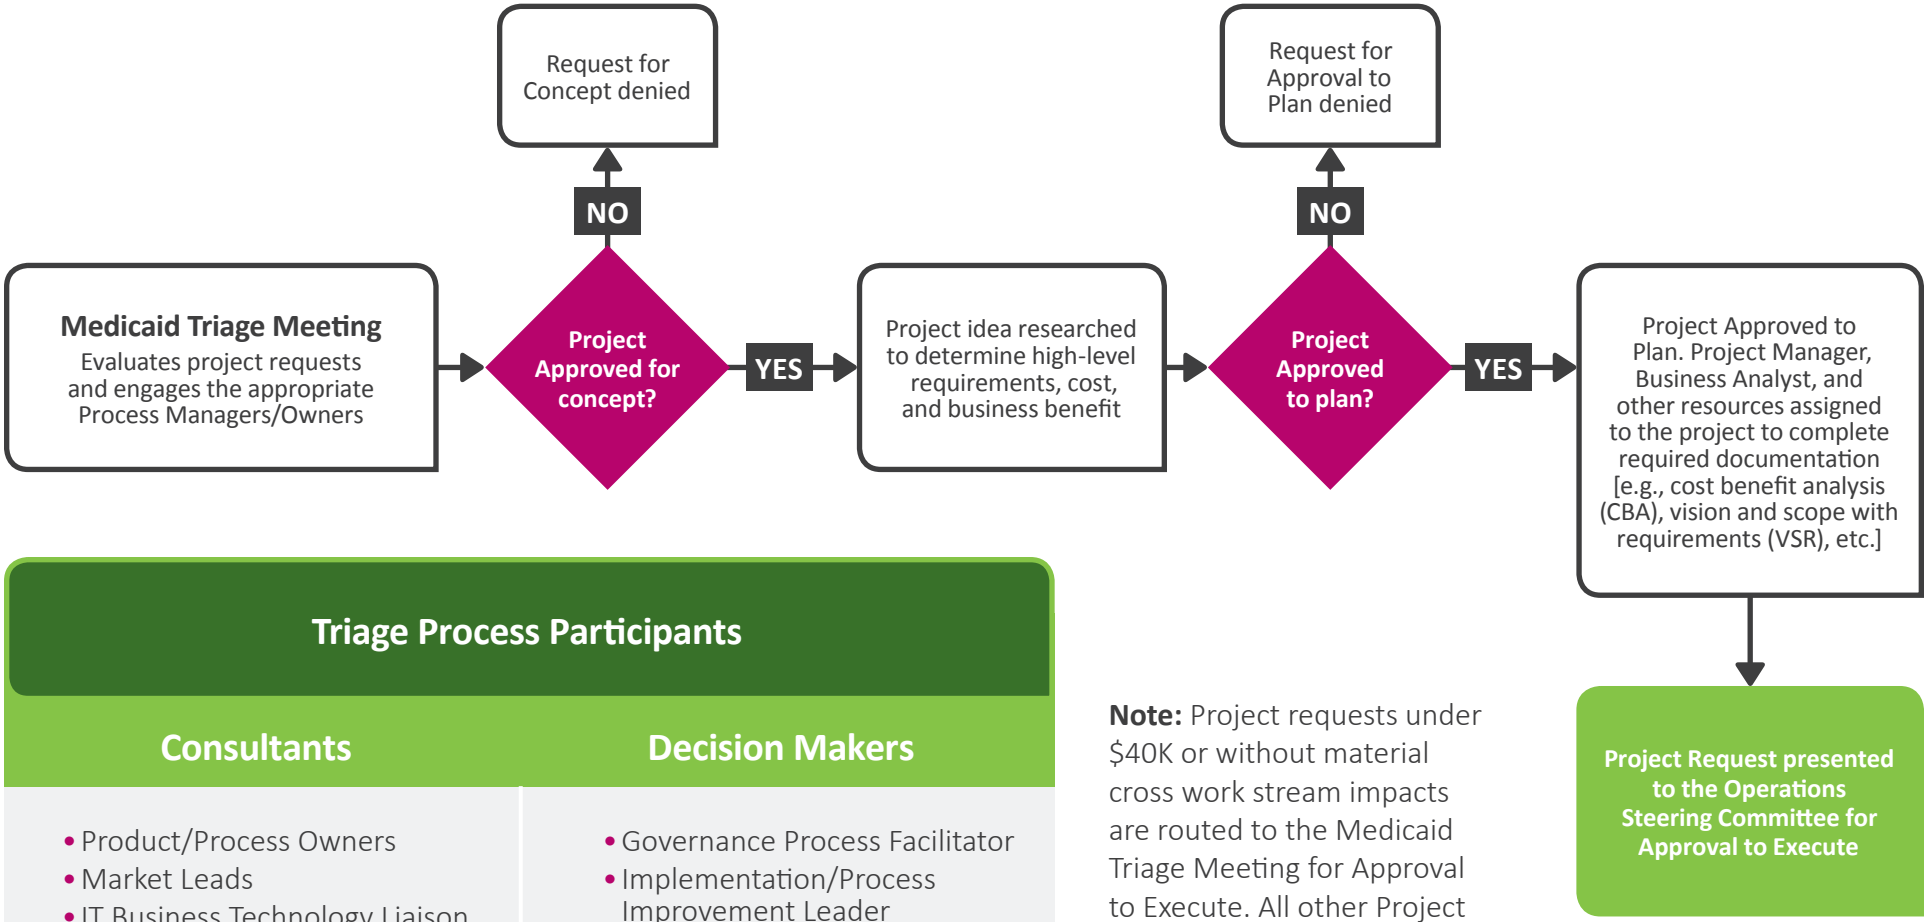


Humana

High Level Process



Triage Process



Triage Process Participants

Consultants	Decision Makers
• Product/Process Owners • Market Leads • IT Business Technology Liaison • Medicaid Corporate Consultant	• Governance Process Facilitator • Implementation/Process Improvement Leader

Note: Project requests under $40K or without material cross work stream impacts are routed to the Medicaid Triage Meeting for Approval to Execute. All other Project Requests are routed to the Operations Steering Committee for Approval to Execute.

E. DELIVERY SYSTEM COORDINATION

SRC# 18 – Utilization Management (Statewide):

The respondent shall describe the following related to its utilization management (UM) approach:

a. A description of the process used to determine whether a service should be prior authorized and that the UM criteria for each service have been evaluated to determine their appropriateness for administering a Medicaid benefit.

b. A description of how the respondent will ensure consistent application of the review criteria for authorization decisions.

c. A description of how the respondent will ensure that services are not arbitrarily or inappropriately denied or reduced in amount, duration or scope.

d. A description of the approach used to determine whether a service will be needed short-term vs. long-term (i.e., maintenance therapy) for an enrollee, specifically highlighting any differences in the respondent's service authorization approach (if any exists) based on the length of time that the service will be needed.

e. To the extent that a service is needed long-term, a description of the strategies that the respondent utilizes to ensure continuity of care and safeguards that are in place to reduce gaps in authorization.

f. A description and example of how the respondent will detect, monitor and evaluate under-utilization, over-utilization and inappropriate utilization as well as processes to identify and address opportunities for improvement.

Response:

Humana uses a dynamic Utilization Management (UM) program to provide comprehensive delivery of health care services and to ensure our enrollees continuously receive the appropriate level of care based on medical necessity. We have built our UM program upon decades of lessons learned serving high-need populations on a large scale and continually enhance the program based on our experiences. Humana integrates physical and behavioral health, long-term services and supports (LTSS), and pharmaceutical management in all phases of the program. Our approach also recognizes the critical impact of social factors. Our processes encompass activities associated with review and authorization of medical services, mental health and substance abuse healthcare services, appropriate resource utilization, and discharge planning for both acute and long-term facility stays. Our UM approach includes the following aspects:

- Prior Authorization List (PAL) and review processes

- Consistent review of UM decisions based on established national clinical guidelines and protocols

- Application of medical necessity criteria to ensure services are not arbitrarily reduced or denied

- Policies and procedures in place to analyze data to monitor and track utilization trends, including over- and under-utilization and inappropriate utilization

The Humana UM program includes evaluation of clinical utilization guidelines and criteria, patterns of utilization, analysis of population-based and evidence-based data, and the intervention of programs to positively affect health outcomes.

==========

1. The extent to which the respondent describes the process and data sources utilized to determine whether a service should be prior authorized, including reviewing complaints or feedback from providers regarding burdensome or unnecessary prior authorization criteria.

==========

PRIOR AUTHORIZATION SERVICE DETERMINATION PROCESS

Humana's prior authorization program promotes quality of care and optimal treatment options for our enrollees while controlling costs to the healthcare delivery system. Ongoing review of utilization, financial and quality data, and the Agency for Health Care Administration (AHCA) fee schedule determines those services that require prior authorization for payment. We implement a PAL in our current comprehensive program in Florida. Attachment SRC 18-1 illustrates the Humana UM processes workflows for outpatient, inpatient, behavioral health, and dental service requests. We review and authorize LTSS services as they are added to the enrollee's plan of care.

PAL AND REVIEWED SERVICES LIST PROCESSES (RSL)

The PAL and RSL represent commonly reviewed services and medications that may require additional clinical information. The PAL conveys the service names that must have prior authorizations, while the RSL conveys the code-level information for those services included on the PAL.

For our Medicaid programs, providers must provide services according to the contractually required guidelines, including Federal Managed Medicaid Care Statutes as well as State Regulatory Guidance. We use MCG® (formerly known as Milliman Care Guidelines), a nationally-recognized medical review criteria, as the primary source for our UM policies. We also apply State-specific requirements for medical necessity, and all services are subject to review for coverage and medical necessity. Additionally, we request (but do not require) service notification for certain services, such as inpatient maternity for normal newborn deliver. This is done so we can refer enrollees to appropriate care management and disease management programs.

Humana uses specific metrics to determine whether to include a requested service in the PAL. These metrics include:

- Over-utilization and inappropriate utilization

- Potential quality of care issues
- Trend of services not meeting nationally-recognized criteria for medical necessity
- Current claims volume for the service
- Projected enrollee impact

The PAL team conducts service reviews to determine which services should be included on the PAL. The team includes representatives from the following departments:

- Clinical and Quality Leadership and teams
- Provider Network
- Clinical Strategies
- Clinical Intake Team (CIT)
- Grievance and Appeals
- Provider Communications
- Claims
- Product Build
- Plan Load

Any stakeholder (including network providers) can raise a PAL issue or propose an addition ro or removal from our PAL by filling out a request form. We also elicit provider feedback on our authorization processes using provider surveys and peer-to-peer discussions between providers and Humana Medical Directors regarding specific authorizations.

Once we have submitted a request, the PAL team follows the process illustrated in Attachment SRC 18-2.

Clinical leaders evaluate the PAL on a bi-annual basis for additions and removals based on utilization patterns and any quality of care issues present. Providers receive annual notification of the PAL via a mailing and receive a mail notification from Humana ninety (90) days in advance of any change to the list, however the PAL and RSL are always available on our website at https://www.humana.com/provider/medical-providers/education/claims/pre-authorization. Humana periodically communicates the corresponding procedures and required timeframes for prior authorizations. Attachment 18-3 illustrates our process for ongoing maintenance of the PAL.

==========

2. The adequacy of the processes used by the respondent to determine whether the utilization management criteria selected are appropriate and consistent with policy requirements for a Medicaid benefit.

==========

Humana's UM program is evidence-based and guided by nationally-recognized clinical care criteria. We utilize MCG® and updated annually, as the foundation of all UM determinations. When necessary, we supplement the MCG® guidelines with clinically sound and reputable Clinical Practice Guidelines (CPG), which the Corporate Quality Improvement Committee (CQIC) reviews and approves annually. CPG provides a basis for written policies and procedures that reflect current standards of medical practice. We base these guidelines on community-based practice guidelines and literature established by national organizations generally accepted in their fields as experts such as the:

- American Diabetes Association (ADA)
- American Heart Association (AHA)
- American College of Chest Physicians (ACCP)
- Centers for Disease Control and Prevention (CDC)
- American Academy of Pediatrics (AAP)
- American Academy of Family Physicians (AAFP)
- American Congress of Obstetricians and Gynecologists (ACOG)
- Agency for Healthcare Research and Quality (AHRQ)
- National Quality Forum (NQF)
- Guidelines.gov

We also utilize the Centers for Medicare and Medicaid Services (CMS) Medicare guidelines for our enrollees with Long-term Care (LTC) needs to determine appropriate coordination of care and benefits for Humana dual eligible enrollees. The LTC Case Managers (CMs) are responsible for case management of services and benefits specific to the enrollee. If necessary, the LTC CM will review Medicare benefits and guidelines to ensure enrollees receive necessary services.

We base all review and authorization decisions on the information collected at the time of the request. When conducting reviews, the utilization review associate accepts information from any reliable source that will assist in the certification process. Requests focus on the information required to render a review decision or assist with discharge planning. We use any information obtained during this process solely for the purposes of utilization management, quality management, discharge planning, case management, and claims payment.

Clinical associates and medical directors use these criteria, which apply for all care acuity levels. In no way are they to replace the clinical judgment of the clinical associates or the Medical Directors. UM review nurses approve services if they meet MCG® criteria.

Humana Medicaid Hierarchy of Criteria for Review of Medical Services (all apply):

1. MCG®
2. Medicaid Coverage Handbook and Medicaid Enrollee’s Contract
3. State-specific Medicaid Regulations
4. Humana Coverage Policies

Medical Directors use MCG® criteria as part of their cadre of information, and rely on clinical judgment to render a decision based on medical necessity. Medical Directors are the only clinical associates that can render adverse determination.

We ensure our reviews are flexible enough to allow deviations from the norm when justified, and to consider special circumstances on a case-by-case basis. We consider at least the following when applying criteria to an individual:

- Age
- Early and Periodic Screening, Diagnostic, and Treatment (EPSDT)
- Co-morbidity
- Progress of treatment

- Complications
- Psychosocial situations
- Home environment
- Cultural needs

We also consider the characteristics of the local delivery system available to specific enrollees including:

- Availability of post-acute service
- Coverage of post-acute services as medically appropriate
- Local hospitals' ability to provide all recommended services within the estimated length of stay
- Availability of inpatient, outpatient, and transitional facilities
- Availability of highly specialized services, such as transplant facilities or cancer centers
- Availability of outpatient services in lieu of inpatient services such as surgicenters versus inpatient surgery

We understand there cannot be a one-size-fits-all approach to determining the appropriate services for all our enrollees. Humana applies an established set of UM guidelines and criteria along with enrollee-specific information to ensure we are flexible and meeting their needs.

==========

3. The adequacy of the respondent's approach to ensure the consistent application of review criteria for authorization decisions (e.g., inter-rater reliability studies, and training for plan staff and network providers).

==========

Humana’s shared national local structure allows us to use consistent and centralized national resources while maintaining flexibility to build policies and procedures to specifically meet local market needs. The Corporate Utilization Management Committee develops, implements, and maintains operational policies and procedures consistent with federal, state, regulatory, accrediting, and corporate guidelines. The Policy Sub Team Committee reviews new policies or policy revisions before sending to the Utilization Management Committee for final approval.

Currently in our Florida Comprehensive Medicaid operations, the Utilization Management Committee is responsible for developing and maintaining Florida-specific policies and procedures. The Florida Medical Director, the Health Services Director, and Utilization Management Director or the local Utilization Management Committee review and approve Florida-specific policies developed for processes specific to our comprehensive program at least annually, and revise as necessary.

UM ASSOCIATE TRAINING

To ensure we consistently apply review criteria for authorization decisions, Humana provides initial and ongoing education for its CMs, UM associates, and network providers regarding our UM program, including clinical guidelines and determination of medical necessity. All case management associates receive new hire and refresher training on UM processes. Upon completion of initial training, new associates team up with a peer for mentoring and continued

support. We also provide all CMs with a new hire orientation packet that includes Policies and Procedures regarding UM processes.

We notify associates when we review and revise policies and procedures and review them individually, as teams, or through special in-service updates. A shared site, Mentor, houses policies and procedures that link to the Health Services Organization (HSO) Guidance Exchange SharePoint site.

INTER-RATER RELIABILITY (IRR) AND EVALUATING CONSISTENCY OF UM DECISIONS
All medical necessity determinations are under the guidance of a licensed physician. Florida licensed healthcare associates, including but not limited to physicians, nurses, and other Florida licensed professionals, make UM decisions that require review.

Assessing consistency in the UM decision-making process is critical to uniform application of medical necessity by physicians and non-physician reviewers. Since non-physician reviewers cannot deny a request for services, it is essential that these associates know the criteria that will allow them to approve a request. Each year Humana conducts testing of these reviewers using methods endorsed by National Committee for Quality Assurance (NCQA). We create hypothetical cases that mimic the types of cases we typically present to our reviewers. Each case (question) has a clinical stem serving as the basis for a selection of choices by the reviewer (examinee). The hypothetical cases focus on the application of Medicaid policies and MCG® criteria, and we review the cases and preferred answers with examinees. Non-physician associates must obtain a passing grade of eighty percent (80%). If they score less than eighty percent (80%), they will re-take an examination. If they again score less than eighty percent (80%), they will undergo additional training.

In contrast, physician reviewers render decisions to approve or deny based on medical necessity, clinical judgment, and knowledge of clinical guidelines and practice patterns in local communities. To identify consistency of physician decisions we employ IRR using a multiple-choice examination based on de-identified cases or hypothetical questions. We then calculate a kappa statistic to evaluate the level of agreement on each item. We consider a kappa equal to or greater than zero point eight (0.8) good agreement; for items with a kappa less than zero point eight (0.8), the group of physician reviewers will review and discuss to improve the quality of our reviews.

GRAND ROUNDS
Humana understands the value of creating a forum where clinical associates can come together to discuss consistency in clinical decision-making. As such, we conduct grand rounds in our Florida Comprehensive Medicaid program to provide a forum for regular case discussions and create an opportunity for group learning. We hold these meetings monthly with a team of medical, behavioral health, and LTC nurses and physicians responsible for UM determinations and discharge planning. UM nurse leaders or doctors choose the cases. The discussions foster clinical learning and development, consistent decision-making, identification of trends, and sharing of quality improvement ideas. The goal is to ensure consistent application of criteria, decision-making, and implementation of best practices among the UM clinical teams.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

ENGAGING PROVIDERS IN THE UM PROCESSES

The Humana UM program works with providers in the planning, implementation, coordination, and delivery of quality healthcare services. We accomplish this through:

- Adoption and establishment of medical necessity guidelines and criteria that promote quality and cost-effective care, which we make available to providers upon request or as appropriate

- Monitoring of healthcare services provided to enrollees

- Assessment, evaluation, and coordination of medically necessary care and the appropriateness of care requested and delivered using established approved written criteria to ensure efficient use of resources

- Promotion of fair and consistent benefit coverage

- Collaboration with local health delivery systems to align initiatives and facilitate program success

- Ensuring outcome-based, cost-effective care of individual enrollees given their current clinical situation and support systems available

- Providing proactive interface with practitioners and providers regarding discharge planning

- Acting as a referral source for identification of case management needs and identifying potential gaps in care

- Identification of enrollees with long-term or disease-specific care needs for case/disease management

Humana also provides education and training for its network providers to ensure that they understand Humana's policies regarding UM. Providers must have authorizations prior to providing services to Humana enrollees except in certain situations, such as emergency circumstances, where we do not require prior approval. The Provider Manual, which we deliver to all network providers, clearly outlines information related to UM. Humana also contractually requires its providers to conduct UM-related training for staff at their facility. Attachment 18-4 contains the excerpt of our provider training that pertains to preauthorization determinations.

DELEGATION OF UM FUNCTIONS AND OVERSIGHT

While Humana's UM program houses most UM functions, there are circumstances under which we would delegate certain UM functions to another entity, such as a subcontractor. For our Florida Comprehensive Medicaid Program, Humana will delegate behavioral health UM functions to our behavioral health subcontractors, Access Behavioral Health (in Regions 1 and 2) and Beacon Health Options (in Regions 3 through 11). (We delegate pharmacy prior authorization to an internal common parrent affiliate entity, Humana Pharmacy Solutions ® (HPS)).

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Although we may delegate the authority to perform a function, the responsibility for the function remains with Humana. We have aligned our policies involving delegation with those of the NCQA and CMS. Prior to approval of delegation, certain pre-delegation activities may include:

- Review of the proposed delegates' program description, work plan, and most recent evaluation

- Review of proposed delegates' policies and procedures

- Pre-delegation audit to determine if the proposed delegate can adequately perform the function(s) to be delegated

- Review of appropriate committee minutes

- Review of organizational chart and job descriptions

- Blinded medical record review, if applicable

- Completion of Humana Pre-Delegation Tool for the proposed delegated function

Humana reviews the contractual language, develops clear delineation of the agreed-upon activities, outlines the delegate's accountability for these activities, determines the type and frequency of reporting to Humana, and determines the process by which we will evaluate the delegation prior to the delegation of the requested UM function.

The contract language includes the following:

- The delegated activities and those activities retained by Humana

- Requirement that services be performed in accordance with Humana's and regulatory requirements and accreditation standards

- Notification to Humana of any material change in the entity's performance of delegated functions

- Sub-delegates shall be subject to the terms of the agreement between the delegate and Humana

- Type and frequency of required reporting to Humana

- Process by which delegation will be evaluated

- Remedies available to Humana, including development of a corrective action plan (CAP), suspension of the delegated function, or termination of delegation if the delegate does not fulfill its obligations

Oversight activities consist of onsite visits, audits, and review of required reports and all relevant documentation related to specific delegation functions for compliance to Humana, regulatory, and accreditation standards. We expect regular presentation to the Florida Quality Improvement

Committee (QIC) and appropriate sub-committee, with certain committees requiring a defined position as a member. We will require implementation of corrective action or quality improvement plans if delegates only partially meet these standards, with re-review and ongoing oversight conducted until they have corrected the identified deficiencies. Oversight of delegation activities is an ongoing process, and may include the following:

- Reporting requirements
- Site visits and audits
- Annual evaluation
- Corrective action or improvement plans
- Reporting to corporate or market committees accountable for ongoing oversight
- Attendance and participation in Joint Operating Committees (JOCs) and other meetings as necessary

==========

4. The adequacy of the review processes (data collection and analysis) deployed by the respondent to ensure services are not arbitrarily being denied or reduced.

==========

Humana has long established and tested mechanisms in place to ensure we do not arbitrarily or inappropriately deny or reduce in amount, duration, or scope any services. Our medical necessity review processes and procedures take into account all aspects of an enrollee's individual healthcare needs to determine which services and care setting is most appropriate.
Humana performs medical necessity reviews for those services for which we require an authorization and that the primary care provider, behavioral health provider, or treating provider requests an initial or extension of the original authorization. The first step in making a coverage and medical necessity determination is to verify benefits existed at the time of service, and that the plan benefits include the services. Humana complies with all federal and state regulations as well as the contractual requirements for covered and excluded services.

Florida licensed healthcare professionals initiate the UM process by reviewing medical record documentation against standardized medical necessity criteria for treatment and verifying appropriate levels and intensity of care. Licensed healthcare professionals may include appropriately qualified practitioners, in accordance with Florida laws.

According to Florida code, "medically necessary" or "medical necessity" means that the medical or allied care, goods, or services furnished or ordered must meet the following conditions:

1. Be necessary to protect life, to prevent significant illness or significant disability, or to alleviate severe pain

2. Be individualized, specific, and consistent with symptoms or confirmed diagnosis of the illness or injury under treatment, and not in excess of the patient's needs

3. Be consistent with generally accepted professional medical standards as determined by the Medicaid program, and not experimental or investigational

4. Be reflective of the level of service that can be safely furnished, and for which no equally effective and more conservative or less costly treatment is available statewide

5. Be furnished in a manner not primarily intended for the convenience of the recipient, the recipient's caretaker, or the provider

“Medically necessary” or “medical necessity” for inpatient hospital services requires that those services furnished in a hospital on an inpatient basis could not, consistent with the provisions of appropriate medical care, be effectively furnished more economically on an outpatient basis or in an inpatient facility of a different type.The fact that a provider has prescribed, recommended, or approved medical or allied care, goods, or services does not in itself make such care, goods, or services medically necessary, or a medical necessity or a covered service.

Humana utilizes MCG® Care Guidelines and Clinical Utilization Guidelines as well as the State of Florida’s rule requirements to ensure that services are medically necessary. We provide the enrollee the fullest extent of their benefits and services as specified by the Medicaid program. We refer all requests, pre-service, concurrent or retrospective, that don’t meet initial medical necessity review criteria, to the Medical Director for determination. Only the Medical Director can make an adverse determination based on medical necessity, which includes:

- Decisions about covered medical benefits defined by the organization, including hospitalization and emergency services listed in the Certificate of Coverage or Summary of Benefits

- Decisions about care or services that could be considered either covered or non-covered, depending on the circumstances, including decisions on requests for care that may be considered experimental

- Behavioral health services denials are rendered by board-certified or board-eligible psychiatrists or by a clinician licensed with the same or similar specialty as the behavioral health services being denied, except in cases of denials of service for psychological testing, which shall be rendered by a qualified psychologist

- Treating or ordering physicians are offered an opportunity to discuss adverse utilization decisions with a Humana physician reviewer either while decision is pending or within the applicable timeframes after the determination has been made

We make specific criteria available upon request to enrollees or providers at no cost. Humana Medical Coverage Policies are available on Humana.com. We make MCG® Care Guidelines and Technology Assessment Forum research available, either verbally or in writing, to providers and enrollees (upon request) and communicate the process to obtain criteria annually in the provider newsletter, YourPractice. We also inform providers and enrollees of the clinical rationale used as the basis for a medical necessity determination in individual adverse determination letters.

==========

d. A description of the approach used to determine whether a service will be needed short-term vs. long-term (i.e., maintenance therapy) for an enrollee, specifically highlighting any differences in the respondent’s service authorization approach (if any exists) based on the length of time that the service will be needed.

6. The adequacy of the respondent's approach in differentiating between UM protocols for authorization of services that are needed short-term (e.g., one-time authorization) vs. long-term (ongoing maintenance services/therapies).
==========

As a Comprehensive Plan, Humana provides a broad range of short- and long-term services for our enrollees. We are experienced in handling care needs for the entire spectrum of our enrollees' needs, from birth to end of life. The process we use to manage requests for services is the same for both short- term and long-term services, as we review authorizations based on medical necessity and individual enrollee needs. Furthermore, we have designed these processes to allow enrollees to focus on their health needs by reducing their administrative burdens that would otherwise delay needed care and cause adverse outcomes. We utilize and apply UM protocols in our review of authorizations, while considering enrollees' individual needs and being flexible when applying those protocols. For example, we evaluate enrollee needs based on the presenting condition and anticipated future needs. If an enrollee needs an in-home ventilator for the foreseeable future, we do not require a reauthorization every thirty (30) days. We issue an ongoing authorization to remove the burden on the provider as well as to ensure that enrollee has continuity in ongoing services.

Our UM protocols also allow for exceptions in certain circumstances, such as chronic conditions and developmental delays. An enrollee with a chronic condition requiring ongoing treatment, such as dialysis, would receive a long-term authorization for dialysis treatments. Similarly, if a child has been diagnosed with a developmental delay in speech, we would supply a longer-term authorization for speech therapy for that enrollee, understanding that this child's condition may take many months or even years to resolve. Our goal is to ensure enrollees receive medically necessary services for the duration of time they require those services so we do not place undue burden on our providers or enrollees.

In the case of an enrollee who requires ongoing services that they or their family cannot manage themselves, the Humana UM nurse works collaboratively with a Humana CM who then assumes the role of management of care, working with the enrollee, enrollee's family and enrollee's providers, especially the primary care physician (PCP).

The CM initiates authorizations for LTC services as they add them into the enrollee's plan of care. We consider those services an ongoing authorization as long as the plan of care includes them. Humana CMs update enrollee plans at least annually or more frequently based on the changing service needs of the enrollee.

Similarly, when an enrollee who receives LTC requires services for an acute illness or condition, their CM will contact the UM nurses to initiate the authorization for the short-term services. To make these transitions seamless, the UM nurses and CM nurses call on ancillary services such as social workers and home health agencies.

==========
7. The adequacy of the respondent's approach at ensuring continuity of care, particularly as it relates to special needs populations.
==========

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana ensures that all our enrollees receive the care they need when they need it, regardless of whether they need their services short- or long-term. For those enrollees who require long-term authorizations for medically necessary services, including special needs populations such as those receiving private duty nursing (PDN), HIV waiver populations, and those with complex medical needs, we have the following mechanisms in place to reduce gaps in authorizations:

- Utilization management and case management interaction
- Plan of care development and ongoing review
- Discharge Planning
- In-home Provider Visits
- Enhanced Care Coordination for Special Needs Enrollees Under Age 21
- Continuity of Care Studies
- New Enrollee Continuity of Care Processes
- Provider Engagement

We identify those enrollees with special needs via data extraction from state files such as the 834 enrollment file, as well as through our risk severity model based on the enrollment files. We supplement that data with enrollee-specific information we obtain through Health Risk Assessments (HRA).

UM AND CASE MANAGEMENT INTERACTION. Humana's Case Management and UM associates work closely to ensure a seamless care delivery experience for our Medicaid enrollees. We understand the population, particularly those with special needs, requires timely and accurate service authorization decisions and conscientious follow up to ensure there are no gaps in care. Communication between our Case Management and Utilization Management associates is fluid and adapts to the needs of our enrollees. Our integrated Clinical Guidelines eXchange (CGX) platform gives CMS areal-time view of authorizations, allowing them to immediately update plans of care where necessary. For a long-term authorization of medically necessary covered services, Humana creates an ongoing authorization for a specified duration of time or number of treatments to complete the expected course of care.

PLAN OF CARE DEVELOPMENT AND ONGOING REVIEW. We maintain enrollee plans of care to ensure we document the most accurate service authorization information. The CM leads the development of the plan of care, keeping the enrollee and PCP as the primary contributors, followed by family and caregivers, and other specialty providers. The results of the comprehensive assessment forms the basis for the plan of care's individualized and prioritized goals and interventions. We develop the plan of care with prioritized goals and actions with timeframes for completion and the enrollee's documented progress toward achieving the goals, which the CM monitors, updates, and revises as needed. Examples of other key items included within the individualized plan of care process include:

- A communication plan with the enrollee including anticipated frequency of contacts

- A communication plan with the PCP and specialist to ascertain the needs the provider has identified and prioritized, including a process to ensure the plan of care developed by the health plan reflects the provider's treatment plan

- Specific services and benefits needed

- Preferences for care

- Need for add-on or extended benefits

- Services for enrollees with disabilities

- Identification of providers responsible for delivering services

- Identification of referrals made to specialists or providers and confirmation that the enrollee received these services

- Referrals to community, social, and recovery support agencies, including assisting enrollees in contacting the agency and validating the enrollee received the needed service

- A review of the new and updated plan of care with enrollee, family and caregiver (as needed), and the primary care provider and specialist, and actively seek input from them

- Contingency planning for changes in condition or caregiver availability and ability

- A plan for effective and comprehensive transitions of care between care settings

- Continual review and revision of the plan of care, which includes follow-up contact as needed with enrollee to ensure we adequately monitor the plan of care, including identification of gaps between recommended care and actual care provided

DISCHARGE PLANNING. CMs work to ensure we closely monitor enrollees (especially those at high risk) post-discharge and on an ongoing basis to ensure safe transition of those enrollees from inpatient settings to the home and community, as well as to reduce unnecessary hospital admissions. The CMs coordinate care for the enrollee by:

- Setting goals that promote coordinated care
- Assisting enrollees by scheduling PCP and Specialist appointments
- Assisting with transportation as needed
- Coordinating care within and across treatment settings
- Giving enrollees and families a single point of contact
- Facilitating care coordination across providers
- Communicating enrollee needs and care preferences to healthcare providers

In addition, the CM is responsible for managing an individualized transition plan for the enrollee, to include:

- Assessment of needs upon hospital admission

- Education of the enrollee and caregiver on their Humana benefits

- Assistance with scheduling a timely follow-up appointment(s), optimally within 7-14 days following discharge, or earlier if appropriate

- Assurance that enrollee needs are addressed prior to hospital discharge (such as home health services, securing discharge medications prior to discharge, transportation)

- Coordination surrounding effective communication between the facility, enrollee and caregiver, the enrollee's health home, and key stakeholders

- Assistance with the establishment of a health home if the enrollee does not have one

- Engagement into a care management program, as appropriate, if the enrollee is not already engaged

- Evaluation of plan effectiveness.

IN-HOME PROVIDER VISITS. If the enrollee is homebound and cannot access required care in the community, the CM may refer the enrollee to a home visiting provider to provide home-based health care to the enrollee post-discharge. This helps reduce the risk of readmissions and to ensure the appropriate services are occurring in the home. Through this service, we provide access to high-quality in-home medical care while focusing on educating enrollees on their disease state, and about the importance of compliance with their treatment plan and regular PCP visit(s).

ENHANCED CARE COORDINATION FOR SPECIAL NEEDS ENROLLEES UNDER AGE TWENTY-ONE (21). For enrollees under age twenty-one (21) who are in nursing facilities and meet criteria for transition from the nursing facility to home, the CM works collaboratively with the enrollee's multidisciplinary team (MDT) to transition the enrollee safely from the facility to the community, developing the transition plan within thirty (30) days prior to discharge. The transition plan includes Freedom of Choice forms and outlining the ongoing services and supports the enrollee needs to successfully reside in the community, including EPSDT services. EPSDT provision inclusion is a fundamental tenet of how we approach care delivery for our enrollees under the age of twenty-one (21).

During the first six (6) months following discharge from the nursing facility, the CM contacts the enrollee or enrollee's authorized representative at least twice per month, with at least one (1) of those meetings as a face-to-face (if the enrollee or enrollee's authorized representative agree). We also conduct quarterly face-to-face visits for our enrollees under the age of twenty-one (21) with private duty nursing (PDN) services. After the initial six (6)-month transition period, the CM continues to maintain monthly contact with the enrollee or enrollee's authorized representative.

CONTINUITY OF CARE STUDIES: We understand that our enrollees with special needs require coordination of care across various settings and levels of care. Humana facilitates care delivered seamlessly across a multitude of delivery sites and throughout the course of the disease process. We analyze data to determine areas where opportunities exist to improve continuity and coordination between settings of care, and in transitions of care from one provider to another.

Humana has medical continuity and coordination of care opportunities, which we complete for all NCQA-accredited states and include Medicare, Medicaid, and Dual Eligible enrollees. These include:

- Post-discharge survey – Improving Rate of Follow up appointment with physician
- Post-discharge survey – Improving Ease of Obtaining medications
- Post-discharge survey – Improving Coordination of home health care services
- Post-discharge survey – Increasing Understanding of discharge plans and instructions

Humana's Florida Medicaid health plan is NCQA-accredited and completes two (2) medical continuity of care opportunities.

- Improving Coordination between Hospital and Primary Physicians for enrollees with an inpatient stay (hospital discharge)

- Improving Communication of Mammogram Results to the Primary Physicians

NEW ENROLLEE CONTINUITY OF CARE (COC) PROCESSES. Humana ensures a new enrollee transitioning to Humana with ongoing authorizations continues to receive those services. We honor existing short- and long-term authorizations for new enrollees for up to sixty (60) days from enrollment; the enrollee continues to receive previously authorized care during that time even if the providers are outside of our network. During the sixty (60) days, Humana conducts a medical necessity review of the previously authorized services. If we deem the services medically necessary, Humana continues the authorization, ensuring no gaps in care or services. We attempt to transfer the enrollee to in-network providers. If deemed no longer medically necessary, Humana works with the enrollee and the CM to reduce, alter, or stop the authorization based on the needs of the enrollee.

PROVIDER ENGAGEMENT. Humana's model of provider engagement involves proactively working with the PCP to serve as a central point for coordination of care for long term authorizations for their patients. The PCPs are key participants in the referral process and typically initiate the orders for care considered either short or long term. Humana also assists PCPs in managing the total care of our enrollees by assisting with referrals if participating providers are unavailable or inadequate to meet the enrollee's medical need or if there are COC issues such that transferring care to a participating provider would jeopardize the enrollee's health.

Additionally, our provider payment model often involves considerable capitation-based contracting, which creates incentives for providers to keep enrollees stable and prevent the re-emergence of health crises that often result in readmissions in less coordinated settings.

==========

5. The adequacy of the review processes (data collection and analysis) deployed by the respondent to identify aberrant utilization patterns (under and over utilization).

==========

Humana understands the need to efficiently provide the highest quality of care for our enrollees. We strive to direct enrollees to the most appropriate level and type of care in a timely manner while improving our cost efficiencies. Our approach to using UM data rests on the foundation of established quality improvement tenets. We rely heavily on data to direct our activities that result in identifying barriers, root causes, and systemic problems that would otherwise lead to fragmented service delivery. The UM Program incorporates numerous measures to monitor and evaluate progress toward meeting goals. We collect, analyze, trend, and monitor data on a

systematic basis to facilitate corporate quality improvement and to address any barriers we identify. Trends may indicate improvement or reveal where we need to improve.

Data collected through Humana's UM program allow us to more effectively:

- Promote appropriate utilization
- Monitor for inappropriate utilization
- Improve our cost efficiencies
- Educate our enrollees and providers
- Identify and refer any suspected cases of fraud, waste, and abuse (FWA)

One of Humana's key differentiators is our ability to use our robust data analytics resources to roll out initiatives across multiple lines of business. Our decades of experience with Medicaid, Medicare, and Commercial populations have allowed us to hone our ability to effectively take utilization data and make substantive changes that truly affect enrollee health outcomes. We pride ourselves on our scalability and we will continue to bring this strength to the Florida Statewide Medicaid Managed Care (SMMC) program. Based on our analysis of the Florida population, if we identify an initiative from one of our other lines of business (Medicare, Commercial or Duals) that we think will demonstrate measurable improvement in the health of Florida enrollees, we have the capabilities and resources to quickly and efficiently implement that initiative.

PROMOTING APPROPRIATE UTILIZATION

Humana draws upon our comprehensive and innovative data analytics systems to monitor enrollee utilization and ensure that enrollees receive the right care, at the right place, at the right time. We proactively monitor utilization trends to assess population health of our enrollees, as well as to identify gaps in care and areas for quality improvement. For example, we provide daily emergency department visit reports to our engaged providers so they can conduct follow up with their enrollees who accessed the emergency department. We also analyze utilization data and produce a series of internal reports that monitor utilization at the population and enrollee levels.

We use utilization data as a part of the first steps in our care management continuum to identify specific enrollee needs and to identify gaps in care. With these data, our CMs can direct enrollees to the most appropriate care setting.

IDENTIFICATION OF AREAS FOR IMPROVEMENT

Humana is committed to ensuring we deliver evidence- and outcome-based approaches and cost-effective care of enrollees given our current clinical situation and support systems available. The Utilization and Case Management unit regularly reviews several reports to provide feedback and tracking in reference to the utilization activities. We collect data from various sources, including clinical reviews, aggregate claims, encounter and authorization data, and provider communications. The UM department develops indicators for identifying potentially inappropriate over- and under- utilization, which the UM and Quality Management Committees (QMC) approve.

The UM Committee receives utilization metric trends reports monthly. Humana's sophisticated Early Indicator Reporting (EIR) includes key utilization indicators. Utilizing the expanded capabilities our local-corporate structure provides, the Humana corporate actuarial team produces this user-friendly dashboard primarily from claims data with actuarial completion principles to incorporate data from the authorization system. This allows earlier recognition of key trends and earlier intervention than allowed if we relied strictly on claims data. For the most recent incurred periods (typically two (2) to three (3) months), we prefer to leverage authorization information from our CGX clinical system to prevent any claims processing noise (e.g., inventory build-up, provider billing delays) from introducing excess restatements. We have studied historical authorizations-versus-claims relationships to assess the provider "compliance" in reporting authorizations, where used. We base utilization projections for those incurred periods off the compliance-adjusted estimate of admission authorizations.

With the EIR, users can see overall performance at a glance and can drill down to specific data elements to quickly analyze data and identify root causes. For example, if overall admits per one thousand (1,000) enrollees is unusually high, the drill-down capability allows users to view by market segments and by age of the population. This report allows analysis of both month-to-month and year-over-year trends.

Attachment 18-5 contains an example of drill-down capability for current Medicaid reporting on an EIR report.

We establish metric targets based on existing utilization data tracking and trending to goals are also part of the analysis. If a metric appears to be unusually high or low, the actuarial team drills down to root causes, preparing additional ad-hoc reporting to present to the Medicaid Trend Committee. Depending on the root cause, we assign the appropriate Florida market or corporate team to complete a gap analysis and return to the UM committee with strategic and tactical recommendations.

When the root cause reveals a clinical issue, we include licensed clinical input in the action plan. Several corporate clinical strategy teams provide specialized inputs, such as for proactive care and messaging campaigns, acute strategies such as for emergency department utilization and post-discharge care coordination, and the Chronic Care Strategies teams.

The goal is to identify risk factors and facilitate the development of innovative management and treatment alternatives including specific medical management, case management and coordination, and disease management programs, which will efficiently and effectively improve health outcomes.

In addition to outcome metrics, operational metric dashboards allow clinical leaders to track and trend activities to drive to successful outcomes. One of the most critical metrics for clinical program success, particularly for Medicaid enrollees, is the timeliness of the intervention and effective engagement with our highest-risk enrollees. Dashboards allow leaders to drill down to specific segments and time periods to closely monitor clinical operational performance. For example, we see that the MomsFirst nurses were able to contact nearly seventy-five percent (75%) of the program-eligible enrollees for our Florida Medicaid plans in 2014. Once contacted, more than ninety-five percent (95%) percent of the enrollees agreed to engage with the nurse. Dashboards allow comparison between different clinical teams with the same programs in

different markets. The corporate team facilitates additional analysis to identify region-specific best practices and lessons learned, allowing ongoing improvement of existing initiatives. Below is a list of Humana's operational metric dashboards and reports.

- INPATIENT CENSUS REPORT - Daily detailed account of all acute and sub-acute inpatient facility admission cases.

- INPATIENT CLINICAL DASHBOARD - Weekly reporting of key operational metrics, such as time from receipt of authorization to nurse receipt, time for clinical decisions, discharge plan documentation, enrollees contacted for post-discharge follow up, clinical program reach and engagement rate.

- EARLY INDICATOR REPORT (EIR) - As described above, monthly reporting of key utilization metrics such as: admits/1,000 by utilization type (Acute, Skilled Nursing Facility, Rehab, LTACH), inpatient days/1,000, Length of Service by type, emergency department visits/1,000, etc. Dashboard format allows user drilldown for analysis by demographics such as geographic, plan type, and age of user.

- PROVIDER UTILIZATION PROFILING - Quarterly provider-level report of claims and encounter data to analyze under- and over- utilization and to provide peer-to-peer analysis.

- PREDICTIVE MODEL REPORTING - Predictive model for Severity Score (updated monthly) and Readmission Model (updated daily from admission to discharge) integrated into CGX to trigger referrals for clinical programs; emergency department Predictive Model scores available by report monthly with expected integration into CGX during 2016

- AUTHORIZATION TIMELINESS REPORT - Monthly market-specific summary of authorization timeliness against target.

Humana also conducts ad-hoc reporting to drill down for root cause analysis in cases of under- or over-utilization. Examples of these reports include:

- READMISSIONS BY PROVIDER – Provides monthly tracking of fourteen (14)- and thirty (30)-day readmission rate for acute admissions, by line of business, product, DRG, and physician visit within fourteen (14) days of discharge date. The reporting dashboard allows us to drill down and identify areas for improvement.

- HIGH UTILIZER REPORT – Allows us to drill down into individual enrollees with high utilization by service type, e.g., ED, inpatient care, etc.

- INPATIENT DRILL DOWN – This report provides inpatient services by provider, type, and major diagnostic category.

We can also focus in on specific services and claims volume to identify areas where interventions may increase appropriate utilization of preventive services. We monitor and analyze utilization data to preemptively address potential high cost inpatient stays, as well as improve health outcomes.

MONITORING AND ADDRESSING OVER-UTILIZATION

Humana's UM Program incorporates numerous measures to monitor and evaluate progress toward meeting goals. Our UM analysts collect, analyze, trend, and monitor data on a systematic basis to facilitate corporate quality improvement and to address any potential or identified barriers. We have found that trends can be indicators of improvement or reveal where improvement is needed. Humana selects utilization indicators and monitors data and outcomes to detect inappropriate utilization trends. Examples include but are not limited to the following:

- Acute Admits per 1,000 enrollees
- Inpatient days per 1,000 enrollees
- Long Term Acute Care Admits per 1,000 enrollees
- Rehabilitation Admits per 1,000 enrollees
- Skilled Nursing Facility (SNF) Average Length of Stay
- Readmission Rates within 30 days
- Emergency Room Visits per 1,000 enrollees
- Observation Rate
- Post-Discharge Care Coordination Referral Calls

ADDRESSING UNDERUTILIZATION

Humana's UM processes also identify areas where enrollees may underutilize key preventive or supporting services. Through review of utilization data, we can identify enrollees who may not have been identified for case management upon enrollment or through their PCP. We reach out to those enrollees to see if they will engage in case management. We monitor underutilization for those enrollees in case management through CM, enrollee, and PCP interactions. The CM is often in the best position to understand the needs of the enrollee and identify areas where they could benefit from more services. Our UM nurses and CMs work together with the enrollees to determine if additional services are medically necessary and would benefit the enrollee and family.

Additionally, we use the UM process to identify enrollees who may not be receiving the appropriate amount of services for their identified condition or situation. Humana Quality Improvement Nurses (QINs) work with our providers to review utilization patterns and identify areas for improvement (such as closing gaps in preventive care) to promote appropriate utilization.

ENROLLEE STORY: INCREASING APPROPRIATE AND NECESSARY UTILIZATION

A young Humana enrollee with complex needs had been receiving twelve (12) hours of PDN. However, given the mother's full-time job, the mother felt overwhelmed when the PDN was not there. The Humana CM noticed the strain on the mother, and asked if she needed more help in the home. As a result, the CM assisted the mother in requesting more in-home services.

Following a review of the family's situation, and the enrollee's needs, Humana increased the amount of in-home nursing services for the enrollee, which increased the quality of life for the whole family.

ADDRESSING INAPPROPRIATE AND FRAUDULENT UTILIZATION

If through our analysis of UM data, we find instances of suspected fraudulent or inappropriate utilization on the part of the enrollee or provider, we refer those cases to the Special

Investigations Unit (SIU). Health Services associates can refer to SIU either telephonically or via email.

Humana's SIU conducts reviews of clinical data to inform its potential Fraud, Waste and Abuse (FWA) cases. The SIU uses the CGX platform to search and view medical pre-authorization data, searching by authorization number and enrollee identification. Once it locates an authorization, the system provides authorization dates, approval status, relevant nurse documentation of the clinical timeline, and nurse phone call logs. Humana also performs data mining to search for unusual or impossible situations.

Three (3) Medical Directors currently assist SIU, and other Medical Directors will assist with certain specialties as follows:

- Ongoing education and guidance from a clinical perspective
- Review of all Medical Necessity reviews
- Review of all experimental and investigational reviews
- Clinician representation on peer-to-peer, provider education, and market calls
- Guidance on various cases and types of reviews for both clinical and SI;
- Attendance in the various meetings of the clinical team to promote consistency in reviews
- Clinical training sessions for SIU and clinical associates
- Clinical representation if needed for litigation or pre-litigation meetings with the legal department

Such engagement of clinicians requires significant collaboration between the Humana's SIU and clinical teams. Collaboration occurs over multiple fronts in addition to those listed above, including but not limited to: approval for Medical Necessity reviews, continuous review for cost-saving efficiencies and process improvements, new case set or meeting with investigative team to discuss cases, review and follow up on post pay cases; and monthly clinical training sessions for SIU and Clinical.

ADDRESSING UTILIZATION CONCERNS
Humana's comprehensive UM program has policies in place to both respond immediately to specific identified utilization problems, and to implement strategies to improve utilization patterns in the long term.

IN THE SHORT TERM: The clinical team receives daily reports on inpatient utilization, which they use to identify enrollee-specific predictive scoring (readmission) to assist with proactive discharge planning and communication. The initial review process includes assessment of readmission history, compliance with provider visits, and case management alerts. The team works collaboratively with the care team during the entire hospitalization to close gaps in care and connect the enrollee back to their PCP. If we identify utilization issues through this review process, including potential cases of FWA, we address them immediately.

IN THE MID TERM: We schedule regular meetings with the clinical team to discuss enrollees requiring complex medical management and discharge coordination, as well as those requiring LTSS. The team discusses enrollee utilization patterns and current clinical needs, including physical capabilities, their family structure and support system, and emotional state. We discuss potential problems identified using analysis of utilization patterns with the PCP. Upon discharge we refer the enrollee to internal and external programs to prevent avoidable rehospitalizations.

IN THE LONG TERM: Our comprehensive data warehouse and targeted "data-marts" provide value-added views of data, which allow us to recommend and measure strategic and targeted improvement projects. Once we identify potential problems related to under- and over-utilization, the program solicits input from healthcare professionals, providers, and other participants. The goal is to identify risk factors and facilitate the development of innovative management and treatment alternatives, including specific medical management, home and community-based services (HCBS), case management and coordination, and disease management programs.

==========

8. The extent to which the respondent provides a specific example of how its review processes resulted in successful interventions to alter unfavorable utilization patterns in the system.

==========

CASE STUDY EXAMPLE

PROACTIVELY MONITORING AND ADDRESSING ED UTILIZATION

Humana continuously assesses the needs of our Florida enrollees. Our CMs work with our Medical Directors and with our primary care physicians (PCPs) to monitor over- and underutilization. As an example of how Humana has led the way in pioneering real-time emergency department data exchange between hospitals and health plans, we identified a real need to address inappropriate ED usage. Between 2014 and 2017, Humana developed partnerships with twenty-three (23) local hospitals to receive daily reports of ED encounters, reducing the months-long notification lag, customary of claims-based reporting, to within a few days of an enrollee's ED visit. Timely notification is essential to impacting non-urgent and non-emergent ED utilization.

Once we identify a non-urgent or non-emergent ED visit, our internal ED team began reaching out to the enrollee and enrollee's PCP. We contacted the enrollee to assess and educate them on the disease process, prevention, appropriate place of treatment including alternatives to ED for non-emergent needs, such as urgent care centers, and redirected them to their PCP for a follow-up appointment. If the ED team felt there were comprehensive needs, we referred the enrollee to case management or our behavioral health partner for behavioral health needs. The team notified the PCP and secured a follow-up PCP appointment to address any barriers to health. Using this process of timely notification, enrollee education, and provider collaboration, Humana achieved a significant reduction of ED visits pre- and post-outreach.

The success of Humana's initiative laid the foundation for the current Florida Health Information Exchange (HIE) Event Notification System (ENS), in which Humana partners with AHCA to contract with more than fifty (50) local hospitals to receive real-time emergency department data.

Evaluation Criteria:

1. The extent to which the respondent describes the process and data sources utilized to determine whether a service should be prior authorized, including reviewing complaints or feedback from providers regarding burdensome or unnecessary prior authorization criteria.

2. The adequacy of the processes used by the respondent to determine whether the utilization management criteria selected are appropriate and consistent with policy requirements for a Medicaid benefit.

3. The adequacy of the respondent's approach to ensure the consistent application of review criteria for authorization decisions (e.g., inter-rater reliability studies, and training for plan staff and network providers).

4. The adequacy of the review processes (data collection and analysis) deployed by the respondent to ensure services are not arbitrarily being denied or reduced.

5. The adequacy of the review processes (data collection and analysis) deployed by the respondent to identify aberrant utilization patterns (under and over utilization).

6. The adequacy of the respondent’s approach in differentiating between UM protocols for authorization of services that are needed short-term (e.g., one-time authorization) vs. long-term (ongoing maintenance services/therapies).

7. The adequacy of the respondent’s approach at ensuring continuity of care, particularly as it relates to special needs populations.

8. The extent to which the respondent provides a specific example of how its review processes resulted in successful interventions to alter unfavorable utilization patterns in the system.

Score: This section is worth a maximum of 40 raw points with each of the above components being worth a maximum of 5 points each.

Humana.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 19 – Utilization Management – Ease of Use (Statewide):

The respondent shall describe the following related to its utilization management systems:

a. A description of how the respondent will ensure that the UM processes are designed so that service authorization requests are completed efficiently and with minimum administrative burden on network providers and enrollees;

b. A description of software capabilities that facilitate ease in requesting service authorization and support data exchanges between providers, subcontractors and the respondent (to the extent any UM functions are delegated);

c. A description of the respondent's experience meeting timeliness standards for service authorization requests;

d. A description of the approach that the respondent will use to educate enrollees and providers about the process for seeking authorization; and

e. A detailed workflow of how "special service" requests are processed for enrollees under the age of 21 years. Special services are requests that are made to the plan to exceed the limit on a Medicaid covered service or to cover a medically necessary service that is not listed in the Florida Medicaid handbooks/coverage policy or the associated fee schedule.

Response:

==========

1. The extent to which the respondent proposes the use of interoperable systems that will seamlessly integrate information from providers to the respondent and its subcontractors (to the extent any UM functions are delegated) and the extent to which the respondent describes how that information will be used to enhance care coordination services and to ensure there are no delays in authorization or gaps in care.

==========

Humana has developed innovative strategies using utilization data and metrics to better manage our enrollees' care while maintaining focus on efficient service delivery. We capitalize on our utilization data to determine which enrollees will benefit from care management, as well as to monitor if our enrollees are receiving the appropriate care.

Humana CareHub (hereafter referred to as CareHub), Humana's enterprise solution for complete program integration for our provider community and enrollees, is at the center of our Utilization Management (UM) system capacity. The CareHub Clinical Guidance eXchange (CGX) workflow system supports utilization and care management. As a fully integrated approach, this enterprise solution provides enhanced capabilities to monitor over- and under-utilization, identify candidates for care management/disease management programs, document gaps in care, automate care planning, monitor plan compliance, and identify undesirable outcomes for further intervention. All of the various sources of identification and referral (from predictive modeling to claims data and lab results) are integrated into our powerful CareHub platform, as shown in Attachment 19-1.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Our data mining capabilities are robust and automated due to the interoperability of our systems. The CareHub infrastructure utilizes technology solutions such as Atlas and Anvita clinical rules engines to drive timely and actionable data into an enterprise workflow for the Humana team. This includes automated processes to route enrollees to specific clinical programs and Case Managers, as well as to create Care Alerts consisting of evidence-based medicine Gaps-in-Care, Healthcare Effectiveness Data and Information Set (HEDIS), and drug-to-drug and disease interaction alerts. These automated processes ensure that there are no delays in authorizations or gaps in care for our enrollees.

FUNCTIONALITY INCLUDES:

- Management of automated referrals to clinical programs

- Clinical Program Care Management for management of an enrollee within the clinical program

- Assessments to evaluate an enrollee's condition and identify opportunities for improvement

- Plan of Care (POC) to manage an enrollee's problems, goals, and clinician interventions

- Documentation of all contact with enrollees and providers and the subsequent outcomes of these contacts

- Management of an enrollee's medications, allergies, and immunizations

AUTOMATED FEATURES SUPPORTING UM ACTIVITIES INCLUDE:
- Routing of authorizations within system to MD queue for clinical determinations

- Automated routing of new authorization requests to appropriate internal team through "My Work" queue management

- Sophisticated, layered, and highly nuanced automated business rules integrate with preauthorization list to automatically approve as appropriate or pend in "real-time" to appropriate clinical team for review

- Electronic capture of provider clinical information to support UM decisions

- UM letters, such as "Notice of Action," integrated within system

- Links to useful tools, such as MCG® guidelines and Customer Care system, create user efficiency

- Integration of discharge planning documentation and care management system with UM system

- User customizable interface allowing filtering and sorting to meet role need

- Individual work and team queues maximize productivity; leader queue management allows real-time visibility (e.g., for reprioritization or re-assignment of associates to meet compliance standards)

- Automated operational and compliance metrics capture; back-end database enables both automated and ad hoc reporting functionality

- Mobile and tablet compatible for onsite associates

AUTOMATED AUTHORIZATIONS

Authorization requests for inpatient and outpatient services to CareHub are processed and automatically fed to CareHub's analytics engine and claims platforms, providing seamless continuity of care for our enrollees. Information that is collected during the building of the authorization request (e.g., enrollee demographics, enrollee medical policy, the provider(s) performing the services, and the medical codes) is provided by the source platforms via real-time web services. Many of the views and functionality provided within CareHub are direct integrations and data representations of the source platforms. Real-time web services are used to drive effectiveness and efficiency by leveraging clinical rules engines to propel timely and actionable data into an enterprise workflow for the Humana associate. Attachment 19-2 provides an overview of our clinical systems, including how UM data is integrated into our automated clinical systems' workflows.

Through the use of various web portals (e.g., Eligibility and Benefits page, Availity Care Profile), messaging channels (e.g., email, fax, mail), and the CareHub CGX clinical workflow system, Care Alerts are generated and distributed to the Multidisciplinary Team (MDT), enrollees, providers, and clinical care teams. The CareHub infrastructure utilizes technology solutions, such as Atlas and Anvita clinical rules engines, to enable integration, collaboration, and data sharing throughout the healthcare delivery system. These Care Alerts consist of evidence-based medicine Gaps-in-Care, HEDIS, and drug-to-drug and disease interaction alerts.

Providers are notified of both gaps in care, as well as risk scores, through utilization reports provided by Humana Quality Improvement Nurses (QINs). For privacy reasons, these records will not include records from psychiatric, substance abuse or HIV-related treatment.

Humana's claims systems and customer service systems are fully integrated with the CareHub system. They share common files and common data coding standards. These applications are capable of the following:

- Supporting electronic enrollment, claims and encounters, and referrals

- Interpreting participant eligibility

- Identifying duplicate claims

- Assessing reasonableness of charges

- Automatically applying correct provider reimbursement methodologies

- Distinguishing participating from non-network providers

- Interpreting covered versus non-covered benefits

- Applying pre-existing conditions

- Determining medical appropriateness

- Recognizing up-coding and unbundling practices (and automatically re-bundling)

- Investigating coordination of benefits

- Detecting fraud and abuse

- Researching potential Medicare and Medicaid eligibility issues

- Assessing subrogation opportunities

- Applying penalties for non-compliance with medical management rules

- Applying a variety of cost sharing and other benefit calculations

- Storing and centralizing data that Customer Care representatives can use to answer questions from enrollees and providers

CareHub's integration server, CareHub Interchange, is implemented in an industry leading technology that provides pre-built interface adapters and message transformation tools to improve the timeliness of integration with other systems. The extent of integration limitations exists solely on that system's ability to provide an inter- and intra-system interface to the CareHub Interchange in a timely manner.

==========

2. The extent to which the respondent uses strategies to reduce administrative burdens for the provider (e.g., software capabilities) in requesting authorization and its approach is streamlined with little to no redundancies between and across departments which could contribute to delayed service authorizations.

==========

SYSTEM INTEGRATION

To reduce the burden on providers, subcontractors, and Humana associates, our systems are integrated through real-time user interfaces that receive information from multiple data sources. The core eligibility and claims processing systems feed data to the Operational Data Store (ODS) and the Enterprise Wide Database (EWD), which are then used to provide information to multiple systems and users throughout Humana. ODS is a DB2 database that houses consolidated data for operational use across the enterprise. ODS receives daily batch feeds from multiple sources. Data subjects include enrollee demographics, eligibility, and benefits

from Customer Interface, as well as medical and dental claims, authorizations, referrals, provider data, and accumulators fed from other systems across Humana. The database is available twenty-four (24) hours a day, seven (7) days a week. We supply our providers and subcontractors with the information housed in the ODS, enabling streamlined identification of enrollee benefits, as well as authorization information. Attachment 19-4 illustrates how our platforms are integrated through our advanced CGX platform.

Providers, vendors, and subcontractors can have access to enrollee eligibility and authorization information through numerous avenues. Enterprise Eligibility Services (EES) are web services that return eligibility and benefit data. Many consumer applications call EES or use ODS data, including MyHumana (Enrollee and Provider portals); Interactive Voice Recognition tools; Enrollee Services (CCP and GCP); Clinical Management; Secured Logons; eHub; Availity®; feeds to vendors; and enrollee communications.

Detailed descriptions of our software capabilities follow in the narrative below.

CAREHUB

Humana's integrated technology solutions are made available to team members through our cutting edge CareHub infrastructure. CareHub is Humana's clinical management platform that includes all of the clinical and care management documentation. This is where all designated care management associates – e.g., acute Case Managers, utilization management associates, Humana Case Managers, Community Health Educators, and Field Case Managers – can create and update enrollee records. Enrollee health status can be tracked through the Clinical Tools function, which collects important information, such as measurements, and generates trend reports for staff and enrollees. This is part of a menu of applications that ties all enrollee experiences (e.g. pharmacy encounters and communications, eligibility status, claims and utilization, power of attorney documentation) into a centralized electronic enrollee record repository.

The objective of the CareHub ecosystem is to improve enrollee outcomes and realize quality objectives by addressing gaps in care through integration at the point of care. Our CareHub infrastructure truly leverages technology to enhance clinical delivery. It utilizes technology solutions to enable integration, collaboration, and data sharing throughout the healthcare delivery life cycle.

CGX

The CareHub CGX clinical workflow system supports an integrated, comprehensive approach to utilization and care management. As a fully integrated approach, this enterprise solution provides enhanced capabilities to monitor over- and under-utilization, identify candidates for programs, document gaps in care, automate care planning, monitor plan compliance, and identify undesirable outcomes for further intervention. Our CGX system documents both medical and Long-term Care (LTC) information, enabling a full view of our comprehensive enrollees. Attachment 19-3 includes a screenshot from our CGX system illustrating our integrated views for our comprehensive enrollees.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

ATLAS

Atlas Clinical Rules Engine allows enrollee identification, stratification and routing for:
- Chronic Condition Management:
-- Diabetes – both disease management and education
-- Coronary Artery Disease – both disease management and education
-- Cancer – both disease management and education
-- End-stage Renal/Chronic Kidney Disease

- Asthma

- Transplant Management

- Rare Disease

- Emergency Department Care Management (Complex Care Management)

Attachment 19-4 Illustrates our Atlas Clinical Rules Engine.

ANVITA

Humana has established a first of its kind clinical infrastructure that truly optimizes technology to enhance enrollee understanding and clinical delivery by converting diverse enrollee data into real-time actionable insights that drive change and enable providers to deliver the most appropriate and effective services.

The Anvita engine and CareHub delivers personalized enrollee analyses identifying enrollees who are at risk for adverse medical events, including hospitalizations, are taking contraindicated therapies, are missing preventive services, have cost-saving interchange opportunities to lower costs, need electronic, automated prior authorization of expensive services, and have resolvable data gaps in their electronic record.

When deployed at the point of care, Anvita can identify, rank, and score competing treatments by safety, efficacy, and cost in real-time, using virtually all known clinical data. Anvita also has the ability to translate confusing industry terminology into consumer-friendly language, in real-time, to enable physicians and enrollees to have symmetrical views enabling shared decision-making.

AVAILITY®

Network providers in Florida have access to the Availity® web-based platform. Availity® is one of the leading health information networks in the country, optimizing information exchange between multiple healthcare stakeholders through a single, secure network. The Availity® Health Information Network encompasses business and clinical services, and supports nationwide real time and batch electronic data interchange via the Web and through business-to-business integration.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

The Availity® Care Profile includes claims information associated with office visits and hospitalizations, diagnoses and associated procedures, prescription history, lab event history, radiology event history, immunization history and clinical messaging. This type of information is critically important when a first time enrollee presents, or during an emergency department visit, post-hospital discharge or natural disasters. Use of the Availity® Care Profile also improves enrollee safety, can eliminate duplicate and unnecessary procedures, and improves coordination and continuity of care. This enables more rapid closure of gaps in care for enrollees, greater opportunity for preventive care services and chronic condition management.

==========

3. The extent to which the respondent has demonstrated experience with meeting timeliness standards for service authorization requests.

==========

Humana has vast experience reviewing and processing authorization requests across all lines of business. In the Florida Medicaid program, we have been working with providers and enrollees to process accurate and timely authorization decisions since 1997.

We believe that UM processes and service determinations should take place in a timely, efficient manner and have a minimum impact on network provider and enrollees. The Humana UM associates provide a Notice of Action regarding service authorizations within the following timeframes:

STANDARD (NON-URGENT)

Humana provides notice as expeditiously as the enrollee's health condition requires and within no more than seven (7) days following receipt of the request for service. An extension may be granted for an additional seven (7) calendar days if the enrollee or the provider requests an extension, or if Humana justifies a need for additional information and the extension is in the enrollee's best interest.

EXPEDITED AUTHORIZATIONS

An expedited authorization is required when a provider, or Humana determines, that following the standard timeline could seriously jeopardize the enrollee's life or health or ability to attain, maintain, or regain maximum function. An expedited decision must be made no later than forty-eight (48) hours after receipt of the request for service. Humana may extend the timeframe for expedited authorization decisions by up to two (2) additional business days if the enrollee or the provider requests an extension or if Humana justifies the need for additional information and how the extension is in the enrollee's interest.

CONCURRENT AND URGENT CONCURRENT REVIEWS

A concurrent review is any review for an extension of a previously approved, ongoing course of treatment over a period of time or number of treatments. NCQA also considers a request made

while an enrollee is in the process of receiving care to be an urgent concurrent request if the medical care requested meets the definition of urgent, even if the organization did not previously approve the earlier care. Requests for ongoing inpatient care are always considered urgent; for this reason, we have nurses and physicians on call twenty-four (24) hours a day, seven (7) days a week three hundred sixty-five (365) days per year. Determinations for Urgent Concurrent reviews are made within twenty-four (24) clock hours one (1) day of Humana's receipt of the authorization request, when all necessary information to make a determination is available. When additional information is needed to make a determination, the request for the additional information must be made within twenty-four (24) clock hours one (1) day of Humana's receipt of the authorization request.

When additional information is requested, the total timeframe in which a decision must be made is three (3) calendar days from the date that Humana received the authorization request.

RETROSPECTIVE REVIEWS

Retrospective reviews occur after the service has occurred. Humana completes these reviews within thirty (30) days of the receipt of the initial request.
Humana meets the above-referenced standards with the following compliance rates:
- Standard authorizations – 98.5% compliant
- Expedited authorizations – 100% compliant
- Urgent Concurrent authorizations– 99% compliant
- Retrospective authorizations– 95% compliant

==========
4. The adequacy of the respondent's education and training plan providers on the service authorization processes.
==========

EDUCATING ENROLLEES ON PRIOR AUTHORIZATION PROCESSES

Humana ensures that our enrollees understand what referrals and prior authorizations are, and we help them navigate the process. The enrollee handbook includes the following information for our enrollees regarding prior authorizations:

- Services that DO NOT require authorization

- Direction to the Benefit Summary to determine what services might require prior authorization

- How to get services authorized and approved
-- Talk to PCP
-- Call Customer Care number on identification (ID) card
-- Talk to Case Manager

As the handbook states, enrollees are encouraged to call our Customer Care line whenever they have questions regarding benefits or authorization information.

EDUCATING PROVIDERS ON PRIOR AUTHORIZATION PROCESSES

Humana provides education and training for our network providers to ensure that they understand Humana's policies regarding utilization management. Providers must have authorizations prior to providing select services to Humana enrollees, except in certain situations, such as emergency circumstances, where prior approval is not required. Information related to utilization management is clearly outlined in the Provider Manual delivered to all network providers. Furthermore, Humana contractually requires our providers to conduct utilization management-related training for staff at their facilities. The prior authorization portion of the training includes the following:

- How to use online submission for prior authorization requests

- How to use the 24 hours a day, 7 days a week automated prior authorization line

- How to submit prior authorization requests via Humana's secure provider self-service at: Humana.com/providers

- How to view the prior authorization list via Humana.com/providers - choose "Authorizations/Referrals"

- How to access authorization forms at www.humana.com/pa or via phone

- How to access authorization requests and decisions via online portal

Please see Attachment 19-5 for the prior authorization excerpt from Humana's provider training.

We notify existing providers of any changes or enhancements to our prior authorization policies or processes via the Provider Manual and online through the provider portal.

==========

5. The extent to which the respondent ensures transparency in service authorization processes (e.g., makes available all utilization management protocols and criteria in an accessible location for service providers).

==========

TRANSPARENCY OF SERVICE AUTHORIZATION PROCESSES

Humana's service providers have full access to all utilization management information via the following resources:
- Provider training
- Provider manual
- Online portals (Availty, www.humana.com)

We make our UM review criteria available on the online provider portal, and providers can access the prior authorization list by either calling Customer Care or accessing the list via the provider portal.

==========
6. The extent to which the workflow describing the respondent's process for handling "special service" requests is consistent with Early and Periodic Screening, Diagnosis and Treatment (EPSDT) requirements.
==========

Humana ensures that our youngest enrollees have access to the services they need; we honor all service requests that meet medical necessity criteria for our enrollees under the age of twenty-one (21). When processing special service requests for children under the age of twenty-one (21), to ensure we are consistent with EPSDT requirements, we only deny services if they do not meet Florida's definition of medical necessity. We do not review for benefit information. If we deem the service(s) medically necessary, regardless of its covered benefit status, we authorize the service(s). Attachment 19-6 includes our detailed workflow of how special service requests are processed for enrollees under the age of twenty-one (21).

Evaluation Criteria:

1. The extent to which the respondent proposes the use of interoperable systems that will seamlessly integrate information from providers to the respondent and its subcontractors (to the extent any UM functions are delegated) and the extent to which the respondent describes how that information will be used to enhance care coordination services and to ensure there are no delays in authorization or gaps in care.

2. The extent to which the respondent uses strategies to reduce administrative burdens for the provider (e.g., software capabilities) in requesting authorization and its approach is streamlined with little to no redundancies between and across departments which could contribute to delayed service authorizations.

3. The extent to which the respondent has demonstrated experience with meeting timeliness standards for service authorization requests.

4. The adequacy of the respondent's education and training plan providers on the service authorization processes.

5. The extent to which the respondent ensures transparency in service authorization processes (e.g., makes available all utilization management protocols and criteria in an accessible location for service providers).

6. The extent to which the workflow describing the respondent's process for handling "special service" requests is consistent with Early and Periodic Screening, Diagnosis and Treatment (EPSDT) requirements.

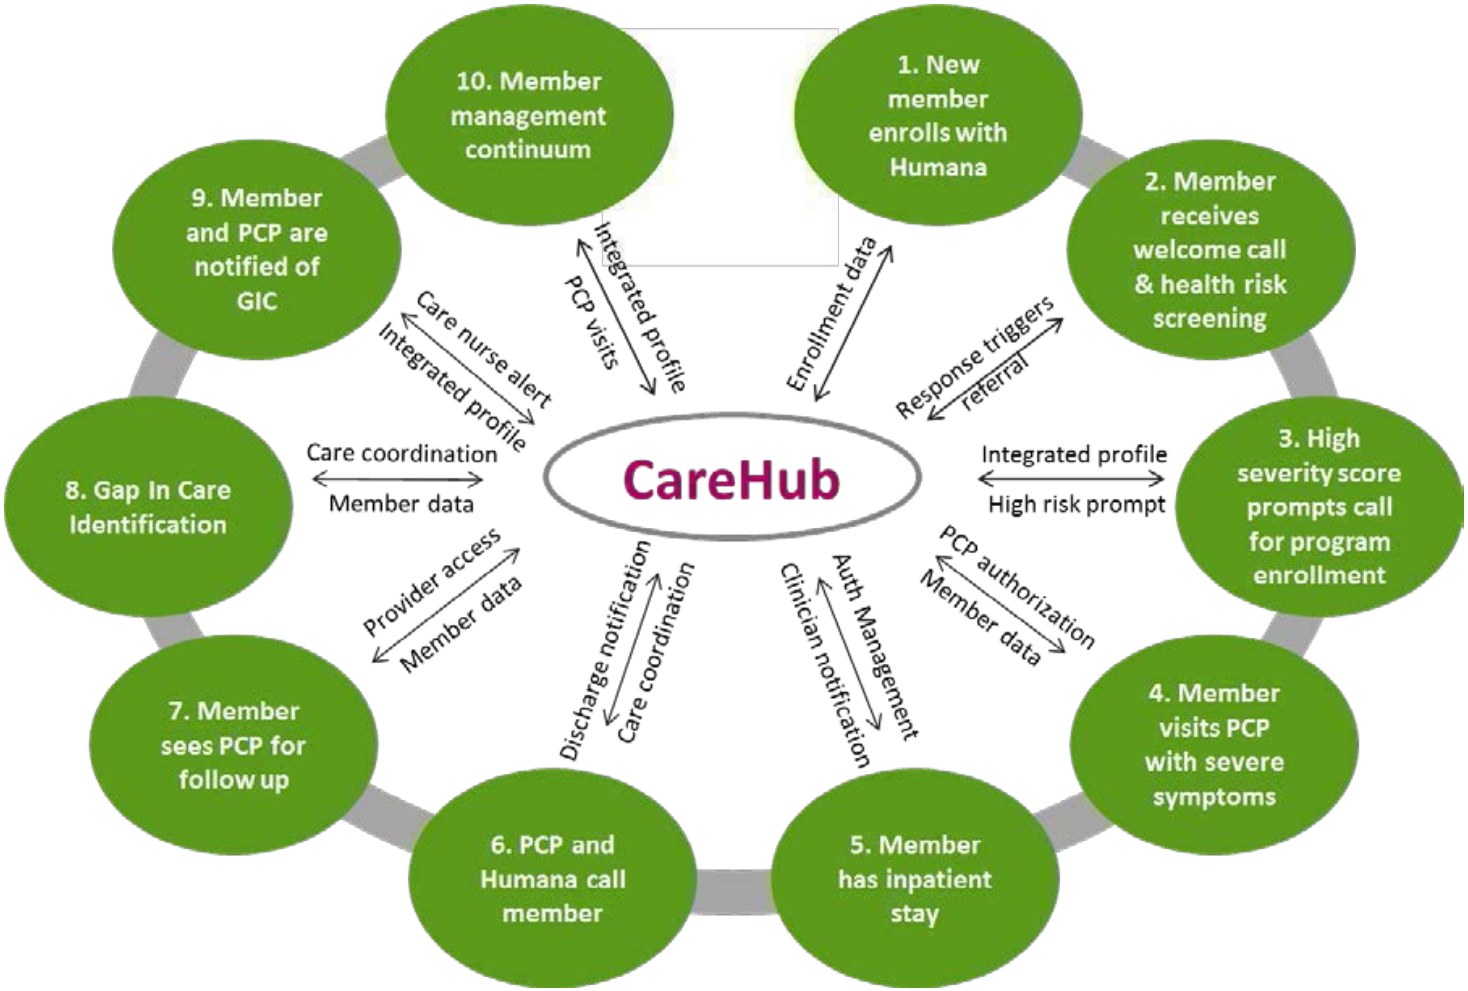
Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

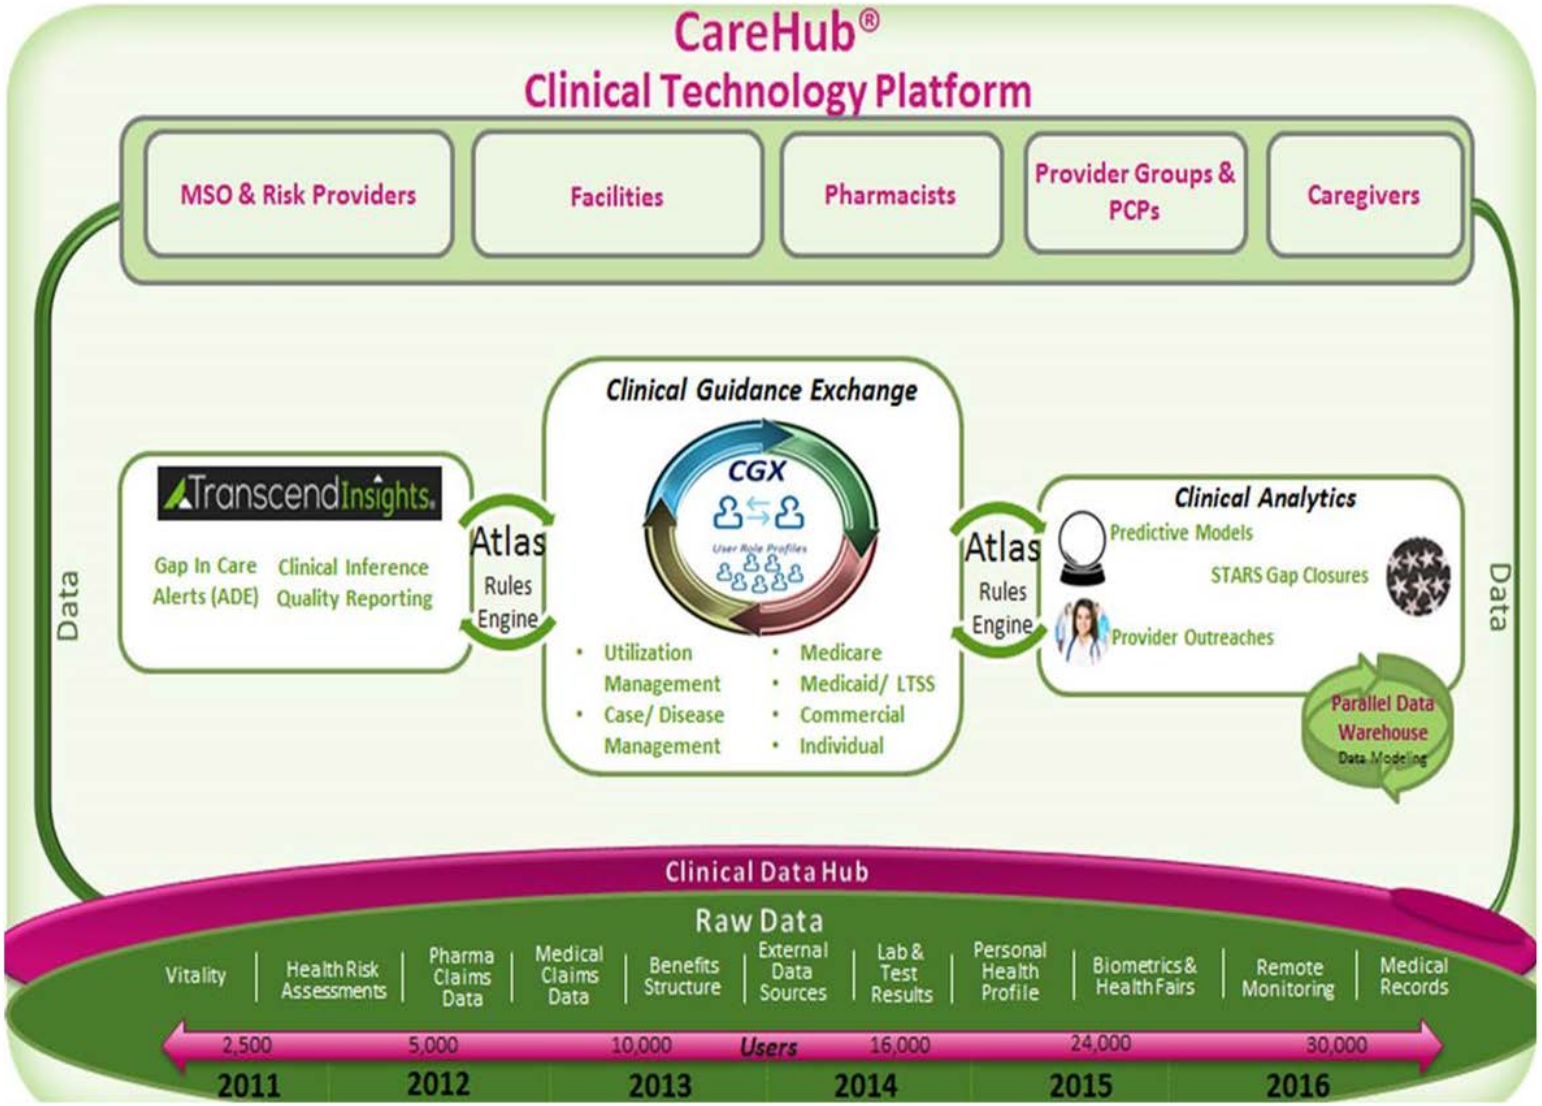
Attachment 19-1: Humana's CareHub Platform

CareHub is Humana's enterprise solution for complete program integration for our provider community and enrollees. The CareHub Clinical Guidance eXchange (CGX) workflow system supports an integrated approach to utilization and care management. All of the various sources of identification and referral – from Predictive Modeling to claims data and lab results – are integrated into our powerful CareHub platform, as seen below.



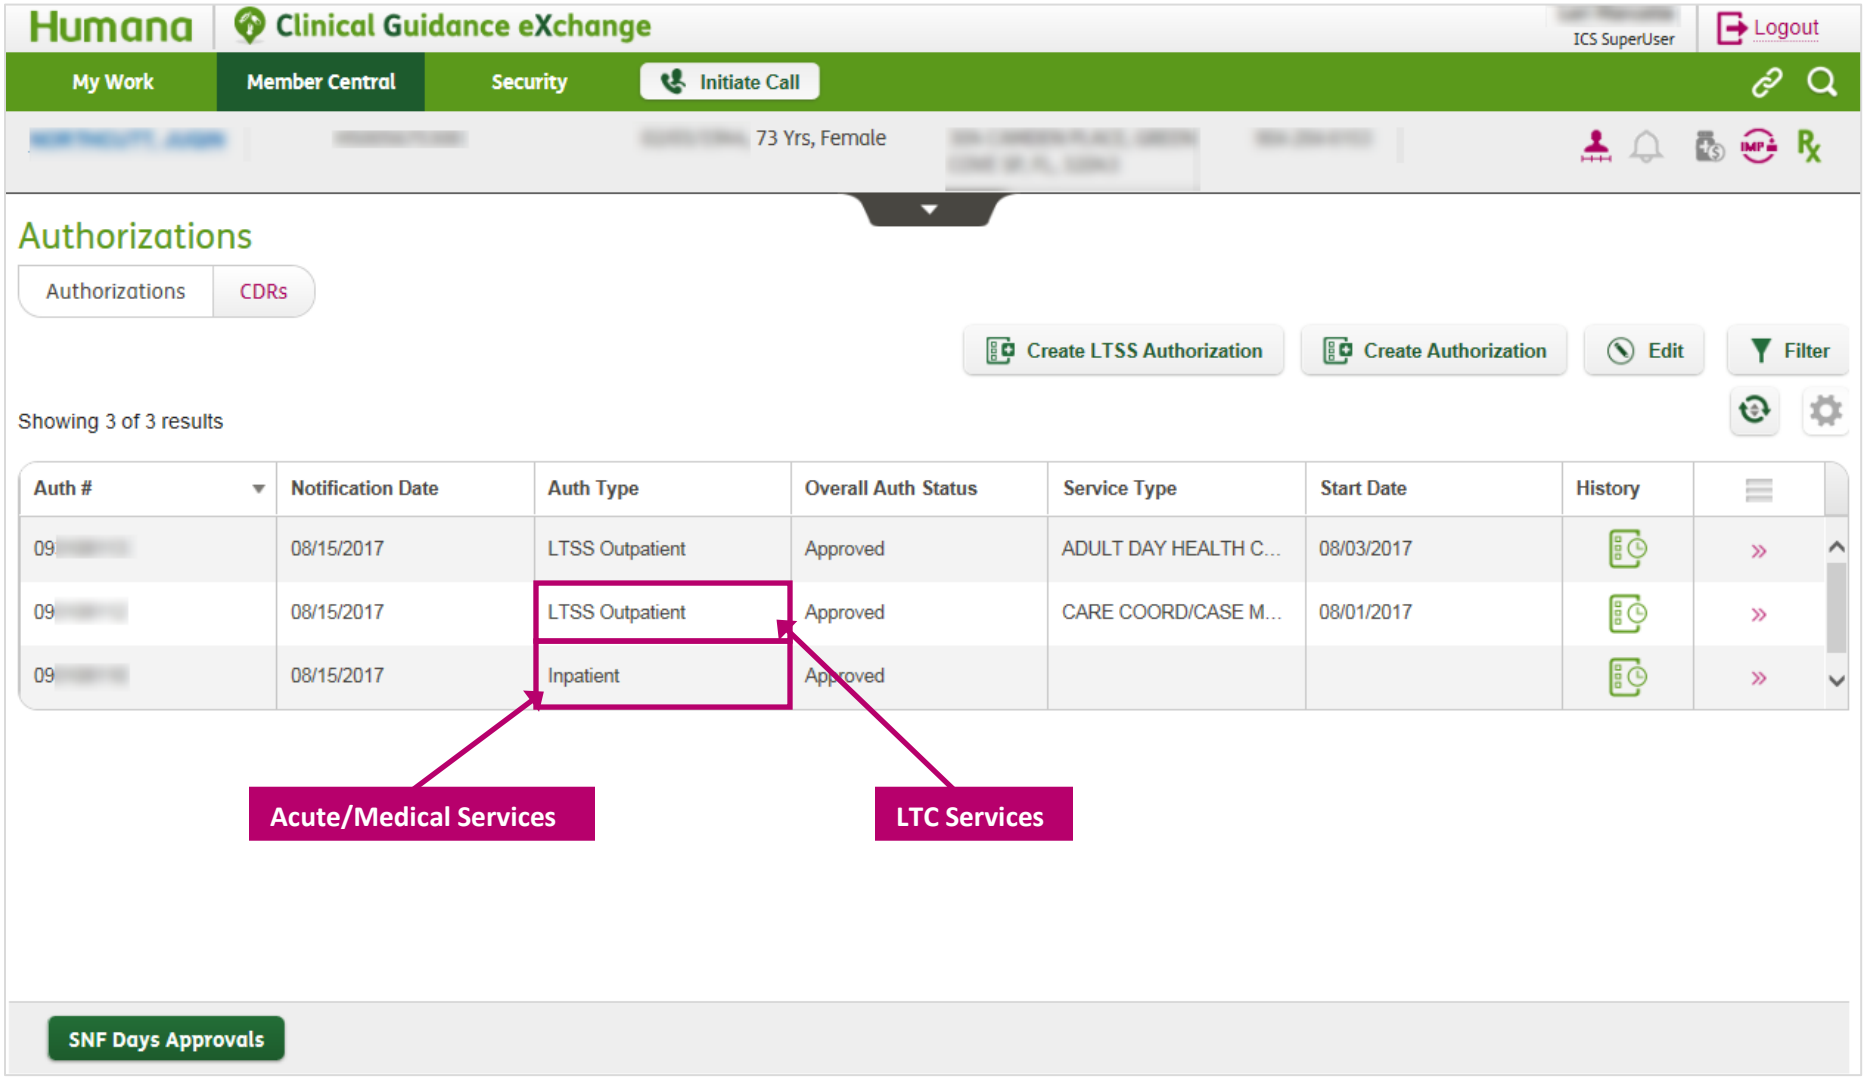
Attachment 19-2: Clinical Technology Platform Overview

Below is an overview of our clinical systems, including how UM data is integrated into our automated clinical systems' workflows.



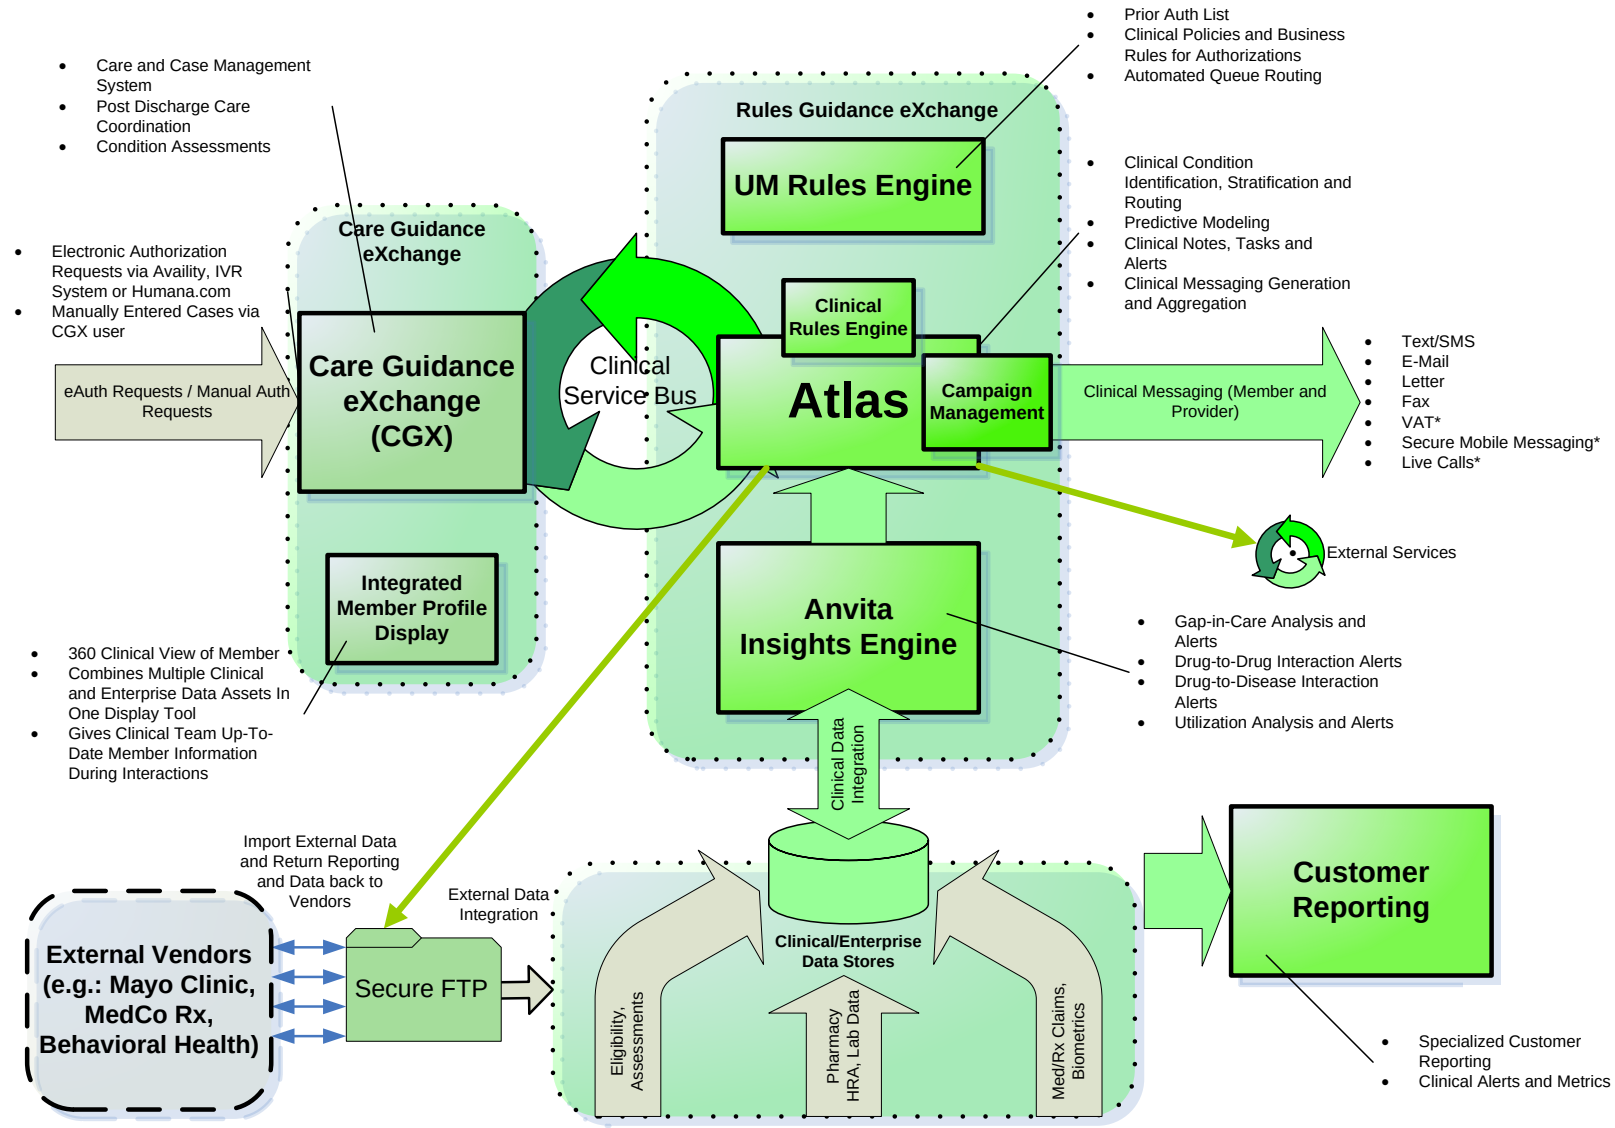
Attachment 19-3: LTC and Medical Services View from CGX Platform

Our Clinical Guidance eXchange (CGX) system documents include both medical and LTC information that allow us a full view of our comprehensive enrollees. Below is a screenshot from our CGX system illustrating our integrated views for our comprehensive enrollees.



Attachment 19-4: Humana Atlas Clinical Rules Engine

Our Atlas Clinical Rules Engine shown below allows for the identification, stratification and routing of a patient for various conditions.



Attachment 19-5: Preauthorization and Notification Provider Training

Providers must have authorizations prior to providing select services to our enrollees. Humana contractually requires its providers to conduct utilization management-related training for staff at their facilities. Below is an excerpt from Humana's training requirements.

Preauthorization and notification

- Allows Humana to provide members' benefit information.
- Required for many services and medications.
- Access lists at **Humana.com/providers**:
  - Select "Authorizations/Referrals."
  - Choose "Preauthorization and Notification Lists."
  - Select the current "Medicaid Preauthorization and Notification List."

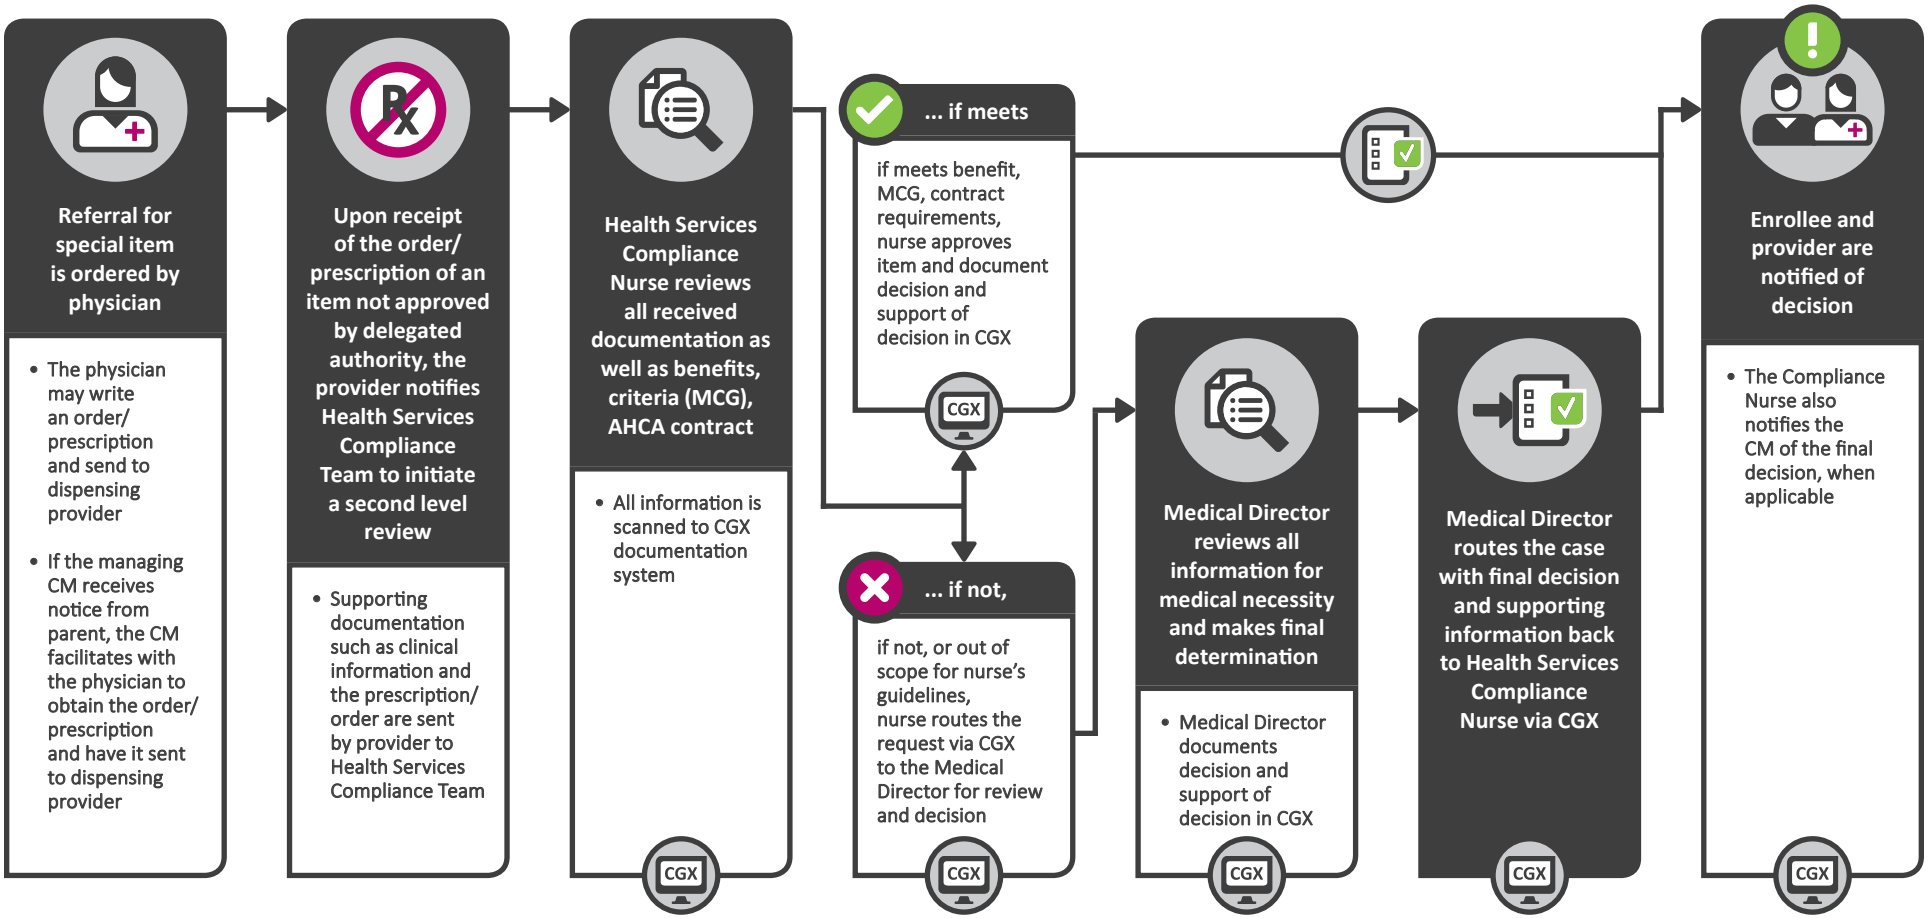
When processing special service requests for children under the age of 21, to ensure we are consistent with EPSDT requirements, we **only** deny services if they do not meet Florida's definition of medical necessity.

CM = Case Manager
CGX = Clinical Guidance eXchange
MCG® = MCG (formerly Milliman Care Guidelines)
CPCM = Complex Case Manager



Humana.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 20 – Care Coordination (Statewide):

The respondent shall describe its approach for identifying, assessing, and implementing interventions for enrollees that present with the following:

- Complex medical and/or behavioral health needs;
- High service utilization;
- Intensive health care needs; and
- Consistently accessing services at the highest level of care.

The respondent's approach shall include:

a. A description of the algorithm used to identify and stratify eligible enrollees by severity and risk level;

b. A description of minimum contact frequencies and contact type for each severity and/or risk level;

c. A description of the maximum caseloads for each case manager (ratio requirements) and support staff;

d. A description of evidence-based guidelines utilized in the care coordination approach, including interventions deployed to improve enrollee engagement and improve treatment adherence; and

e. A description of performance metrics used to evaluate the efficacy of the care coordination, including cost-savings, reduction in the use of higher cost services, etc.

Response:

Humana has been providing case management and care coordination for Medicaid populations and vulnerable subpopulations for decades. Our experience has shown us that an effective approach to identifying, assessing, and implementing interventions for high-risk enrollees must be multi-faceted and enrollee-driven while encompassing all levels of care. Our comprehensive case management program is dedicated to identifying, engaging, and managing our enrollees who require care coordination and case management services, and tailoring those services to the specific needs of the enrollee. Humana's process for identifying and monitoring the highest need and highest-risk enrollees integrates robust data analytics with specialized care coordination strategies. This approach allows us to proactively identify high-risk enrollees and preventively address emerging health issues.

We are committed to having well-trained and knowledgeable case management staff. In addition to hiring Case Managers (CMs) with specifically applicable experience (e.g., our pediatric CMs have pediatric-specific experience), Humana's Clinical Learning and Development (CLD) team provides a two (2)-week orientation that includes training on Medicaid, Humana's care and technology systems, ethics, cultural competency, motivational interviewing, and other computer-based training. After initial orientation, senior CMs mentor CMs for eight (8) weeks using onsite-office, field-based, and web-based training. This training

equips CMs to find and locate appropriate community resources to help resolve enrollee issues in a timely manner. They learn strategies to identify barriers to access to care, prioritize immediate needs, identify enrollee health literacy, and display empathy and emotional support. Humana provides a half-day monthly meeting of continuous education and training in addition to oversight, ensuring CMs have the most up-to-date care management information.

Humana maintains a “No Wrong Door” policy for identifying enrollees in need of regular care monitoring. We integrate all our various sources of identification and referral into our powerful CareHub platform, Humana’s innovative enterprise solution for complete program integration for Humana’s provider community and enrollees. This includes everything from predictive modeling to claims data and lab results. The CareHub Clinical Guidance eXchange (CGX) clinical workflow system supports an integrated approach to care coordination. As a fully integrated approach, this enterprise solution provides enhanced capabilities to identify enrollees for programs, document gaps in care, automate care planning, monitor plan compliance, and identify undesirable outcomes for further intervention.

==========
1. The extent to which the respondent’s algorithm and risk stratification approach is well-defined and incorporates data elements other than diagnosis.

2. The extent to which the respondent describes data sources that are incorporated into the risk stratification process that is used for new enrollees.

3. The extent to which the respondent’s approach includes the use of predictive modeling.
==========

Humana identifies and assesses an enrollee’s needs at both the time of enrollment and on an ongoing basis using multiple means, including but not limited to the sources listed below. Our data sources allow us to create a full picture of enrollee utilization and help us identify potential high utilizers, high-risk enrollees, and potential emerging risk factors upon initial enrollment and ongoing.

- Upon initial enrollment in Humana through:
-- Information from the enrollee’s 834 file
-- Prior authorizations and other continuity of care data and requests
-- New enrollee welcome calls
-- Health Risk Assessment (HRA)
-- Predictive modeling and risk stratification
-- Claims and encounter data that may be available from enrollee’s previous health plans and the Agency for Health Care Administration (AHCA)

- Ongoing identification through:
-- Data collected through Utilization Management (UM) or Case Management processes
-- Hospital admission and discharge data including Readmission Reports
-- Claims and encounter data
-- Ongoing face-to-face and telephonic contacts
-- High Utilizer Report (HUR)
-- Electronic Medical Record (EMR) access
-- Outlier Report

-- Pharmacy data
-- Electronic and automated reports
-- Twenty-four seven (24/7) nurse call line
-- Enrollee self-referrals
-- Referrals from caregivers, providers, and community agencies
-- Laboratory reports
-- Health management, wellness, and health coaching programs
-- Ongoing predictive modeling and risk stratification

The case management program maintains a "No Wrong Door" policy for potential care management referrals twenty-four (24) hours a day, including referrals from providers. We maintain a list of screening triggers for all internal and external staff to use as a guide to further maximize timely and accurate referrals to the case management program. In addition, because case management and disease management programs are effective tools to coordinate care for our enrollees, Humana includes a description of case management and disease management program opportunities for self-referral in the enrollee new materials and through our quarterly enrollee newsletter. We also disseminate information about these programs in provider materials.

Claims data analysis conducted through predictive modeling is a primary method we use to identify enrollees in need of case management and to determine the level of case management required. Humana seeks to obtain pre-enrollment claims and diagnosis history while the enrollee was in a different health plan or in fee-for-service (FFS) so we can thoroughly assess case management needs at time of enrollment. Our claims data inputs to our predictive modeling tools encompass all claims types: medical claims data, which include lab data, behavioral health claims data, and pharmacy claims data, which is available to us on a real-time basis. In Florida, we have partnered with independent labs to receive not only the claim for a completed test, but also the actual lab value.

It is important to highlight that an enrollee's life circumstances, such as socioeconomic status and environment and social service needs are also important determinants of the level of case management required. The additional data gathered through various avenues (e.g., Health Risk Screening results, internal and external referral sources) are crucial to incorporate into the identification and stratification process. We address an enrollee's whole physical, mental, and social health and seek to improve enrollees' health and social outcomes through a population health management approach.

The data mining by the CareHub CGX system is comprehensive and automated. This is where we integrate our predictive modeling tools. The CareHub infrastructure utilizes technology solutions such as Atlas and Anvita clinical rules engines to drive timely and actionable data into an enterprise workflow for the Humana team, including automated processes to route enrollees to specific clinical programs and CMs.

The backbone of our identification is advanced predictive modeling to detect enrollees who need support in the early stages of their condition, when we can have the greatest impact. By using medical and pharmacy claims data along with other data elements such as behavioral and socioeconomic input, this early identification allows our clinical programs to intervene before a major health event occurs. Sophisticated algorithms allow for precise stratification, and we queue enrollees in "risk rank order" for engagement, focusing on the highest-risk cases first.

This stratification does not determine the level of intensity of case management needed (e.g., low, medium, high, complex), but instead stratifies enrollees by severity score for prioritization of outreach. The enrollee's CM determines final case management intensity after outreach and comprehensive assessment.

The fact that our predictive models are based on our data and built on our systems enhances the validity, reliability, and flexibility of the models. Humana's predictive modeling capabilities have led the industry for years and we continue to innovate. Our approach is, in as close to real-time as possible, continually screening our enrollees for opportunities to make a difference. We then can reach out to the enrollee with the most appropriate level of support. Our proprietary predictive models include the following:

- Humana's MEDICAID SEVERITY SCORE PREDICTIVE MODEL is the primary predictive model used across the entire Medicaid population, not just on those who are hospitalized as with the Readmission Predictive Model described below, for example. Using this proprietary model, we incorporate a severity score generated from medical, behavioral health, and pharmacy claims into monthly reports that identify enrollees with high costs and clinically complex health conditions over a rolling 12-month period. The severity score is a predictor of future medical and pharmacy costs over the next 12 months. Use of this data allows Humana to identify enrollees with changing care needs, enroll them in case management, move them between acuity levels, and alter their level of case management intervention. All this occurs while we're gauging the stage of readiness of the enrollee to accept case management support.

- This innovative model addresses the challenges of modeling for a diverse group like those represented by Humana's Medicaid population. For such diverse populations, the large array of characteristics makes it difficult to score the enrollees under the same circumstances. Humana's model groups the individuals together based upon certain characteristics and builds individual models for each group. This 2-stage meta modeling is reliable, efficient, and provides increased accuracy.

- We then stratify the severity scores into complex, high, moderate, and low categories, which allows our case management team to identify the enrollees at greatest risk for a clinical event that could devastate them and their families. We prioritize case management processes to ensure that enrollees identified as complex or high risk receive intervention first, so we can mitigate potential crises or transition situations to whatever extent possible.

- Humana also calculates the READMISSION PREDICTIVE MODEL (RPM) to assess the probability of an enrollee's readmittance into a facility within thirty (30) days. The RPM is a true predictive modeling process, with inputs from more than 50 variables including demographics such as the enrollee's age and gender, previous medical and pharmacy claims including physician visits, admissions, days since last admission, Charlson Comorbidity Index (validated instrument regarding co-morbidities), and number of medications, as well as information regarding their current admission (procedure, diagnosis, bed type, length of stay (LOS), and discharge disposition). The process generates a numerical RPM score, which allows stratification and prioritization based upon the risk of all-cause readmission within thirty (30) days.

- Humana uses EMERGENCY DEPARTMENT PREDICTIVE MODELS that prospectively identify enrollees likely to use emergency departments, likely to become high emergency

department utilizers, and likely to use emergency departments for non-emergent reasons to provide the following benefits:

--Opportunity for proactive enrollee engagement and education to reduce barriers to optimal health management;

-- Referrals to clinical programs and alignment with support services; and

--Prevention of repeated ED visits as a substitute for primary care, often detrimental to enrollees with chronic conditions. This also helps create a stronger enrollee-physician care partnership.

==========

4. The extent to which the frequency and intensity of the care coordination services (i.e., maximum caseload and minimum contact requirements) are aligned with the respondent's risk stratification process and proportional to the clinical and psychosocial needs of the target population.

==========

Before determining the frequency and intensity of our care coordinaton services based on enrollee-specific needs, we engage in comprehensive assessment of our enrollees. We summarize our assessment and care planning approaches below and then follow with a description of contact frequencies and contact type.

ASSESSMENT AND CARE PLANNING

Every aspect of health care begins by assessing the enrollee's need for care. The assigned CM contacts enrollees with Managed Medical Assistance (MMA)-only benefits who are referrals for and accept participation in case management. The CM administers a comprehensive case management assessment within thirty (30) days of the enrollee's acceptance of participation. Our comprehensive case management assessment not only identifies health needs but also identifies potential barriers to care, such as an enrollee's lack of knowledge of their disease state, understanding of the PCP's treatment plan and importance of adhering to that plan, or challenges in meeting basic needs. These basic needs include the ability to afford food, housing, and transportation. Elements include:

- Enrollee's health status, including condition-specific issues

- Social and cultural dynamics, including an evaluation of activities of daily living and functional status

- Evaluation of caregiver resources including adequacy, involvement, and level of decision-making

- Cultural and linguistic needs, preferences, or limitations

- Life planning activities

- Mental health status, including psychosocial and cognitive functioning

- Clinical history, including a medication reconciliation

- Evaluation of available benefits within the organization and from community resources

- Evaluation for hearing and visual preferences or limitations

We assign a CM to all Comprehensive enrollees, those with both Long-term Care (LTC) and full MMA benefits through our plan. The CM assesses them face-to-face for long-term care services and support (LTSS) needs as well as for medical and behavioral health needs.

The additional information we gather through the assessment, which involves direct communication with the enrollee and caregiver or designee, enables the CM to make a final determination on acuity. With all factors in mind, including predictive model scores and information gathered during the comprehensive assessment, the CM assigns acuity based on clinical judgment.

Humana CMs actively manage enrollees, coordinating care between service settings and acuity levels. Our comprehensive case management program is multifaceted and encompasses Low Acuity Case Management, Medium Acuity Case Management, High Acuity Case Management, and Complex Acuity Case Management, described in greater detail later in this section.

We create an individualized POC for every MMA-only enrollee within thirty (30) days of his or her consent to case management. Comprehensive enrollees all receive case management and an individualized POC. The CM creates a Multidisciplinary Team (MDT) specific to the enrollee's needs. This may include the CM, the enrollee and enrollee representative, family and caregivers, the enrollee's PCP, and other applicable providers involved in the enrollee's care. The CM leads the development of the plan, keeping the enrollee and PCP as the primary contributors, followed by other MDT members. The results of comprehensive assessment form the basis for the plan's individualized and prioritized goals and interventions, which we develop with timeframes for completion and the enrollee's documented progress toward achieving their goals. CMs monitor, update, and revise the goals as needed. Each goal has a set of interventions and expected outcomes associated with it.

Examples of other key items included within the individualized care plan process include:

- A communication plan with the enrollee including anticipated frequency of contacts

- A communication plan with the PCP and specialist to ascertain the needs the provider has identified and prioritized, including a process to ensure the provider's treatment plan is reflected in the plan of care developed by the health plan

- Specific services and benefits needed

- Preferences for care

- Need for add-on or extended benefits

- Services for enrollees with disabilities

- Identification of providers responsible for delivering services

- Identification of referrals made to specialists or providers and confirmation that the enrollee received these services

- Referrals to community, social, recovery support agencies, including assisting enrollees in contacting the agency and validating the enrollee received the needed service

- A review of the new and updated care plan with enrollee, family, and caregiver as needed and the PCP and specialist and actively seek input from them

- Contingency planning for changes in condition or caregiver availability and ability

- A plan for effective and comprehensive transitions of care between care settings

- Continuous review and revision of the plan of care, which includes follow-up contact as needed with enrollee to ensure care plan is adequately monitored, including identification of gaps between recommended care and actual care provided

The primary objective of the plan of care is to identify and document the enrollee's problems, goals, and interventions to guide best practices, support enrollee expected goals and outcomes, and provide a tool for communication among the enrollee's MDT. While the CM initiates and updates the POC, other participants on the enrollee's care team, including the enrollee, actively contribute to the development and ongoing updates to the plan to ensure the enrollee achieves his or her physical, behavioral, and psychosocial goals.

FREQUENCY AND INTENSITY OF CARE COORDINATION SERVICES

The Humana case management model allows for differing levels of care coordination and follow-up with the enrollee, provider, and other stakeholders based on the acuity level of the enrollee.

- COMPREHENSIVE ENROLLEES: All Comprehensive enrollees receive case management. For these enrollees, the primary CMs are LTC specialists who are assisted by RN CMs acting in a consultative role for the medical component. CMs have at minimum monthly contact with these enrollees and quarterly face-to-face visits, regardless of their acuity level. We will enhance contact frequency based on enrollee's risk stratification and comprehensive needs assessment.

- ENROLLEES UNDER THE AGE OF 21 YEARS WHO ARE RECEIVING SERVICES IN A SKILLED NURSING FACILITY (SNF), RECEIVING PRIVATE DUTY NURSING (PDN) SERVICES IN THEIR FAMILY HOME, OR OTHER COMMUNITY-BASED SETTING: Whether a Comprehensive enrollee or MMA-only enrollee, contact frequency is at minimum monthly and includes quarterly face-to-face visits.

COMPLEX ACUITY

- The CM contacts complex acuity enrollees weekly.

- The criteria for stratifying an MMA-only enrollee as complex are as follows

-- At least two (2) hospitalizations within 30 days

-- Medical, educational, and psychosocial barriers that lead to emergency department or inpatient readmissions

-- Complex needs for care coordination.

We use the following referral guidelines to identify Comprehensive enrollees for complex case management:

-- Discussion with medical director required because of unmanaged health issues or the enrollee's inability to take or obtain medications

-- Complex health and medical management situations

-- High Utilization of emergency department or hospitalizations – two (2) or more hospitalizations within 6 months

-- End of life issues that require team approach

-- Transitions of care concerns to prevent unplanned nursing home placement

-- Home safety, durable medical equipment (DME), or fall prevention concerns

-- Change in cognition (e.g., dementia or decline in health or lack of caregiver support)

-- Caregiver struggling to assist the enrollee with his or her health issues or because of enrollee's decline in health

-- Increased need for case management – when the discussion becomes more clinical while liaising with an enrollee's PCP

-- Unresolved state complaints that require Medical Director intervention

-- Difficult transitions to the community setting

-- Complex discharge planning, enrollee decline during hospitalization now requesting extensive services

For enrollees with complex needs, we extend and formalize the role of the MDT to ensure that we regularly review such enrollees' care using a team approach. This ensures a person-centered care plan is in place and that we address and resolve any gaps in care. The MDT core participants for these enrollees may include the enrollee and caregiver, Medical Director, CM, Disease Management (DM) Nurse if indicated, Frontline Leader, and any other participants involved in the enrollee's care (e.g., PCP, specialists, behavioral health provider, Medicare

health plan). The CM collaborates with the MDT on a regular basis and presents their cases during a monthly Interdisciplinary Case Conference. We may hold unscheduled MDT meetings as needed to review any urgent or emergent situations.

HIGH ACUITY:
- The CM contacts these enrollees monthly.
- Stratification criteria are as follows:
-- At least 2 hospitalizations within the last 3 months
-- Medical, educational, and psychosocial barriers that lead to ED/inpatient readmissions
-- Ongoing needs for care coordination

MEDIUM ACUITY:
- The CM contacts these enrollees every other month.
- Stratification criteria are as follows:
-- At least 2 hospitalizations within the last 6 months
-- Barriers to educational and self-healthcare management
-- Require reinforcement about their plan of care

LOW ACUITY (SHORT-TERM, EPISODIC CLINICAL MANAGEMENT):
- The CM contacts these enrollees every 3 months
- Stratification criteria are as follows:
-- No hospital admissions, but has ED utilization of more than 2 visits in 30 days
-- Knowledge deficit of ED versus Urgent Care and PCP visits for follow-up care and sick visits

LOW ACUITY (NON-CLINICAL MONITORED AND PENDING HIGH UTILIZATION REPORT MONITORING STATUS):
- A case management assistant contacts these enrollees six (6) months following enrollment into case management, and then annually.
- Stratification criteria include the following:
-- No hospital admission within the last 6 months
-- Stable with mild or no symptoms
-- Understands their plan of care, but desires a CM for follow-up
-- Complies with plan of care and does not require assistance with care coordination

BEHAVIORAL HEALTH INTENSIVE CASE MANAGEMENT (ICM): We have designed Behavioral Health ICM to serve enrollees with the most complex behavioral health care needs. These enrollees are typically at the highest risk within the health population for negative clinical outcomes related to mental health and substance use issues and co-morbid medical issues.

The following criteria qualify an enrollee as eligible for ICM:
-- Rapid re-admission (within 60 days)
-- Frequent emergency department visits
-- Recent suicide attempt
-- Co-morbid medical condition with Behavioral Health and Substance Abuse Disorder that could result in exacerbation of the fragile medical status

The primary goals of the ICM program are to help individuals maintain or improve community tenure, regain optimal health, improve life functioning capability, and promote resiliency and recovery. Contact frequency for ICM is a minimum of 1 contact per month; however, enrollee

acuity will determine frequency. Ideally, once an enrollee engages in the ICM process and begins to stabilize, contact frequency will lessen but will continue to be at least once per month.

Humana's case management program uses both telephonic and face-to-face contact with enrollees. In addition to the quarterly face-to-face visits with comprehensive enrollees and enrollees under the age of twenty-one (21) who are receiving services in an SNF or receiving PDN services in their family home or other community-based setting, face-to-face visits also occur as part of the following initiatives:

- HIV-AIDS FIELD CASE MANAGEMENT (FCM). In June 2016, we implemented FCM for enrollees participating in our HIV/AIDS DM program who reside in Dade or Broward counties. Humana has 1 dedicated HIV/AIDS DM CM in Broward and one (1) in Dade who meet with their assigned enrollees wherever they need to: in the home, PCP office, hospital, or elsewhere. We initiated this program to enhance our case management services for this population, as we found that many enrollees with HIV/AIDS felt uncomfortable engaging over the phone. We selected Dade and Broward counties for this iniative because these counties are home to a large number of new infections.

- FIELD CM AND FIELD SOCIAL WORKER PILOTS. In July 2017, Humana introduced Field CM and Field Social Worker Pilots in Broward and Dade Counties for reducing utilization, reducing barriers to close gaps in care, and improving engagement of identified enrollees with complex needs. We designate a Field CM and a Field Social Worker in each of these counties to conduct field visits to the enrollee at the hospital and at PCP appointments (and, beginning in Phase Two of the pilot, in the enrollee's home). We identify enrollees eligible for a field visit through a variety of sources, including the following:
-- Complex Acuity
-- High Utilizer Enrollee (e.g., as identified via Frequent Admitter Report)
-- UM Nurse Referral (high risk for readmission)
-- Regional Medical Directors
-- Physician Referral
-- CM Referrals (Non-compliance with plan of care or PCP appointments, complex needs, knowledge deficit with psychosocial issue or barrier)

Hospital visit criteria include the following:
-- Enrollees non-compliant with PCP visits
-- High Utilizers
-- Knowledge deficit issues (e.g., medication issues)
-- Enrollee or PCP request (Supervisor approval needed)

- In addition to our Field CM pilots, we have recently instituted a field visit component for all our telephonic CMs throughout our MMA program. While the majority of enrollee contacts continue to be telephonic, each CM conducts at least 1 field visit per month at the hospital or PCP office to engage an enrollee identified for case management whom they have been unable to contact. For instance, if a high utilizer we have been unable to reach and engage in case management is hospitalized, there will be an alert in the system so that a CM may visit the enrollee in the hospital and try to engage them. Similarly, if a complex acuity enrollee is already engaged but would benefit from direct contact between the CM and the PCP, the CM can meet with the enrollee and the PCP at an office visit.

==========

4. The extent to which the frequency and intensity of the care coordination services (i.e., maximum caseload and minimum contact requirements) are aligned with the respondent's risk stratification process and proportional to the clinical and psychosocial needs of the target population.

==========

CASELOADS FOR MMA-ONLY ENROLLEES

Humana has maximum caseload requirements relative to Enhanced Care Coordination for Enrollees under the age of twenty-one (21). We assign CMs to children with special needs, including enrollees under the age of twenty-one (21) who are receiving skilled nursing facility (SNF) or PDN services. On May 21, 2015, AHCA approved a mixed caseload that does not exceed caseloads outlined in the contract and meets the following methodology:

- Each CM will carry a weighted caseload of no more than 15 enrollees where each enrollee residing in a Nursing Facility counts as 1, and each enrollee receiving services in the community counts as 15/40 (or 0.375)

- This methodology translates to the following mixed caseload formula: # of NF enrollees + (# of PDN enrollees X 0.375) = less than or equal to 15

For other CMs and support associates, we maintain targets that guide our process of assigning CMs to enrollees as follows:

- Telephonic CMs (including telephonic DM and OB CM nurses providing case management services to enrollees participating in these programs): Caseload Target of 70 enrollees.

- Field CMs (including HIV/AIDS DM CMs and pilot FCMs in Broward and Dade counties): Caseload Target of 40 to 45 enrollees.

- Telephonic social workers: Caseload Target of 100 enrollees.

- Field social workers (pilot in Broward and Dade Counties): Caseload Target of 40 to 45 enrollees.

- CM Assistants: Caseload Target of 150 enrollees.

All our CMs and support staff have a mix of enrollee severity levels in their caseloads. When assigning a new enrollee to a CM and support staff, we assess the current caseload to ensure that adding an enrollee at the enrollee's initially assigned case acuity level will not overload the CM or support associates.

CASELOADS FOR COMPREHENSIVE ENROLLEES

CM caseloads do not exceed a ratio of sixty enrollees to one (60:1) CM for enrollees who reside in the community, or a ratio of one hundred (100) enrollees to one (1) CM for enrollees who reside in a nursing facility. As all CMs are likely to have blended caseloads, we weight caseloads to ensure contractual compliance with caseload ratios. For example, a CM may have fifty (50) assigned enrollees residing in the community (who are weighted as one point six six (1.66) enrollees each) and sixteen (16) enrollees residing in a nursing home (who are weighted

at one (1) enrollee each), and not exceed the maximum weighted ratio of one hundred (100) enrollees.

Humana cross-trains all CMs on all contract performance provisions so we can assign any CM to enrollees with related needs. To ensure optimal case management assignment, we adjust case management staffing and caseloads as necessary based on not only the number of enrollees, but also the enrollees' acuity and intensity of case management interaction. For purposes of monitoring and managing specialty caseloads, we determine caseload acuity by assigning different weights to enrollees, as follows:

- Enrollees with special and complex needs (e.g., traumatic brain injury, AIDS, ventilator-dependent) will receive an acuity weight of 1:2.5. We will count any enrollee with such special needs as 2.5 enrollees in caseload calculations.

- We will assign an acuity weight of 1:2 to all other enrollees stratified into moderate and high acuity levels using our Acuity Stratification Tool. This means that we will count each moderate or high acuity level enrollee as 2 enrollees in caseload calculations.

- All other enrollees, including those in the low acuity level, will have an acuity weighting of 1:1

Frontline Leaders and Clinical administrators review caseload size and acuity monthly to ensure appropriate supervisory oversight by the Frontline Leaders. If through such analysis we find that we are exceeding caseload ratios or that caseloads have inappropriately high acuity levels, the Clinical administrator will coach the Frontline Leaders and develop work plans to ensure contract compliance.

CASE ASSIGNMENT OPTIMIZATION MODEL
Humana has recently invested in technology to improve care management compliance, efficiency, and the enrollee experience. By removing obstacles to providing care coordination to enrollees within the community we are increasing the time case managers spend with enrollees. Specifically, we have developed a case manager assignment program which utilizes linear algorithms to determine the most appropriate case manager to assign to each enrollee. The algorithm has been pairs with a user interface that allows the clinical management team to make future case manager hiring and membership distribution decisions that best serve our enrollees (see Attachment 20-1). Factors accounted for within the algorithm include: distance from casse manager to enrollee, prior assignment, state weighting, membership clustering, language preference, enrollment and term projections, and current model to optimal model thresholds. The utilization of advanced mathmatical clustering techniques combined with a linear program solver and enrollee directed inputs creates an industry leading practice for enrollee assignment. Travel savings resulting from use of this model are estimated to be as high as forty percent (40%) across all regions once the model is fully phased in. A handful of enrollees who require specialized training are excluded from the algorithm and assigned manually.

==========

5. The extent to which the respondent's approach includes innovative strategies for addressing the unique needs of highly resistant or difficult to serve populations.

6. The adequacy of the respondent's description of evidence-based interventions in achieving improved outcomes and enhancing enrollee engagement.
==========

Humana's Case Management programs incorporate the National Committee on Quality Assurance (NCQA) guidelines for accredited case management programs in each of the following areas NCQA addresses:

- Element A: Population Assessment
- Element B: Program Description
- Element C: Identifying Enrollees for Case Management
- Element D: Access to Case Management
- Element E: Case Management Systems
- Element F: Case Management Process
- Element G: Initial Assessment
- Element H: Case Management – Ongoing Management
- Element I: Experience with Case Management
- Element J: Measuring Effectiveness
- Element K: Action and Remeasurement

The interventions we employ to enhance enrollee engagement and improve treatment adherence are multi-faceted and incorporate evidence-based best practices. They include the following:

- MOTIVATIONAL INTERVIEWING: All of Humana's CMs and Case Management Assistants receive training on motivational interviewing skills designed to engage enrollees and help them decide if they are hesitant or apprehensive. Both initial training and ongoing coaching address communication techniques and behavior change strategies. Training includes role-play, observation, and hands-on learning exercises. They incorporate motivational interviewing into interactions and collaboration with enrollees to facilitate progress toward enrollee-centric goals, reduce ambivalence, and promote behavioral change. These motivational strategies may include open-ended questions, affirmations, reflective listening, and summarizing, among others.

- ADDRESSING CULTURAL DIVERSITY: Humana is committed to addressing cultural diversity through cultural competency training, through building a network and providing supports such as translation services that minimize barriers to care resulting from language and cultural barriers, and through disseminating culturally and linguistically appropriate materials to our enrollees. These efforts are particularly important to maximizing the appropriate utilization of certain services, such as prenatal and postpartum services, as cultural values and beliefs related to pregnancy often contribute to an enrollee's hesitancy to access services. Through our case management programs, we ensure we inform and link our enrollees to the translation services and community resources they need to facilitate their care.

- CASE MANAGEMENT PROCESS: Our CMs work with each enrollee and his or her caregiver to identify and address barriers to the POC, such as poor understanding of the treatment regimen or difficulty remembering to take medicines. In addition to using techniques such as motivational interviewing to engage the enrollee, difficulty in implementing behavior change

strategies for enrollees in complex case management will result in convening an MDT. During this meeting which all persons involved in the enrollee's care can address strategies for change.

- ENGAGING INDIVIDUALS WHO INITIALLY DECLINE TO ENGAGE: Our foremost priority is to respect the choices of every enrollee. Enrollees may exercise their right to decline or disengage from case management. For our most complex enrollees and LTC enrollees who have declined to engage or have disengaged, cases remain open. In these instances, CMs continue to monitor and receive alerts about the enrollee in the event of hospitalizations, changes to a condition, or any other health events. CMs offer the opportunity to engage or reengage, if the enrollee is willing, after a health event. Even if an enrollee doesn't experience a health event or change in condition, CMs reach out over the phone periodically or based on minimum contact requirements to offer case management services and to ensure the enrollee is receiving everything they need both medically and socially (unless the enrollee states he or she doesn't want contact from us).

- PEER SUPPORT: Humana recommends a system of care approach that embraces recovery and resiliency using peers. Both of our behavioral health partners, Beacon Health Options (Beacon) and Access Behavioral Health (ABH), incorporate peer support to enhance enrollee engagement and to address the unique needs of difficult to serve populations.

-- Beacon utilizes peer specialists who are trained in principles of recovery and resilience, wraparound services, and traditional peer support. Beacon connects enrollees to the National Alliance for Mental Illness (NAMI), which has peers throughout the state, and to community resources that offer peer specialists. Peer specialists support the enrollee's engagement in treatment, assist in navigating the service system, and identify natural supports. They also reach out to recently discharged individuals to assist in their transition, support their adherence to any follow-up appointments, and help them leverage their own strengths. Peer support specialists significantly enhance the impact of case management and broaden the array of support available to families. Their "lived experience" allows them to connect in a meaningful way, showing by example that recovery is attainable.

-- ABH launched Café PERC (Peer Education Resource Community) at Lakeview Center in 2012 as a clubhouse-model peer-support service organization (PSSO), where consumers of behavioral health services share information, socialization, and recreational activities with their peers. The café serves as a safe place where guests interact with one another in a comfortable, low-stress environment without fear of stigma or judgment. Lakeview's Behavioral Health Division assumed responsibility for Café PERC the following year, and ABH continues active involvement. ABH associates facilitated training in Region 1 for Peer Recovery Certification, which is a designation for behavioral health consumers to become trained to act as support and advocates for other behavioral health consumers. Currently, these associates work at Café PERC.

- FIELD CASE MANAGEMENT: As discussed earlier in the response, we have implemented HIV/AIDS field case management, field case management and field social worker pilots, and a field visit component for all our telephonic CMs throughout our MMA program. The primary objective of all of these initiatives is to improve engagement of identified enrollees with complex needs. Early results from our field case management program for HIV/AIDS indicate that this strategy has been effective. By successfully engaging these enrollees, guiding them to the appropriate care setting, and enrolling them in DM, Humana has reduced our average per

member per month (PMPM) cost for these enrollees by forty-eight percent (48%). Lower PMPM costs indicate better overall management of these enrollees, thereby improving overall outcomes.

- TELEMEDICINE: As discussed in detail in our response to MMA SRC #4, Humana and our behavioral health partners, Beacon and ABH, use telemedicine to meet enrollee access needs, particularly in challenging rural areas. We understand the value and endorse the use of telemedicine technologies as a component of an effective care management model. Telemedicine availability improves access to care, reduces emergency room use, and improves opportunity for detection and control of chronic diseases. For highly resistant and difficult to serve populations, the ability to connect enrollees to telemedicine providers is very beneficial; telemedicine availability reduces barriers related to time and distance that may interfere with enrollees' desire to engage in their care and their ability to adhere to treatment regimens. Humana, Beacon, and ABH all ensure that there are no limitations on telemedicine services if providers and practitioners who conduct telemedicine have the proper interactive electronic systems that protect the confidentiality of client information as well as audio and visual data transfer during the provision of telemedicine services.

- REAL-TIME ED ALERTS: Since 2014, Humana has developed relationships with Florida hospitals to receive daily reports of emergency department encounters to reduce the months-long notification lag to 1 day. Timely outreach and engagement of enrollees to educate and close gaps has been key to impacting unnecessary emergency department utilization. Humana is currently contracted with AHCA for the Florida Health Insurance Exchange's (HIE) Event Notification Service (ENS) for Regions 9, 10, and 11, which automates the notification process and has increased our provision of daily reports to facilities.

- EFFECTIVE TRANSITION PROCESSES: As described in our responses to MMA SRC #10 and LTC SRC #3, we have created processes that meet the needs of our enrollees and their families during transitions between care settings and levels of care. During these critical times, they are most likely to seek education and assistance with care coordination. Internal propensity-matched studies, which inform our post-discharge activities for all our enrollee populations, suggest that the closer the post-discharge intervention follows the discharge, the more likely the intervention will have a positive impact on quality of care and decrease inappropriate and costly readmissions. Engaging enrollees at these crucial points has resulted in decreasing readmission rates. In both 2015 and 2016, we significantly improved our readmission rate goal for our enrollees in complex case management, (by 7 percentage points between 2015 and 2016).

- PROACTIVE HEALTH INITIATIVES: Focusing on effective healthcare proactively during childhood helps establish patterns of lifelong healthcare engagement. Enrollees who establish patterns of engagement early are more likely to avoid the health risks associated with lack of regular preventive and prenatal care, for instance. Thus, we have developed the following initiatives centered on building positive provider-enrollee relationships during childhood.

-- Our welcome calls to all new female enrollees of childbearing age include a brief discussion of gynecological care. We ask the enrollee where she receives gynecological care and when her last visit was. If the enrollee states that she is not receiving gynecological care, we connect her to a CM to provide education on the importance of obtaining such care on a regular basis. This

not only helps to improve the enrollee's gynecological health, but also supports a healthy start to pregnancy and adequate prenatal care for those enrollees who later become pregnant.

-- For children, our provider network team and Quality Improvement Nurses (QINs) conduct to PCPs who have child enrollees who have yet to visit. We encourage the PCP to reach out to their enrollees to schedule a child health checkup. We also are initiating a Healthy Kids outreach campaign for school-aged children who have yet to have a PCP visit. This initiative reaches out to the parents/caregivers to encourage PCP visits for their child.

- INNOVATIVE COMMUNICATION METHODS: Humana offers a range of sophisticated and innovative technologies, including an extensive social media presence, text messaging platform, and numerous mobile applications. To align with AHCA's goals and to meet our enrollees where they are, Humana is developing and implementing a Medicaid-specific digital health strategy. Our strategy focuses on engaging hard-to-reach enrollees to ensure they are aware of and know how to use the breadth of resources we have available. It includes a redesigned health and well-being website, social media platforms as avenues for enrollee education and engagement, and mobile-friendly access to Humana resources. We provide detail on this strategy in our response to SRC #13.

==========
7. The efficacy of the respondent's approach in achieving cost savings, cost avoidance, emergency department diversion, increased utilization of ambulatory care settings, etc.
==========

A key component of our CM program is evaluation. We continuously evaluate operational, humanistic, clinical, and economic outcomes to improve overall enrollee health and well-being. Below we summarize the sample metrics we use for each of these categories of evaluation and provide examples of recent results within each category.

Operational Outcomes:
-- Definition: Efficient operations, high participation rate, effective outreach
-- Sample Metrics: Program participation, outreach frequency
-- Recent Results: Of adult enrollees eligible for and reached regarding case management, 74% agreed to participate in the program

Humanistic Outcomes:
-- Definition: Positive trends in patient-reported indicators (subjective measures)
-- Sample Metrics: Participation satisfaction, improved quality of life, readiness to change
-- Recent Results: Humana conducts enrollee surveys to assess satisfaction among enrollees who participate in our CM programs. From August through September 2017, Humana conducted a survey to assess satisfaction among enrollees who participated in the Humana Complex Case Management Program. Evaluated measures included the program's impact on enrollees' likelihood to make changes in their health and enrollees' preparedness to manage their health, as well as overall CM ratings. Our most recent results are very positive. Every measure represented an improvement over the previous year. The percentages below reflect percent of enrollees who gave ratings of 4 or 5, on a scale of 1-5:
--- CM Rating – Overall: 82%
--- CM Rating – Knowledgeable: 88%
--- Likely to make change in how you take care of your health: 77%

--- Whether you feel more prepared to manage your own health: 77%
--- Helped You Achieve Healthcare Goals (new question in 2017): 82%

Clinical Outcomes:
- Definition: Achievement of clinical standards of care (objective measures).
- Sample Metrics: Increased treatment adherence, reduction in adverse events (e.g., emergency department visits, hospital stays).
- Recent Results: For adult and pediatric enrollees participating in our Case Management Programs between January 1, 2016, and June 30, 2017, we looked at annualized admissions per thousand (APT) and emergency department visits per thousand (EPT) in the 6 months prior to their enrollment in CM and in the 12 months following their enrollment in CM.

--- For adult CM enrollees, APT decreased 57% and EPT decreased 34% from the pre-CM enrollment period to the post-CM enrollment period.
--- For pediatric CM enrollees, APT decreased 61% and EPT decreased 32% from the pre-CM enrollment period to the post-CM enrollment period.

Please see Attachment 20-2 for additional detail.

Economic Outcomes:
- Definition: Healthcare cost savings
- Sample Metrics: Reduction in overall costs per participant per month
- Recent Results: For adult and pediatric enrollees participating in our Case Management programs between January 1, 2016, and June 30, 2017, we also looked at per member per month (PMPM) costs before and after CM enrollment. As with APT and EPT trends, average costs PMPM decreased significantly from the pre-CM enrollment period to the post-CM enrollment period, for both adult enrollees, who had a 37% decrease, and pediatric enrollees, who had a 62% decrease. Please see Attachment 20-2 for additional detail.

Evaluation Criteria:

1. The extent to which the respondent's algorithm and risk stratification approach is well-defined and incorporates data elements other than diagnosis.

2. The extent to which the respondent describes data sources that are incorporated into the risk stratification process that is used for new enrollees.

3. The extent to which the respondent's approach includes the use of predictive modeling.

4. The extent to which the frequency and intensity of the care coordination services (i.e., maximum caseload and minimum contact requirements) are aligned with the respondent's risk stratification process and proportional to the clinical and psychosocial needs of the target population.

5. The extent to which the respondent's approach includes innovative strategies for addressing the unique needs of highly resistant or difficult to serve populations.

6. The adequacy of the respondent's description of evidence-based interventions in achieving improved outcomes and enhancing enrollee engagement.

7. The efficacy of the respondent's approach in achieving cost savings, cost avoidance, emergency department diversion, increased utilization of ambulatory care settings, etc.

Score: This section is worth a maximum of 35 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 21 – Coordination of Benefits (Statewide):

The respondent shall describe the strategies utilized in care coordination with other plans and insurers (e.g., Medicare) to provide necessary services for its enrollees when the third party payer is the primary insurer. The respondent shall include information on its approach in the following circumstances:

a. Florida Medicaid does not cover the service, but it is available through the third party payer;

b. Florida Medicaid and the third party payer cover the service, but Medicaid is only liable for the coinsurance/copayment expenses. In this scenario, the respondent shall identify any differences in its approach if the enrollee is dually eligible for Medicare and Medicaid;

c. The third party carrier benefit limit is exhausted and the service is now a Medicaid expense. In this scenario, the respondent shall identify any differences in its approach if the enrollee is dually eligible for Medicare and Medicaid; and

d. The service is not covered by the third party but is available through Florida Medicaid.

Response:

An effective coordination of benefits process eliminates gaps in care while minimizing service overlaps, reducing enrollee confusion, ensuring timely service authorization and payment, and preserving service coordination. Humana views effective coordination of benefits as a critical aspect of our partnership with AHCA and numerous other organizations around the state. We have developed a varied set of policies, procedures, and approaches that range from clinical management and care coordination to claims processing and service authorization.

Our approach to coordination benefits for our Florida Medicaid enrollees is informed by decades of experience serving them while also serving individuals across our broad base of plan types in Florida. Our operations in and relationships built through our Medicare Advantage, Medicaid, Tricare, commercial, and D-SNP plans offer additional insight into the range of benefits covered by these plans and the numerous ways these and other coverage packages should best interact with one another for the collective benefit of the individuals they each support. This is particularly impactful for individuals enrolled across multiple plans with Humana. Our care management systems enable us to swiftly and easily coordinate care and share information, insights, and plans of care (POCs) for these individuals.

Our response to this question will first provide our global approach to effective enrollee communication, processes for identifying non-covered services and streamlining authorization and payment, and service coordination. This includes provider communication and service provision for enrollees who are dually eligible for Medicare and Medicaid. We will then present our specific approach for each of the scenarios, in which we will detail how we will use our sophisticated care coordination platforms, streamlined authorization and payment systems, and broad methods of enrollee communication to coordinate benefits.

==========

2. The extent to which the respondent's approach includes (a) documentation of effective communication strategies to reduce confusion for the enrollee (e.g., strategies used in enrollee materials)

==========

Our communication strategies are designed to reduce confusion and provide guidance to enrollees about the benefits available to them through Humana Medicaid and other third-party payers. We use four primary avenues to convey this information: our Welcome Calls; the enrollee handbook; communication from our Case Managers; and our Customer Care Specialists.

WELCOME CALLS

Beginning with the enrollment process, we seek to gather information about the enrollee's other sources of coverage so that we can provide information and support that is specifically applicable to the enrollee. During our Welcome Call (which is conducted for all new enrollees) we provide information about the services that are available through Humana Medicaid and request information about any other insurers or coverage they have (in case this information was not captured on the enrollment form). For those enrollees who indicate that they have coverage through another insurer, we explain that Humana and the other insurer will coordinate and guide the enrollee to also contact their other insurer for information about covered benefits. As needed, we provide contact information or offer to transfer enrollees to the appropriate parties with the other insurer.

ENROLLEE HANDBOOK

Our enrollee handbook (always easily accessible through our website or via mail upon request) contains information about Medicaid covered services, including specific information for dual eligible enrollees. The information for dual eligible enrollees describes, in easy-to-understand language, what it means to be dually eligible for Medicaid and Medicare and how dual eligible enrollees use their Humana medical plan. There is also information on choosing a provider, accessing Medicaid-covered services, and other valuable programs (e.g., Healthy Behaviors). With AHCA's approval, we will add similar information to our enrollee handbook that describes coordination of benefits for enrollees who are covered by other third party payers.

CARE MANAGEMENT

For our enrollees in LTC and MMA Case Management, our Case Managers use job aids and other templates to help them clearly explain and answer questions about coordination of benefits across the various third-party payers, such as Medicare, commercial, and Tricare. In addition, Humana's Case Managers serve as advocates for our enrollees to ensure that services needed by our enrollees are being provided. We contact the Case Managers of other payers and our enrollees' providers when needed to facilitate this coordination. This communication ensures that enrollees receive a unified message from all payers and providers about their benefits.

INBOUND CALLS TO CUSTOMER CARE

When an enrollee calls our Customer Care department to inquire about their benefits, the Customer Care Specialist can view the enrollee's profile in our Customer Relationship Management (CRM) system to determine if they have other coverage. Using this information, along with any other statements made by the enrollee, the Customer Care Specialist refers to the benefit grids (a comprehensive list of covered services, dollar and frequency limits, and approval requirements) to determine which benefits are covered by Humana Medicaid or a third-party payer. If the enrollee is inquiring about a benefit that is not covered by Humana Medicaid, our Customer Care Specialist will explain this and offer to transfer the enrollee to the other insurer using information in our database of contact information.

==========
2. The extent to which the respondent's approach includes (b) processes used to identify non-covered services by the primary insurer for individual enrollees
==========

We have five paths through which we can determine that an enrollee has a different primary insurer:

- Enrollee's 834 file, received from AHCA

- Florida Medicaid Managed Information System (FLMMIS)

- HealthNet

- Communication from enrollees or their providers, including through our Welcome Calls and during completion of the health risk assessment (HRA)

- Coordination of Benefits (COB) submissions from providers and other plans

We take care to document any information about an enrollee's other insurer in our Clinical platform, Clinical Guidance eXchange (CGX), and in our CRM system. As these systems are accessed by our Case Managers, Customer Care Specialists, and other enrollee-facing staff across our Medicaid, Medicare, and D-SNP plans in Florida, they reduce duplication of efforts, ensure earlier resolution of coordination of benefits inquiries, and enable us to swiftly answer enrollees' questions with information tailored to their situations.

Services that are not covered by the primary insurer may be identified through routine check-ins with our enrollees in Case Management or during a telephone call with our Customer Care Specialists. In either situation, we work with the enrollee and the enrollee's provider to obtain coverage from Humana Medicaid for the service if it is a covered benefit. Throughout this process, we have regular communication with the enrollee (either telephonically or face-to-face) in order to reduce confusion, ensure that the enrollee understands that service coverage will be maintained, and help the enrollee anticipate and prepare for any unavoidable changes in providers.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

During the HRA and POC process, our Case Managers collect information about services that are covered by a third-party payer and seek to obtain information about the length of the authorization and any benefit limits from the third-party payer. This is done so that we are prepared to evaluate medical necessity and assume responsibility for coverage of the service upon expiration of the authorization. In addition, Humana ensures our enrollees' POCs contain information about services covered through a third-party payer.

For those not enrolled in Case Management, we most frequently identify these services by the primary insurer through claims submissions. This process is detailed below.

MEDICAL CLAIMS

Upon receiving a request for benefits coverage, our associates review the claim to determine the appropriate Medicaid allowable and potential payment. We pay the claim using AHCA and Centers for Medicare and Medicaid Services (CMS) rules regarding coordination of benefits. If the enrollee is dually eligible for Medicaid and Medicare and Humana is the Medicare provider, our staff coordinate with Humana Medicare to process the claim with Medicare as the primary payer. If the enrollee has third-party coverage through another health insurer, we will redirect the provider to submit the coverage request to the other payer for primary payment. If the primary payment has already been made by the third-party payer, we review the payment for secondary coverage under the appropriate Medicaid allowable and covered benefits. All of this communication is documented in our Claims Adjudication System to provide an easily accessible record of the claim's status.

PHARMACY CLAIMS

Our pharmacy claims processing system, Argus, integrates information from our enrollment forms to indicate if an enrollee is covered by another third-party payer. When a retail pharmacy is checking coverage of a prescription, Argus recognizes whether or not Medicaid is the payer for that prescription. If the prescription should be covered by another payer, the pharmacist receives an error message. The pharmacist can then obtain the appropriate plan information from the enrollee. If the enrollee does not have information for their primary payer, the pharmacist or enrollee can contact our Customer Care department to request information about the other insurer. We then reach out to the enrollee's other insurer, as noted in their file, to determine the enrollee's coverage and effective dates, including this information in our system to avoid any future coordination of benefit issues.

For those enrollees who are enrolled in more than one Humana plan, this process is expedited. Our enrollees have a unique enrollee identification (ID) number, which is the same across all Humana plans. This feature enables pharmacy claims to be quickly routed to the appropriate insurer, whether it is Humana Medicare or Medicaid, without additional prompting to the pharmacy or enrollee.

==========

2. The extent to which the respondent's approach includes (c) processes used to streamline ongoing authorization and payment of services once the initial determination has been made

that a service is not covered by the primary insurer or the benefit from the third party insurer has been exhausted.
==========

Humana employs a number of complementary processes aimed at ensuring that enrollees obtain timely and appropriate services when they cannot obtain a necessary service from their primary insurer or have exhausted a third-party benefit. Our Utilization Management department focuses on the expeditious authorization of the necessary service, working in tandem with our Case Management department, the enrollee, and (as appropriate) providers. We have additional processes in place to ensure that claims for these services will be paid upon submission, whether the service requires authorization, involves a new provider, or uses the standard procedures.

CONTINUITY OF CARE

Once a determination has been made that the service is not covered by the primary insurer or if the benefit from the third-party insurer has been exhausted, we adhere to continuity of care policies and procedures we have developed. These are designed to reduce and eliminate gaps in coverage for our enrollees. This includes incorporating those non-participating providers into our network (to the extent possible) in an effort to permit an enrollee to stay with their provider. If the provider is not already in our MMA network, we pay at the rate that the provider was receiving just prior to transfer, or at a lower rate if agreed upon by the provider during the 60-day continuity of care period (with exceptions for enrollees with certain conditions, such as transplant recipients). For our enrollees receiving LTC services, our Case Managers will collaborate with other insurers to obtain previous POCs to streamline this process. We will ensure that continuity of care is preserved until the needed services are authorized and incorporated into the enrollee's POC, at which time the enrollee will be transferred to a participating provider.

ONGOING AUTHORIZATION

When an initial determination has been made that a service is not covered by the primary insurer, or the benefit from the primary insurer has been exhausted, our primary goal is to ensure continuity of care for our enrollees, and to protect against any gaps in care. Through regular communication with our enrollees, their providers, and other health insurers, our Case Management department seeks to identify services that Florida Medicaid must cover in a timely, efficient manner. Using our database of health insurer contact information, we reach out to other insurers covering our enrollees to understand their benefit packages, including limits on covered benefits. This enables us to anticipate any services the enrollee may need that their primary insurer may not cover and to ensure that we have processes in place to assume responsibility for covered services upon the benefit limit being reached. Upon identification of these benefits, we arrange to obtain any needed authorizations and correct submission of the claim for continuation of the service so that there is no gap in coverage.

We recognize that, in many circumstances, we will not learn of a non-covered service until the enrollee is in urgent need of or is already receiving the service. In these circumstances, our authorization and payment processes are expedited where possible in order to protect against

gaps in care. For those services where Medicaid is the primary payer, we ensure that the authorization and payment of that service guarantees continuity of care for our enrollees. If the service does not require authorization, we communicate with the prescribing provider to confirm submission of the claim to Humana for coverage.

If the service requires authorization and Medicaid is the primary payer, our Utilization Management department reviews the authorization request in one of the following timeframes, according to the urgency of the service need:

- STANDARD (NON-URGENT): No more than seven (7) days following receipt of the request for service. An extension may be granted for an additional seven (7) calendar days if the enrollee or provider requests an extension, or if Humana justifies the need for an extension to AHCA.

- EXPEDITED AUTHORIZATIONS: These authorizations are required when a provider indicates, or Humana determines, that following the standard timeline could jeopardize the enrollee's life, health, or ability to attain, maintain, or regain maximum function. These decisions will be made no more than forty-eight (48) hours after receipt of the request for service, with the possibility of an extended timeframe if the enrollee or provider requests an extension or Humana justifies the need for additional information and how the extension is in the enrollee's best interest.

- CONCURRENT/URGENT CONCURRENT AUTHORIZATIONS: When an enrollee is currently receiving a benefit that is not covered by the third-party payer, or for which the third-party payer's benefit has been exhausted, Humana undertakes a concurrent or urgent concurrent authorization review. Requests for ongoing inpatient care are always considered urgent; we have nurses and physicians on call twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days per year to review these requests. Urgent concurrent review determinations are made within one (1) day of receipt of the authorization request by Humana when all necessary information to make a determination is available. When additional information is needed to make a determination, the request for additional information must be made within one (1) day of receipt of the authorization request by Humana. When additional information is requested, the total timeframe in which a decision must be made is three (3) calendar days from the date that Humana received the authorization request.

- RETROSPECTIVE REVIEWS: If we learn of a non-covered service after it has already occurred, we will undertake a retrospective review. Humana completes these reviews within thirty (30) days of the receipt of the initial request.

Our authorization process includes a determination of the length of authorization. For preventive services or services to treat an acute illness, we issue a short-term authorization. For those enrollees that have a continuing, ongoing need for a service – usually a minimum of three (3) months – we will issue a long-term authorization.

TIMELY PAYMENTS

Our sophisticated claims processing logic is designed to ensure timely payments after the service becomes a Medicaid expense. Humana's systems automatically process Medicare or

other insurer benefits in the claims systems as primary and Medicaid services as secondary, in line with Medicaid's role as the payer of last resort. If the third-party payer does not cover the service, or the benefit limit has been reached, our system will detect that there has been no payment or only a partial payment by the primary payer and will proceed to pay the claim in accordance with our AHCA-approved coordination of benefits guidelines.

If the service provider is not currently part of our Medicaid network, our Network Development and Claims departments facilitate any required provider integration into our claims system or special processing arrangements to ensure timely payment.

==========

3. The extent to which respondent's description specifically addresses special processes in place to improve care coordination, including provider communications, and service provision for dual eligibles when Medicare is the primary insurer.

==========

Humana has established special processes to improve care coordination for our enrollees with third-party coverage, including dual eligibility with Medicare. Our strategy includes enrollee and provider communication and education, proactive coordination and collaboration with other insurers, and sophisticated data systems that enable sharing between Humana's Medicaid and Medicare plans.

CARE COORDINATION

To reduce overlap in services and improve care coordination, our Case Managers work with other health insurers to understand their benefits package and coordinate the exchange of information to ensure coverage of benefits and continuity of care. We work with third-party payers to verify that they have any necessary prescriptions or authorizations from the provider and to guarantee coverage of benefits for our enrollees.

From our experience coordinating benefits across Florida's regions, we have learned that strong communication between health insurers is key to care coordination. As mentioned previously, Humana led the development of a database of contact information for health insurers across the state. This database allows our associates to quickly and easily contact their counterparts with other payers to identify non-covered services for our enrollees, communicate a unified message to our enrollees and their providers, and ensure any necessary authorization and coverage of the service in a timely manner. Under the next contract, Humana will work with other insurers to obtain updated contact information and disseminate the revised list to all payers.

Our Case Managers include any non-covered services that are being provided by a third-party payer in the enrollee's POC in CGX. As possible, they include the length of the authorization so that we can monitor for an expiring or denied service authorizations and intervene as appropriate. This intervention may include the issuance of our own service authorization so that there is no gap in care, or coordination with the provider to ensure the service authorization is issued as appropriate.

To further support care coordination across health insurers for our dual eligible enrollees, comprehensive enrollees, and enrollees receiving enhanced care coordination, our Case

Managers initiate contact with the enrollee's third-party insurer to determine if the enrollee already has a multidisciplinary team (MDT) in place. If the Case Manager determines that an MDT is already in place through another health insurer serving the enrollee, the Case Manager will become part of that team. If there is no MDT in place for an enrollee with complex needs, the Case Manager will create one to include the enrollee/caregiver, the enrollee's primary care provider (PCP), therapists/specialists serving the enrollee, facility representative for enrollees living in a facility, behavioral health provider(s) as applicable, and Case Managers from other health insurers serving the enrollee.

PROVIDER COMMUNICATIONS

As our providers are responsible for the submission of claims to the appropriate payer, their understanding of the COB process is essential to reducing confusion for the enrollee at the point of service, and for ensuring a seamless authorization and claims payment process. For these reasons, our Medicaid provider training processes and handbook explain coordination of benefits procedures as they relate to providers and discuss those standard and expanded benefits that are covered through Humana Medicaid. Our regular face-to-face visits with providers may also be used as an opportunity to share information and answer questions about coordination of benefits.

If we learn that a provider has inappropriately billed Medicaid for a non-covered service or has mistakenly accepted a copayment from an enrollee who is eligible for Medicaid coverage of copayments, we use it as an opportunity to educate that provider about COB and the importance of ascertaining the enrollee's coverage at the time of service by asking the enrollee for all insurance cards.

Claim denials, due to improper submission to Humana Medicaid as the primary payer, are also used as an opportunity to educate providers about COB. At an individual provider level, all denials include an explanation of denial and/or explanation of adjustment when applicable. We also review the most frequent reasons for denials, and use this information to design provider trainings that address improper claims submissions. Providers can contact our Claims Customer Service department with questions or concerns regarding the denial or partial denial of payment.

SERVICE PROVISION FOR DUAL ELIGIBLE ENROLLEES WHEN MEDICARE IS THE PRIMARY INSURER

For enrollees who are enrolled in a Humana Medicare plan, in addition to a Humana Medicaid plan, a number of factors ensure seamless care coordination, drive continuity, and minimize confusion while safeguarding against gaps or overlap in care:

- The enrollees' PCPs and other providers are in-network with Humana.

- All network providers receive Humana training and education that emphasizes the importance of communication, coordination, and integration of care.

- A single data repository houses enrollment, benefits, clinical, and care coordination data across Medicare, Medicaid, physical health, behavioral health, and LTC, streamlining reporting and data analytics.

- CGX, Humana's integrated clinical platform, enables Humana's enrollee-facing staff across plans to view all enrollee data in one system. Through CGX, our Case Managers can access records and care plan details across Medicare and Medicaid for our dual eligible enrollees who are also enrolled in Humana's Medicare Advantage or D-SNP plans. This data sharing facilitates regular communication between our Medicare and Medicaid Case Managers to preserve coordination and continuity of care.

We recognize that not all of our dual eligible enrollees will be enrolled in a Humana Medicare plan. Humana has experience coordinating care for thousands of dual eligible enrollees in our Florida Medicaid plans whose Medicare coverage is through FFS or an unaligned MA plan or D-SNP. As Medicare handles case management responsibilities for dual eligible enrollees, our care coordination approach shifts to focus on the ongoing provision of information and data to the Medicare plan. If the enrollee has a MDT, our Case Managers will invite the Medicare plan to participate in these meetings. We coordinate services for all of our enrollees and facilitate enrollee access to services, regardless of the ultimate funding source of these services.

For those dual eligible enrollees with a non-Humana Medicare plan, we work to identify their PCP during routine contacts or through a review of claims data. Our Case Managers reach out to, meet with, and create relationships with unaligned PCPs, including inviting these PCPs to enrollee MDT meetings. We also attempt to bring any unaligned PCPs in-network.

ENROLLEE STORY

Martha is a Humana LTC enrollee who Medicare coverage through another insurer. Martha required supplemental oxygen concentrators – equipment that is not covered by Medicare, but is covered by Medicaid. Upon identifying Martha's needs for these services, her Humana Case Manager set up a call with the Medicare plan to discuss how to obtain a prescription for these items, as Martha was homebound and could not visit her Medicare provider to obtain the prescription. After outreach by Martha's Humana Case Manager, the Medicare plan arranged for an in-home visit by the provider. Martha then received the supplemental oxygen concentrators, improving her quality of life. Through the coordination efforts of her Humana Case Manager, we were able to arrange coverage of these necessary items for Martha.

==========

1. The adequacy of the respondent's approach when:
a. Florida Medicaid does not cover the service, but it is available through the third party payer.

==========

Our approach to care coordination when Florida Medicaid does not cover the service, but the third-party payer does, includes:

- Communication to enrollees to help them understand their benefits

- Streamlined identification of non-covered services, with the goal of ensuring prompt coverage by the appropriate payer

- Communication with providers and other insurers to coordinate needed services for our enrollees in a timely manner

ENROLLEE COMMUNICATION

Beginning with an enrollee's initial enrollment in Humana Medicaid, we provide information about our covered benefits through our enrollee handbook and Welcome Call. For those enrollees in care management, we review this handbook and COB information during the initial face-to-face visit. During the Welcome Call and subsequent enrollee interactions that address COB, we explain that, if they do have coverage through another insurer, that insurer may cover other services, and that questions about those covered benefits and service authorizations should be directed to that insurer. As needed, we provide contact information for the other insurer.

If the enrollee contacts their Case Manager or our Customer Care department with questions about a benefit that is not covered by Florida Medicaid, we will determine if the enrollee has coverage through another insurer by checking their record in CGX, asking the enrollee directly, and confirming any information in FLMMIS and HealthNet. If the enrollee does have coverage through a third-party payer, we will warm transfer that enrollee to the other payer using our list of contact information for other insurers operating in Florida. In addition, we use this opportunity to explain to the enrollee how the COB process works, and what type of information they should share with their other insurer and their provider.

IDENTIFICATION OF NON-COVERED SERVICES

When our Claims department receives a claim, AHCA's fee schedule – which is loaded into our systems – is used to ascertain if the service is covered by Florida Medicaid. If not, the remittance advice issued to the provider explains the reason for the denial and states that non-covered items or charges are not the enrollee's responsibility.

CARE COORDINATION

When we learn that a service is being provided by a third-party payer, we note that information in CGX or in the enrollee's POC. This POC is shared with the PCP and the enrollee's other providers, facilitating greater coordination of the services being covered by all payers through the care team. We leverage this information to ensure that our enrollees receive the wrap-around support services covered by Florida Medicaid that complement those services provided by the third-party payer. For example, for those enrollees receiving dialysis through a third-party payer, we will make sure that the enrollee is attending dialysis through regular check-in. In addition, if that enrollee requires support when they get home from dialysis, we will arrange to have a companion there for them.

COMMUNICATION WITH PROVIDERS

Our provider handbook contains a list of covered services for Florida Medicaid enrollees. During provider training, we review these benefits and discuss COB. Providers are instructed to ensure collection of all insurance information from the enrollee at the point of service, and to submit claims to the primary insurer for timely and correct payment.

==========

b. Florida Medicaid and the third party payer cover the service, but Medicaid is only liable for the coinsurance/copayment expenses. In this scenario, the respondent shall identify any differences in its approach if the enrollee is dually eligible for Medicare and Medicaid.

==========

When Medicaid is responsible only for coinsurance/copayment expenses, Humana's role focuses primarily on enrollee education and proper payment of claims. Through our Case Managers, we work to make sure that the enrollee knows that their primary insurance is responsible for payment of the service, while Medicaid will cover their coinsurance/deductible. By emphasizing the importance of providing all insurance cards to providers with our enrollees and educating providers on proper billing of coinsurance/copayment expenses for coverage by Medicaid, we ensure streamlined payment of these claims.

ENROLLEE COMMUNICATION

Upon enrollment in Case Management, our Case Managers educate our enrollees on COB, using a job aid to ensure consistency in communication. We inform dual eligible enrollees that Medicaid may pay for coinsurance/copayment expenses if the enrollee is a qualified Medicare beneficiary. For these enrollees, we stress the importance of making sure that their provider receives both their Medicare and Medicaid card in order to avoid any confusion about coinsurance/copayment expenses.

CLAIMS PAYMENT

We learn of our liability for coinsurance/copayment expenses as the secondary payer through the enrollment files received from AHCA and through the receipt of claims from the provider, after another insurer has made a primary payment. When we receive such a claim, we confirm that we are the secondary payer for the enrollee and review the claim for potential coverage of any copayment or coinsurance expenses, up to the Medicaid allowable.

We process these claims through the same systems used for all other claims, following AHCA and CMS rules for coordination of benefits. There are no differences in these processes if Medicare is the primary payer or if a commercial or other insurer is the primary payer.

CARE COORDINATION

Our provider training on COB discusses Medicaid coverage of coinsurance/copayment expenses for qualified enrollees. We emphasize the importance of asking all of their patients if they have Medicaid coverage, in addition to any other third-party payer.

If we learn of an enrollee who has been inappropriately billed for coinsurance or copayment, we will work to communicate with that provider – whether they are a Medicaid provider or not – the appropriate procedures for billing of coinsurance/copayment expenses for an enrollee who qualifies for Medicaid coverage of these expenses to avoid future issues.

==========

c. The third party carrier benefit limit is exhausted and the service is now a Medicaid expense.

==========

For many of our enrollees who have third-party coverage, especially those with chronic conditions or LTC needs, exhaustion of benefits may be common. This includes our enrollees covered through Medicare, which sets limits on services such as inpatient care. To ensure continuity of care for these enrollees, we have established procedures that facilitate streamlined authorization and payment of needed services.

ENROLLEE COMMUNICATION

Humana's enrollee handbook explains Medicaid covered services. With AHCA's permission, we will add language targeted to our enrollees who have both Medicare and Medicaid plans explaining that they are not responsible for any expenses that are covered under Medicaid, including office visits and hospital stays. For those enrollees who have other insurance, we explain that as long as their other insurance has been informed of their Medicaid status and the provider is aware of their Medicaid status, the balance of the claim will be sent directly to their Medicaid plan, which will cover the remainder of any medically necessary services. These messages will be reiterated in any other communication about coverage of these expenses with their Case Manager or the Customer Care Specialist.

AUTHORIZATION AND PAYMENT

We most often identify non-covered services through an automated claims submission. In this case, our system automatically reviews the claim for payment by the primary insurer. Upon determination that the claim is now a Medicaid expense, it is processed in accordance with our AHCA-approved procedures. Alternatively, we may become aware of a non-covered service after an explanation of benefits (EOB) from a third-party payer has been sent to us by a provider or enrollee. In this event, we will process the claim following our standard procedures.

While authorization is not required for claims when Medicaid is the secondary payer, we will ensure that ongoing authorization is streamlined using the processes described above.

CARE COORDINATION

Our Case Managers seek to identify services covered by a third-party payer that our enrollees currently receive, and to ascertain if and when the benefit limit will be reached through communication with the enrollee and the third-party payer. Using this information, our Case Managers obtain any necessary authorizations and coordinate with the provider to ensure that service provision is not interrupted when the third-party's benefit limit is reached.

We educate our providers so they understand that if a third-party benefit limit is exhausted, Medicaid may cover the remaining expense. We also emphasize that, for this reason, it is important to ask all enrollees if they have Medicaid coverage at the time of service provision to avoid any delay in claim processing and payment.

DIFFERENCE IN APPROACH FOR THOSE DUALLY ELIGIBLE FOR MEDICARE AND MEDICAID

For those dual eligible enrollees who require case management services, the Medicare plan assumes medical case management responsibilities, with Humana maintaining case management responsibilities for LTC benefits. We continue to serve as advocates for these enrollees by ensuring that they have all necessary services, regardless of the payer. In the event that the Medicare limit for a covered service is exhausted, we collaborate with the provider, enrollee, and Medicare plan to assume responsibility for service coverage and prevent gaps in services/care.

Our approach to coverage of claims after the third-party carrier benefit limit has been exhausted does not differ for enrollees who are dually eligible for Medicare and Medicaid. However, we do ensure that our enrollee and provider communication materials provide guidance for enrollees with various types of coverage (Medicare, commercial plans, Tricare, etc.), highlighting the differences that enrollees and providers may expect for each.

==========

d. The service is not covered by the third party but is available through Florida Medicaid.

==========

Florida Medicaid covers a number of services which are not routinely included in many third-party insurance policies, such as home-based care. Additionally, Humana offers a range of expanded benefits, such as dental services and speech therapy for adults that may not be available through a third-party payer. We treat these services like all others in our benefits package, and are committed to ensuring their appropriate use by our enrollees. Enrollees can access these services through our provider network and use our enrollee portal and Customer Care line for assistance in finding a provider and setting up an appointment. For those enrollees engaged in care management, our Case Managers integrate these services into the care plan and facilitate case coordination.

ENROLLEE COMMUNICATION

Humana's enrollee handbook provides information on covered benefits that are covered by Florida Medicaid. In our handbook, we explain that the enrollee may receive the majority of their services through their other third-party payer, such as Medicare, and that Medicaid rules do not apply for those services covered by other insurers. However, if the other insurer does not cover the service required by the enrollee, and it is a Medicaid covered benefit, Humana will assume responsibility for that cost for those services that are determined to be medically necessary.
In addition, our Welcome Call and enrollee interactions with their Case Manager and our Customer Care Specialists provide additional opportunities to reduce confusion among our enrollees about services that are covered through Florida Medicaid. During our Welcome Call, we explain the benefits that are covered under Florida Medicaid, including hearing and vision. If the enrollee calls our Customer Care department or Case Manager with a question about covered benefits, our associates use the benefits grid to explain those benefits that are covered by Florida Medicaid, and encourage our enrollees to obtain a list of covered benefits from their other insurer. The enrollee can be warm transferred to the other insurer or the Case Manager will initiate contact with the other insurer to obtain the list of covered benefits in order to provide optimal assistance to the enrollee in understanding the COB process.

AUTHORIZATION AND PAYMENT

We identify services that are not covered through third-party payers through claims processing. When we note that a claim has been received for an enrollee who has another third-party payer, we ascertain that the claim has been denied by that third-party payer. Depending on the reason for the denial, we determine if Humana Medicaid will pay as the primary or secondary insurer, and process the claim accordingly.

Our service authorization and payment procedures reduce the amount of time between the request for coverage of a service and the time when the enrollee receives the service and the provider receives payment. When Florida Medicaid is the primary payer, we will authorize the service using our standard service authorization protocols, as described above.

CARE COORDINATION

Although the other payer may not be financially liable for the requested services, we communicate with the payer to ensure that they are nonetheless aware of the services being provided to facilitate the coordination of care. Our database of insurer contacts and participation on any MDT held by the enrollee's other insurer facilitate this communication. We use these forums to share information about the services covered by Florida Medicaid through Humana.

Evaluation Criteria:

1. The adequacy of the respondent's approach when:

(a) Florida Medicaid does not cover the service, but it is available through the third party payer.

(b) Florida Medicaid and the third party payer cover the service, but Medicaid is only liable for the coinsurance/copayment expenses.

(c) The third party carrier benefit limit is exhausted and the service is now a Medicaid expense.

(d) The service is not covered by the third party but is available through Florida Medicaid.

2. The extent to which the respondent's approach includes:

(a) Documentation of effective communication strategies to reduce confusion for the enrollee (e.g., strategies used in enrollee materials).

(b) Processes used to identify non-covered services by the primary insurer for individual enrollees.

(c) Processes used to streamline ongoing authorization and payment of services once the initial determination has been made that a service is not covered by the primary insurer or the benefit from the third party insurer has been exhausted.

3. The extent to which respondent's description specifically addresses special processes in place to improve care coordination, including provider communications, and service provision for dual eligibles when Medicare is the primary insurer.

Score: This section is worth a maximum of 40 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

SRC# 22 – Early and Periodic Screening, Diagnosis and Treatment (EPSDT) (Statewide):

The respondent shall describe its approach to education and monitoring of Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) requirements, including:

a. A description of outreach and communication strategies that will be used to enhance enrollee education on EPSDT requirements and to improve compliance with the periodicity schedule and treatment recommendations that are identified as a result of a screening.

b. A training plan that includes descriptions of strategies that will be used to facilitate a firm understanding of federal and State EPSDT requirements throughout all operations of the plan (case management, utilization management, provider relations, etc.) as well as subcontractors.

c. A description of the monitoring approach that will be used to ensure compliance with EPSDT requirements throughout all relevant departments within the plan and with subcontractors.

d. A plan for ensuring greater transparency among external stakeholders (e.g., advocacy groups) in the respondent's approach towards coverage of the EPSDT benefit.

Response:

Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) plays an essential role in enabling Florida Medicaid enrollees under the age of twenty-one (21) to lead healthy lives by ensuring the availability of preventive services and screenings, and facilitating prompt access to medically necessary treatment for identified conditions. Our approach to EPSDT education and outreach incorporates both population-level and individual strategies that leverage data and the unique knowledge of our associates, providers, and community partners to design programs and interventions that will increase compliance with the EPSDT periodicity schedule. This outreach and education approach is complemented by our commitment to ensuring compliance with the EPSDT requirements throughout our plan – including providers and subcontractors – and the strong partnerships we have cultivated with external stakeholders over the past twenty (20) years serving Medicaid enrollees in Florida.

==========

1. The adequacy of the respondent's approach related to outreach and communication strategies that will be used to enhance enrollee education on EPSDT requirements.

==========

Humana's approach to outreach and education combines written materials, targeted telephonic campaigns, and online resources with innovative community partnerships to bring multi-cultural, multi-lingual outreach activities to our enrollees. We complement these population-level approaches with targeted, data-driven individual outreach to identify and close gaps in EPSDT services among our enrollees.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

NEW ENROLLEE ONBOARDING

Our strategies to enhance enrollee education on the EPSDT requirements begin when the enrollee joins Humana. At this time, our Medicaid Administration Education and Satisfaction Unit (ESU) conducts New Enrollee Welcome Outreach Calls to each new enrollee or enrollee family. These calls cover topics including Primary Care Physician (PCP) selection, an abbreviated Health Risk Screening, and continuity of care. The ESU team educates the caregivers of our enrollees under twenty-one (21) on the importance of well-child visits, the intervals at which well-child visits should be scheduled, and the periodicity schedule for immunizations. We also connect enrollees and their caregivers with information about their PCP and assist enrollees in scheduling their upcoming Child Health Check-Up appointments.

To complement the Welcome Calls, we send each of our enrollees a packet of new enrollee materials. These materials include information about online resources, including our Provider Directory and Enrollee Handbook, that helps enrollees and their caregivers follow the periodicity schedule, learn about EPSDT benefits, and schedule appointments with pediatric PCPs. These enrollee materials are written at no more than a fourth grade reading level and are produced, at a minimum, in English and Spanish.

Our online Enrollee Handbook informs enrollees about the importance of the EPSDT program, the enrollee incentive and rewards program, and Humana's disease management and case management programs. Enrollees can refer to their Handbook for details regarding how to contact Humana for more information and referrals to specific programs. The Handbook also contains a chart that helps caregivers track their child's immunizations against the recommended schedule.

Humana's online Provider Directory is user-friendly and allows for searches by zip code, the first and last name of physicians, and specialty type. Enrollees can further filter their search results by gender of the physician; whether the practice is accepting new patients; practice affiliations; hospital affiliations; accreditations and certifications; and languages spoken at the practice. While our associates are always ready and willing to help our enrollees schedule an appointment with a PCP, this Provider Directory empowers our enrollees and their caregivers with additional information and tools to take control of their own care, including choosing their PCP and scheduling appointments.

MAILINGS AND PHONE CAMPAIGNS

We utilize mailings and inbound and outbound call campaigns to educate enrollees about upcoming EPSDT visits. We send reminder mailings for immunizations and EPSDT visits at one (1), three (3), five (5), eight (8), eleven (11), fourteen (14), seventeen (17), and twenty-three (23) months, and yearly thereafter. This outreach is designed to enhance the caregiver's understanding of the importance of timely Child Health Check-Up (CHCUP) visits.

Our Child Wellness Campaign targets caretakers with child wellness and benefit coverage education through e-mail, text messages, and outbound calls, including customized reminders based on the child's milestone (birthday, age group, back-to-school, or seasonal). Our outbound enrollee calling campaigns include both voice-automated and live calls to enrollee home phone

lines and cell phone lines. We conduct these calls in advance of the enrollee's next, periodic EPSDT visit to ensure that the visit is scheduled in accordance with the periodicity schedule. During these calls, Customer Care Specialists (CCS) ask about the enrollee's health status, inquire about the enrollee's engagement with their PCP, conduct a short questionnaire to screen for any immediate health needs, and provide referrals to care. If the Customer Care Specialist learns that the enrollee has not connected with their PCP, or has not scheduled their upcoming EPSDT visit, they will – with the caregiver's permission - conduct a three-way call to connect the enrollee with the PCP's office and help schedule an appointment for an annual CHCUP.

Text messaging offers an innovative avenue to reach our enrollees and their caregivers with important health information. Humana will pilot the mPulse HIPAA-compliant platform in Florida to extend our EPSDT outreach. Through mPulse, Humana will offer text messaging (or messaging through an app or web-based platform), push notifications, e-mail, and secure chat to communicate with our enrollees and their caregivers in real-time. In the initial pilot program, our team will send text messages to engage enrollees who are due or overdue for their annual wellness visit. These messages will include information on how to set up an appointment, appointment reminders, and directions to the appointment.

ENROLLEE NEWSLETTERS

Our quarterly enrollee newsletters are filled with educational information and useful news about our enrollees' health care coverage, social service programs, preventive health care, safety tips, and benefit updates. Our newsletters emphasize the importance of timely access to preventive care, including CHCUP. Humana realizes that healthy habits stem from the leadership of parents and guardians; as such, our newsletters are designed to address the needs of both the enrollee and their family. Recent topics covered in our newsletters include hygiene, dental care, the role of the PCP, and immunizations. An excerpt of our summer 2017 newsletter, which includes information on the importance of back-to-school wellness check-ups, can be found in Attachment 22-1.

DIGITAL OUTREACH

Our Digital Outreach strategy for EPSDT education and outreach includes our website, Enrollee Portal, and social media platforms.

Through our website, we provide valuable, easy-to-read information to our enrollees to learn more about covered EPSDT services. Our Florida SMMC enrollee website includes:

- The Enrollee Handbook, including EPSDT benefit information

- The most recent and historical quarterly enrollee newsletters

- Information about current seasonal and national health issues

- Important contact numbers, including the number for our Customer Care Department to help our enrollees schedule their no-cost yearly CHCUP

In addition to our public website, our secure Enrollee Portal empowers our enrollees and their caregivers to take greater responsibility for their health, including compliance with the EPSDT periodicity schedule. This portal, known as MyHumana, is accessible through a computer, mobile device, or the My Humana mobile application. Through MyHumana, enrollees and their caregivers can access their enrollee identification number, demographic information, PCP assignment and contact information, a summary of the enrollee's health status, and other health information. Additionally, when enrollees log onto MyHumana, they receive a gap-in-care alert that flags any missing preventive screenings. The MyHumana portal also enables enrollees to send secure messages to CCS for further assistance.

Our social media platforms also serve as an avenue to increase health literacy and educate our enrollees about their EPSDT benefits. Through our Corporate Social Media platforms (Facebook, Twitter, YouTube), and soon-to-be launched Medicaid Facebook page, we conduct campaigns about health care utilization and preventive screenings. These campaigns, designed by our award-winning Digital Center of Excellence Team, will leverage organic content in addition to content based on our enrollees' location, interests, behaviors, and demographics.

COMMUNITY-BASED OUTREACH AND EDUCATION

Our community-based outreach and education strategies reflect our commitment to meet our enrollees with important health information where they are. This means that we partner with community organizations, providers, and other stakeholders to deliver information face-to-face in places that are easily accessible and frequented by our enrollees and their caregivers. Today, we use four (4) approaches to reach our enrollees with these messages in the community: our Humana Storks program, our CHCUP events and Health Education sessions at provider offices, and health promotion events around the state.

CHCUP EVENTS WITH OUR PROVIDER NETWORKS

With our provider partners, we hold events around the state to encourage completion of the CHCUP among our enrollees. Through mailings, voice activated technology (VAT), and flyers, and through direct outreach from the provider office, we target our enrollees who have a current or upcoming care gap and who are assigned to the provider office where the event will be held. These enrollees are invited to call the provider office to schedule an appointment for services during this event, which also features fun, healthy, and interactive activities for our enrollees, such as face-painting, photo opportunities with "superheroes", and arts and crafts. We use these events as an opportunity to share important health information with our enrollees' parents and caregivers, including the importance of complying with the EPSDT periodicity schedule and treatment recommendations. In 2016, eight hundred thirty-six (836) enrollees attended these events, six hundred forty-seven (647) CHCUP services were provided, and four hundred ninety-two (492) HEDIS gaps were closed. In the words of one of our provider groups: "Having the opportunity to work with Humana was a very positive experience for our office and patients. Our patients really enjoyed the many fun, entertaining, and interactive activities provided, especially photos with their favorite superheroes! Due to the outreach provided, our office was successful in scheduling and providing quality care to many of our Humana enrollees. This Humana event was well-organized, fun, and productive. We look forward to working with Humana in the future."

HEALTH EDUCATION SESSIONS AT PROVIDER OFFICES
In addition to our CHCUP events, we partner with providers to lead educational sessions for our enrollees at their offices. We offer these events at a wide range of provider offices, including Federally Qualified Health Centers (FQHCs), OB/GYN, and pediatric offices, to reach our enrollees at the location where they most frequently receive health services. Past locations include Escambia Community Clinic (including their Mobile Dental Units), Genesis OB/GYN, Cantonment Family Practice, Tampa Family Health Centers, Big Bend Pediatrics, and Pediatric Associates of Tampa Bay. At these sessions, we cover topics that are of utmost importance to our enrollees and their caregivers, including asthma; nutrition, or diabetes; oral health; bullying; staying safe in the summer, including sun and swim safety; medicine safety and poison control; and holiday safety. In 2017, we have conducted almost four hundred (400) such events at provider offices, potentially reaching over eighty-seven thousand (87,000) enrollees.

HUMANA STORKS
Our commitment to educating our enrollees and their families about the importance of EPSDT visits begins at birth. Through our Humana Storks program, which recently debuted at two hospitals within the Memorial Healthcare System, our Enrollee Advocates greet new mothers in the hospital with a care package and information about how to access important health services for themselves and their babies. This information includes a vaccination schedule and a reminder to reach out to the pediatrician to make an appointment for their newborn's first Well-Child Visit.

HEALTH PROMOTION EVENTS IN THE COMMUNITY
As part of Humana's outreach efforts, we partner with community agencies and develop a calendar of health promotion events that our associates participate in throughout the year. Through these public events, our Enrollee Communication and Engagement team engages families outside of the provider's office to share important health information with Florida residents, including resources on CHCUPs.

Some of the community events that we participated in during 2016 included:

- March for Dimes March for Babies in Broward County

- Back to School in Hillsborough County

- Health Fair, held in conjunction with Central Florida Healthcare and Lakeland Primary Care

- Flipany Fun Run in Broward County

- Healthy Mothers/Healthy Babies is the New Hot! Health Fair in Broward County

- Ministerio Internacional El Rey Jesus CARE Community Resource Fair

- City of Miami Health Department Safe Summer Back to School Health Fair

- Jessie Trice Community Health Center Immunization Fair in Miami-Dade County

- City of Miami Police & 1804 INK Little Haiti Turkey Drive Health Fair

- United Way Center of Excellence – United Way Mini Health Fair

- Florida Department of Health/Miami-Dade – 3rd Annual Homestead/Florida City Health & Resource Fair

DESIGNING POPULATION-LEVEL STRATEGIES TO IMPROVE COMPLIANCE
On a monthly basis, our CHCUP Task Force Team meets to review EPSDT-related indicators, and to design and implement interventions that can improve our EPSDT results. These interventions are based on root-cause analysis, and are designed using the Plan-Do-Study-Act (PDSA) approach.

One such finding of these root-cause analyses was that there is a lack of understanding by enrollees and their caregivers regarding the importance of CHCUP visits and proper immunizations, resulting in missed screenings and immunizations. In addition, we determined that our PCPs faced challenges in documenting CHCUP visits: CHCUP services provided during a minor illness visit may not be properly recorded, leading to false missed gaps in the enrollee record. To resolve these barriers, we implemented a multi-pronged initiative that targeted enrollees, their caregivers, and providers through different channels to increase awareness of the importance of CHCUP services, and to ensure correct documentation of services in the enrollee record. These initiatives included:

- Targeted mailing, including an immunization card;

- Enhanced Welcome Calls process to provide assistance with scheduling appointments and transportation;

- Increased awareness and use of the Healthy Behavior Incentive Programs, including the Baby Well Visit Program and the Pediatric Well Visit Program;

- Enhanced Birthday Wellness VAT calls to remind enrollees to make an appointment for their yearly check-up/screening;

- Dissemination of CHCUP materials at targeted public events and educational enrollee events around the community; and

- Education for providers to remind them to record all screening services provided, including those provided during non-CHCUP visits.

Through the CHCUP Task Force Team's monthly meetings, these interventions are reviewed using the PDSA approach to identify progress towards measurable goals and isolate areas for improvement. Our enhanced Welcome Calls have demonstrated progress in helping more enrollees schedule PCP appointments: in July 2017, fifteen point three (15.3) percent of Welcome Calls resulted in a scheduled PCP appointment, as compared to twelve point seven (12.7) percent in April 2017.

==========

2. The adequacy of the enrollee engagement approach and strategies that will be deployed to improve compliance with the periodicity schedule and treatment recommendations, including identification of the data sources that will be used to monitor compliance.

==========

Humana uses a rich set of advanced data analytics tools, through our Atlas Clinical Rule Engine, to identify enrollees who are not in compliance with their periodicity schedule and treatment recommendations. We provide this information to providers and case managers (CMs) through actionable reports that can be used to engage enrollees. We then deploy additional outreach and education strategies to engage enrollees who have missed an appointment or who have a gap in care, including targeted calls and mailings. In addition, the Healthy Behaviors program, through which our enrollees and their caregivers receive a gift card for attendance at well-child and well-baby visits, provides an extra incentive for our enrollees to adhere to the periodicity schedule.

USING DATA TO EMPOWER PROVIDERS TO CLOSE CARE GAPS

We provide all PCPs with a package of monthly HEDIS reports, sourced from claims data. This package details the PCPs' performance on a range of HEDIS metrics and compares their performance with that of their peers in the same region. In addition, we include a list of the enrollees who have CHCUP care gaps. To equip our providers with the information to take action on these results and improve compliance with CHCUP visits, we provide call lists with the contact information for enrollees who have care gaps and a list of recommended actions for enrollees who are non-compliant with preventive care screening or disease management visits. For example, Pediatric Associates – the largest pediatric primary care practice in our network, with locations around the state – uses this contact list to identify enrollees who may benefit from their case management outreach program. An example of this action report is included in Attachment 22-2.

These monthly HEDIS reports, delivered by our Provider Relations representatives, are supported by a clinical infrastructure that converts diverse patient data into real-time, actionable insights. Humana's clinical insights engine, Anvita, continually tracks each component of EPSDT compliance for our enrollees through bi-directional data feeds with our providers using submitted claims. Anvita automatically flags enrollees who are not compliant with the EPSDT and immunization periodicity schedules, and sends this information to our CMs and providers as Care Gap alerts.

Our proprietary web-based platform, Availity, serves as an additional data source for our providers to swiftly and easily identify care gaps among their enrollees, including missing EPSDT services and unfulfilled treatment recommendations. Through this portal, our providers can access: payment history and claim status to track EPSDT services provided; enrollee profiles that give a comprehensive view of screenings, check-ups, and treatments received; and monthly membership lists to track Humana enrollees. Because Availity combines information from all providers for each enrollee, one provider can determine whether an enrollee obtained follow-up treatments or screenings from another. This improves coordination and continuity of care between providers.

ENROLLEE OUTREACH TO IMPROVE COMPLIANCE WITH THE PERIODICITY SCHEDULE AND TREATMENT RECOMMENDATIONS

Upon identification of a care gap for an enrollee, we take additional actions to educate the enrollee about any missing EPSDT services and help them schedule an appointment with their PCP for care. A mailing is sent to the enrollee to remind them of the importance of the missed care gap and to share information about our enrollee incentive program, which rewards them for completing their CHCUP visits. In addition, this enrollee may be queued for a CHCUP call. This call – part of a campaign geared towards enrollees who have no well-child visit claims within the 6 month period after their birthday – serves as an opportunity to educate the enrollee/caregiver about the importance of EPSDT visits and to connect the enrollee and caregiver with their PCP to schedule an appointment. From January 1, 2017 to July 31, 2017, we reached almost twenty-three thousand five hundred (23,500) enrollees through these calls, and educated over sixteen thousand (16,000) about the importance of EPSDT services. Additionally, we have scheduled PCP appointments for over two thousand (2,000) enrollees through this ongoing campaign.

HEALTHY BEHAVIORS PROGRAMS

To encourage parents and caregivers to take their children and babies to their CHCUP appointments, we provide incentives through our Healthy Behaviors programs. Through the Baby Well Visit program, parents or guardians of infants who have been a Humana Medical Plan enrollee since birth can receive a ten (10) dollar gift card for each well-child visit completed between zero (0) and eighteen (18) months of age, up to three (3) visits. In our Pediatric Well Visit program, parents or guardians of Humana Medical Plan enrollees between the ages of two (2) and twenty-one (21) years can receive a twenty (20) dollar gift card for each yearly well-child visit.

Our CHCUP Task Force has introduced initiatives to increase enrollee awareness of the Healthy Behaviors program. As of September 2017, seven thousand eight hundred and seventy-four (7,874) enrollees have received the Pediatric Well-Visit reward and nine thousand four hundred and ninety (9,490) enrollees have received the Baby Well Visit reward.

==========

3. The adequacy of the respondent's training and education approach to facilitate a firm understanding of federal and State EPSDT requirements throughout all operations of the plan/subcontractors. The respondent must illustrate a commitment to ongoing training and retraining of staff/subcontractors utilizing an array of mediums to earn all points for this component.

==========

TRAINING FOR ASSOCIATES

We use an array of mediums to help our associates understand and implement federal and State EPSDT requirements throughout plan operations, including online, classroom, and field-based training; written materials, including policies and procedures and e-mail updates; and associate meetings to discuss updates to the requirements and best practices for compliance. Training on these requirements occurs upon hire and throughout each associate's tenure with Humana.

Humana associates who are responsible for implementing the EPSDT requirements – including those in Case Management, Utilization Management, Provider Relations, Quality Improvement, and Customer Care departments – complete online, on-boarding training upon hire,

complemented by field visits administered by our Clinical Learning and Development department (CLD) and clinical trainers. We will design a detailed EPSDT module that will be added to this mandatory training that will cover the federal and State EPSDT requirements and EPSDT operations throughout the plan. Additionally, we offer several online courses for our associates that provide further education on Medicaid, including “Medicaid Basics” and “Florida Medicaid Plan”, both of which cover the benefits available to our enrollees under our plan. Additionally, our “Florida Contract Training” e-learning course emphasizes the required Medicaid benefits, including EPSDT, and Humana expanded benefits.

Although some aspects of associate training are common to everyone, each department has its own training process and content tailored to the specific knowledge, skills, and abilities needed to perform each role. After the initial onboarding training, new CMs shadow experienced CMs on at least two field visits and one supervised meeting visit before their first unsupervised visit with an enrollee. This field training ensures that our Case Managers can apply the knowledge that they gained through our online and classroom education to their day-to-day responsibilities, including the EPSDT requirements.

Our associates receive ongoing and annual training designed to refresh their knowledge on the EPSDT requirements and other compliance measures, share best practices for ensuring compliance with these requirements, and discuss updates to policies and procedures. Humana’s clinical and quality assurance teams review of changes in our current training tools as AHCA or CMS issues new program requirements or changes to the EPSDT requirements. E-mail updates, associate meetings, and updates to policies and procedures are used to convey these changes to our associates, and the changes are also built into ongoing training sessions. These training sessions use an array of mediums, including WebEx, Microsoft Lync, and on-site classroom-based trainings.

TRAINING FOR SUBCONTRACTORS

Our subcontractor training closely resembles our associate training. Subcontractors are required to complete the same online on-boarding and annual training as our associates, and they receive further in-person training specific to their delegated duties. For subcontractors with responsibilities for utilization management or EPSDT service provision or referral – including Beacon Health Options, Access Behavioral Health, and Medical Care Consortium, Inc. – our Relationship Managers also use our monthly Local Operating Committee meetings to discuss the EPSDT requirements, and to share any updates to the requirements.

TRAINING FOR PROVIDERS

Our diverse set of providers in Florida calls for various training mediums to meet their needs and educate them on EPSDT compliance in an easy-to-understand fashion. Providers are educated on timely access standards and other EPSDT requirements through four (4) primary training modalities:

- Medicaid Provider Orientation: Humana’s Provider Relations teams conduct in-person or virtual orientations for all newly contracted providers within thirty (30) days of the effective contract date.

- Written Materials: The Florida Medicaid Provider Manual and the Florida Medicaid Addendum to the provider agreement are both shared with our providers to convey information about the EPSDT requirements in a written form. In addition, providers receive an annual letter to remind

them of the importance of CHCUP and the components of an EPSDT visit for each age group. The letter in Attachment 22-3 is an example of our written provider communication about EPSDT.

- Digital Education: Our provider website offers easy access to communications related to EPSDT, including the annual CHCUP letter, and education on the EPSDT requirements.

==========

4. The adequacy of the respondent's monitoring approach, including all data sources that will be used to ensure compliance with EPSDT requirements throughout all relevant departments within the respondent and with subcontractors.

==========

Our Quality Improvement Committee (QIC) is the hub of EPSDT compliance monitoring activities through our Florida Humana operations. Quarterly QIC meetings are attended by our Utilization Management, Case Management, Quality, Compliance, Provider Relations, Performance Management, and Risk Management departments. Each department shares their monitoring activities and results from the most recent quarter, specific to the EPSDT requirements referred to in 42 U.S.C. § 1396d(r)(5), all binding federal precedents interpreting it, and any other State and federal requirements. The monitoring approach used by each department is further described below. In addition to addressing or referring any immediate quality or compliance issues to the Compliance Oversight department, the QIC develops improvement projects to respond to overall plan trends in EPSDT in conjunction with the CHCUP Task Force.

MONITORING APPROACHES BY DEPARTMENT

UTILIZATION MANAGEMENT

Our Utilization Management (UM) department is responsible for the review of special services requests in accordance with the flowchart depicted in Attachment 22-4. Our UM Nurse Liaisons and/or Compliance Nurses review the request utilizing National Clinical Guidelines (NCGs), Humana's AHCA contract, and our enrollee handbook. If the request is out of scope with the guidance provisions, it is then routed to the Associate Medical Director. For EPSDT services, the Associate Medical Director's authorization decision is always based on medical necessity, not covered benefits.

To monitor the consistent application of our EPSDT criteria and compliance with the special services request flowchart, we employ three processes. The results of all three processes are shared at QIC meetings:

1. Review a sample of denial and appeal files for services provided to enrollees ages zero (0) to twenty-one (21) for compliance with the EPSDT requirements.

2. Conduct inter-rater reliability assessments for our physician and non-physician reviewers at least annually. This assessment measures the consistency with which our health care professionals involved in UM decision-making apply the EPSDT requirements.

3. Hold case conferences to monitor the quality of decision-making and criteria application skills of the reviews referred to a physician by a nurse reviewer, pharmacy reviewer, or claim examiner. These case conferences, in addition to ensuring compliance with the EPSDT requirements, allow us to identify any gaps in our clinical policies that have led to variation in our decision-making, as it relates to service authorizations.

CASE MANAGEMENT
Our Case Management department is responsible for ensuring EPSDT compliance for children enrolled in case management, including the identification of gaps in care, coordination of CHCUP visits, and resolution of any barriers to accessing care.

To monitor our Case Management department for compliance with the relevant EPSDT requirements, we audit a subset of care plans for our enrollees ages zero (0) to twenty-one (21) to ensure that they contain EPSDT services. Additionally, we sample those enrollees in CM who have an EPSDT care gap to ascertain that their CM has conducted the appropriate follow-up. As all communication with enrollees and their providers is documented in our clinical operating system, Care Guidance eXchange (CGX), we can ensure that the CM contacted both the enrollee to notify them of the care gap and the provider to schedule an appointment (if the enrollee gave permission to do so).

SUBCONTRACTOR OVERSIGHT
Our local Performance Management Office and Relationship Managers, in conjunction with our Delegation Compliance department, are responsible for subcontractor oversight as related to the EPSDT requirements. At our quarterly QIC meetings, the Performance Management Office provides an update on all EPSDT-related monitoring activities, including any possible non-compliance that has been detected and addressed.

All subcontractors are monitored for completion of required trainings, including modules on EPSDT. We ensure subcontractor compliance with the EPSDT requirements through annual delegation audits, reviews of service-level agreement performance, and regular Local Operations Committee meetings. Annual delegation audits are designed to evaluate each subcontractor's ability to meet delegation compliance requirements. These audits include a review and approval of each subcontractor's policies and procedures; program descriptions and work plans; forms, tools, and reports; file audits; and enrollee communications. We provide a template for all enrollee communications to assist our subcontractors in complying with communications-specific requirements. Additionally, for subcontractors with delegated UM responsibilities, we review authorizations of EPSDT services, including authorizations sent to Humana for review by the Medical Director.

PROVIDER RELATIONS
Our Provider Relations department is responsible for oversight of provider education, outreach, training, and ensuring that our network is compliant with the EPSDT requirements. To monitor compliance with the requirements among our providers, our Provider Relations department conducts site visits to evaluate compliance with AHCA's periodicity schedule and EPSDT requirements; documents the education it provides to our provider network on the EPSDT requirements; and ensures a sufficient network of EPSDT providers. This outreach includes education on the importance of tracking all EPSDT services provided for our enrollees, even those that are part of a minor illness visit (as opposed to a well-child visit), to ensure data accuracy. A report on these activities is provided at our quarterly QIC meetings.

We also conduct various audits to ensure our providers are maintaining accessibility standards. Appointment availability standards are measured through initial credentialing and re-credentialing site visits, complaint data, capacity reports, and provider self-reporting. Humana also physically audits appointment schedules on a random basis and at least annually during visits to provider offices, and conducts "secret shopper" surveys to assess appointment availability and wait times. Additionally, we conduct calls to PCP offices at least annually to ensure our enrollees have access to care during after-hours. The results of our 2016 After Hours Accessibility Audit found that we are within the AHCA Service Level Agreement requirement in every region in which we operate a MMA plan.

MEDICAID ADMINISTRATION DEPARTMENT
Legal and compliance reviews of our handbooks and other enrollee communications concerning EPSDT ensure that these materials contain clear information about the enrollee's right to appeal any decision, and the procedures for doing so.

MEDICAID ADMINISTRATION EDUCATION AND SATISFACTION UNIT (ESU)
Our ESU plays a key role in providing outreach and education for our enrollees on EPSDT services. Our ESU team conducts outbound calls to enrollees who have EPSDT care gaps, and assists those enrollees with gaps to schedule a CHCUP visit. The ESU prepares quarterly reports that demonstrate the percentage of all enrollees with an EPSDT care gap who receive an outbound call, the percentage who are educated about CHCUP visits, and the percentage of those enrollees who grant permission to the ESU team to schedule a PCP appointment.

ENROLLEE AND COMMUNITY ENGAGEMENT TEAM
Our Enrollee and Community Engagement team conducts EPSDT outreach and education activities throughout the state. This team provides quarterly reports on the number of activities conducted, the number of enrollees in attendance, and any related health outcomes (e.g., number of CHCUPs completed).

==========
5. The extent to which the respondent's overall outreach approach identifies opportunities to improve upon the level of transparency for external stakeholders.
==========

Humana has demonstrated our commitment to engaging with stakeholders in Florida to share and improve our approach towards coverage of the EPSDT benefit. Through our Community Engagement Teams, Medicaid Advisory Panel, involvement with professional associations, engagement with providers, and participation in community organizations, we will continue this commitment to transparency under the next contract. As we expand into other regions of the state, we will continue to engage with stakeholders from all regions who can inform and strengthen our EPSDT-related activities.

COMMUNITY ENGAGEMENT TEAMS
Humana's Medicaid Community Engagement Teams, launched in 2014, facilitate our efforts to support local organizations that serve our Florida Medicaid enrollees. These regionally-based teams work with a broad array of community partners to host health events, provide health education, and refer our enrollees for further support and resources. Our regular involvement with these partners facilitates the exchange of information and dialogue about ways to ensure

coverage of the EPSDT benefit among our enrollees, as these groups have unique insights into the communities they serve. Some of our partners who have been fundamental to improving our EPSDT program include:

- Region 1: Escambia County School District and Head Start

- Region 6: Polk County Boys and Girls Club and the Healthy Start Coalition

- Region 9: Bridges and Lake Worth West and Bridges at Northwood

- Region 10: Cypress Elementary School and Healthy Mothers, Healthy Babies of Broward County

- Region 11: Carol City Elementary School and Health Connect in Our School

MEDICAID ADVISORY PANEL
Our Medicaid Advisory Panel, first formed in 2013, brings together leaders from within Humana and from external stakeholders across the communities we serve. Our current members include representatives from hospitals, including Holtz Children's Hospital and North Shore Medical Center; Member Services Organizations, including Doctor's Medical Center, Pediatric Associates, and Broward Health; non-profit organizations, including Healthy Mothers Healthy Babies and Goodman JFS of Broward; and cultural groups, including Sant La Haitian Neighborhood Center in Miami-Dade. As we grow our presence across the state, we will seek to include leaders who represent all parts of the state on our panel to ensure transparency across our EPSDT operations.

During our meetings, we discuss EPSDT-related HEDIS measures, including any progress or challenges we have encountered in improving our rates. Our panel draws upon their depth of experience serving Florida's Medicaid population to provide advice and input on how to better reach these communities and improve compliance with well-child visits and immunizations. For example, we learned from a representative of our Haitian community that Creole-speaking enrollees were having difficulty understanding the highly technical language presented by other native Creole speakers during outbound calls to educate our enrollees about the EPSDT benefit. We presented this information to the department responsible for these outbound calls to design ways to better communicate this nuanced information to our Creole-speaking enrollees, including a thorough review of the translation of health information and other technical language.

In addition, the Medicaid Advisor Panel often raises issues from their day-to-day work in the community that they believe Humana can help to address. For example, after discussing high rates of emergency department utilization, we worked with external stakeholders on the Medicaid Advisory Panel to design an Emergency Department Utilization Pilot Project. With the connections we have established through the Advisory Panel – including representation from North Shore Medical Center in Miami and Palmetto General Hospital in Hialeah – we introduced a pilot project in which real-time information was sent to Humana and the PCP when an enrollee was admitted to the emergency department. In addition to addressing the acute issue that brought the enrollee to the emergency department, we are able to improve coverage of the EPSDT benefit by connecting our enrollees with their PCP, who can ensure that they receive all necessary EPSDT services during their follow-up visit.

Our panel further serves as a sounding board for our EPSDT outreach and education initiatives. For example, we collaborated with our panel members to extend the reach of our Children's Nutrition Campaign. Through connections forged by our panel, we formed a partnership with FLIPANY, an organization in South Florida that provides nutritional outreach to low-income families. FLIPANY helped us to bring local chefs to our enrollee events to demonstrate ways in which our families can eat healthy in an affordable manner. At our upcoming meeting in December 2017, we will share the results of the first year of our Humana Storks program, which targets mothers during the post-partum period to share information about the importance of well-child visits and adhering to the immunization schedule, and will solicit feedback from our panel about how we can continue to grow this initiative.

ENGAGEMENT WITH PROFESSIONAL ASSOCIATIONS

Humana regularly partners with external provider associations to understand their evolving concerns and develop collaborative solutions to better serve our Florida Medicaid enrollees, including in the area of EPSDT. This year, we have met with more than twelve (12) provider associations, including the Florida Medical Association, Florida Hospital Association, the Florida Obstetric and Gynecological Society, the Florida Chapter of the American Academy of Pediatrics, and the Florida Council for Community Mental Health Centers. Our attendance at conferences held by professional associations throughout Florida further strengthens our relationships with these external stakeholders. As these conferences allow us to interact with a broad swath of our providers, we can both share information about our EPSDT-related efforts and obtain feedback from our provider network and other community stakeholders about our ongoing work.

HUMANA ASSOCIATES' INVOLVEMENT WITH COMMUNITY ORGANIZATIONS

Humana associates participate in the leadership of community organizations across North, Central, and South Florida. These connections with community stakeholders allows us to respond to and incorporate ongoing community initiatives into our own work; identify best practices that we can use to strengthen our EPSDT operations; and share Humana's ongoing activities for feedback and recommendations. As we expand our presence throughout Florida, we will seek to engage with community partners in all regions.

Some of the committees and boards on which our associates and executive leadership currently serve are:

- Head Start Advisory Committee
- Healthy Start Coalition
- Student Health Advisory Committee of Hillsborough County
- Head Start Policy Council
- March of Dimes Board of Directors
- Florida Board of Nursing
- Impact Broward Advisory Committee
- Pediatric Council for the Florida Chapter of the American Academy of Pediatrics
- United Way of Broward County's Health Access Committee

CHILD HEALTH CHECK-UP EVENTS HELD WITH PROVIDER OFFICES

Our Child Health Check-Up events, held in partnership with provider offices, present us with a unique opportunity to present our EPSDT approach to our providers and enrollees. As we work

closely with our providers to plan and hold these events, they can provide feedback, advice, and input into our approach to coverage of the EPSDT benefit. Additionally, at the events themselves, Humana associates can interact with our enrollees and learn how to better help them maintain compliance with the EPSDT periodicity schedule. These events will continue to be a key avenue for ensuring transparency among these important external stakeholders under the next contract.

Evaluation Criteria:

1. The adequacy of the respondent's approach related to outreach and communication strategies that will be used to enhance enrollee education on EPSDT requirements.

2. The adequacy of the enrollee engagement approach and strategies that will be deployed to improve compliance with the periodicity schedule and treatment recommendations, including identification of the data sources that will be used to monitor compliance.

3. The adequacy of the respondent's training and education approach to facilitate a firm understanding of federal and State EPSDT requirements throughout all operations of the plan/subcontractors. The respondent must illustrate a commitment to ongoing training and retraining of staff/subcontractors utilizing an array of mediums to earn all points for this component.

4. The adequacy of the respondent's monitoring approach, including all data sources that will be used to ensure compliance with EPSDT requirements throughout all relevant departments within the respondent and with subcontractors.

5. The extent to which the respondent's overall outreach approach identifies opportunities to improve upon the level of transparency for external stakeholders.

Score: This section is worth a maximum of 25 raw points with each of the above components being worth a maximum of 5 points each.

Attachment 22-1: Back-to-School Wellness Check-Ups Newsletter Excerpt

Humana realizes that healthy habits stem from the leadership of parents and guardians; as such, our newsletters are designed to address the needs of both the enrollee and his or her family. Recent topics covered in our newsletters include hygiene, dental care, the role of the PCP, and immunizations. An excerpt of our summer 2017 newsletter, which includes information on the importance of back-to-school wellness check-ups, can be found below.

CHECKUP

Back to school
Time for a checkup!

Kids may be enjoying summer fun but, before you know it, they'll be back in school

Make sure they have had their yearly checkup before the last-minute rush. Students of all ages must be up-to-date with their shots in order to go back to school. Talk to your child's doctor about the shots they should get.

Your child's doctor can answer any questions you may have about shots and don't worry—if your child missed a shot, they can get caught up. Enjoy summer and have a healthy back-to-school season.

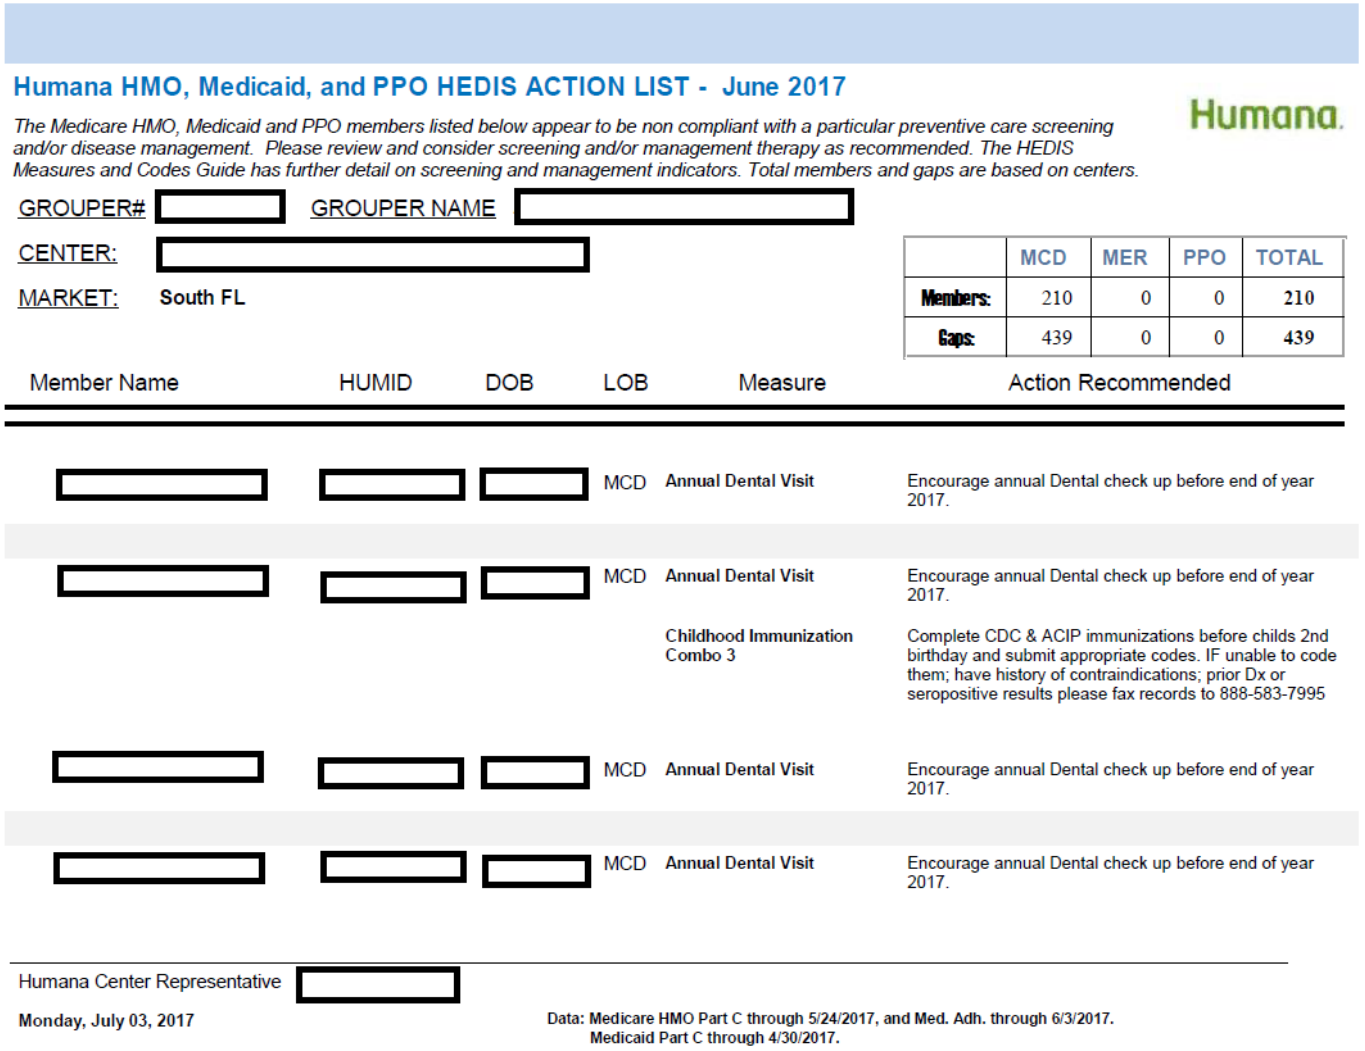
Attachment 22-2: HEDIS Action Report

We provide all of our PCPs with a package of monthly HEDIS reports. This package details the PCPs' performance on a range of HEDIS metrics and compares their performance with that of their peers in the same region. An example of this action report is included below.



Humana HMO, Medicaid, and PPO HEDIS ACTION LIST - June 2017

Humana.

The Medicare HMO, Medicaid and PPO members listed below appear to be non compliant with a particular preventive care screening and/or disease management. Please review and consider screening and/or management therapy as recommended. The HEDIS Measures and Codes Guide has further detail on screening and management indicators. Total members and gaps are based on centers.

Medicaid Part C through 4/30/2017.

Attachment 22-3: Annual CHCUP Letter

We provide our providers with an annual letter to remind them of the importance of CHCUP and the components of an EPSDT visit. The letter below provides an example of our written provider communication about EPSDT.

Child Health Check-Up (CHCUP)

Information for physicians

The Child Health Check-Up (CHCUP) is a regularly scheduled comprehensive, preventive health screening service for children from birth through age 20. Child health checkups are performed according to a periodic schedule to help children have routine health screenings to identify and correct medical conditions before the conditions become more serious and potentially disabling. CHCUP is Florida's Early and Periodic Screening, Diagnosis and Treatment (EPSDT) program.

Making the most of the visit while the child is in the office

Physician discretion in evaluating the degree of illness should determine if a child health checkup should be performed during a visit when the child is sick. A child health checkup should not be performed on an obviously sick child during which time findings may be distorted. The physician should treat the child for the illness and reschedule the checkup. If, in the physician's opinion, a checkup or well-child visit can be appropriately completed, the physician should treat or refer the child for the illness and bill the checkup or well visit.

What are the components of the child health checkup?

A child health checkup is composed of the following:

- Comprehensive health and developmental history, including assessment of past medical history, developmental history and behavioral health status
- Nutritional assessment
- Developmental assessment
- Comprehensive unclothed physical examination
- Dental screening, including dental referral, when required
- Vision screening, including objective testing, when required
- Hearing screening, including objective testing, when required
- Laboratory test, including blood lead testing, when required
- Appropriate immunizations
- Health education and anticipatory guidance
- Diagnosis and treatment
- Referral and follow-up, as appropriate

Importance of lead testing

Federal regulation requires that all children receive a blood test for lead at:

- 12 months old and 24 months old
- 36 months old and 72 months old for children who have not had a previous blood lead screening

How do the CHCUP measures compare to the various HEDIS® measures?

Both the CHCUP components and various Healthcare Effectiveness Data and Information Set (HEDIS®) measures address annual wellness visits for children: well-child visits in the first 15 months of life (W15); well-child visits in the third, fourth, fifth and sixth years of life (W34); adolescent well-care visits (AWC); adults' access to preventive/ambulatory health services (AAP); child and adolescent access to a primary care physician (CAP); an annual dental visit (ADV); and

FLHJBAXEN 1317FL0116-A

Page 1 of 3

lead screening in children (LSC). The main difference is based on the child's continuous enrollment in the plan, as well as the measurement periods for both groups of measures.

With CHCUP measures, children are placed in the health plan's denominator (children meeting criteria for the service) once the child has been enrolled for 90 days or more. The measurement period is Oct. 1 – Sept. 30. HEDIS measures typically place children in the health plan's denominator once the child has been with the plan for 12 months. The measurement period for many HEDIS measures is Jan. 1 – Dec. 31.

Most procedure codes detailed below cover both CHCUP and HEDIS measures, depending on care rendered to the member.

Members on the HEDIS and CHCUP action lists you receive monthly and quarterly, respectively, may overlap based on the criteria detailed above in regard to continuous enrollment and measurement periods. In addition, compliance also may be met with one visit based on the time frame details listed.

What is Humana's approach to improve the CHCUP measures?

Humana is working to improve CHCUP measures through a variety of methods, including:

- Outreach to members using printed materials, online information and phone calls.
- Nurses who are working directly with physician practices to promote CHCUP and improve HEDIS scores.
- Member rewards programs through which eligible Medicaid members can earn rewards for receiving certain immunizations, screenings and well checkups.
- Health care providers may bill for a CHCUP and a sick visit on the same day.

Billing tips: CHCUP

To ensure you receive credit for performing CHCUP requirements, please use the correct codes when submitting encounters and claims. Please note: Health care providers can bill a sick visit in addition to the CHCUP visit and receive reimbursement for both.

Child health checkup age or description	Well-child ICD-9 codes	New patient CPT codes	Established patient CPT codes
Neonatal exam	NA	99460, 99461, 99463	NA
Two to four days for newborns discharged less than 48 hours after delivery	NA

Health exam of defined subpopulation	V70.5		
Health exam in population survey	V70.6		
Other specified general medical exam	V70.8		
Unspecified general medical exam	V70.9		

ICD-9 codes were replaced by the following ICD-10 codes Oct. 1, 2015:

Z76.2 (Encounter for health supervision and care of other healthy infant and child)
Z00.121 (Encounter for routine child health examination with abnormal findings)
Z00.129 (Encounter for routine child health examination without abnormal findings)
Z00.110 (Health examination for newborn under 8 days old)
Z00.111 (Health examination for newborn 8 to 28 days old)
Z00.00-01 (Encounter for general adult medical examination without/with abnormal findings)
Z02.0 (Encounter for examination for admission to educational institution)
Z02.1 (Encounter for pre-employment examination)
Z02.2 (Encounter for examination for admission to residential institution)
Z02.3 (Encounter for examination for recruitment to armed forces)
Z02.4 (Encounter for examination for driving license)
Z02.5 (Encounter for examination for participation in sport)
Z02.6 (Encounter for examination for insurance purposes)
Z02.81 (Encounter for paternity testing)
Z02.82 (Encounter for adoption services)
Z02.83 (Encounter for blood-alcohol and blood-drug test)
Z02.89 (Encounter for other administrative examinations)
Z00.8 (Encounter for other general examination)
Z00.6 (Encounter for examination for normal comparison and control in clinical research program)
Z00.5 (Encounter for examination of potential donor of organ and tissue)
Z00.70 (Encounter for examination for period of delayed growth in childhood without abnormal findings)
Z00.71 (Encounter for examination for period of delayed growth in childhood with abnormal findings)

Notes: The child may enter the periodic schedule at any time. For example, if a child has an initial screening at age 4, then the next periodic screening is performed at age 5. This information may be found at http://pediatrics.aappublications.org/cgi/data/120/6/1376/DC1/1.

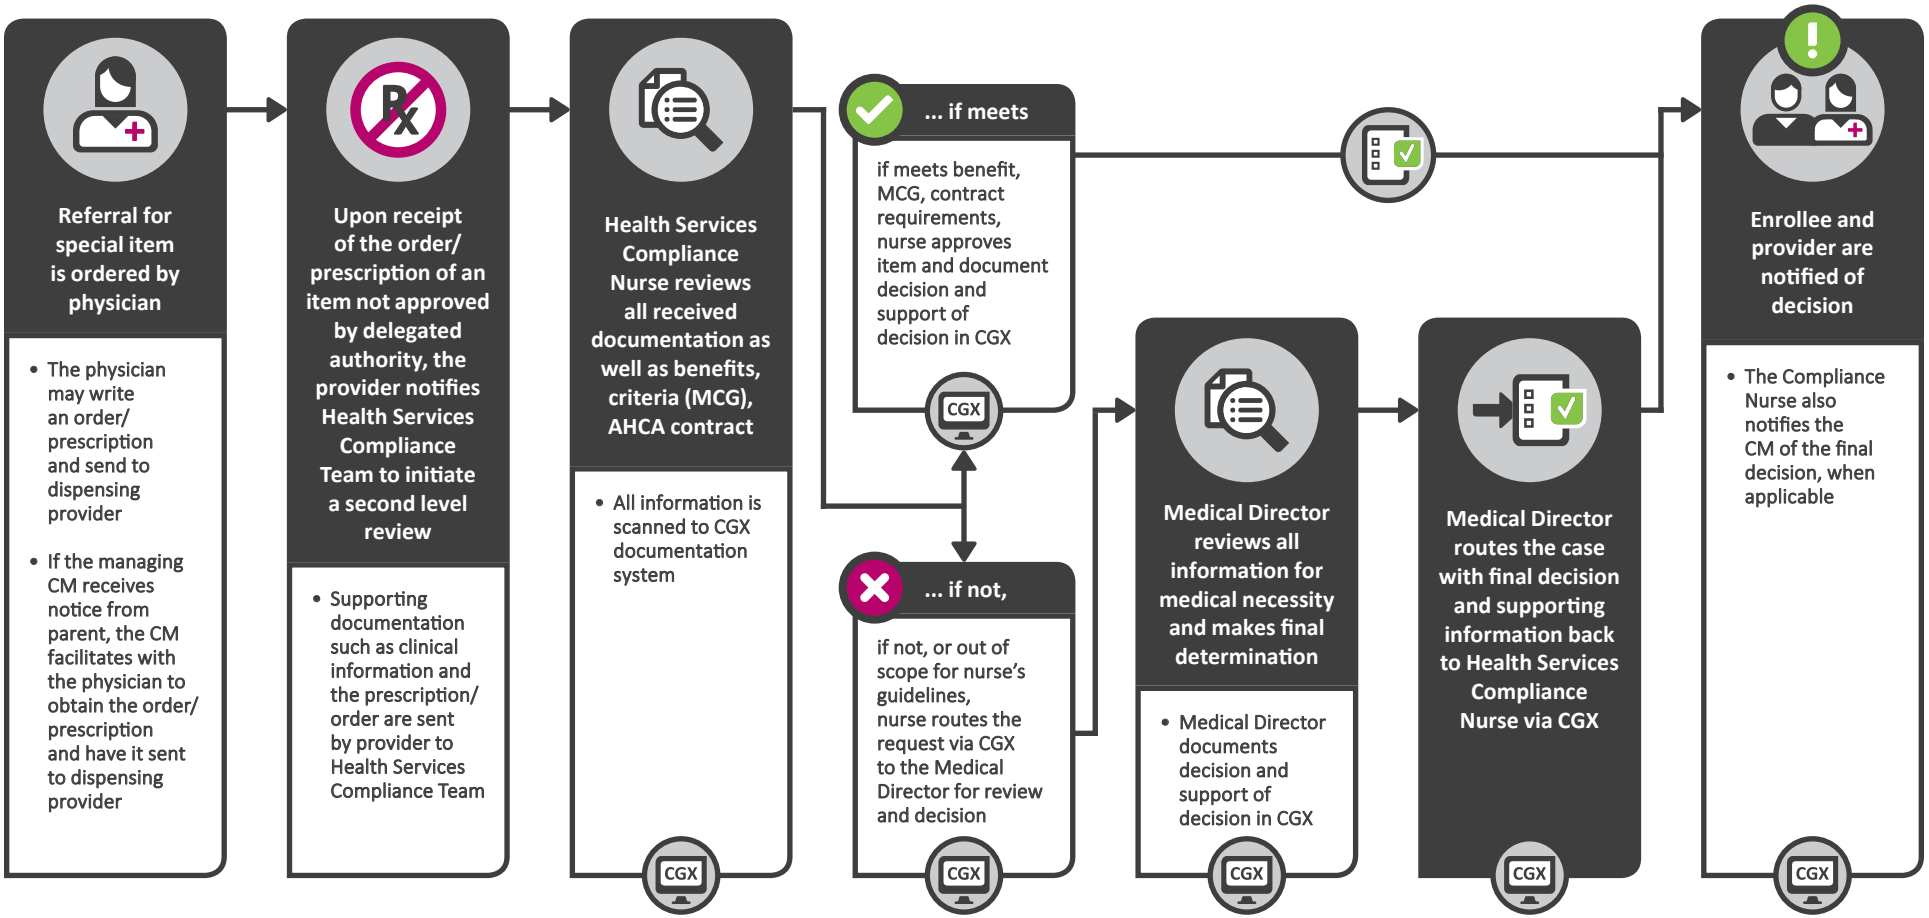
Attachment 22-4: Special Service Requests for Enrollees under the Age of 21

Humana ensures our youngest enrollees have access to the services they need; we honor all service requests that meet medical necessity for our enrollees under the age of 21. When processing special service requests for children under the age of 21, to ensure we are consistent with EPSDT requirements, we **only** deny services if they do not meet Florida's definition of medical necessity.

CM = Case Manager
CGX = Clinical Guidance eXchange
MCG® = MCG (formerly Milliman Care Guidelines)
CPCM = Complex Case Manager



Humana.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 23 – Behavioral Health/Primary Care Integration (Statewide):

The respondent shall describe its proposed approach in promoting integrated behavioral health and primary care models, including:

a. Identification of integrated models in various practice settings that have documented improved patient outcomes, patient satisfaction, and cost-effectiveness.

b. Identification of opportunities for improvement across the respondent's system of care (e.g., care management, provider network, utilization management, enrollee services) with the goal of advancing to more integrated care models.

c. Description of strategies the respondent will deploy to overcome the barriers/gaps identified to increase its capacity for providing integrated care models, including use of alternative payment models/financing strategies.

Response:

Historically, behavioral health (BH) and primary care have been fragmented, with limited coordination between primary care and BH providers. Evidence demonstrates that having multiple, mostly independent systems of care contributes to poorer health outcomes and higher costs. Although up to 80 percent (80%) of individuals with BH problems seek care in emergency departments (EDs) and primary care clinics, many primary care providers may lack the training needed to identify and treat BH needs. Additionally, individuals receiving treatment for a medical condition may develop a co-occurring BH need as a result of their medical condition (as the recent opioid epidemic in the United States demonstrates) and require specialized BH treatment. For those individuals who do receive treatment in behavioral health settings, they often do so in independent practices that have no formal referral processes with primary care settings. When patients are left to navigate the health system on their own, they may struggle to follow through with appointments, be unsure where to go for care, or feel uncomfortable or stigmatized seeking care outside of their normal BH or medical facility. As a result of these often separate and parallel systems, patient outcomes worsen and health care costs can skyrocket. Individuals with severe and persistent mental illness (SPMI) tend to die 25 years earlier than the general population, often due to untreated medical conditions. Additionally, the American Psychiatric Association found that spending for patients with co-occurring behavioral health needs is 2.5 to 3.5 times higher than for those without co-occurring needs, with most of that spending going to medical services [1].

Recognizing the benefit and necessity of integration to our enrollees, our providers, and the health system as a whole, Humana is committed to bringing integrated care to our network and care models in Florida. We place enrollees at the center of our system of care and support providers to introduce integration into their practices. In strengthening coordination and collaboration between providers and emphasizing integration throughout our system of care, we improve medication adherence and reduce BH or medical inpatient and ED visits, ultimately leading to better outcomes, higher quality of life, and lower avoidable costs.

Humana manages BH services in Florida Medicaid today through a longstanding integrated strategic partnership model, working with Beacon Health Options (Beacon) and Access Behavioral Health (ABH). This design enables us to implement best practices from each of our

partners' highly-specialized BH experience and capabilities in Florida and across the country. We have refined our BH partnership model over the years, continuously enhancing our operational and strategic integration points to become an increasingly cohesive organization. This ongoing effort will be further enhanced by AHCA's move towards a Comprehensive Plan model for the SMMC program. In our collective and joint experience serving Florida Medicaid enrollees, we have worked to overcome systemic challenges that affect the integration of BH and primary care, including providers' separate facilities and data systems. We will continue to pursue new opportunities to support providers' development of stronger primary and behavioral care integration, including an increased emphasis on community involvement, further integration of our BH partners into Humana's Clinical Guidance eXchange (CGX) platform, and the continued expansion of integrated telemedicine to serve enrollees with co-occurring needs in rural areas.

==========

1. The extent with which the respondent thoroughly describes its current approach to and readiness for promoting/incentivizing, and removing barriers to, integrating behavioral health and primary care throughout its system of care.

==========

Humana takes a person-centered, holistic approach to case management that encompasses all conditions enrollees may have. We work to bridge the BH, primary care, and social services divide by promoting communication and coordination among medical and BH case managers, primary care providers (PCPs), BH providers, enrollees with co-occurring conditions, caregivers, and community organizations. Our strategy, designed to incentivize and remove barriers to integration, is focused on three (3) key areas of our system of care:

1. Case Management
2. Enrollee Engagement and Care Planning
3. Integrated Care Continuum in our Provider Network

CASE MANAGEMENT

For those enrollees with complex medical, behavioral, or long-term services and supports needs, our innovative care team structure provides wrap-around support that covers all areas of their care, and helps the enrollee navigate the health system to access the services they need. This Multidisciplinary Team (MDT), led by a Humana case manager, encompasses a wide range of supports and integrates medical and behavioral expertise in support of the enrollee's care. Each MDT meets regularly to discuss enrollee needs and ensure proper service coverage. With the enrollee's consent, we facilitate open dialogue between behavioral and medical providers, with all providers invited to participate in MDT meetings.

Recognizing the unique needs of our enrollees, the frequency of coordination and discussion between medical and BH case managers is dependent upon the enrollee's needs and risk level, and is determined during the referral process. For enrollees with BH needs, a BH case manager supports the enrollee and medical case manager as part of the MDT, providing insight, condition-specific education, coordination with providers, and assistance with care planning, external resources, and referrals as indicated. At times, the enrollee's BH needs are more prominent - such as with enrollees who have conditions that are difficult to manage, such as

SPMI, schizophrenia, psychosis, or bipolar disorder. When these needs require more intensive case management, the MDT may agree that the BH case manager should lead the MDT process on behalf of the enrollee. These open lines of communication between case managers encourage increased collaboration, to the benefit of our enrollees with co-occurring disorders. Reflecting our person-centered, individualized approach to case management, our BH and medical case managers determine the type of collaboration that will most benefit each enrollee. This case management collaboration may include:

- Attendance at Humana case management meetings, as requested, to review goals and interventions, and to re-evaluate and update the enrollee's comprehensive care plan across physical and behavioral health issues

- Updates on enrollee adherence with treatment and after-care plans for both behavioral and medical conditions

- Identification of enrollees with multiple inpatient admissions or multiple ED visits for possible enrollment in additional case management

- Updates between case managers and healthcare providers on a regular basis. During the initial referral process, the referring party can indicate how often they would like updates on the enrollee's case

- Recommendations on care plan revision from the enrollee, case managers, and the enrollee's providers

- Receiving recommendations from the health care providers on next steps to improve the enrollee's health and well-being

- Providing updates based on agreed-upon timeframes, in line with the care plan

To facilitate this collaboration, we receive daily hospital inpatient census reports for Humana enrollees admitted for BH conditions. Humana case managers reference these reports to identify enrollees currently receiving or requiring medical case management who may be hospitalized for BH needs. Our BH case managers also provide weekly hospital discharge reports that provide Humana with a list of enrollees who were discharged in the previous week. In addition to discharge date and diagnosis, the report includes the provider name and date and time of the scheduled follow-up appointment. This data-sharing prompts follow-up from both medical and BH case managers to ensure that the enrollee receives the appropriate post-discharge care and support, including an appointment with the provider within seven (7) days of discharge and linkage with any necessary social services and community resources that can reduce the likelihood of re-admission.

With the collective experience and expertise of our clinical team, we are equipped to comprehensively and successfully manage even the most complex needs of our enrollees. Our regular, interdisciplinary Medical Advisement meetings give our medical and BH case managers a venue to seek physician advice or consultation on specific cases from across our entire organization. This interdisciplinary approach ensures that we are addressing all aspects of our enrollees' needs and goals to support a holistic approach to our enrollees' needs. Specifically, the Medical Advisement program provides an opportunity to:

- Assist with assessment, planning, facilitation, advocacy, and care coordination for enrollees

- Review the enrollee's clinical status to determine opportunities for improved coordination with the MDT, ongoing care and support needs, and connection to community resources

- Facilitate evidence-based recommendations for optimal case management planning

- Help develop an actionable case management plan or obtain clarification on direction to take within that plan

- Review identified barriers or gaps in care and identify ways to overcome these barriers to help improve an enrollee's care plan (e.g., using injectable, long-lasting medications to help enrollees with SPMI better adhere to their medications).

ENROLLEE ENGAGEMENT AND CARE PLANNING

Once an enrollee is identified to participate in case management, the MDT begins the process of engaging the enrollee in case management services, completing a comprehensive assessment of the enrollee's needs, and as a result, developing a person-centered, individualized plan of care (POC).

Our treatment planning processes do not seek to impose a prescriptive or "one size fits all" approach to our enrollees' care. Rather, we take the time to develop POCs that are built around the unique needs and goals of each individual we serve. For enrollees with co-occurring disorders who are enrolled in case management, our primary care and BH case managers participate in concurrent case management reviews and collaborate on the review of the enrollee's POCs with their providers.

For enrollees who receive comprehensive MMA and LTC services, this integration extends to their long-term care needs and benefits. Our innovative model of care includes the joint participation of primary care and BH providers on enrollees' MDT, facilitating the discussion of enrollees' needs in a holistic manner. The MDT is updated to include additional enrollees and key participants as enrollee needs change.

The health assessments conducted by both our medical and BH case managers encompass the enrollees' behavioral health, medical, and long-term services and support needs. In addition, we assess other aspects of enrollees' lives that influence their health, such as their natural support systems, access to community resources, and social determinants. The comprehensive nature of our assessments allows us to more quickly detect co-occurring conditions among our enrollees, and use these results to inform the POC and to request further screenings, assessments, and referrals that meet each enrollee's unique needs and goals.

Upon completion of the initial assessment, the medical case manager collaborates with the enrollee, their family or caregivers, the BH case manager, and the enrollee's primary care and specialty providers to develop a POC that encompasses all medical, BH, and long-term services required by the enrollee. This plan includes:

- Short-term goals to address the acute or immediate health status of the enrollee
- Long-term goals to achieve sustained health improvement and optimal health status
- Interventions planned to meet these goals
- Timeframes for re-evaluation (follow-up) and assessment of progress against the POC
- Identification of barriers to meeting goals, or complying with the POC
- Resources to be utilized to assist the enrollee in achieving short- and long-term goals
- Collaborative approaches for facilitating implementation of the POC, including coordination between medical and BH case managers

INTEGRATED CARE CONTINUUM IN OUR PROVIDER NETWORK

We support a continuum of innovative provider engagement models that facilitate integrated primary and behavioral health care. Recognizing that providers in our network have varying levels of readiness to engage in integrated arrangements, this spectrum allows us to engage all providers in an integration model that is appropriate for their current capacities while supporting them to move along the continuum towards more complex arrangements. This continuum is depicted in Attachment 23-1, and includes the following integration models, arranged from least to most integrated:

- Traditional Primary Care and BH Arrangements: In this traditional model, providers are only responsible for the services delivered within their practice. Humana encourages increased integration of primary and BH care in this model through support for screening, diagnosis, and treatment of less serious mental illnesses among PCPs, and identification of and referral to primary care services by BH providers, including Community Mental Health Centers (CMHCs).

- Value-Based Payment (VBP) Integration: The goal of our VBP arrangements is to improve quality and outcomes while reducing avoidable costs. In order to achieve this goal, both primary care and BH providers are incentivized to take greater accountability for our enrollees' entire spectrum of needs, including those that they may not treat themselves. Payments are linked to their performance on a range of outcome measures, including ED visits and inpatient admissions for both medical and BH issues.

- Formalized Partnership: Primary care and BH providers in this model sign Humana's Collaborative Care Agreement to improve coordination and communication between their practices. This agreement provides a framework for better communication and safe transitions of care between PCPs and BH providers. PCPs and BH providers agree to share consultation notes and other data about their patients in a HIPAA-compliant manner and with the permission of enrollees.

- Co-Location: In the co-location model of integration, PCPs and BH providers are co-located at the same facility. We recognize that transportation and time constraints are real challenges for many Medicaid enrollees, and co-location helps enrollees adhere to their primary care-to-BH referrals. In addition to facilitating seamless referrals, co-location models encourage regular collaboration and data sharing between providers to support care coordination for enrollees with co-occurring conditions.

- Fully-Integrated Health Home: In the fully-integrated health home model, our providers build upon the co-location model to provide wrap-around services that support enrollees using a

team-based approach. These services include: comprehensive case management; care coordination and health promotion; comprehensive transitional and follow-up care from inpatient to other settings; individual and family support; referral to community and support services; and use of health information technology to link services.

- Comprehensive Health System: The final integration model on Humana's continuum of programs is built around health systems that include both PCPs and BH providers. Just as in the fully-integrated health home model, health systems often have many different provider types co-located at the same site. The key difference in the health system model is that primary and BH providers are part of the same overarching provider group. As a result, primary and BH providers are fully integrated, with systems and processes designed from the ground-up to support full integration across all services offered. This model allows our enrollees to truly use a "one-stop shop" for all of their health care needs.

==========
2. The extent to which the respondent provides examples of more effective integrated models within its provider network that have documented improved patient outcomes, patient satisfaction, and cost-effectiveness. The respondent must also describe the data sources.
==========

Humana works proactively with our provider network to develop the capabilities and partnerships that will enable them to deliver integrated care. We provided a brief summary above of our integrated care continuum and will provide further detail in this section, including examples from our current provider network. Using transactional electronic claims data, we are able to track patient outcomes for our providers engaged in these models. Additionally, as detailed below, our provider network collects data from a variety of sources, including pre- and post-surveys and medical record reviews, to provide data on patient outcomes, patient satisfaction, and cost-effectiveness.

Our continuum includes:
1. Traditional primary and BH arrangements
2. Value-based purchasing
3. Formalized partnerships
4. Co-location models
5. Fully-integrated health homes
6. Comprehensive health systems

TRADITIONAL PRIMARY AND BH ARRANGEMENTS

We recognize that not all network providers are prepared to engage in a more sophisticated integration model. Humana is committed to supporting our network providers who operate under traditional arrangements to advance primary care and behavioral health integration, while providing incentives for them to move along the integration continuum into more advanced models of integration.

In the traditional arrangement of primary care and behavioral health, providers largely operate within their own area, with only limited data sharing and periodic communication with providers outside of their practice. We believe that even in this traditional model, PCPs and BH providers

can do more to support integration. We provide the tools and support that our providers need to deliver integrated care for our enrollees, including:

- Joint Visits: Humana Provider Relations representatives conduct joint visits with representatives from our BH partners to educate PCPs on BH measures, including how to drive improvement, and how to undertake appropriate referrals for BH services. For example, these visits are used as an opportunity to support PCPs to implement the Screening, Brief Intervention, and Referral to Treatment (SBIRT) approach for substance abuse. This model of treatment is designed to support PCPs in screening for substance abuse and provide brief interventions that are tailored to the needs of the patient. For those deemed to be at a moderate level of risk, the PCP is empowered to use motivational interviewing techniques to raise awareness of the condition and encourage behavior change. Additionally, the PCP may provide further assessment, education, and coping mechanisms. For those patients who are determined to be at high risk, the PCP provides a referral to a BH provider.

- Toolkits: With the right information and training, PCPs can screen enrollees for BH conditions and provide appropriate referrals. PCP toolkits provided by our BH partners (Attachment 23-2 and Attachment 23-3) in hard copy and online contain resources, contact information, diagnostic and prescribing references, and information on how to bill for BH services provided by PCPs. In addition, PCPs can share fact sheets and self-management strategies from the toolkits with enrollees. These toolkits also include behavioral health screening tools that are specifically designed for the primary care setting, including the Patient Health Questionnaire (PHQ-9) for depression; the CAGE to screen for alcohol abuse; the CRAFFT for adolescent substance use; the Edinburgh Postnatal Depression Scale for postpartum depression; and the Generalized Anxiety Disorder 7-item (GAD-7) scale for anxiety disorders. All screening tools are also available on our behavioral health partners' websites for 24/7 access.

- Model Protocols for Collaboration: PCPs and BH providers who do not have experience with integrated models may be unsure of how to initiate a collaborative relationship. Therefore, in addition to face-to-face support offered by our Provider Relations representatives, we also provide model protocols to our PCPs and BH providers that describe how they can consult with one another and conduct joint clinical reviews.

- Consent Forms and Registries: Respect for our enrollees' privacy and confidentiality is of utmost importance. Therefore, we provide sample forms and protocols to our providers to secure consent from their patients to allow communication between PCPs and BH providers. We also provide sample registries to help providers identify and track enrollees who are affected by one or more chronic conditions.

- Case Consultation: We operate toll-free hotlines through which PCPs consult with a board-certified psychiatrist about BH issues, including psychopharmacology, treatment alternatives, and when to refer for a psychiatric assessment. Additionally, our case managers and PCPs contact licensed BH clinicians, employed by our BH partners, to obtain short-term case consultation services, including referrals for further treatment.

- Community Engagement: To further promote education for PCPs on referrals for BH services, our BH partners participate in county-wide monthly meetings. These meetings include BH providers, medical providers, school systems, faith-based groups, and representatives from child welfare, the court system, and juvenile justice. The goal of these meetings is to ensure that

there are no gaps in coordination of care between behavioral and medical providers. These monthly meetings are accompanied by quarterly regional meetings that promote sharing across counties.

To measure collaboration between PCPs and BH providers in traditional arrangements, our quality teams assess the frequency of communication between enrollees' medical and BH providers through medical record audits. During regular monitoring visits of our BH providers, staff check for evidence of communication, including evidence of an assessment of any medical diagnoses, signed information releases allowing practice staff to contact the enrollee's other providers, and records of conversations with PCPs or other providers. These results are then trended and presented to BH providers to review their performance and to ensure that the integration of primary and behavioral health care is promoted. Additionally, during our regular Joint Operating Committee meetings between Humana and our BH partners, we review the results of these medical record audits and discuss possible avenues for supporting and improving integration between providers.

VALUE-BASED PURCHASING INTEGRATION

Our VBP models are designed to improve health outcomes by incentivizing providers to take more accountability for the full spectrum of our enrollees' care, including primary and behavioral health. More than 167,000 of our Florida Medicaid enrollees are attributed to PCPs in Global Risk arrangements. Ten (10) of our largest BH providers are contracted through VBP arrangements as well. These arrangements range from quality rewards programs to capitated arrangements in which providers assume global risk.

Most of our Florida Medicaid enrollees' PCPs are now engaged in global risk arrangements. In global risk arrangements, rather than reimbursing providers on a fee-for-service basis, PCPs and specialists receive a single capitated monthly payment to manage the care of our enrollees. This model incentivizes PCPs to reduce preventable events, such as hospital admissions, through proactive and preventive care. As a result, PCPs in global risk arrangements work closely with BH providers to ensure enrollees adhere to referrals and treatment plans for co-occurring conditions.

Using our claims data, we are able to assess our providers' performance under various risk arrangements. This data demonstrates that Humana's Florida Medicaid providers in "Full Value" risk arrangements outperform their non-risk counterparts in terms of quality, outcomes, and cost. In 2016, the risk providers had significantly higher quality scores on metrics related to preventive health, well child visits, and diabetes management. As a result of their strong performance, these providers also have strong outcomes – Humana's Florida Medicaid risk providers are averaging twenty-five point three percent (25.3%) fewer emergency department visits per one thousand (1,000) enrollees and seventeen point four percent (17.4%) fewer hospital admits per one thousand (1,000) enrollees. By reducing preventable events like these and helping enrollees access care in appropriate settings, Florida risk providers have fourteen point seven percent (14.7%) lower inpatient medical expenses and reduce pharmacy expenses by eleven point four percent (11.4%).

As one example of a VBP arrangement supporting integrated care in our current network of Florida Medicaid providers, Humana has a Global Risk VBP arrangement with Pediatric

Associates, a practice with locations in Broward County, Jacksonville, Miami-Dade County, Palm Beach County, St. Lucie, and Tampa. More than fifty-six thousand (56,000) of our Florida Medicaid enrollees are attributed to Pediatric Associates providers. The Global Risk arrangement encourages providers to screen for behavioral health conditions among our enrollees, such as Attention Deficit/Hyperactivity Disorder (ADHD). Pediatric Associates providers screen enrollees for this condition, provide guidance on parenting, school performance, and treatments (both those with and without medication), and offer a host of resources on its website for parents about ADHD and its management. This Global Risk arrangement complements and strengthens Pediatric Associates' formalized partnership with Chrysalis Health for BH referrals and data-sharing, the next step on our continuum.

FORMALIZED PARTNERSHIPS

In the Formalized Partnerships model, provider groups sign a commitment to one another, agreeing to share enrollees' consultation notes and test results on an ongoing basis to facilitate improved integration of primary care and BH services. Patient-centered medical homes (PCMHs), with their capabilities to provide supportive services that help our enrollees navigate the health system, are well-suited for this integration model; as such, Humana encourages them to sign Collaborative Care Agreements with key local BH providers, and has a team in Florida that is delegated to help providers obtain PCMH certification. Attachment 23-4 contains a sample Collaborative Care Agreement.

Chrysalis Health, a behavioral health treatment provider in our network that serves children and adults throughout the state of Florida, has a formalized partnership with Pediatric Associates, the largest provider of pediatric health care in the United States. As more than eighty percent (80%) of Chrysalis's patients are under the age of twenty-six (26), this partnership facilitates integrated physical and behavioral health care for children and young adults. Joint policies permit pediatricians to manage mild and low-risk behavioral health needs, while the behavioral health needs of enrollees who are moderate and high-risk are managed by a psychiatrist. The formal partnership forged by Chrysalis Health and Pediatric Associates includes:

- Primary-behavioral care coordination
- Integrated electronic health records
- Integrated treatment planning
- Psychiatric consultation for physicians
- Shared assessment tools
- Shared responsibility for managing medical and behavioral health
- Protocols for regular communication
- Joint policies for collecting, sharing, and reporting joint outcomes
- Warm hand-offs from behavioral health when stabilization is achieved

All outcomes from this partnership are stored in Chrysalis Health's electronic health records, and include data collected from pre- and post-testing; Daily Living Activities scores; treatment plan goal completion; reports from clients, guardians, and providers; and any other information collected from health plans and other partners. Outcomes from calendar year 2016 include:

- Seventy-five percent (75%) of patients improved their condition and/or symptoms during the course of treatment

- Sixty-two point seven (62.7%) of patients eliminated substance use, and twenty-three point nine (23.9%) reduced use

- Ninety-five (95%) of patients were free from psychiatric hospitalization while receiving services

At several sites, Chrysalis Health and Pediatric Associates have even co-located to offer primary and behavioral health at the same location. This co-located model represents the next progression on our Integrated Care Continuum.

CO-LOCATION

In the co-location model, PCPs and BH providers work together at the same location. This model has several benefits, including: reduced travel and wait times; greater routine health maintenance; seamless coordination of medical and BH care; and establishment of a relationship with a PCP for our enrollees with BH needs. Co-location supports both the addition of BH providers to primary care settings, and the addition of PCPs to BH settings. There is robust evidence that for individuals with depression and anxiety disorders, integration of behavioral health into primary care settings (with the PCP serving as the primary provider) is an effective pathway to better care and treatment for both medical and behavioral health conditions. For those individuals with SPMI or substance use disorders (SUD), the integration of primary care into behavioral health settings (with the BH provider serving in the primary provider role) serves as a more effective model of care, as these individuals may encounter difficulty in juggling multiple appointments or fear stigma outside of the BH clinic. We seek to include both of these models in our provider network.

Our network today demonstrates the feasibility and success of the co-location model. Chrysalis Health and Pediatric Associates, have co-located to jointly offer primary and BH services at several sites. Gracepoint, an integrated community mental health center serving our enrollees in the Tampa Bay area, co-locates staff within the Florida Hospital ED. By screening individuals under the Baker and Marchman Acts, which govern involuntary admissions of persons with BH needs in Florida, while they are in the ED, Gracepoint's staff can ensure that our enrollees receive the care they need more quickly. Additionally, Gracepoint's Care Coordination Team (CCT) coordinates behavioral and medical services for high utilizers, engaging these individuals in Gracepoint's Central Receiving Facility (CRF), as well as the Crisis Stabilization Unit, Detox, hospital ED, and the community. Gracepoint has tracked outcomes for those patients who received services from the CCT. There was a decrease from eighty-eight (88) CRF admissions pre-CCT intervention to sixty (60) CRF admissions post-CCT among enrollees who were discharged from the CRF between December 2016 and April 2017. This was accompanied by an estimated fifty-two percent (52%) reduction in costs for these patients, based on actual submitted claims for all funding sources.

We plan to pursue the credentialing of at least one BH therapist in all Federally Qualified Health Centers (FQHCs) in accordance with guidelines issued by the Centers for Medicare and Medicaid Services. In our current network, Escambia Community Clinic (ECC), a leading FQHC in region 1, has adopted the co-location model. Today, ECC's main clinic in Pensacola employs a Licensed Clinical Social Worker (LCSW) and a Family Psychiatric-Mental Health Nurse Practitioner to provide behavioral health care. Two of ECC's pediatric clinics have added a

LCSW to work with children and families. Chautauqua Health Care Center, also in Region 1, has placed a LCSW in the Walton County Health Department to see Humana enrollees while they are receiving medical services.

To expand access to primary care for individuals with SMI or SUD, and reduce barriers to diagnosis and treatment of medical needs, some of our BH providers have integrated medical clinics into their locations. Lakeview Center CMHC in Region 1 has partnered with ECC to bring on-site medical care into their main center and their clinic in Century. A medical nurse practitioner employed by the Peace River Center (PRC) in Region 6 provides medical services for individuals at New Beginnings Transitional Housing and Substance Use Recovery Program for Men operated by Tri-County Human Services in Polk County. Additionally, PRC provides licensed BH therapists who work at medical centers around Region 6, including Lakeland Regional Health, Family Practice Clinic; Florida Department of Public Health – Polk County Medical Clinics; Lakeside Pediatrics; and Lakeland Pediatrics. In all of these arrangements, PRC's co-located staff use electronic health records and provide summary reports and data on the care they provide to the medical or behavioral health clinic's staff, in compliance with HIPAA requirements.

FULLY-INTEGRATED HEALTH HOME

Fully-integrated health homes provide comprehensive, coordinated care for Medicaid enrollees who have complex needs, including co-occurring medical and behavioral health conditions. Moving beyond simple co-location of providers, this approach provides patient-centered care through a team of professionals who span different areas of health care system, with a focus on case management, community referrals, and wrap-around supports for the enrollee and their family. Fully-integrated health homes have often added case managers and social workers to provide this extra care for our enrollees. These individuals play a crucial role in helping our enrollees navigate the health system for both their medical and behavioral health needs.

Two examples from our current provider network demonstrate the value of the fully-integrated health home model in caring for enrollees with co-occurring conditions. In Region 6, Peace River Center operates a comprehensive, integrated behavioral health home serving Polk, Highlands, and Hardee Counties. PRC's BHH model provides both BH and primary care services, supported by care management, care coordination, health and wellness assessments and promotion, transitional care, individual and family support, and referral to community and social services, as needed. While mainly operating as a BH service provider, PRC also employs medical nurse practitioners and internal medicine physicians who provide medical and behavioral health services to PRC clients. To support integration and communication throughout the health home, PRC uses electronic health records for all documentation.

In Region 10, Henderson Behavioral Health has incorporated on-site PCPs for integrated primary care through the HILL (Helping Individuals Live Longer) Project. The HILL Project provides primary medical care and wellness activities to enrollees who receive services at Henderson Behavioral Health and serves as their health home. This model of service provides medical exams, lab tests, coordination of follow-up medical services, and an onsite wellness program. The program adheres to the principles of informed choice, recovery-focused and person-centered care and incorporation of evidence-based practices in routine care. The focus

of HILL Project service delivery is a person-centered, integrated approach to the medical care of enrollees with BH needs.

THE GOALS AND OBJECTIVES OF THE HILL PROJECT ARE TO:

- Increase the delivery of a coordinated array of medical, self-help, social, supportive, and rehabilitative services designed around the needs and desires of the individual.

- Improve the physical health of individuals with SPMI who are at-risk for co-occurring behavioral health and primary care conditions.

- Assist enrollees in taking an active role in their health and well-being.

- Assist in the coordination of primary, specialty, and behavioral health services.

- Increase individual and family input and participation in the recovery planning process.

THE SUPPORTS AND SERVICES PROVIDED BY THE HILL PROJECT INCLUDE:

- Primary Medical Care - A primary care physician and medical assistant are available one day per week at each of the adult outpatient facilities. Their focus is on assessing, diagnosing, and reducing the symptoms of primary medical issues, and making referrals for specialty care and wellness activities.

- Care Coordination - Every effort is made to coordinate the primary medical appointment with ongoing Henderson psychiatric, rehab, or case management services, as well as assisting individuals to link with specialty care services in the community as needed.

- Peer Support Wellness - The peer support specialist assists enrollees with their wellness by providing individual coaching and support to implement change strategies that improve healthy living habits. Smoking cessation, healthy eating habits, exercise, and healthy living groups are scheduled throughout the year for participants in the program.

- Integrated Services - Primary services are coordinated with outpatient BH services.

At each visit, Henderson BH collects data on each individual served through the HILL Project, including blood pressure, body mass index, waist circumference, breath carbon monoxide, fasting plasma glucose or HgbA1C, and cholesterol. In addition, behavioral health and substance use screening results are tracked over time for evidence of changes in risk factors. These results demonstrate the feasibility and impact of the integrated health home model. These data were aggregated to Henderson BH's reporting as a condition of its grant from the Substance Abuse and Mental Health Services Administration to launch the HILL Project [2].

- Of the participants who assessed for behavioral health and substance use risk factors that impact overall health, ninety-two percent (92%) reported stability in risk factors or demonstrated improvement in one or more factor.

- 81% of individuals seen during this reporting period demonstrated stability in healthy ranges or improvement in blood pressure readings.

- 85% of individuals seen during this reporting period demonstrated stability in healthy ranges or improvement in A1c readings, an indicator of blood glucose readings over time.

- 70% of individuals seen during this reporting period demonstrated stability in healthy ranges or improvement in cholesterol readings.

- During the first half of this grant period, the HILL Project has a retention rate of 93%, reflecting patient satisfaction.

COMPREHENSIVE HEALTH SYSTEM

In the Comprehensive Health System model, PCPs and BH providers operate under the umbrella of a single health system. With fully integrated services and fiscal accountability, the comprehensive health system model represents the most advanced version of integration. With one health system responsible for all facets of the enrollee's medical and BH care, providers use the same information systems and engage in regular dialogue and discussion to manage the enrollee's case in a holistic manner.

Citrus Health Network, both a community mental health center and Federally Qualified Health Center (FQHC), is an example of a comprehensive health system in our current provider network. While Citrus Health was founded to serve individuals with mental and behavioral health conditions, they have expanded their services to include primary care and social services in order to deliver a truly holistic approach. Today, Citrus Health employs PCPs and BH providers, who work side-by-side in several locations across South Florida to provide integrated care. This arrangement to integrate behavioral health has led to strong clinical quality performance. According to data from the Health Resources and Services Administration, in both 2015 and 2016 for example, Citrus Health was in the top-ranked quartile of national health centers across disease management measures related to diabetes management, controlling high blood pressure, and coronary artery disease [3]. In addition, Citrus Health increased the percentage of patients who were screened for clinical depression and had a follow-up plan from nineteen point one percent (19.1%) in 2015 to seventy-six point nine percent (76.9%) in 2016 [4].

==========
3. The extent to which the respondent identified opportunities for improvement in delivering an improved integrated care model and subsequent steps the respondent will implement across its systems to increase capacity for providing integrated care.
==========

In addition to the provider arrangements described above, our experience implementing an integrated care model in Florida has helped us to identify opportunities for improving the delivery of integrated primary care and BH services across our system of care. Humana is committed to continuous self-evaluation and improvement of our operations, with the goal of providing the best experience for our enrollees. To this end, we collaborate with our community partners through our Medicaid Advisory Panel, community events, and stakeholder listening tours to gain their insight and input into our integrated care model, and to identify opportunities to better meet the BH and medical needs of our enrollees. Under the next contract, we will draw upon our lessons learned, strong provider network, and partnerships with stakeholders to

continue delivering innovations that increase our capacity for providing integrated care. Specifically, we have designed initiatives to respond to the following identified opportunities for improvement:

- Medical and Behavioral Integration in Community Settings
- Improving System Capabilities
- Training for Providers and Humana Associates to Support Primary Care and BH Integration
- Integrated Care Teams Across our Comprehensive Plan
- Telemedicine to Improve Access to Behavioral Health Services in Rural Areas

MEDICAL AND BEHAVIORAL INTEGRATION IN COMMUNITY SETTINGS

BRINGING CARE COORDINATION TO SCHOOLS

The average school counselor ratio per student in low-income communities is three (3) times the federal guidelines; at the same time, four (4) in ten (10) students have a behavioral health disorder. In collaboration with the largest school districts in Florida, we will support Motivational Coaches of America (MCUSA) to place trained Service Members on school campuses to initiate multi-tiered support systems targeting student behavioral and academic early warning indicators. Trained coaches work on school campuses all day for one hundred eighty (180) academic days, providing a mix of evidence-based interventions, prevention, and primary care coordination for Humana enrollees with identified behavioral health needs. Humana is exploring an enhancement of this program by assigning a primary care provider to visit the schools with MCUSA and deliver truly integrated behavioral and primary health services.

MCUSA's proven model has demonstrated significant improvements in school campus climate and culture in five key areas: improved attendance, reductions in disciplinary referrals, increases in instructional time, improved school safety, and greater child-school connectivity.

- 98% improvement in submitting homework assignments
- 93% improvement in parent/child relationships
- 88% decrease in self-harming behavior
- 97% decreases in rates of alcohol and substance abuse
- 87% increase in school engagement
- Additional 60,000 days of attendance in one school district in the 2015-16 school year

This innovative school-based program will allow us to meet our enrollees where they are, and to deliver services that address their social, behavioral, and wellness needs in a holistic manner. Through our partnership with Motivational Coaches of America (MCUSA), we will expand our school-based behavioral health care presence to serve Humana enrollees ages six (6) to twenty (20) in Miami-Dade, Palm Beach, Escambia, Orange, Duval, Hillsborough, Pasco, Broward, Jefferson, and Clay counties. By incorporating primary care, we can enhance the program and integrate primary and behavioral health.

SUPPORTING THOSE WITH SPMI THROUGH ASSERTIVE COMMUNITY TREATMENT

Individuals with SMI may struggle to keep appointments, adhere to their medications, and obtain medical care, due to their condition. These difficulties can be compounded by homelessness, food insecurity, and a multitude of other challenges that they encounter in their day-to-day lives.

To better support these enrollees and engage them in both medical and behavioral health care in an integrated model, we employ the Florida Assertive Community Treatment (FACT) approach. The FACT program provides the care, coordination, and community support that our enrollees need to live successful, healthy lives. By focusing on basic needs, including housing, medical care, and income, enrollees are empowered to address their BH needs and adhere to treatment. FACT uses a team model, comprised of psychiatrists, nurses, social workers, substance abuse treatment specialists, vocational rehabilitation counselors, and peer counselors, covering all aspects of enrollees' needs. Using this team-based approach, FACT reaches enrollees in the community and helps them to obtain medical care and cope with life's day-to-day demands. Under the next contract, we will continue to apply and expand this approach to coordinate integrated care for our enrollees with the most complex behavioral health needs.

IMPROVING SYSTEM CAPABILITIES

Lack of data can often be an impediment to the improved integration of behavioral health and primary care services. By bridging this data gap, we can support PCPs and BH providers in our network to better monitor and coordinate care for our enrollees with co-occurring conditions. For example, by informing our PCPs of BH admissions among their patient panel, we empower our medical providers to follow-up with enrollees and ensure that they see their BH provider upon discharge, decreasing re-admissions. Additionally, with the right information, our PCPs and BH providers are enabled to jointly help enrollees who are taking medications for psychiatric conditions to adhere to the medication and manage any medical side effects. For example, through our Antidepressant Medication Management quality initiative, we provide PCPs and BH providers with a monthly action list containing contact information for those enrollees prescribed antidepressants who are due for a follow-up visit.

Today, we receive automated, daily inpatient census reports and weekly discharge reports for our enrollees admitted for BH inpatient care. These reports provide Humana's clinical teams with updated information about our enrollees' date of admission and treating physician. We use this information to both track enrollee utilization and to identify clinical aftercare programs that may be beneficial to enrollees post-discharge. With the enrollee's permission, we share this discharge information with their medical and BH providers to encourage further follow-up.

To further close this information gap between our medical and behavioral health case managers, we will build out our Behavioral Health Clinical and Case Management capabilities in our CGX system during 2018. In addition to our standing meetings and daily census reports, this integration will enable both our medical and behavioral health case managers to obtain a seamless view of our enrollee's needs, including their providers, care plans, and contact information, leading to better communication, coordination, and integration for our enrollees with co-occurring medical and behavioral health needs.

IMPROVING TRAINING FOR PROVIDERS AND HUMANA ASSOCIATES

PCPs are often the first line of care for our enrollees, and their main point of interaction with the health care system. Therefore, it is essential that all PCPs, including pediatric PCPs, are

equipped with tools and knowledge to identify BH conditions and refer to the appropriate providers. We will continue our ongoing initiatives to deliver provider support and training for improved integration of BH and primary care, including our joint site visits with BH partners, while growing our approach to incorporate best practices and evidence-based approaches.

To help our own associates understand interplay between primary and behavioral health services, along with the social determinants that impact enrollees' health, we utilize a training course called "Medicaid – Closing the Gaps." This training will be integrated into our associate on-boarding in Florida. The course defines social determinants of health, calls attention to various environmental, cultural, and social challenges that may impact our enrollees and their abilities to engage in health management, and discusses how we can take these into account when we are designing new programs, talking to our enrollees, coordinating care, building systems, and more.

OPERATING AS A COMPREHENSIVE PLAN

Through our experience as a Comprehensive Plan, we have developed unique capabilities to support the integration of primary care and BH. Coordinating enrollees within a comprehensive plan design which incorporates medical, behavioral, and LTC benefits helps us identify enrollees with BH care needs and provide integrated, comprehensive care. Our MDT approach facilitates communication and reduces fragmentation between Humana's case managers, BH case managers, providers across all specialties, and the enrollee, ensuring that the full spectrum needs are accommodated.

We are prepared to facilitate service delivery for comprehensive enrollees with BH needs. For example, enrollees diagnosed with a SPMI who reside in an Assisted Living Facility (ALF) may require additional care coordination support to ensure access to behavioral health services. Our BH partner, Beacon Health Options, was selected by AHCA to join with Apalachee Center and the President of the Florida ALF Association to establish meetings throughout the State of Florida to work with health plans, providers, ALF owners, and managing entities to develop a System of Care for enrollees with SMI living in ALFs. The intimate involvement of our BH partner in the development of the System of Care will ensure that our processes to integrate and coordinate care for these enrollees reflect best practices in the state, while facilitating improved collaboration with ALF providers and owners.

SUPPORTING INTEGRATION IN RURAL AND UNDERSERVED AREAS THROUGH TELEPSYCHIATRY

Humana will continue its investment in expanding the reach of telepsychiatry services. We see an opportunity to integrate primary and behavioral health services by supporting PCPs who are interested in building telepsychiatry capabilities in their practices. Telepsychiatry also provides an opportunity to improve coverage of BH services in rural and other underserved areas. By allowing PCPs and enrollees to quickly and easily access services from a licensed psychiatrist that are equivalent to in-person care in diagnostic accuracy, treatment effectiveness, and patient satisfaction (according to the American Psychiatric Association), we can meet the behavioral health needs of our enrollees in a timely, low-cost manner. Additionally, telepsychiatry can be used as an avenue to answer the PCP's questions, further integrating primary care and

behavioral health. In our network today, over 650 of providers in our current BH network are authorized to provide telemedicine service. Some of these providers include Lakeview Center CMHC and Chautauqua Healthcare Services in Region 1; BayCare in Region 6; and Changing Tree Wellness Center in Region 9.

To extend the reach of our current telepsychiatry capabilities, we will continue to expand our network of providers who are authorized to provide telepsychiatry. Additionally, Humana will adopt the Project ECHO model. This model revolutionizes how community providers manage specialty health conditions, such as substance use disorders, with the goal of disseminating knowledge previously held only by specialists. Through this model, community-based providers are better equipped to treat specialty conditions, particularly in those areas where access to care is limited. To bring this model to our enrollees in Florida, we will establish specialist teams, known as ECHO hubs, who will be linked with primary care or other community clinicians through interactive videoconferencing. Initially focusing on those enrollees with opioid use disorders, this hub would be led by a senior psychiatrist and addictionologist, along with an interdisciplinary team of providers, including a pharmacist, nurse, behavioral health counselor, and a peer. This approach would result in expanded access to ambulatory treatment, with a focus on Medication-Assisted Treatment (MAT); improved knowledge and skills among community practitioners, equipping them to treat opioid use disorders with MAT; and improved integration of BH treatment in primary care settings.

Evaluation Criteria:

1. The extent with which the respondent thoroughly describes its current approach to and readiness for promoting/incentivizing, and removing barriers to, integrating behavioral health and primary care throughout its system of care.

2. The extent to which the respondent provides examples of more effective integrated models within its provider network that have documented improved patient outcomes, patient satisfaction, and cost-effectiveness. The respondent must also describe the data sources.

3. The extent to which the respondent identified opportunities for improvement in delivering an improved integrated care model and subsequent steps the respondent will implement across its systems to increase capacity for providing integrated care.

Attachment 23-1: Continuum of Primary Care and Behavioral Health Integration

Humana supports a continuum of innovative provider engagement models that facilitate integrated primary and behavioral health care. Recognizing that providers in our network have varying levels of readiness to engage in integrated arrangements, this spectrum allows us to engage all of providers in an integration model that is appropriate for their current capacities while supporting them to move along the continuum towards more complex arrangements. This continuum is depicted below.

Beacon Health Options' PCP Toolkit

A Resource for Identification, Screening, Treatment and Referral of Members with BH conditions

Beacon is committed to leading the integration of medical and behavioral health services to improve patient outcomes

As the **first line of defense for behavioral health issues**, primary care physicians play a critical role in the proper **identification and treatment** of behavioral health conditions.

As a collaborative healthcare partner, **Beacon supports PCPs through information sharing and support** so that they have the tools and resources they need to successfully treat their patients.

Beacon's toolkit has been developed to support our ongoing collaborative initiatives with Primary Care Practices.

PCP toolkit development process incorporated input from both PCPs and Behavioral Health physicians

- **Primary research targeting PCPs to determine:**
  - Who is presenting to their practice with BH conditions?
  - What conditions are they seeing most frequently?
  - How do they currently treat BH conditions?
  - How do they refer patients for BH services?
  - What additional resources would be helpful in treating their patients?
- **Secondary research of existing resources for BH conditions**
  - Information gathered targeting up-to-date clinical guidelines, member-facing resources, and standard screening tools for BH conditions
- **Rigorous review of material included in the toolkit**
  - Reviewed by consulting NP for relevance/usefulness to PCP practice
  - VP of Medical Affairs reviewed for clinical appropriateness and accuracy
- **Moving forward:**
  - Ongoing monitoring and maintenance to ensure relevance of clinical material
  - Managed in house by Quality Department

Beacon's toolkit has been developed to support our ongoing collaborative initiatives with Primary Care Practices.

Depression Guidelines:

ICSI
Institute for Clinical Systems Improvement

Health Care Guideline:

Adult Depression in Primary Care Guideline

The American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders* (DSM) is a classification of mental disorders with associated criteria designed to facilitate more reliable diagnoses of these disorders. With successive editions over the past 60 years, it has become a standard reference for clinical practice in the mental health field. In May 2013, the most recent edition, DSM-5, was published. It is the product of more than 10 years of effort by hundreds of international experts in all aspects of mental health.

The sixteenth edition of the Adult Depression in Primary Care Guideline uses DSM-5 as a reference. Throughout the guideline, both ICD-9-CM codes and ICD-10-CM codes are identified (the latter scheduled for adoption in October 2014). This reflects how DSM-5 classifications of mental health disorders were harmonized with the World Health Organization's *International Classification of Diseases* (ICD).

You and Your Healthcare Provider:
Working Together to Treat Depression

WHAT TO EXPECT WHEN YOU ARE BEING TREATED FOR DEPRESSION

Depression is a treatable, medical illness. It is important to find the treatment that works best for you. Antidepressants are commonly prescribed medications to treat depression. When you are taking antidepressants, you need to talk with your provider about how you feel, so you can work together to make changes, as needed. Because antidepressants take time to work, some people stop taking them because they think they are not helping, or because they have side effects.

THINGS TO REMEMBER

- It may take more than one trial to find the right medication for you.
- Medications are started at a low dose and slowly increased to reduce the chance of side effects.
- If you experience side effects, such as headache, fatigue, heartburn or stomach upset, talk with your provider before stopping your medication. Most side effects will go away over time as you continue taking the medication.
- Medications do not work right away, but may take about a month to be effective.
- Many medications are most helpful if taken for at least six months.
- It is important to see your medication prescriber within the first three months of taking your medication, and beneficial to see your therapist at least twice.
- Some over-the-counter, herbal or natural supplements may interact with your medication, so inform your prescriber if you are taking them.
- Drinking alcohol can worsen depression and interfere with the medication or cause dangerous reactions.
- If you have questions about your medication, call your provider.
- If you have suicidal thoughts or feelings, **call 911**, go to your nearest emergency room, or call your local Emergency Service Provider (ESP, Crisis Team).

FACTS ABOUT DEPRESSION

19 million people per year suffer from depression.

1 in 4 women will have depression during their lifetime.

1 in 7 men will have depression during their lifetime.

1 in 10 women will have depression in the few months after having a baby.

Depression can affect how well you can take care of other illnesses, such as diabetes or asthma.

Depression is treatable.

People with depression can feel better with the right treatment.

INFORMATION ABOUT

Treating Depression

WHAT IS DEPRESSION?

Depression is an illness that can affect your body, mood and thoughts. Depression is when you feel sad or down most of the time. It is not a passing " blue mood."

Some Signs of Depression are:

- Feeling worried
- Feeling restless or nervous
- Feeling guilty, worthless, or hopeless
- Feeling "empty"
- Sleeping too little or too much
- Eating too little or too much
- Loss of energy
- Loss of interest or pleasure in things you like to do
- Having problems thinking or making decisions
- Having thoughts of death and suicide
- Having health problems that don't get better, such as headaches or stomach aches

If you often have these kinds of thoughts or problems, it could be a sign of depression. If you have signs of depression, you can talk with your doctor, nurse, or a counselor.

Without treatment, the symptoms of depression can last for weeks, months, or even years.

TREATMENT FOR DEPRESSION

Counseling
Most people who have depression get better with counseling, medication, or both. Counseling can be done individually or in a group and can help improve your mood. It can also help you figure out what brings on your depression and help you find ways to get better.

Medication
There are several different types of medicines to help with depression including medicines called anti-depressants. Your doctor or nurse will work with you to choose the one that's right for you. Usually, it takes between four (4) and eight (8) weeks for the medicine to work and for you to feel better. It is important to take it the way your doctor or nurse tells you to. Your doctor or nurse will most likely tell you to take the medicine for at least six (6) months. Some people take medicine for much longer.

If you are in treatment, experts recommend that you see your counselor at least three (3) times for the first three (3) months of your treatment.

If you take medicine for your depression, you should see the doctor or nurse who gave you the medicine at least one (1) time in the first three (3) months.

Remember to keep your appointments and take your medication exactly as your doctor or nurse tells you, even if you are feeling better. Always tell your doctor or nurse exactly how you are feeling.

Ask Yourself...
If you think you or someone you know might have depression, here are two questions that may help you talk with a doctor, nurse, or counselor:

1. Over the past two weeks, have you felt down, depressed, or hopeless?
2. Over the past two weeks,have you felt little interest or pleasure in doing things?

If you answered yes to either of these questions:

- It is important to talk to your primary care doctor, nurse, or go to see a counselor.
- A doctor or nurse can also rule out health problems that look like signs of depression.

If you have thoughts of hurting yourself, call 911, go to the emergency room, or get help right away from a doctor, nurse, or counselor. This can be a very dangerous situation that needs treatment immediately.

Treatment can Help
If you are not in treatment and want counseling or medication, you can go to a counselor, doctor or nurse, and you don't need a referral. If you need help finding someone in your area, please call Beacon Health Options at 1-888-204-5581, or TTY: 1-866-727-9441.

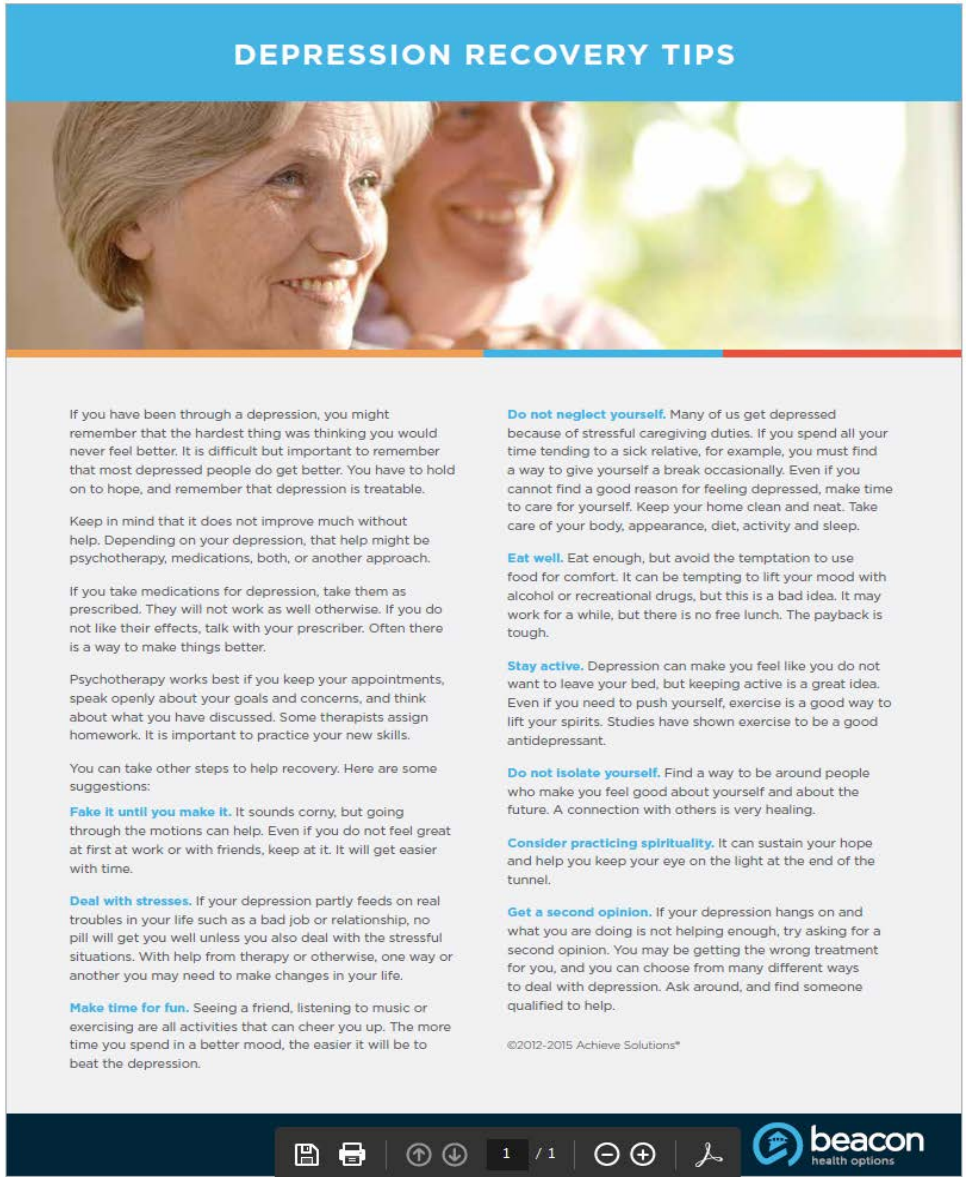
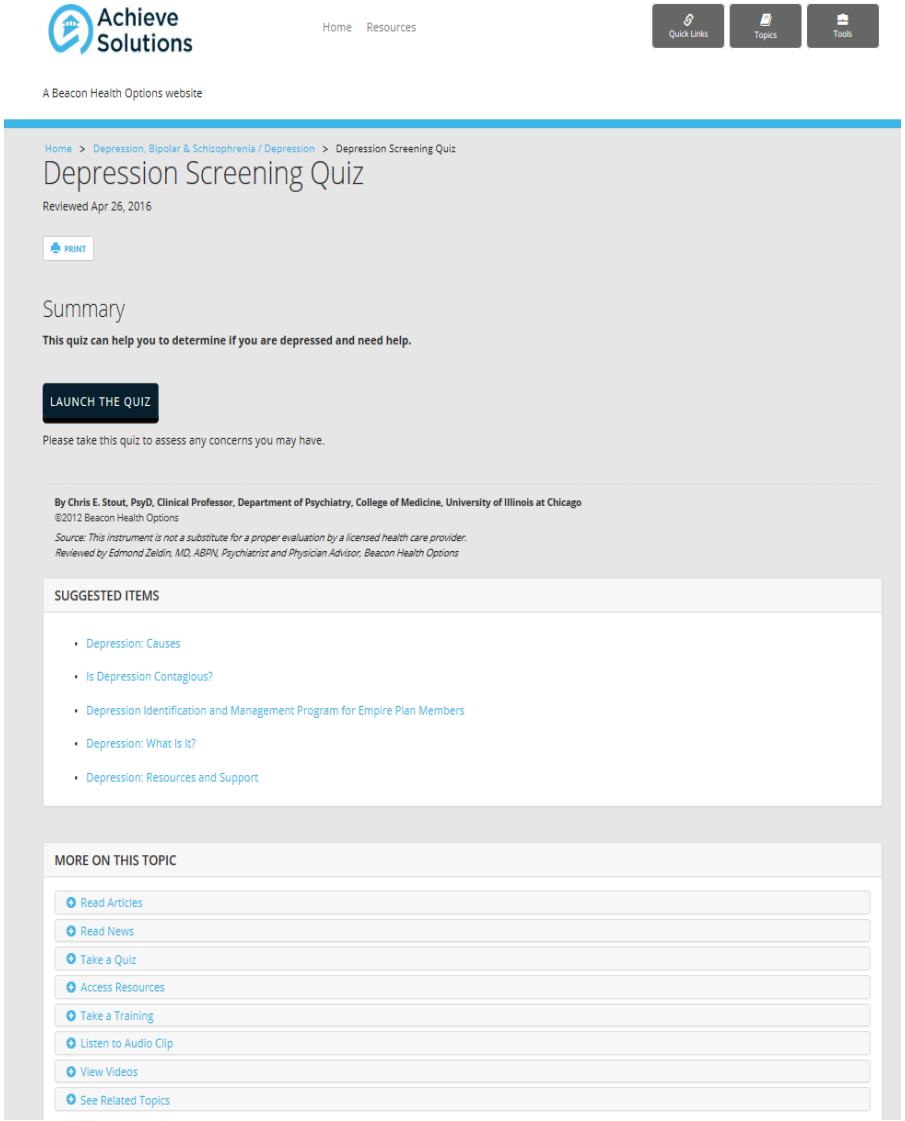
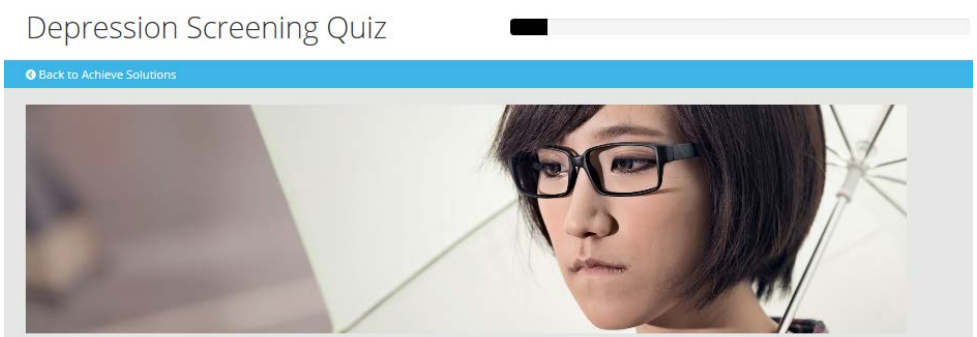
Bulletins

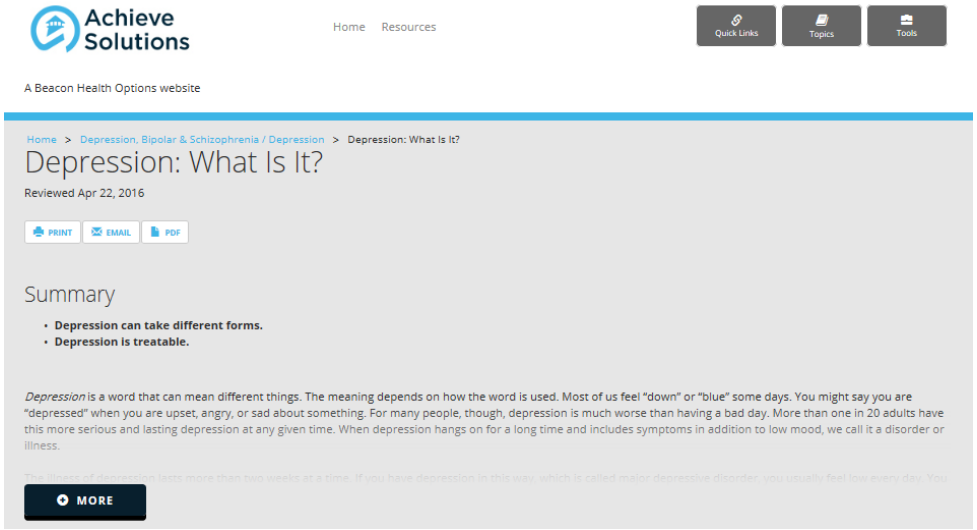


Depression-related member materials include:

Interactive Member Tools and Articles







Beacon's Depression Screening Program includes Screening Tools and Interpretive support

DEPRESSION ASSESSMENT

USE THIS GUIDE AS A REFERENCE TOOL TO SCREEN FOR CLINICAL DEPRESSION AND SUICIDE RISK.

RISK FACTORS FOR CLINICAL DEPRESSION

- Previous depressive episode or family history of depression
- Multiple or unexplained physical symptoms
- Chronic pain or chronic illness
- Recent serious loss or stressful life events
- Increase in substance use

REMEMBER

Always ask about alcohol and substance use/abuse.

TWO QUESTION SCREEN

During the past month, have you often been bothered by:

1. Little interest or pleasure in doing things? ☐Yes ☐No
2. Feeling down, depressed or hopeless? ☐Yes ☐No

If one or both responses are **"Yes,"** proceed to a more detailed assessment tool such as the PHQ-9, available at **www.beaconhealthstrategies.com.**

If the response is **"No"** to both questions, the screen is negative.

This guide is adapted from the MacArthur Initiative on Depression in Primary Care Physician Toolkit. Additional information on assessment and treatment guidelines are available on the MacArthur Initiative website: www.nimh.nih.gov/health/topics/depression/index.shtml

DSM 5 DIAGNOSTIC CRITERIA FOR DEPRESSION

For major depressive disorders, at least 5 of the following symptoms must be present most of the day, nearly every day, and for at least two weeks.

- **Depressed mood**
- **Markedly diminished interest in usual activities**
- Significant increase/loss in appetite/weight
- Insomnia/hypersomnia
- Psychomotor agitation/retardation
- Fatigue or loss of energy
- Feelings of worthlessness or guilt
- Difficulty with thinking, concentrating, or making decisions
- Recurrent thoughts of death or suicide.

REMEMBER

At least one of the first two bolded symptoms must be present.

SUICIDE RISK ASSESSMENT

If you make a depression diagnosis, you must also assess the patient for suicide risk. Remember: questions about suicidal ideation do not promote suicidal action.

If a patient reports current suicidal thoughts with planning, get emergency behavioral health services immediately or call 911.

Risk factors are not predictors of suicide. The following mnemonic aid **SAD PERSONS** may be used to assess for risk factors associated with suicide.

Sex (more women attempt suicide, more men succeed)
Age (bimodal age distribution <19 and/or >45)
Depression (especially with anxiety/panic)
Previous attempts
ETOH (alcohol or other substance abuse)
Rational thinking loss (psychosis)
Social Supports (none or limited)
Organized plan
No spouse
Sickness (chronic or debilitating illness)

TREATMENT OPTIONS

Consider starting a trial of antidepressant medication and/or a mental health referral for psychotherapy.

Call Beacon Health Strategies at **888.204.5581** for a referral to a behavioral health provider. For additional treatment options, visit **www.nimh.nih.gov/health/topics/depression/index.shtml**.

This guide is adapted from the MacArthur Initiative on Depression in Primary Care Physician Toolkit. Additional information on assessment and treatment guidelines are available on the MacArthur Initiative website: www.nimh.nih.gov/health/topics/depression/index.shtml

Depression Screening Tools:

- ***PHQ-2***: The sole purpose of PHQ-2 is to screen for depression, encompassing only the first two questions of the PHQ9, identifying the degree to which an individual experienced depressed mood and anhedonia over the past two weeks.
- ***PHQ-9***: The PHQ-9 is used to screen for depression, but is also valid for the assessment of depression severity. Thus, when used successively during a treatment episode, the PHQ-9 is a practical means to quantitatively monitor the patient's response to depression treatment.
- ***PHQ-A***: The PHQ-A is a modified version of the PHQ-9 sensitive to the adolescent experience of depression that is an acceptable and efficient tool for early detection and recognition of mental disorders in this high-risk group.

Thank you

Humana®

Medical and Behavioral Health Integration

A Behavioral Health Support Toolkit for Primary Care

2016

Humana.

Medicaid is currently the largest source of financing for behavioral health services in the nation. Recent data released by the Government Accountability Office show that more than half of Medicaid-only enrollees in the top 5 percent of expenditures had a mental health condition.[1] Approximately 71 percent of enrollees with high expenditures who had a substance-use disorder also lived with one or more co-occurring mental health conditions.[1] Increased costs and poor health outcomes among Medicaid recipients constitute the need for an integrated system of care that can properly identify, assess and address behavioral, medical and psychosocial needs.

Humana Family recognizes this need and is dedicated to foster and grow the relationship between primary care and behavioral care through its medical and behavioral health integration program. We hope this document helps support physicians in their efforts to efficiently address the behavioral health and substance abuse needs of our Humana Family members.

With the growing need for care integration, it is our intent to provide information to bridge efforts and increase collaboration for the treatment of members in our community.

For inquiries, please contact Humana Customer Service at 1-800-477-6931.

[1]Physical and Mental Health Integration: https://www.medicaid.gov/state-resource-center/innovation-accelerator-program/physical-and-mental-health-integration/physical-and-mental-health-integration.html

Meet your Humana Family Behavioral Health Support Team!

Access Behavioral Health (ABH) has been providing behavioral and substance abuse services to Medicaid recipients in northwestern Florida since 2001. ABH offers a wide variety of behavioral health and substance abuse services for both adults and children utilizing a comprehensive and community-based system of care.

Humana Family has contracted with ABH to address the behavioral health needs of Humana Family members and support the collaboration of primary care, behavioral care and the health plan to deliver necessary services and avoid gaps in care. We encourage physicians to reach out to us for behavioral health and substance abuse support for Humana Family members.

Humana Family Covered Benefits

- ✓ Inpatient hospital services for behavioral health conditions
- ✓ Outpatient hospital services for behavioral health conditions
- ✓ Outpatient medication management
- ✓ Outpatient substance abuse

ABH's Mission:
To help people overcome life's challenges by connecting them to hope and recovery.

Referring Patients to ABH

If a physician identifies a behavioral health need, such as a member with severe depression, anxiety, history of serious mental illness or substance abuse, the physician can refer the member to ABH for coordination of care by calling ABH customer service toll free at 1-866-477-6725, or by accessing our TDD/TYY services through the Florida Relay number at 1-800-955-1339. Referrals also may be faxed to 1-850-469-3597.

Information about available behavioral health programs and a full list of in-network providers are available on the ABH website at www.abhfl.org.

Provider Hotline Available for Psychiatric Questions

Humana Family and ABH strongly support communication between primary care physicians and behavioral health providers. We encourage physicians to address questions related to antidepressants, antipsychotics or general behavioral/substance abuse treatment to ABH's medical director for a peer consult.

Dr. Ed Mobley: 1-866-477-6725
Email: ed.mobley@bhcpns.org
(Please include "PCP Consultation" in the email's subject line)

Behavioral Health Performance Measures

It is our goal to collaborate with behavioral health care providers, primary care physicians and the health plan to improve behavioral health performance measures, as outlined by the Healthcare Effectiveness Data and Information Set (HEDIS) and the Florida Agency for Healthcare Administration (AHCA). Given the high rates of medical and behavioral comorbidity, and overall chronic illness, it is imperative that there is an open line of communication between all parties involved in a member's care when addressing such measures. (Please see pages 4 to 11 for the details of the measures.)

For additional questions regarding performance measures, please contact the ABH Director of Quality Management at 1-866-477-6725.

Thank you for assisting in our efforts to continually improve the quality of care and services to our members.

Antidepressant Medication Management (AMM)

Primary care physicians know that antidepressants are frequently prescribed in the primary care setting. They also know that patients often don't take their medications as prescribed. To improve adherence, it is important to educate the patient regarding common side effects, how long the side effects may last and how to manage those side effects.

Primary care physicians need to encourage patients to schedule their medication management appointments after their initial psychiatric evaluation and before they leave your office.

Measure description	Service needed	What to report
Percentage of members 18 years old and older who were diagnosed with a new episode of major depression, were treated with antidepressant medication and remained on an antidepressant medication treatment.	• Encourage and monitor compliance with antidepressant medications for members 18 years old and older, newly diagnosed with major depression.	**Codes to identify major depression**: **ICD-10-CM diagnosis**: F32.0 – F32.4. ☐ Antidepressant medication management	Encourage and monitor compliance with antidepressant medications for members **18 years old and older**, newly diagnosed with major depression.	____/____/_____

Adherence to Antipsychotic Medications for Individuals with Schizophrenia (SAA)

Failure to adhere to medication as prescribed can have a major impact on the course of illness and treatment outcomes in patients with schizophrenia. Even relatively short gaps in medication coverage increase the risk of relapse. It is important for primary care physicians and behavioral health providers to be vigilant for signs of adherence problems. To improve adherence, it is important to educate the patient regarding common side effects, how long the side effects may last and how to manage those side effects.

Measure description	Service needed	What to report
Percentage of members 19 to 64 years of age during the measurement year with schizophrenia who were dispensed and remained on an antipsychotic medication for at least 80 percent of their treatment period	• Adhere to the antipsychotic medication treatment regimen for all members 19 to 64 who are diagnosed with schizophrenia during **2016** • Consider medications within the following drug classes per the AHCA formulary: - Phenothiazine antipsychotics (oral) - Psychotherapeutic combinations (oral) - Psychotherapeutics combinations (oral) - Thioxanthenes (oral) - Long-acting injections	**Pharmacy claims for appropriate antipsychotic medications** **Codes to identify schizophrenia** **ICD-10-CM diagnosis**: F20.0 – F20.3, F20.5, F20.81, F20.89, F20.9, F25.0 – F25.1, F25.8 – F25.9 **ICD-10-CM diagnosis codes to identify required exclusions**: **Dementia:** F01.50 – F01.51, F02.80 – F02.81, F03.90 – F03.91, F04, F10.27, F10.97, F13.27, F13.97, F18.17, F18.27, F18.97, F19.17, F19.27, F19.97, G30.0 – G30.1, G30.8 – G30.9, G31.83

SAA Action Checklist:

Behavioral health management	Description of requirement	Date completed
☐ Adherence to antipsychotic medications for individuals with schizophrenia	Encourage and monitor compliance with antipsychotic medications for members **19 to 64 years of age** with schizophrenia	____/____/_____

Metabolic Monitoring for Children and Adolescents on Antipsychotics (APM)

Antipsychotics can effectively treat psychiatric disorders in children and adolescents, but some of these medications increase the risk for weight gain and diabetes. Young people with metabolic disorders are at greater risk of negative outcomes. Therefore, it is important to closely monitor young people taking antipsychotics. It is important to educate parents/guardians and ensure annual blood tests are performed.

Measure description	Service needed	What to report
Percentage of children and adolescents 1 to 17 years old who had two or more antipsychotic prescriptions and had metabolic testing during the measurement year	• At least one blood glucose or HbA1c test in **2016** for all eligible members **and** • At least one LDL-C or cholesterol test in **2016** for all eligible members	**Pharmacy claims for antipsychotic medications** **Code to identify glucose test:** **CPT**: 80047, 80048, 80050, 80053, 80069, 82947, 82950, 82951 **LOINC:** 10450-5, 14753-8, 14754-6, 14756-1, 14757-9, 14759-5, 14764-5, 14765-2, 14771-0, 1492-8, 1494-4, 1496-9, 1499-3, 14995-5, 1501-6, 1504-0, 1507-3, 1514-9, 1518-0, 1530-5, 1533-9, 1554-5, 1557-8, 1558-6, 17865-7, 20436-2, 20437-0, 20438-8, 25666-9, 26554-6, 30251-3, 30265-3, 30267-9, 32320-4, 40285-9, 40286-7, 41024-1, 49134-0, 51597-3, 55351-1, 55381-8, 6749-6, 74774-1, 9375-7 **Code to identify HbA1c test:** **CPT**: 83036, 83037, 3044F, 3045F, 3046F **LOINC**: 17856-6, 4548-4, 4549-2 **Code to identify LDL-C test:** **CPT**: 80061, 83700, 83701, 83704, 83721, 3048F, 3049F, 3050F **LOINC**: 12773-8, 13457-7, 18261-8, 18262-6, 2089-1, 49132-4, 55440-2 **Code to identify cholesterol test:** **CPT**: 82465, 83718, 84478 **LOINC**: 2085-9, 2093-3, 2571-8, 5932-9

APM Action Checklist:

Behavioral health management	Description of requirement	Date completed
☐ Metabolic Monitoring for Children and Adolescents on Antipsychotics	One blood glucose or HbA1c test and one LDL-C or cholesterol test for children/ adolescents **1 to 17** years old who had two or more antipsychotic prescriptions before Dec. 31, 2016.	Glucose/HbA1c: ____/____/____ LDL-C/Cholesterol: ____/____/____

Use of Multiple Concurrent Antipsychotics in Children and Adolescents (APC)

The practice of prescribing antipsychotics to children and adolescents has rapidly increased in recent years. Antipsychotics have serious side effects, including weight gain, diabetes and metabolic disturbance. Primary care physicians need to refer patients to behavioral health providers for consultation when prescribing antipsychotics to children and adolescents.

Measure description	Service needed	What to report
Percentage of children and adolescents 1 to 17 years of age who were on two or more concurrent antipsychotic medications during the measurement year	• Eligible members who are on **two or more** concurrent antipsychotic medications for at least **90 consecutive days**	**Pharmacy claims for antipsychotic medications** • First Generation Antipsychotic Medication • Second Generation Antipsychotic Medication

APC Action Checklist:

Behavioral health management	Description of requirement	Date completed
☐ Use of multiple concurrent antipsychotics in children and adolescents	Monitor members 1 to 17 years of age who were on antipsychotic medications	____/____/_____

Follow-up Care for Children Prescribed ADHD Medication (ADD)[1]
Initiation and Continuation Phase

Attention deficit hyperactivity disorder (ADHD) is one of the most commonly diagnosed childhood behavioral health disorders. The treatment of childhood ADHD works best with a team approach that includes care collaboration between behavioral health psychiatrists, clinicians, pediatricians, teachers, parents/legal guardians and other health care professionals. It is important to educate the patient's parents or guardians on medication adherence and medication management visits, which are essential to monitor the child's progress.

Performance measure	Service needed	What to report
Percentage of children 6 to 12 years old newly prescribed ADHD medication who had at least three follow-up care visits within a 10-month period, one of which was within 30 days of when the first ADHD medication was dispensed	**For members with newly prescribed attention deficit disorder (ADD)/ADHD medications:** • An in-person outpatient visit within 30 days of prescription fill **and** • Two additional in-person outpatient follow-up visits between days 31 and 300 of prescription fill	**Codes to identify visits**: **CPT**: 90791 – 90792, 90801– 90802, 90804 –90819, 90821 – 90824, 90826 – 90829, 90832 – 90840, 90845, 90847, 90849, 90853, 90857, 90862, 96150 – 96154, 98960 – 98962, 99078, 99201 – 99205, 99211 – 99215, 99217 – 99223, 99231 – 99233, 99238 – 99239, 99241 – 99245, 99251 –99255, 99341 – 99345, 99347 – 99350, 99381 – 99384, 99391 – 99394, 99401 – 99404, 99411, 99412, 99510 **HCPCS**: G0155, G0176, G0177, G0409 – G0411, G0463, H0002, H0004, H0031, H0034 – H0037, H0039, H0040, H2000, H2001, H2010 – H2020, M0064, S0201, S9480, S9484, S9485, T1015

ADD Action Checklist:

Behavioral health management	Description of requirement	Date Completed
☐ Follow-up management for children with newly prescribed ADD/ADHD medications	• In-person outpatient visit within 30 days of prescription fill • Two additional in-person outpatient follow-up visits between days 31 and 300 of prescription fill	Initial: ____/____/_____ Follow-up: ____/____/_____ ____/____/_____

Follow-up after Hospitalization for Mental Illness (FHM) [2]
7 days and 30 days

Effective discharge planning from an acute-care facility helps facilitate continuous and coordinated behavioral health care treatment for patients. Timely follow-up after an inpatient psychiatric hospitalization promotes continuity of behavioral health care.

Measure description	Service needed	What to report
Percentage of discharges for members 6 years old and older who were hospitalized for treatment of selected mental health disorders and who had an outpatient visit with a mental health practitioner within 7 and 30 days	• An outpatient visit within **7 days of discharge** and • An additional outpatient visit within **30 days of discharge**	**Code to identify mental health diagnosis:** **ICD-10-CM diagnosis**: F20.0 – 3, F20.5, F20.81, F20.89, F20.9, F21 – F24, F25.0 – 1, F25.8 – 9, F28 – F29, F30.10 – 13, F30.2 – 4, F30.8 – F31.0, F31.10 – 13, F31.2, F31.30 – 32, F31.4 – 5, F31.60 – 64, F31.70 – 78, F31.81, F31.89, F31.9 – F32.5, F32.8 – 9, F33.0 – 3, F33.40 – 42, F33.8 – F34.1, F34.8 – 9, F39, F42, F43.0, F43.10 – 12, F43.20 – 25, F43.29, F43.8 – 9, F44.89, F53, F60.0 – 7, F60.81, F60.89, F60.9, F63.0 – 3, F63.81, F63.89, F63.9, F68.10 – 13, F68.8, F84.0, F84.2 – 3, F84.5, F84.8, F84.9, F90.0 – 2, F90.8 – F91.3, F91.8 – 9, F93.0, F93.8 – F94.2, F94.8 – 9 **Codes to identify visits**: **CPT****: 90791, 90792, 90832 – 98034, 90836 – 90840, 90847, 90849, 90853, 90867 – 90870, 90875 – 90876, 90960, 99078, 99201 – 99205, 99211 – 99215, 99217 – 99223, 99231 – 99233, 99238, 99239, 99241 – 99245, 99251 – 99255, 99341 – 99345, 99347 – 99350, 99383 – 99387, 99393 – 99397, 99401 – 99404, 99411, 99412, 99510 **HCPCS****: G0155, G0176, G0177, G0409 – G0411, G0463, H0002, H0004, H0031, H0031 HO, H0031 HO GT, H0031 TS, H0031 HN, H0031 HN GT, H0032, H0032 TS, H0034 – H0037, H0039, H0040, H0046, H0046 GT, H2000, H2000 HP, H2000 HP GT, H2000 HO, H2001, H2010 – H2020, H2019 HR, H2019 HR GT, H2019 HQ, H2019 HO, H2019 HN, H2010 HO, H2010 HO GT, H2010 HE, H2010 HE GT, H2010 HQ, H2020 HA, H2030, M0064, S0201, S9480, S9484, S9485, T1015, T1015 GT, T1015 HE, T1023 HE ***Follow-up visits identified by these CPT and HCPCS codes must be with a mental health practitioner.*

FHM Action Checklist:

Behavioral health management	Description of requirement	Date completed
☐ Follow-up after hospitalization for mental illness	Confirm follow-up outpatient visit with a mental health practitioner within **7 days and 30 days of discharge**.	____/____/_____ ____/____/_____

Initiation and Engagement of Alcohol and Other Drug Dependence Treatment (IET)[1]

Identifying individuals with alcohol and other drug disorders (AOD) is an important first step in the process of care; however, identification often does not lead to the initiation of care. The measure is designed to ensure that treatment is initiated once the need has been identified.

Many times the PCP is the first professional to encounter a patient with alcohol or other drug abuse issues. The following is a list of PCP interventions:

- Assess the patient about his or her alcohol use and other drug use. Screen for program, if applicable. (Please refer to page 12 for the recommended screening tools.)
- Make sure that the diagnosis is listed in the chart and on the patient's claims.
- Encourage the patient to follow through. Schedule a follow-up visit.
- Refer the patient to ABH for appointment scheduling with a behavioral health provider.

Performance measure	Service needed	What to report
Percentage of adolescent and adult members (13 years old and older) with a new episode of alcohol or other drug dependence (AOD)	• **Initiation of treatment:** Initiate treatment through an inpatient AOD admission, outpatient visit, intensive outpatient encounter or partial hospitalization **within 14 days of diagnosis** *See the patient for this diagnosis.* **and** • **Engagement of treatment**: Initiate treatment (as stated above) and have two or more additional services with a diagnosis of AOD **within 30 days of the initial visit** *See the patient for this diagnosis.*	*One of the following diagnosis codes must be billed for the initiation and the engagement visits, in addition to the requirements listed in Option 1, Option 2 or Option 3.* **ICD-10-CM Diagnosis**: F10.10, F10.120 – 121, F10.129, F10.14, F10.150 – 151, F10.159, F10.180 – 182, F10.188, F10.19 – 20, F10.220 – 221, F10.229 – 232, F10.239, F10.24, F10.250 – 251, F10.259, F10.26 – 27, F10.280 – 282, F10.288, F10.29, F10.920 – 921, F10.929, F10.94, F10.950 – 951, F10.959, F10.96 – 97, F10.980 – 982, F10.988, F10.99, F11.10, F11.120 – 122, F11.129, F11.14, F11.150 – 151, F11.159, F11.181 – 182, F11.188, F11.19 – 20, F11.220 – 222, F11.229, F11.23 – 24, F11.250 – 251, F11.259, F11.281 – 282, F11.288, F11.29, F12.10, F12.120 – 122, F12.129, F12.150 – 151, F12.159, F12.180, F12.188, F12.19 – 20, F12.220 – 222, F12.229, F12.250 – 251, F12.259, F12.280, F12.288, F12.29, F13.10, F13.120 – 121, F13.129, F13.14, F13.150 – 151, F13.159, F13.180 – 182, F13.188, F13.19 – 20, F13.220 – 221, F13.229 – 232, F13.239, F13.24, F13.250 – 251, F13.259, F13.26 – 27, F13.280 – 282, F13.288, F13.29, F14.10, F14.120 – 122, F14.129, F14.14, F14.150 – 151, F14.159, F14.180 – 182, F14.188, F14.19 – 20, F14.220 – 222, F14.229, F14.23 – 24, F14.250 – 251, F14.259, F14.280 – 282, F14.288, F14.29, F15.14, F15.150 – 151, F15.159, F15.180 – 182, F15.188, F15.19 – 20, F15.220 – 222, F15.229, F15.23 – 24, F15.250 – 251, F15.259, F15.280 – 282, F15.288, F15.29, F16.10, F16.120 – 122, F16.129, F16.14, F16.150 – 151, F16.159, F16.180, F16.183, F16.188.

		F16.19 – 20, F16.220 – 221, F16.229, F16.24, F16.250 – 251, F16.259, F16.280, F16.283, F16.288, F16.29, F18.10, F18.120 – 121, F18.129, F18.14, F18.150 – 151, F18.159, F18.17, F18.180, F18.188, F18.19 – 20, F18.220 – 221, F18.229, F18.24, F18.250 – 251, F18.259, F18.27, F18.280, F18.288, F18.29, F19.10, F19.120 – 122, F19.129, F19.14, F19.150 – 151, F19.159, F19.16 – 17, F19.180 – 182, F19.188, F19.19 – 20, F19.220 – 222, F19.229 – 232, F19.239, F19.24, F19.250 – 251, F19.259, F19.26 – 27, F19.280 – 282, F19.288, F19.29 **<u>Physician Codes</u>** **Option 1 –** *At least one code must be billed.* **CPT**: 98960 – 98962, 99078, 99201 – 99205, 99211 – 99215, 99217 – 99220, 99241 – 99245, 99341 – 99345, 99347 – 99350, 99384 – 99387, 99394 – 99397, 99401 – 99404, 99408, 99409, 99411, 99412, 99510 **HCPCS**: G0155, G0176, G0177, G0396, G0397, G0409-G0411, G0443, G0463, H0001, H0002, H0004, H0005, H0007, H0015, H0016, H0020, H0022, H0031, H0034 – H0037, H0039, H0040, H2000, H2001, H2010 – H2020, H2035, H2036, M0064, S0201, S9480, S9484, S9485, T1006, T1012, T1015 **UB revenue**: 0510, 0513, 0515 – 0517, 0519 – 0523, 0526 – 0529, 0900, 0902 – 0907, 0911 – 0919, 0944, 0945, 0982, 0983 **<u>Behavioral health codes</u>** **Option 2 –** *At least one CPT code plus a POS code must be billed.* **CPT**: 90791, 90792, 90832 – 90834, 90836 – 90840, 90845, 90847, 90849, 90853, 90875, 90876 **and** **POS**: 03, 05, 07, 09, 11 – 15, 20, 22, 33, 49, 50, 52, 53, 57, 71, 72 **Option 3** – *At least one CPT code plus a POS code must be billed.* **CPT**: 99221 – 99223, 99231 – 99233, 99238, 99239, 99251 – 99255 **and** **POS**: 52, 53

IET Action Checklist:

Behavioral health management	Description of requirement	Date completed
☐ Initiation and engagement of alcohol and drug dependence treatment	Initiate treatment through an inpatient alcohol or other drugs admission, outpatient visit, intensive outpatient encounter or partial hospitalization **within 14 days of diagnosis**. **And** Have two or more additional services with a diagnosis of AOD **within 30 days of initial visit.**	Initial: ____/____/_____ Follow-up: ____/____/_____ ____/____/_____

Screening Tools

There are several hundred screening tools that are available today to aid clinicians with the identification of patients with alcohol problems. Many are presented in the guide, *Assessing Alcohol Problems: A Guide for Clinicians and Researchers*, 2nd Edition, which may be accessed online at http://pubs.niaaa.nih.gov/publications/AssessingAlcohol/index.htm.

Following are several brief recommended screenings:

CAGE

C Have you ever felt that you should **cut down** on your drinking or drug use?
A Have people **annoyed** you by criticizing your drinking or drug use?
G Have you ever felt **guilty** about your drinking or drug use?
E **Eye opener**: Have you ever had a drink or used drugs first thing in the morning to steady your nerves or to get rid of a hangover?

Note: CAGE can identify alcohol problems over the lifetime. Two positive responses are considered a positive test. Further assessment is warranted.

T-ACE

T **Tolerance**: How many drinks does it take to make you feel high?
A Have people **annoyed** you by criticizing your drinking or drug use?
C Have you ever felt you ought to **cut down** on your drinking or drug use?
E **Eye-opener**: Have you ever had a drink or used drugs first thing in the morning to steady your nerves or get rid of a hangover?

Note: T-ACE, which is based on CAGE, is valuable for identifying a range of use, including lifetime use and prenatal use, based on the DSM-III-R criteria. A score of two or more is considered positive. Affirmative answers to questions A, C or E = one point each. Reporting tolerance to more than two drinks (the T question) = two points.

Alcohol Use Disorders Identification Test (AUDIT)

Please circle the answer that is correct for you.

1. **How often do you have a drink containing alcohol?**

Never | Monthly or less | Two to four times a month | Two to three times per week | Four or more times a week

2. **How many drinks containing alcohol do you have on a typical day when you are drinking?**

1 or 2 | 3 or 4 | 5 or 6 | 7 to 9 | 10 or more

3. **How often do you have six or more drinks on one occasion?**

Never | Less than monthly | Monthly | Two to three times per week | Four or more times a week

4. **How often during the last year have you found that you were not able to stop drinking once you had started?**

Never | Less than monthly | Monthly | Two to three times per week | Four or more times a week

5. **How often during the last year have you failed to do what was normally expected from you because of drinking?**

Never | Less than monthly | Monthly | Two to three times per week | Four or more times a week

6. **How often during the last year have you needed a first drink in the morning to get yourself going after a heavy drinking session**?

Never | Less than monthly | Monthly | Two to three times per week | Four or more times a week

7. **How often during the last year have you had a feeling of guilt or remorse after drinking?**

Never | Less than monthly | Monthly | Two to three times per week | Four or more times a week

8. **How often during the last year have you been unable to remember what happened the night before because you had been drinking?**

Never | Less than monthly | Monthly | Two to three times per week | Four or more times a week

9. **Have you or someone else been injured as a result if your drinking?**

No | Yes, but not in the last year | Yes, during the last year

10. **Has a relative, friend, doctor or other health care worker been concerned about your drinking?**

No | Yes, but not in the last year | Yes, during the last year

Note: The Alcohol Use Disorders Identification Test (AUDIT) can detect alcohol problems experienced in the last year. A score of 8+ on the AUDIT generally indicates harmful or hazardous drinking. Questions 1-8 = 0,1,2,3 or 4 points. Questions 9 and 10 are scored 0, 2 or 4 only.

Psychotropic Medication Clinical Guidelines

Medication management is a collaborative effort between all prescribing practitioners. It is our goal to provide the necessary tools to support current guidelines for the use of psychotherapeutic medication among children and adults. Listed below are resources to obtain *Florida's Best Practice Psychotherapeutic Medication Guidelines for Children* and *Florida's Best Practice Psychotherapeutic Medication Guidelines for Adults.*

Questions regarding these guidelines may be directed to ABH Medical Director Ed Mobley at 1-866-477-6725.

Collaborative Care Agreement

This Collaborative Care Compact (Care Compact) is entered into between the Primary Care Provider ("PCP") and the Behavioral Health Specialist ("Specialist").

The purpose of this Primary Care-Specialty collaboration is:

- To provide optimal health care for our patients.
- To improve the quality, cost, and efficiency of health services.
- To provide a framework for better communication and safe transition of care between primary care and behavioral health/specialty care providers.

Both providers signing this document agree to:

- Provide safe, effective, and timely patient care.
- Maintain effective communication between the PCP and the specialist to eliminate the waste and excess cost of healthcare.
- Mutually respect each other with the purpose of sustaining a professional relationship and working collaboration.
- Offer proper care at the right time and place.
- Share the patient's consultation notes and relevant test results on an ongoing basis.

NOW THEREFORE, the parties hereto agree as follows:

By signing this agreement, both parties will abide by the Primary Care Provider-Behavioral Health Collaborative Care Agreement.

	Behavioral Health Provider	Primary Care Provider

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 24 – Transportation (Statewide):

The respondent shall describe its experience and approach for coverage of non-emergency transportation services by providing the following:

a. A description of the software capabilities utilized to facilitate ease in scheduling and tracking of enrollee pickup adherence;

b. Strategies for determining the most appropriate mode of transportation; and

c. Providing data on the following performance metrics for calendar year 2016:

- **(1)** Percentage of trips where the enrollee arrived to their scheduled appointment on-time;
- **(2)** Percentage of missed trip requests (failed to pick up the enrollee);
- **(3)** Percentage of hospital discharge requests fulfilled within three (3) hours of the request;
- **(4)** Percentage of urgent care requests fulfilled within three (3) hours of the request; and
- **(5)** Number of transportation related complaints and grievances per 1,000 enrollees.

d. A description of how the respondent uses the performance metric data above to identify areas in need of improvement and implements successful strategies that improve the provision of service.

Response:

Medicaid enrollees, particularly those who live in rural areas or who have special needs, often experience heightened challenges in reaching the services they need due to a lack of reliable transportation. This can result in enrollees delaying or foregoing necessary preventive visits, missing prescription medication refills, and seeking care for acute conditions at hospital emergency departments rather than more appropriate, non-emergent care settings.

For these reasons, reliable and safe transportation services delivered by professional and courteous transportation providers is essential to improving the health outcomes of our enrollees. Through our contracts with Access2Care and LogistiCare, Humana provides Non-Emergency Transportation (NET) services to our enrollees who have no other means of transportation available to all covered Medicaid services, including enhanced benefits and services covered through Medicaid fee-for-service. Technological innovations from our NET providers continue to advance ease of access for our enrollees, including an improved ability to track vehicles and ensure timely pick-up and drop-off. Through our standardized questionnaires for enrollees requesting transportation, we ensure that they use the right level of NET for their medical needs, and that those enrollees with the highest level of need (including the frail, elderly, children with special needs, and pregnant women) receive the NET services they require. Our case managers take an active approach to arranging NET for these enrollees, including scheduling NET on their behalf. Additionally, we guarantee the high-quality performance of all of our providers through dedicated joint and local operating committees and quality oversight procedures. These efforts have resulted in demonstrable achievements. In

calendar year 2016, ninety-nine point nine percent (99.9%) of NET trips were complaint-free and only zero point zero zero three percent (0.003%) of trip requests were missed.

Our longstanding partnerships with both LogistiCare and Access2Care provide our enrollees with greater access to high-quality NET services. Under the next contract, we will continue to provide a high standard of care through innovative technologies, attention to enrollee satisfaction, and dedicated quality oversight.

==========

1. The adequacy of the respondent's software capabilities to facilitate ease in scheduling transportation and tracking of enrollee pickup adherence.

==========

We have invested in innovative software that will continue to ensure the highest quality transportation experience for our enrollees. These innovations permit our enrollees, their designated caregivers, providers, and Humana associates to easily and efficiently schedule trips over the phone, through a mobile application, or through an online portal. Additionally, investments in driver and enrollee applications increase convenience, accessibility, and enrollee control over routine tasks while improving enrollee pick-up adherence.

USING SOFTWARE TO FACILITATE SCHEDULING

The systems and intake processes used by our transportation partners aim to provide maximum efficiency in scheduling with minimum error. Our enrollees, their case managers, and providers can schedule transportation via dedicated phone lines, our online portals, or a smartphone app. These options, each designed to facilitate ease in scheduling, allow enrollees to quickly access the level of transportation that best meets their needs.

SCHEDULING VIA DESIGNATED PHONE LINES

Our enrollees and case managers can schedule transportation 24/7 via designated NET phone lines. Contact information for these phone lines is included in the enrollee handbook and on our enrollees' plan ID cards. Our subcontractors use a state-of-the-art Automatic Call Distribution (ACD) phone reporting system that works in concert with our web-based trip assignment system. This system records and aggregates critical performance and quality-related information on an hourly, daily, weekly, and monthly basis, allowing us to quickly identify areas of improvement and meet the needs of the enrollee and those dedicated to serving them. In addition, the scheduling process can be accelerated by utilizing previously stored enrollee selections, drop-down lists, and radio buttons to capture enrollee information and eliminate potential data entry errors.

ENROLLEE ONLINE PORTAL

We are committed to expanding the range of tools our enrollees can use to schedule their trips. One of these is the online enrollee portals operated by our transportation partners, through which our enrollees have twenty-four (24) hours a day, seven (7) days a week, three-hundred sixty-five (365) days per year access to online ordering and trip management functions. This easy-to-use platform provides enrollees and their designated caregivers with increased control and discretion over their NET options. Enrollees are able to schedule, modify, or cancel their trips, view pick-up times, retrieve health plan contact information, obtain online user guides, and

authorize additional users (for example, a child or legal guardian) to act on their behalf to perform trip management functions.

HEALTH PLAN PORTAL
Humana associates can use the secure Health Plan portal to view scheduled trips, access reports, and respond to complaints filed by enrollees. In addition, we can perform user administration functions on behalf of our enrollees, an important feature for those enrollees who may lack access to the internet or cannot use the portal independently.

NET PROVIDER PORTALS
The NET Provider Portal is an easy-to-use, online platform that allows the NET provider network to more easily manage scheduling requests, thus ensuring greater access for our enrollees, and decreasing the number of missed or late trips. Through this portal, NET providers can view, accept, and reject trips, manage resources, such as drivers and vehicles, and track their accounts receivable, billing, and claims. In addition, providers can download trip information to meet specific reporting criteria, or upload to their own dispatch systems.

ENROLLEE APP
Today, more and more Medicaid enrollees own smartphones, tablets, and other handheld electronic devices. Our enrollees can download a free mobile application to their iOS or Android device to better manage their NET benefit.

This intuitive, user-friendly mobile app empowers enrollees to complete basic requests, independently, using their iOS or Android mobile device. The app guides users through questions to determine the most appropriate level of service for their needs and uncover any special needs (e.g., wheelchair or stretcher services). After a request is submitted, the enrollee is assigned a request ID number (which is stored in the app) and the reservation is sent to the local operations center for processing. Once the trip is assigned, the enrollee can view the confirmed trip through the app and through the enrollee online portal.

The mobile app may support a range of functions, including:

- Enrollment: Provides the functionality for enrollees to sign up for NET services and verify their eligibility

- Add a Member: Allows enrollees to add family members and other authorized users to their account to manage NET requests

- Account Management: Enables change of enrollee profile information, such as the enrollee's phone number or e-mail address

- Make/Change/Cancel Reservations: Enables enrollee management of reservations

- Manage Interactions: Allows in-app communication with drivers and transportation providers

- Ride Assist: Allows our enrollees to use their mobile device to check on the status of their ride

- Ready for Pick-Up: Enables our enrollees to use their mobile device to notify us when they are ready for a return pick-up, as an alternative to calling the Ride Assist Line

- View Pick-Up /Drop-Off: GPS timestamps enable verification of pick-up and drop-off times and locations

- View Schedule and Alerts/Notifications: Allows enrollees to view their scheduled trips, track the location of the ride, and receive notification if it is going to be late or early

- Post-Trip Surveys: Allows enrollees provide immediate feedback upon completion of a ride and rate the trip on a scale of one (1) to five (5)

USING SOFTWARE TO TRACK ENROLLEE PICKUP ADHERENCE

Humana is committed to continually refining our operations to minimize uncertainty, reduce enrollee wait times, and increase transparency. To this end, our subcontractors have introduced mobile applications for drivers. These applications allow continual, real-time oversight of drivers for on-time performance. Data can be collected on user wait times, on-time performance, incidents, management practices, and system usage. This real-time data is used by both Humana and our transportation subcontractors to foster better network performance, contribute to cost savings, and improve the enrollee experience.

Through this app, our transportation routers can remotely track vehicles in real-time on a browser-based map and quickly view vehicles operating on schedule, delayed vehicles, and vehicles available for recovery or urgent trip requests. With this information, we can take proactive measures to quickly activate recovery vehicles and limit late pick-ups and no-shows. Data from the GPS tool is used to optimize trip time estimations and maximize routing efficiency, helping us limit commute times. In addition, trips made through the call center, enrollee mobile application, and enrollee portal can be assigned to drivers via the app.

==========

2. The extent to which the respondent describes strategies for determining the appropriate mode of transportation equipped to meet the enrollee's individual needs.

3. The extent to which the respondent's approach includes an assessment of whether the enrollee has any other means of transportation, including a description of the process that will be utilized to make this assessment.

==========

Humana's objective in providing NET services is to ensure that transportation issues do not create a barrier to enrollees obtaining health care. Our goal is to provide a wide array of transportation assistance that will meet the diverse transportation needs of our enrollees in the least costly, most medically-appropriate way. Enrollees with the greatest needs for NET, including those with special needs and pregnant enrollees who need to reach prenatal care, are informed of the benefit, know how to use it, and receive the support they need from Humana associates to use the service. At one end of the spectrum is the enrollee who is able to walk, lives close to a public transit stop, and has a series of appointments with a provider who is also close to a public transit stop. For this enrollee, provision of bus passes may be the least costly, most appropriate solution to ensuring appointments are kept. At the other end of the spectrum is a bed-ridden or disabled individual who requires not only a wheelchair, a lift-equipped vehicle,

or stretcher van to get to his or her follow-up appointment, but also needs an attendant to accompany him or her. Our transportation scheduling processes are designed to ensure that the least expensive, most appropriate mode of transport is assigned, based on the enrollee's medical condition and their destination.

Our comprehensive assessments, conducted upon enrollment into case management or disease management, address gaps and barriers to care that our enrollees may be facing, including transportation. For those enrollees who report transportation gaps, our case managers and Customer Care specialists can assist them in calling the appropriate subcontractor to begin transportation arrangements. In addition, our case managers and Customer Care specialists monitor for indications that an enrollee may need transportation assistance, such as one or more missed appointments, and uses it as an opportunity to link the enrollee with our transportation subcontractors.

When an enrollee calls the NET Customer Care line to schedule transportation, our Customer Care specialists first verify their eligibility. After the enrollee's eligibility has been confirmed, the NET Customer Care specialist obtains details of the enrollee's request, including trip date and time, and the name, address, and telephone number of their destination. To ensure that we assign the most appropriate transportation mode for each enrollee's individual medical needs, enrollees are asked a series of questions about their health and mobility, including the enrollee's ability to walk, use of a mobility device, proximity to mass transit spots (on both pick-up and drop-off locations), and availability of other forms of transportation, including a friend or family member's vehicle. For those transportation requests submitted by the case manager on behalf of the enrollee, the case manager will use the results of our comprehensive health risk assessment to inform the best choice of transportation for that enrollee. To expedite future service requests, enrollees' responses are stored in the scheduling system, allowing for quick and easy verification that the information is still up-to-date and accurate with each new transportation request.

After the request has been entered, a "Trip Optimization" algorithm is applied to assign the most appropriate vehicle type and service level for the individual enrollee, based on rules established by Humana and the enrollee's response to these questions. Our system considers the following baseline factors when determining suitability of a particular mode of transportation:

- The enrollee's access to a vehicle and ability to afford fuel. This may indicate the suitability of gas reimbursement.

- The enrollee's ability to travel independently, which may be limited because of age or any permanent or temporary debilitating mental or physical condition. This may preclude the use of mass transit, and indicate the need for an enrollee to travel with a caregiver.

- The availability of public transportation in the enrollee's area or community (including the accessibility of the enrollee's destination) and whether the enrollee must walk more than three-quarters of a mile to or from the public transportation stop.

- The availability of on-demand response providers in absence of public transit.

- The compatibility of a public transportation schedule with the enrollee's appointment times.

- The enrollee's ability to ambulate independently or use a wheelchair and type of wheelchair.

- Any special needs of the enrollee requiring coordination with other providers such as attendants for minors, the elderly, and enrollees with disabilities or other special needs.

PROMOTION OF MORE COST-EFFECTIVE MODES OF TRANSPORT
For those enrollees for whom a more cost-effective mode of transportation is appropriate, our NET Customer Care specialists educate the enrollee about their options, including the benefits of each. For example, we explain that enrollees often enjoy the benefits associated with receiving bus passes, such as having the ability to use the pass until its expiration to get to the grocery store, pharmacy, and other locations, in addition to their medical appointment. Additionally, the mileage reimbursement option, which allows enrollees with access to a vehicle through a family member, friend, or neighbor to receive coverage of fuel, provides additional flexibility in the enrollee's schedule, as they have more control over when they leave and arrive at their destination.

==========
4. The adequacy of the respondent's performance related to:
a. Percentage of trips where the enrollee arrived to their scheduled appointment on-time;
b. Percentage of missed trip requests;
c. Percentage of hospital discharge requests fulfilled within three (3) hours of the request;
d. Percentage of urgent care requests fulfilled within three (3) hours of the request;
e. Number of transportation-related complaints and grievances per 1,000 enrollees.
==========

Data from our current MMA and LTC plans in Florida are displayed below. This data is based upon verified, paid trips. We have included data from each month of calendar year 2016 to show our consistent performance over time, in addition to the overall total.

NET FOR HUMANA LTC ENROLLEES, CALENDAR YEAR 2016

Percentage of trips where the enrollee arrived to their scheduled appointment on-time:

Total Monthly Average 2016: 79.7%
January: 75.6%
February: 78.3%
March: 79.5%
April: 80.0%

==========

5. The extent to which the respondent uses performance metric data to identify areas in need of improvement and implements successful strategies to improve the provision of services.

==========

Humana is committed to ensuring that all of our transportation partners meet or exceed all quality metrics. Our subcontractor oversight structure uses the performance metric data, captured in the reports detailed below, to guide our quality management activities. Through regular interactions with our NET subcontractors, including biweekly or monthly Local Operating Committees (LOCs) and Joint Operating Committees (JOCs), we collaborate to review this data and any received complaints to identify strategies for improvement, including investments in technology and refined processes. These interventions are rooted in the commitment of Humana and our NET subcontractors to provide a high-quality transportation experience that brings our enrollees to their destination in a safe and timely manner.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

REPORTING TO HUMANA

The robust reporting capabilities of our transportation subcontractors, as required by our contracts, provide Humana with a view of transportation program operations from multiple perspectives. These reports allow both Humana and our subcontractors to pinpoint areas for improvement and to design projects that can ensure a better NET experience for our enrollees. The reports produced by our transportation subcontractors draw from a wide variety of sources, including trip logs, enrollee surveys, complaints, claims, quality metrics, and transportation provider performance. These reports include the metrics listed above, in addition to:

- Call center metrics: Number of calls received, average answer time, number of abandoned calls, average abandonment time, and average call time

- Quality reports: Complaints by type (provider late, provider no-show, provider issue, other)

- Trip detail reports.

-- Trip summary report: Details the number of trips that have been requested, cancelled, and completed, as well as trips that are open. This report also includes utilization data by enrollee and vehicle type.

-- Complaint report: Details complaints filed by enrollees, transportation providers, medical providers, and facilities. This report provides dates, descriptions, and resolutions of these complaints.

-- Refusal report: Details all refusals for service, providing enrollee name, date of refusal, and reason for refusal.

-- Transportation provider accident report: Details accidents by NET provider, providing dates, driver names, enrollee names, cause of accident, injuries (if any), and actions taken.

-- Network provider report: Provides complete provider files.

-- Transportation quality assurance report: Details on-time performance, complaint ratio, and any late re-routes.

DEDICATED QUALITY MANAGEMENT AND SUBCONTRACTOR OVERSIGHT

Humana has implemented a rigorous oversight program for our subcontractors, comprised of corporate and market-level teams that are dedicated to the management of our subcontractors. Our Delegated Vendor Performance Oversight program is responsible for our subcontractor quality management activities. The goals and objectives of this program include:

- Monitoring the facilitation and delivery of appropriate care and services to enrollees
- Monitoring the response to enrollees' needs and practitioner requests

- Monitoring subcontractors' adherence to contractual provisions and Service Level Agreements (SLAs)
- Identifying opportunities for improvement in the delivery of care and services to enrollees
- Collaboratively developing corrective action plans, as appropriate
- Monitoring for timely submission of contractual reporting
- Reviewing financial solvency for subcontractors with financial risk arrangements
- Monitoring adherence to policies concerning Protected Health Information
- Detecting inappropriate utilization patterns
- Monitoring for appropriate credentialing and network adequacies
- Escalating operational and financial non-performance to the Delegated Vendor Oversight Committee (DVOC), Quality Improvement Committee (QIC), and senior leadership, as needed
- Collaborating with Delegation Compliance at the corporate level to validate that all delegated functions are in compliance and are meeting Humana's expectations based on SLAs

Monitoring and oversight of our NET subcontractors is performed on a day-to-day basis by our Florida-based Delegate Relationship Managers (DRM). In addition to the reports provided by our subcontractors on a monthly basis and ongoing communication to address any issues or questions that may arise, our DRMs oversee the performance of our NET subcontractors via our LOCs. Regular Operational Working Sessions, held on a biweekly or monthly basis, provide a structured forum for our DRMs, compliance officers, and the Director of Vendor Performance to meet with our NET subcontractors to review data, discuss trends, and identify opportunities for improvements with our subcontractors' own quality improvement teams. We also discuss any enrollee complaints that may have been filed in the last month, and the steps that our vendors are taking to address them. This close working relationship with our subcontractors, facilitated at the local level, provides us with a unique oversight and quality improvement role, allowing Humana to ensure the best possible NET services for our enrollees.

These calls also provide a forum for our subcontractors to share important lessons learned with Humana. For example, it was noted by the subcontractor during a LOC meeting that a select group of enrollees had to travel more than fifty (50) miles to reach a specialist. Humana used this information to explore ways to build their network in this region to bring our care closer to our enrollees' homes.

Our DRMs and LOCs are supported by our Director of Vendor Performance, who holds monthly operational meetings with all DRMs to review vendor performance, identify opportunities for improvement, develop corrective interventions, and follow-up on progress. A summary of subcontractor performance is presented at the DVOC. The DVOC is tasked with oversight of all of our delegated services at a market level, including NET. Through ongoing, objective, and systematic monitoring, including review and follow-up of corrective action plans, review of subcontractor activity performance reports, and the establishment of delegation oversight mechanisms, the DVOC ensures the quality performance of our NET subcontractors. The DVOC reports its findings and activities to our QIC.

STRATEGIES TO DRIVE PERFORMANCE ON KEY INDICATORS

Through our regular conversations with our NET subcontractors, we have designed and implemented strategies to consistently improve our performance on key metrics. In the section

below, we provide examples of the interventions that we have introduced to continually provide the best NET experience for our enrollees.

INCREASING ENROLLEE ON-TIME TRIPS AND REDUCING MISSED TRIP REQUESTS
Data on the percentage of trips where the enrollee arrived to their scheduled appointment on-time and the percentage of missed trip requests are shared with NET providers in the form of a performance score card. This scorecard benchmarks their performance compared to other providers, factoring in tracked complaints, on-time performance, credentialing compliance, cancellations, re-routes, no shows, and the number of trips provided. Using GPS technology, every trip is date- and time-stamped, providing transparent accounting for the performance of our NET providers.

When transportation providers do not maintain high-quality scores, per their contracted metrics with LogistiCare and Access2Care, our subcontractor teams meet with the provider to discuss areas where their performance falls below our quality standards and establish an agreed upon action plan to resolve issues in a prescribed timeframe. These plans include a variety of interventions that are responsive to the identified issues, such as provider re-training and vehicle re-inspection. We find that performance typically improves after implementation of the action plan. However, if we do not see the requisite level of improvement within the designated timeframe, we use a progressive improvement plan to provide a structured process to address critical deficiencies and improve and prevent a recurrence of undesirable incidents or performance issues. These steps include a verbal warning and provider education, a written warning and a decrease in the number of trips assigned to the provider, suspension and final written warning, and termination.

To improve our performance on these metrics, GPS technology is used to enable continual, real-time monitoring of on-time performance of our vehicle fleet. If we see a vehicle is at risk of a delayed arrival, we can proactively take action to ensure that the enrollee arrives in time for their scheduled appointment, including dispatching another vehicle nearby that can reach the enrollee more quickly. Furthermore, we can use data from the GPS tool to estimate trip times and maximize routing efficiency to limit enrollee commute times. This results in an improved enrollee experience, better on-time performance and cost savings.

INCREASING HOSPITAL DISCHARGE REQUESTS FULFILLED WITHIN THREE HOURS
We use data on the percentage of hospital discharge requests fulfilled within three (3) hours of the request to guide the development of strategies to ensure timely pick-ups for our enrollees. Two such strategies are our dedicated facility phone line and integration of our transportation scheduling system with hospital discharge software.

DEDICATED FACILITY PHONE LINE

To ensure timely service delivery for hospital discharge and urgent care requests, LogistiCare provides a dedicated line for facilities that is answered by specially-trained transportation staff. This toll-free number, which operates twenty-four (24) hours a day, seven (7) days a week, expedites the trip request process for medical facility staff. Through this line, hospital personnel receive prompt scheduling assistance in support of their discharge planning. Furthermore, LogistiCare's Utilization Review Department Specialists provide specialized management of standing order and demand response trip requests from ordering practitioners and serve as an

in-house advocates for, and liaisons to, healthcare facilities. Our review of hospital discharge requests by facility helps us to identify those facilities that could most benefit from this in-house support.

INTEGRATION WITH HOSPITAL DISCHARGE SOFTWARE

To further expedite the hospital discharge planning process, requests for NET can be made through naviHealth hospital discharge software if the participating facility uses this tool. This software, which is in use at LogistiCare's call centers, allows hospital staff to request discharge NET services without having to place a call to LogistiCare. Upon receipt of the request from a hospital LogistiCare will finalize the request through normal verification processes and provide details of the trip in naviHealth.

INCREASING URGENT CARE REQUESTS FULFILLED WITHIN THREE HOURS

Our subcontractors have implemented specialized processes to improve our performance on this metric. When an urgent care request is received through the NET call center, the request is routed to the Transportation department, where they are prioritized for scheduling and manually assigned to either an in-network or demand provider able to meet the level of service and timeframe required. To identify providers who can complete the request within the three hour window, we leverage our subcontractors' GPS capabilities through which we can see where our transportation provider vehicles are, in relation to a pick-up location. This system enables us to visually identify an available vehicle in the vicinity and meet the enrollee's request in a timely manner.

In addition to designing strategies to improve our performance on this metric, we use our data on the urgent care requests to identify the reasons why enrollees are submitting urgent care requests. For example, if enrollees are regularly submitting requests at short notice for routine appointments, we will educate them on their options to schedule appointments ahead of time through our designated phone line, enrollee portal, or mobile app.

REDUCING NUMBER OF TRANSPORTATION-RELATED COMPLAINTS AND GRIEVANCES

Humana and our NET subcontractors are committed to capturing and fully investigating all complaints received. This information is subsequently used to improve how we serve our enrollees. Our company-wide focus on quality improves our programs, and as a result, improves the enrollee experience. Our commitment to quality is recognized by the industry's highest standard: Access2Care and LogistiCare have received full URAC Accreditation for quality in all of their operations, and ninety-nine point nine percent (99.9%) of NET trips taken by Humana enrollees are complaint-free.

COMPLAINT INTAKE AND RESOLUTION

Our strategies to reduce the number of transportation-related complaints and grievances are rooted in a strong complaint intake and resolution process. All of our NET Customer Care specialists are trained on the complaint intake process and are able to receive and log complaints twenty-four (24) hours per day, seven (7) days per week, three-hundred sixty-five (365) days per year via the same toll-free number our enrollees call to schedule a trip. Customer

Care specialists log all complaints into the software system. A verbal acknowledgement is given to enrollees during intake, and an acknowledgement is generated within one business day.

While we encourage the formal filing of complaints by our enrollees, we recognize that informal complaints may also be received by our case managers or other personnel that warrant response and further discussion with the subcontractor. For example, our case manager may be called by the enrollee or their caregiver when the transportation provider is late for pick-up. In this instance, the case manager contacts our NET partner immediately to find another mode of transport, logs the complaint, and documents all information in Clinical Guidance eXchange (CGX) for our records. As with formal complaints, any informally-filed complaint that is not resolved by close of business on the business day following receipt becomes a grievance, and is elevated to Humana's Grievance and Appeals department. At our regular, internal quality meetings, these informal complaints are further shared and discussed, with trends identified and elevated to the DRM. The DRM brings these identified trends to the next LOC meeting with the subcontractor, where we discuss causes for the complaints and how they can be prevented in the future, including solutions related to network adequacy, technology, scheduling, and provider training.

In addition to Humana's own procedures for complaint resolution, both subcontractors have a designated team that responds to complaints from our enrollees. This response team works directly with all departments, in addition to other functional teams, to investigate complaints, uncover root causes, identify a targeted or high-risk list, and provide retrospective monitoring of these enrollees to improve their experience. The goal of this team is to enhance the overall NET program and provide the highest level of customer service. Any complaints that are not resolved by close of the next business day are elevated to Humana's Grievance and Appeals Department for resolution, with further support from our transportation partners. Grievances will be resolved as expeditiously as possible and no later than ninety (90) calendar days from the day of receipt by Humana.

All significant events are analyzed and brought to Humana's Grievance and Appeals department for further review, in conjunction with the subcontractor. Significant events are unexpected occurrences that demonstrate a real or potential threat to enrollee care or staff safety. We are committed to effectively managing such events, and corrective actions can vary from re-education up to termination of provider subcontractor agreements.

Our NET subcontractors share complaint-related information with Humana via monthly dashboard reporting and in near-real time via the secure online portal. Through our regular review of the portal, Humana staff can provide feedback on the complaint management process and recommend changes. We review complaints received during our regular LOC meetings with our transportation subcontractors. During these discussions, we review how the complaint was resolved and how future complaints of that kind can be prevented. We also use information on complaints received and resolved to design performance improvement projects to guarantee enrollee satisfaction with NET services.

IDENTIFICATION OF QUESTIONS AND CONCERNS THROUGH ENROLLEE SURVEYS

Our subcontractors' enrollee surveys allow us to proactively identify and address any questions or concerns that an enrollee may have that have not yet been registered as a complaint or

grievance. The results of the more than ten thousand (10,000) enrollee surveys conducted per quarter (which are shared with Humana during our LOC meetings) provide rich insights into our enrollees' experience with our transportation subcontractors. Based upon the findings of the surveys, we track our subcontractors' performance over time and design performance improvement projects to improve enrollee satisfaction. As an example, below are the results of LogistiCare's 2017 third (3rd) quarter results, among Humana's Florida Medicaid enrollees. We have seen a steady improvement in these results since the First (1st) quarter of 2017:

- 88.21% found it easy to request transportation
- 88.96% reported that the vehicle they rode in met their needs
- 88.37% arrived on time to their appointment
- 93.29% found their driver to be courteous

Evaluation Criteria:

1. The adequacy of the respondent's software capabilities to facilitate ease in scheduling transportation and tracking of enrollee pickup adherence;

2. The extent to which the respondent describes strategies for determining the appropriate mode of transportation equipped to meet the enrollee's individual needs.

3. The extent to which the respondent's approach includes an assessment of whether the enrollee has any other means of transportation, including a description of the process that will be utilized to make this assessment.

4. The adequacy of the respondent's performance related to:

- **(a)** Percentage of trips where the enrollee arrived to their scheduled appointment on-time;
- **(b)** Percentage of missed trip requests;
- **(c)** Percentage of hospital discharge requests fulfilled within three (3) hours of the request;
- **(d)** Percentage of urgent care requests fulfilled within three (3) hours of the request; and
- **(e)** Number of transportation related complaints and grievances per 1,000 enrollees.

5. The extent to which the respondent uses performance metric data to identify areas in need of improvement and implements successful strategies to improve the provision of services.

Score: This section is worth a maximum of 45 raw points with each of the above components being worth a maximum of 5 points each.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 25 – Vignette (Statewide):

The respondent shall review the below case vignette, which describes potential Florida Medicaid recipients. Note: The vignette included below is fictional.

> *Deshea is 25 years old. She was auto-assigned to your plan and enrolled effective January 1, 2019. Deshea's enrollment information did not include a telephone number and listed a local area homeless shelter as her last place of residence. She left the shelter on December 27, 2018, and the shelter does not know her current whereabouts.*

The respondent shall describe the process it will use to attempt to contact Deshea by March 29, 2019.

Response:

PRE-ENROLLMENT

PRIOR TO DESHEA'S EFFECTIVE ENROLLMENT DATE
Notification of Deshea's eligibility comes to Humana via the 834 enrollment file from the Florida Agency for Health Care Administration (AHCA) on December 17, 2018 with a January 1, 2019 effective date. This file feed is an automated electronic transmission into our Customer Interface (CI) enrollment system. Deshea's eligibility information loads within 24 hours and flows into our downstream systems within 72 hours of enrollment receipt. The downstream systems include Humana's [1] CareHub Clinical Guidance Exchange (CGX) and [2] Customer Relationship Management (CRM).

IDENTIFICATION AND TIMELY INITIAL CONTACT WITH DESHEA
With the upload of Deshea's eligibility information into our systems, an electronic transmission triggers Humana's Enrollment team to mail welcome materials to Deshea. Before mailing the materials to Deshea, our system utilizes an automated validation process to ensure the address provided on the 834 file is complete for automated mailings. Within five days, the welcome materials were mailed to the address for her on the 834 file. Welcome materials mailed to Deshea contained the following items:

- Welcome letter to include an enrollment notice, where to locate the current enrollee handbook online, and how Deshea can receive a printed version of the handbook if desired

- Enrollee identification card

- Customer Service, 24/7 Nurse line phone numbers

- Continuity of Care form with a self-addressed and stamped return envelope

- Health Risk Assessment (HRA) form with a self-addressed and stamped return envelope. This form gathers key information on Deshea to determine if case management and/or disease management would be appropriate, such as chronic conditions, pregnancy, and care needs

- Release of Information form

UPON-ENROLLMENT

STRATIFICATION WITH MEDICAID SEVERITY PREDICTIVE MODEL
Concurrent with the initial outreach process, Deshea's new eligible enrollee information (such as claims, pharmacy, demographic, diagnosis, and pregnancy indicators) is run within the first thirty days of enrollment, and monthly thereafter, through our proprietary Medicaid Risk Score algorithm. This score provides guidance for enrollees with high risk factors and triggers them for case management or disease management outreach and participation efforts. Humana can improve care quality and health outcomes by stratifying enrollees by future risk and high utilization potential, and identify enrollees appropriately for case management. If Deshea is not eligible for case management or disease management, our Medicaid Severity Predictive Model will continue to run in the system background to assess changes in condition that may make her eligible for outreach by case or disease management case managers.

PREGNANCY INDICATORS
With Deshea's young age, she is within child bearing years. Humana's Medicaid Administration Education Satisfaction Unit (ESU) understands the importance of early identification and continuous care within the perinatal period and makes every effort to identify pregnant enrollees through many channels, including welcome calls, review of HRAs, community relationships, and efforts with the local Healthy Start program. If identified as pregnant, upon contact, Deshea would be enrolled in our Florida Medicaid plan are invited to enroll in Humana Obstetrics' Moms First program or they can opt to enroll in the Healthy Start case management program. Humana coordinates our case management efforts with the local Healthy Start Case Manager to prevent duplication of services. In addition, Humana established a file sharing relationship with Healthy Start, which assists in early identification of pregnant enrollees.

DISEASE MANAGEMENT REFERRAL REPORT
Medicaid enrollees such as Deshea are also queried through claims data that is inclusive of medical ICD-10 codes and pharmacy National Drug Code (NDC) codes related to any of the five proposed diseases; a report known as the "Potentials Report" is then generated. This report is pulled on a monthly basis by the Disease Management case manager and the identified enrollees are contacted by letter and telephonically within 7-10 days of identification.

DAY 1: DESHEA IS IDENTIFIED AS UTC; SERGIO INITIATES ATTEMPTS TO LOCATE

Although most enrollees have permanent residences, at times Humana is assigned enrollees, such as Deshea, who do not have permanent residences or known phone numbers and are very difficult to find. To specifically focus on such enrollees, we developed an Unable to Contact (UTC) process comprised of specially trained Humana associates dedicated to locating enrollees in the most effective and timely manner. In this instance, we assign Deshea's case to Sergio, a UTC Customer Care Specialist (CCS) within ESU. With his extensive communication tools, resources, and training, Sergio is able to begin the UTC process upon Deshea's effective enrollment date, in order to exhaust all reasonable methods to attempt to find her and identify

her care needs or concerns, as well as to connect her with the most appropriate providers, services, and community partners.

Sergio receives an automated alert of Deshea's UTC status in CGX. He reviews her file and learns she is a 25 year old female who has been auto-assigned to our plan. Unfortunately for Sergio, Deshea's file does not include a telephone number. Per Humana's process, for enrollees like Deshea who have a missing or invalid telephone number, an individual case file is created within CGX, triggering a UTC alert within the system. Upon activation of the UTC alert, Deshea's file forwards to an automated UTC queue within CGX to be managed by Sergio. Sergio's Florida-based UTC team manages the UTC queue for all Florida Medicaid enrollees who do not have a valid telephone number or a valid address. Given the system's "first-in first-out" approach, Sergio receives Deshea's case file in real time. Right away, he begins working on multiple avenues to attempt to locate her. Sergio is experienced in situations like Deshea's, given the significant number of individuals who enroll or are enrolled with inaccurate or incomplete contact information.

Proceeding with the initial steps to locate Deshea, Sergio begins with a search for a valid telephone number and address for Deshea within Humana's system. He reviews CGX to identify whether there is any historical claims information, provider or pharmacy data, or additional contact information. If Sergio were able to find such information for Deshea, he would attempt calls to any identified providers to obtain Deshea's current contact details. In this case, Deshea has no historical information on file.

DAY 2 – 19: SERGIO'S SHELTER OUTREACH

Sergio notes that the enrollee materials mailed pre-enrollment were returned as undeliverable (when this happens, an associate from ESU captures this information within CRM to note the returned mail). Sergio further notes the address as a homeless shelter in the area he knows. Sergio also knows that Humana provides Florida shelters with the latest information and enrollee-facing materials to distribute to our enrollees on a continual basis. These materials educate enrollees on our services and assistance we can provide, including a contact number that will route to Sergio or one of his associates if the enrollee needs assistance. Humana also delivers Humana Homeless Enrollee Survival Kits to homeless shelters for our enrollees. While partnering with the shelters in Deshea's community, Sergio knows the staff would provide a kit to Deshea if she were to visit, and would request that Deshea contact Humana to discuss her plan benefits. The Humana Homeless Enrollee Survival Kit includes items such as:

- First Aid supplies, like antiseptic wipes, hand sanitizer, ointment, and adhesive bandages

- Sunscreen and lip balm

- ID/Wallet Card for enrollee to complete with name, address, phone number, doctor, medical conditions, and emergency contact information

- Toothbrush and toothpaste

- List of available community support resources

- Humana ER Utilization Magnet

- Blanket

- Drawstring backpack

- Nail clippers

- Humana's contact information in multiple languages

This relationship development with the shelters, combined with Sergio's experience working with them through UTC and other community related activities, enables Sergio to make efficient and effective contact with the shelter listed as Deshea's address. He calls and speaks with the shelter manager, Alice. Alice tells Sergio that Deshea has not visited the shelter since December 27 and that she has no current information on her whereabouts. Alice makes a note to leave a message on the shelter communication board asking Deshea to contact Humana. Sergio also contacts a few other local homeless shelters, but has no luck in locating Deshea. Sergio had been hopeful he'd be able to locate a valid address for Deshea, as that would allow him to generate an automated mailing of a UTC postcard. However, knowing the current address is to a homeless shelter and that Deshea is no longer there, he ensures the postcard is not sent.

Sergio then connects with Humana's Florida Community Outreach teams to see if Deshea accessed any of these community services upon enrollment. Humana actively participates in Florida Health Fairs and Town Halls, in addition to partnering with Florida's Community Medical Automated Community Connection to Economic Self Sufficiency (ACCESS) Centers, where Deshea could check her eligibility and discuss her benefits with representatives from the State upon request. These representatives can also offer assistance in finding a Primary Care Physician (PCP), as well as determining eligibility for food (Food Assistance Program) and cash (Temporary Cash Assistance Program). Unfortunately for Sergio, the community outreach teams don't have any information on Deshea either.

Sergio is also mindful that a provider is auto-assigned to enrollees who do not choose one upon enrollment and can easily check the system for this information, as Humana's system proactively auto-assigns a PCP through our provider partnership model in situations like this. Sergio contacts Deshea's assigned PCP office and learns Deshea has not contacted the office since her enrollment date and they have no prior patient history. Sergio documents this information in CRM to note his call for future reference.

DAY 20-89: SERGIO'S CONTINUED EFFORTS AND COMMUNITY ENGAGEMENT

Sergio utilizes online search engines, such as the LexisNexis database, as well as social media channels, for government records such as death certificates and correctional facility admissions as additional possible paths for obtaining contact information. An online record of Deshea does not turn up; however, Sergio is aware of Humana's partnerships with community clinics, such as Federally Qualified Health Clinics and Community Mental Health Clinics, which have proven helpful in locating people in the past based on activities like visits to emergency departments. If Deshea visits one of these local centers, the representatives will provide guidance to Deshea on

Humana's behalf and encourage her to contact Humana regarding her plan benefits. Humana's Florida Medicaid Community Outreach team stays connected to these organizations to provide them with Humana enrollee education information regarding health and financial literacy, provider and enrollee cultural competency, food insecurity, and additional barriers to health.

Sergio continues the extensive research, location, and outreach methods outlined above and at least every two weeks reviews internal systems to identify if any new contact information has been obtained, such as a pharmacy claim or a medical visit.

HIE-ENS DAILY EMERGENCY DEPARTMENT UTILIZATION NOTIFICATIONS

For continuous monitoring of Deshea, Humana receives a daily Health Information Exchange-Electronic Notification System (HIE-ENS) file notifying us if Deshea were to visit an emergency department. This file would include her current contact information obtained during the visit. This HIE-ENS file would then alert our Utilization Management (UM) team of her emergency department visit and trigger for outreach. Additionally, the UM team would view Deshea's UTC status in the system. This collaborative effort allows for outreach to Deshea sooner, after being identified by these services.

DAY 90: THE END OF DESHEA'S INITIAL 90 DAYS

Deshea's initial 90 days of enrollment come to a close and Sergio is still unsuccessful in locating her. He is also unable to find an accurate current address or phone number, and no new medical or pharmacy data has been uploaded into the system.

Sergio closes Deshea's formal 90 day UTC case within Humana's CGX and CRM systems, knowing our engagement efforts will continue well past the ninety day period.

POST 90 DAYS: ENROLLEE OUTREACH AND MONITORING

For Deshea, Humana's Healthcare Effectiveness Data and Information Set (HEDIS) campaigns are also utilized by ESU in an attempt to locate her post ninety days of initial plan enrollment. These campaigns include:

- Annual Wellness Visit – ESU attempts to follow up with Deshea if she does not get timely screenings and is more than two months behind in the periodicity schedule. If this new activity reveals a valid phone number, ESU contacts Deshea and offers to assist with scheduling her appointments and transportation.

- Birthday Campaign – Every month, ESU identifies all enrollees with a birthday for that particular month. This information is compiled to complete an automated call, encouraging enrollees like Deshea to visit her PCP to receive a health assessment and preventive care. If Deshea had children covered by our plan, ESU will also ask if the children have been to the doctor for their yearly health assessment, helping Deshea schedule the appointment and transportation if necessary.

- Dental Campaign – Humana's Medicaid Quality Team reviews data from our dental partners regarding HEDIS measures and relays this information to ESU on enrollees who are compliant

for that measure. In this case, ESU would attempt to contact Deshea since she is non-compliant providing updated number or address information is found.

- Concierge Campaign – ESU attempts to contact an enrollee after nine consecutive months of enrollment, with an upcoming open enrollment period within the next couple of months. Since open enrollment is different for every Medicaid enrollee, this is an ongoing process for ESU. The team performs outreach attempts starting month nine of enrollment, extending through months ten, eleven, and twelve. This particular call campaign ends the first month (month 1) of the new plan year eligibility for that enrollee.

ADDITIONAL INFORMATION: OTHER RELEVANT HUMANA UTC PROCESSES

Unfortunately, Sergio was not able to locate Deshea within his formal 90 day UTC process period, in part, due to her specific set of circumstances. However, Sergio understands that there are many others for whom these tactics may have yielded a more positive outcome.

Below, we have outlined some additional information that is helpful to understand to gain a fuller picture of Humana's UTC approach. This information relates to alternate processes to locate UTC enrollees when more information is available and training that is provided for our UTC Specialists. Specifically below, you will find detail on:

- Humana's UTC Specialist Training
- Humana's Process for New Enrollees with a Valid Telephone Number

UTC SPECIALIST TRAINING

Humana provides extensive training to Sergio as a UTC specialist. This comprehensive training includes four weeks of classroom training, covering motivational interviewing, cultural competency, and enrollee rights. After four weeks of classroom training, he is mentored by senior CCSs and Quality Specialists (QS). Sergio's mentoring includes shadowing and then oversight and feedback, with every call reviewed for quality assurance and application of scoring criteria. This training includes strategies on finding enrollees without a valid telephone number or address, as well as mail returned undeliverable to an enrollee, or enrollee mail returned to Humana with a completed health risk assessment.

This training equips Sergio to locate and contact appropriate community resources, to help resolve enrollee issues in a timely manner. This helps Sergio and his colleagues learn to utilize strategies to identify indicators of access-to-care barriers, prioritization of immediate needs, detection of enrollee health literacy issues, and to display empathy and provide emotional support. Humana's ESU uses Spanish, English, French, Creole, and other languages mirroring the enrollee's spoken language, to address communication barriers. CCSs such as Sergio are the first Humana touchpoint with enrollees, initiating a relationship that can be built upon to empower the enrollee to be successful. Humana hosts a monthly meeting for CCSs to incorporate continuous education methods, which includes a question and answer training session and forum where they share lessons learned with each other. Along with monthly training, QSs support the CCS team by performing quality assurance reviews of Humana's new enrollee welcome calls each month, to assess the performance and completion of all procedures required to effectively inform new enrollees of their plan benefits. The evaluation includes the monitoring of Humana's Health Insurance Portability and Accountability Act

(HIPAA) requirements, communication and interaction skills, accuracy and accountability, and documentation of enrollee information. CCSs also adhere to all Telephone Consumer Protection Act (TCPA) and Do Not Call regulations if a valid number is found.

PROCESS FOR NEW ENROLLEES WITH A TELEPHONE NUMBER

Upon enrollment, all enrollee files that include a valid phone number are loaded into the Humana Autodialer for automated telephonic outreach. The Autodialer is programmed to call enrollees with a phone number six times within the first thirty days of eligibility. If the call is answered by the enrollee, our automated system transfers the call to ESU to conduct a welcome call. This call includes completion of an HRA to determine needs, a review of available benefits, confirmation of current providers, confirmation of receipt of the enrollee handbook and plan identification card, and the collection of any updated demographic information. If an enrollee exhibits an urgent medical need or concern, the ESU CCS personally transfers them and introduces them to the Humana Clinical Access Team for immediate assistance by a Registered Nurse. If someone other than the enrollee answers the call, the ESU CCS will leave a non-PHI general message requesting they contact Humana at their earliest convenience.

Trained to identify the needs of our enrollees during welcome calls, ESU helps to close care gaps and target resources that match individualized needs. An ESU Quality Specialist supports this team by performing quality assurance reviews of welcome calls monthly to assess the performance and completion of all procedures required to effectively inform the new enrollee of their plan benefits. The evaluation includes the monitoring of Humana's HIPAA requirements, communication and interaction skills, accuracy and accountability, and documentation of enrollee information.

CONCLUSION

Humana realizes that successfully engaging new enrollees requires timely and consistent outreach throughout eligibility, not just during the first ninety days. We work with a variety of community and social service organizations, including homeless shelters and community mental health groups, as well as physician and hospital partnerships and social media channels, all with the aim of finding solutions to complex health and well-being issues. By exhausting all options for engagement through extensive internal and external search, continuously monitoring for health care changes, and improving our processes through innovative strategies, enrollees like Deshea can receive a simplified and streamlined experience. This provides various pathways into case management services for a holistic and dedicated approach to health and well-being.

Footnotes

---

[1] CareHub is Humana's enterprise solution for complete program integration for our provider community and enrollees. CGX supports an integrated, comprehensive approach to medical, behavioral health, pharmacy, utilization, and care management. Full system integration allows our care team the capability to identify potential enrollees for programs, document gaps in care, automate care planning, monitor plan compliance, and identify opportunities for intervention.

[2] CRM is Humana's documentation system for enrollee support activities, providing message optimization, enrollee-centric prioritization, data mining and reporting, and enhanced processes for quality management to streamline the flow of data to other internal systems.

Evaluation Criteria:

1. The adequacy of the respondent's approach in addressing the following:

(a) Identification of strategies for identifying new enrollees; and

(b) Description of the sources of data/information that will be utilized to identify enrollees with special health care needs or circumstances.

2. The extent to which the respondent describes its process for contacting enrollees, including the data sources.

3. A description of how network providers and community partners will be engaged in the identification process.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Attachment SRC 25-1: Deshea's Visual Story Guide

We have provided this document as a visual guide to our response. The key timelines from our core response are duplicated here in a format intended to supplement and enable a comprehensive review of Humana's approach to Deshea.

About Deshea:

Deshea is a 25-year-old female, newly eligible MMA Medicaid enrollee with auto-assignment into the Humana plan, with a January 1, 2019 effective date of eligibility. Her enrollment information did not include a telephone number and listed a local area homeless shelter as last place of residence. Deshea left the shelter on December 27, 2018 and the shelter does not know her current whereabouts.

Key Components of Care

- **Unable to Contact (UTC)** process focuses specifically on locating Deshea in the most effective and timely manner possible
- **Real-time information updates** via Humana's CGX and CRM to automate UTC alerts, assignment, and status for Deshea
- **Dedicated, knowledgeable UTC Customer Care Specialist (CCS)** engages community, provider, & social services supports to exhaust every outreach effort and identify Deshea's care needs and concerns
- **Florida Medicaid Community Outreach teams** to connect to organizations, share information
- **Post-90 Day Outreach and Monitoring throughout Eligibility** to continue timely and consistent outreach to locate and engage Deshea

Deshea's Support System

- **Sergio** — UTC CSS
- **Alice** — Shelter Manager
- **Florida Community Outreach teams**
- **ESU Continued Outreach & Monitoring Post-90 days**

Deshea's Timeline:

1 — Pre-Enrollment:
Notification of Deshea's eligibility comes to Humana on December 17, 2018. Her information loads within 24 hours and flows into our downstream systems within 72 hours of enrollment receipt. The downstream systems include CGX and CRM.

2 — Pre-Enrollment: Timely Initial Contact
Our system validates Deshea's mailing address from her 834 file. Within five days, we mail new enrollee materials to the address for her on the 834 file.

3 — Day 1 – Ongoing: Enrollment Identification through Predictive Modeling
Humana runs Deshea's eligibility information through our Medicaid Risk Score algorithm within the first thirty days of enrollment, and monthly thereafter.

4 — Day 1: UTC Designation
Returned shelter mail indicates Deshea isn't at the shelter. A UTC alert is triggered within the system. Sergio, a UTC CCS, begins location and outreach attempts for Deshea.

5 — Day 1: Attempting to Locate Using Internal Systems
Sergio looks through Humana's system to try to locate contact info, reviewing CGX for historical claims, data, etc. No information is on file for Deshea.

6 — Days 2-19: Shelter & Community Engagement
Sergio calls the and speaks with Alice, the shelter's manager. She has not seen Deshea since Dec. 27, 2018. Sergio then connects to Humana's Florida Community Outreach teams to see if she has accessed community services upon enrollment.

7 — Day 20: Community Engagement
Sergio uses online search engines, databases, social media, and government records for possible paths to contact Deshea.

8 — Day 20-90: Continued Search & Close Formal UTC case
Sergio continues extensive research and every two weeks reviews all available internal systems. After 90 days of no contact, he closes Deshea's formal 90-day UTC case.

9 — Post-90 Days: Enrollee Outreach & Monitoring
Humana's Education & Satisfaction Unit (ESU) continues attempts to locate Deshea using HEDIS campaigns such as annual wellness visits follow-up, birthday campaigns, dental and concierge campaigns.

F. OVERSIGHT AND ACCOUNTABILITY

SRC# 26 – Subcontractor Oversight (Statewide):

The respondent shall list any proposed subcontractors to which it will delegate the management of: provision of covered services, utilization management, provider networks or paying providers. The respondent shall describe how it will oversee and monitor the performance of subcontractors in general, as well as any specific oversight planned for certain subcontractors, including any corresponding service level agreements. The respondent shall include in its response the schedule and type of monitoring and how findings are reported, remediated, and used for process improvements.

Response:

While Humana has responsibility for and will continue to perform a majority of the functions required by the SMMC, we also understand the importance of choosing and maintaining high quality subcontractor relationships where functional support is appropriate. We have thoughtfully and deliberately contracted with entities that share Humana's goal of providing the most effective and efficient care to Florida enrollees. We have been successfully delegating select services as part of our Florida Medicaid program for the last twenty (20) years. Humana subcontractors provide specialized services and support to enrollees and providers in varying capacities across several categories:

- Managing the provision of covered services,
- Performing utilization management,
- Maintaining high quality provider networks, and
- Paying providers.

Humana is committed to working with partners experienced in serving Medicaid enrollees and delivering services on behalf of our organization to improve enrollee outcomes and quality of life. We carefully evaluate our subcontractors by conducting pre-assessment reviews prior to contracting and delegation to ensure we satisfy all compliance standards. The pre-assessment is conducted in addition to all assessments and audits required by regulations and contract obligations at the time of delegation. We will provide results of subcontractor monitoring to the Agency's Contract Manager fourteen (14) business days after the end of each month or as specified by the Agency. We understand that if a subcontractor's performance does not meet the Agency's performance standard according to the Agency's monitoring report or the subcontractor's monitoring report, an improvement plan must be submitted to the subcontractor and the Agency within fourteen (14) business days of the deficient report.

==========

1. The extent to which the respondent provides a list of subcontractors it proposes to use under the SMMC Program for the delegation of work as described above.

==========

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

PROPOSED SUBCONTRACTORS

Humana proposes to use the subcontractors listed below and in Attachment 26-1 Subcontractor List in our Florida Comprehensive Medicaid program to delegate management of: provision of covered services [Florida Statute 409.973], utilization management, provider networks, and paying providers. Each subcontractor will be subject to the contracting, monitoring and oversight processes described here prior to providing any services or goods in support of the SMMC.

PROVISION OF COVERED SERVICES:
- 20/20 Eye Care Network, Inc. (Vision Services)

- Access2Care, LLC (Non-Emergency Medical Transportation Services)

- American Eldercare, Inc. (Administration of LTC Program)

- Audiology Distribution, LLC, d/b/a HearUSA (Hearing Services)

- Bay Care Medical Group (Credentialing)

- Beacon Health Strategies LLC (Behavioral Health Services)

- Coordinated Medical Specialists Podiatry (Provider Services - Claims Processing, Network Management)

- DentaQuest of Florida, Inc. (Dental Services)

- Dermatology Network Solutions (Provider Services - Claims Processing, Network Management)

-Doctor on Demand, Inc. (Telemedicine Services/Virtual Physician Consultation)

- Doctor's Professional Service Consultants (Provider Services - Claims Processing, Network Management)

- Evolve Emod, LLC (Home Modification Network Manager)

- First Quality Home Care, Inc. (Supplemental Case Manager Staffing)

- Florida Chiropractic Institute (Chiropractic Services)

- Florida Health Sciences Center, Inc., d/b/a Tampa General Hospital (Credentialing)

- Guardiantrac, LLC, d/b/a GT Independence (Participant Direction Option Services)

- Gulf Coast Jewish Family and Community Services, Inc. (Supplemental Case Manager Staffing)

- Health First Network, Inc. (Provider Services - Credentialing, Network Management)

- Humana Insurance Company (Provider Services - Claims Processing, Customer Service, Front End Operations, Billing and Enrollment, UM Review, Administrative Functions, Case Management)

- Humana Pharmacy, Inc., d/b/a PrescribeIT RX (Administration of OTC Benefit)

- iCare Health Solutions, LLC (Vision Services)

- Independent Living Systems, LLC (Post Discharge Meal Delivery, Nutrition Counseling)

- JMG Specialty Physicians (Credentialing)

- Laboratory Corporation of America Holdings a/k/a LabCorp (Lab Services)

- Lakeland Regional Health Systems, Inc. (Credentialing)

- Lakeview Center, Inc., d/b/a Access Behavioral Health (Behavioral Health Services)

- LanguageSpeak, Inc. (Translation Services)

- LogistiCare Solutions, LLC (Non-emergency Medical Transportation Services)

- Manatee County Rural Health Services (Credentialing)

- Martin Memorial Physician Corporation, d/b/a Martin Medical Group (Credentialing)

- Mednax Services Inc. (Credentialing)

- MotionPoint Corporation (Translation Services)

- Nemours Children's Clinics/Nemours Foundation (Credentialing)

- One HomeCare Solutions LLC (Home Health Services/DME Services)

- Orange Health Solutions, Inc., d/b/a Citra Health Solutions (f/k/a Sirona Health) (After Hours Nurse Triage Services)

- Orthopedix Network, Inc. (Provider Services - Claims Processing, Network Management)

- Pediatric Associates (Credentialing)

- Premier Eye Care, LLC (Vision Services)

- Public Partnerships, LLC (Participant Direction Option Services)

- Quest Diagnostics Incorporated (Lab Services)

- Shands HealthCare Network-Gainesville (Credentialing)

- Shands Jacksonville Medical Center (Credentialing)

- Ubiqus Reporting Inc., d/b/a LanguageWorks (Translation Services)

- University of Miami School of Medicine (Credentialing)

- University of South Florida/USF College of Medicine (Credentialing)

- United Language Group (Translation Services)

- Variety Children's Hospital, d/b/a Nicklaus Children's Hospital (Credentialing)

- Village Health Disease Management LLC (Renal Care Management)

- Whole Health Networks, Inc., f/k/a Healthways Whole Health Networks, Inc. (Provider Services Claims Processing, Credentialing, Network Management)

UTILIZATION MANAGEMENT:
- American Eldercare, Inc. (Administration of LTC Program)

- Beacon Health Strategies LLC (Behavioral Health Services)

- Continuecare Managed Care, Inc. (Utilization Management)

- DentaQuest of Florida, Inc. (Dental Services)

- Humana Insurance Company (Provider Services - Claims Processing, Customer Service, Front End Operations, Billing and Enrollment, UM Review, Admin Functions, Case Management)

- Lakeview Center, Inc., d/b/a Access Behavioral Health (Behavioral Health Services)

- Medical Care Consortium, Inc. (Utilization Management)

- One HomeCare Solutions LLC (Home Health Services/DME Services)

- Premier Eye Care, LLC (Vision Services)

- Village Health Disease Management LLC (Renal Care Management)

PROVIDER NETWORKS:
- 20/20 Eye Care Network, Inc. (Vision Services)

- Access2Care, LLC (Non-Emergency Medical Transportation Services)

- American Eldercare, Inc. (Administration of LTC Program)

- Audiology Distribution, LLC, d/b/a HearUSA (Hearing Services)

- Beacon Health Strategies LLC (Behavioral Health Services)

- Coordinated Medical Specialists Podiatry (Provider Services - Claims Processing, Network Management)

- DentaQuest of Florida, Inc. (Dental Services)

- Dermatology Network Solutions (Provider Services - Claims Processing, Network Management)

- Doctor's Professional Service Consultants (Provider Services - Claims Processing, Network Management)

- Evolve Emod, LLC (Home Modification Network Manager)

- Florida Chiropractic Institute (Chiropractic Services)

- Guardiantrac, LLC, d/b/a GT Independence (Participant Direction Option Services)

- Health First Network, Inc. (Provider Services - Credentialing, Network Management)

- Humana Insurance Company (Provider Services - Claims Processing, Customer Service, Front End Operations, Billing and Enrollment, UM Review, Admin Functions, Case Management)

- iCare Health Solutions, LLC (Vision Services)

- Laboratory Corporation of America Holdings a/k/a LabCorp (Lab Services)

- Lakeview Center, Inc., d/b/a Access Behavioral Health (Behavioral Health Services)

- LogistiCare Solutions, LLC (Non-emergency Medical Transportation Services)

- One HomeCare Solutions LLC (Home Health Services/DME Services)

- Orthopedix Network, Inc. (Provider Services - Claims Processing, Network Management)

- Premier Eye Care, LLC (Vision Services)

- Public Partnerships, LLC (Participant Direction Option Services)

- Quest Diagnostics Incorporated (Lab Services)

- Whole Health Networks, Inc., f/k/a Healthways Whole Health Networks, Inc. (Provider Services Claims Processing, Credentialing, Network Management)

Paying Providers:

- 20/20 Eye Care Network, Inc. (Vision Services)

- Access2Care, LLC (Non-Emergency Medical Transportation Services)

- American Eldercare, Inc. (Administration of LTC Program)

- Audiology Distribution, LLC, d/b/a HearUSA (Hearing Services)

- Beacon Health Strategies LLC (Behavioral Health Services)

- Coordinated Medical Specialists Podiatry (Provider Services - Claims Processing, Network Management)

- DentaQuest of Florida, Inc. (Dental Services)

- Dermatology Network Solutions (Provider Services - Claims Processing, Network Management)

- Doctor's Professional Service Consultants (Provider Services - Claims Processing, Network Management)

- DST Systems, Inc., d/b/a DST Pharmacy Solutions, f/k/a Argus Health (Pharmacy Claims Processing)

- Florida Chiropractic Institute (Chiropractic Services)

- Guardiantrac, LLC, d/b/a GT Independence (Participant Direction Option Services)

- Humana Insurance Company (Provider Services - Claims Processing, Customer Service, Front End Operations, Billing and Enrollment, UM Review, Admin Functions, Case Management)

- iCare Health Solutions, LLC (Vision Services)

- Lakeview Center, Inc., d/b/a Access Behavioral Health (Behavioral Health Services)

- LogistiCare Solutions, LLC (Non-emergency Medical Transportation Services)

- One HomeCare Solutions LLC (Home Health Services/DME Services)

- Orthopedix Network, Inc. (Provider Services - Claims Processing, Network Management)

- Premier Eye Care, LLC (Vision Services)

- Public Partnerships, LLC (Participant Direction Option Services)

- Whole Health Networks, Inc., f/k/a Healthways Whole Health Networks, Inc. (Provider Services - Claims Processing, Credentialing, Network Management)

Humana proposes to also utilize the following administrative subcontractors (e.g. print, fulfillment):
- Conduent Incorporate d/b/a Xerox Commercial Solutions (Administrative Services)
- Decision Support Systems, d/b/a DSS Research (Administrative Services)
- Dunwoody Technology Services Group (Administrative Services)
- EC Services, LLC (Administrative Services)
- Hinduja Global Solutions, Inc. (Administrative Services/Provider Services)
- New Leaf Business Solutions (Administrative Services)
- Photofax, Inc. (Administrative Services)
- Pride Healthcare, LLC (Administrative Services)
- Silverlink Communications (Administrative Services)
- Talk2Rep, Inc. (Administrative Services)
- Verscend Technologies, Inc. (Administrative Services)

SUBCONTRACTOR SELECTION AND ENGAGEMENT PRACTICES

When Humana Florida Operations identifies a need requiring the engagement of a subcontractor, a responsible Relationship Manager is identified to facilitate the subcontractor selection process. We first clarify internal requirements and then competitively select the most ideal subcontractor(s) positioned to meet our needs. Once selected, fully qualified, and contractually engaged, the Relationship Manager establishes the necessary relationship touch points.

The six (6) step process employed by Humana to guide the selection of a subcontractor is described below and in Attachment 26-2 Medicaid Relationship Management Six Step Process:

1. Internal Analysis:

- Spend Trend – Historic and anticipated spend, usage and related transactions associated with the target purchase are evaluated.

- Service Need – Key stakeholders are identified to clarify scope of services to be provided by the subcontractor.

2. External Analysis:

- Potential Service Providers – To include incumbents (if deemed appropriate), those providing similar services across the Humana lines of business, and additional candidates identified via market research.

3. Sourcing Process:

- Assessment criteria are established, inclusive of price, capability, quality/compliance, customer service, and innovation. These criteria are weighted.

- Request for Proposal (RFP) or Request for Quote (RFQ)– A request for proposal is developed, describing Humana, the service need, State Contract references, service requirements, and the timeline for responding. Subcontractors respond directly to the Director of Medicaid Operations

or Market team managing the bid. Please see Attachment 26-3 Participant Direction Option Services RFP, from June 2017, as an example.

4. Negotiations and Contracts:

- Respondent Evaluations – Each respondent is assessed via a Financial Due Diligence (FDD) process. Please see Attachment 26-4 Financial Due Diligence Summary for an example of the result the completed FDD process.

- References – References obtained from each respondent are contacted to collect additional information. We seek to obtain three (3) references per potential subcontractor.

- Selection – All respondents are evaluated based on the assessment criteria, feedback from references, best and final pricing, and the preference of the stakeholders.

5. Implementation:

- Pre-Delegation Audit – If the subcontractor is a new relationship, a pre-delegation audit is conducted by the Delegation Compliance team. Without their confirmation, the engagement does not progress.

- Business Continuity (BC) Planning and Disaster Recovery (DR) – While standard BC and DR expectations are established by contract, the selected subcontractor's BC and DR strength will be formally assessed via on-site and desk audits based on the criticality of this service relationship and the level of risk of an inadequate BC or DR program.

6. Relationship Management:

- The Relationship Manager will monitor and influence service provider performance in an ongoing manner in coordination with, and support of, or led by the Florida Market.

SUBCONTRACTOR QUALIFICATION AND CONTRACTING PROCESS

Humana holds every subcontractor to compliance with all applicable requirements of the SMMC Program Scope of Services. All service level agreements (SLAs) and applicable contract requirements are flowed to each subcontractor within the executed agreements specific to the performed activities.

==========
3. The extent to which the respondent uses and monitors for service level agreements consistent with the SMMC Program Scope of Services.
==========

SERVICE LEVEL AGREEMENTS

While it is always the intent of Humana to have vendor compliance and performance be voluntary and automatic, we have found that requiring certain performance with attendant consequences drives desired behavior. Humana customizes SLAs to each set of subcontractor activities and services and then actively negotiates the requirements into each subcontract. SLAs address those items important to Humana in provision of the services related to the contract and the Humana statement of work. For example, our call center SLAs are the current contract requirements reduced to individual line items with the metric, definition, standard, penalty, and measurement period identified. This is done for each area of activity of the subcontractor related to the services provided. Areas of focus include enrollment and eligibility, customer service, mail and correspondence, case management, quality measures (such as Healthcare Effectiveness Data and Information Set (HEDIS)), complaints and grievances, claims processing, provider network, reporting and file transfer, legal requirements such as Health Insurance Portability & Accountability Act (HIPAA) and privacy controls, and any additional state and federal requirements.

Certain performance metric service levels may be more or less stringent than the related service levels described in the SMMC. Such differences are intended solely to reduce the cost of tracking and monitoring service levels, simplify administration, and diminish conflict in application. It is important to note that the SLAs are in addition to, and separate from, the provisions in every subcontract for the subcontractor to comply strictly with each requirement of the SMMC.

Humana and the subcontractor agree on the form and content of each report for each service level metric, and the subcontractor self-reports on the agreed timing, typically monthly. SMMC required reports may be used for certain metrics, but others are developed as necessary. Humana always retains the right to audit and analyze the subcontractor's calculations.

SLAs are discussed at each Joint Operating Committee (JOC) meeting as described further below. Penalties are assessed and collected in accordance with the settlement process documented in each subcontract. The detailed statement of work negotiated with subcontractors and the Medicaid Addendum, which tracks all of the requirements of the Agency for Health Care Administration (AHCA) checklist, are additional requirements of the contracting process.

DELEGATION PROCESS

After the Market has received approval for contracting from the local Florida Contract Approval Committee for any value based arrangements, Delegation Compliance is the next stop for the Market in the qualification process. First, a Request for Delegation (RFD) (Attachment 26-5 Request for Delegation) must be completed and submitted to the Delegation Compliance unit to trigger the need for evaluation and documentation. For claims and clinical delegations, approval must also be sought from the national Delegation Council.

The Overall Delegation Approval Process map (Attachment 26-6 Overall Delegation Approval Process) provides a detailed snapshot of the rigorous delegation process. The Delegation Policy (Attachment 26-7 Delegation Policy) describes the oversight process requirements for any activity or function that has been delegated by Humana to another entity. Humana remains responsible for the performance and compliance of any delegated function.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Upon receipt of the RFD, Delegation Compliance carefully evaluates our subcontractors by conducting pre-assessment reviews prior to contracting and delegation to ensure we satisfy all compliance standards. The pre-assessment is conducted in addition to all assessments and audits required by regulation and contract obligations at the time of delegation.

After a subcontractor completes the certification process, additional specific requirements particular to the delegated services are established in a written delegation agreement supplementing the main subcontract (Attachment 26-8 Delegated Services Addendum). However, not all subcontractor contracts require a contract addendum. The written agreement setting forth the subcontracted activities and related obligations includes the following information:

- Activities to be performed by the subcontractor
- Process by which Humana evaluates the subcontractor's performance
- Remedies available to Humana if the subcontractor does not fulfill its obligations (CAPs, penalties, or revocation)
- Required reports to be created and submitted to Humana
- Responsibilities retained by Humana

The delegation document specifically addresses instructions and requirements for functions, reporting, regulatory standards, corrective action plans (CAPs) and penalties, quality improvement, auditing, and the grievance and appeal process based upon the type of direct impact of the subcontracted services. For example, there are delegation attachments for Utilization Review and Management of Medical or Behavioral Health Services, Complex Case Management, Disease Management, Quality Improvement for Behavioral Health Services, and Claims Processing. However, the Delegation Compliance team will create documentation and establish monitoring processes for any function that is delegated in accordance with the SMMC requirements, such as network management.

==========

2. The adequacy of the respondent’s oversight structure, including the extent of executive level staff participation.

4. The adequacy of the respondent’s approach to monitoring the quality of work performed by subcontractors, including the frequency and type of monitoring.

==========

SUBCONTRACTOR OVERSIGHT STRUCTURE

Humana’s robust subcontractor oversight structure is coordinated across multiple teams at national and local levels. At the national level, well established delegation policies and procedures ensure consistency across Humana. We require subcontractors to adhere to a formal Compliance Policy (Attachment 26-9 Compliance Policy) which contains written standards of conduct for healthcare providers and subcontractors supporting us. In Florida, local executive leadership oversees the operations and performance of our subcontractors, applying those national policies and procedures in a way that is more specifically applicable to local operations. Finally, in direct response to State process and contract requirements, the Florida Subcontractor policy and procedure has been implemented.

This Florida structure is formalized in Attachment 26-10 Florida Medicaid Subcontractor Monitoring and Oversight procedure and Attachment 26-11 Medicaid Delegate Relationship Management policy.

The Humana Florida Market has designed the local monitoring and oversight structure described here, incorporating all existing company-wide resources, to address specific activity as required by SMMC and regulation. This will ensure world-class subcontractors are selected and maintained for Florida Medicaid.

As part of the subcontracting effort, Humana requires every subcontractor to meet all AHCA performance requirements related to its services. A Humana Relationship Manager is assigned to each subcontractor, and in coordination with other key market stakeholders, is responsible for managing the subcontractor relationship. Driving closure of any gaps to the contract and Humana SLAs, inclusive of operational, reporting, and compliance-related requirements, is a key focus area.

Following are the teams, departments and committees materially contributing to vendor oversight:

LOCAL SUBCONTRACTOR OVERSIGHT
- Florida Director, Vendor Performance Oversight
- Relationship Managers
- Joint Operating Committee (JOC)
- Florida Market Operations

NATIONAL SUBCONTRACTOR OVERSIGHT
- Clinical Vendor Oversight
- Delegation Compliance
- Delegation Council
- Enterprise Procurement and Vendor Services (EPVS) and IT Strategic Vendor Services (ITSVS)
- First Tier, Downstream, Related Entity (FDR) Compliance
- Fraud, Waste, and Abuse (FWA) and Special Investigations Unit (SIU)
- Internal Audit Consulting Group (IACG)
- Medicaid Finance
- Medicaid Strategic Partnerships and Implementation
- National Network Operations (NNO)
- Privacy Office
- Regulatory Compliance

LOCAL AND NATIONAL OVERSIGHT COMMITTEES
- Florida Contract Approval Committee
- Delegated Vendor Oversight Committee (DVOC)
- Medicaid Compliance Committee
- Quality Improvement Committee (QIC)

In addition to these teams and committees, there are other established enterprise-wide functions that support, monitor, and provide guidance related to vendor oversight. Our

Grievance and Appeals, Risk Management, and Legal Departments manage these functions. Notably, our Legal team includes attorneys specialized in CMS/Medicaid regulatory matters who counsel in direct support of the Florida Medicaid Comprehensive plan.

LOCAL SUBCONTRACTOR OVERSIGHT STRUCTURE
Florida Director, Vendor Performance Oversight
The Florida Director, Vendor Performance Oversight reports to the Vice President, Dual Eligible and Medicaid Programs and provides executive-level oversight of the subcontractor and delegated function process. The Florida Director, Vendor Performance Oversight, together with Relationship Managers whose duties are described below, is responsible for subcontractor relationship maintenance and for monitoring subcontractors' performance in accordance with State Contract and Humana-specific requirements.

Relationship Manager
Relationship Managers are responsible for the monitoring of subcontractor performance within their designated operational areas. If a subcontractor demonstrates a significant gap in meeting established SMMC or Humana-specific performance targets, the Relationship Managers, together with the Florida Director, Vendor Performance Oversight, collaborate in the development of CAPs. For subcontractors serving multiple Humana lines of business or markets, the Relationship Managers are especially dedicated to translating best practices and learnings across the broad Humana enterprise.

In accordance with our Medicaid Delegate Relationship Management policy (Attachment 26-11 Medicaid Delegate Relationship Management), each Relationship Manager is to ensure that the following actions and activities are accomplished.

FIRST-TIER DOWN-STREAM-RELATED ENTITY (FDR) ASSESSMENT
- Complete and submit the Risk Ranking Questionnaire to the FDR Committee for review.
- Confirm and follow the requirements for third parties determined to be FDRs.

DELEGATION COORDINATION
- Submit a completed Request for Delegation form to Delegation Compliance to initiate a pre-delegation audit.
- Confirm and follow the delegation recommendation from Delegation Compliance (Go/No Go).

CONTRACTING
- Complete required due diligence (e.g. financial, business continuity, systems and physical security, etc.) to identify and mitigate potential risk.

- Negotiate all required contract documents and related provisions, working with contract drafting, legal, and compliance subject matter experts (SMEs) to streamline the language, limit duplications, and eliminate conflicting language, to include, but not be limited to:

-- SLAs, reflecting relevant contract performance requirements and Humana operating standards, inclusive of penalties and incentives, as appropriate;

-- For the specific delegated functions, a Delegation Addendum and attachments;

-- A current state-specific Medicaid Addendum (aka Medicaid Omnibus Agreement);

-- A Business Associate Agreement, as applicable;

-- An IT Security Agreement, as applicable.

- Facilitate final reviews and contract execution, internal-to-Humana, including the operational lead(s), and with the subcontractor.

- In partnership with state-facing market lead(s), obtain state agency approval for the initial relationship and relationship changes, as required.

ON-GOING RELATIONSHIP OVERSIGHT
- Identify and engage the operational lead(s) associated with the subcontractor to establish and maintain a shared understanding of expectations and accountability for compliance oversight.

- Assist with compliance oversight, as needed (e.g. Delegation, FDR, IACG, EIP).

- In partnership with teams who monitor and report certain measures internal-to-Humana and to external entities, ensure the subcontractor takes the necessary action to create information, communicate, and manage to key metrics (e.g. compliance, operational, contractual SLAs, etc.) associated with the services being provided.

- In partnership with operational market lead(s), schedule and participate in regular operational pulse meetings.

- Schedule and host formal joint steering committee (JSC) meetings to:

-- Align on compliance challenges/opportunities (e.g. Grievance and Appeals (G&A), Risk Management, Internal Audit Consulting Group (IACG), Delegation, First-Tier-Down Stream-Related Entity (FDR), Enterprise Information Protection (EIP), Privacy, Legal, Regulatory Compliance, related audit findings and Corrective Action Plans (CAPs), etc.).

-- Pulse performance trend over time (e.g. SLAs, key compliance metrics).

-- Identify/address operational and performance barriers.

-- Pursue opportunities to maximize business benefit.

-- Explore cross-market translation opportunities.

- Document and publish notes and next actions from all JSCs.

- Participate in all key audits associated with the third party to facilitate full performance transparency and coordinated follow up.

- Support escalation of performance issues including penalty assessments, de-delegation evaluations, breach investigations.

- Engage the appropriate SMEs (e.g., Legal, Privacy, EIP, Delegation, Regulatory Compliance, IACG, FDR, clinical/operational leads) to assist in addressing issues or exploring opportunities to maximize relationship value.

Because the Relationship Manager is directly dedicated to subcontractor performance, this ensures that the subcontractor is able to meet our standards for care and customer service, the standards of the Department of Insurance, requirements of state and federal regulatory agencies, and applicable accrediting agencies (e.g., the NCQA).

JOINT OPERATING COMMITTEE (JOC)
Regular JOC meetings are held with individual subcontractors and relevant staff where performance is assessed, and issues and opportunities are escalated. The agendas address compliance challenges and opportunities (e.g. G&A, Delegation, FDR, Privacy, Regulatory Compliance, related audit findings, and CAPs); track performance trend over time (e.g. SLAs, key compliance metrics); identify and address operational and performance barriers; pursue opportunities to maximize business benefit; and explore cross-market translation opportunities. The JOCs are attended by key market leaders, including Florida Medicaid Operations and the Florida Director, Vendor Performance Oversight.

The JOCs meet regularly based on the need and the direct impact of the relationship. JOCs ensure:
- Subcontractors comply with applicable state and federal Laws.

- Tasks related to the subcontract are performed in accordance with the terms of the AHCA Contract.

- Subcontractors remain eligible for participation in the Medicaid Program.

- Subcontracted durable medical equipment subcontractors are in compliance with the Any Willing Provider statute.

- Opportunities to minimize risk and maximize value in the service of enrollees and the Plan are explored and supported.

FLORIDA MARKET OPERATIONS
The Humana Florida Market Operations team is comprised of the Florida Director, Vendor Performance Oversight, Ancillary and Network Contract team, Medicaid Provider Network team, and the Specialty Contract team. Florida Market Operations identifies the subcontractor need and initiates the process to engage the subcontractor, including following the subcontractor selection and engagement process previously described. Florida Market Operations also identifies a Relationship Manager, and partners with Delegation, Regulatory, and FDR Compliance teams to establish the necessary oversight of the subcontractor. In partnership with the respective Relationship Managers for each subcontractor, the Florida Market Operations team is responsible for the following tasks to ensure compliance by subcontractors:

- Review of SLAs performance;

- Participation in all audits of the subcontractor to facilitate coordinated follow up;

- Escalation of performance issues;

- Reports findings, corrective action plans, and follow up to the DVOC;

- Engagement of the appropriate subject matter experts, including our legal department, Privacy department, Regulatory Compliance, Delegation Compliance, FDR Compliance, EIP, and IACG, as needed;

- Assists with resolution of escalated enrollee and provider complaints;

- In conjunction with the subcontractor, identify and align on challenges and improvement opportunities.

Additionally, Florida Market Operations ensures:
- Subcontractors comply with applicable state and federal laws;

- That subcontractors are eligible for participation in the Medicaid Program;

- Tasks related to the subcontract are performed in accordance with the terms of the State Contract; and

- Delegated durable medical equipment (DME) subcontractors are in compliance with Florida Statute § 409.975(1)(d) and the Agency Guidance Statement about Durable Medical Equipment Contracts in the Managed Medical Assistance Program.

NATIONAL SUBCONTRACTOR OVERSIGHT STRUCTURE AND PROCESSES

CLINICAL VENDOR OVERSIGHT
Clinical Vendor Oversight and Trend Management reports through the Vice President, Clinical Operational Oversight to the Segment President for Healthcare Services. This team conducts a monthly dashboard meeting and quarterly business reviews of Utilization Management subcontractors. The monthly dashboard meeting reviews subcontractor budgets and tracks and reviews metrics related to quality and operations generally. The quarterly business review delves deeper into an individual subcontractor's operational performance. Both the monthly dashboard and the quarterly business reviews are sent to Delegation Compliance for review, follow up, and implementation of any necessary CAPs.

DELEGATION COMPLIANCE
The Delegation Compliance team is a centralized team based in Humana's national office and conducts operational compliance oversight of subcontractors performing claims, clinical health services, credentialing, and any other delegated function on behalf of Humana. This team:

- Evaluates all delegation requests submitted to Delegation Compliance to initiate a pre-delegation audit;

- Performs an audit prior to delegation of these functions to assess capability to perform the function in a compliant manner;

- Based on the audit results, provides recommendation for subcontractor delegation and delegation documentation to be executed by the subcontractor;

- Conducts annual audits against function-specific compliance standards and routinely monitors each delegate; and

- Initiates corrective actions when instances of noncompliance are identified and notifies Market Operations.

DELEGATION COUNCIL
In recent years, several Centers of Excellence were created at Humana, including the Provider Development Center of Excellence (PD CoE). The mission of the PD CoE is to develop and deploy best practices and capabilities that assist enrollees, market and network leaders, owned entities and Humana's MSO, in creating successful value-based provider relationships with a focus on improving the provider experience and achieving Humana's path-to-value goals.

The Delegation Council is a monthly leadership forum created by the PD CoE for Markets to evaluate strategic and operational impacts of potential clinical and claims delegation and to provide organizational visibility into new subcontracted arrangements for all lines of business. At each monthly forum, the Council reviews proposals to consider whether delegation is in the best interest of our enrollees, providers, and Humana, and to help minimize negative operational impacts.

Members of the Delegation Council include representatives from Provider Development, Provider Process & Services, Integrated Clinical Solutions, Service Fund, Retail Segment, Group Segment, Delegation Compliance, the Legal Department, and Market Representation proposing the group or vendor.

ENTERPRISE PROCUREMENT AND VENDOR SERVICES (EPVS) AND INFORMATION TECHNOLOGY STRATEGIC VENDOR SERVICES (IT SVS)
The EPVS team sources enterprise administrative goods and services and is responsible to lead the contracting for certain Florida Medicaid goods and services such as print, fulfillment, and translation services. As gatekeeper, EPVS directs and provides management oversight for these relationships by facilitating vendor performance through SLAs and other contract requirements.

IT Strategic Vendor Services (IT SVS) provides IT subcontractor selection, negotiation and management focused on best-in-class engagements which comply with myriad healthcare requirements and regulations. IT SVS is responsible for software compliance monitoring, IT subcontractor relationship management, research and guidance, and is a liaison with contract management. Florida Market needs for enterprise or custom software and services begins with engagement of IT SVS.

FIRST TIER, DOWNSTREAM, RELATED ENTITY (FDR) COMPLIANCE
The First Tier, Downstream, Related Entity (FDR) Compliance team reports up through Licensure and Business Partner Compliance to the Enterprise Vice President for Compliance. It is a centralized unit based in the Humana national office. To identify Florida delegate FDRs for monitoring and compliance with CMS requirements, the FDR Compliance team reviews the Risk Ranking Questionnaire (Attachment 26-12 Risk Ranking Questionnaire) completed by

Delegation Compliance and evaluates the information through the FDR Identification Committee. The FDR Identification Committee consists of compliance representatives, Medicaid operations leaders and CMS counsel. The committee meets weekly to determine whether the presented subcontractor services are or are not assigned FDR status. FDR Compliance monitors and performs periodic audits of FDRs, monitors compliance program self-assessments, and screens FDRs against the Office of Inspector General (OIG) and General Services Administration (GSA) exclusion lists monthly. The team also initiates corrective actions when instances of non-compliance with FDR program requirements are identified.

The FDR Compliance team communicates compliance program expectations, training requirements, and methods of reporting suspected or detected compliance and FWA issues involving an FDR. Non-compliance or FWA occurrences are escalated to the appropriate business area and others.

FRAUD, WASTE AND ABUSE (FWA) AND SPECIAL INVESTIGATIONS UNIT (SIU)
Humana recognizes that the prevention, detection, and investigation of fraud on the government or the company, waste of funds, and abuse of benefits or services are essential to maintaining the integrity of the healthcare system and ensuring compliance with federal and state laws and regulations.

Humana has robust procedures and systems in place for responding to suspected internal, subcontractor, provider, and enrollee FWA non-compliance in managed care programs. Humana conducts timely investigations of potential noncompliance identified in the course of self-evaluations and audits of subcontractors, and corrects such problems immediately, reducing the potential for recurrence and ensuring ongoing compliance with state and federal requirements for all product offerings. Humana has developed policies and procedures to ensure a timely and reasonable inquiry is made into potential fraud or misconduct. In addition, Humana reports identified instances of fraud or misconduct to the appropriate regulatory body, based on the associated Humana line of business, and all associates must consistently adhere to all applicable Humana policies, regardless of operational needs, financial concerns, level or degree of influence, or any other business factor.

In addition, Humana holds healthcare providers, subcontractors, and business partners responsible for maintaining their own comprehensive plan for detecting, correcting, and preventing FWA. The FWA team verifies healthcare providers, subcontractors, and business partner FWA plans annually.

Humana is actively involved with anti-fraud organizations such as the National Health Care Anti-Fraud Association, the Healthcare Fraud Prevention Partnership, and the Midwest Anti-Fraud Insurance Association. Humana cooperates with federal, state, and local authorities in the investigation of potential FWA when appropriate.

The purpose of the Special Investigations Unit (SIU) is to reduce fraudulent activity by pursuing potential leads, initiating research, educating Humana associates and customers, partnering with law enforcement and government agencies, while working with competitors in the active detection of FWA.

SIU is Humana's primary investigative arm and is responsible for complex cases of fraud and abuse. SIU processes include data analytics to identify trends, fraud, schemes, and potential

fraudulent activity that may warrant further investigation. SIU investigates fraud at all levels—from associates to providers to subcontractors to enrollees.

SIU also participates in the Enterprise Investigations Consortium (EIC) which is designed to encourage information sharing and collaboration among the various investigative groups within Humana. When appropriate, allegations may be referred to other investigative groups pursuant to the transfer standard set forth by the EIC investigations policy.

SIU implements an Anti-Fraud Plan which continuously monitors all lines of business for potential FWA activity. SIU monitors the activities of associates, enrollees of its health plans and insurance policy holders, healthcare providers and business partners.

INTERNAL AUDIT CONSULTING GROUP (IACG)
The Internal Audit Consulting Group (IACG) reports to the Segment Vice President in Finance Management and provides independent consulting and advisory services that evaluate and improve the effectiveness of risk management, control, and governance processes. IACG guides management on the appropriate level of risk taking necessary to achieve objectives. IACG will conduct on-site audits and desk reviews at the request of a Relationship Manager to audit the critical processes of a subcontractor (including Humana's oversight of those processes), focusing on areas of greatest risk and exposure. In response to deficiencies, Issues and Opportunities (IOPs) are documented and tracked to closure.

MEDICAID FINANCE
The Medicaid Finance team consists of Operational and Corporate teams. Both report through the Segment Vice President, Finance Management to the Chief Financial Officer. The team provides financial support about subcontractors serving the Florida market. Corporate is the controller function managing accruals, reserves, audit reporting, and like activities. Operational manages financial reporting, P&L ownership, administration, trend analysis, and contract analysis.

MEDICAID STRATEGIC PARTNERSHIPS AND IMPLEMENTATION
The Medicaid Strategic Partnerships and Implementation team reports through Medicaid operations to the Vice President, Dual Eligible and Medicaid Programs. The team provides relationship management for subcontractors with a cross-Medicaid market presence. This includes facilitating performance oversight and coordinating with the key stakeholders within the Florida Market, attendance at the JOCs and DVOC participation. The team is also responsible for implementing new and expanded plan capability leaning on the Medicaid Governance structure.

NATIONAL NETWORK OPERATIONS (NNO)
National Network Operations (NNO) reports up to the Vice President for Provider Development Leadership and operates at the national level. NNO has promulgated policies and procedures for all enterprise provider activity, including national health systems administration, health plan management, provider contracting and administration, and certain national vendor contracts.

PRIVACY OFFICE

The Privacy Office reports through Privacy, Ethics and Corporate Policy to the Enterprise Vice President for Compliance. The Privacy Office ascertains whether contracted business associates of Humana are in compliance with the terms of their Business Associate Agreements, including HIPAA and HI-TECH.

REGULATORY COMPLIANCE

The Regulatory Compliance team is a centralized team based in the Humana national office and in the field. Two (2) Compliance Officers on this team are dedicated to the Florida Medicaid plan. In addition to other business functions, this team assists Delegation Compliance with issues identified through the oversight and monitoring channels. Regulatory Compliance also institutes and monitors CAPs as needed and escalates issues to the DVOC and JOC, whose meetings they regularly attend. The Florida Compliance Officers for Managed Medical Assistance (MMA) and Long-term Care (LTC) monitor metrics, SLA performance, operational and performance barriers, and issues of non-compliance by external subcontractors. This is achieved by reviewing and analyzing company and provider or subcontractor documents and reports, attending various operational and functional meetings, and through consultation with the Relationship Managers. Upon identification of an issue by the Florida Compliance Officers, an audit or CAP may be conducted.

LOCAL AND NATIONAL OVERSIGHT COMMITTEES

FLORIDA CONTRACT APPROVAL COMMITTEE (CAC)

The Florida market structure provides for Florida to have its own dedicated CAC as a subset of the national CAC. Monthly meetings (more often as needed) bring all new third party engagements before the committee for approval. The Florida CAC must approve any new engagement to ensure provider and vendor contracting representatives in Florida are adhering to Humana contracting standards and that non-standard contracts have undergone appropriate approvals and reviews prior to contract execution. The Florida CAC is made up of representatives from Senior Director/VP Network, Finance, Law, Medicare/Medicaid President (or designee), Service Fund, and Medical Director.

DELEGATED VENDOR OVERSIGHT COMMITTEE (DVOC)

The Delegated Vendor Oversight Committee (DVOC) is a Florida Market-based committee authorized by the QIC to monitor Humana's delegated services. The DVOC charter (Attachment 26-13 DVOC Charter 2017) provides for the committee to monitor the Medicaid plan's subcontracted services and perform oversight of quality and service activities delivered and managed by subcontractors. The DVOC operates in alignment with the Florida Medicaid Subcontractor Monitoring and Oversight procedure (Attachment 26-10) and Medicaid Delegate Relationship Management policy (Attachment 26-11).

The committee receives regular updates about subcontractor performance and activities from the Relationship Managers are assigned to each subcontractor performance via regularly held JOC meetings with the subcontractors. The JOC meetings are designed to review the previous period's subcontractor performance as compared to SLAs and contract provisions. JOC meetings are led by the Relationship Managers and attended by the Florida Director, Vendor Performance Oversight, and Business Owners from designated areas are invited participants. The DVOC reviews JOC notes and next actions, compliance reporting, and audit feedback. The

DVOC is chaired by the Florida Director of Vendor Performance Oversight and meets quarterly and more frequently as needed.

The DVOC is charged to:
- Establish appropriate subcontractor oversight mechanisms, procedures, and tools.

- Review subcontractor activity, performance metrics, and audit results.

- Make recommendations and approve CAPs as appropriate.

- Review annual Utilization Management (UM) program descriptions and evaluations for subcontractors with delegated UM.

- Review and follow up on CAPs progress and/or completion.

- Perform annual evaluation of the Delegated Vendor Performance Oversight program (Attachment 26-14 Delegated Vendor Performance Program) and makes recommendations for enhancements.

The DVOC submits the quarterly meeting minutes to the QIC, which in turn incorporates the DVOC minutes into a report presented to Corporate QIC and to the Board of Directors.

MEDICAID COMPLIANCE COMMITTEE
The nationally led Medicaid Compliance Committee, comprised of leaders and their reports from all Medicaid teams, including operations, compliance, clinical, and provider, meets each month. The purpose of the Medicaid Compliance Committee is to provide a forum to present, review, analyze and make recommendations on issues pertaining to Medicaid. Discussion of metrics facilitates the closure of external and internal CAPs and other notifications of non-compliance. All subcontractors, including those that are corporate-owned, fall within the scope of the monthly Medicaid Compliance Committee meeting.

QUALITY IMPROVEMENT COMMITTEE (QIC)
The QIC is a multidisciplinary committee that includes our Chief Medical Officer (CMO) and our Florida Medicaid President, who oversees Florida Medicaid operations. The QIC meets quarterly and provides oversight of Quality Improvement program activities and clinical recommendations for our Florida Medicaid plan. This authority is delegated to the QIC by the Corporate QIC and the Internal Board of Directors Executive Committee.

The Florida Director, Vendor Performance Oversight presents performance trends and relates insights of the Relationship Managers to the QIC, as captured by the JOCs and DVOC. The QIC employs the subcontractor-related data provided to best inform quality strategy and plans.

==========

5. The adequacy of the respondent's processes for addressing performance issues, including the triggers for increased monitoring activities, interventions and Contract compliance action.

==========

CLAIMS SUBCONTRACTORS

If audits or reviews reveal a claims subcontractor is at a moderate risk level for financial insolvency, the responsible Relationship Manager or performance team will remediate. Relevant data will be captured, assessed, and proactively remediated to potential risks or failure points for subcontractor's ability to meet the contract requirements. The FMEA tool is effective at engaging a subcontractor to thoughtfully assess risks and issues, as well as implementing triggers to successfully identify risks and issues throughout the life of the subcontract. This process is discussed in greater detail in the Financial Monitoring and Oversight section of this narrative.

CORRECTIVE ACTION PLANS

The local Florida Operations team participates in all key audits associated with each subcontractor to facilitate full performance transparency and coordinated follow-up. The respective Relationship Managers escalate performance issues including penalty assessments, de-delegation evaluations, and breach investigations by engaging the appropriate SMEs to correct any issues.

The Humana Delegation Compliance unit issues a CAP when a delegate fails to meet established compliance thresholds, State Contract requirements, subcontract requirements, accreditation organization standards, or other state or federal regulatory requirements. Specific deficiencies triggering and resulting in CAPs may include:

- Failure to achieve an adequate overall audit score;
- Failure to achieve a required threshold for any single-item score; or
- Failure to meet compliance thresholds for critical elements as specified on the standardized audit tool during pre-delegation, an annual delegation audit, or contract review.

A CAP contains:
1. The identified issues and deficiencies;
2. Root cause analysis;
3. The corrective actions required; and
4. The timeframes for performance of the corrective actions and achieved results.

The delegate's performance under the CAP is monitored by Delegation Compliance. Monitoring frequency is dependent upon the potential risks identified, and will occur until the delegate has achieved the required results. If a delegate fails to achieve the required results within the timeframe provided, the delegate's results will be referred to the appropriate committee, Florida Market leadership, compliance leadership, or Relationship Manager for additional evaluation and final determination on appropriate and necessary next steps. These may include additional corrective measures, cancellation of a particular subcontracted function, or termination of the delegated services agreement. Decisions to terminate subcontractors lie with the contract owners and Relationship Managers, with input from multiple stakeholders.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

AUDITS

FDR COMPLIANCE AUDITS

The Humana FDR Compliance team Subcontractor Monitoring Schedule is submitted to AHCA each year in accordance with State Contract requirements. This schedule documents planned auditing and monitoring activity of FDR relationships supporting Humana's contract with the State. Subcontractors are screened against the OIG/GSA exclusion lists monthly, with a small subset being monitored on an ad-hoc basis through Organization Compliance Program self-assessments. OIG/GSA screenings are essential for subcontractors to remain eligible for participation in the Medicaid program. FDR Compliance audits with a frequency required by regulatory or accrediting bodies, as well as those audits with a discretionary frequency.

INTERNAL AUDITS

IACG will engage, at the request of the respective Relationship Manager or Florida Market leader, to audit the critical processes of the subcontractor, including Humana’s oversight of those processes. With an eye on process stability and efficiency, the IACG will focus on areas of greatest risk and exposure. Specifically, IACG performs risk-based audits addressing process issues with a focus on the contract, CMS, and other regulatory requirements. In response to deficiencies, Issues and Opportunities (IOPs) are identified, documented and tracked to closure.

NATIONAL ANNUAL DELEGATION AUDITS

To ensure ongoing compliance, all subcontractors are be evaluated at least annually against state, federal, and accreditation standards. The audits are performed by Delegation Compliance on all delegates utilizing customized audit tools built to conduct onsite reviews of the subcontractor. All delegated functions of a subcontractor are audited for compliance with the subcontract and with state, federal, and accreditation standards and requirements. The audit also covers a careful review of the subcontractor’s financial solvency and established letters of credit.

The reviews include the following:
- Policies and procedures
- Forms, tools, and reports
- Program descriptions and work plans
- Sub-delegation agreements
- Audit of contracted sub-delegates
- Financial solvency
- File audit
- Letters of credit

Results of the annual delegation audit are discussed with the Florida Market operations leaders, recorded on a standardized audit tool, and then scored to determine the delegate’s ability to meet compliance requirements. The audit tool provides data sources which would trigger a CAP.

==========

6. The extent to which the respondent provides monitoring activities it will use to ensure the financial stability of the subcontractor, including the required financial reporting frequency for subcontractors.

==========

FINANCIAL MONITORING AND OVERSIGHT

FINANCIAL DUE DILIGENCE

The Financial Due Diligence process (FDD) is a standard vendor onboarding process used by our EVPS team to investigate and rate via scorecard a new vendor's financial status prior to entering into an agreement, although FDD is also available for other uses.

Humana partners with Tata Consultancy Services (TCS), who completes the FDD analysis after receiving a subcontractor's financial statements. The analysis is supplemented through online financial information searches and by direct contact with the subcontractor. Once relevant financial information is obtained, TCS completes the appropriate public or private entity FDD template (Attachment 26-15 EVPS Financial Due Diligence SOP) to calculate a health score, which is shared with the FDD requestor. The FDD requestor uses the health score to complete the Financial Due Diligence Summary Report (Attachment 26-4) which feeds the Financial Solvency Risk Report, triggering the FMEA tool.

The FDD process is offered by EVPS to other areas of Humana seeking financial analysis due to concerns over a subcontractor's financial risk, the need to evaluate subcontractors during a Request for Proposal (Attachment 26-3 Participant Direction Option Services RFP), a significant business change or event, or as part of the annual monitoring of subcontractor financial risk. An FDD Strategy Manager or other Humana associate, such as a Relationship Manager, may request an FDD at any time on a new or existing subcontractor, delegate, or provider engaged outside the administrative services procurement process.

FINANCIAL SOLVENCY REVIEW PROCESS AND RISK REPORT

In addition to the other Market, national, and compliance oversight described here, monitoring and oversight of all claims subcontractors is enhanced by a rigorous Financial Solvency Review process that includes a Financial Solvency Risk Report (Risk Report) (Attachment 26-16 Financial Solvency Risk Report). The Risk Report is updated quarterly by the Financial Solvency Task Force containing one hundred twenty-five (125) representatives across Risk Management, Internal Audit, Senior Products, National Network Operations, Delegation Compliance, Finance, and Market Operations.

Two (2) months prior to every quarterly Financial Solvency Task Force meeting, Delegation Compliance requires Market finance teams to obtain the most recent financial documents from subcontractors for upload to Humana's internal system to complete the Risk Report.

All Market Finance Directors and Relationship Managers with a claims subcontractor receiving a high or moderate risk score on the Risk Report are prepared to discuss the matter in detail during the quarterly Financial Solvency Task Force meetings. Market Finance Directors and Relationship Managers leave the meeting with action items to be completed to mitigate any

risks. Delegation Compliance follows up on the action items with the Market Finance Directors and Relationship Managers regularly after the meeting.

The Florida Market team will treat the Risk Report as a primary data source of financial solvency risks to trigger a remediation plan for a subcontractor where warranted. Leveraging existing processes, resources, and a proven Six Sigma-based tool, we will proactively capture, assess, and remediate financial solvency risks for UM and Paying Provider delegates.

CONCLUSION

Careful monitoring and rigorous oversight of subcontractors on many levels across the enterprise, with effort and focus driving State Contract requirements at the local Florida Market level aligns with the Humana commitment to improving quality and outcomes for our enrollees. The relationships with our subcontractors support our Perfect Experience goal, which is dedicated to delivering a personalized well-being journey that inspires those we serve to embrace us as a health partner for life.

Evaluation Criteria:

1. The extent to which the respondent provides a list of subcontractors it proposes to use under the SMMC Program for the delegation of work as described above.

2. The adequacy of the respondent's oversight structure, including the extent of executive level staff participation.

3. The extent to which the respondent uses and monitors for service level agreements consistent with the SMMC Program Scope of Services.

4. The adequacy of the respondent's approach to monitoring the quality of work performed by subcontractors, including the frequency and type of monitoring.

5. The adequacy of the respondent's processes for addressing performance issues, including the triggers for increased monitoring activities, interventions and Contract compliance action.

6. The extent to which the respondent provides monitoring activities it will use to ensure the financial stability of the subcontractor, including the required financial reporting frequency for subcontractors.

Score: This section is worth a maximum of 30 raw points with each of the above components being worth a maximum of 5 points each.

Medicaid Six Step Process: Source Selection & Relationship Management

Internal Analysis

- Analyze spend
- Analyze usage and transactions
- Analyze/engage stakeholders and users
- Analyze products, services, and related contracts
- Identify cross-Line of Business needs & relationships
- Broadly define scope, specifications, requirements

External Analysis

- Identify potential partners/providers
- Evaluate markets for same services or products
- Perform benchmarking analysis

Sourcing Process

- Refine scope, specifications, and requirements
- Develop the partner engagement strategy
- Develop evaluation tool/model
- *Initiate a Request for Proposal or a Request for Quote based on the expectations of the participating third parties**

Negotiations And Contracts

- Evaluate all respondents via financials(e.g. financial due diligence (FDD)), references, written responses
- Narrow subcontractor/ provider pool to a "short list" for further negotiations
- Lead final negotiation/make selections
- Finalize terms, conditions, Service Level Agreements (SLAs), and performance requirements
- Complete all required FDR Submissions
- Draft and Execute required Contracts
- Gather required approvals, including those required by the impacted state(s)

Implementation

- Implement the new/revised relationship, to include, but not be limited to, the following:
  - Project Plan
  - Comprehensive Stakeholder Engagement
  - Communications Strategy
  - Engagement Training/Support
- Initiate metrics reporting and tracking

Relationship Management

- Initiate robust relationship management process in partnership with the service provider and market operational lead(s)
- Participate in regular Operations Touch Points
- Schedule, Host, and document Joint Operating Committee Meetings
- FL: Contribute to DVOC Subcontractor Oversight

Humana

DRAFT_ver 2.0

**** If the process and expectations are solidly defined and set, third parties under evaluation need only submit a quote. If not, a request for proposal, to gather process/approach recommendations, is in order. (out of box vs custom)***

Humana Inc.
Request for Proposal
For
Participant Direction Option (PDO) Support Services

RFP Date: June 6, 2017
RFP Due: June 20, 2017

Contact: Deborah Beavin
Director, Medicaid Operations
502.580.2941
DBeavin@Humana.com

500 West Main
Louisville, KY 40202

Corporate Profile

Humana Inc., headquartered in Louisville, Ky., is a leading health and well-being company focused on making it easy for people to achieve their best health with clinical excellence through coordinated care. The company's strategy integrates care delivery, the member experience, and clinical and consumer insights to encourage engagement, behavior change, proactive clinical outreach and wellness for the millions of people we serve across the country.

RFP Purpose

Humana has chosen your organization to participate in the competitive evaluation of Participant Direction Option (PDO) Services in support of its Long-Term Care enrollees in Florida. Responses to this Request for Proposal (RFP), as assessed against Humana's needs, will drive next steps.

Humana wishes to identify a partner capable of meeting all requirements of Humana Medicaid in the provision of PDO Services to our members and, in doing so, will be a strong partner in driving continuous improvement and demonstrating operational excellence.

From Humana's FL Medicaid Contract:

- ***Participant Direction Option (PDO)*** — A service delivery enrollee option that enables long- term care enrollees to exercise decision-making authority and control over allowable services and how those services are delivered, including the ability to hire and fire service providers. An enrollee choosing participant direction accepts responsibility for taking a direct role in managing his/her care.

- ***Participant Direction Option Services (PDO Services)*** — The services an enrollee may choose for the participant direction option. They include: adult companion care, attendant care, homemaker services, intermittent and skilled nursing, and personal care services.

RFP Response Instructions

Please provide responses to all RFP questions, as provided in Exhibit B, and any supplementation information via email to Deborah Beavin (Dbeavin@Humana.com) by 5pm eastern, Tuesday, June 20. All questions regarding this RFP are to be directed to Deborah Beavin using the above contact information.

A bidders' conference with all participants will be hosted 3pm eastern, Tuesday, June 13 to ensure all questions have been addressed.

Humana will request a formal presentation from all finalists identified through the RFP process. The participants and dates for these forums will be hosted between June 21 and June 30.

RFP Schedule

Please provide responses to all RFP questions, as provided in Exhibit B, and any supplementation information via email to Deborah Beavin (DBeavin@Humana.com) by 5pm eastern, Tuesday, June 20.

RFP Request Date	5pm eastern, Tuesday, June 6
Bidders' Conference	2pm eastern, Tuesday, June 13 *Note: Written questions are due to Deborah Beavin (dbeavin@humana.com) by noon eastern, Monday, June 12*
RFP Responses Due	5pm eastern, Tuesday, June 20
RFP Finalist Presentations	June 27 through June 30
Finalize Selection	Friday, July 21

Exhibits

- Exhibit B Service Requirements (Page 11-33)
- Exhibit C Request for Proposal Questionnaire (Page 34)
- Exhibit D List of Required Documents (Page 35)

RFP Cancellation/Non Award

Humana reserves the right to cancel this RFP, or to make no award of a contract pursuant to this RFP. RFP respondents shall bear all of their own costs related to this RFP.

Rejection of Proposals

Proposals which do not conform to the requirements of this RFP may be rejected by Humana. Proposals may be rejected for reasons, which include, but are not limited to, submission of the RFP response after the submission deadline.

EXHIBIT A
PLAN REQUIREMENTS AND REFERENCES

Section V. Covered Services

A. Required Benefits

2. Specific Services to be Provided

a. Comprehensive LTC Managed Care Plans are responsible for implementing and managing the Participant Direction Option (PDO) for enrollees with LTC benefits, as defined in Section I, Definitions and Acronyms, and as specified in the LTC Exhibit.

1. Participant Direction Option (PDO)

a. General Provisions

(1) The Managed Care Plan is responsible for implementing and managing the Participant Direction Option (PDO) as defined in Attachment II, Section I,

Definitions and Acronyms. The Managed Care Plan shall ensure the PDO is available to all Long-term Care enrollees who have any PDO-qualifying service on their authorized care plan and who live in their own home or family home.

(2) An enrollee's plan of care shall include one or more of the following services in order for the enrollee to be eligible to participate in the PDO: adult companion care, attendant nursing care, homemaker services, intermittent and skilled nursing, or personal care. The enrollee may choose to participate in the PDO for one or more of the eligible PDO services, as outlined in their authorized care plan.

(3) Enrollees who receive PDO services shall be called "participants" in any PDO specific published materials. The enrollee shall have employer authority. An enrollee may delegate their employer authority to a representative. The representative can neither be paid for services as a representative, nor be a direct service worker. For the purposes of this section, "enrollee" means the enrollee or their representative.

(4) The Managed Care Plan shall develop PDO-specific policies and procedures that shall be updated at least annually and shall obtain Agency approval prior to distributing PDO materials to enrollees, representatives, direct service workers, and case managers.

(5) The Managed Care Plan shall operate the PDO service delivery option in a manner consistent with the PDO Manual and the PDO Participant Guidelines provided by the Agency.

(6) The Agency will provide templates for the following to the Managed Care Plan: PDO Consent Form, PDO Representative Agreement, PDO Participant Guidelines, and PDO Pre-Screening Tool.

(7) The Managed Care Plan shall maintain books, records, documents, and other evidence of PDO-related expenditures using generally accepted accounting principles (GAAP).

(8) The Managed Care Plan shall submit a PDO report monthly as specified in Section XIV, Reporting Requirements and the Managed Care Plan Report Guide. The Managed Care Plan shall provide ad-hoc PDO related information, records, and statistics, at the request of the Agency within the specified timeframe.

(9) The Agency will conduct PDO satisfaction surveys on at least an annual basis and shall provide results to the Managed Care Plan for use in quality improvement plans.

(10) The Managed Care Plan shall cooperate with, and participate in, ongoing evaluations and focus groups conducted by the Agency to evaluate the quality of the PDO.

b. Training Requirements

(1) The Managed Care Plan shall ensure all applicable staff receives basic training on the PDO service delivery option

(2) The Managed Care Plan shall designate staff to participate in PDO training conducted by the Agency.

(3) The Managed Care Plan shall ensure an adequate number of case managers are trained extensively in the PDO. This extensive PDO training, beyond the general PDO informational training, is provided to case managers who serve enrollees and consists of training specific to PDO employer responsibilities, such as: completing federal and state tax documents, interviewing potential direct service workers, developing Emergency Back-up Plans, training direct service workers, completing the PDO Pre-Screening tool, evaluating direct service worker job performance, and completing and submitting timesheets. The Managed Care Plan shall maintain records of employee training in the employee's file.

(4) The Managed Care Plan shall provide PDO-trained staff as part of the enrollee and provider call centers to be available during the business hours specified in this Contract.

c. PDO Case Management

(1) The case manager is responsible for informing enrollees of the option to participate in the PDO when any of the PDO services are listed on the enrollee's authorized care plan.

(2) The Managed Care Plan shall assign a case manager trained extensively in the PDO within two business days of an enrollee electing to participate in the PDO delivery option.

(3) In addition to the other case manager requirements in this Contract, all case managers are responsible for:

(a) Documenting the PDO was offered to the enrollee, initially and annually, upon reassessment. This documentation shall be signed by the enrollee and included in the case file;

(b) Referring Managed Care Plan enrollees, who have expressed an interest in choosing the PDO, to available case managers who have received specialized PDO training.

(4) In addition to the other case manager requirements in this Contract, case managers who have received extensive PDO training are responsible for:

(a) Completing the PDO Pre-Screening Tool with each enrollee and prospective representative;

(b) Ensuring enrollees choosing the PDO understand their roles and responsibilities;

(c) Ensuring the Participant Agreement is signed by enrollees and included in the case file;

(d) Facilitating the transition of enrollees to, and from, the PDO service delivery system;

(e) Ensuring PDO and non-PDO services do not duplicate;

(f) Training enrollees, initially, and as needed, on employer responsibilities such as: creating job descriptions, interviewing, hiring, training, supervising, evaluating job performance, and terminating employment of the direct service worker(s);

(g) Assisting enrollees as needed with finding and hiring direct service workers;

(h) Assisting enrollees with resolving disputes with direct service workers and/or taking employment action against direct service workers;

(i) Assisting enrollees with developing emergency back-up plans including identifying Plan network providers and explaining the process for accessing network providers in the event of a foreseeable or unplanned lapse in PDO services;

(j) Assisting and training enrollees as requested in PDO related subjects.

d. Enrollee Employer Authority/Direct Service Workers

(1) Enrollees may hire any individual who satisfies the minimum qualifications set forth in Section VI, Provider Network, including but not limited to neighbors, family members, or friends. The Managed Care Plan shall not restrict an enrollees' choice of direct service worker(s) or require them to choose providers in the Managed Care Plan's provider network.

(2) The Managed Care Plan shall inform enrollees, upon choosing the PDO, of the rate of payment for the PDO services. If the rate of payment changes for any PDO service, the Managed Care Plan shall provide a written notice to the applicable enrollees and direct service workers, at least thirty (30) days prior to the change.

(3) The Managed Care Plan shall ensure the enrollees update their Participant/Direct Service Worker Agreement indicating any changes in rate of payment.

(4) The Managed Care Plan shall provide instructions to the enrollee regarding the submission of timesheets.

(5) The Managed Care Plan shall ensure the Participant/Direct Service Worker Agreement includes, at a minimum, include the following:

(a) Service(s) to be provided;

(b) Hourly rate, the range for which may change from time to time as established and managed by Humana;

(c) Direct service worker work schedule;

(d) Relationship of the direct service worker to the enrollee;

(e) Job description and duties;

(f) Agreement statement; and

(g) Dated signatures of the case manager, enrollee, and direct service worker.

(6) The Managed Care Plan shall pay for Level II background screening for at least one representative (if applicable) per enrollee and at least one direct service worker for each service per enrollee, per Contract year. The Managed Care Plan shall receive the results of the background screening and make a determination of clearance, adhering to all requirements in Chapters 435 and 408.809 F.S.

(7) The Managed Care Plan shall monitor over and under use of services based on payroll and an enrollee's approved plan of care and provide reports to the Agency, or its designee.

e. Fiscal/Employer Agent

(1) The Managed Care Plan shall be the Fiscal/Employer Agent (F/EA) for PDO enrollee's or may sub-contract this function. Should any of the F/EA duties be sub-contracted, the Managed Care Plan shall provide enrollees with at least thirty (30) days' notice informing them that the Managed Care Plan shall utilize a subcontractor to perform certain F/EA duties.

(2) The Managed Care Plan shall meet all applicable PDO-related Federal and State requirements and shall be operated in accordance with Section 3504 of the Internal Revenue Code, per Revenue Procedure 70-6 and Section 3504 Agent Employment Tax Liability proposed regulations (REG-137036-
08) issued by the IRS on January 13, 2010.

(3) The Managed Care Plan remain abreast of all federal and state F/EA requirements and tax forms, and shall ensure all materials distributed to enrollees, representatives, direct service workers, and case managers are current, and in accordance with the appropriate federal and state regulations.

(4) The Managed Care Plan shall have a separate Federal Employer Identification Number (FEIN) that is used only for purposes of representing enrollees as employers. This FEIN should not be used to file or pay taxes for the Managed Care Plan's staff.

(5) The Managed Care Plan shall complete the following payroll and F/EA tasks:

(a) Develop a pay schedule and distribute it to all enrollees at least annually;

(b) Collect and process timesheets submitted by the enrollee. Resolve any timesheet issues with the enrollee and/or direct service worker;

(c) Disburse payroll (no less than twice per month) by direct deposit or pre- paid card to each direct service worker who has a complete and current Hiring Packet on file and has provided services to an enrollee as authorized in the enrollee's plan of care and the Participant/ Direct Service Worker Agreement by the published pay date;

(d) Maintain payroll documentation for all direct service workers;

(e) Compute, maintain, and appropriately withhold all employer and direct service worker taxes pursuant to federal and state law. All payments that are not in compliance with federal and state tax withholding, reporting, and payment requirements shall be corrected within two (2) business days of identifying an error;

(f) Process applicable direct service worker garnishments, liens, and levies in accordance with state and federal garnishment rules. Submit payments and reports to applicable agencies per garnishment instructions;

(g) Deposit direct service worker aggregate payroll deductions per federal and state tax deposit requirements. Federal Income Tax, Social Security and Medicare and enrollee Federal Social Security and Medicare (FICA) taxes in the aggregate per deposit frequency required by an F/EA. (See IRS publication 15-A, located at www.irs.gov/);

(h) Deposit employer aggregate tax deductions per federal and state tax deposit requirements. Federal Unemployment Tax (FUTA) shall be deposited in the aggregate per F/EA deposit frequency. (See IRS publication 15-A, located at www.irs.gov/);

(i) Refund over-collected FICA for direct service workers who earn less than the Federal FICA threshold for the year (See IRS Publication 15, Circular E for threshold information);

(j) File a single IRS Form 941, Employer's Quarterly Tax Return in the aggregate on behalf of all enrollees represented by the Managed Care Plan. Form 941 is completed using the Managed Care Plan's separate F/EA, FEIN. Wages and taxes reported represent total, aggregate wages and taxes for all enrollees represented by the Managed Care Plan. Schedule B should be completed per rules. The Managed Care Plan shall also complete and submit Schedule R with the Form 941.

Schedule R disaggregates each enrollee's employer wages and federal tax liability;

(k) Adjust Forms 941 as applicable by completing and filing IRS Form 941- X.

(l) File a single IRS Form 940, Employer's Annual Federal Unemployment Tax Return in the aggregate on behalf of all enrollees represented by the Managed Care Plan. Form 940 is completed using the Managed Care Plan's separate FEIN. Wages and FUTA tax reported represent total, aggregate wages and taxes for all enrollees represented by the Managed Care Plan. Note: Even Managed Care Plans incorporated with a nonprofit 501c3 status SHALL file and pay FUTA on behalf of enrollees;

(m) Process and distribute IRS Forms W-2 to the direct service workers and submit them electronically according to IRS Form W-2 instructions, per IRS rules and regulations;

(n) Track payroll disbursed to all direct service workers and provide reports as may be required by the Agency or its designee in accordance with this Contract;

(o) Provide written notification to the case manager and enrollee if utilization is less than 10% of the monthly hours as approved on the authorized plan of care for more than one (1) month;

(p) Obtain workers' compensation coverage for the enrollee's direct service workers, if required by Florida statute or rule (see, e.g., Chapter 440, F.S., and Rule 69L, F.A.C.), which shall be funded by the Managed Care Plan;

(q) Comply with, and support enrollee compliance with, state workers' compensation audits as applicable;

(r) Prepare for and support enrollee preparation for unemployment claim proceedings, as

applicable;

(s) Maintain records in compliance with Fair Labor Standards Act requirements for employers;

(t) Ensure a payroll system with maximum data integrity in which direct service workers are not paid above authorized hours as prescribed in the enrollee's plan of care and the Participant/Direct Service Worker Agreement;

(u) Respond to requests for direct service worker employment verification;

(v) Perform all duties regarding disenrollment of an enrollee from the PDO, including final federal and state tax filings and payments and revocation of accounts, numbers, and authorizations previously obtained by the

Managed Care Plan. This includes retiring the FEIN and State Unemployment Tax Account (SUTA) Number;

(w) Provide a transitioning enrollee's new plan with the enrollee's FEIN and SUTA numbers.

f. PDO Monitoring

The Managed Care Plan shall monitor for compliance with PDO requirements, and shall report to the Agency or its designee upon request for an annual F/EA Quality Assessment and Performance Review, including:

(1) Whether timesheets are signed by the enrollee (or enrollee's authorized representative, if applicable) and the direct service worker;

(2) Utilization of services based on payroll and an enrollee's approved plan of care;

(3) Whether services, duties, and hours listed on the Participant/Direct Service Worker Agreement are in compliance with the authorized plan of care;

(4) Whether direct service workers are qualified pursuant to the PDO Participant Guidelines and the PDO Manual, prior to providing services to an enrollee;

(5) Duplication of PDO and non-PDO services.

Table 2

PDO Provider Qualifications

Long-term Care Plan Benefit	**Qualified Service Provider Types**	**Minimum Provider Qualifications**
Adult Companion	Individual	None *

Attendant Nursing Care	Registered Nurse (RN), Licensed Practical Nurse (LPN)	Licensed per Chapter 464, F. S.*
Homemaker	Individual	None *
Intermittent/ Skilled Nursing	Registered Nurse (RN), Licensed Practical Nurse (LPN)	Licensed per Chapter 464, F. S.*
Personal Care	Individual	None*

*Individuals of the enrollee's choosing may provide PDO services so long as they meet the minimum provider qualifications as above and are age eighteen (18) years and older. PDO providers are also required to sign a Participant/Direct Service Worker Agreement and obtain a satisfactory Level II background screening.

Section XIV. Reporting Requirements

A. Managed Care Plan Reporting Requirements

1. Required Reports

The Managed Care Plan shall comply with all reporting requirements set forth in this Contract, including reports specific to Comprehensive LTC Managed Care Plans as specified in the Summary of Reporting Requirements Table below and the Managed Care Plan Report Guide.

Summary of Reporting Requirements		
Report Name	**Plan Type**	**Frequency**
Participant Direction (PDO) Roster Report	All LTC Plans	Monthly

SERVICE REQUIREMENTS

Statement of Work

THIS STATEMENT OF WORK IS EFFECTIVE FOR THE RFP AND HUMANA RESERVES THE RIGHT TO ADJUST DESCRIPTIONS AND REQUIREMENTS BASED ON RESPONSES AND NEGOTIATIONS AND ENGAGEMENT OF ACTUAL SERVICES.

A. Definitions:

1. **AHCA** means Florida Agency for Healthcare Administration which issued the State Contract; also referred to as the "State".
2. **Case Manager** means the MCO personnel responsible to manage the Participant's Plan of Care .
3. **COMPANY** means [PDO Service Provider], the vendor performing PDO services in accordance with the Schedule.
4. **Direct Service Worker** means the employee hired by the Participant to perform PDO Services.
5. **Enrollment Packet** means that set of documents approved or provided by the State which contains the items listed in Section C.2(b).
6. **FEA** means fiscal employer agent.
7. **Hiring Packet** means the set of documents approved or provided by the State which contains the items listed in Section C.3(a).
8. **Humana Services** means services performed by COMPANY for the benefit of individuals enrolled under the State Contract.
9. **IRS** means the Internal Revenue Service of the United States.
10. **LTC** means Long Term Care.
11. **LTSS** means long term services and supports.
12. **MCO** means Managed Care Organization. Humana is an MCO.
13. **P&P(s)** means Policy and Procedure documents developed by Humana and provided to COMPANY that describes the procedures to be followed regarding certain activities in support of the Services. Such P&Ps shall be incorporated as if fully set forth herein.
14. **Participant** means the long term care recipient whose Plan of Care provides for PDO Services.
15. **Participant Directed Option (PDO)** means a service delivery enrollee option that enables long term care enrollees to exercise decision-making authority and control over allowable services and how those services are delivered, including the ability to hire and fire direct service workers.
16. .**Participant Directed Option (PDO) Services** means the services an enrollee may choose for the Participant Directed Option. They include adult companion care, attendant care, homemaker services, intermittent and skilled nursing, and personal care services.
17. **Participant Packet** means the set of forms and documents provided or approved by the State which contains the items listed in Section C.4 (b).
18. **PDO Participant Guidelines** mean the document prepared or approved by the State which provides information to the Participant regarding MCO, COMPANY, and Participant responsibilities with respect to PDO Services, and the hiring and management of Direct

Service Workers.

19. .**Personnel** means all employees, agents, officers, managers, providers and subcontractors of COMPANY.
20. **Plan of Care** means the care plan of the Participant as authorized by the State and as implemented by the MCO Case Manager**.**
21. **Region** means the designated geographical area within which Humana is authorized by the State Contract to furnish covered services to enrollees.
22. **Representative** means an individual officially designated as required by the State to represent the Participant in implementing PDO Services. An enrollee may delegate employer authority to a Representative. The representative can neither be paid for services as a representative, nor be a direct service worker.
23. **State Contract** means the Statewide Medicaid Managed Care contract including Medical Managed Assistance and Long Term Care by and between Humana and the State of Florida through AHCA.
24. **Supports Broker(s)** means the dedicated Personnel employed by COMPANY to assist Participants with managing their PDO Services and Direct Service Workers.
25. **System** means the proprietary computer applications and software, including hardware/storage owned or licensed by COMPANY and used by COMPANY to manage information described in this SOW. It also includes systems which Participants and Direct Service Workers may access to manage and perform activity, such as schedule workers, submit time cards and requests for payment. This definition includes multiple systems and platforms owned or licensed by COMPANY.
26. **The State** means the state of Florida and/or ACHA.

B. Purpose:

Humana has contracted with AHCA to provide Medicaid LTC services to eligible Florida enrollees. Humana must ensure the PDO is available to all LTC enrollees who have any PDO-qualifying service on their authorized Plan of Care and who live in their own home or family home. An enrollee's Plan of Care must include one or more of the PDO Services in order for the enrollee to be eligible to participate in the PDO. COMPANY shall provide the required services for providing the PDO in the State Contract to identified Participants, including without limitation assisting Participants with self-directing the employment of individuals to provide PDO Services, and to perform financial management and support broker services (the "Services") all as set forth herein.

C. Description of Services:

1. Personnel

a) In accordance with the State Contract and consistent with Humana P&Ps, COMPANY shall have sufficient staff, qualified by training, experience and certification/licensure to conduct the functions. COMPANY shall have professional support staff necessary to conduct daily business in an orderly manner, directly available during agreed upon business hours for Participant communication and assistance. COMPANY shall maintain sufficient professional support staff, available to handle urgent inquiries from Humana, Participants and Representatives.

b) **COMPANY** shall have a centralized executive administration, and must ensure adequate staffing and information systems capability to ensure **COMPANY** can appropriately manage financial transactions, record keeping, data collection, and other administrative functions, including the ability to submit any financial, programmatic, encounter data or other information required by the Schedule.

c) If Humana notifies **COMPANY** that any of its Personnel performing Services has failed to meet any standard of Humana or the State, **COMPANY** shall immediately take reasonable corrective action, including but not limited to, removing such person from performing any Services for Humana as appropriate. Any request for replacement of **COMPANY** Personnel by Humana shall be in writing and will be administered in accordance with applicable law.

d) **COMPANY** shall maintain and show reasonable evidence of adequate back-up force and supervisory staff to assist with sick days, vacations and disasters or any other emergency. **COMPANY** shall comply in all respects with the staffing due diligence requirements of the State Contract, including, but not limited to, timely background checks, drug screens, and fingerprint submissions.

e) Every month, COMPANY shall check current staff and Direct Service Workers against the federal List of Excluded Individuals and Entities (LEIE) and the federal System for Award Management (SAM) (includes the former Excluded Parties List System (EPLS) or their equivalent), to identify and report to Humana any excluded parties.

f) COMPANY shall ensure all applicable Personnel receives basic training on Humana's PDO Service delivery option. COMPANY shall designate staff to participate in PDO training conducted

by the State.

g) COMPANY shall ensure an adequate number of Personnel are trained extensively in the PDO. This extensive PDO training, beyond the general PDO informational training, must be provided to Personnel who serve Participants and consists of training specific to PDO employer responsibilities, such as completing federal and state tax documents, interviewing potential Direct Service Workers, training Direct Service Workers, evaluating Direct Service Worker job performance, and completing and submitting timesheets. COMPANY shall maintain records of Personnel training in each individual's employee file.

h) Supports Brokers

i) COMPANY shall maintain Supports Broker staffing sufficient to achieve the service levels described herein. The Supports Broker staff serving Humana Participants shall be exclusively dedicated to Humana.

ii) COMPANY shall use best efforts to have Supports Brokers in close proximity to the geographic location of Participants. In any event, Supports Brokers shall make themselves available for in person meetings as hereinafter set forth.

iii) All Supports Brokers shall have the proper and required skill, and training background to perform duties described herein in an effective and efficient manner. All Supports Brokers shall be fluent in English and Spanish. All Supports Brokers shall be trained on PDO activities within fifteen (15) days of hire.

iv) In addition to the PDO training materials developed by Humana for Case Managers, COMPANY and its Supports Brokers shall assist with development and updating of "Train the Trainer" materials as mutually agreed.

2. <u>Participant Initial PDO Enrollment Activities</u>

a) Case Managers will determine if Participants are eligible for PDO Services within the Plan of Care. If a Participant is eligible, the Case Manager will send to the Participant the Enrollment Packet for completion. When COMPANY is selected, Humana will send the completed Enrollment Packet to the COMPANY Supports Broker for that Region by secure e-mail [or fax] within two (2) business days of receipt from Participant.

b) The Enrollment Packet will contain information necessary for COMPANY to begin delivering Services to Participants, including but not limited to:

- Participant applicable Plan of Care provisions,
- Employer of Record Information Form,
- Level II Background Screening Form
- PDO Consent Form,
- PDO Representative Agreement,
- IRS Form 2678,
- IRS Form 8821,
- Florida Business Tax Application,
- Florida Department of Revenue Power Of Attorney and Declaration of Representative Form,

- Florida Department of Revenue Reemployment Tax Application for Agent Registration,
- Florida Enrollment and Authorization for e-Services Program,
- IRS Form SS-4.

This list is subject to change in accordance with requirements of the State.

c) COMPANY shall, within twenty-four (24) hours of receipt of the Enrollment Packet, log all information into its System and contact the Participant by telephone ("Welcome Call") to introduce Participant to the program and confirm basic information, in particular, whether Participant has already identified potential Direct Service Workers or whether Participant needs assistance to recruit Direct Service Workers.

d) In the event COMPANY is initially unable to contact Participant, COMPANY shall make at least three (3) attempts over the five (5) following business days to contact Participant, and thereafter report to Humana immediately if unable to contact.

e) COMPANY shall advise Participants of the COMPANY toll free customer service telephone number for assistance with filling out forms and other employer assistance.

3. <u>Participant Identified Direct Service Worker</u>

a) If a Participant has identified potential Direct Service Worker(s), the Case Manager will leave a Direct Service Worker Hiring Packet with Participant, or COMPANY will send the Hiring Packet to the Participant within three (3) calendar days of a request from Humana or the Participant. The Direct Service Worker Hiring Packet will contain:
   - COMPANY Direct Service Worker Information Form
   - MCO/Plan Customer Service Contact Information
   - COMPANY Direct Service Worker Payroll Schedule D
   - USCIS Form I-9,
   - Authorization Form by Direct Service Worker for Direct Deposit
   - Form W-4
   - Criminal Record Check Consent Form
   - AHCA Affidavit Of Compliance With Background Screening Requirements
   - COMPANY/Participant/Direct Service Worker Agreement(s)
   - Return envelope

This list is subject to change in accordance with requirements of the State.

b) The Case Manager will contact the COMPANY Supports Broker by telephone to advise if the Participant previously identified a potential Direct Service Worker. The Supports Broker shall make contact with the Participant no later than seventy-two (72) hours after contact from a Case Manager.

c) The Supports Broker shall thereafter attempt further contact on the twentieth (20th) day, and every three (3) business days thereafter, until the earlier of: (i) three (3) unsuccessful contact attempts, (ii) the Participant indicates that he/she is no longer interested in enrolling in PDO Services, or (iii) receipt of completed Direct Service Worker Hiring Packet materials.

d) Following three (3) unsuccessful attempts to contact the Participant, or notice from the Participant that he/she does not wish to continue in PDO, the Supports Broker shall notify the Case Manager

who will make final determination whether to continue efforts to enroll Participant in PDO Services or dis-enroll Participant from the program. COMPANY shall not suspend attempts to enroll Participant in PDO Services without the Case Manager's prior authorization.

4. Direct Service Worker Recruitment Assistance Services

a) When a Participant requests assistance in recruiting Direct Service Worker(s), prior to performing the tasks described in 3(a) – (c), above, the COMPANY Supports Broker shall schedule a recruiting program meeting with the Participant to provide the Participant with information and education on recruiting techniques, interviewing and hiring. Such meeting shall take place in person at such time and place as reasonably requested by the Participant.

b) COMPANY shall provide the following Direct Service Worker Recruitment Assistance Services and materials:
   i) Provide the Participant Packet within three (3) business days, containing the following:
      - COMPANY Direct Service Worker Payroll Schedule D
      - Self Determination Time Sheet and Instructions for Completion
      - Fax Coversheet for Self-Directed Service Recipients
      - Caregiver Online Directory Letter and Application
      - Florida New Hire Reporting Form
      - PDO Participant Guidelines (if not yet received)
   ii) Assist the Participant with developing job description(s);
   iii) Educate the Participant about interviewing techniques, how to identify Direct Service Workers within their own networks and nontraditional recruiting channels;
   iv) Assist the Participant in developing and placing Direct Service Worker recruitment ads if the cost of such advertising is reimbursable under Medicaid. COMPANY will contact the Participant within two (2) business days of the recruiting program meeting to confirm ad placement, and again within twelve (12) days thereafter to monitor recruitment ad responses. The Supports Broker shall obtain Case Manager approval prior to placement of any recruitment ad with a cost greater than $250.00.

5. Direct Service Worker Candidate Eligibility Testing

a) Participants may hire any individual who satisfies the minimum qualifications set forth in Table 2 of Section VI, Provider Network, of the State Contract (Appendix 1 hereto), including but not limited to neighbors, family members, or friends. There shall be no restriction on a Participant's choice of Direct Service Worker(s) and they may not be required to choose providers in Humana's network.

b) Upon identification of Direct Service Worker candidates by Participants and receipt of all required candidate-completed forms, COMPANY shall, on Participants' behalf, perform eligibility testing of candidates. Such eligibility testing shall comply with the requirements of State (specifically Chapter 435 and S. 408.809, Florida Statutes) and federal law, as well as requirements of applicable P&Ps.

c) COMPANY shall ensure that Level II criminal background screening and fingerprinting have been performed for Direct Service Worker(s) pursuant to Chapter 435 and Section 408.809, F.S.

d) COMPANY shall verify all direct Service Worker qualifications in accordance with applicable P&Ps.

e) COMPANY shall verify all direct Service Worker qualifications as specified by the State and shall further verify Direct Service Workers' information (i.e., citizenship or legal alien verification documentation), and social security numbers with the Social Security Administration's Social Security Verification Service.

f) COMPANY shall contact either Participant or potential Direct Service Worker(s) to confirm that potential Direct Service Worker has completed all required screening (including 10 panel drug screening and fingerprinting) not later than two (2) weeks following receipt of candidate-completed forms. COMPANY shall conduct two (2) follow-up calls to either Participant or potential Direct Service Worker(s) and if potential Direct Service Worker(s) has not completed required screening, COMPANY shall contact the Case Manager for further instructions.

g) COMPANY shall comply with all State requirements for determining eligibility of Direct Service Worker(s) for employment under PDO. For all ineligible candidates:
   i) COMPANY shall, on behalf of the Participant, provide all legally required documentation to the potential Direct Service Worker(s) (e.g., Fair Credit Reporting Act notices).
   ii) In the event potential Direct Service Worker(s) fail eligibility testing, COMPANY shall notify the Case Manager AND the Participant within three (3) business days of notification of such failure. Following such failure, the Supports Brokers shall seek the advice and consent of Case Manager prior to assisting the Participant with further searches for potential Direct Service Workers.

6 Participant / Direct Service Worker Orientation Meeting

a) Within five (5) business days of a potential Direct Service Worker passing eligibility testing, the Supports Broker shall coordinate a meeting between the Participant and/or Representative, the Direct Service Worker and Humana Case Manager at such time and place as reasonably requested by the Participant ("Direct Service Worker Orientation Meeting"). The Direct Service Worker Orientation Meeting must be an in-person, face-to-face meeting. If necessary as pre-approved by the Case Manager, COMPANY shall provide telephone orientation to Direct Service Workers, Representatives and others who could not participate in the in-person, face-to-face meeting.

b) COMPANY shall comply with all State and Humana requirements for Direct Service Worker Orientation Meetings.

c) During the Direct Service Worker Orientation Meeting, COMPANY shall:

   i) Secure the completion and/or execution of all documents necessary for Direct Service Worker PDO Services that includes payroll taxes, workers compensation coverage (if required) and other employment related expenses.

   ii) Communicate the program parameters (as set forth in the Plan of Care received from the Case Manager) to Participants and Direct Service Workers.

   iii) Confirm that the Participant and Direct Service Worker have agreed upon a wage rate that conforms to Humana guidelines and State program requirements for wage rates, and confirm that the wage rate is documented in the Participant/Direct Service Worker Agreement. (Humana will inform Participants, upon choosing the PDO, of the rate of payment for the PDO Services.

If the rate of payment changes for any PDO Service, Humana will provide the thirty (30) day written notice to the affected Participants and Direct Service Workers as required by the State Contract and notify COMPANY.) COMPANY shall ensure any updates to rates are documented in the Participant/Direct Service Worker Agreement.

iv) Complete and obtain signatures on the required Hiring Packet forms, including the Participant/Direct Service Worker Agreement.

v) COMPANY shall ensure the Participant/Direct Service Worker Agreement includes the following minimum provisions.

1. PDO Service(s) to be provided;
2. Hourly rate;
3. Direct Service Worker work schedule;
4. Relationship of the Direct Service Worker to the Participant;
5. Job description and duties;
6. Agreement statement;
7. Dated signatures of the Case Manager (or COMPANY), Participant, and Direct Service Worker.

vi) Deliver the following State-required training to Direct Service Worker(s):

1. Overview of PDO in HCBS and self-direction of health care tasks;
2. Caring for elderly and disabled populations;
3. Abuse and neglect identification and reporting;
4. Critical Incident reporting;
5. Submission of timesheets, required documentation and withholdings.

vii) Deliver the following State-required training to Participants initially and on an as needed basis:

1. Understanding the role of Participants and Representatives and PDO in HCBS and self-direction of health care tasks;
2. Understanding the role of the Case Manager and COMPANY;
3. Creating job descriptions
4. Interviewing, hiring, training, and supervising Direct Service Workers;
5. Abuse and neglect identification and reporting;
6. Being an employer, evaluating worker performance and managing Direct Service Workers;
7. Fraud and abuse;
8. Performing administrative tasks such as reviewing and approving time sheets;
9. Scheduling workers and back-up planning;
10. Terminating employment of Direct Service Workers.

d) COMPANY will coordinate a minimum of one (1) face-to-face Participant/Direct Service Worker Orientation Meeting between the Participant, Supports Broker and each Direct Service Worker.

7. <u>Direct Service Worker Training</u>

a) With respect to Direct Service Worker training, in addition to that described in 7(c) vi, above, COMPANY shall:

i) deliver written training materials;

ii) refer Direct Service Workers to appropriate training providers (e.g., American Red Cross for

CPR);

iii) refer Direct Service Workers to certification and licensing locations when COMPANY cannot perform any required certifications;

iv) confirm by telephone with Direct Service Workers that training materials have been received and that Direct Service Workers understand the content of such materials;

v) respond to Direct Service Worker questions relating to training.

c) Efforts to contact, deliver, and initiate necessary training to Direct Service Workers shall be completed no later than fifteen (15) days from hire.

d) COMPANY shall provide all training materials to Direct Service Workers and will collect any required certifications in the Eligibility Testing phase.

e) COMPANY shall document and maintain information on certification renewals and shall follow up with Direct Service Workers to ensure renewals are timely obtained. In the event Direct Service Worker certifications lapse, COMPANY shall administer such processes as reasonably requested by Humana and/or required by the State.

8 Employment Oversight and Performance Services

a) COMPANY shall include within the PDO Participant Guidelines information related to Direct Service Worker discipline and provide telephone support to Participants for Direct Service Worker discipline issues through COMPANY'S customer call center. Such support shall include information relating to documentation of performance issues and proper termination procedures.

b) COMPANY shall assist Humana in enforcing CMS regulations relating to fraud, waste and abuse by observing potential indicators of Participants' failure to manage employer responsibilities and communicating evidence of such indicators to Case Managers. Indicators include but are not limited to:

i) extreme utilization patterns, including under use of services or high concentration of utilization over a short period;

ii) statements or actions by Participants or Direct Service Workers that indicate fraudulent activity or violation of program rules.

c) All Participant- and Direct Service Worker-facing materials required for PDO Services shall be in form and content as required by the State and Humana. The State and Humana shall provide or preapprove all documentation used by COMPANY in performance of Services. Members who receive PDO Services shall be called Participants in any PDO specific published materials. All documentation created or used by COMPANY for Services must display an AHCA code number.

d) Materials shall be reviewed and updated by the parties annually, or more frequently if required by the State. All materials shall be available in hard copy format, either hand delivered to the Participant or Direct Service Worker or sent by U.S. Mail, or e-mailed if directed by Participants or Direct Service Workers. Delivery timeframes shall meet all State PDO program requirements. Materials may also be provided at COMPANY's website.

e) COMPANY developed materials, whether paper or electronic, shall be in English and Spanish. Translation services for other languages shall be made available by COMPANY for other

languages at a Participant's or Case Manager's request.

f) In the event COMPANY receives notice of a Direct Service Worker termination (either voluntarily or by Participant), COMPANY shall communicate such information to the Case Manager by telephone, together with a follow up e-mail, within thirty (30) minutes of actual notice, in order for Humana to meet the State's requirement that backup services to the Participant be provided within three (3) hours. After normal business hours, COMPANY shall implement such messaging or automatic routing processes as are required to direct Participants to a live agent.

9. Payroll Services

COMPANY shall complete the following payroll and FEA tasks:

a) COMPANY shall perform all employer payroll processing and payments to Direct Service Workers on behalf of Participants in compliance with all state, federal and local laws, rules and regulations.

b) COMPANY shall obtain an individual Federal Employer Identification Number ("FEIN") used only for purposes of representing Participants as employers.

c) COMPANY shall complete or assist Participants with completion of all forms and documents included in the Enrollment Packet.

d) COMPANY shall distribute the pay schedule to all Participants at least annually.

e) COMPANY shall collect and process timesheets submitted by the Participant and resolve any timesheet issues with the Participant and/or Direct Service Worker.

f) COMPANY shall disburse payroll (no less than twice per month) by direct deposit or pre- paid card to each Direct Service Worker who has a complete and current Hiring Packet on file and has provided PDO Services to a Participant as authorized in the Plan of Care and the Participant/ Direct Service Worker Agreement by the published pay date.

g) COMPANY shall establish payroll withholding accounts as required by law and shall prepare and timely file all payroll and withholding reports due to state, federal and local government agencies.

h) COMPANY shall respond to correspondence and questions from state, federal and local tax authorities in a timely manner and comply with all deadlines and requirements according to regulation and/or instructions included in the correspondence. COMPANY shall receive and respond to correspondence from taxing authorities sent directly to Participants or Case Managers in the same manner.

i) COMPANY shall train Direct Service Workers on proper completion of timesheet service descriptions tied to proper service codes so as to properly evidence reimbursements due from CMS or other government agencies. COMPANY will maintain edits within its timekeeping system to allow only descriptions which match Medicaid CMS codes.

j) COMPANY shall ensure Direct Service Workers are only paid for approved PDO Services actually performed.

k) COMPANY shall ensure that Participants and Direct Service Workers understand that no additional fringe or other benefits, including overtime, will be approved or paid by the State.

l) COMPANY shall process applicable Direct Service Worker garnishments, liens, and levies in accordance with state and federal garnishment rules. Company shall submit payments and reports to applicable agencies per garnishment instructions.

m) COMPANY shall provide Human Relations functions, such as processing requests for Direct Service Worker verification, at a Participants' request.

n) COMPANY shall prepare for and support unemployment claims proceedings on terminated Direct Service Workers.

o) COMPANY shall prepare and timely submit all reports to the Florida Department of Economic Opportunity and other federal and state employment-related reports (e.g., EEOC-1 if applicable).

p) COMPANY shall obtain workers compensation insurance without markup, for a Participant's Direct Service Worker if required by Florida statute or rule (see, e.g., Chapter 440, F.S., and Rule 69L, F.A.C.)and if approved as part of the Plan of Care.

q) COMPANY shall assist with processing workers compensation claims and field inquiries on Participants who have no coverage.

r) COMPANY shall compute, maintain, and appropriately withhold all Participant employer and Direct Service Worker taxes pursuant to federal and state law. All payments that are not in compliance with federal and state tax withholding, reporting, and payment requirements shall be corrected within two (2) business days of identifying an error. COMPANY shall contain a provision in any written agreements with Participant indemnifying and holding Participants harmless from any failure of COMPANY to properly withhold or remit taxes.

s) COMPANY shall respond timely and lawfully to third-party requests for verification of employment status of a Direct Service Worker.

t) COMPANY shall deposit Direct Service Worker aggregate payroll deductions in accordance with federal and state tax deposit requirements. Federal Income Tax, Social Security and Medicare and participant Federal Social Security and Medicare (FICA) taxes in the aggregate shall be deposited in accordance with deposit frequency requirements of a fiscal employer agent. (IRS publication 15-A, located at www.irs.gov/)

u) COMPANY shall deposit Participant's employer aggregate tax deductions in accordance with federal and state tax deposit requirements. Federal Unemployment Tax (FUTA) in the aggregate shall be in accordance with fiscal employer agent deposit frequency. (IRS publication 15-A, located at www.irs.gov/)

v) COMPANY shall refund over-collected FICA for Direct Service Workers who earn less than the Federal FICA threshold for a calendar year. (IRS Publication 15, Circular E).

w) COMPANY shall file a single IRS Form 941, Employer's Quarterly Tax Return in the aggregate on behalf of all Participants. Form 941 is completed using COMPANY's separate FEA, FEIN.

Wages and taxes reported represent total, aggregate wages and taxes for all Participants. Schedule B must be completed in accordance with the rules. Company shall also complete and submit Schedule R with the Form 941. Schedule R disaggregates each Participant's employer wages and federal tax liability.

x) COMPANY shall adjust Form 941 as applicable by completing and filing IRS Form 941- X.
y) COMPANY shall file a single IRS Form 940, Employer's Annual Federal Unemployment Tax Return, in the aggregate on behalf of all Participants. Form 940 is completed using COMPANY's separate FEIN. Wages and FUTA tax reported represent total, aggregate wages and taxes for all Participants.

z) COMPANY shall distribute IRS Forms W-2 to each Direct Service Worker and submit them electronically according to IRS Form W-2 instructions, in accordance with IRS rules and regulations.

aa) COMPANY shall track payroll disbursed to all direct service workers and provide reports as may be required by the Agency or its designee in accordance with this Contract
bb) COMPANY shall comply with, and support Participant compliance with, state workers compensation audits as applicable.

cc) COMPANY shall maintain records in compliance with Fair Labor Standards Act requirements for employers.

10. <u>Direct Service Worker Payment / Claim Processing</u>

a) COMPANY shall maintain books, records, documents, and other evidence of PDO-related expenditures using generally accepted accounting principles (GAAP).

b) COMPANY shall ensure a payroll System with maximum data integrity in which Direct Service Workers are not paid above authorized hours as prescribed in the Plan of Care and the Participant/Direct Service Worker Agreement.

c) COMPANY will use timesheet forms and templates as approved by the State and Humana.

d) COMPANY shall accept timesheets submitted by fax or scanned documents sent by email. COMPANY shall accept timesheets sent through the US mail and will educate Direct Service Workers on delays which may be caused by untimely mailed timesheets.

e) COMPANY shall review all submitted timesheets for:
   i) Mathematical accuracy. Inaccuracies will be rejected for correction and required to be resubmitted; however, COMPANY shall correct timesheets and confirm, telephonically or by other means, such corrections with Participants.
   ii) Proper time period. COMPANY shall not compensate for dates-of-service more than ninety (90) days old unless approved by Humana in writing.
   iii) Overlapping timesheets, i.e., more than one Direct Service Worker with the same service or one Direct Service Worker with multiple entries for the same service on the same day or time. COMPANY will reconcile and reject or pay as appropriate.
   iv) Proper service codes.
   v) Signature by the Direct Service Worker and Participant, including a statement by the Direct Service Worker attesting that the Participant was provided the PDO Services in accordance with the information contained on the timesheet. Timesheets shall be rejected and

signatures obtained for resubmittal. No verbal approvals shall be allowed.

f) COMPANY shall resolve all timesheet discrepancies within the then-current payroll cycle. If the discrepancy cannot be remedied within the current cycle, COMPANY shall timely notify the Direct Service Worker that payment or correction will be in the next payroll cycle. COMPANY may be required by Humana to issue payroll checks off the payroll cycle in certain circumstances set forth herein.

g) COMPANY will timely advise Direct Service Workers of all rejections of timesheets or payment requests in a timely manner and by telephone to the extent practical. COMPANY shall request correction and resubmission.

h) COMPANY shall forward any invoices received in error from non-Direct Service Worker vendors of Participants to the Humana Case Manager within one (1) day of receipt and provide concurrent notification by telephone or e-mail.

i) COMPANY shall make payments to Direct Service Workers [on a bi-weekly basis] by: (i) ACH or (ii) debit card transfers, at Humana's direction.

j) In the event of an overpayment or underpayment to a Direct Service Worker, COMPANY shall make the proper correction consistent within wage and hour standards and concurrently report the error and resolution to Humana if the error is over five hundred dollars ($500.00). COMPANY shall correct the error on the next payment cycle from discovery.

k) In the event COMPANY incorrectly bills Humana (or other party at the request of Humana), COMPANY shall credit (or charge) Humana to correct such error immediately upon discovery, and provide information on the circumstances surrounding such credit or charge. COMPANY shall be responsible, at its own expense, to pursue any third party recovery to which it is entitled.

l) Humana shall have the right to recover from COMPANY all Direct Service Worker payments made in error by COMPANY for a period of five (5) years from the date of payment to the Direct Service Worker. Such right will survive termination of the Agreement between COMPANY and Humana.

m) COMPANY shall comply with all state laws applicable to unclaimed property and escheatment, including reasonable efforts to locate payees and re-issue payments prior to escheatment, filing all required reports and making all required remittances and deposits.

11. <u>Utilization Management</u>

a) Humana shall have primary responsibility for all utilization management ("UM") requirements of the State Contract, including Plan of Care development and authorization of services and benefits.

b) Services are (currently) authorized in Participant Plans of Care in ninety (90) day increments, subject to change by State requirements. COMPANY shall compare PDO Services reported in Direct Service Worker timesheets to those authorized in Participant Plans of Care. COMPANY shall compare Direct Service Worker timesheets to the Participant service authorization in the Plan of Care and will notify Participants when the amount of PDO Services claimed exceeds the amount of services authorized on a prorated (authorization to date) basis. COMPANY will not

compensate Direct Service Workers for PDO Services in excess of the authorized amount or for services that were not authorized without the prior approval of Humana.

c) COMPANY shall provide to Humana such reports relating to PDO Services and hours authorized and paid as required by the State and/or Humana to satisfy State reporting requirements or facilitate Humana's oversight of PDO Services. Such reports shall adhere to format, frequency and timing as mutually agreed by COMPANY and Humana and include, but are not limited to:
   i) Monthly comparison, by Participant, of hours and PDO Services paid to hours and PDO Services authorized
   ii) Written notification to the Case Manager and Participant if utilization is less than 10% of the monthly hours as approved on the authorized Plan of Care for more than one (1) month. Iii) Written notification to Case Managers if hours or PDO Services paid in any payroll period are 25% below, or 10% above, hours and PDO Services authorized.

d) COMPANY and Humana agree that format, frequency and timing of reports may be modified in accordance with policy and procedures for utilization management as agreed by the parties.

12. <u>Participant Disenrollment or Transfer</u>

a) In the event Humana receives formal notification from either the State or the Participant that the Participant has elected to cease receiving PDO Services, Humana will provide notice to COMPANY. COMPANY will confirm the termination date of Participant's participation in PDO Services, as well as Direct Service Worker termination dates, in writing to Case Manager.

b) In connection with the disenrollment in PDO, COMPANY shall perform all duties regarding disenrollment of the Participant from PDO, including final federal and state tax filings and payments and revocation of accounts, numbers, and authorizations previously obtained for closing the Participant records with COMPANY. This includes retiring the FEIN and State Unemployment Tax Account (SUTA) Number. COMPANY shall provide all such documentation to Humana.

c) In the event Case Manager receives a request from Participant to transition to a PDO service provider other than COMPANY ("Alternate PDO"), Case Manager will provide written or verbal notice to COMPANY COMPANY shall thereafter initiate contact with Alternate PDO within three (3) business days. COMPANY shall exchange with Humana and Alternate PDO all necessary information, including complete Participant and Direct Service Worker records. Such exchange wshall be within five (5) days of notification by Humana and in such manner and format as reasonably requested by COMPANY and Alternate PDO. COMPANY shall take such other steps as are necessary to facilitate Participant's transition to Alternate PDO, including coordinating submission of payroll taxes with Alternate PDO, and providing Participant's Alternate PDO or new Plan with Participant's FEIN and SUTA numbers.

13. <u>Customer Service and Service Center Operations</u>

a) COMPANY shall operate a support center (the "Service Center") to respond to Participant, Direct Service Worker and Case Manager inquiries, whether by telephone or written correspondence (email, fax or letter) which shall be staffed (including coverage for vacations and sick days) in such manner as to maintain the service levels as otherwise agreed to by COMPANY and Humana.

b) The Service Center shall maintain a toll-free telephone number dedicated exclusively to the PDO

program.

c) The Service Center shall have hours of operation from Monday through Friday, 8 AM to 7 PM eastern time. The Service Center may be closed on State and national holidays, but shall not be closed on any day which is not recognized as a State holiday.

d) COMPANY will follow all P&Ps for escalation of issues during telephone calls with Participants and Direct Service Workers.

e) COMPANY shall maintain sufficient Spanish-speaking agents to assure that call service levels achieved for Spanish-speaking callers are not less than those required by the standard service level commitments. Other languages shall be supported by a third party interpreting service engaged by COMPANY or as directed by Humana.

f) Subject to the requirements of the Complaint process set forth in the following section, all correspondence received by letter, email, or fax from or regarding Participants or Direct Service Workers shall be logged as received in COMPANY's systems and responded to within three (3) business days.

g) In accordance with the State Contract, AHCA will conduct PDO satisfaction surveys on at least an annual basis and provide results to Humana for use in quality improvement plans. Humana will share with COMPANY the results pertaining to COMPANY. COMPANY shall cooperate with, and participate in, ongoing evaluations and focus groups conducted by AHCA to evaluate the quality of the PDO.

h) In addition to any member satisfaction or CAHPS survey issued by the State or Humana, COMPANY shall develop and mail written satisfaction surveys to each Participant and Case Manager receiving Services during the twelve months prior to the survey date. Such surveys will be performed annually. Survey instruments shall be developed by COMPANY and approved by Humana (and the State where required). Survey results shall be compiled by COMPANY and reported to Humana within sixty (60) days after collection. COMPANY may offer online access to the survey instrument. Written and online surveys shall be ADA compliant (sight and hearing impaired) and shall be available in English. COMPANY will translate written surveys into other languages upon Participant or Case Manager request.

14. <u>Complaints, Grievance & Appeals</u>

a) Humana shall have responsibility for processing Participant Grievances and appeals. Humana shall have responsibility for handling Participant Complaints for denied services.

b) Under the State Contract, a Complaint is any oral or written expression of dissatisfaction by an enrollee submitted to COMPANY and resolved by close of business the following business day. Possible subjects for Complaints include, but are not limited to, the quality of services provided, aspects of interpersonal relationships such as rudeness of COMPANY Personnel, failure to respect the enrollee's rights, administration, claims practices or provision of services that relates to the quality of care rendered pursuant to the State Contract. A Complaint is the lowest level of challenge and provides COMPANY an opportunity to resolve a problem without it becoming a formal Grievance. Except for the

items set forth in section i), above, COMPANY shall handle all other Participant Complaints in accordance with these provisions.

c) COMPANY shall address, log, track and trend all Complaints, regardless of the degree of seriousness or whether the Participant expressly requests filing the concern. The COMPANY log of Complaints shall include date received, complainant and Participant name(s), Medicaid ID number, nature of complaint, whether complaint is EPSDT related, type of complaint, date of disposition, description of resolution and final disposition. COMPANY shall submit the information in this Complaint log with its required monthly reporting and submit the actual log at any time upon the request of Humana or AHCA.

d) COMPANY Personnel shall have all necessary and proper training to effectively support Humana's resolution of Complaints, Grievances and appeals, including training on how to determine when such matters constitute a Participant Complaint, Grievance or appeal to be directed to Humana. COMPANY shall provide Humana with proof of completion of training on the issues upon request.

e) If a Member Complaint is not resolved within 24 hours of receipt, it becomes a Grievance. All Grievances shall be identified in COMPANY's Participant record and notified to the Humana Florida Medicaid Grievance Department for attention within twenty-four (24) hours of receipt at the following numbers, telephone- 1-800-477-6931; fax- 1-800-949-2961 using the form supplied by Humana.

f) COMPANY shall respond to all requests for information by Humana in support of the Complaint, Grievance and Appeal process as follows: within twenty-four (24) hours for standard requests, or as required to address/respond to AHCA Critical Inquiry cases.

g) Humana shall have responsibility for administering Participant medical necessity appeals. COMPANY shall promptly respond to all requests for information by Humana to enable prompt response to such appeals within the timeframes established by the State Contract, e.g. seventy-two (72) hours for expedited appeal requests and seven (7) calendar days for standard appeal requests. These times are subject to change by AHCA on a case by case basis.

h) Reporting Requirements: COMPANY shall provide to Humana the specific monthly reports as noted in the State Contract and required by the Florida Market and COMPANY's Delegation Compliance consultant at Humana. Monthly reports shall be submitted by COMPANY in proper format within eight (8) days following the end of each calendar month.

i) Reporting requirements, including timing, may change based upon revised or new State and federal legislation and NCQA standards requirements during the Agreement term.

j) Critical Incidents: COMPANY shall follow all State and federal laws, rules and regulations, including State Contract requirements with respect to reporting suspected Participant abuse and neglect. COMPANY shall provide to Humana all incident and event details (Critical or Adverse Incident Report) by completing all required fields in the Critical Incident

portal, Riskonnect, within twenty-four (24) hours of the incident or receipt of a report by a third party. Critical Incident details shall be captured in the Critical Incident Portal within twenty-four (24) hours of learning of such events. Reports shall include at a minimum the Participant's identity, description of the incident and outcomes including current status of the Participant. COMPANY shall cooperate fully with Humana Risk Managers to provide information, follow up and participation in resolution to ensure all Critical and Adverse Incidents have been properly resolved and documented.

k) Direct Service Worker Complaints. COMPANY shall respond to all concerns or inquiries from Direct Service Workers, whether telephonic or written, within three (3) business days of receipt. COMPANY shall resolve such concerns or inquiries at the time of initial Direct Service Worker contact. COMPANY will notify the Case manager of Direct Service Worker complaints within twenty-four (24) hours of receipt.

15. Reporting and Data File Exchanges

a) In addition to any reports, files or documents identified in other sections of this Schedule, COMPANY shall provide the following reports, files and documents on the frequency and to the persons or entities identified below. Details of report formats will be mutually agreed by COMPANY and Humana.

b) This report list may change and is at all times subject to the requirements of the State Contract, including PDO monthly report(s) as specified in Section XIV, Reporting Requirements and the Managed Care Plan Report Guide. COMPANY shall provide ad-hoc PDO related information, records, and statistics, as reasonably requested by Humana, plus any information requested by the State, and within any specified timeframes.

Report Title	Delivered To:	Frequency
1. Participant enrollment and disenrollment – report of changes in enrollment	Humana	Monthly
2. Participant report – comparison of authorized services to actual services	Participant	Monthly, by the 21st calendar day of each month
3. Participant report – comparison of authorized services to actual services by Participant	Humana	Monthly, by the 21st calendar day of each month
4. Payroll register – details of payments to Direct Service Workers, by Direct Service Worker	Humana	Bi-weekly, within one (1) business day of payroll
5. 837 Healthcare claims file	Humana	Bi-weekly, within three (3) business days of payroll

6. Participant enrollment roster – report of Participants enrolled in Program on the last day of the month, with attestation	Humana	Monthly, by 10th calendar day of each month

16. Payroll Funding/Reimbursement

a) COMPANY will receive from Humana a monthly Participant election file; COMPANY shall include in its payroll register only costs for services of Participants that appear on the Participant election file.

b) COMPANY shall submit its bi-weekly payroll register, in the form of a HIPAA 837- compliant claims file, to Humana for reimbursement.

c) Additional requirements of the payroll funding process may be required based on System processes.

17. General Requirements of COMPANY as FEA and Supports Provider

a) Humana shall provide enrollees any required notices of the State Contract informing them that Humana is utilizing a subcontractor to perform FEA duties.

b) COMPANY shall meet all applicable PDO-related federal and State requirements and shall be operated in accordance with Section 3504 of the Internal Revenue Code, per Revenue Procedure 70-6 and Section 3504 Agent Employment Tax Liability proposed regulations (REG-137036-08) issued by the IRS on January 13, 2010.

c) COMPANY remain informed of all federal and state FEA requirements and tax forms, and shall ensure all materials distributed to Participants, Representatives, Direct Service Workers (and Case Managers as applicable) are current, and in accordance with the appropriate federal and state regulations.

d) COMPANY shall have a separate Federal Employer Identification Number ("FEIN") that is used only for purposes of representing Participants as employers. This FEIN must not be used to file or pay taxes for COMPANY's staff.

e) COMPANY shall provide to Humana a copy of its Fiscal Intermediary Service Organization license required under 641.316 F.S. or Insurance Administrator license required under 626, Part VII F.S.. COMPANY shall alternately provide acceptable evidence that it is not required to maintain such licenses to operate in the State.

18. Performance Standards

a) CMS and the State have defined specific requirements for performance and established liquidated damages, penalties and sanctions for failure of Humana to comply with such requirements including but not limited to those described in the State Contract. COMPANY shall be responsible to pay Humana for incurred liquidated damages, penalties or sanctions

which have been levied by CMS or the State against Humana when the actions or inactions of COMPANY are the proximate cause.

b) In addition to responsibility for State or CMS penalties in Section A, above, COMPANY shall implement procedures and tools needed to measure its performance under the Performance Standards set forth below. The parties will also implement tracking and measurement reports for each of the performance standards ("Tracking Reports"). COMPANY shall provide the Tracking Reports of all metrics on the fifteenth (15th) day of the month following the reporting period, for example, on November 15 for performance during the month of October. In the event the 15th falls on a weekend, or on a Humana or COMPANY holiday, the Tracking Reports will be provided by close of business the next business day. The formats of all Tracking Reports will be in accordance with the descriptions set forth in the Performance Standards below, and as mutually agreed by the parties. The reporting and related deadlines are not intended to supersede any State-required reports or their related deadlines described in the Delegation Addendum. Humana shall have the right at all times to analyze and audit COMPANY's calculations.

c) Upon receipt of the Tracking Reports and calculations, Humana shall have ten (10) calendar days to accept or propose adjustments to COMPANY reporting and calculations. If Humana proposes adjustments to COMPANY reporting or calculations, COMPANY shall have five (5) calendar days following receipt of Humana's response to accept or reject Humana's adjustments. Following acceptance by Humana of the final calculation, COMPANY shall remit, or allow Humana to deduct from amounts owed to COMPANY, funds equal to the final calculation within five (5) business days.

d) There will be a one half percent (0.5%) reduction of the COMPANY payment during each month for each Performance Standard not met.

e) In the event of COMPANY's failure to achieve a service level described herein, Humana shall have the right to request COMPANY to: (a) provide Humana with a report detailing the cause of, and procedure for correcting, such failure within ten (10) business days of request; as well as reasonable evidence that such failure will not reoccur. This shall be in addition to any and all other rights, remedies, credits and damages to which, in a particular instance, Humana shall be entitled. Reoccurrence of the same failure in consecutive months shall constitute a default under the Agreement.

#	Section of AHCA or Humana Contract	Metric	Definition	Performance Standards	Measurement Period
1	IV.B.2.h(1)	Telephone Response Time	The average speed of answer (ASA) shall not exceed thirty (30) seconds.	Ninety five (95%) percent of Participant and Direct Service Worker calls not to exceed ASA of 30 seconds	Monthly

2	IV.B.2.h(2)	Call Blockage Rate	The call blockage rate for direct calls shall not exceed one half of one percent (0.5%)	Ninety five (95%) percent of telephone calls shall not exceed 0.5%	Monthly
3	IV.B.2.h(3)	Abandoned Call Rate	The average call abandonment rate for direct calls shall not exceed three percent (3%). A system, which places calls in queue may be used but the wait time in the queue shall not exceed sixty (60) seconds	Abandoned calls shall not exceed three (3%) percent.	Monthly
4	Humana SOW	Referral Packet Delivery	Ensure that Participant has received Referral Packet within five (5) business days of COMPANY obtaining the signed consent form.	Deliver Referral packets within five (5) business days ninety eight (98%) percent of the time	Monthly
5	Humana SOW	Employee Candidate Eligibility Testing	Confirm that potential Direct Service Worker has completed all required screening (including 10 panel drug screening and fingerprinting) not later than two (2) weeks following receipt of candidate-completed forms.	Confirm screening completion within two (2) weeks ninety five (95%) percent of the time	Monthly
6	Humana SOW	Participant / Employee Orientation Meeting	Coordinate Orientation Meeting with all required attendees within five (5) business days of potential employee passing eligibility testing.	Coordinate meeting within five (5) business days ninety five (95%) percent of the time	Monthly
7	V.A.6.b.1	Direct Service Worker Training	Direct Service Workers will receive all initial training no later than fifteen (15) days from hire.	Complete Direct Service Worker training within fifteen (15) days from hire ninety five (95%) percent of the time	Monthly

8	Humana SOW	Backup Services Notice	Report Direct Service Worker termination notices received by telephone, and follow up e-mail within thirty (30) minutes of actual notice in order for Humana to provide timely backup services	Report terminations to Humana within thirty (30) minutes of actual notice ninety nine (99%) percent of the time	Monthly
9	Humana SOW	PDO Transition	Provide complete Participant and employee records to Humana and Alternate PDO within five (5) calendar days of transfer notification	Provide necessary information within five (5) calendar days of notice ninety eight (98%) percent of the time	Monthly
10	V.A.6.a.8	Participant Budget Report	GT shall provide Humana with the Participant Budget report (comparison of authorized services to actual services, and comp. of authorized services to actual services by Participant) monthly by the twenty-first (21st) calendar day of each month.	Deliver report by the twenty-first (21st) calendar day of each month.	Monthly
11	XI.C.8.b	Eligibility Database Update	GT shall update its eligibility/enrollment databases within twenty-four (24) hours after receipt of said files.	Update database ninety-nine (99%) of time within twenty four (24) hours of receipt of file(s).	Monthly
12	Humana SOW	Participant Grievances	For Participant contacts unable to be resolved in 24 hours, log as a grievance and transmit to Humana within the same 24 hours of receipt	Grievances transmitted timely 99% of the time	Monthly
13	Humana Operating Consistency Requirement	Reporting – Timeliness and Accuracy – State Required Reports	Provide a complete and accurate report to Humana on its due date as stated in Delegation and Statement of Work documents	Timely delivery of complete and accurate report 100% of the time	Per occurrence

14	XI.D.4.a	System Issue Notification	Within one (1) hour of discovery, notify Humana of any problem that may or is jeopardizing the availability and performance of System functions and the availability of information, including any problems affecting scheduled exchanges	Notify Humana within one (1) hour of discovery one hundred (100%) percent of the time	Per Occurrence
15	XI.D.5	System Issue Resolution	Unscheduled System unavailability caused by the failure of systems and telecommunications resolved and the services restored within forty-eight (48) hours of declaration of System unavailability.	Resolve issue within forty eight (48) hours of declaration one hundred (100%) percent of the time	Per Occurrence
16	Humana SOW	COMPANY Participant Survey - Satisfaction	Number of Participants that "strongly agree" or "agree" with survey question, "Overall, the services that I am receiving from COMPANY are better than I expected."	95.0% of total respondents "strongly agree" or "agree"	Annually
17	Humana SOW	COMPANY Case Manager Survey - Satisfaction	Number of Humana Case Managers that "strongly agree" or "agree" with survey question, "Overall, the services that I am receiving from COMPANY are better than I expected."	95.0% of total respondents "strongly agree" or "agree"	Annually

Appendix 1

PDO Provider Qualifications of the State Contract

Long-term Care Plan Benefit	Qualified Service Provider Types	Minimum Provider Qualifications
Adult Companion	Individual	None *
Attendant Nursing Care	Registered Nurse (RN), Licensed Practical Nurse (LPN)	Licensed per Chapter 464, F. S.*
Homemaker	Individual	None *
Intermittent/ Skilled Nursing	Registered Nurse (RN), Licensed Practical Nurse (LPN)	Licensed per Chapter 464, F. S.*
Personal Care	Individual	None*

*Individuals of the Participant's choosing may provide PDO Services so long as they meet the minimum provider qualifications as above and are age eighteen (18) years and older. PDO providers are also required to sign a Participant/Direct Service Worker Agreement and obtain a satisfactory Level II background screening.

EXHIBIT C
REQUEST FOR PROPOSAL QUESTIONNAIRE

1. Please provide a proposal for services required as set forth in Exhibit B.

2. Please propose pricing for FL Medicaid LTC members participating in the PDO service program:
   Note: Pricing is to be fixed for the term of the resulting contract.
   a. Administrative Fees as a Per Member Per Month Fee, Tiered by Participant Count:
      - 1-300
      - 301-600
      - 601-900
      - 901-1200
      - 1201-1500
      - 1501-1800
      - 1801-2100
      - 2101-above

   b. Background Check and Drug Screens

EXHIBIT D
LIST OF REQUIRED DOCUMENTS

1. Top-level organizational chart with a list of all your management personnel
2. Copies of all most recent state, federal, and local government agency performance evaluations
3. Current financial statement with:
    a. Income statement
    b. Balance Sheet
    c. Statement of Cash Flows
    d. State of Retained Earnings and Notes to Financial Statements
    e. Two most previous fiscal years ended audited financial reports. If you are a publicly held multi-divisional organization, provide your divisional statements as well.
4. Member satisfaction survey results for the past two years
5. Provider satisfaction survey results for the past two years
6. Sample management reports, inclusive of utilization reports

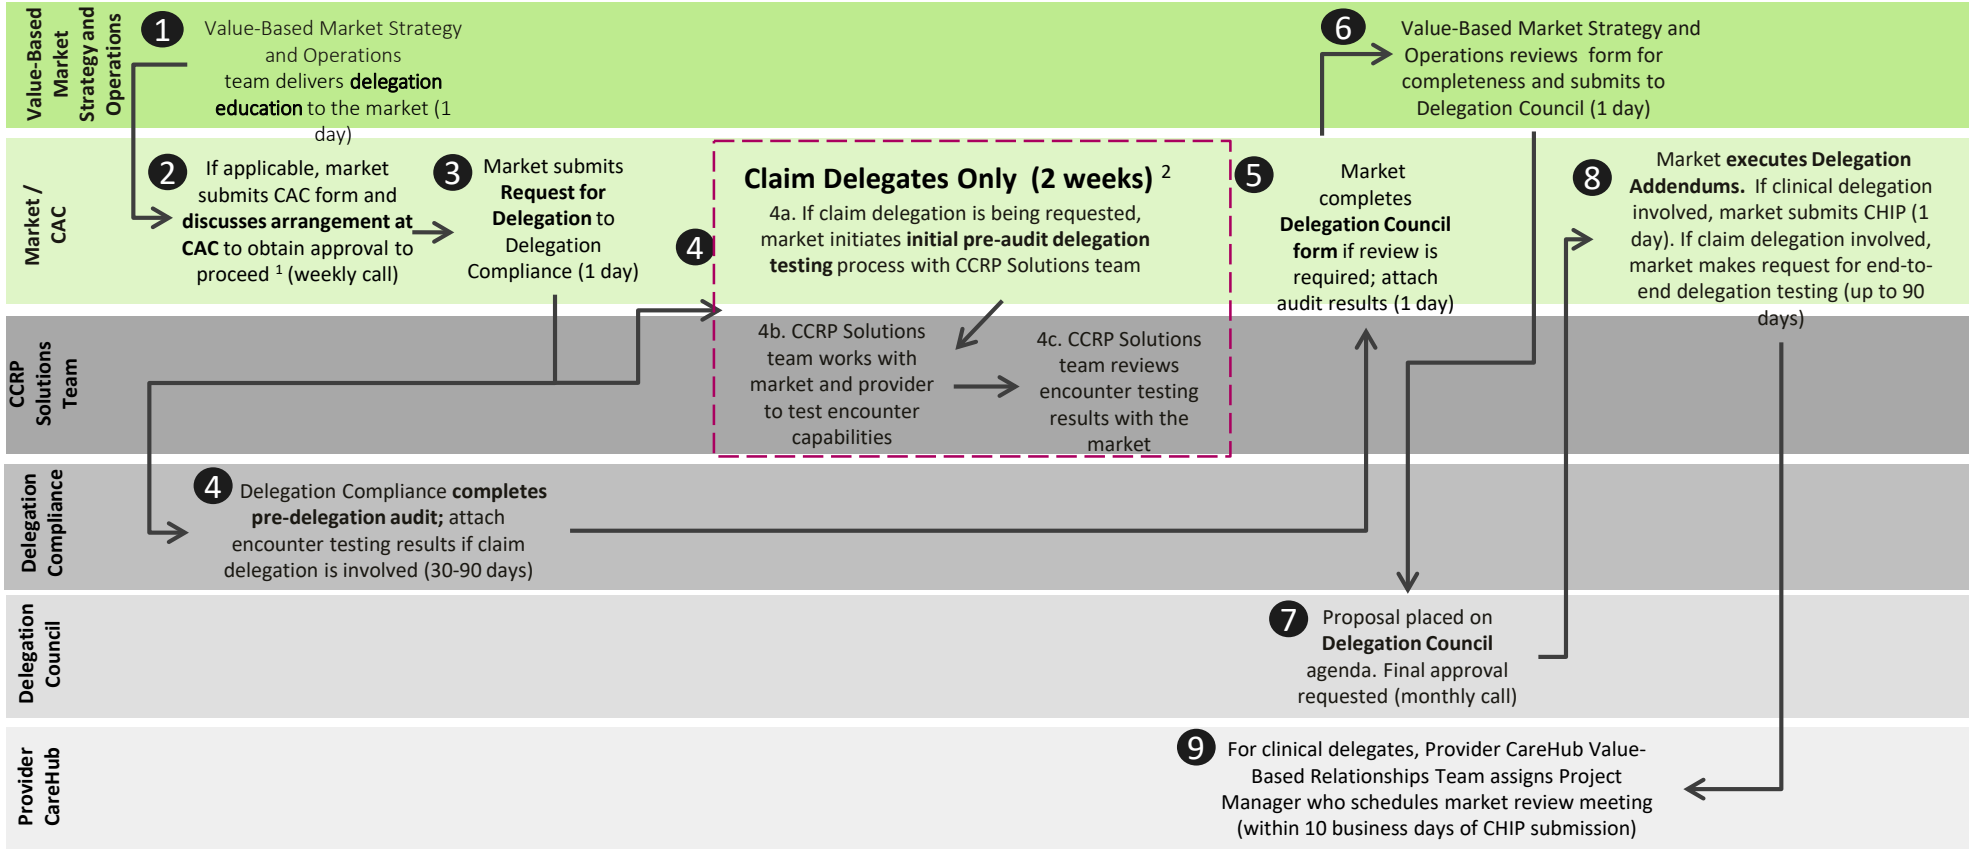
Overall Delegation Approval Process

This graphic outlines the overall delegation approval process.



1) Please refer to CAC process to determine if contract needs to be presented to CAC. The base contract may be executed after CAC approval; delegation contingent on successful completion of the pre-delegation audit and approval process. 2) This step is not required for CarePlus

Delegation Policy

Humana

Humana Policy and Standards

Creation Date:	September, 1996	**Accountable Dept:**	10906- Licensure and Business Partner Compliance
Publication Date:	July 18, 2016	**Business Domain:**	02 Governance and Compliance
Last Review ed:	July 18, 2016	**Business Area:**	13.05 Delegation

Scope:

This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to perform an activity or function on its behalf.

Statement:

This policy describes the oversight process for any activity or function for the Medicare, Medicaid, Marketplace Exchanges (FFM, SBM, SHOP, SPM), commercial and specialty lines of business that have been delegated by Humana to another entity. Humana remains responsible for the performance and compliance of any function that is delegated. Functions that may be delegated include, but are not limited to:

- Claims Processing
- Claims Repricing
- Credentialing
- Clinical Health Services for medical and behavioral health
  - Utilization Management (UM)
  - Complex Case Management (CCM)
  - Disease Management (DM)
  - Quality Improvement (QI)
- Special Needs Plan (SNP)

The following standards are part of this Delegation Policy:

- Pre-Delegation Audit
- Annual Delegation Audit
- Corrective Action Plan
- Delegation Services Addendum and Delegation Attachments
- Provisions for Protected Health Information (PHI)
- Sub-Delegation
- Termination of Delegation
- Additional Delegated Functions

Definitions:

Additional Delegated Functions- Any additional activity or function that has been delegated by Humana.

Annual Delegation Audit- Method to evaluate an entity's contractual, regulatory and accreditation organization compliance and performance capacity annually.

Claims Processing- The process to receive, investigate and an act on a claim filed by a provider or an insured. It involves multiple administration and customer service layers that include review, investigation, adjustment, and remittance of payment or denial of a claim. Delegation of claims processing is whereby Humana delegates all of these processes to another entity.

Complex Case Management- Coordination of care and services provided to members who have experienced a critical event or diagnosis that requires extensive use of resources and who need help navigating the system to facilitate appropriate delivery of care and services.

Concurrent- A review for an extension of a previously approved, ongoing course of treatment or number of treatments.

Humana Internal
UNCONTROLLED WHEN PRINTED. Check controlled location to verify that this is the current version before use.

Corrective Action Plan- Issued to a delegated entity when they fail to meet established thresholds of compliance.

Credentialing- The process of obtaining and reviewing the documentation provided by the applicant and/or obtained during the process for the purpose of determining participation privilege status in the health plan.

Delegated Entity- An entity contracted to perform a function on behalf of Humana.

Delegation- A formal process whereby a health plan gives a qualified contracted provider group the authority to perform certain business functions on its behalf.

Delegation Attachment- A legal document that covers the specific performance requirements based on the function being delegated.

Delegation Council- A cross-functional group to review and vet proposals that involve clinical or claim delegation

Delegation Services Addendum- An additional document not included in the main part of the contract. It contains additional terms, obligations and information regarding the delegation of specific functions to an entity.

Disease Management- A multidisciplinary, continuum-based approach to health care delivery that proactively identifies populations with, or at risk for, established medical conditions.

Pre-Delegation Audit- Method to evaluate an entity's compliance and performance capacity prior to the execution of a delegation contract.

Pre-service Review- A service that an organization must approve, in whole or in part, in advance of a member obtaining medical care or services.

Post Service- Assessing appropriateness of medical services on a case-by-case or aggregate basis after services was provided.

Sub-Delegation- An entity contracted with a delegated entity to perform a function on behalf of the delegate.

Utilization Management- A formal evaluation (pre-service, concurrent, or post service) of the coverage, medical necessity, efficiency or appropriateness of health care services and treatment plans.

Acronyms:

BAA- Business Associate Agreement

CAC- Contract Approval Committee

CAP- Corrective Action Plan

FFM- Federally-Facilitated Marketplace

HIPAA- Health Insurance Portability and Accountability Act

HITECH- Health Information Technology for Economic and Clinical Health Act

SBM- State-Based Marketplace

SHOP- Small Business Health Options Program

SNP- Special Needs Plan

SPM- State Partnership Marketplace (partnership of state and federal agencies)

Related Documents: N/A

Standard: Pre-Delegation Audit

Purpose: To evaluate the entity's capability to perform the requested delegated functions on behalf of Humana in a contractually compliant manner.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been recommended for delegation by a Humana contractor to perform an activity or function on Humana's behalf.

Requirement: The Delegation Compliance department will perform a pre-delegation audit prior to any function being delegated to a prospective entity upon receipt of the Request for Delegation form and the Predelegation Questionnaire (claims delegation only). The pre-delegation audit will include evaluation of a prospective delegate's compliance and performance capacity which will include a review and approval of the following applicable items of the prospective delegate:

- Delegation Council review of proposed clinical health services and claims delegation
- Contract Approval Committee (CAC) approval for claims delegation
- Policies and procedures
- Program descriptions and work plans
- Forms, tools and reports
- Sub-delegation agreements
- Audit of contracted sub-delegate's program including policies, procedures and program documents
- Letters of accreditation
- Financial solvency
- File audit
- Federal/state exclusion screenings
- Offshore contracting

If a delegate requests a change of a subcontractor at any point, Humana's Delegation Compliance department will review and approve the subcontractor's policies, procedures and program documents, either directly or by review and approval of the delegate's audit of the proposed sub-delegate. These reviews will be conducted prior to contracting and require the subcontractor to comply with all Humana, federal, state and accreditation requirements.

Results of the pre-delegation audit are recorded on a standardized audit tool and then scored to determine the prospective delegate's ability to meet compliance requirements. Approval or rejection of the prospective delegate's pre-delegation audit will be based on the following compliance thresholds:

- Prospective delegates with a pre-delegation audit score of less than 70% must be referred to the appropriate committee, market leadership, compliance leadership, or business owner for additional evaluation and final determination on the entity's ability to meet Humana requirements to assume a delegated function.

- Prospective delegates with a pre-delegation audit score of 70%- 94% or those missing critical elements may only be approved if a Corrective Action Plan (CAP) is implemented. Refer to the Corrective Action Plan standard.

- Prospective delegates with pre-delegation audit score of 95% or higher may be approved without requiring a CAP, although potential opportunities for improvement should be documented and communicated to the delegate

Definitions: N/A

Related Documents: N/A

Standard: Annual Delegation Audit

Purpose: To review annually the functions of a delegated entity against contractual, state, federal and accreditation organization standards and requirements to ensure compliance.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to

perform an activity or function on its behalf.

Requirement: The Delegation Compliance department will perform an annual delegation audit to evaluate a delegate's continued ability to meet delegation compliance requirements, which will include a review and approval of the following applicable items of the delegate:

- Policies and procedures
- Program descriptions and work plans
- Forms, tools and reports
- Sub-delegation agreements
- Audit of contracted sub-delegate's program including policies, procedures and program documents
- Letters of accreditation
- Financial solvency
- File audit
- Confirming no offshore contracting

If a delegate requests a change of a subcontractor at any point, Humana's Delegation Compliance department will review and approve the subcontractor's policies, procedures and program documents, either directly or by review and approval of the delegate's audit of the proposed sub-delegate. These reviews will be conducted prior to contracting and require the subcontractor to comply with all Humana, federal, state and accreditation requirements.

Results of the annual audit are recorded on a standardized audit tool and then scored to determine the delegate's ability to meet compliance requirements. Approval or rejection of the delegates annual delegation audit scores will be based on the following compliance thresholds:

- Delegates with annual delegation audit scores of 70% or less must be referred to the appropriate committee, market leadership, compliance leadership or business owner for additional evaluation and final determination on appropriate and necessary next steps which may include; additional corrective measures, cancellation of a particular delegated function by termination of a delegation attachment, or termination of the delegation services addendum.

- Delegates with annual delegation audit scores of 70%-94% may only be approved if a Corrective Action Plan (CAP) is implemented. Refer to Corrective Action Plan standard.

- Delegates with annual delegation audit scores of 95% or higher may be approved without requiring a CAP, although potential opportunities for improvement should be documented and communicated to the delegate.

Definitions: N/A

Related Documents: N/A

Standard: Corrective Action Plan

Purpose: To formally identify and document any contractual, regulatory or accreditation organization performance requirements or other issues, provide an explanation of how the delegate is determined to be non-compliant and provide a plan of action to bring the delegate into compliance.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to perform an activity or function on its behalf.

Requirement: The Delegation Compliance department will issue a Corrective Action Plan (CAP) when the delegate fails to meet established compliance thresholds, contractual requirements, or other requirements. Specific deficiencies resulting in a CAP include, but are not limited to:

- Failure to achieve an overall audit score of 95%, or
- Failure to achieve a single-item score of equal to or greater than 70%, or
- Failure to meet compliance thresholds for critical elements as specified on standardized audit tool, during a pre-delegation, annual delegation audit, or contractual review.

A CAP should contain:

1. The identified issues and deficiencies
2. The corrective actions required, and
3. The timeframes for performance of the corrective actions and achieved results.

The delegate's performance under the CAP will be monitored by Delegation Compliance. Monitoring frequency is dependent upon the potential risks identified, and will occur until the delegate has achieved the required results.

If a delegate fails to achieve the required results within the timeframe provided, the delegate's results will be referred to the appropriate committee, market leadership, compliance leadership or business owner for additional evaluation and a final determination on appropriate and necessary next steps, which may include; additional corrective measures, cancellation of a particular delegated function by termination of a delegation attachment, or termination of the delegation services addendum.

Definitions: N/A

Related Documents: N/A

Standard: Delegation Services Addendum and Delegation Attachments

Purpose: To establish a legally enforceable contractual arrangement between Humana and an entity that outlines the legal obligations mutually agreed upon between the parties to the agreement.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to perform an activity or function on its behalf.

Requirement: Upon approval of delegation pursuant to the pre-delegation audit standard, Humana and delegate must execute Humana's Delegation Services Addendum and Delegation Attachment for each delegated function. The written Delegation Services Addendum and Delegation Attachment(s) must:

- Be mutually agreed upon.
- Describe the activities and the responsibilities of Humana and the delegated entity.
- Requires at least semiannual reporting by the delegated entity to Humana.
- Describe the process by which Humana evaluates the delegated entity's performance.
- Describe the remedies available to Humana if the delegated entity does not fulfill its obligations, including revocation of the Delegation Attachments.
- Retain for Humana the right to approve, suspend and terminate any delegated or sub-delegated function, including but not limited to the termination of individual practitioners, providers and provider sites where credentialing decision making is delegated.
- Retain for Humana pre-approval rights for any proposed sub-delegation.
- Contractually require that delegate shall provide sufficient oversight of the subcontractor to ensure that the subcontractor shall comply with all of the terms and conditions of the Delegation Services Addendum and attachments, or allow Humana to perform direct oversight of sub-delegate..
- Require delegate to comply with Humana, state and federal law and accreditation organization requirements.
- For Qualified Health Plans (QHP): Delegate must comply with 45 CFR 156.340 and permit access by the Secretary and the OIG or their designees in connection with their right to evaluate through audit, inspection, or other means, to the delegated or downstream entity's books, contracts, computers, or other electronic systems, including medical records and documentation, relating to the QHP issuer's obligations in accordance with Federal standards under paragraph (a) of 45 CFR 156.340 until 10 years from the final date of the agreement period.

The Delegation Compliance department will maintain the Delegation Services Addendum with applicable Delegation Attachment(s).

Definitions: N/A

Related Documents: 45 CFR 156.340

Standard: Provisions for Protected Health Information (PHI)

Purpose: To protect the confidentiality, integrity, and availability of electronic PHI when it is stored, maintained, or transmitted.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to perform an activity or function on its behalf.

Requirement: If a delegation arrangement involves the use of protected health information (PHI), Humana and delegate must execute Humana's Business Associate Agreement (BAA). The BAA should be mutually agreed upon and describe the following information:

- A list of allowed uses of PHI.
- A description of delegate safeguards to protect the information from inappropriate use or further disclosure.
- A stipulation that the delegate will ensure that sub-delegates have similar safeguards.
- A stipulation that the delegate will provide individuals with access to their PHI.
- A stipulation that the delegate will inform the organization if inappropriate uses of the information occur.
- A stipulation that the delegate will ensure that PHI is returned destroyed or protected if the delegation agreement ends.
- All other requirements under HIPAA/HITECH Act statutes and regulations.

The Business Associate Agreement (BAA) should be maintained by the Humana's Privacy Office and a copy of the BAA to the Delegation Compliance department.

Definitions: N/A

Related Documents: N/A

Standard: Sub-Delegation

Purpose: To establish requirements if a delegate choses to sub-delegate any activities that are currently delegated to them by Humana.

Scope: This standard governs the sub-delegation by any delegate of a delegated function

Requirement: The delegate will request Humana's approval to sub-delegate any portion of the delegated functions or activities. The delegate will demonstrate to Humana a plan for adequate oversight of the sub-delegate or request oversight by the Delegation Compliance department prior to approval of the sub-delegate.

If Humana approves the sub-delegation, the delegate will provide Humana documentation of a written sub-delegation agreement (and, as applicable, a Business Associate Agreement) that:

- Is mutually agreed upon.
- Describes the activities and the responsibilities of the delegate and the sub-delegated entity.
- Requires at least semiannual reporting of the sub-delegated entity to the delegate.
- Describes the process by which the delegate evaluates the sub-delegated entity's performance.
- Describes the remedies available to the delegate if the sub-delegated entity does not fulfill its obligations, including revocation of the delegation agreement.
- Allows Delegation Compliance access to all records and documentation pertaining to monitoring and oversight of the sub-delegates delegated activities.

If it retains oversight responsibilities, the delegate will provide:

- Evidence of annual oversight of sub-delegated entity.

Definitions: N/A

Related Documents: N/A

Standard: Termination of Delegation

Purpose: To mitigate any risks the delegate may impose on Humana due to failure to comply with regulatory, contractual and other compliance requirements.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to perform an activity or function on its behalf.

Requirement: A delegate's failure to perform or comply with the terms of the Delegation Services Addendum and attachments will result in Delegation Compliance referring the delegate's noncompliance or unacceptable performance status to the appropriate committee, market leadership, compliance leadership, or business owner recommending termination of delegation. Specific deficiencies that may lead to termination include:

- Failure to comply with state and federal laws, rules and regulations.
- Failure to comply with Humana or accreditation organization standards.
- Failure to cooperate with Humana's delegation audit process.
- Failure to comply with any term of the Delegation Services Addendum or delegation attachment(s).
- Failure to comply with the terms of any implemented Corrective Action Plan.
- Failure to submit accurate and timely delegation reports, as specified in the Delegation Services Addendum and attachments.
- Placement on any federal/state government programs exclusion lists.

Either the termination of the Delegation Services Addendum and/or a rescission of the delegated function/service should be initiated.

Definitions: N/A

Related Documents: N/A

Standard: Additional Delegated Functions

Purpose: To identify functions that could be delegated to an entity that would be out of scope for the Delegation Compliance department to oversee and/or monitor.

Scope: This Delegation Policy governs Humana's relationships with any entity that has been delegated by Humana to perform an activity or function on its behalf.

Requirement: The following additional activities or functions may be delegated by operational areas within Humana when the operational area assumes responsibility for oversight of that function or activity:

- Network Management
  - Provider access and availability
  - Provider contracting

Oversight of these additional activities or functions should meet the requirements of Humana's Delegation Policy and all standards therein.

DELEGATION SERVICES ADDENDUM

This **Delegation Services Addendum (Addendum)** is made part of and incorporated into the **<Insert Type>** Participation Agreement entered into between **<Insert Name of the Humana or ChoiceCare entity>** (**Delegator**), and **<Insert Name>** (**Delegate**) which was effective **<Insert Effective date of Base Agreement>** (Agreement). This Addendum is intended to supplement the terms and conditions of the Agreement and to the extent that this Addendum conflicts with the terms and conditions of the Agreement, including any prior amendments, addenda, exhibits, or attachments, this Addendum controls the relationship between the parties.

The following Attachments are included with this Addendum and incorporated by reference herein:

CONTRACTOR NOTE: Include only those Attachments that are appropriate for the Provider entity you are Delegating services to and delete the inapplicable Attachments **– REMOVE THIS TEXT BEFORE SENDING TO DELEGATE**.

A. Delegation of Credentialing Services Attachment
B. Delegation of Utilization Review and Utilization Management Services Attachment
C. Delegation of Complex Case Management Attachment
D. Delegation of Disease Management Attachment
E. Delegation of Quality Improvement Services for Behavioral Health Services Attachment
F. Delegation of Claims Processing Attachment
G. FDR Compliance Program Requirements Attachment
H. Process Integration Attachment
I. IT Security Agreement Attachment
J. Business Associate Agreement Attachment

ARTICLE I
DEFINITIONS

Any capitalized term in this Addendum or any of its Attachments not defined herein shall have the same meaning as set forth in the Agreement.

1.1 **Accreditation Organization** means any nationally recognized organization that accredits managed care organizations including without limitation to the National Committee of Quality Assurance (NCQA), the Utilization Review Accreditation Commission (URAC), and the Joint Commission (TJC) or other nationally recognized Accreditation Organization approved by Delegator.

1.2 **Subcontractor(s)** means any third party which has entered into an agreement with **Delegate** to perform part or all of **Delegate's** duties and/or obligations under this Addendum.

ARTICLE II
DELEGATE'S OBLIGATIONS

In order to fulfill the purposes and objective of this Addendum, the **Delegate** agrees:

2.1 To accept the obligation to perform all delegated functions and activities described in this Addendum and in each Attachment which are each incorporated by reference into the Agreement.

2.2 To comply with **Delegator's** policies, procedures, and program requirements, Member's Plan (coverage agreement), and all applicable state and federal laws, rules and regulations and instructions including but not limited to the CMS Standards for Downstream and Delegated Entities, (45 CFR 156.340) and Accreditation Organization requirements pertaining to all functions and activities described in each Attachment.

a. **Delegate** agrees to monitor all providers, employees and Subcontractors supporting any exchange Plan, Medicare and/or Medicaid lines of business for debarments and exclusions from federal and state government programs. This must be conducted upon initial hire or contract and on a monthly basis thereafter. Accurate records of such monitoring activity must be maintained and retained for a period of a minimum of ten (10) years. Any provider, Subcontractor or employee found excluded from any exchange, Federal and state government program must be removed from providing direct or indirect services for Medicare/Medicaid or other state or federal governmental program Members immediately and shall be reported promptly to the **Delegator**.

b. **Delegate** further agrees to make available to **Delegator,** its designee or any state or federal governmental agency all documents, including but not limited to logs, files, committee meeting minutes and reports required within the timeframe determined by the auditor.

2.3 To furnish, at no expense to **Delegator**, any and all staffing and systems necessary to receive from and transmit to **Delegator**, or its designee, all required data, and will allow access to and provide to **Delegator,** or its designee, all data required by state and federal laws, rules and regulations, and **Delegator** or Accreditation Organization standards including without limitation any documentation, records, files or data necessary to perform the functions delegated under this Addendum.

2.4 That upon the termination of performance of delegated function under this Addendum, and/or the expiration, non-renewal or termination of the Addendum, regardless of the cause, any files, records and documentation or quality copies of such files and documentation pertaining to **Delegator's** Members or providers which are necessary for **Delegator** to resume responsibility for the delegated function will be made available to **Delegator** upon request.

2.5 To prepare and maintain all appropriate records which involve transactions relating to any services delegated hereunder in accordance with prudent and professional record-keeping procedures and as required by applicable federal, state, or local laws, rules, or regulations and **Delegator** or Accreditation Organization standards.

2.6 That, in the event that **Delegator** is financially penalized or incurs any administrative fine or penalty imposed by any state or federal agency or Accreditation Organization as a direct result of **Delegate's** or any of its employees or Subcontractor's failure to adhere to the applicable state or federal laws or regulations, or the standards and procedures described herein, **Delegator** will forward to **Delegate** documentation of such financial penalty and/or sanction, and **Delegate** shall reimburse **Delegator** the full amount of such financial penalty imposed, including without limitation any attorneys' fees incurred as a result of such action and penalty by a state or federal agency within thirty (30) calendar days of receipt of the documentation.

2.7 That notwithstanding anything to the contrary herein, this Addendum may not be construed to limit in any way the authority or responsibility of **Delegator** to comply with all state and federal laws, rules and regulations, and Accreditation Organization requirements to which **Delegator** is subject.

2.8 To promptly notify **Delegator**, or its designee, in writing of any confirmed quality or risk issues of which **Delegate** may become aware of as it relates to the services delegated hereunder.

a. **Delegate** shall notify and provide documentation to **Delegator** within the next business day of any corrective action plan and/or sanctions, fines or other penalties imposed on or incurred by **Delegate**, or if applicable its Subcontractor, following any review by a regulatory agency or Accreditation Organization.

b. **Delegate** agrees any material change in **Delegate's** performance of delegated functions shall be submitted to **Delegator** for review and approval by **Delegator** prior to the effective date of the proposed changes.

2.9 That **Delegator** may request a change or revision to the **Delegate**'s programs and/or processes at any time as necessary to reflect changes in regulatory, **Delegator's** and/or Accreditation

Organization requirements. Required changes or revisions will be provided to **Delegate** in writing, to be effective within ninety (90) calendar days, or such lesser period of time as may be required by applicable regulatory and/or Accreditation Organization requirements to which **Delegator** is subject. **Delegate** shall provide evidence of implementation to **Delegator** as directed.

ARTICLE III
ACCESS, AUDIT AND OVERSIGHT

Delegate agrees that state, federal and Accreditation Organization regulations or standards require **Delegator** to maintain oversight of the delegated functions furnished by **Delegate**. Such oversight shall, at a minimum, include:

3.1 **Delegator's** or its designee's right to conduct on-site visits at least annually, or more frequently if deemed necessary by **Delegator**, upon not less than ten (10) business days prior notice, or such shorter notice as may be imposed on **Delegator** by a state or federal regulatory agency or Accreditation Organization.

3.2 **Delegator**, **Delegator's** designee, federal, state, and local governmental authorities having jurisdiction, and/or Accreditation Organization to audit any and all documents and materials including, but not limited to, books, contracts, computer and other electronic systems, related to services rendered under this Addendum. **Delegate** shall also permit review of **Delegate's** policies and procedures, programs, annual plans, annual evaluation of previous year's programs, reports, and meeting minutes that have been approved by the **Delegate's** administrative/quality committee, and **Delegate's** performance/compliance under each Attachment.

3.3 Permission for **Delegator**, **Delegator's** designee, federal, state and local governmental authorities having jurisdiction, and/or Accreditation Organization's right to conduct a site visit and/or audit at any site at any time where **Delegate** performs delegated functions under the terms of this Addendum. Any such audit shall be permitted during the term of this Addendum and for a period of ten (10) years thereafter (or any greater period required by applicable law). This section shall survive the termination of this Addendum, regardless of the cause of termination;

3.4 Submission to **Delegator** of periodic reports. These reports shall be provided in accordance with the applicable delegated function attachment and at such other times as **Delegator** shall request or as **Delegator** shall deem necessary or appropriate to ensure that **Delegator** is fully apprised of **Delegate's** activities;

3.5 That **Delegate** agrees to retain all data, information, records, and documentation related to its performance of each delegated function under this Addendum for the longer of ten (10) years following the date of service or the period required by applicable state law.

3.6 **Delegate's** obligation to cooperate and comply with any Corrective Action Plan (CAP) established by **Delegator** in the event there is any breach of this Addendum or non-compliance with state or federal law, Accreditation Organization requirements or **Delegator's** policies and procedures. Corrective action may include, without limitation, intensifying the frequency and number of audits, the temporary loss of delegated rights under this Addendum or the termination of this Addendum.

3.7 **Delegate's** agreement that notwithstanding anything to the contrary herein, **Delegator**, in its sole discretion, or any state or federal regulatory authority, retains the right to approve, modify, suspend or revoke at any time all, or any portion, of functions and/or activities delegated hereunder.

3.8 **Delegate's** acknowledgement and agreement that **Delegator** reserves the right to perform assessments to review the effectiveness of **Delegate's** ability to perform the assigned delegated

functions and compliance with established criteria. **Delegator** shall provide at least ten (10) business days prior written notice before conducting any onsite assessment.

3.9 That notwithstanding anything to the contrary herein, **Delegator**, in its sole discretion, or any state or federal regulatory authority, retains the right to approve, modify, suspend or revoke at any time all or any portion of functions and/or activities delegated hereunder.

ARTICLE IV
SUB-DELEGATION

4.1 If **Delegate** sub-delegates any portion of the delegated functions to a Subcontractor, **Delegate** will require by contract that those functions shall be pre-approved by **Delegator** and be subject to the terms of this Addendum and will be provided in accordance with **Delegator's** policies, procedures and program requirements and all state and federal regulatory and/or Accreditation Organization requirements applicable to **Delegator**.

4.2 Such sub-delegation shall not relieve **Delegate** of its obligations under this Addendum. **Delegate** acknowledges and agrees that all of its obligations under this Addendum shall apply equally to any Subcontractor that provides any services under this Addendum, and **Delegate** represents and warrants that **Delegate** shall take all steps necessary to cause such Subcontractor to comply with the terms of this Addendum.

4.3 If **Delegate** sub-delegates any portion of the delegated functions, then **Delegate** will provide to **Delegator** documentation, and demonstrate a plan for adequate oversight of, Subcontractor prior to any sub-delegation and annually thereafter, or will provide to **Delegator**, in writing **Delegate's** request and acknowledgement that **Delegator** will perform oversight of all sub-delegated functions.

4.4 **Delegate** agrees to require by contract that Subcontractor acknowledge and agree that **Delegator** retains the right to perform evaluation and oversight of the Subcontractor, and will review or audit as required by law or if deemed necessary by **Delegator.**

4.5 The **Delegate** will provide **Delegator** with documentation of a written sub-delegation agreement and Business Associate Agreement that:

a. Is mutually agreed upon;
b. Describes the responsibilities of the **Delegate** and Subcontractor;
c. Describes all sub-delegated activities;
d. Requires at least semi-annual reporting to the **Delegate**;
e. Describes the process by which the **Delegate** will regularly evaluate the Subcontractor's performance;
f. Describes the remedies, including revocation of the sub-delegation agreement, available to the **Delegate** if the Subcontractor does not fulfill its obligations.

4.6 If **Delegate** sub-delegates any portion of the delegated functions to a Subcontractor, then **Delegate** will require by contract that Subcontractor agrees to indemnify and hold **Delegator** and its affiliates and their respective agents, employees, and/or officers harmless from any and all claims, losses, liabilities, damages, injunctions, lawsuits, fines, penalties, demands and/or expenses of any kind or nature, including without limitation attorneys' fees, arising out of or in relation to Subcontractor's performance of the sub-delegated functions.

4.7 The **Delegate** agrees to monitor the Subcontractor for federal and state government programs exclusions on a monthly basis for Medicare/Medicaid providers and will maintain accurate records of such monitoring activity. Any provider, Subcontractor or employee found excluded from any exchange, Federal and/or state government program must be removed from providing direct or indirect services for Medicare/Medicaid or other governmental program Members immediately and shall be reported to the **Delegator**.

4.8 The **Delegate** agrees to monitor to ensure that the Subcontractor performs the federal and state government exclusion checks for their employees and contracted entities on a monthly basis and will

maintain accurate records of such monitoring activity. Any provider, Subcontractor or employee found excluded from any exchange, Federal and/or state government program must be removed from providing direct or indirect services for Medicare/Medicaid or other governmental program Members immediately and shall be reported to the **Delegate** who in turn shall report to the **Delegator**.

ARTICLE V
TERM AND TERMINATION

6.1 This Addendum shall commence at 12:01 AM on the Effective Date specified below and shall continue in full force and effect for an initial term of twelve (12) months. This Addendum shall continue in full force and effect for additional twelve (12) month periods unless terminated in accordance with the terms outlined in the Agreement or this Addendum.

6.2 Notwithstanding anything to the contrary in this Addendum, the Attachments, or the Agreement, performance under this Addendum may be terminated without cause by either party upon written notice provided to the other party no less than ninety (90) calendar days prior written notice or by mutual agreement.

6.3 Notwithstanding anything else in this Addendum, the Attachments, or the Agreement any breach related to Delegate's accreditation, licensure, and/or quality assurance issues shall be considered non-curable. Furthermore, a determination by Delegator that Delegate's continued performance of the delegated functions and/or activities under this Addendum may adversely affect the health, safety or welfare of any Member or bring Delegator or its provider networks in to disrepute, shall be considered non-curable.6.4 Notwithstanding any other provision in the Agreement, this Addendum or any Attachment, **Delegator** may terminate this Addendum, or any Attachment immediately and automatically without additional notice in the event **Delegator** determines that there has been any change or limitation that materially affects **Delegate's** ability to adequately deliver the services delegated hereunder, or for any of the reasons outlined in the Agreement. .

The Effective Date of this Addendum is: **<Insert Date>** .

Each party to this Addendum represents that it has full power and authority to enter into this Addendum and the person signing this Addendum on behalf of either party represents that he/she has been duly authorized to enter into this Addendum.

DELEGATION OF DISEASE MANAGEMENT ATTACHMENT

This **Delegation of Disease Management Attachment** ("DM Attachment") is hereby made part of and incorporated into the Agreement and the Delegation Services Addendum, entered into between **<Insert Name of the Delegator Humana entity>** (**Delegator**), and **<Insert Name>** (**Delegate**) on **<Date>.** This DM Attachment is intended to amend the terms and conditions of the Addendum and to the extent that this DM Attachment conflicts with the terms and conditions of the Agreement or the Addendum, including any prior agreements, addenda, exhibits, or attachments, this DM Attachment controls the relationship between the parties.

ARTICLE I
DELEGATE'S OBLIGATIONS

Delegate agrees that it shall:

1.1 Acknowledge and agree that **Delegate**'s policies and procedures are subject to **Delegator's** review and written approval prior to any delegation of Disease Management (DM) functions.

1.2 Accept the responsibility and the obligation for performing all DM delegated functions and activities specified in **TABLE 1**, which is attached hereto and incorporated by reference herein, as they relate to services rendered to Members assigned to physicians, employees, Subcontractors and independent contractors.

1.3 Acknowledge and agree that clinical assessments of Members are required to be performed by licensed registered nurses (RN) in accordance with nurse practice guidelines and licensure requirements.

1.4 Comply with **Delegator's** policies, procedures, and program requirements and all applicable state and federal laws, rules and regulations and Accreditation Organization requirements pertaining to DM and the delivery of medical and related health care services.

1.5 Demonstrate **Delegate's** DM program plan, previous plan evaluation, and subsequent revisions have been approved by **Delegate's** internal quality/utilization management (UM) committee.

1.6 Not provide incentives to deny, limit, or discontinue Medically Necessary services. Nothing contained in this DM Attachment or the Agreement is intended by **Delegator** to be a financial incentive or payment, which directly or indirectly acts as an inducement for the **Delegate** to limit Medically Necessary services.

1.7 Retain all Member-related information and records created for a period of not less than ten (10) years.

1.8 Acknowledge that **Delegator** retains all other DM functions not specified as the **Delegate's** responsibility in this DM Attachment.

ARTICLE II
ACCESS, AUDIT, AND OVERSIGHT

Delegate agrees that it shall:

2.1 At least annually, or more frequently if deemed necessary by **Delegator**, and then upon not less than ten (10) business days prior notice, or such shorter notice as may be imposed on **Delegator** by a federal or state regulatory agency or Accreditation Organization, allow **Delegator**, its designee, and any state or federal entity or Accreditation Organization to access all DM documentation, processes, policies, systems, and files in order to perform an audit review of the **Delegate's** policies and procedures, program plan, QI/UM Committee meeting minutes that have been approved by the **Delegate's** QI/UM Committee, and **Delegate's** performance/compliance under this DM Attachment. In-person or telephonic/virtual meetings with participation of both **Delegator** and the **Delegate** will be held to discuss results of audits or reports on an as needed basis.

2.2 Submit to **Delegator**, with respect to delegated functions, all required reports and analyses, as indicated in **TABLE 2**, which is attached and hereby incorporated by reference, along with identified problems, corrective actions initiated, and outcomes.

a. All reports and subsections of reports must be specific to line of business and offering **Delegator**'s affiliate, and all reporting formats must be pre-approved by **Delegator**.

b. The analysis of data must address identified opportunities for improvement with dates that documented interventions were implemented. The next scheduled report must address follow up activities, outcomes and/or status.

c. **Delegate** agrees to provide any and all reports requested by **Delegator** within timeframes identified by **Delegator** to ensure **Delegator** meets all new and revised **Delegator,** CMS, Federal, State and Accreditation Organization reporting requirements.

2.3 Acknowledge and agree that **Delegator** maintains the ultimate responsibility for the sufficiency and appropriateness of the DM programs and retains the right to implement a Corrective Action Plan (CAP), suspend or terminate any of this DM Attachment at any time **Delegate** fails to meet or comply with **Delegator**'s policies, procedures, and program requirements and all applicable state and federal laws, rules and regulations and Accreditation Organization requirements.

2.4 Should the **Delegate** be placed on a CAP, the **Delegate** will have fourteen (14) calendar days to provide a written response describing how they will meet the requirements found to be noncompliant including prospective date of compliance.

2.5 **Delegate** will be subject to a capitation payment penalty as indicated in the table below for any outstanding issues noted on a CAP:

Outstanding Corrective Action Plan	**0 to 3 months**	**4-6 months**	**7-9 months**	**10-12 months or greater**
Payment Penalty	**0%**	**1% per month until CAP resolved**	**2% per month until CAP resolved**	**3% per month until CAP resolved**

ARTICLE III
MEMBER APPEALS AND GRIEVANCES/COMPLAINTS

3.1 **Delegator's** Member expedited and standard complaints/appeals/grievances are not delegated. **Delegator** maintains all Member rights and responsibility functions. **Delegator** will handle all Member appeals/ grievances/complaints for denied services including expedited and standard complaints/appeals/grievances made by a physician/practitioner on behalf of the Member.

3.2 **Delegate** will redirect any complaint/grievance and appeal received verbally or in writing to the **Delegator** within one (1) Business Day.

3.3 **Delegate** will fax all expedited appeals/grievances/complaints to **Delegator** immediately upon notification/receipt.

For Expedited and Standard Member Appeals and Grievances/Complaints:

Medicare:
Telephone- 1-800-867-6601 Fax- 1-800-949-2961
Medicaid:
Telephone- 1-800-764-7591 Fax- 1-855-336-6220

Commercial and Exchange:

Telephone- 1-888-259-6767 Fax- 1-920-339-2112

FL Medicaid only:
Telephone- 1-800-477-6931 Fax- 1-800-949-2961

ARTICLE IV
TERMINATION

4.1 Notwithstanding anything to the contrary in this DM Attachment, the Addendum, or the Agreement, performance under this DM Attachment may be terminated without cause by either party upon written notice provided to the other party no less than ninety (90) calendar days preceding the termination date or by mutual agreement.

4.2 Notwithstanding anything else in this DM Attachment, any breach related to **Delegate's** accreditation and/or licensure, quality assurance issues or alleged breach regarding termination by **Delegator** in the event **Delegator** determines that **Delegate's** continued performance of the delegated functions and/or activities under this DM Attachment may affect adversely the health, safety or welfare of any Member or bring **Delegator** or its provider networks in to disrepute, shall be considered non-curable.

The **Effective Date** of this Disease Management DM Attachment is: **<Insert Date>** .

TABLE 1
DISEASE MANAGEMENT FUNCTIONS

DELEGATED DISEASE MANAGEMENT ACTIVITIES	DETAIL FUNCTION FOR DELEGATOR	DETAIL FUNCTION FOR DELEGATE
Delegate's Disease Management Programs List the DM Programs: Congestive Heart Failure (CHF) Chronic Obstructive Pulmonary Disease (COPD) Coronary Artery Disease (CAD) Diabetes End-Stage Renal Disease (ESRD)		Disease Management Programs will be based on adopted Clinical Practice Guidelines.
DM Program		**Delegate's** DM Program/s will be based on nationally recognized clinical practice guidelines and describe the chronic illness/es of those Members served by the program, the types of services offered including the scope of services, (interventions, communications, self-care training) and a description of the types of measures that are used to assess program performance, including significant outcomes (clinical, satisfaction and costs).
DM Program Participation Criteria		**Delegate** establishes criteria for participation, describes how it monitors the progress of its DM participants, how frequently this occurs.
Identification of Members who qualify for DM programs	**Delegator** will assist **Delegate** in providing reporting data as requested by **Delegate**	The **Delegate** systematically identifies Members who qualify for each of its DM programs at least monthly using multiple referral and data sources including but not limited to claims, encounters, pharmacy, laboratory results, health appraisals, utilization management, case or care management, health management such as wellness or health coaching programs, electronic health records, physician referrals and Member self-referrals.
Program content requirements		Each DM program must address the following: 1. condition monitoring to include: a. self-monitoring; b. medical testing; c. regular clinical and laboratory assessment; d. surveillance of pharmacological management; e. lifestyle management; and f. assessing whether a Member understands a condition. 2. adherence to treatment plans and prescribed medication; 3. medical and behavioral comorbidities and other health conditions such as cognitive deficits and physical limitations; 4. health behaviors; 5. psychosocial issues; 6. depression screening 7. providing information about the Member's condition to caregivers who have the Member's consent including: a. the condition and treatment plan; b. self-management tools; c. DM program and staff resources; and d. community resources; 8. encouraging patients to communicate with their practitioners about their health conditions and treatment; and

DELEGATED DISEASE MANAGEMENT ACTIVITIES	DETAIL FUNCTION FOR DELEGATOR	DETAIL FUNCTION FOR DELEGATE
		9. additional resources external to the **Delegate.**
Member communications		The **Delegate** will provide the eligible Members the following written information about the program: 1. how to use the services; 2. how Members become eligible to participate; and 3. how to opt in or opt out.
Member interventions		**Delegate** will document evidence Member interventions have been performed based on disease stratification and assessment.
Practitioner communications		The **Delegate** will provide practitioner with the following information about the DM program: 1. instructions on how to use DM services; and 2. how the **Delegate** works with practitioner's patients in the program.
Member continuity of care (COC)		The **Delegate** will integrate information from various systems to facilitate access to Member health information for COC: A health information line; a DM program; a case management program; a UM program; and a wellness program.
Appropriate policies and procedures		**Delegate** must have documented policies and procedures that meet National Committee for Quality Assurance (NCQA) and Centers for Medicare and Medicaid Services (CMS) requirements, as applicable.
Member experience with disease management	Approve Member satisfaction survey prior to **Delegate** use	The **Delegate** annually evaluates the satisfaction with its disease management services by: 1. Obtaining and analyzing Member feedback: a. the overall program; b. helpfulness of the program staff; c. usefulness of the information disseminated; and d. Member's experience in adhering to treatment plans 2. Analyzing Member feedback and inquiries by conducting a quantitative analysis of data to identify patterns in Member feedback, and conducts a causal analysis if stated goals were not met.
Measure effectiveness of DM Program		The **Delegate** must track a minimum of one performance measure for each DM program. Each measure: 1. addresses a relevant process or outcome; 2. produces a quantitative result; 3. is population based; 4. uses data and methodology that are valid for the process or outcome being measured; and 5. has been analyzed in comparison with a benchmark or goal. The **Delegate** monitors clinical outcomes and measures and tracks performance measures against goals. Results are analyzed; improvement plans are initiated, if warranted. Outcomes in health status for Members are documented.

TABLE 3
DOCUMENTATION REQUIREMENTS

Documentation Required	DM File	DM Log
Type of DM Program		X
Line of business	X	X
Member Identification number	X	X
Member name	X	X
Primary Care Physician name	X	
Names of all involved healthcare professionals including contact information	X	
Date enrolled in DM program	X	X
Member diagnoses	X	X
Clinical history including medications	X	
Disease stratification level and assessment	X	X (stratification level only)
Development of care plan with ongoing documentation	X	
Interventions	X	
Identification of barriers to meeting goals and complying with the plans	X	
Development of schedules for follow-up and communication with Members	X	
Development and communication of member self-management plans	X	
Assessment of progress against disease management plans and goals, and modification as needed	X	
Date DM program terminated	X	X

TABLE 2
REQUIRED DISEASE MANAGEMENT REPORTS

All reports are to be sent using the secured email procedure and sent to your assigned delegation compliance consultant.

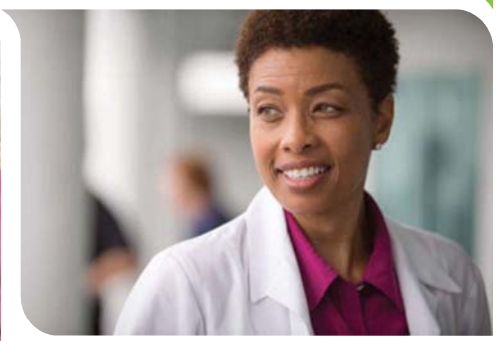
MANDATORY REPORTS	FREQUENCY	DETAIL
DM Annual Programs	Annually	
Previous year DM Programs effectiveness evaluations	Annually	
Member DM Program Satisfaction Survey	Annually	
Aggregated numbers of all quarterly report data	Annually	
Reporting for each delegated DM program of opt-in and opt-out active Member participation rates.	Quarterly Annually	Report opt-in participation rates: Total eligible population and by condition Number of Members referred to the program and opted in % Members enrolled and actively managed Report opt-out participation rates: Total eligible population and by condition Active participation number % Members opt-out active participation rate
Reporting of enrolled Members into **Delegate's** DM programs. See **Table 3** for log requirements.	Quarterly Annually	At a minimum, the annual report is to be submitted to the **Delegator**
Hospital admissions/readmissions for enrolled DM Members • Admissions per each DM program/each total DM program membership • Readmissions per each DM program/each total DM program membership • ER visits per each DM program/each DM program membership	Quarterly	
Member DM Program Satisfaction Survey	Annually	Determine performance goals for the Member satisfactory survey and conduct a causal analysis if stated goals were not met.

Note: Reporting requirements may change based upon revised or new state and federal legislation, **Delegator** and NCQA standards requirements during the term of this Attachment.

All reports and subsections of reports must be LOB and **Delegator** market specific.
The analysis of data and identified opportunities for improvement must include documentation of interventions implemented. Outcomes and/or status should be documented in the next scheduled report. **Reporting formats must be pre-approved by Delegator.**
Monthly – 30 days following the end of the month
Quarterly – 60 days following the end of the quarter
Annually – March 15

Compliance Policy

for Contracted Health Care Providers and Business Partners



It is important that I read this and, if I'm an administrator, provide this information or a materially similar document to all employees and business partners who support Humana's Medicare and/or Medicaid products as a part of our relationship.

Overview

Humana has compliance program requirements for those supporting its business: your organization, its employees and downstream entities. These requirements include, but are not limited to, the core elements of Humana's Compliance Program outlined in the Table of Contents on the next page. Your organization may be required to provide assurance that it understands and incorporates these components into its own compliance program or that it has a materially similar program.

Introduction

Purpose

One of Humana's objectives is "to help people achieve lifelong well-being." In pursuit of this ideal, Humana is committed to maintaining high ethical standards in the conduct of its business. The key to upholding these standards is through the daily decisions and actions of every Humana associate. We also require highly ethical conduct from our business relationships. Your strong commitment to compliance is the foundation of our business relationship.

The purpose of this policy is to aid our health care providers and business partners in fully understanding Humana's strong organizational commitment to conducting business ethically, with integrity, and in compliance with applicable laws, regulations and requirements. Humana requires of its health care providers and business partners a similar commitment to ethical conduct and assurance that they, and their employees and downstream entities supporting Humana business, comply with the guiding principles outlined within this policy.

Organization

This policy relays Humana's compliance requirements and expectations of its health care providers and business partners and addresses the requirements of the Centers for Medicare & Medicaid Services (CMS) pertaining to an effective compliance program and fraud, waste and abuse prevention, detection and correction. In addition, this policy references state- and product-specific requirements. The seven core elements of an effective compliance program are categorized into the following sections within this document: Framework, Communication, Oversight and Investigation. Under each of these sections is a description of Humana's elements-related requirements and processes, along with an outline of Humana's expectations of health care providers and partners in a "Health Care Provider and Business Partner Impact" segment.

Responsibility

Humana maintains ultimate responsibility for the effectiveness of its compliance program. As part of this responsibility, Humana requires all health care providers and business partners to adhere to and maintain policies to address the principles outlined in this document.

This can be achieved by your organization in any of the following ways:

a) Adopting all of the following: this Policy, Humana's Ethics Every Day for Contracted Health Care Providers and Business Partners (standard of conduct), and CMS' fraud, waste and abuse (FWA) training and general compliance training; OR

b) Adopting the CMS FWA training and general compliance training document and maintaining internal policies that:

   i. Are materially similar to this Policy and Ethics Every Day for Contracted Health Care Providers and Business Partners; and

   ii. Align with the guiding principles and requirements of these documents listed above; OR

c) Completing the exception process if the requirement is not applicable

   » Exception requests must be made in writing to and receive approval from Humana's Enterprise Compliance Department.

In addition, Humana has ongoing monitoring, auditing and reporting processes to assess health care provider and business partner compliance. Humana updates this policy when there are material regulation, policy or guidance changes, and at least annually.

Notable changes (with page number)

This overview has been provided to list the key points of notable changes and the sections in which they are detailed.

(Cover)

It now clarifies the required audience for this document.

Definitions (2)

Clarified that examples of Health Care Providers and Business Partners also include delegated and non-delegated health care providers, as well as delegated entities. These are in addition to other examples previously and currently listed.

Materials Distributed to Contracted Health Care Providers and Business Partners (3)
Effective Training and Education (5)

Both sections now clarify that key compliance program materials and training documents:
- must be provided to employees and subcontractors performing administrative functions and/or providing health care services in support of Humana's Medicare and/or Medicaid products; and
- are publicly acessible on Humana's Website.

Methods for Reporting Suspected or Detected Noncompliance to Humana Humana (6)

This section now includes a fax number in addition to other listed methods.

Oversight (7)
Investigation, Discipline and Correction (8)

Both of these sections now clarify that, when applicable, organizations supporting Humana must issue corrective actions and track them to closure.

Conflict of Interest (7)

This section now clarifies that a conflict of interest internal disclosure policy must be in place.

Appendix A: Resources (8)

This section now clarifies that the CMS Compliance Program Policy and Guidance link includes regulations and select CMS memoranda serving as the basis for requirements; and provides materials and a CMS contact email address to leverage for training and support.

Added information about Humana having an electronic Compliance Toolkit containing supplemental materials to support organizations' compliance program enhancement and maturity. A contact has been provided for emailing related inquiries.

Appendix B: Summary of Applicable Laws and Regulations (9)

Added CMS link and information about marketing guidelines related to Medicare products.

Appendix B: Summary of Applicable Laws and Regulations (10)

This section now has an overview of the Foreign Corrupt Practices Act (FCPA) and a link to the applicable government site with additional information.

Definitions

Associate – Refers to a Humana employee.

Audit – Refers to a formal review of compliance with a particular set of internal (e.g., policies and procedures) and/or external (e.g., laws and regulations) standards used as base measures.

Centers for Medicare & Medicaid Services (CMS) – An agency within the U.S. Department of Health and Human Services that is responsible for the administration of the federal Medicare and Medicaid programs and the federally-facilitated marketplace for the exchange product (FFM).

Conflicts of Interest – Personal, familial or business relationships that could amount to, but are not limited to:

- Competing with any of Humana's product offerings
- Providing services to a competitor of Humana
- Interfering with the performance of work duties

Please refer to Humana's Ethics Every Day for Contracted Health Care Providers and Business Partners for examples.

Downstream Entity – An organization or individual that enters into an acceptable written arrangement below the level of the arrangement between Humana and a First Tier Entity. This continues down to the level of the ultimate provider of a service or product. Example: A management services organization contracted directly with Humana is a First Tier Entity. The hospitals and health care providers contracted with the management services organization as part of its network are downstream entities.

FDR - A first tier, downstream or related entity of Humana. This is a contracted entity that supports Humana business. Please refer to the separate definitions of First Tier, Downstream and Related Entity, as well as Health Care Providers and Business Partners, for clarifications.

FDR Employees and Downstream Entities – Individuals employed by, contracted with, or otherwise supporting an FDR, who are acting on behalf of Humana, either directly or indirectly. These include, but are not limited to, FDR employees, employed and contracted health care providers and pharmacists, board members, pharmacy and therapeutic committee members, volunteers, consultants and any contracted individuals.

First Tier Entity – An organization or individual that enters into an acceptable written arrangement with Humana to provide administrative or health care services. This includes any person or entity that is contracted by Humana to perform work in support of administration or delivery of Humana products and/or services. Additionally, when Medicare or Medicaid is involved and Humana is the Sponsor, the agreement must be acceptable to CMS. Example: A call center contracted directly with Humana is a first tier entity.

Health Care Providers and Business Partners – Any non-associate contracted, directly or indirectly, to perform a business function or provide goods or a service for or on Humana's behalf. These may also be referred to as first tier, downstream and related entities (FDRs). Some examples of business partners are health care providers, pharmacies, sales agents, sales agencies, vendors, suppliers, contractors and delegates.

Some examples of business partners are delegated and non-delegated health care providers, delegated entities, pharmacies, sales agents, sales agencies, vendors, suppliers, contractors and delegates.

Vendors and suppliers of administrative goods and services are considered Business Partners.

Humana – Refers to Humana Inc. and its wholly owned subsidiaries.

Monitoring – Reviews that are repeated regularly during the normal course of operations. These activities may occur to confirm:

- Ongoing compliance even in the absence of identified problems; or
- Corrective actions are undertaken and effective

Related Entity – Any entity that is related to Humana by common ownership or control and meets one of the following criteria:

- Performs some of Humana's management functions under contract or delegation; or
- Furnishes services to enrollees under an oral or written agreement; or
- Leases real property or sells materials to Humana at a cost of more than $2,500 during a contract period

Volunteer – Any individual who performs work for Humana related to the Medicare or Medicaid program, but is not employed by or contracted with Humana in any fashion, and not otherwise compensated for their work. An example is an unpaid student intern.

Key takeaways from this policy

Humana is committed to ethically conducting business and complying with this Policy and all laws, rules and regulations referenced in the appendices. This policy is aligned with the seven elements of an effective compliance program outlined by CMS:

Section I – Framework

Element I: Written Policies, Procedures and Standards of Conduct

- **Materials Distributed to Contracted Health Care Providers and Business Partners:** This Policy, a standards of conduct document (Ethics Every Day for Contracted Health Care Providers and Business Partners), and CMS' fraud, waste and abuse (FWA) training and general compliance training. Compliance with all the above documents is required and corresponding training on their subject matter must be provided to employees and subcontractors performing administrative functions and/or providing health care services in support of Humana's Medicare and/or Medicaid products. These documents are accessible from a public page on Humana's website: http://www.Humana.com/fraud
  - » Organizations performing any function for Humana may meet the distribution requirements for the two Humana policies by using materially similar policies. However, only the CMS training material on FWA and general compliance may be used to meet the training requirements for those two topics.
- **Record Retention:** Documentation and records integral to meeting Policy requirements and activities must be maintained for a minimum of 10 years.
- **Requirements of Contracted Health Care Provider and Business Partners Subcontracting any of their Contractual Obligations:**
  - » Notify Humana when it seeks to subcontract any work in support of Humana so that Humana can issue its approval or rejection of the proposed relationship.
  - » Maintain written agreements with any subcontractors supporting functions the contracted health care provider or business partner is contracted to perform for Humana.
  - » Provide performance and compliance oversight of their subcontractors to assure they are meeting related requirements outlined in any contracts related to Humana as well as the Policy.

Element II: Compliance Officer, Compliance Committee and High Level Oversight

- Humana has designated personnel accountable for overseeing compliance responsibilities.
  - » Contracted health care providers and business partners must also have designated resources to fulfill compliance obligations.

Section II – Communication

Element III: Effective Training and Education

- This must be in place for Humana and its contracted health care providers and business partners on compliance, addressing fraud, waste and abuse, and, where applicable, Medicaid-related subject matter. The education must be formally tracked and conducted by contracted health care providers and business partners within 90 days of initial contract/employment and annually thereafter.

Element IV: Effective Lines of Communication

- Humana employees and its contracted health care providers and business partners are given access to its compliance officer for feedback and multiple methods for reporting suspected or detected noncompliance. Such reporting is required of all who support Humana's business. More than one available method offers anytime access, while all are confidential and allow for follow-up.
- Humana prohibits intimidation or retaliation against anyone making a good faith report of suspected violations of the Policy. Contracted health care providers and business partners are required to have and publicize one or more reporting options with these features and/or publicize Humana's reporting options, as well as comply with the prohibition on intimidation and retaliation.

Element V: Well-Publicized Disciplinary Standards

Humana and its contracted health care providers and business partners are required to widely publicize disciplinary standards and the requirement to report suspected violations.

Section III – Oversight

Element VI: Effective System for Routine Monitoring, Auditing and Identification of Compliance Risks

- **Monitoring and Auditing Work Plans:** Humana has these in place to assess compliance with this Policy and related requirements. Contracted health care providers and business partners are also required to have these plans and conduct corresponding oversight.
- **Exclusion Lists:** Screening employees and subcontractors against the Office of Inspector General (OIG) and Genersal Service Adminsitration (GSA) exclusion lists must be conducted by Humana and contracted health care providers and business partners prior to hire/contract and at least monthly thereafter and, and records of screening activities must be retained for 10 years. An individual or entity appearing on either list must be promptly removed from supporting Humana business.
- **Conflicts of Interest:** Statements of Humana associates' suspected conflicts are obtained by Humana within 90 days of hire, upon any related change or addition, and annually thereafter. Contracted health care providers and business partners must obtain these statements annually, and when there is a related change or addition, from those performing functions for them. Identified conflicts must be removed or approval to allow them must be granted. Humana reserves the right to request and review this information, as well as require a conflict to be removed, up to the person or entity supporting Humana ceasing to perform functions to meet contractual obligations to Humana.

Section IV – Investigation, Discipline and Correction

Element VII: Procedures and System for Prompt Response to Compliance Issues

Humana investigates suspected violations, takes applicable disciplinary action and implements any necessary, subsequent corrections to prevent future violations. Associates, as well as contracted health care providers and business partners, must also cooperate with any investigation and initiate disciplinary actions when applicable.

I. Framework

Written Policies, Procedures and Standards of Conduct

Humana has two principle documents at the core of its compliance program:

- Humana's standards of conduct, which outlines ethical expectations and can be accessed online from the Corporate Governance section of the Investor Relations page on **Humana.com**. There is also a closely-aligned document titled Ethics Every Day for Contracted Health Care Providers and Business Partners. It can be accessed on www.Humana.com/fraud.
- The Enterprise Compliance Plan outlines the fundamental elements of Humana's compliance program, including
  - » Required policies;
  - » Compliance officer and Compliance Committee requirements;
  - » Compliance and fraud, waste and abuse (FWA) training content and requirements;
  - » Communication and compliance officer access requirements;
  - » Behavior monitoring and disciplinary standard expectations;
  - » Requirements for monitoring and assessment of compliance with state and federal requirements and identification of compliance risks; and
  - » Requirements for identifying, responding to and correcting compliance issues.

Numerous policies, standards and procedures exist to support the Enterprise Compliance Plan. The core policies that apply to relationships with health care providers and business partners as they relate to compliance are outlined in this document.

Health Care Provider and Business Partner Impact

Health care providers and business partners are expected either to adopt the following for their employees and downstream entities:

a) Humana's Ethics Every Day for Contracted Health Care Providers and Business Partners (standards of conduct)
b) This compliance policy
c) CMS' FWA training and general compliance training

Or to adopt the CMS FWA training and general compliance training and maintain their own, materially similar:

a) Version of Humana's standards of conduct for contracted health care providers and business partners
b) Policies that support the requirements and activities in this document

Supporting procedures may be developed and maintained for certain required activities. All health care providers and business partners are required to have appropriate policies and procedures in place to address FWA.

Record Retention

Health care providers and business partners must maintain documentation and records for requirements and activities outlined in this policy for a minimum of 10 years.

Your Relationships With Downstream Entities

Though Humana is ultimately responsible for any functions performed to support its business, there are also certain requirements that health care providers and business partners must adhere to when entering into a relationship with a downstream entity. The health care provider or business partner must:

- Notify Humana for approval to subcontract any services inside or outside of the United States
- Maintain compliant written agreements with downstream entities
- Maintain adequate oversight of the functions performed downstream
- Confirm that downstream entities adhere to core compliance requirements, including all requirements outlined in this document (such as providing compliance and FWA training to, and conducting exclusion screening of, their employees and those supporting the downstream entities, and monitoring and auditing of any further downstream entities)

Compliance Officer and Compliance Committee, and High Level Oversight

Humana has a chief compliance officer (CCO) who is a full-time Humana associate. The CCO:

- chairs the Enterprise Compliance Committee;
- on behalf of the Enterprise Compliance Committee, reports directly to the Audit Committee of the Board of Directors; and
- reports indirectly to the chief executive officer (CEO), and reports administratively to the senior vice president and general counsel.

Humana has a separate compliance officer for Medicare and Medicaid who is also a full-time Humana associate and reports directly to Humana's chief compliance officer, has direct access to report any compliance matters to the Audit Committee of the Board of Directors or chief executive officer, and provides quarterly updates to the chief compliance officer on the Company's Fraud, Waste, and Abuse Program. The Medicare and Medicaid compliance officer chairs the Medicare and Medicaid Compliance Committee.

The CCO, chairman of the board and CEO, and the board of directors provide overall leadership and governance for the Enterprise Compliance Plan.

Health Care Provider and Business Partner Impact

Health care providers and business partners are expected to have a designated compliance resource accountable for overseeing the organization's compliance responsibilities, including those outlined in this document. The personnel assigned must be adequately educated, trained, and qualified to perform compliance functions. Humana is not prescriptive regarding specific qualifications; however, organizations may choose to consider qualifications such as formal education, on the job training, industry experience, compliance experience, continuing education, conferences and seminars in determining adequacy.

II. Communication

Effective Training and Education

Humana requires its associates to annually review its standards of conduct. In addition, associates and members of the board of directors receive compliance and FWA training within 30 days of hire or election and annually thereafter. Associates working in areas of identified substantial risk receive specialized and focused training. These areas include, but are not limited to the following: Claims, Correspondence, Customer Service, Critical Inquiry, Billing and Enrollment, Sales, Underwriting, Grievance and Appeals and Pharmacy.

Health care providers and business partners are required to review Ethics Every Day for Contracted Health Care Providers and Business Partners and to complete the CMS general compliance and FWA training within 90 days of contract and annually thereafter. They are also required to provide standards of conduct and the CMS general compliance and FWA training to employees and any downstream entities performing administrative functions and/or providing health care services in support of Humana's Medicare and/or Medicaid products. Health care providers and business partners may use their discretion in how training is administered; examples include classroom training, online training modules, or attestations that these audiences have read and received standards of conduct and/or compliance policies and procedures. Instructions for accessing the CMS general compliance and FWA training document are available in Appendix A. Regardless of the method used for training, health care providers and business partners are required to provide proof to Humana that the requirement has been met through completion of an acceptance statement and maintenance of documentation of the time, attendance topic, certifications of completion and test scores of any tests administered (if applicable).

Required Training and Education

All employees and downstream entities of health care providers and business partners are required to receive:

- CMS general compliance training (including Medicare compliance training, if applicable)
- CMS FWA detection, correction and prevention training

(Individuals with Humana system access are required to complete Humana's training(s) for FWA and general compliance and are not required to receive additional or separate training from your organization for that content.)

- Applicable, job-specific compliance training
- Training required in a particular state or by a Humana Medicaid and/or government contract may include, but is not limited to:
  - » Cultural competency training
  - » Health, safety and welfare education training
  - » Medicaid training
  - » Humana orientation training

Sufficient understanding of training received must be demonstrated to the health care provider or business partner prior to performing any functions included under a Humana contract, which may be accomplished through knowledge checks or other means. Humana will provide training content support and monitor completion of required training to those who have Humana system access.

Required Training Timelines

All health care providers and business partners without Humana system access must train on compliance and FWA within 90 days of hiring an employee or contracting with a representative, or downstream entity and annually thereafter. Those employees or downstream entities who receive Humana system security access are required to take Humana's training on ethics and compliance, including FWA, within 30 days of receiving such access and annually thereafter. Additionally, job-specific training must be provided by health care providers and business partners and completed within 30 days of hire or contract to properly perform the functions required.

Deemed Status

Humana recognizes that certain health care providers are deemed to have met FWA education and training requirements through:

- Enrollment into the Medicare program; or
- Accreditation as a supplier of durable medical equipment, prosthetics, orthotics and supplies (DMEPOS)

In the case of organizations with multiple locations, such as chain pharmacies, each individual location must be enrolled in Medicare Part A or B to be deemed.

Entities and individuals with deemed status for FWA training are still required to complete the CMS general compliance training.

Noncompliance With Humana's Training Requirements

The following will occur in the event that any employee or downstream entity of a health care provider or business partner is found to be noncompliant with respect to Humana's training requirements or an individual's singular actions demonstrate noncompliance with Humana's compliance expectations:

- Humana will give the organization written notice
- The health care provider or business partner must immediately remove and replace, at its own expense, such employee or downstream entity from supporting Humana-contracted work

If the health care provider or business partner discovers the noncompliance with training requirements, then the health care provider or business partner must remove and replace the employee or downstream entity and notify Humana. In the event that the health care provider or business partner fails to immediately remove and replace the noncompliant employee or downstream entity, as requested by Humana, then Humana may take disciplinary action. This can include a formal corrective action plan, up to termination of the contracted work upon written notice.

Changes Impacting Training

Humana will notify health care providers and business partners when there are changes to a process in a specific contract that require immediate, job-specific training and require the health care provider or business partner to act immediately to provide such training to its employees and any downstream entities.

Health Care Provider and Business Partner Impact

Health care providers and business partners are expected to:

- Complete CMS's general compliance and FWA training within 90 days of contract and annually thereafter.
- Provide compliance policies and standards of conduct to employees and any downstream entities within 90 days of hire or contract and annually thereafter.
- Provide CMS's general compliance and FWA training to employees and any downstream entities within 90 days of hire or contract and annually thereafter. Training documentation should include the time, attendance, topic, certificates of completion (if applicable) and test scores of any tests administered.
- Verify as deemed via a contract between the health care provider and CMS, or a business partner and CMS, which, among other things, affirms the FWA training requirement has been met. Otherwise, remove and replace any employees and any downstream entities who do not receive FWA training within 90 days of hire or contract.
- Provide specialized compliance training on issues posing FWA risks based on an individual's job function when appropriate.

Effective Lines of Communication

Humana communicates with its associates through the company intranet to provide continual awareness of the importance of compliance. Humana also communicates regularly with its health care providers and business partners through a variety of methods, including contracts, administration manuals, newsletters, the Partner Compliance Portal, **Humana.com**, policy communication and annual compliance and FWA training.

Access and Availability of Compliance Officer

The Chief Compliance Officer, J. Gregory Catron, is available to address any suggestions or comments on maintaining ethical behavior, or identifying and preventing fraudulent or criminal misconduct. Associates, health care providers or business partners may contact Mr. Catron through the Ethics Office or call the Help Line at **1-877-5-THE-KEY (1-877-584-3539)**.

Mr. Catron is based in Humana's corporate headquarters: 500 West Main St., Louisville, KY 40202.

Requirement to Report

All Humana associates, members of the governing body, health care providers, and business partners are required to report compliance concerns and suspected or actual compliance and FWA violations to Humana.

Methods for Reporting Suspected or Detected Noncompliance to Humana

Suspected or detected violations of Humana's Ethics Every Day for Contracted Health Care Providers and Business Partners or any related law or policy must be immediately reported by health care providers, business partners, or their employees or downstream entities to Humana through one of these methods:

- Telephonic: Ethics Help Line, **1-877-5-THE-KEY (1-877-584-3539)**
- Online: Ethics Help Line Web reporting site **www.ethicshelpline.com**
- Email: **ethics@Humana.com** (Ethics Office)

Suspected or detected FWA violations may also be reported directly to Humana's Special Investigations Referral department by calling **1-800-614-4126**, emailing **siureferrals@Humana.com**, or faxing **1-920-339-3613**.

Key Features of These Communication Options

- Intake Neutrality: Non-Humana personnel (employed by a separate and independent company) staff the Ethics Help Line.
- Anonymous Reporting: Communication to the Ethics Help Line or Ethics Help Line Web reporting site can be made anonymously. Humana requests that if a reporter desires to remain anonymous, he/she provide enough information to allow Humana to investigate the issue.
- Prohibition Against Intimidation and/or Retaliation: Humana strictly prohibits intimidation and/or retaliation against any health care provider or business partner, or their employees or downstream entities, who, in good faith, reports a detected or suspected violation of ethical standards or FWA.
- Status Update: Regardless of the reporting method used, the individual reporting a suspected or detected violation will receive a confidential identification number that will allow for follow-up on the status of the issue reported, along with a recommended follow-up date.

Health Care Provider and Business Partner Impact

Health care providers and business partners may train their employees and downstream entities on their own ethics and compliance reporting processes; however, the reporting system must meet the following requirements:

- Maintain confidentiality (to the greatest extent possible)
- Allow for anonymity if desired
- Be available 24 hours a day
- Emphasize the policy of non-intimidation and non-retaliation for good faith reporting of compliance concerns, FWA and participation in the compliance program
- Emphasize that reports must be made to Humana

In addition, health care providers and business partners are expected to:

- Widely publicize the methods for reporting compliance and FWA concerns and the non-retaliation policy throughout facilities (examples include: posters, table tents, mouse pads, key cards and other prominent displays)
- Reinforce Humana's policy of non-intimidation and non-retaliation
- Report compliance concerns and suspected or actual compliance and FWA violations to Humana

III. Oversight

Monitoring and Auditing Work Plan

Humana maintains an Anti-Fraud Plan for continuous monitoring of potential fraud, waste, and abuse activity. Humana monitors and audits the activities of associates, members of its health plans and insurance policies, health care providers and business partners. In addition, health care providers and business partners are responsible for maintaining their own comprehensive plan for detecting, correcting, and preventing fraud, waste, and abuse.

Humana also conducts monitoring and auditing activities for its relationships with health care providers and business partners. The activities monitored and audited may include, but are not limited to, both operational performance and compliance requirements applicable to the functions performed and as described throughout this document.

Humana has developed separate monitoring and auditing work plans to address the risks associated with the health care provider and business partner relationships. The implemented work plans enable Humana to determine the nature, timing and extent of the monitoring and auditing process to be performed by Humana.

In order to monitor a health care provider or business partner's compliance obligations, Humana may periodically request the health care provider or business partner to complete a self-assessment, questionnaire or survey, submit documentation, and/or attest to applicable policy, procedure and compliance requirements. Humana may also perform an on-site or desktop audit, which may include inspection of the facilities, systems, books, procedures, audit work plans and results and records that relate to the services provided under the contractual agreement. Health care providers and business partners shall provide timely turnaround of these requests in accordance with the time period specified by Humana.

Disciplinary actions could result from Humana's conducted monitoring and auditing initiatives. These could include, but are not limited to: mandatory (re)training, corrective action plans tracked to closure or contract termination.

Health Care Provider and Business Partner Impact

Health care providers and business partners are expected to:

- Monitor for fraud, waste, and abuse within their organizations and downstream entities
- Comply with any monitoring or auditing requests from Humana
- Develop and implement monitoring and auditing work plans for any functions supporting Humana business that the health care provider or business partner has further contracted to downstream entities

Exclusion Lists

Individuals and entities acting on behalf of Humana, either directly or indirectly, that appear on either the Department of Health and Human Services Office of Inspector General List of Excluded Individuals and Entities (OIG) or the General Services Administration list of excluded parties contained within the System for Award

Management (GSA) may not support any Humana business function. All health care providers and business partners, and their employees and downstream entities, are required to be screened against both the OIG and the GSA prior to hire or contract and monthly thereafter, and accurate records of such monitoring activity must be retained for a minimum of 10 years.

Health Care Provider and Business Partner Impact

Health care providers and business partners are expected to:

- Query both the OIG and GSA for all employees and downstream entities prior to hire or contract and monthly thereafter
- Promptly remove any individual or entity appearing on either of these lists from any work related to Humana business functions
- Promptly report any such exclusions and actions to Humana

Conflicts of Interest

Humana requires each associate to complete a conflict of interest statement certifying that the individual is free from any conflicts of interest in performing his/her job function. Similarly, employees and downstream entities of Humana's health care providers and business partners must have a policy to internally disclose any conflicts of interest annually and upon any change or addition to this status.

Health Care Provider and Business Partner Impact

Health care providers and business partners are expected to:

- Communicate to their employees and downstream entities that any conflict of interest must be disclosed annually and upon receipt of any changes or additions
- Review potential conflicts of interest and either remove the conflicts or, if appropriate, grant approval to continue work despite the conflicts

IV. Investigation, Discipline and Correction

Violation of Humana's Ethics Every Day for Contracted Health Care Providers and Business Partners and other policies and procedures could compromise Humana's integrity and reputation. A violation may also result in a required corrective action, termination of contract and/or reporting of the violation to appropriate regulatory and/or law enforcement authorities.

Humana initiates investigations of any reports of suspected or detected violations of Ethics Every Day for Contracted Health Care Providers and Business Partners and Humana policies and procedures, as well as suspected FWA, as quickly as possible, but not later than within two weeks of identifying the suspected or detected issue. All reported issues are treated confidentially to the greatest extent possible and documentation is maintained.

In the event that corrective actions are imposed on a health care provider or business partner, Humana will monitor and/or audit the health care provider or business partner to confirm that corrective actions have been implemented. Monitoring and auditing following implementation of the corrective action will also occur, as appropriate, to facilitate effective corrective actions.

Health Care Provider and Business Partner Impact

Health care providers and business partners are expected to:

- Widely publicize the disciplinary standards, including the duty and expectation to report noncompliant and unethical behavior and suspected FWA
  - » Examples include: newsletters, regular presentations and department staff meetings, communications with downstream entities, general compliance training, intranet site, posters prominently displayed throughout employee work and break areas, and cafeteria table tents.
- Take prompt disciplinary action when there is noncompliant or unethical behavior by their employees or downstream entities or FWA is discovered, and report such action to Humana. This may include issuing corrective action plans that must be tracked to closure.
  - » Humana reserves the right to take additional action if deemed necessary.
- Cooperate fully with any investigation of an alleged violation and/or remedial actions.

Appendix B: Summary of Applicable Laws and Regulations

Note: Depending on the function your organization performs, not all of the following laws and regulations may be applicable to it.

Title XVIII of the Social Security Act	Passed in 1965, the Social Security Act included Title XVIII, which became known as Medicare. Title XVIII includes Part A, which provides hospital insurance for the aged and disabled, and Part B, which provides medical insurance. To address the Part A and Part B benefits, Medicare offers a choice between an open-network single payer health care plan (known as Original Medicare) and plans administered by private companies approved by Medicare (Medicare Advantage, or Medicare Part C), where the federal government pays for private companies to administer health coverage. Medicare Part D covers outpatient prescription drugs exclusively through plans offered by Medicare-approved private insurance companies. Part D plans can either be stand-alone prescription drug plans or through included in a Medicare Advantage plan that offers prescription drugs. Humana offers part C and D plans. Therefore, the laws and regulations related to Part C and D plans, many of which are listed in the link below, impact your relationship with Humana. http://www.ssa.gov/OP_Home/ssact/title18/1800.htm
Regulations governing Medicare Parts C and D, and Medicaid, where applicable, found at 42 C.F.R. §§ 422 and 423 respectively	CCMS has outlined compliance program guidelines in its Prescription Drug Benefit Manual, Chapter 9 and Medicare Managed Care Manual, Chapter 21. That combined manual is an interpretation of the compliance program requirements and related provisions in 42 C.F.R. Parts 422 and 423 for Medicare Advantage Organizations (MAO) and Medicare Prescription Drug Plans (PDP). As a result, Humana's compliance program incorporates the seven elements of an effective program as outlined by CMS. 42 C.F.R. § 422.503: http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&rgn=div8&view=text&node=42%3A3.0.1.1.9.11.5.4&idno=42 42 C.F.R. § 422.504: http://www.ecfr.gov/cgi-bin/retrieveECFR?gp=1&SID=c41f978c39319dbc1d0a601eba47dee%200&ty=HTML&h=L&r=SECTION&n=se42.3.422_1504 42 C.F.R. § 423.504: http://www.ecfr.gov/cgi-bin/retrieveECFR?gp=1&SID=808d3484cc31371f557c19a256928842&ty=HTML&h=L&r=SECTION&n=42y3.0.1.1.10.11.5.5
Medicare Managed Care Manual, Chapter 3 – Medicare Marketing Guidelines	The Marketing guidelines reflect CMS' interpretation of the marketing requirements and related provisions of the Medicare Advantage and Medicare Prescription Drug Benefit rules (42 C.F.R. Parts 422 and 423). For specific information on marketing guidelines related to Providers, please refer to section 70.11 titled "Marketing in the Health Care Setting". https://www.cms.gov/Medicare/Health-Plans/ManagedCareMarketing/FinalPartCMarketingGuidelines.html
Patient Protection and Affordable Care Act (Pub. L. No. 111-148, 124 Stat. 119)	This extensive act is most known for the increased rights and protections it establishes for consumers, but it has many provisions, known as titles. The core elements of this act include, but are not limited to, the following: • Where/how to purchase coverage is being expanded • New benefits are offered for those eligible for coverage • There are shifts in who is eligible for receiving and retaining coverage and under what arrangements • Organizations offering insurance, like Humana, are subject to greater accountability The act will change payment (amounts) and reimbursement(s) for certain benefits, as well as increase the ability to appeal claims, which may impact enrollment and claims processing. This could ultimately affect your relationship with Humana and/or how your organization maintains records and/or tracks payments. There are other titles that could also impact your organization, although not directly in regard to Humana. Therefore, the act is available here for review: http://www.gpo.gov/fdsys/pkg/PLAW-111publ148/pdf/PLAW-111publ148.pdf
Federal Acquisition Regulation	This regulation prohibits gifts with greater than $15 fair market value from being given to, or received from, the government. The exceptions are: • Modest items of snacks and refreshments (such as soft drinks, coffee and donuts) offered other than as part of a meal if made available to everyone in attendance • Promotional or marketing materials (e.g., pens, pencils, note pads and calendars) valued at $15 or less • Tokens of appreciation (e.g., command coins or patches) with the command's/unit's logo, valued at $15 or less
Health Insurance Portability and Accountability Act (HIPAA) (Public Law 104-191)	Per the U.S. Department of Labor, HIPAA was initially passed in 1996 to "improve portability and continuity of health insurance coverage." As a result, there are more consumer protections regarding options for coverage. http://aspe.hhs.gov/admnsimp/pl104191.htm Later "rules," or provisions, were passed in 2001 and 2003 to protect the privacy, confidentiality and security of individually identifiable health information. This includes the establishment of security standards for electronic protected health information. Your organization, as well as Humana, is required to have sufficient safeguards regarding this type of information, including who may access it, how much of it may be accessed by any individual and how it is retained and transmitted. http://www.hhs.gov/ocr/privacy/hipaa/understanding/summary/index.html http://www.hhs.gov/ocr/privacy/hipaa/understanding/srsummary.html

False Claims Acts (31 U.S.C. §§ 3729-3733	This act gives the federal government leverage against persons/entities involved in fraudulent activities with the government. This allows financial liability in the form of a civil penalty and damages to be imposed for submitting, or causing someone to submit, a false or fraudulent claim for government payment. http://www.gpo.gov/fdsys/pkg/USCODE-2011-title31/pdf/USCODE-2011-title31-subtitleIII-chap37- subchapIII-sec3729.pdf http://www.gpo.gov/fdsys/pkg/USCODE-2011-title31/pdf/USCODE-2011-title31-subtitleIII-chap37- subchapIII-sec3730.pdf http://www.gpo.gov/fdsys/pkg/USCODE-2011-title31/pdf/USCODE-2011-title31-subtitleIII-chap37-subchapIII-sec3731.pdf http://www.gpo.gov/fdsys/pkg/USCODE-2011-title31/pdf/USCODE-2011-title31-subtitleIII-chap37- subchapIII-sec3732.pdf http://www.gpo.gov/fdsys/pkg/USCODE-2011-title31/pdf/USCODE-2011-title31-subtitleIII-chap37- subchapIII-sec3733.pdf
Federal Criminal False Claims Statutes (18 U.S.C. §§ 287,1001)	Section 1001 applies to anyone whose action(s) related to any claim(s) for government payment consist(s) of any of the following: • Falsifying, concealing, or covering up by any trick, scheme or device a material fact related to any claim(s) for government payment; • Making any materially false, fictitious or fraudulent statement or representation; • Making or using any false writing or document knowing it contains any materially false, fictitious or fraudulent statement or entry. Section 287 states that whoever makes or presents to the government a claim knowing that it is false, fictitious or fraudulent shall be imprisoned and subject to fines. The government is required to establish all of the following in regard to the action(s) of a false claim(s) case defendant. He/she: • Made or presented a false, fictitious or fraudulent claim to a department of the United States; • Knew the claim was false, fictitious or fraudulent; and • Did so with the specific intent to violate the law or with awareness that what s/he was doing was wrong. http://www.gpo.gov/fdsys/pkg/USCODE-2011-title18/pdf/USCODE-2011-title18-partI-chap15-sec287.pdf http://www.gpo.gov/fdsys/pkg/USCODE-2011-title18/pdf/USCODE-2011-title18-partI-chap47-sec1001.pdf
Anti-Kickback Statute (42 U.S.C. § 1320a-7b(b))	This federal statute prohibits any individual or entity from knowingly and deliberately offering, giving or receiving money or something of value in exchange for referrals of health care goods or services that will be paid for in whole or in part by a federal health care program, such as Medicare or Medicaid. http://www.ssa.gov/OP_Home/ssact/title11/1128B.htm#f
The Beneficiary Anti-Inducement Statute (42 U.S.C. § 1320a-7a(a)(5))	This federal statute declares that any person who gives or offers to give anything of value* to a Medicare or Medicaid beneficiary that the person knows or should know is likely to influence a beneficiary's choice of a particular health care provider, practitioner or supplier to buy or rent a Medicare or Medicaid covered item from the provider, practitioner or supplier may be liable for civil money penalties of up to $10,000 for each wrongful act. http://www.gpo.gov/fdsys/pkg/USCODE-2010-title42/pdf/USCODE-2010-title42-chap7-subchapXI-partA-sec1320a-7a.pdf * The OIG stated in guidance that there is a "nominal value" exception that allows a health care provider to give: • A gift to a beneficiary as long as the gift has a retail value of $10 or less • Multiple gifts each with retail value of $10 or less over a 12-month period, as long as the total retail value of the gifts does not exceed $50 Any such gift must not be in cash or cash equivalents, so it should not be a gift card or gift certificate. Types of gifts and their value(s) are detailed in a Special Advisory Bulletin from the OIG: http://oig.hhs.gov/fraud/docs/alertsandbulletins/SABGiftsandInducements.pdf
Prohibitions against employing or contracting with persons or entities that have been excluded from doing business with the federal government (42 U.S.C. §1395w-27(g)(1)(G)	The expectations of CMS and Humana in regard to screening government exclusion lists have been outlined in the oversight section on page 9 of this policy and in this federal provision: http://www.gpo.gov/fdsys/pkg/USCODE-2010-title42/pdf/USCODE-2010-title42-chap7-subchapXVIII-partC-sec1395w-27.pdf
Foreign Corrupt Practices Act (FCPA)	This federal statute prohibits giving any type of gift, payment, entertainment, gratuity or anything of value to a foreign official, political candidate, political party, party official, public international organization, their employees or their representatives or entities working with them for the purpose of obtaining, retaining or directing their business to any person for the purpose of influencing an official act or decision or securing an improper advantage. The FCPA has specific criminal and civil penalties for violations: fines for the responsible organization, suspension or debarment from participation in federal programs and fines and imprisonment for individuals convicted of such conduct. https://www.justice.gov/criminal-fraud/foreign-corrupt-practices-act

Civil monetary penalties of the Social Security Act (42 U.S.C. § 1395w-27 (g))	This provision of the Social Security Act describes the penalties that can be assessed to organizations that offer Part C and/or Part D plans should CMS determine they do not meet the requirements outlined in their contract(s) with CMS. Your organization is impacted by this act if it supports and/or sells any of Humana's Medicare Advantage or Prescription Drug products. Examples of such impactful provisions include, but are not limited to: • Enrolling an individual in any such plan without the prior consent of the individual or the individual's designee • Failing to re-enroll an eligible individual • Denying or discouraging an eligible individual from plan enrollment • Noncompliance with marketing restrictions surrounding these plans • Failing substantially to provide medically necessary items and services that are required (under law or contract) {to an individual covered under the contract http://www.gpo.gov/fdsys/pkg/USCODE-2010-title42/pdf/USCODE-2010-title42-chap7-subchapXVIII-partC-sec1395w-27.pdf
Physician Self-Referral ("Stark") Statute (42 U.S.C. § 1395nn)	This statute: • Prohibits a physician from making referrals for certain designated health services payable by Medicare to an entity with which he or she (or an immediate family member) has a financial relationship (ownership, investment, or compensation), unless an exception* applies • Prohibits the entity from presenting, or causing to be presented, claims to Medicare (or billing another individual, entity or third party payer) for those referred services * Specific exceptions have been established, and the federal government has the authority to create regulatory exceptions for financial relationships that do not pose a risk of program or patient abuse. Please refer to the following link for a list of the established exceptions and additional information: https://www.cms.gov/PhysicianSelfReferral/
Fraud and Abuse, Privacy and Security Provisions of the Health Insurance Portability and Accountability Act, as modified by HITECH Act	This act could be considered an extension of HIPAA, as it enabled the U.S. Department of Health and Human Services to promote and expand the adoption of health information technology. It addresses: • Use of electronic health records, including incentives for adopting them and requirements around their disclosure • How to secure protected health information appropriately • When and to whom notifications should made in regard to data breaches of unsecured protected health information (PHI) http://www.healthit.gov/policy-researchers-implementers/health-it-legislation-and-regulations
Fraud Enforcement and Recovery Act of 2009	This act improves the enforcement of various kinds of fraud related to federal assistance and relief programs, the recovery of funds lost to these frauds, and for other purposes. It increased resources for investigation and prosecution of fraud cases and made recovery under the False Claims Act, 31 USC § 3729 statute easier. http://www.gpo.gov/fdsys/pkg/PLAW-111publ21/pdf/PLAW-111publ21.pdf
CMS Data Use Agreement	Humana's Compliance Policy and Ethics Every Day for Contracted Health Care Providers and Business Partners incorporate the overarching aspects of the CMS Data Use Agreement to facilitate the proper safeguarding of all data, including CMS-related data, by Humana and health care providers and business partners, regardless of whether support is provided for Humana's Part C and/or Part D offerings. The overarching components of the CMS Data Use Agreement are as follows: **Disclosure**, use, or reuse of the data covered by the agreement between CMS and Humana must only be for the purpose(s) specified within the agreement, unless CMS provides appropriate authorization for any other purpose(s). • Any individual's access to the data must only be on a need-to-know basis • Data access must be limited to the minimum amount of data and minimum number of individuals necessary to achieve the purpose stated in the agreement **Sufficient Data Safeguards** for the storage and disclosure of data/information must be established from the following perspectives: administrative, technical and physical. Together these measures assure data confidentiality is protected and that unauthorized use or access to it is prevented. **Handling of Suspected or Detected Breaches** • This matter is addressed in the Effective Communications section of this policy under "Methods for Reporting Suspected or Detected Noncompliance to Humana" A signed CMS Data Use Agreement provides CMS with assurance of compliance with the requirements of the Privacy Act, the Privacy Rule, and CMS data release policies when CMS data is utilized by anyone outside of CMS. The agreement must be completed and updated when applicable by Humana. Upon CMS' receipt of the completed agreement, CMS provides Humana with, and/or access to, data containing, but not necessarily limited to, protected health information and individual identifiers from CMS' Systems of Record. It is your responsibility to consult with your legal counsel to determine when/if there are instances that the CMS Data Use Agreement applies to your organization.
All sub-regulatory guidance produced by CMS and HHS such as manuals, training materials, HPMS memos, and guides	Vast guidance resources are available on the following websites: **CMS:** https://www.cms.gov/Regulations-and-Guidance/Regulations-and-Guidance.html http://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Policy-and-Memos-to-States-and-Regions.html **U.S. Department of Health and Human Services:** http://www.hhs.gov/ http://www.hhs.gov/regulations/index.html

Florida Medicaid Subcontractor Monitoring & Oversight

Humana

Humana Procedure

Creation Date:	September 26, 2017	**Accountable Dept:**	50606 Florida Medicaid Administration
		Business Domain:	FL Medicaid
		Business Area:	Delegation Oversight

Summary of Changes: New document

Scope: This Procedure applies to the Florida Medicaid Market and the oversight of Subcontractor/Vendor performance.

Statement: The purpose of this Procedure document is to establish a process for monitoring and oversight of contracted subcontractors/vendors who render services on behalf of Humana Health Plan. The Procedure is written in accordance with the Agency for Health Care Administration (the Agency) state contract FP023, Amendment 14 requirements (State Contract).

Definitions:
Subcontractor – Any entity contracted by or subsidiary or affiliate of the Health Plan that performs services or fulfills any of the requirements listed in the State Contract.

Delegated Vendor – Any entity performing functions on behalf of the Health Plan that are listed in the State Contract. These include but are not limited to utilization management, case management, claims processing, network management and credentialing.

Related Document(s): Medicaid Delegate Relationship Management Policy; Delegated Vendor Performance Oversight Program Description; Delegated Vendor Oversight Committee Charter; Subcontractor Lifecycle

Procedure: Florida Medicaid Subcontractor Monitoring & Oversight

Description: Humana oversees Florida subcontractors/vendors through a company-wide coordinated approach across multiple teams, including Florida Market Operations, Delegation Compliance, First Tier Downstream Related entity (FDR) Compliance, and Regulatory Compliance. The monitoring and oversight of subcontractors/vendors results are reported to the Delegated Vendor Oversight Committee (DVOC). The oversight activities are managed in compliance with active Florida Medicaid State Contract requirements, NCQA accreditation standards, and all applicable laws, rules, and regulations.

Narrative:

Florida Market Operations

The local Florida Market Operations team includes Delegate Relationship Managers (DRM) responsible for the procurement of subcontractors/vendors. The DRM develops the contract and engages Delegation Compliance at the corporate level, if any functions are to be delegated. In addition, the Florida Market Operations team:

- Holds subcontractors/vendors accountable for compliance with State Contract requirements and Service Level Agreements (SLAs).

- In conjunction with the subcontractor/vendor, the Florida Market Operations team will identify and align on challenges and improvement opportunities.

- Reports findings, corrective action plans, and follow up to the DVOC.

- Monitors the performance trend of subcontractors/vendors overtime (e.g. SLAs, key compliance metrics, etc.).

- Reports results of the monitoring to the Agency's Contract Manager, fourteen (14) business days after the end of each month or as specified by the Agency. The reports shall be based on the Agency supplied format.

- If the subcontractor/vendor's performance does not meet the Agency's performance standards according to the Agency's monitoring report or the subcontractor/vendor monitoring report, an improvement plan must be submitted to the subcontractor/vendor and the Agency within fourteen (14) business days of the deficient report.

- Assesses and reviews the operational health of subcontractors/vendors with Humana and subcontractor/vendor leadership during regularly held Joint Operational Committee (JOC) meetings, and uses this forum to ensure:
  - Subcontractors/vendors comply with applicable state and federal Laws;
  - Subcontractors/vendors are eligible for participation in the Medicaid Program;
  - Tasks related to the subcontract are performed in accordance with the terms of the State Contract;
  - Delegated durable medical equipment (DME) subcontractors are in compliance with Florida Statute § 409.975(1)(d) and the Agency Guidance Statement regarding Durable Medical Equipment Contracts in the Managed Medical Assistance Program.

- Assists with resolution of member and provider complaints, including:
  - Billing and claims issues;
  - Coordinating appropriate pre- and post-contracting activities with the Delegation Compliance team, if the subcontractor/vendor will be delegated for any functions (e.g., claims, credentialing, utilization management, and network management).

- Participates in all key audits associated with the subcontractor/vendor to facilitate full performance transparency and coordinated follow up.

- Supports escalation of performance issues including penalty assessments, de-delegation evaluations, breach investigations, and like issues.

- Engages the appropriate subject matter experts (SMEs) (Legal, Privacy, Enterprise Information Protection (EIP), Delegation Compliance, Regulatory Compliance, Internal Audit Consulting Group (IACG), FDR Compliance, Clinical/Operational leads) to assist in addressing issues or exploring opportunities to maximize relationship value.

Delegation Compliance

The Delegation Compliance team is a centralized team based in Humana's corporate office and conducts operational compliance oversight of subcontractors/vendors performing claims, clinical health services, credentialing, and any other delegated function on behalf of Humana. This team:

- Evaluates all delegation requests submitted to Delegation Compliance to initiate a pre-delegation audit.

- Performs an audit prior to delegation of these functions to assess capability to perform the function in a compliant manner.
- Based on the audit results, provides recommendation for subcontractor/vendor delegation.
- Conducts annual audits against function-specific compliance standards and routinely monitors each delegate.
- Initiates corrective actions when instances of noncompliance are identified and notifies Market Operations.

FDR Compliance

Humana's FDR Compliance team is a centralized team based in Humana's corporate office. The FDR Compliance team conducts oversight activities related to compliance program requirements such as:

- Evaluates the FDR Risk Ranking Questionnaire completed by the business owner.
- Tracks the universe of subcontractors/vendors.
- Performs periodic audits against compliance program standards, periodic monitoring of compliance program self-assessments completed by subcontractors/vendors, and reviews subcontractors/vendors against the Office of Inspector General (OIG) and General Services Administration (GSA) exclusion lists monthly.
- Initiates corrective actions when instances of noncompliance with compliance program requirements are identified and notifies Market Operations.

Regulatory Compliance

The Regulatory Compliance team is a centralized team based in both Humana's corporate office and the field. This team assists with oversight and monitoring activities such as:

- Assists Delegation Compliance and FDR Compliance with desk reviews and audits as needed.
- Assists with issues identified through other oversight and monitoring channels.

Delegated Subcontractor/Vendor Performance Oversight

This team is Florida Market-based and includes a Director, Vendor Performance Oversight, who is dedicated to subcontractor/vendor performance oversight. The Director works closely with all entities listed within this Procedure to ensure subcontractor/vendor performance remains compliant with the State Contract requirements and agreed upon SLAs between the subcontractor/vendor and Humana.

Delegated Vendor Oversight Committee (DVOC)

The DVOC is a Florida specific committee responsible for the monitoring of delegated vendors who render services on behalf of Humana Health Plan. The DVOC is chaired by the Director, Vendor Performance Oversight and meets quarterly at minimum and more frequently as needed. The DVOC reports to the Quality Improvement Committee. The DVOC is charged to:

- Establish appropriate delegation oversight mechanisms, procedures and tools.
- Review vendor activity, performance metrics, and audit results.
- Make recommendations and approve corrective action plans as appropriate.

- Review annual Utilization Management (UM) program descriptions and evaluations for vendors with delegated UM.
- Review and follow up on corrective action plan progress and/or completion.
- Perform annual evaluation of the Delegated Vendor Performance Oversight program and makes recommendations for enhancements

Owner:	**Irene Lord**	**Executive Team Members:**	**John Barger, Alan Wheatley**

Disclaimer:

Humana follows all federal and state laws and regulations. Where more than one state is impacted by a particular issue, to allow for consistency, Humana will follow the most stringent requirement.

This document is intended as a guideline. Situations may arise in which professional judgment may necessitate actions that differ from the guideline. Circumstances that justify the variation from the guideline should be noted and submitted to the appropriate business area for review and documentation. This Procedure is subject to change or termination by Humana at any time. Humana has full and final discretionary authority for its interpretation and application. This Procedure supersedes all other policies, standards, guidelines, procedures or information conflicting with it. If viewing a printed version of this document, please refer to the electronic copy maintained in Policy Source to ensure no modifications have been made.

Non-Compliance:

Failure to comply with any part of Humana's policies, standards, guidelines, and procedures may result in disciplinary actions up to and including termination of employment, services or relationship with Humana. In addition, state and/or federal agencies may take action in accordance with applicable laws, rules and regulations.

Any unlawful act involving Humana systems or information may result in Humana turning over any and all evidence of unlawful activity to appropriate authorities. Information on handling sanctions related to noncompliance with this Procedure may be found in the Expectations for Performance, and Critical Offenses policies, both of which may be found in the Policy Source site of Humana's secure intranet on HI! (Sites/View Full Site Directory/Tools and Resources/Policy Source).

Medicaid Delegate Relationship Management

Humana

Humana Policy and Procedure

Creation Date:	February 23, 2017	**Accountable Dept:**	50115 Medicaid/LTSS/Duals Operations
Publication Date:	March 10, 2017	**Business Domain:**	02 Governance and Compliance
Last Review Date:	March 9, 2017	**Business Area:**	04.11 Vendor Compliance

Summary of Changes: New document

Scope: This policy applies to anyone responsible for Medicaid Delegate Relationship Management, including selection, contracting, and on-going relationship oversight of third parties and internal-to-Humana legal entities which have been delegated certain plan-required services.

Statement: The purpose of this policy is to clarify the expectations and accountabilities of an individual who is the responsible Medicaid Delegate Relationship Manager.

Definitions: See below

Related Document(s): Delegation Policy

Procedure: Medicaid Delegate Relationship Management

Description: Each individual responsible for the relationship management of third party and internal-to-Humana legal entities delegated to perform certain plan-required services is to ensure that the following actions and activities are accomplished.

Narrative:

First Tier-Down Stream-Related Entity (FDR) Assessment

- Ensure the Risk Ranking Questionnaire is completed and submitted to the FDR Committee for review.
- Confirm and follow the requirements for third parties determined to be FDRs.

Delegation Coordination

- Submit a completed Request for Delegation form to Delegation Compliance to initiate a pre-delegation audit.
- Confirm and follow the delegation recommendation from Delegation Compliance (Go/No Go).

Contracting

- Complete required due diligence (e.g. financial, business continuity, systems and physical security, etc.) to identify and mitigate potential risk.
- Negotiate all required contract documents and related provisions, working with contract drafting, legal, and compliance SMEs to streamline the language, limit duplications, and eliminate conflicting language, to include, but not be limited to:
  - Performance Requirements (aka service level agreements (SLAs)), reflecting relevant contract performance. requirements and Humana operating standards, inclusive of penalties and incentives, as appropriate;
  - For the specific delegated functions, a Delegation Addendum and attachments;
  - A current state-specific Medicaid Addendum (aka Medicaid Omnibus Agreement);
  - A Business Associate Agreement (BAA), as applicable;
  - An IT Security Agreement (ITSA), as applicable.
- Facilitate final reviews and contract execution, internal-to-Humana, including the operational lead(s), and with the Delegate.

- In partnership with state-facing market lead(s), obtain state agency approval for the initial relationship and relationship changes, as required.

On-Going Relationship Oversight

- Identify and engage the operational lead(s) associated with the Delegate to establish and maintain a shared understanding of expectations and accountability for compliance oversight.
- Hold Delegates accountable for compliance.
- In partnership with operational market lead(s), participate in regular operational pulse meetings.
- Assess and review the operational health of Delegates with Humana and Delegate leadership during formal periodic meetings and use these occasions to:
    - Align on compliance challenges/opportunities (e.g. Grievance and Appeals (G&A), Risk Management, Internal Audit Consulting Group (IACG), Delegation, First-Tier-Down Stream-Related Entity (FDR), Enterprise Information Protection (EIP), Privacy, Legal, Regulatory Compliance, related audit findings and Corrective Action Plans (CAPs), etc.).
    - Pulse performance trend over time (e.g. SLAs, key compliance metrics).
    - Identify/address operational and performance barriers.
    - Pursue opportunities to maximize business benefit.
    - Explore cross-market translation opportunities.
- Document and publish notes & next actions from the formal periodic leadership meetings.
- Participate in all key audits associated with the third party to facilitate full performance transparency and coordinated follow up.
- Support escalation of performance issues including penalty assessments, de-delegation evaluations, breach investigations.
- Engage the appropriate SMEs (e.g., legal, privacy, EIP, delegation, regulatory compliance, IACG, FDR, clinical/operational leads) to assist in addressing issues or exploring opportunities to maximize relationship value.

Assessment of Future Service Sources

- Participate in future service evaluations and competitive evaluations for the services provided, inclusive of insourcing assessments.

Definitions:

- **Business Associate Agreement (BAA)** - A contract document containing terms, obligations, and information regarding between the Delegate, as a HIPAA business associate, and Humana, as a HIPAA-covered entity, as established via HIPAA.
- **CMS –** Centers for Medicare & Medicaid Services.
- **Delegated Entity or Medicaid Delegate –** An entity contracted to perform one or more functions, as required of Humana Medicaid under a state Medicaid contract, on behalf of Humana Medicaid.
- **Delegation –** A formal process whereby a health plan gives a qualified entity the authority to perform certain business functions required of Humana by the state Medicaid contract.
- **Delegation Addendum –** A contract document containing terms, obligations, and information regarding the delegation of specific functions to an entity.
- **HIPAA - Health Insurance Portability and Accountability Act.**
- **IT Security Agreement (ITSA)** - A contract document containing terms, obligations, and information regarding information technology-related security requirements.
- **Medicaid Addendum or Medicaid Omnibus Agreement –** A contract document containing terms, obligations, and information regarding requirements of First Tier, Downstream, or Related Entities, as established and governed by CMS, in the service of Medicaid enrollees in a given state
- **Pre-Delegation Audit –** Method to evaluate an entity's compliance and performance capacity prior to the execution of a Delegation Addendum.

This (policy/standard) supersedes all other policies, standards, guidelines, procedures or information conflicting with it. If viewing a printed version of this document, please refer to the electronic copy maintained in Policy Source to ensure no modifications have been made.

Non-Compliance:

Failure to comply with any part of Humana's policies, standards, guidelines, and procedures may result in disciplinary actions up to and including termination of employment, services or relationship with Humana. In addition, state and/or federal agencies may take action in accordance with applicable laws, rules and regulations.

Any unlawful act involving Humana systems or information may result in Humana turning over any and all evidence of unlawful activity to appropriate authorities. Information on handling sanctions related to noncompliance with this policy may be found in the Expectations for Performance, and Critical Offenses policies, both of which may be found in the Policy Source site of Humana's secure intranet on HI! (Sites/View Full Site Directory/Tools and Resources/Policy Source).

2016 FDR Compliance Risk Ranking Questionnaire – Final 6/17/2016

The Risk Ranking Questionnaire (RRQ) must be completed prior to the execution and/or modification of a contract that supports Medicare Advantage, Prescription Drug Plan, and/or Medicaid products. The completed RRQ is submitted to the FDR Compliance Team which is responsible for determining if the entity (partner) is a first tier, downstream or related entity (FDR) based, on the scope of work.

Definition:

A **first tier entity** is any party that enters into a written arrangement with a Humana entity to provide administrative or health care services to a Medicare or Medicaid eligible individual under a Humana Medicare Advantage, Medicare Prescription Drug Benefit, Medicaid or Dual Medicare-Medicaid plan.

A **downstream entity** is any party that enters into a written arrangement with persons or entities involved with a Humana Medicare Advantage, Medicare Prescription Drug Benefit, Medicaid or Dual Medicare-Medicaid plan, below the level of the arrangement between Humana and a first tier entity. These written arrangements continue down to the level of the ultimate provider of both health and administrative services.

A **related entity** is any entity that is related to Humana by common ownership or control and:

- Performs some of the health plan management functions under contract or delegation;
- Furnishes services to Medicare, Medicaid or Dual Medicare-Medicaid enrollees under an oral or written agreement; or
- Leases real property or sells materials to Humana at a cost of more than $2,500 during a contract period.

Scope:

FDRs include entities performing functions that support the administration or delivery of Medicare Advantage, Medicare Prescription Drug Benefit, Medicaid and/or Dual Medicare-Medicaid health care services or benefits (including mandatory and optional supplemental benefits) offered by Humana, and continues down to the level of the ultimate provider of administrative or health services. These definitions do not apply to any other products (i.e., Medicare supplement and commercial products).

FDRs include delegated entities, suppliers, providers, pharmacies and delegated sales agents. The Centers for Medicare and Medicaid Services (CMS) govern relationships associated with service to Medicare and Medicaid members. In the questions below the following terms apply:

- Humana refers to Humana Inc. and any Humana subsidiaries
- Supplier refers to the entity contracted with Humana and any subcontractors supporting the contracted entity

The contracting business partner must complete the required information below to determine if FDR reporting to CMS is required for this transaction and whether any Medicare or Medicaid addenda are required for the contract. This form must be completed for all new contracts and also in the event that an existing contract is modified for any reason.

For any questions, contact partnercompliance@humana.com

Item	Guidance	Response
Name of partner:	Legal name on the agreement	
The Centers for Medicare and Medicaid Services (CMS) govern relationships associated with service to Medicare and Medicaid members. Are the services procured under this contract in support of the Centers for Medicare and Medicaid Services, such as Humana Medicare Advantage, Dual Medicare/Medicaid, Medicaid only, or Prescription Drug Benefit products or services?	Respond Yes, if the partner will be supporting Medicare , Medicaid or Duals services on behalf of Humana. Procurement is responsible for executing a Medicare addendum and informing FDR Compliance of the contract effective date. If the response is No, the remaining questionnaire does not need to be completed or forwarded to FDR Compliance.	
If you answer yes to the above because the services support Medicaid, indicate all applicable states:	Select each state that applies: FL, IL, VA, KY, All. Procurement will need to execute the appropriate Medicaid addendum for each state indicated and inform FDR Compliance of the contract effective date(s). Contact Ryan Keith if questions on addenda for KY, IL, VA. Contact Nicole Hines for questions on FL addenda.	
Humana Affiliated Legal Entity that is Contracting with the partner:	The name on the agreement of the Humana legal entity contracting with the partner.	
Humana business area contracting with this partner:	Humana business (*aka Component*) area initiating the contract.	
Humana business area process owner:	The operational business owner responsible for managing and oversight of the contracted scope of work.	
Humana business contract owner:	Person in the operational business area responsible for the overall contract.	
Procurement lead	Name of the person in procurement responsible for processing the partner contract.	
List the functions and services provided by the partner: Actuarial Support, Advanced Care Planning, Audits/Surveys – Required, Behavioral Health, Care Management, Claims Administration, Processing and Coverage Adjudication, Claims Review, Clinical Health Services, Clinical Outreach, Complex Case Management, Coordination of Benefits, Credentialing, Customer Inquiry, Customer Service, Dental, Diagnostic Lab Testing, Disease Management, Drug Utilization Review, Enrollment, Financial Recovery/Subrogation, Fiscal Intermediary Services, Grievance and Appeals, Health Care Services, Health Risk Assessment,	List all functions that apply from the options imbedded. If the function or service you need is not listed please specify.	

Home Health, Hotline Operations, Marketing, Medical Record Retrieval, Medical Record Review, Medicare Risk Adjustment, Medication Intake, Therapy, Member Eligibility Verification, Member Pharmaceutical Counseling and Education, Network Management, Payroll Services¸ Pharmacy Benefits Management, Population Health Management, Practice Management Services, Prescription Drug Fulfillment, Print and Mail Fulfillment, Provider Relations, Quality Improvement, Quality Management, Sales Functions, Special Needs Plan, Transportation Services, Unable to Contact, Utilization Management, Utilization Review, Wellness and Rewards Program		
Scope of Work:	Include a full and detailed description of the scope of work (functions and services). This can be taken from the draft contract, SOW, schedule or Executive Summary as needed. Attach the actual or draft SOW or forward to partnercompliance@humana.com if available, even if in draft format.	
Service Level Agreement (SLA):	Please include proposed service level agreements for this SOW.	
Is this a direct contract with Humana (First Tier)?	Yes, if the contract is between Humana and the partner. Be advised that if any time the contractor subcontracts any of the Humana work, FDR compliance must be notified.	
If no, explain the subcontractor relationship (Downstream):	Indicate who the subcontractor has contracted with directly.	
Is the partner partially or wholly owned by Humana (Related Entity)?	Respond Yes or No If Yes, Indicate partial or wholly owned.	
Partner's internal compliance point of contact resource Name	Name

performed Line 2		
Physical location where contracted work will be performed City	City	
Physical location where contracted work will be performed State	State	
Physical location where contracted work will be performed Zip Code	Zip Code	
Risk Criteria Questions:		
1. Does the partner provide a delegated function for Humana?	Choose all that apply: • Credentialing Operations; • Claim Operations; and/or • Clinical Health Services (Delegation refers to a function that is being performed entirely by a partner other than Humana, overseen by Delegation Compliance and requires a Delegation Agreement. For example: Credentialing; Claim Processing; Utilization Management; Disease Management; Behavioral Health; Quality Improvement; Complex Case Management).	
2. Does the contracted work require direct interaction with members?	Respond Yes or No Direct interaction can be face-to-face, over the phone or through written correspondence.	
3. Does the contracted work require access into Humana systems?	Respond Yes or No This includes employees or contractors of the partner having access to any internal Humana systems.	
4. Does the partner have access to Humana member's health and/or financial information?	Respond Yes or No	
5. Is Humana member's health and/or financial information stored outside of Humana systems or locations in support of this contract?	Respond Yes or No	
6. Does the partner make health plan decisions on Humana's behalf?	Respond Yes or No *Most responses will be "No" to this question. If decision making is based upon Humana policy or procedure, answer "no". For example, if an partner makes decisions, but the decision is directed or dictated by Humana policy, procedure or defined criteria, the response is no.*	
7. Does the partner perform a critical function and also perform a substantial portion of the function for Humana as a whole?	Respond Yes or No Consider to what degree Humana business functions would be adversely impacted in the event the relationship with this partner was disrupted, ended unexpectedly, or the contracted work was not performed properly. For example: The partner performs at least 80% of the work for all of Humana. Critical functions include those core to the operation of a	

	health plan, such as billing; eligibility; enrollment; claims processing; call center operations, etc.	
8. Does the function(s) impact the member's ability to receive care under a Humana benefit plan?	Respond Yes or No Defaults to No if the partner is a Claims or Credentialing delegate. FDR Compliance Intake Consultant will confirm this response for each Clinical Health Services delegate.	
9. Does the function(s) impact member's ability to access pharmaceutical drugs under a Humana benefit plan?	Respond Yes or No	
10. Will the partner utilize or subcontract with an off shore vendor (vendor located outside of the United States or United States territory) to meet contractual obligations to Humana?	Respond Yes or No If Yes, Procurement will engage Humana Enterprise Information Protection (EIP) to complete a due diligence review of the off shore vendor. This information must be reported to CMS, by FDR Compliance, within 30 days of the contract signature date. Be advised that if at any time the off shore arrangement changes: new off shore arrangement added, change in location or change in scope of work, the FDR Compliance Team must be notified immediately.	
11. If yes, what is the name of the off shore vendor?	Include the name of the vendor providing the off shore support.

Humana®

Committee: Delegated Vendor Oversight Committee (DVOC)

Charter Statement:
The Delegated Vendor Oversight Committee (DVOC) is a Florida based decision-making committee that monitors the health plan's delegated services and performs oversight of quality and service activities delivered and managed by contracted vendors.

Purpose:
- Provide oversight of delegated vendor activities that relate to utilization management, credentialing, customer services (member and provider), contract compliance, and claims processing and payment. This is accomplished through a comprehensive, Plan-wide system of ongoing, objective, and systematic monitoring (oversight program).
- The Director, Vendor Performance Oversight, in conjunction with the Delegate Relationship Managers (DRM), is responsible for vendor relationship maintenance and the monitoring of delegated vendor performance in accordance with the contract requirements.
- The Business Owners from their respective areas are responsible for the monitoring of vendor performance related to their designated areas. If the vendor fails to meet the established performance targets, Business Owners, in conjunction with the DRMs, are responsible for the recommendation and the development of corrective action plans (CAPs). Delegation Compliance, Regulatory Compliance and Internal Audit Consultant Group shall be consulted in the CAP development. One or more of these teams must be engaged to invoke a formal CAP. All CAPs are captured in, triggered, and issued from, the central partner repository, Enterprise Solution Point (ESP).
- Opportunities for vendor performance improvement/enhancement are identified and resolved during the Joint Operational Committee (JOC) meetings with the vendors, and the outcomes are presented to the DVOC. JOC meetings are led by the Delegate Relationship Manager and as appropriate, the Business Owners are invited participants. If issues are being escalated, the Business Owner is required to attend the JOC meeting.
- The oversight program will ensure that delegated services meet the health Plan standards for care and customer service, as well as the standards of the Department of Insurance, requirements of state and federal regulatory agencies, and applicable accrediting agencies such as the National Committee for Quality Assurance (NCQA).
- The DVOC reports its findings to the Quality Improvement Committee (QIC).

Scope:
- Establish appropriate delegation oversight mechanisms, procedures, and tools.
- Oversight of delegated services by the review of vendor activity, performance metrics, and reports.
- Review of pre-delegation and annual delegation audit findings.
- Recommendations for the issuance of Corrective Action Plans (CAPs) as appropriate.
- Review of vendors' annual QI/UM Workplans, Program Descriptions, and Evaluations (as applicable).
- Review of JOC meeting minutes.
- Review and follow up on CAP activities.
- Determine and implement mechanisms to improve vendor collaboration and performance.

Structure and Operation:
- The members of the DVOC act as an oversight committee and receive regular reports from all Delegate-specific subcommittees that are responsible for monitoring activities.
- The DVOC is a Business Owner committee with at least one (1) representative from each department involved with the Delegate to monitor performance. A representative from the Corporate Delegation Compliance team shall attend the DVOC.
- The Director, Vendor Performance Oversight (or designee) is the standing chairperson for the DVOC.
- The DVOC meets at a minimum four (4) times per year and on an ad hoc basis as necessary.

Quorum: All members are voting members; a minimum of four (4) members must be present for a quorum.

Decision Authority:
Except where decision making authority is retained by others as stated herein, the DVOC is authorized by the health Plan QIC to make all decisions related to vendor oversight. Decisions are made by consensus and DVOC members are responsible to raise any concerns or issues at the DVOC meetings.

Committee Data/Document Responsibilities:
- The chairperson or a designee maintains detailed records and minutes of all DVOC meetings, presentation documents, dashboards, reports, CAPs, and logs decisions made by the Committee.
- The DVOC submits meeting minutes to the QIC for approval at least four (4) times per year, which in turn incorporates the DVOC minutes into a report presented to the Corporate Board of Directors. Committee minutes are completed, signed, and dated by the recorder within fifteen (15) calendar days of the meeting, and are signed and dated by the chairperson within five (5) business days following approval of the minutes at the next meeting of the Committee.

Evaluation:
- The DVOC submits a written summary in the form of an evaluation of the outcomes and effectiveness of the DVOC program to the QIC on an annual basis.
- The DVOC reviews the charter annually.

Delegated Vendor Performance Oversight Program Description

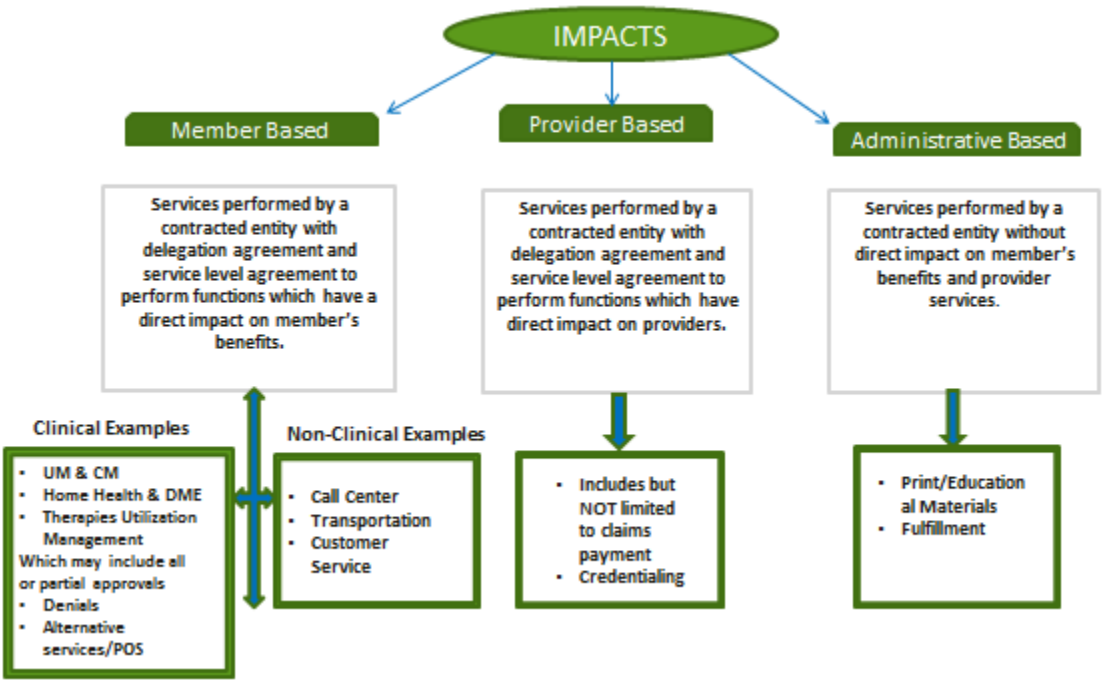
2017

Humana.

Delegated Vendor Performance Oversight
Program Description

I. Introduction and Overview

The Delegated Vendor Performance Oversight program, a Florida based program, sets forth the monitoring and oversight of functions delegated to subcontractors. The delegated functions are divided into three (3) pillars with corresponding impacts.



The monitoring and oversight of the delegated functions entails coordination and collaboration with subcontractors rendering services on behalf of the Humana Plan. Humana remains responsible for the performance and compliance of any function that is delegated. The following functions that may be delegated are:

- Utilization Management (UM)
- Complex Case Management (CM)
- Disease Management (DM)
- Behavioral/Mental Health
- Dental Health
- Provider Credentialing
- Network Management
- Claims Payment
- Ancillary Services (Therapies, Home Health, DME, Specialty Networks)
- Other function(s) as identified

A comprehensive monitoring approach incorporating market-based and corporate teams is utilized to ensure subcontractors are in compliance with all contract provisions. Humana undertakes the following actions in its subcontractor monitoring and oversight:

- Pre-Delegation Audit
- Delegation Services Agreement, including specific Service Levels Agreement (SLA) and Attachments
- Annual Delegation Audit (NCQA Standards where applicable, and contractual provisions)
- Ad hoc audit if warranted by subcontractor's performance
- Corrective Action Plans
- Protected Health Information (PHI) protection
- Financial contingency plan for subcontractors with financial risk
- Termination of Delegation

Refer to Delegation Policy (Business Domain: 02 Governance and Compliance, Attachment A) for a full description of each action.

The monitoring and oversight of subcontractors with delegated functions is performed by the Delegate Relationship Managers (DRM). The DRMs are assigned to each subcontractor and oversee the performance of subcontractors via regularly held joint operational meetings with the subcontractors and receipt of regular reporting as stated in the contract. The Joint Operational Committee (JOC) meetings are designed to review the previous period's subcontractor performance as compared to SLAs and contract provisions. JOC meetings are led by the DRM and attended by the Director, Vendor Performance Oversight, and Business Owners from designated areas are invited participants. In addition, the Director, Vendor Performance Oversight holds periodic operational meetings with all DRMs to review subcontractors' performance, identify opportunities for improvement, develop corrective interventions and identify progress made. Summaries of subcontractor performance are presented at the Delegated Vendor Oversight Committee (DVOC) which reports to the Quality Improvement Committee (QIC).

II. Goals and Objectives

The goals and objectives of the subcontractor monitoring and oversight program include:

- To monitor the facilitation of the delivery of appropriate care and services to enrollees
- To monitor the response to enrollee needs and practitioner requests
- To monitor subcontractor adherence to SLAs and State contract provisions
- To identify opportunities for improvement in the delivery of care and services to enrollees
- To collaboratively develop corrective actions plans as appropriate
- To monitor for timely submission of contract required reporting

- To review the financial solvency of subcontractors with financial risk arrangements
- To monitor adherence to PHI protection requirements
- To detect inappropriate utilization patterns (UM and Claims)
- To monitor for appropriate credentialing and network adequacies
- To escalade operational and financial non-performance to the DVOC, QIC, and senior leadership
- To collaborate with Delegation Compliance to validate that all delegated functions are compliant and meet Humana expectations based on SLAs

III. Scope

Humana partners with subcontractors to provide health care and related services to enrollees. The partnerships are based on contract provisions and performance expectations stated in the SLAs. To ensure that each subcontractor adheres to or exceeds these expectations, Humana has implemented a rigorous oversight program with corporate and market based teams responsible for subcontractor performance.

IV. Accountability and Structure

The DVOC is a governing entity which reports to the QIC. All subcontractor performance issues are presented to the DVOC for review and approval of necessary interventions and corrective actions in the event of a subcontractor's non-compliance with SLAs and contract provisions. The oversight of subcontractors is performed by three entities:

1. Delegate Relationship Managers (DRM) – A front line of Humana associates who work closely with the subcontractors. They are responsible for the due diligence of subcontractors and consistent oversight of operational performance according to the SLAs and contract provisions. DRMs hold joint operational meetings with the subcontractors and report any findings which need to be escalated to the DVOC. *Refer to Medicaid Delegate Relationship Management Policy (Business Domain: 04.11 Vendor Compliance, Attachment B)* for role details.
2. Corporate Delegation Compliance – This organization is responsible for pre-delegation, annual, and ad hoc audits of subcontractors. The audits are performed in accordance with State contract provisions, NCQA Standards, and SLAs. The audit results are presented to the DVOC for recommendations of interventions as appropriate.
3. Delegated Vendor Performance Oversight unit – comprised of a director and coordinator. The role of this unit include the following:
    a. In conjunction with DRMs, facilitates the coordination of oversight and monitoring activities
    b. Reviews operational performance of subcontractors for adherence to contract provisions and SLAs
    c. In conjunction with the DRMs, develops interventions and corrective action plans as necessary to improve performance and subcontractors compliance

d. Participates in joint operational meetings with subcontractors; review performance and recommend improvements
e. Reviews for under/overutilization trends and addresses with subcontractors
f. Works with subcontractors to participate in the support of Humana's goals to improve health care outcomes (HEDIS campaigns, Plan initiatives, integration and specialty programs)
g. Establishes vendor specific performance goals based on enrollee health outcomes
h. Works closely with the Network Contracting Directors to monitor for financial solvency for subcontractors with financial risk
i. Performs any other subcontractor monitoring or oversight activity necessary to ensure exceptional performance and compliance

To ensure comprehensive oversight, communication, and timely implementation of interventions, the Director, Vendor Performance Oversight holds periodic operational meetings with the DRMs. The focus of the meetings is the review and analysis of the prior period subcontractor performance against SLAs and other contract requirements, and subsequent development of corrective interventions as appropriate. The results and actions identified during the monthly meetings are presented to the DVOC.

V. Delegated Vendor Oversight Committee (DVOC)

The DVOC is a committee that monitors the health plan's subcontractor delegated services and performs oversight of quality and service activities delivered and managed by subcontractors.

Purpose

- Provide oversight of delegated vendor activities that relate to utilization management, credentialing, customer service (member and/or provider), contract compliance, and claims processing and payment. This is accomplished through a comprehensive, Plan-wide system of ongoing, objective, and systematic monitoring (oversight program).
- The Director, Vendor Performance Oversight in conjunction with the DRMs is responsible for the vendor relationship maintenance and the monitoring of delegated vendor performance in accordance with the contract requirements.
- The DRMs are responsible for the monitoring of performance for assigned vendors. DRMs collaborate with the Business Owners from respective areas to obtain recommendations and assist with the development of corrective action plans (CAPs) if the vendor fails to meet the established performance targets. The CAPs are created in partnership with Delegation Compliance, Regulatory Compliance and Internal Audit Consultant Group. One or more of these teams are required to be engaged to invoke a formal CAP. All CAPs are issued and captured from the central partner repository, Enterprise Solution Point (ESP). Opportunities for vendor performance improvement and enhancement are identified and resolved during

the Joint Operational Committee (JOC) and other meetings with the vendors, and the outcomes are then presented to the DVOC.

- The oversight program will ensure that delegated services meet the health Plan standards for care and customer service, as well as the standards of the Department Of Insurance, requirements of state and federal regulatory agencies, and applicable accrediting agencies such as National Committee for Quality Assurance (NCQA).
- The DVOC reports its findings to the Quality Improvement Committee (QIC).

The scope of the DVOC includes, but is not limited to:

- Establish appropriate delegation oversight mechanisms, procedures, and tools
- Oversight of delegated services by the review of subcontractor activity performance metrics/reports
- Review of pre-delegation and annual delegation audit findings
- Recommendation for the issuance of CAPs as appropriate
- Review of annual program descriptions, and evaluations for subcontractors with delegated Utilization Management (UM)
- Review and follow up on CAP progress and completion
- Perform annual evaluation of the Delegated Vendor Performance Oversight Program and make recommendations for enhancements

The DVOC membership comprises of DRMs, Network Contracting Directors, the Medical Director, and representatives from operational areas within the Plan. The committee is chaired by the Director, Vendor Performance Oversight and meets quarterly at minimum and more frequently as needed.

VI. Annual Evaluation

Humana evaluates the Delegated Vendor Performance Oversight Program annually to ensure it remains current and appropriate, including the program structure, scope and level of senior leadership involvement. The evaluation and any enhancements are presented to the DVOC for approval.

Standard Operating Procedure

Financial Due Diligence (FDD)

INTRODUCTION

1.1 Purpose of this Document

This Operating Procedure Manual details the step by step process of financial information collection, financial data entry and completion of the **Financial Due Diligence Process (FDD) scorecard.** It is intended to be used as a training and reference tool for staff that will be deployed in the above process. It is used in conjunction with the Training Manual & User Manual to promote understanding and reduce the learning curve for new staff as deployed in the process.

1.2 Process Scope

General Scope:

1.2.1 IN SCOPE

- Investigate & rate via scorecard a new vendor's financial information, prior to contracting.

2 TERMS & DEFINITIONS

S. No	Term	Definition
1.	EPVS	Enterprise Procurement & Vendor Services. Humana's site to access SharePoint and Project requests
2.	SLA	Service Level Agreement
3.	KPI	Key Performance Indicators
6.	SharePoint	Humana's intranet. EPVS has a departmental site on Humana's SharePoint
7.	Outlook ("Vendor Info" mail box)	Separate folder inside the Outlook email which includes the emails sent by a Humana representative
8.	Requestor	Humana representative that will submit a request into the system to be processed.
9.	FDD	Financial Due Diligence

3 SLA & KPI

Supplier will complete the FDD template within 2 (two) business days of receiving vendor's financial statements.

4 STEP BY STEP PROCEDURE

4.1 Detailed activity table

Step #	Activities	Expected Result	Action Required, If no Result	Fig Ref No:
Financial Due Diligence is required in order to investigate and rate via scorecard a new vendor's financial situation, prior to signing product/service contracts. Note that FDD's may be requested on an existing vendor.				
1.0	Supplier Analyst will receive an FDD request through the FDD SharePoint EPVS Secure Site (submitted by an EPVS associate or a Business unit). Supplier Analyst will enter the FDD SharePoint EPVS Secure Site once a day to check if there are any Financial Due Diligence requests under the **"Open"** status. If there is a new FDD request, then Supplier Analyst will start working on it keeping the comments section updated. **FDD site link:** go/fddstatus			1
2.0	Supplier Analyst will investigate the Vendor's financial information. If the vendor is a **public company** Supplier Analyst will be able to find their financial information from online sources such as **Google Finance, Yahoo Finance, Nasdaq, Reuters.com, morningStar.com, USATODAY.com, Marketwatch.com or Scotttrade.com, SEC.gov**. This can be achieved by inserting the vendor's name in such sites. (Please refer to figure #1). Supplier Analyst will update the comment section in go/fddstatus with date of email sent to vendor.	Find new vendor's financial information online.	Contact the vendor and request their financial information be sent via email to your project email.	2

Step #	Activities	Expected Result	Action Required, If no Result	Fig Ref No:
2.1	If the new vendor is a **private company**, an automated email will be sent to vendor contact requesting the necessary financial information. If vendor is unresponsive, then Supplier Analyst will need to request vendor's financial information via email, sending follow up emails every 3 business days. If the vendor does not respond to the 3rd follow up, then Supplier Analyst will mark the vendor as "Unresponsive" as explained in 1.0 above. The financial information to be requested is **3 years** of vendor's **audited financial statements** including **Income Statement, Balance Sheet and Statement of Cash Flow**. The vendor will be notified that this request is for internal use only and that the information will not be shared with anyone and once analysis is completed, the information the vendor provided will be destroyed. If the vendor will not provide audited financial statements, Supplier Analyst will complete the Financial Due Diligence Summary to report an Overall Rating of "Red", noting that requested financial information was not made available. If the vendor provides unaudited reports, the vendor will receive a ranking that is one level lower than the scorecard calculates. (Ex: green rating would = yellow rating).	Receive new vendor's financial information via project email.	Contact the vendor and request their financial information be sent via email to your project email.	
2.2	Once all the financial information has been obtained from the vendor or from the financial website, start completing the applicable FDD template:	Complete the information required in the FDD template		 Private Comp FDD Template u Public Company Template updat

Step #	Activities	Expected Result	Action Required, If no Result	Fig Ref No:
3.0	The FDD Template contains multiple sections: Template section: • **Date of Financial review** The date in which the Supplier Analyst completed the FDD template. • **Address** This information is found in the Company Profile tab in provided websites. • **BIN# (Bank Identification Number)** This number will be provided by vendor upon set-up in iSupplier. It is not needed for this form. • **Parent Company and Comments** If provided, enter on this form. Not all companies have a Parent Company. Leave blank if not available. • **Line of Business** For Public companies, this information will be available on the online finance site (such as Yahoo Finance or Google Finance). For Private Companies Supplier Analyst will need to check the documentation provided by the vendor or check the vendor website. (See fig. 3) • **Year Started**	Enter all the information required for each section within the FDD Template.		3

Step #	Activities	Expected Result	Action Required, If no Result	Fig Ref No:
3.1	• **Current Stock Price** For public companies, Supplier Analyst can obtain this information from the Summary tab in Yahoo finance. For private companies, this information should be in the documentation provided by the new Vendor. • **Market Cap** For private companies, Supplier Analyst can obtain this information from the Summary tab in Yahoo finance. • **No of Employees** This information can be obtained from the Business Summary (above), otherwise, it may be found on the vendor's website. • **1Y target estimate** The Supplier Analyst can obtain this information from the webpage as shown above. • **Major Clients** The Supplier Analyst can obtain this information from the Vendor's website. • **Major Competitors** This information may be obtained from the Competitors tab in Yahoo Finance.			

Step #	Activities	Expected Result	Action Required, If no Result	Fig Ref No:
	• **Financial Statements Tab** To complete the Financial Statements Tab of the FDD template, the Supplier Analyst will need to go to the Financials Tab in Yahoo Finance. • **Balance Sheet table** On the Balance sheet table of the FFD template, match the lines with the balance sheet in Yahoo finance and fill in the blanks. • **Cash Flow** On the Cash Flow table of the FFD template, match the lines with the cash flow in Yahoo finance and fill in the blanks. • **Income Statement** On the Income Statement sheet table of the FFD template, match the lines with the income statement sheet in Yahoo finance and fill in the blanks.			4 5 6

Step #	Activities	Expected Result	Action Required, If no Result	Fig Ref No:
4.0	Once Supplier Analyst has completed all the fields with the information, they will save the template and update the **"Supplier health Score"** column for FDD Rating with result of financial analysis. Supplier Analyst will email the FDD Rating to the requester upon completion and save a copy on the EPVS SharePoint site in the following location: http://teams.humana.com/sites/procurement_team/Shared%20Documents/Forms/AllItems.aspx?RootFolder=%2Fsites%2Fprocurement%5Fteam%2FShared%20Documents%2FSupplier%20Compliance%20Data%2FFinancial%20Due%20Diligence&FolderCTID=0x0120009FE081E54AFF0442838C3A978FBA5A5C&View={7BDAE0C5-C819-461F-803F-0D96C35BE30A} or follow this path to the correct folder: Team Documents > Supplier Compliance Data > Financial Due Diligence (Note: If the FDD Rating is based on publicly available financial information, the Financial Due Diligence Summary will include the underlying financial information. If FDD Rating is based on information provided by the prospective vendor, the Financial Due Diligence Summary will not reflect the underlying financial information)	Upload the Financial due Diligence information to Share Point.		
	****IMPORTANT NOTE: ONCE Supplier ANALYST HAS COMPLETED THE FDD TEMPLATE AND HAS THE OVERALL RATING AVAILABLE, MAKE SURE TO CONVERT TO PDF THE SUMMARY TAB AND SHARE THE PDF DOCUMENT WITH REQUESTOR TO AVOID DISCLOSING ANY VENDOR'S CONFIDENTIAL INFORMATION****

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 27 – Subcontractor Oversight (Statewide):

The respondent shall submit a sample contingency plan it would enact in the event a subcontractor to which the plan has delegated authority to manage utilization and pay providers on behalf of the plan, files for bankruptcy or otherwise becomes unable to continue operations due to lack of financial resources.

Response:

Humana understands the importance of contingency planning, especially in situations where we use subcontractors to manage utilization and pay providers on behalf of the plan. Subcontractors sometimes file for bankruptcy or become otherwise unable to continue operations because of a lack of financial resources. While we consider financial solvency and organizational reliability when selecting subcontractors, uncertain market conditions can lead to insolvency or bankruptcy and become a potential failure point for many organizations.

That's why we coordinate our robust subcontractor oversight structure across multiple teams at both national and local levels. As part of this effort, Humana requires every subcontractor to meet all Agency for Health Care Administration (AHCA) performance requirements related to its services. We assign a Humana Relationship Manager to each subcontractor, who in coordination with other key market stakeholders, is responsible for managing the subcontractor relationship. If our subcontractor oversight process reveals a claims and utilization subcontractor is at a risk level for financial insolvency that is of concern, the relationship manager will develop a subcontractor-specific contingency plan. This plan will identify alternative external services options and evaluate internal business solutions. Unless the situation requires a more expedient resolution, relationship managers develop alternative plans within sixty (60) days of identifying a problem that include all pertinent evaluation points such as enrollee impact, provider experience, staffing plans, alternative subcontractor evaluation, system evaluations, timeframe, and internalization of subcontractor capabilities.

In the unlikely event that our proactive process does not identify an imminent closure and we receive notice of a subcontractor bankruptcy or deemed insolvency, we immediately convene all affected areas and support teams to:

- Develop a specific strategy absent a formal bankruptcy declaration
- Follow laws and regulations around letters of credit outstanding
- Understand the subcontractor's liability with respect to its downstream payees

We recognize continuity of care is of the utmost importance, which is why we invoke appropriate claims payment processes to ensure the flow of services or goods while taking care that the subcontractor or unpaid provider is not perpetrating fraud. To the extent we would not be hindered by a bankruptcy stay or subcontractor agreement as debtor in possession, we engage with the subcontractor early and as often as possible to obtain accounts payable and other relevant information regarding unpaid claims of providers and suppliers touching Humana enrollees. These subcontractor activities may also include requesting visibility into providers' accounts to establish valid claims, negotiation of unpaid claim amounts, manual adjudication of those claims, joint checks made payable to the subcontractor and the provider or supplier, and

confirming with enrollees that they have received the goods or services evidenced by the claims.

The Florida Market President will work with the legal department to consult and understand which business activities can continue with the subcontractor. This may include taking immediate actions against the subcontractor, interacting with enrollees and providers, collecting debt, and monitoring any asset disposition. We will engage outside counsel on proper timing to represent us in bankruptcy court proceedings and to provide counsel on state and federal insolvency matters. We will also consult with Humana Medicaid Finance and other national finance teams to address letter of credit draws, other guarantees, or assets we might access for incurred and unreported claims.

Ultimately, as we complete the work to verify and pay claims on the front end, our teams and processes also all provide the standard fraud detection and management activities, which we describe in detail below.

==========
1. The extent to which the respondent has outlined the data sources it would use to trigger the respondent to put the contingency plan into play in advance of the subcontractor filing for bankruptcy or otherwise becoming unable to continue operations due to lack of financial resources.
==========

The Financial Solvency Risk Report (Risk Report), an output of Humana's rigorous Delegate Financial Solvency Review Process, will serve as the primary data source of potential triggers to invoke the Subcontractor Contingency Plan for Florida's claim subcontractors. Humana can accelerate implementation of the contingency plan using a combination of processes, tools, and resources including:
- Delegate Financial Solvency Review Process and Risk Report
- Failure Modes and Effects Analysis (FMEA) Tool
- Florida Market Directors
- Relationship Managers
- Florida Director, Vendor Performance Oversight
- Deterioration related to contract compliance

DELEGATE FINANCIAL SOLVENCY REVIEW PROCESS AND RISK REPORT

The established Delegate Financial Solvency Review Process ensures that Humana regularly monitors the financial solvency of all subcontractors who process claims. In 2004 we developed a Solvency Task Force (STF) to discuss financial results of claim subcontractors after Humana paid significant claims costs when a subcontractor became insolvent. The STF includes representatives from Risk Management, Internal Audit, Senior Products, National Network Operations, Delegation Compliance, Finance, and Florida and other Market Operations.

The STF uses a scoring methodology that assigns audit scores and financial results a risk value of low, moderate, or high, which we then multiply by the weighted score for that category. We add the score for each category to calculate the risk score classified as low, moderate, or high risk. The Financial Solvency Risk Report includes information on the number of enrollees,

capitation payments, and financial guarantees. The Risk Report will serve as the primary data source for implementing the Subcontractor Contingency Plan. Attachment 27-1: Risk Report has subcontractor names and other confidential information removed.

Delegation Compliance, in collaboration with the Financial Solvency Committee, evaluates the financial stability of the provider group/entity prior to delegation, quarterly and annually. While we update the financial information for all subcontractors annually, we receive information on a rolling basis. For example, a subcontractor's audits may be submitted during one (1) quarter and financial statements in another. We evaluate all subcontractors quarterly to ensure we capture and evaluate all financial information updates regularly. Delegation Compliance collects the following information, which Market Finance Directors review and report to the Financial Solvency Committee.

RISK REPORT DATA SOURCE COLLECTION INCLUDES:

- Most recent audit report and supporting financial statements, including income statements, cash flow, and balance sheets. If not publicly available, we request the audited financial statements from the subcontractor;

- Opinion page from the independent auditor's report, which we will request if not publicly available;

- Working capital position (short-term financial health status);

- Current ratio (current assets divided by current liabilities), which we calculate in the Risk Report;

- Utilization management denial rates; and

- Contract compliance metrics, which vary by subcontracted category.

RISK REPORT TRIGGERS FOR THE CONTINGENCY PLAN
The goal of the Risk Report is to illuminate moderate and high risks. We strive to remediate moderate risks before they become high risks. The established Risk Report captures and scores the following compliance and financial solvency information:
- Negative Net Income/Net loss
- Negative Cash Flow
- Total Liabilities exceeding Total Assets
- Current Ratio less than 1
- Checks to the provider that are not cashed within 30 days of issued date
- Checks that are post dated
- Large changes in utilization denial rates
- Letter of Credit status
- Interest Payment Accuracy rating of less than 99.9%
- Member Denial Accuracy of less than 95%
- Cycle Time of less than 95%
- Cash Flow at 0
- Net Income at 0
- Total Liabilities to Total Assets rating of 0

- Current Ratio of less than 1
- Validity of Letter of Credit

Today, if any of the above reflects negatively on a subcontractor's financial standing, we will notify the subcontractor via a financial solvency corrective action plan (CAP). While this CAP process will continue, we will enhance it through the proactive capture and management of financial insolvency triggers of our Subcontractor Contingency Plan.

PROACTIVE MANAGEMENT OF MODERATE RISKS
Our goal is to proactively manage moderate risks to prevent them from becoming high risks. Our process indicating moderate risk will trigger the contingency plan and the Failure Modes and Effects Analysis (FMEA) tool will capture all relevant data.

LEVERAGING RISK REPORT TRIGGERS TO INVOKE THE CONTINGENCY PLAN
The FMEA tool will capture these risk data triggers and inform the contingency plan.

FAILURE MODES AND EFFECTS ANALYSIS TOOL (FMEA)

Informed by the Risk Report, Humana will apply the FMEA tool to capture, assess, and proactively remediate exposure to potential risks or failure points, and to serve as a subcontractor contingency planning tool.

Based on Six Sigma methodology, FMEA is a system for analyzing a service to identify potential failures in terms of severity, frequency, and detection.
- Severity – How severely the error affects enrollees or the business
- Occurrence – How often the error occurs
- Detection – How likely it is that the error will be detected

Subject matter experts evaluate the three (3) criteria above and assign scores of one (1) through ten (10), with one (1) being the best and ten (10) being the worst. We multiply the individual scores to produce a Risk Priority Number (RPN), which we then rank from highest to lowest. The team evaluates the highest RPNs to identify the root cause, and then develops and communicates solutions to reduce or eliminate the risk associated with each failure.

Attachment 27-2: FMEA Tool Example shows how the tool will be integral to the Subcontractor Contingency Plan as we use it to thoughtfully assess risks and plan for success. The following leaders will take ownership of the internal and external processes and communications to ensure we use the FMEA tool to its fullest:

The Market President, who oversees, Florida will be responsible for overseeing the ongoing utilization and management of the Contingency Plan FMEA tool. At monthly operational meetings (as needed) and quarterly Delegated Vendor Oversight Committee (DVOC) meetings, the Director, Delegated Vendor Oversight will provide status on the financial solvency issues, review corrective interventions, and report results as defined in the FMEA tool.

RELATIONSHIP MANAGERS FOR FLORIDA SUBCONTRACTORS

Relationship Managers for the Florida subcontractors will be accountable for meeting with individual subcontractors and providing the governance required by Florida Medicaid. Each Relationship Manager will be accountable for managing the contingency plan, inclusive of participation in the quarterly financial solvency committee. They will use the FMEA tool to support conversations around the moderate risks in compliance and financial solvency. Relationship Managers will report the risk discussions to their Florida Market Directors, who will oversee updates to the FMEA tool. If an issue arises, the Florida Market Director attends the monthly operational meeting to address the issue.

FLORIDA DIRECTOR, DELEGATE VENDOR OVERSIGHT

The Florida Director, Delegate Vendor Oversight is a natural focal point to collectively and collaboratively monitor and address performance needs in partnership with Relationship Managers and Florida Medicaid operations leads. The Director, Delegate Vendor Oversight also serves as the Delegated Vendor Oversight Committee (DVOC) Chair. As such, this individual will be well positioned to engage Humana's Internal Audit Consulting Group (IACG) on a periodic basis to assess the impact and effectiveness of the contingency plan process. The IACG is a consulting practice providing independent, objective assurance, consulting, and business advisory services that evaluate and improve the effectiveness of risk management, control, and governance processes.

==========

2. The extent to which the respondent outlines a communications strategy in the contingency plan.

==========

The Communication Plan (Attachment 27-3) describes our communication strategy in the contingency plan. This plan provides details regarding how we will communicate internally and externally with our enrollees, providers, and downstream subcontractors should a subcontractor file for bankruptcy or otherwise become unable to continue operations because of a lack of financial resources. Relationship Managers provide ongoing communication and serve as a point of contact for downstream subcontractors. Specifically, Relationship Managers answer frequently asked questions; provide claim submission and fee-for-service contracting process information; and offer contracting opportunities as part of our continuity of care plan to downstream subcontractors. The Florida Account Executive, Medicaid Administration, serves as the liaison between AHCA and Humana.

The Subcontractor Contingency Plan and FMEA tool will leverage the communication plan while adding proactive moderate risk identification, assessment, and planning. The FMEA will also capture internal and external communications and action items.

In addition, through established monitoring and oversight practices, use of the FMEA tool, and planned interventions, Humana will ensure ongoing communications with subcontractors. The monthly reviews will spot insolvency issues and improve our capacity to proactively remediate issues. Established escalation processes in DVOC and the Quality Improvement Committee (QIC) further improve our responsiveness to address financial insolvency matters.

LEVERAGING PAST EXPERIENCE

In our experience with a subcontractor who filed for bankruptcy or was otherwise unable to continue operations because of a lack of financial resources our communication strategy included contact with enrollees, providers, and the subcontractor. Relationship Managers, both then and now, are accountable for subcontractor relationships, communications, and ongoing support.

We developed and disseminated enrollee and provider communications to direct them on next steps and provide them with contact numbers. We placed copies of these communications in Humana's Contract Management System for access by all Humana care centers to ensure the centers knew how to direct both enrollees and providers calling in about the situation. We also provided enrollee and provider call center teams with a message wheel, a tool designed to help the care center teams maintain a consistent message to all callers. We provided timely and accurate communication and information to our enrollees and providers across all platforms.

To secure our own contracts, we coordinated with the subcontractors' contracted providers. We coordinated with hospitals and enrollees for continuation of care needs, including proactively identifying enrollees who needed critical ongoing care such as oxygen tanks. We contacted hospitals weekly to coordinate the home healthcare required by discharged individuals and to provide them with our updated network. These actions ensured our enrollees were guaranteed continuity of care.

We worked with the subcontractor to acquire all open authorized reports identifying enrollees at risk for current, open services. We worked with the Clinical Intake team and Health Services to ensure authorization processes, including authorization extensions, were in place to avoid enrollee service disruption. We also put a system business rule in place for ninety (90) days to allow services without an authorization, specific to providers who were newly contracted directly with Humana and going through the contract loading process.

Humana's strong experience in relationship management and established communication processes will contribute to the success of Florida's proactive contingency plan for claim subcontractors.

==========

3. The extent to which the contingency plan includes strategies for ensuring providers get paid for situations where there were open authorizations.

==========

Humana's Contingency Plan includes ways to ensure we pay providers in situations where there are open authorizations. The Delegation Services agreement (Attachment 27-4) establishes a contractual arrangement between Humana and an entity that sets forth the legal obligations both parties mutually agree upon. The delegated claims attachment specifically states the subcontractor's obligations regarding claims performance, access, audit and oversight.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SUBCONTRACTOR OBLIGATIONS

Humana requires a subcontractor to provide a financial guarantee prior to implementing any delegation of claims processing, including but not limited to a letter of credit, to ensure the subcontractor's continued financial solvency and ability to adjudicate and process claims. We also require subcontractors to process and pay claims to maintain a surplus account to meet their obligations.

In addition, Humana requires subcontractors to provide financial information upon request, as proof of their continued financial solvency. Financial information submitted must include recent audited financial statements (balance sheet, statement of operations, and cash flow statement) if the subcontractor has not been audited. The subcontractor's chief financial officer or owner must certify the accuracy of the documents by signing the financial statements.

Subcontractors also agree to permit any regulatory agency to examine, at any time, information the agency deems relevant to determine financial solvency or to review their ability to continue to perform the subcontracted services.

CLAIMS PERFORMANCE REQUIREMENTS

Subcontractors are obligated to pay contracted providers under the terms of the contract between the subcontractor and the provider. Subcontractors agree within the delegation documents that Humana maintains the ultimate responsibility for the accuracy of claims processing and adjudication for enrollees, and retains the right to implement a Corrective Action Plan (CAP), suspend, or terminate any portion in the event there is a breach of the Claims Attachment or noncompliance with state or federal law, accreditation organization requirements, or subcontractor's policies, procedures and claims performance requirements.

CLAIMS, ACCESS, AUDIT, AND OVERSIGHT

Humana ensures that subcontractors establish, enforce, and monitor solvency requirements that provide assurance of the subcontractor's ability to meet its obligations. The Delegation process will monitor metrics, Service Level Agreements (SLAs), tracking, and reconciliation, along with the quarterly risk assessment process. Subcontractors agree that we can monitor the accuracy, quality, timeliness, and effectiveness of their claims adjudication and processing functions and activities through periodic reviews and audits. This includes requested access to any and all source documentation, and all other documents, processes, procedures, systems, and other information related to enrollee claims processed, paid, denied, or pending.

If Humana issues a CAP, the subcontractor has fourteen (14) calendar days to provide a written response describing how it will meet the requirements found to be noncompliant, including the prospective date of compliance, which they must remediate within ninety (90) days or less. The subcontractor will be subject to a capitation payment penalty each month until the CAP is resolved.

Our Florida Medicaid Subcontractor Monitoring and Oversight procedure establishes subcontractor monitoring and oversight activities by the Medicaid Market, including:

- Holding subcontractors accountable for compliance with State Contract requirements and SLAs;

- Reporting findings, CAPS, and follow up to the DVOC;

- Monitoring the performance trend of subcontractors over time;

- Reporting monitoring results to AHCA's Contract Manager, fourteen (14) business days after the end of each month or as specified;

- Participating in all key audits associated with the subcontractor to facilitate full performance transparency and coordinated follow up;

- Supporting escalation of performance issues including penalty assessments, de-delegation evaluations, breach investigations, and like issues; and

- Engaging the appropriate subject matter experts to assist in addressing issues or exploring opportunities to maximize relationship value.

PROVIDER CONTRACT REQUIREMENTS

Humana includes an exculpatory clause, which survives provider contract termination, in all contracts regarding breach due to insolvency. This clause ensures that our enrollees will not be held liable for the subcontractor's debts.

==========

4. The extent to which the contingency plan includes strategies to prevent provider fraud and abuse in situations where a subcontractor files for bankruptcy or otherwise becomes unable to continue operations due to lack of financial resources.

==========

At Humana, we proactively seek to prevent fraud, waste, and abuse (FWA) in every interaction. FWA expectations, training, and requirements are part of our core on-boarding process for all new and existing parties with which Humana engages, including subcontractors. In addition to our essential standards, as set forth in our Compliance Policy for Contracted Health Care Providers and Business Partners, our contingency plan includes extensive FWA oversight, monitoring, and strategies to prevent provider fraud and abuse in situations where a subcontractor files for bankruptcy or otherwise becomes unable to continue operations because of a lack of financial resources.

At the time we receive notice of an imminent closure, insolvency, or bankruptcy of a subcontractor, we immediately convene all affected areas and support teams to:

- Develop a strategy absent a formal bankruptcy declaration
- Understand laws and regulations around letters of credit outstanding

- Understand the subcontractor's liability with respect to its downstream payees

Because continuity of care in accordance with state law is critically important, we also invoke sophisticated claims payment processes to ensure the flow of services or goods while ensuring that the subcontractor or unpaid providers do not perpetrate fraud. To the extent we are not hindered by a bankruptcy stay or subcontractor agreement as debtor in possession, we would engage with the subcontractor early and as often as possible to obtain accounts payable and other relevant information regarding unpaid claims of providers and suppliers touching Humana enrollees. These subcontractor activities may also include requesting visibility into providers' accounts to establish valid claims, negotiation of unpaid claim amounts, manual adjudication of those claims, joint checks made payable to the subcontractor and the provider or supplier, and confirming with enrollees that they received the goods or services evidenced by the claims.

We consult the market attorney for the relationship state and other subject matter experts in the legal department to understand which business activities can continue to take place with the subcontractor, including immediate actions we can take to move against the subcontractor, interact with enrollees and providers, collect debt, and monitor any asset disposition. We engage outside counsel on proper timing to represent us in bankruptcy court proceedings and provide counsel on state and federal insolvency matters. We also immediately consult Humana Medicaid Finance and other national finance team members to address letter of credit draws and other guarantees or assets we might access for incurred and not reported claims.

COMPLIANCE POLICY

Our Compliance Policy for Contracted Health Care Providers and Business Partners, which we provide to all subcontractors, communicates our strong organizational commitment to conducting business ethically; provides training requirements and schedules (e.g., ethics, FWA, compliance); and describes communication lines and disciplinary actions. We require our healthcare providers and business partners to comply with the guiding principles set forth within this policy.

Humana requires healthcare providers and business partners to review our Ethics Every Day for Contracted Health Care Providers and Business Partners policy, and to complete the Centers for Medicare and Medicaid Services (CMS) general compliance and FWA training within ninety (90) days of the effective date of the contract, and annually thereafter.

In addition, we also expect healthcare providers and business partners, within ninety (90) days of the effective date of the contract and annually thereafter, to:

- Provide compliance policies and standards of conduct to associates and any downstream entities;

- Provide CMS's general compliance and FWA training to associates and any downstream entities. Training documentation should include the time, attendance, topic, certificates of completion (if applicable), and test scores of any tests administered;

- Verify they have met the FWA training requirement. Otherwise, remove and replace any associates and any downstream entities that did not complete the FWA training; and

- Provide specialized compliance training on issues posing FWA risks based on an individual's job function when appropriate.

ETHICS EVERY DAY

Our Ethics Every Day for Contracted Health Care Providers and Business Partner policy for contracted healthcare providers and business partners outlines our ethics expectations. The document defines ethics at Humana and provides information regarding resources, Ethics Office contact information, FWA, conflicts of interest, privacy, and laws/regulations. Please see Attachment 27-7: Ethics Every Day for more details.

FINANCIAL SOLVENCY CONTINGENCY PLAN

The contingency plan includes strategies to prevent provider FWA when subcontractors are facing financial insolvency issues. The contingency plan will draw information from our departments that combat FWA. We have multiple departments that work together to combat FWA. While all departments collaborate internally, they each manage their own case work independently.

SPECIAL INVESTIGATIONS UNIT (SIU) AND PROVIDER PAYMENT INTEGRITY (PPI)

Humana has developed procedures for reporting instances of FWA reviewed by the SIU and PPI departments to external agencies as required by each agency. The Claims Cost Management (CCM) Compliance team supports both Special Investigations Unit (SIU) and Provider Payment Integrity (PPI) to ensure all regulatory reporting is completed in a timely and compliant manner, and that each department stays abreast of changes to federal and state regulations. The CCM Compliance team, with support from Humana's law department, is also responsible for responding to subpoenas and requests for information from government agencies as they pertain to FWA reviews.

SIU serves as Humana's primary investigative arm and is responsible for complex cases of fraud and abuse. Its processes include data analytics to identify trends, fraud, schemes, and potential fraudulent activity that may warrant further investigation. The SIU investigates fraud at all levels, from providers to agents to enrollees.

SIU also implements an Anti-Fraud Plan, which continuously monitors all lines of business for potential FWA activity. SIU monitors and audits the activities of associates, enrollees of its health plans and insurance policies, health care providers, and business partners. In addition, healthcare providers and business partners are responsible for maintaining their own comprehensive plan for detecting, correcting, and preventing FWA. Humana also conducts monitoring and auditing activities for its relationships with healthcare providers and business partners. The activities monitored and audited may include but are not limited to both operational performance and compliance requirements applicable to the performed functions we describe throughout this response.

Humana is actively involved with anti-fraud organizations, such as the National Health Care Anti-Fraud Association, the Healthcare Fraud Prevention Partnership, and the Midwest Anti-Fraud Insurance Association. Humana cooperates with federal, state, and local authorities in the investigation of potential FWA when appropriate.

Humana's PPI department uses complex data analytics including outlier analysis, trending, and link analysis to identify potential fraud, waste, and abuse. PPI reviews all leads for FWA, and routes each allegation to the appropriate area for further review. PPI routes fraud allegations, for example, to Humana's SIU department to investigate. The department also conducts pre-payment and post-payment audits to identify potential overpayments. In the event PPI substantiates FWA, it may refer the provider to the appropriate government agencies. PPI also provides recommendations for process and system improvements to proactively prevent overpayments.

RISK ADJUSTMENT INTEGRITY UNIT (RAIU)
The RAIU ensures integrity within the government programs administered by Humana, as it relates to risk adjustment. Its focus is detection and investigation of FWA in Humana's provider network that involve capitated payment models. The RAIU performs investigations on case referrals from various sources, including but not limited to internal and external legal counsel, SIU, Hotline, and Outlier Data Analysis.

OTHER DEPARTMENTS
The contingency plan also collects information from the following departments, which work independently, collectively, and with the previously mentioned SIU, PPI, and RAIU teams to combat FWA.

- Humana Claims Cost Management (CCM) oversees the following four (4) platforms to monitor claims, encounter payments, and limit exposure to FWA:
-- Expense Mitigation, the flagship platform, monitors more than three point four (3.4) million claims each year.
-- Value-Based Payment Monitoring detects FWA among providers submitting encounter and risk adjustment data.
-- Revenue Preservation identifies enrollees for whom CMS is improperly compensating Humana.
-- Underpayment Distribution enables us to quickly reprocess incorrect expense recoveries and claims underpayments that our provider partners identify.

- Clinical Integrity Review (CLI) is responsible for medical services substantiation and clinical necessity auditing, recovery, and loss prevention.

- Medical Coding Integrity Review (CI) updates medical coding standards validation, billing abuse and waste detection, and proactive billing correction.

- Coordination of Member Benefits (COB) reviews proactive benefit coordination for enrollees who have Humana as their secondary insurance coverage.

- Service Fund Integrity Review (SFI) is responsible for provider service fund payment issue detection, recovery and loss prevention.

- Subrogation Capture (SUB) identifies, investigates, and coordinates payments with third-party medical liability holders.

SUMMARY

Humana strives to partner with subcontractors that adhere to our established compliance thresholds, contract requirements, and other requirements set forth in this response. This helps us provide our enrollees with a simplified experience, one focused on integrated care delivery for improved quality and outcomes. The contingency plan requirements, along with our continued processes, tools, and resources, will set the expectations for subcontractor governance to ensure effective service delivery without added noise and complexity. With Humana's proven track record of successful service delegation to subcontractors for the current Florida Medicaid Managed Medical Assistance (MMA) and Long-Term Care (LTC) contracts, these rigorous strategies will continue to safeguard against financial insolvency for the new Florida contract.

Evaluation Criteria:

1. The extent to which the respondent has outlined the data sources it would use to trigger the respondent to put the contingency plan into play in advance of the subcontractor filing for bankruptcy or otherwise becoming unable to continue operations due to lack of financial resources.

2. The extent to which the respondent outlines a communications strategy in the contingency plan.

3. The extent to which the contingency plan includes strategies for ensuring providers get paid for situations where there were open authorizations.

4. The extent to which the contingency plan includes strategies to prevent provider fraud and abuse in situations where a subcontractor files for bankruptcy or otherwise becomes unable to continue operations due to lack of financial resources.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

Attachment 27-2: FMEA Tool

Contingency Plan Guidelines

Contingency Planning via Failure Modes Effects Analysis (FMEA) – FMEA Guidelines

Purpose

In the context of Subcontractor Contingency Planning, FMEA is a system for analyzing a service to identify potential failures in terms of severity, frequency, and detection.

- Severity – How severely the error affects Customers, Enrollees, or the business
- Occurrence – How often the error occurs
- Detection – How likely it is that the error will be detected

An FMEA can be used to evaluate all potential points of failure or just those with the greatest probability of failure.

Process

- Gather process Subject Matter Experts (SMEs) including those familiar with the service(s) in question, including downstream SMEs who can provide helpful input.
- Evaluate the three criteria scales at the bottom of the template and agree on how the 1, 5, 10 scores will apply for each of the three criteria (Use "Criteria Scoring" tab to document)
- It is OK to use any number between 1 and 10 if team agrees that is appropriate
- Agree on the score to assign for each error and each criteria, based on your agreed-to scoring criteria

Results

- The Risk Priority Number (RPN) auto-calculates = Severity X Occurrence X Detection Scores
- When all errors have been scored, sort table by RPN highest to lowest
- Evaluate highest error risks and determine which ones are best to address

Next Steps

- Identify the root cause of the highest error RPNs using cause and effect or 5 Whys tools
- Establish solutions to reduce or eliminate the risk associated with each failure

Contingency Plan (FMEA)

FL ITN NOTE: The Failure Mode and Effects Analysis tool will be utilized by Relationship Managers to proactively manage financial solvency risks for each claim delegate. For example purposes, this FMEA lists all seven (7) risk elements that are scored in the quarterly Financial Solvency Risk Report, an output of the Humana Delegate Financial Solvency Review Process. The "Potential Issue or Risk" column shows the Moderate Risk metric from the risk report that triggers the Contingency Plan and use of the FMEA tool.

Subcontractor Name: We-Pay-Providers

Contingency (aka FMEA) GRADING CRITERIA

FMEA Category	1	5	10
Severity			
Occurrence			
Detection			

EXAMPLE

FMEA GRADING CRITERIA – Enrollee-centered Service

FMEA Category	1	5	10
Severity	Impacts just a few enrollees	Impacts a material subset of membership (~25%) in a given geography	Impacts more than half of all enrollees in a given geography
Occurrence	Rarely, if ever	Periodically	Often
Detection	Automatically detected	Detected through routine oversight	Identified through a complaint or grievance

Attachment 27-3: Communication Plan

Subcontractor Contingency Communication Plan

Accountable Business Area	Communicate What	Purpose	Frequency/ Duration	Communication to	Communication Methods
Humana (Internal)					
Provider Contracting	Subcontractor Issue and Contingency Plan Informational Email	Inform leadership of subcontractor issue and contingency activation plan	Once	Business Leaders	Email
Provider Contracting	Contingency Plan Activation Kick-off	Inform reason for contingency plan activation, identify stakeholders, share project schedule, and assign impact analysis and business area specific action plan	Once	Provider Contracting, Hospital Contracting, MSO Operations, Health Services, Service Fund, Finance and Medicaid Operations	Meeting
Provider Contracting	Impact Analysis and Business Area Action Plan	Opportunity for each impacted business area to share impact and action items to mitigate risk	Once	Provider Contracting, Hospital Contracting, MSO Operations, Health Services, Service Fund, Finance and Medicaid Operations	Meeting
Provider Contracting	Impact Analysis and Business Area Action Plan Updates	Opportunity for each business to provide updates and collaborate with other impacted areas	Biweekly	Provider Contracting, Hospital Contracting, MSO Operations, Health Services, Service Fund, Finance and Medicaid Operations	Meeting
Provider Contracting	Contingency Activation Project Closure and Lessons Learned	Close out termination and transition project and document lessons learned to be incorporated on the next contingency plan activation	Once	Provider Contracting, Hospital Contracting, MSO Operations, Health Services, Service Fund, Finance, and Medicaid Operations	Meeting
AHCA					
Medicaid Operations	Inform of Subcontractor Termination	Initial communication to inform AHCA of subcontractor termination, cause of termination, enrollees impacted, and contingency plan (continuity of care)	Once	AHCA Contracting Manager and other AHCA contacts as needed	Call and Email
Medicaid Operations	Contingency Plan Status Update	Opportunity to provide status update of contingency plan progress (continuity of care, network adequacy, and communication enrollee/provider/downstream subcontractors) and obtain feedback/requests from AHCA	Weekly	AHCA Contracting Manager and other AHCA contacts as needed	Call or email

Attachment 27-3: Communication Plan

Enrollees					
Provider Contracting	Inform of Subcontractor Termination	Inform enrollees of termination, effective date, and continuity of care process, including Humana contact assistance number	Once	All impacted enrollees	Letter and Email
Health Services	High Risk Enrollee Continuity of Care Outreach	Opportunity for Case Management team to call enrollees and assist with subcontract transition (if needed), and avoid unnecessary hospitalization	Once and additional outreach if needed	High risk enrollees in Humana Case Management program	Call
Providers					
Provider Contracting	Subcontractor Termination Informational Letter	Inform providers, hospital and SNFs of termination, effective date, continuity of care/new process	Once	Providers, Hospitals, and SNFs	Letter, Fax, Email
Provider Contracting	Subcontractor Termination FAQs	Additional information on termination, lines of business and provider types affected, contingency plan by region, patient continuation of care process and contacts, and downstream claims submission process	Once	Providers, Hospitals, and SNFs	Letter, Fax, Email
MSO Operations, Hospital Contracting, and Provider Contracting	MSO/Provider Outreach	Inform provider offices, including front line staff of termination and continuity of care/new process, and opportunity to identify issues, gaps and educational needs during the transition	Once and additional outreach as needed	Providers, Hospitals, and SNFs	Outreach
Downstream Subcontractors					
Provider Contracting	Subcontractor Termination Informational Letter for Downstreams	Inform subcontractor downstreams of termination, effective date, and continuity of care process (fee-for-service)	Once	Downstream providers contracted by Humana subcontractor being termed	Letter, Fax, Email
Provider Contracting	Subcontractor Termination FAQs for Downstreams	Provide a Humana contact point of contact and inform downstreams of claim submission and fee-for-service contracting process	Once	Downstream providers contracted by Humana subcontractor being termed	Letter, Fax, Email
Provider Contracting	Contracting Outreach	Contact downstreams to offer contracting opportunity as part of our continuation of care plan	Once and additional outreach as needed	Downstream providers contracted by Humana subcontractor being termed	Outreach

DELEGATION SERVICES ADDENDUM

This **Delegation Services Addendum (Addendum)** is made part of and incorporated into the **<Insert Type>** Participation Agreement entered into between **<Insert Name of the Humana or ChoiceCare entity>** (**Delegator**), and **<Insert Name>** (**Delegate**) which was effective **<Insert Effective date of Base Agreement>** (Agreement). This Addendum is intended to supplement the terms and conditions of the Agreement and to the extent that this Addendum conflicts with the terms and conditions of the Agreement, including any prior amendments, addenda, exhibits, or attachments, this Addendum controls the relationship between the parties.

The following Attachments are included with this Addendum and incorporated by reference herein:

CONTRACTOR NOTE: Include only those Attachments that are appropriate for the Provider entity you are Delegating services to and delete the inapplicable Attachments **– REMOVE THIS TEXT BEFORE SENDING TO DELEGATE**.

A. Delegation of Credentialing Services Attachment
B. Delegation of Utilization Review and Utilization Management Services Attachment
C. Delegation of Complex Case Management Attachment
D. Delegation of Disease Management Attachment
E. Delegation of Quality Improvement Services for Behavioral Health Services Attachment
F. Delegation of Claims Processing Attachment
G. FDR Compliance Program Requirements Attachment
H. Process Integration Attachment
I. IT Security Agreement Attachment
J. Business Associate Agreement Attachment

ARTICLE I
DEFINITIONS

Any capitalized term in this Addendum or any of its Attachments not defined herein shall have the same meaning as set forth in the Agreement.

1.1 **Accreditation Organization** means any nationally recognized organization that accredits managed care organizations including without limitation to the National Committee of Quality Assurance (NCQA), the Utilization Review Accreditation Commission (URAC), and the Joint Commission (TJC) or other nationally recognized Accreditation Organization approved by Delegator.

1.2 **Subcontractor(s)** means any third party which has entered into an agreement with **Delegate** to perform part or all of **Delegate's** duties and/or obligations under this Addendum.

ARTICLE II
DELEGATE'S OBLIGATIONS

In order to fulfill the purposes and objective of this Addendum, the **Delegate** agrees:

2.1 To accept the obligation to perform all delegated functions and activities described in this Addendum and in each Attachment which are each incorporated by reference into the Agreement.

2.2 To comply with **Delegator's** policies, procedures, and program requirements, Member's Plan (coverage agreement), and all applicable state and federal laws, rules and regulations and instructions including but not limited to the CMS Standards for Downstream and Delegated Entities, (45 CFR 156.340) and Accreditation Organization requirements pertaining to all functions and activities described in each Attachment.

a. **Delegate** agrees to monitor all providers, employees and Subcontractors supporting any exchange Plan, Medicare and/or Medicaid lines of business for debarments and exclusions from federal and state government programs. This must be conducted upon initial hire or contract and on a monthly basis thereafter. Accurate records of such monitoring activity must be maintained and retained for a period of a minimum of ten (10) years. Any provider, Subcontractor or employee found excluded from any exchange, Federal and state government program must be removed from providing direct or indirect services for Medicare/Medicaid or other state or federal governmental program Members immediately and shall be reported promptly to the **Delegator**.

b. **Delegate** further agrees to make available to **Delegator,** its designee or any state or federal governmental agency all documents, including but not limited to logs, files, committee meeting minutes and reports required within the timeframe determined by the auditor.

2.3 To furnish, at no expense to **Delegator**, any and all staffing and systems necessary to receive from and transmit to **Delegator**, or its designee, all required data, and will allow access to and provide to **Delegator,** or its designee, all data required by state and federal laws, rules and regulations, and **Delegator** or Accreditation Organization standards including without limitation any documentation, records, files or data necessary to perform the functions delegated under this Addendum.

2.4 That upon the termination of performance of delegated function under this Addendum, and/or the expiration, non-renewal or termination of the Addendum, regardless of the cause, any files, records and documentation or quality copies of such files and documentation pertaining to **Delegator's** Members or providers which are necessary for **Delegator** to resume responsibility for the delegated function will be made available to **Delegator** upon request.

2.5 To prepare and maintain all appropriate records which involve transactions relating to any services delegated hereunder in accordance with prudent and professional record-keeping procedures and as required by applicable federal, state, or local laws, rules, or regulations and **Delegator** or Accreditation Organization standards.

2.6 That, in the event that **Delegator** is financially penalized or incurs any administrative fine or penalty imposed by any state or federal agency or Accreditation Organization as a direct result of **Delegate's** or any of its employees or Subcontractor's failure to adhere to the applicable state or federal laws or regulations, or the standards and procedures described herein, **Delegator** will forward to **Delegate** documentation of such financial penalty and/or sanction, and **Delegate** shall reimburse **Delegator** the full amount of such financial penalty imposed, including without limitation any attorneys' fees incurred as a result of such action and penalty by a state or federal agency within thirty (30) calendar days of receipt of the documentation.

2.7 That notwithstanding anything to the contrary herein, this Addendum may not be construed to limit in any way the authority or responsibility of **Delegator** to comply with all state and federal laws, rules and regulations, and Accreditation Organization requirements to which **Delegator** is subject.

2.8 To promptly notify **Delegator**, or its designee, in writing of any confirmed quality or risk issues of which **Delegate** may become aware of as it relates to the services delegated hereunder.

a. **Delegate** shall notify and provide documentation to **Delegator** within the next business day of any corrective action plan and/or sanctions, fines or other penalties imposed on or incurred by **Delegate**, or if applicable its Subcontractor, following any review by a regulatory agency or Accreditation Organization.

b. **Delegate** agrees any material change in **Delegate's** performance of delegated functions shall be submitted to **Delegator** for review and approval by **Delegator** prior to the effective date of the proposed changes.

2.9 That **Delegator** may request a change or revision to the **Delegate**'s programs and/or processes at any time as necessary to reflect changes in regulatory, **Delegator's** and/or Accreditation

Organization requirements. Required changes or revisions will be provided to **Delegate** in writing, to be effective within ninety (90) calendar days, or such lesser period of time as may be required by applicable regulatory and/or Accreditation Organization requirements to which **Delegator** is subject. **Delegate** shall provide evidence of implementation to **Delegator** as directed.

ARTICLE III
ACCESS, AUDIT AND OVERSIGHT

Delegate agrees that state, federal and Accreditation Organization regulations or standards require **Delegator** to maintain oversight of the delegated functions furnished by **Delegate**. Such oversight shall, at a minimum, include:

3.1 **Delegator's** or its designee's right to conduct on-site visits at least annually, or more frequently if deemed necessary by **Delegator**, upon not less than ten (10) business days prior notice, or such shorter notice as may be imposed on **Delegator** by a state or federal regulatory agency or Accreditation Organization.

3.2 **Delegator**, **Delegator's** designee, federal, state, and local governmental authorities having jurisdiction, and/or Accreditation Organization to audit any and all documents and materials including, but not limited to, books, contracts, computer and other electronic systems, related to services rendered under this Addendum. **Delegate** shall also permit review of **Delegate's** policies and procedures, programs, annual plans, annual evaluation of previous year's programs, reports, and meeting minutes that have been approved by the **Delegate's** administrative/quality committee, and **Delegate's** performance/compliance under each Attachment.

3.3 Permission for **Delegator**, **Delegator's** designee, federal, state and local governmental authorities having jurisdiction, and/or Accreditation Organization's right to conduct a site visit and/or audit at any site at any time where **Delegate** performs delegated functions under the terms of this Addendum. Any such audit shall be permitted during the term of this Addendum and for a period of ten (10) years thereafter (or any greater period required by applicable law). This section shall survive the termination of this Addendum, regardless of the cause of termination;

3.4 Submission to **Delegator** of periodic reports. These reports shall be provided in accordance with the applicable delegated function attachment and at such other times as **Delegator** shall request or as **Delegator** shall deem necessary or appropriate to ensure that **Delegator** is fully apprised of **Delegate's** activities;

3.5 That **Delegate** agrees to retain all data, information, records, and documentation related to its performance of each delegated function under this Addendum for the longer of ten (10) years following the date of service or the period required by applicable state law.

3.6 **Delegate's** obligation to cooperate and comply with any Corrective Action Plan (CAP) established by **Delegator** in the event there is any breach of this Addendum or non-compliance with state or federal law, Accreditation Organization requirements or **Delegator's** policies and procedures. Corrective action may include, without limitation, intensifying the frequency and number of audits, the temporary loss of delegated rights under this Addendum or the termination of this Addendum.

3.7 **Delegate's** agreement that notwithstanding anything to the contrary herein, **Delegator**, in its sole discretion, or any state or federal regulatory authority, retains the right to approve, modify, suspend or revoke at any time all, or any portion, of functions and/or activities delegated hereunder.

3.8 **Delegate's** acknowledgement and agreement that **Delegator** reserves the right to perform assessments to review the effectiveness of **Delegate's** ability to perform the assigned delegated

functions and compliance with established criteria. **Delegator** shall provide at least ten (10) business days prior written notice before conducting any onsite assessment.

3.9 That notwithstanding anything to the contrary herein, **Delegator**, in its sole discretion, or any state or federal regulatory authority, retains the right to approve, modify, suspend or revoke at any time all or any portion of functions and/or activities delegated hereunder.

ARTICLE IV
SUB-DELEGATION

4.1 If **Delegate** sub-delegates any portion of the delegated functions to a Subcontractor, **Delegate** will require by contract that those functions shall be pre-approved by **Delegator** and be subject to the terms of this Addendum and will be provided in accordance with **Delegator's** policies, procedures and program requirements and all state and federal regulatory and/or Accreditation Organization requirements applicable to **Delegator**.

4.2 Such sub-delegation shall not relieve **Delegate** of its obligations under this Addendum. **Delegate** acknowledges and agrees that all of its obligations under this Addendum shall apply equally to any Subcontractor that provides any services under this Addendum, and **Delegate** represents and warrants that **Delegate** shall take all steps necessary to cause such Subcontractor to comply with the terms of this Addendum.

4.3 If **Delegate** sub-delegates any portion of the delegated functions, then **Delegate** will provide to **Delegator** documentation, and demonstrate a plan for adequate oversight of, Subcontractor prior to any sub-delegation and annually thereafter, or will provide to **Delegator**, in writing **Delegate's** request and acknowledgement that **Delegator** will perform oversight of all sub-delegated functions.

4.4 **Delegate** agrees to require by contract that Subcontractor acknowledge and agree that **Delegator** retains the right to perform evaluation and oversight of the Subcontractor, and will review or audit as required by law or if deemed necessary by **Delegator.**

4.5 The **Delegate** will provide **Delegator** with documentation of a written sub-delegation agreement and Business Associate Agreement that:

a. Is mutually agreed upon;
b. Describes the responsibilities of the **Delegate** and Subcontractor;
c. Describes all sub-delegated activities;
d. Requires at least semi-annual reporting to the **Delegate**;
e. Describes the process by which the **Delegate** will regularly evaluate the Subcontractor's performance;
f. Describes the remedies, including revocation of the sub-delegation agreement, available to the **Delegate** if the Subcontractor does not fulfill its obligations.

4.6 If **Delegate** sub-delegates any portion of the delegated functions to a Subcontractor, then **Delegate** will require by contract that Subcontractor agrees to indemnify and hold **Delegator** and its affiliates and their respective agents, employees, and/or officers harmless from any and all claims, losses, liabilities, damages, injunctions, lawsuits, fines, penalties, demands and/or expenses of any kind or nature, including without limitation attorneys' fees, arising out of or in relation to Subcontractor's performance of the sub-delegated functions.

4.7 The **Delegate** agrees to monitor the Subcontractor for federal and state government programs exclusions on a monthly basis for Medicare/Medicaid providers and will maintain accurate records of such monitoring activity. Any provider, Subcontractor or employee found excluded from any exchange, Federal and/or state government program must be removed from providing direct or indirect services for Medicare/Medicaid or other governmental program Members immediately and shall be reported to the **Delegator**.

4.8 The **Delegate** agrees to monitor to ensure that the Subcontractor performs the federal and state government exclusion checks for their employees and contracted entities on a monthly basis and will

maintain accurate records of such monitoring activity. Any provider, Subcontractor or employee found excluded from any exchange, Federal and/or state government program must be removed from providing direct or indirect services for Medicare/Medicaid or other governmental program Members immediately and shall be reported to the **Delegate** who in turn shall report to the **Delegator**.

ARTICLE V
TERM AND TERMINATION

6.1 This Addendum shall commence at 12:01 AM on the Effective Date specified below and shall continue in full force and effect for an initial term of twelve (12) months. This Addendum shall continue in full force and effect for additional twelve (12) month periods unless terminated in accordance with the terms outlined in the Agreement or this Addendum.

6.2 Notwithstanding anything to the contrary in this Addendum, the Attachments, or the Agreement, performance under this Addendum may be terminated without cause by either party upon written notice provided to the other party no less than ninety (90) calendar days prior written notice or by mutual agreement.

6.3 Notwithstanding anything else in this Addendum, the Attachments, or the Agreement any breach related to Delegate's accreditation, licensure, and/or quality assurance issues shall be considered non-curable. Furthermore, a determination by Delegator that Delegate's continued performance of the delegated functions and/or activities under this Addendum may adversely affect the health, safety or welfare of any Member or bring Delegator or its provider networks in to disrepute, shall be considered non-curable.6.4 Notwithstanding any other provision in the Agreement, this Addendum or any Attachment, **Delegator** may terminate this Addendum, or any Attachment immediately and automatically without additional notice in the event **Delegator** determines that there has been any change or limitation that materially affects **Delegate's** ability to adequately deliver the services delegated hereunder, or for any of the reasons outlined in the Agreement. .

The Effective Date of this Addendum is: **<Insert Date>** .

Each party to this Addendum represents that it has full power and authority to enter into this Addendum and the person signing this Addendum on behalf of either party represents that he/she has been duly authorized to enter into this Addendum.

DELEGATION OF CLAIMS PROCESSING FOR MEDICAL and BEHAVIORAL HEALTH SERVICES (remove BH services if not applicable)

ATTACHMENT

This **Delegation of Claims Processing Services Attachment** ("Claims Attachment") is hereby made part of and incorporated into the Agreement and the Delegation Services Addendum, entered into between **<Insert Name of the Humana entity>** (**Delegator**), and **<Insert Name>** (**Delegate**) effective on **<Date>**. This Claims Attachment is intended to amend the terms and conditions of the Addendum and to the extent that this Claims Attachment conflicts with the terms and conditions of the Agreement or the Addendum, including any prior agreements, addenda, exhibits, or attachments, this Claims Attachment controls the relationship between the parties.

ARTICLE I

DELEGATE'S OBLIGATIONS

Delegate agrees that it will:

1.1 Acknowledge and agree that **Delegate**'s policies and procedures are subject to **Delegator's** review and written approval prior to any delegation of claims processing functions.

1.2 Accept responsibility and the obligation for all claims processing functions delegated hereunder for those services rendered to Members.

1.3 Be solely responsible for acquiring, operating, and maintaining any equipment or software necessary in performing its duties hereunder.

1.4 Conduct claims adjudication and processing in accordance with **Delegator's** policies, procedures, and program requirements, Member's Plan, state and federal laws, rules, and regulations, and the requirements of all regulatory bodies or Accreditation Organizations to which **Delegator** is subject, including but not limited to all privacy and electronic data security laws or regulations, and/or as required by **Delegator**.

1.5 Represent and warrant that **Delegate's** claims processing processes are compliant with the most current American Medical Association (AMA) Current Procedural Terminology (CPT®) code sets, Healthcare Common Procedure Coding System (HCPCS) code sets, International Classification of Diseases, 10th Edition/Revision (ICD-10) code sets (and future ICD revisions when effective), Centers for Medicare & Medicaid Services (CMS) guidelines and national coverage determinations (NCDs), and the CMS National Correct Coding Initiative (NCCI).

1.6 Acknowledge and agree that **Delegator** retains the right and final authority to pay any claims for its Members regardless of the delegation of any such functions or activities to **Delegate**.

1.7 Acknowledge and agree that any amounts authorized by **Delegate** for payment by **Delegator** may be charged against **Delegate's** funding.

1.8 If required by state and/or federal law, rule or regulation, **Delegate**, at all times during the term of this Addendum, shall obtain, and maintain in good standing a Third Party Administrator (TPA) license/certificate or other state required license/registration/certification. **Delegate** shall provide **Delegator** a copy of the appropriate license/registration/certification number(s) prior to execution of this Addendum and upon renewal thereafter.

1.9 Provide a financial guarantee, acceptable to **Delegator** prior to implementation of any delegation of claims processing, including, but not limited to, a letter of credit, to ensure its continued financial solvency and **Delegate's** ability to adjudicate and process claims hereunder.

1.10 **Delegate** shall submit to **Delegator**, financial information, upon request, as proof of their continued financial solvency. Financial information submitted should include the following:

a. Recent audited financial statements (balance sheet, statement of operations, statement of cash flows and notes to the financial statements). If the audited financial statements

are over six (6) months old, provide current internal financials with projections (e.g. 6 month-ended financials or quarterly reports).

b. If **Delegate** has not been audited, **Delegate** is to provide recent internally prepared financial statements (balance sheet, statement of operations and cash flow statement).

c. **Delegate's** chief financial officer and/or owner will certify/attest to their correctness by adding his/her signature to the financial statements provided to **Delegator**.

1.11 **Delegate** agrees to permit any regulatory agency to examine, at any time, information the agency deems relevant to determine the financial solvency of the **Delegate** or to review the **Delegate's** ability to meet its responsibilities in connection with any function delegated to **Delegate** by **Delegator**.

1.12 **Delegate** will submit claim/Encounter data in the format defined in the Process Integration Attachment (eConnectivity).

1.13 Acknowledge that **Delegator** retains all other claim processing functions not specified as the **Delegate's** responsibility in this Claims Attachment.

ARTICLE II
CLAIMS PERFORMANCE REQUIREMENTS

Delegate agrees, and represents and warrants that it will meet, at a minimum, the following claims adjudication and processing performance requirements. **Delegate** must:

2.1 Accurately and timely process at least ninety-five percent (95%) of the total of all delegated claims according to **Delegator's** claims processing standards and requirements and in accordance with state and federal laws, rules and regulations and/or the requirements of any regulatory or Accrediting Organization to whom **Delegator** is subject.

2.2 Pay any and all statutory interest or other penalties on claims in accordance with applicable state and federal requirements.

2.3 Maintain an accuracy rate of at least ninety-nine percent (99%) of total dollars paid, for any given calendar month for all claims processed and adjudicated.

2.4 Comply with all state, federal and Accreditation Organization requirements to which **Delegator** is subject with respect to any denial or appeal of claim payment in all communications made to Members. Use **Delegator** prepared Member letter or Explanation of Benefits (EOB) templates for all delegated lines of business as indicated.

2.5 Provide claims processing results to **Delegator** on a monthly basis as required by **Delegator's** Delegation Compliance Department using the submission form supplied by **Delegator**.

2.6 If processing claims for payment for services rendered to any Medicare Advantage Members, **Delegate** must comply with all rules and requirements for the processing of Medicare Advantage claims established or implemented by the Centers for Medicare and Medicaid Services ("CMS") including, but not limited to, the following:

a. the **Delegate** must make correct claim determinations, which include developing the claim for additional information, when necessary, for:

1. Services obtained from a non-contracted provider and reasonable reimbursement when the services were authorized by a contracted provider or the **Delegate;**

2. Ambulance services dispatched through 911;

3. Emergency services;

4. Urgently needed services;

5. Post-stabilization care services;
6. Renal dialysis services that Medicare Members obtain while temporarily out of the service area; and
7. Services for which coverage has been denied by the **Delegate** but found to be services the Member was entitled to upon appeal.

b. Ninety-five percent (95%) of "Clean Claims" (as defined by CMS) from nonparticipating providers must be paid within thirty (30) calendar days of receipt.

c. Pay any CMS mandated interest amounts on all Clean Claims which are paid to nonparticipating providers later than thirty (30) calendar days from date of receipt.

d. Pay or deny all other claims received by nonparticipating providers within sixty (60) calendar days of receipt.

2.7 The **Delegate** is obligated to pay contracted providers under the terms of the contract between the **Delegate** and the Provider.

2.8 **Delegate** agrees that **Delegator** maintains the ultimate responsibility for the accuracy of claims processing and adjudication for Members and retains the right to implement a Corrective Action Plan (CAP), suspend, or terminate any portion of this Claims Attachment in the event there is a breach of this Claims Attachment or noncompliance with state or federal law, Accreditation Organization requirements or **Delegator's** policies, procedures and claims performance requirements.

ARTICLE III
CLAIMS ACCESS, AUDIT AND OVERSIGHT

3.1 **Delegate** shall allow **Delegator**, or its designee, to monitor the accuracy, quality, timeliness, and effectiveness of **Delegate's** claims adjudication and processing functions and activities hereunder through periodic reviews and audits. Accordingly, upon request at any time during the term of this Claims Attachment, **Delegate** will provide **Delegator**, or its designee, access to any and all source documentation, and all other documents, processes, procedures, systems and other information related to Member claims processed, paid, denied, or pended hereunder.

3.2 Submit to **Delegator**, with respect to delegated functions, all required reports and analyses including but not limited to the contents in **TABLE 1,** which is attached hereto and incorporated by reference herein, along with identified problems, corrective actions initiated, and outcomes.

a. All reports and subsections of reports must be specific to line of business and offering **Delegator's** affiliate, and all reporting formats must be pre-approved by **Delegator**.
b. **Delegate** agrees to provide any and all reports requested by **Delegator** within timeframes identified by **Delegator** to ensure **Delegator** meets all new and revised **Delegator**, CMS, Federal, State and Accreditation Organization reporting requirements.

3.3 Should the **Delegate** be placed on a CAP, the **Delegate** will have fourteen (14) calendar days to provide a written response describing how they will meet the requirements found to be noncompliant including prospective date of compliance, which must be remediated within ninety (90) days or less.

3.4 **Delegate** will be subject to a capitation payment penalty as indicated in the table below for any outstanding issues noted on a CAP:

Outstanding Corrective Action Plan	**0 to 3 months**	**4-6 months**	**7-9 months**	**10-12 months or greater**
Payment penalty	**0%**	**1% per month**	**2% per month**	**3% per month**

		until CAP resolved	**until CAP resolved**	**until CAP resolved**

ARTICLE IV
MEMBER APPEALS AND GRIEVANCES/COMPLAINTS

4.1 **Delegator's** Member appeals/grievances/complaints are not delegated. **Delegator** maintains all Member rights and responsibility functions. **Delegator** will handle all Member appeals / grievances / complaints regarding claims payment and payment denials including any appeal / grievances / complaints made by a provider on behalf of the Member.

4.2 **Delegate** will fax all Member appeals/grievances/complaints to **Delegator** within one (1) business day.

. **For Expedited and Standard Member Appeals and Grievances/Complaints**:

Medicare:

Telephone- 1-800-867-6601 Fax- 1-800-949-2961

Medicaid:

Telephone- 1-800-764-7591 Fax- 1-855-336-6220

Commercial and Exchange:

Telephone- 1-888-259-6767 Fax- 1-920-339-2112

Florida Medicaid:

Telephone- 1- 800-477-6931 Fax- 1- 800-949-2961

ARTICLE V
PARTICIPATING AND NON-PARTICIPATING PROVIDER DISPUTE/RECONSIDERATION

MEDICARE

5.1 **Delegator** will handle all non-participating physician, practitioner, hospital, and other health care professional and/or provider claim payment and payment denial disputes or request for reconsideration.

5.2 Delegate will handle all physician, practitioner, hospital, and other health care professional and/or provider claim payment and payment denial disputes or requests for reconsideration for Participating Providers.

5.3 **Delegate** shall instruct non-participating providers to submit their claim payment and payment denial disputes or requests for reconsideration directly to:

Humana

P.O. Box 14601

Lexington, KY 40512-4601

5.4 **Delegator's** payment dispute/reconsideration determination will be final and processed by **Delegate** as directed.

5.4 **Delegate** will follow the most current CMS MA Payment Guide for Out of Network Payments.

COMMERCIAL

5.5 **Delegate** will handle all physician, practitioner, hospital, and other health care professional and/or provider claim payment and payment denial disputes/appeals/grievances for Participating and non-participating Providers except as otherwise required by state or federal law.

MEDICAID

5.6 **Delegate** will handle all physician, practitioner, hospital, and other health care professional and/or provider claim payment and payment denial disputes/reconsiderations for Participating and non-Participating Providers as required by state and federal law.

ARTICLE VI

TERMINATION

6.1 Notwithstanding anything to the contrary in this Claims Attachment, the Addendum, or the Agreement, performance under this Claims Attachment may be terminated without cause by either party upon written notice provided to the other party no less than ninety (90) calendar days preceding the termination date or by mutual agreement.

6.2 Notwithstanding anything else in this Claims Attachment, any breach related to **Delegate's** accreditation and/or licensure, quality assurance issues or alleged breach regarding termination by **Delegator** in the event **Delegator** determines that **Delegate's** continued performance of the delegated functions and/or activities under this Claims Attachment may affect adversely the health, safety or welfare of any Member or bring **Delegator** or its provider networks in to disrepute, shall be considered non-curable.

6.3 If delegated for claims payment, the **Delegate** is obligated to pay claims incurred up to the date of termination. The run-off period to pay claims post-termination will be determined by the **Delegator** and shall continue until the last outstanding claim has been paid. The **Delegate** shall continue with the Mandatory Monthly Claims Reporting noted in the Claims Attachment, Table 1, until all applicable claims are paid.

The **Effective Date** of this Claims Attachment is: **<Insert Date>** .

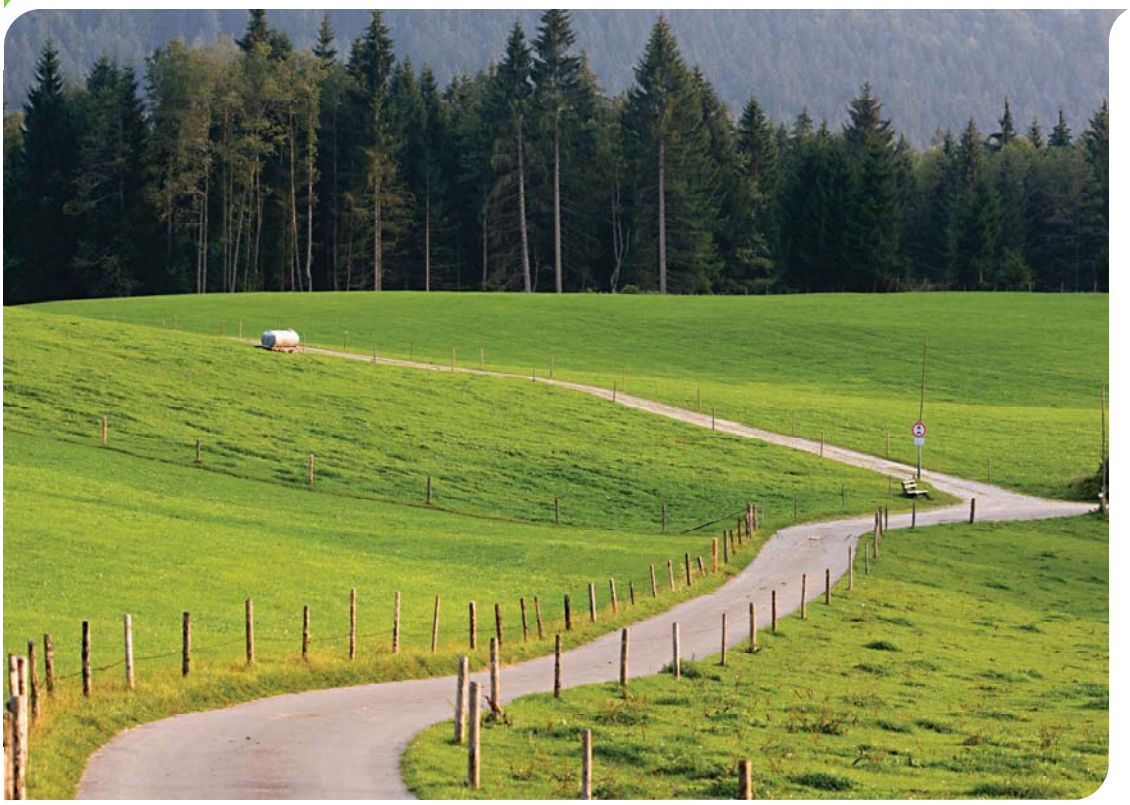
MANDATORY REPORTS	FREQUENCY	DETAIL
Delegator Monthly Claims Report	Monthly	Template will be provided to **Delegate**
Non-participating Provider Disputes	Monthly	Template will be provided to **Delegate** or **Delegator** will review **Delegate** template
Medicare Part C Reporting (Requirements can be found in the Medicare Part C Specification Documents)	Quarterly	**This must be reported 8 days following the end of the quarter**
Note: Reporting requirements may change based upon revised or new **Delegator,** state and federal legislation during the term of this Attachment. The Mandatory Reports listed above are in addition to required reports communicated throughout other contract documents.		

CLAIMS REPORT TABLE 1

All reports and subsections of reports must be line of business (LOB) and **Delegator** market specific. Reporting templates not provided by **Delegator** are subject to review and approval.
Monthly – 15th of the following month **Quarterly** – April 15, July 15, October 15, January 15

Ethics Every Day

for Contracted Health Care Providers and Business Partners



It is important that I read this and, if I'm an administrator, provide this information or a materially similar document to all employees and business partners who support Humana's Medicare and/or Medicaid products as a part of our relationship.

I am the key to integrity

I have help

From my manager, my organization, Humana and the Ethics Help Line **(1-877-5-THE-KEY)**, I have the support I need if I encounter sticky situations.

I know what to do

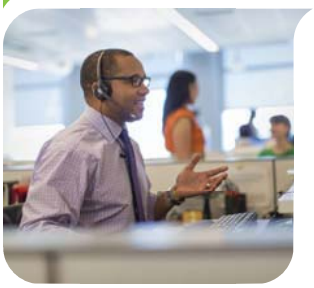
The guidelines in this book, along with Humana's policies and resources, help me understand and follow the rules.

I am safe from retaliation

When I suspect a violation, I know I will not get in trouble for speaking up.

Humana®

We are all the key to integrity



Humana's dream is underscored by Humana's values:

- Inspire health
- Cultivate uniqueness
- Rethink routine
- Pioneer simplicity
- Thrive together

We encourage your organization to consider these perspectives in its approach to the ongoing fulfillment of obligations to Humana.

Dear Valued Contracted Health Care Providers and Business Partners:

We appreciate all you do to maintain the highest ethical standards in your business interactions. Your actions enable us to do the same, while also contributing in a meaningful way to our combined success. We value our mutually beneficial relationship and are grateful for your partnership.

Our dream is to help people achieve lifelong well-being. Part of realizing that dream is a steadfast commitment to act with integrity and achieve the highest ethical standards, something we have been doing since Humana was founded more than 50 years ago. The values we share and clear ethical principles help us all make good decisions every day, allowing us to deliver a perfect experience for everyone we do business with. It takes all of us working together, living our values, taking ownership of our actions, and following the state and federal legal requirements that govern our industry to create that perfect experience in the right way.

In this spirit, we offer you, your employees and contracted business partners an important part of our Enterprise Compliance Program: Ethics Every Day for Contracted Health Care Providers and Business Partners. This document outlines our program's standards of conduct requirements for you.

Our Enterprise Compliance Program will help you with troubling or confusing matters, or you can reach out to your leader, another leader outside your team or the independently staffed Ethics Help Line (1-877-5-THE-KEY or www.ethicshelpline.com).

Thank you for your continued participation as a contracted health care provider or business partner. With all of us working each day to be the key to integrity, we can deliver a perfect experience. When we do the right thing in the right way for the right reasons, we thrive together.

Sincerely,

Kurt J. Hilzinger

Chairman of the Board

Bruce Broussard

President and
Chief Executive Officer

J. Gregory Catron

Vice President,
Associate General Counsel
and Chief Compliance Officer

Staying on track

The bottom line

The locations of the key requirements from each section of this document are listed below.

I am required to:	Where addressed
Make ethical decisions	1
Report suspected noncompliance with the Standards of Conduct or any applicable law or regulation	1, 2 and 3
Be familiar with the concepts of fraud, waste and abuse (FWA)	4
Not make business decisions motivated by personal considerations or relationships	5
Refrain from discussing, giving or offering anything of value, including employment, to anyone on Humana's behalf, unless permitted by law or Humana policy	5
Treat Humana customers with respect and make every effort to protect their health, safety and welfare	6
Not intimidate or retaliate against anyone I interact with in performing my role for Humana	7
Protect Humana information	8
Follow all applicable laws, rules and regulations	9

Those in a leadership role also are required to:	
Foster an ethical and compliant culture	1
Not employ or contract with ineligible parties	4

Violations	
Suspected violations will be investigated	7
Disciplinary actions will be taken when violations occur	7

Notable changes
(with page number)

This overview has been provided to list the key points of notable changes and the sections in which they are detailed.

Cover page
It now further clarifies the required audience for this document.

Key terms (ii)
Clarified that examples of Health Care Providers and Business Partners also include delegated and non-delegated health care providers, as well as delegated entities. These are in addition to other examples previously and currently listed.

I have help (3)
The Resources sub-section now lists a fax number as an additional option for reporting suspected violations that are referred to Humana's Special Investigations Unit.

Privacy or security breaches (3)
Clarified what a breach can be.

Conflicts of interest (5)
Clarified that uncertainty over whether a conflict exists means the matter should be disclosed for evaluation.

Gifts, favors, job opportunities and entertainment (5)
Disclosed that Humana has policies which outline allowable gifts for Medicare or Medicaid beneficiaries.

Investigation of suspected violations (7)
Clarified that those disclosing their identity when reporting a suspected violation may be contacted for additional information.

Disciplinary standards (7)
This section now includes a clarification that corrective action plans, when issued, are tracked to completion.

Index		10

Humana is ultimately responsible for ensuring the actions of those who support Humana business, including the actions of contracted health care providers and business partners, are compliant with applicable laws, rules and regulations.

Key terms

I will see the terms below throughout this document, and they are defined as follows:

Associate – A Humana employee.

Compliance Policy – The Compliance Policy for Contracted Health Care Providers and Business Partners, a detailed listing of Humana's compliance requirements for health care providers and business partners and how to meet them, along with overviews of, and links to, resources and applicable laws and regulations.

Health care providers and business partners – Any non-associate contracted, directly or indirectly, to perform a business function or provide goods or a service for or on our behalf. These may also be referred to as first tier, downstream and related entities (FDRs). Some examples of business partners are delegated and nondelegated health care providers delegated entities, pharmacies, sales agents, sales agencies, vendors, suppliers, contractors and delegates.

- Vendors and suppliers of administrative goods and services are considered business partners.

Humana (or the company) – Refers to Humana Inc. and its wholly owned subsidiaries.

Terms specific to fraud, waste and abuse (FWA):

Abuse –Includes any action(s) that may, directly or indirectly, result in one or more of the following:

- Unnecessary costs to the health care system, including the Medicare and Medicaid programs
- Improper payment
- Payment for services that fail to meet professionally recognized standards of care
- Services that are medically unnecessary

Abuse involves payment for items or services when there is no legal entitlement to that payment and the entity supporting Humana (e.g., a health care provider or supplier) has not knowingly and/or intentionally misrepresented facts to obtain payment.

Abuse cannot always be easily identified, because what is "abuse" vs. "fraud" depends on specific facts and circumstances, intent and prior knowledge, and available evidence, among other factors.

Fraud – Knowingly and willfully executing, or attempting to execute, a scheme or artifice to defraud any health care benefit program or to obtain (by means of false or fraudulent pretenses, representations or promises) any of the money or property owned by, or under the custody or control of, any health care benefit program (18 U.S.C. § 1347).

Waste – Overutilization of services or other practices that, directly or indirectly, results in unnecessary costs to the health care system, including the Medicare and Medicaid programs. Waste is not generally considered to be caused by criminally negligent actions, but by the misuse of resources.

Our expectations

These principles are intended as guides that reflect the collective good judgment and common sense of us all, not a comprehensive set of rules or legal advice.

Q. What should I do if my supervisor or manager asks me to do something I think violates this document or related policies or is illegal?

A: Immediately report the request to a level of management above your supervisor or manager, Humana's Ethics Office or the Ethics Help Line. The matter will be investigated promptly so you receive proper guidance.

The Bottom Line
Leaders must foster an ethical and compliant culture.

Who should read this document

This document is for everyone who performs a business function or provides a service for or on our behalf. It is not limited to those who define themselves as health care providers or business partners, but includes their employed and contracted staff and organizations serving them.

Our principles

This document is closely aligned to the standards of conduct (Ethics Every Day) distributed to associates and available on Humana's website: http://phx.corporate-ir.net/External.File?item=UGFyZW50SUQ9MTg5MjY0fENoaWxkSUQ9LTF8VHlwZT0z&t=1

Both versions reaffirm our commitment to integrity as the cornerstone of behavior for anyone who acts on our behalf. This means anyone from a board of director to the CEO to the part-time temporary worker, regardless of whether the person is an employee.

The guidelines in this document are meant to help all of us better understand what we believe to be in the best interest of our constituencies, including customers, members, patients, clients, associates, shareholders, those with whom we do business and the public at large. As a result, we will provide value, service and guidance to become the role model for the health care industry.

Therefore, it's important to conduct ourselves in an ethical, legal and above-board manner. The quality of health care providers' and business partners' products and services affects the quality of Humana's products and services. Understanding this commitment and willingness to raise ethical concerns are essential to the well-being of Humana's customers, members, patients and clients, as well as the success of both your organization and Humana.

Keep in mind

No matter what the situation:

- Remember the ripple effect — your actions have an impact on everyone around you
- Don't forget it's OK to ask — if something doesn't feel right, use the resources identified in this policy to share your concerns

Our ethical principles are the framework for the Compliance Policy, which also integrates requirements outlined in Medicare Managed Care Manual, Chapter 21, and Prescription Drug Benefit Manual, Chapter 9 guidelines published by the Centers for Medicare & Medicaid Services (CMS). Please refer to the Compliance Policy for how to align ethical behavior with compliance requirements.

Leaders' responsibility

We expect leaders to set the example:

- Provide sufficient information to those supporting your organization to comply with laws, rules and regulations to meet obligations to Humana
- Foster a culture that encourages everyone to communicate concerns when they arise
- Never sacrifice ethical and compliant behavior in the pursuit of business objectives
- Have business ethics requirements for your organization, including a formal program for ethics, compliance and ongoing related training; you also may adopt this document

I know what to do

Four powerful principles steer us away from mistakes we never intended to make:

1 **Honesty and respect to all:** Act fairly and honestly with those who are affected by your actions, and respect and value those you serve by treating them the way you and they would want to be treated.

2 **Compliance with laws and focus on quality:** Comply not only with the letter of all applicable laws, regulations and regulatory guidance, but also with the spirit of the law, regulation or regulatory guidance. Act in such a manner that the full disclosure of all facts related to any activity would reflect favorably on the company or you. Ensure everything is done right the first time and every time.

3 **Responsibility for actions:** Adhere to the highest ethical standards of conduct in all business activities and act in a manner that enhances Humana's standing as a corporate citizen and ethical competitor within the business community. Pursue no business opportunity that requires violation of these principles. Communicate openly, place customers' needs first and act appropriately, according to Humana's values.

4 **Responsibility for reporting violations:** All of us are responsible for reporting suspected ethical or compliance violations and issues. Humana promotes relationships based on mutual trust and respect and provides an environment in which a company practice can be questioned without fear of adverse consequences.

It is important to report to Humana any questionable activity because ethical violations are not always the result of an intentional disregard of ethical standards.

Questions to ask yourself

If you're confronted with a situation that you're unsure how to handle, use these questions to guide your actions:

- Am I following approved company practices?
- Am I causing harm to someone?
- Can I defend my actions to my leader, coworkers, associates and the public?
- Am I appropriately protecting information about the company from disclosure to external or internal parties?
- Am I protecting the information of our customers, members, patients, clients, associates and shareholders?
- Am I living up to my personal code of behavior?
- Will my actions give the appearance of being illegal or unethical?
- Will my actions bring discredit to any co-workers, associate or the company if disclosed to the public?

Phrases you hear, read or think may signal a problem:

"It's just between you and me ..."

"Well, maybe just this once ..."

"Nobody will ever know."

"It doesn't matter how it gets done as long as it gets done."

"Everyone does it."

"What's in it for me?"

"Don't contact the Ethics Help Line."

"Remember, we didn't have this conversation."

"If they don't ask, don't tell."

The Bottom Line

I must make ethical decisions and report suspected noncompliance.

I have help

I can choose the option I feel most comfortable using.

An abundance of resources is available to make you feel comfortable speaking up.

Sometimes it's hard to report concerns or admit you don't know something. That's why Humana makes it easy to be heard.

Resources

For raising issues, asking questions and reporting suspected violations:

- **Leader:** Ask your leader for advice
- **Other leadership:** Speak to the next level of leadership
- **Humana's Ethics Office:** Contact via email at **ethics@Humana.com**
- **Ethics Help Line:** Call 1-877-5-THE-KEY (1-877-584-3539) or visit **www.ethicshelpline.com**
  - Available 24 hours a day, seven days a week
  - Calls are confidential and can be made anonymously
  - Calls will not be traced or otherwise identified
  - Staffed by trained, external non-Humana representatives
  - Reports are documented and forwarded to Humana's Ethics Office for review and determination of action, including referrals to internal departments for investigation
- **Special investigations referral:** Report suspected incidents of fraud, waste and abuse to SIU: **1-800-614-4126**, **siureferrals@Humana.com**, or fax 1-920-339-3613 or Contact the Ethics Help Line

Privacy or security breaches*

A Humana business partner with a signed Business Associate Agreement with Humana that identifies improper disclosure of or access to information or systems related to Humana, including, but not limited to, beneficiary or member information, must report it to Humana within five days of discovery. All information that should be included in the breach report is outlined in the Business Associate Agreement.

Mail: Humana Inc.
Privacy Office
500 W. Main St.
Louisville, Kentucky 40202

Fax: 502-508-3700

Email: **privacyoffice@Humana.com**

* Due to the nature of these issues, reporting them anonymously is not an option.

The Bottom Line

I must report suspected noncompliance.

Fraud, waste and abuse (FWA)

The detection, correction and prevention of FWA are essential to maintaining a health care system that is affordable for everyone. State and federal law enforcement agencies are increasingly focused on investigating health care FWA.

Examples of FWA include but are not limited to:

- Defrauding or attempting to defraud the health care system
- Lying, using false pretenses or making false statements or promises to get money from the health care system
- Using the identifying information of another person to defraud the health care system
- Misusing resources or services, which results in unnecessary costs to the health care system
- Taking any action that leads to a payment from the health care system that is improper, for substandard care or for medically unnecessary services

Even if you don't intentionally lie or misrepresent facts, you could still be committing fraud, waste and abuse if you are paid by the health care system but are not actually entitled to the money.

Requirement to report FWA

Everyone who performs a function that in some way supports Humana business is required to report suspected FWA to one of the designated contacts in the "I have help" section on the previous page.

Humana has zero tolerance for any activity that constitutes fraud, waste or abuse.

For more information on FWA, including additional examples, use the Web link below to access CMS' Medicare Parts C and D Fraud, Waste, and Abuse Training and Medicare Parts C and D General Compliance Training*
http://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/ProviderCompliance.html

* As with all concepts discussed in this document, the CMS training also applies to Humana's Medicaid line of business.

The Bottom Line
I must be familiar with FWA concepts.

Ineligible parties

The government requires us to refrain from contracting with or employing those who have engaged in certain types of activities. Such parties include health care providers and business partners, their employees and those they contract with to perform functions to meet obligations to Humana that have been or are:

- Convicted of a criminal offense related to health care
- Listed as excluded or otherwise ineligible for participation in federal health care programs*
- Identified and listed on the Executive Order 13224 – Blocking Property and Prohibiting Transactions with Persons Who Commit, Threaten to Commit, or Support Terrorism
- Listed on either the Department of Health and Human Services' Office of Inspector General or the General Services Administration exclusion list*
- Convicted of any felony involving dishonesty or a breach of trust (Violent Crime Control and Law Enforcement Act of 1994)

These individuals and their employees and those they contract with to perform functions to meet obligations to Humana are ineligible for any contractual relationship with Humana.

The Bottom Line
Those in leadership roles must not employ or contract with ineligible parties.

* There may be instances where some person or entity was previously listed as excluded, but that status has been removed. In such a case, Humana should be contacted so it can determine whether the involved party(s) may support Humana.

Conflicts of interest

Having a conflict of interest is not necessarily a violation of this document, but failing to disclose the conflict to your organization is a violation. Humana's healthcare providers and business partners and those supporting them must disclose any conflicts of interest annually and if their status changes. If you are unsure of whether a relationship is a potential conflict of interest, you should disclose it so that it may be evaluated.

The Bottom Line
I must not make business decisions motivated by personal considerations or relationships.

Possible conflicts of interest

Personal, familial or business relationships that could interfere with your organization's ability to meet contractual obligations to Humana may be conflicts of interest.

Additionally, Humana associates must not engage in activities that compete with any of Humana's lines of business nor invest in entities they select, manage or evaluate as an entity supporting Humana. Health care providers and business partners must be sensitive to these relationships and avoid creating situations that could encourage a Humana associate to violate these policies.

A good general rule is to avoid any action or association that would be embarrassing to you, your organization or Humana if it were disclosed to the public, or that would be perceived as a potential conflict of interest or appear as improper.

Gifts, favors, job opportunities and entertainment

Please refer to the Compliance Policy for anti-kickback and anti-inducement provisions that outline the kinds of items that can be given away, their value limits and to whom.

Email the Ethics Office at ethics@Humana.com with questions about gift cards and gift limits, including on a state or local level.

Health care providers and business partners:

- Should never offer or provide, directly or indirectly, anything of value – such as a job, cash, bribes or kickbacks – to any Humana associate, representative, customer or government employee.
- Are expected to understand Humana's business entertainment policies before offering or providing any Humana associate or representative any business entertainment. Business entertainment should never be offered to a Humana associate or representative under circumstances that create an appearance of impropriety.

Accepting or giving gifts, favors, travel and entertainment may create a conflict of interest with your obligations to Humana and may constitute a violation of law.

Gift giving or receiving that involves health care providers or business partners, is limited to $50 fair market value or less. Giving gifts to Medicare or Medicaid beneficiaries has stricter guidelines and limitations outlined in Humana policies. This also includes, but is not limited to, meals, favors, travel, tickets or entertainment, prizes, drawings, raffle winnings, gratuities and awards.

Gifts of money or cash equivalent are never permissible.

The Bottom Line
I must refrain from discussing, giving or offering anything of value, including employment, to anyone on Humana's behalf, unless permitted by law or Humana policy.

Working with Humana customers

Cultural competency

Health care providers and business partners who interact with Humana customers, including beneficiaries, must do so in a culturally competent manner. This includes:

- Understanding cultural differences and economic disparities in the populations you work with as part of your responsibilities for Humana
- Being knowledgeable about how to work with people from a variety of cultural and economic backgrounds and sensitive to any ongoing clinical challenges that may be in addition to the reason for their seeking treatment or guidance
- Being aware of your own cultural biases

To access interpretation services for Humana beneficiaries, call Humana or request the member provide the phone number listed on the member's Humana identification card.

Safety and welfare

Health care providers and business partners must make every effort to protect the health, safety and welfare of the customer. This includes being aware of the signs and symptoms of the following:

- **Abuse** – e.g., physical, sexual or emotional
- **Neglect** – e.g., conduct that could or does result in serious physical or emotional injury
- **Exploitation** – e.g., use of a position of trust to knowingly deceive or intimidate, or deprive of resources, funds or assets

Certain populations, such as the elderly and disabled, are at increased risk for these situations.

Reporting suspected abuse, neglect or exploitation

If a Humana customer is ever in immediate danger, call 911 or local police.

States may require me to immediately report suspected abuse, neglect and exploitation directly to the appropriate state agency(s). Additionally, any signs of the above must be reported to the Humana Care Manager, who will determine the appropriate next steps.

The Bottom Line

I must treat Humana customers with respect and make every effort to protect their health, safety and welfare.

I am safe from retaliation

We strictly prohibit intimidation and/or retaliation against any associate or health care provider or business partner who, in good faith:

- Reports an actual or suspected violation of ethical standards, Humana policies or procedures and applicable laws, rules or regulations

or

- Participates in the investigation of a suspected or detected violation

If you suspect such behavior, you must report it to the Ethics Help Line.

Investigation of suspected violations

Humana promptly investigates any reported issues suspected of being violations of this document, Humana policies or procedures, or applicable laws, rules or regulations. All reported issues are treated as confidentially as possible, yet you may be contacted to provide additional information if you provided your name at the time of reporting. If contacted, you are expected to cooperate fully in any investigation of an alleged violation. If you want to remain anonymous when reporting an issue, please provide as much information as possible, at the time of reporting, to allow Humana to thoroughly investigate the issue.

When Humana determines it is appropriate, Humana will report any violations of the requirements in this document or Humana policies, Medicare program noncompliance, Medicaid program noncompliance, violations of law, criminal misconduct, any instances of abuse, neglect or exploitation, or FWA to the Centers for Medicare & Medicaid Services (CMS), CMS designees, other regulatory agencies, including state Medicaid agencies and/or law enforcement, as applicable.

The Bottom Line

- I must not intimidate or retaliate against anyone I interact with in performing my role for Humana
- Suspected violations will be investigated

Disciplinary standards

The Bottom Line

Disciplinary actions will be taken when violations occur.

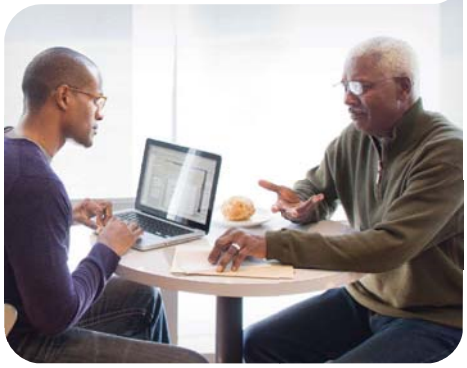
Violation of this document and other policies and procedures could compromise Humana's integrity and reputation, and result in criminal or monetary penalties or disciplinary action. This disciplinary action may include, but is not limited to, retraining, issuance of a corrective action plan that is tracked to completion or termination of your organization's contract and, based on the violation, the matter being reported to the appropriate authorities.

Health care providers and business partners should promptly take appropriate disciplinary actions for employees and business partners found to be in violation, up to and including termination of contract or employment, and report such action to Humana. Humana may take additional action if deemed necessary.

The following are examples of conduct that may result in disciplinary action:

- Authorization or participation in actions that violate this document or Humana policies
- Failure to report a suspected violation of this document or Humana policies
- Refusal to report a suspected violation of this document or Humana policies
- Refusal to cooperate in an investigation of an alleged violation of this document or Humana policies
- Failure by a violator's supervisor or manager to detect and report a violation of this document or Humana policies, if such failure reflects inadequate supervision or lack of oversight
- Intimidation of, or retaliation against, an individual for reporting or participating in the investigation of a violation or suspected violation of this document or Humana policies
- Intentionally making a false accusation

Integrity of company information



We are committed to:

- Safeguarding information used to perform functions for or related to Humana. This includes following the privacy and security rules of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and the more recent Health Information Technology for Economics and Clinical Health Act (HITECH), as should Humana health care providers and business partners. Links to these regulations are in the Compliance Policy.
- Providing accurate and truthful information in any transaction — it is required.
  - Of particular note, health care providers are responsible for submitting truthful, complete and accurate data to Humana.
  - For instance, when you submit risk adjustment data to Humana, Humana expects that it is always truthful, complete and accurate and that all diagnoses are appropriately documented in the medical record.

Policies and procedures

This commitment is reinforced by internal controls and procedures designed to detect and prevent, report, investigate and track inappropriate usage and disclosure of information, as well as illegal activities, in compliance with the Foreign Corrupt Practices Act.

Health care providers and business partners are expected to have policies and procedures in place to affirm the integrity of their organizations' information. Examples include:

- Privacy and security training program for employees and business partners
- Confidentiality agreements, where applicable
- A procedure for the required return/destruction of protected health information (PHI) if an agreement involving the support of Humana is terminated
- A procedure for restricting the marketing of PHI

If asked, health care providers and business partners have an obligation to provide accurate and complete information to auditors about the status of financial, operational and compliance risks and controls related to their business with Humana.

Health care providers and business partners must safeguard Humana information.

For those having a BAA with Humana: Please refer to the separate Humana Privacy and Security Policy Guidance document that is provided with the BAA for more information on this topic.

Your concerns

Health care providers and business partners, or those who perform functions for them, who believe they have been asked to withhold information from auditors, or question the accuracy of any information, are required to immediately call the Ethics Help Line at 1-877-5-THE-KEY or report their concern at www.ethicshelpline.com.

Unauthorized disclosure

Humana's written approval must be acquired by organizations designated as business associates before any confidential Humana information may be provided to any contractor, including subcontractor and independent contractor, outside of the United States. Unauthorized disclosure of, or access to, confidential information, within or outside of an organization, may result in termination of contract and also may result in civil and criminal penalties.

The Bottom Line

I must protect Humana information.

Reporting a privacy or security breach*

If I am a Humana business partner with a signed Business Associate Agreement (BAA) with Humana, any identified breach by my organization must be reported to Humana within five days of discovery via one of the methods outlined in the "I have help" section on page 3. All information that should be included in the breach report is outlined in the BAA.

* Due to the nature of these issues, reporting them anonymously is not an option.

Applicable laws and regulations

Humana's Compliance Policy provides more information on applicable laws and regulations that impact the relationship that my organization and I have with Humana.

Direct clarification requests to: compliance@Humana.com.

Corporate social responsibility

Our proactive commitment extends beyond compliance, as we are dedicated to making business decisions to improve the health and well-being of our members, our associates, the communities we serve and our planet.

For more information: Humana.com/about/corporate

Overview

There are many laws and regulations that impact Humana's operations that you and your organization should be familiar with to sufficiently fulfill contractual obligations to Humana. They involve but are not limited to:

- Prohibitions on inducing referrals or recommendations related to an item, service or plan enrollment paid for in whole or in part under a federal or state health care program. This could take many forms, such as gifts, rebates, etc.
- Filing or conspiring to file false claims.
- Retaliating against someone who reports suspected misconduct.
- Improperly using cash value options of a covered product to facilitate money laundering or finance terrorist activity.
- Requirements and restrictions regarding doing business with the government, with accrediting agencies, and foreign governments, contractors or consultants.
- Receiving contractor bid or proposal information that would give Humana an unfair competitive advantage.
- Giving, discussing or offering anything of value, including employment, to a procurement official.

Humana's compliance department should be informed of any allegation of a violation or citations alleging a violation from a governmental regulatory agency. The person receiving the notification should direct the request to Humana's Compliance department. This requirement also applies to health care providers and business partners if a violation occurs that involves Humana business. Email the applicable information to **compliance@Humana.com**.

Health care providers and business partners, their employees and those they contract with to perform functions to meet obligations to Humana must never:

- Destroy or alter any document or record in anticipation of a request for the document or record by a government agency or court
- Lie or make false or misleading statements to any government investigator
- Persuade or attempt to persuade anyone to provide false or misleading information to a government investigator

Humana's policy is to avoid even the appearance of impropriety. Related violations committed by health care providers, their employees or those they contract with to perform functions to meet obligations to Humana are punishable by fines and imprisonment, loss of government contracts and/or suspension or exclusion from participating in federal procurement opportunities.

Environmental commitment

Humana is committed to conducting its business operations in an environmentally responsible manner and in compliance with all applicable laws and regulations. Health care providers and business partners are expected to support this commitment by:

- Operating in full compliance with both the letter and spirit of environmental, health and safety laws and regulations applicable to their businesses, including the integration of sound environmental, health and safety practices into their everyday activities
- Reporting any environmental, health and safety concerns in connection with their Humana business dealings
- Identifying opportunities to improve their environmental, health and safety programs
- Implementing emergency preparedness plans, if necessary

The Bottom Line

I must follow all applicable laws, rules and regulations.

We thrive together

We stay in the know and understand the consequences of our actions.

We expect our leaders to set the example.

Humana®

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 28 – System Modification Protocol (Statewide):

The respondent shall describe, in detail the following change control IT processes:

a. How the respondent will initiate and coordinate internal modifications for any of its core systems (including, but not limited to, encounter submission, EDI/Clearinghouse, and financial reporting) or any potential subcontractor's core systems,

b. How the respondent will accommodate Agency-directed IT modifications; and

c. How the respondent will identify, track, communicate, and resolve IT production issues that affect internal or external stakeholders.

For each of the descriptions, the respondent shall also include the expected timeframes for making modifications, the prioritization process employed, the communication processes used for planned or unplanned changes, as well as status updates provided to employees, Agency staff, and providers. The descriptions shall also address testing procedures, production control procedures, and any applicable claims/encounter reprocessing for historical or retroactive system changes.

Response:

Humana has one of the most effective and efficient Management Information Systems in the industry. Our technology facilitates operational transaction processing, data collection, workflow, reporting, and analytics. We place considerable focus on the importance of IT as the backbone of our core business functions. As such, we have made significant IT investments to provide efficient and effective delivery of services to our members. Humana's integrated IT platform differentiates us within the industry—it is managed in-house and receives positive feedback from auditors. Our IT systems have served our Florida Medicaid operation's needs since 1997, with continuous investment to maintain and evolve their capabilities. As a national company with various lines of businesses, we serve more than fourteen (14) million members in medical benefits plans and nearly seven (7) million members in specialty plans. We are adept at designing technology solutions to meet the always evolving needs to support high quality care.

Our capabilities will meet or exceed the requirements of this contract and our applications are well-integrated to support the workflows necessary to manage enrollee and provider interactions and improve every aspect of our care, quality, and business processes.

Humana continually invests in our IT platform and recognizes the crucial role it plays in ensuring successful operations. Over the current contract administration we have streamlined our clinical capabilities for our Medical Managed Assistance (MMA) and Long-Term Care (LTC) members in our Care Management platform so that the Care Coordinators and Utilization Management teams have a 360° clinical view of the member, including authorizations and referrals, care plans, and health assessments and have also developed insightful reporting and data analytics capabilities (e.g., Medicaid DataMart, Clinical DataMart, and Business Intelligence tools) to support our performance goals and to offer a proactive approach to operational performance. These major IT improvements were built to enhance and replace existing capabilities without disrupting access to our legacy platforms or other core systems. Our process and people,

managed by our Medicaid Governance Committee, exemplify our success in achieving systems changes.

In 2016, we were awarded the InfoWorld/Forrester Enterprise Architecture Award, recognizing Humana as one of five companies globally who are leading the way by approaching Enterprise Architecture (EA) with speed, responsiveness, and agility. Humana was singled out by InfoWorld, which reported, “Humana’s EA practice identified synergies across the strategic focus areas, which became the genesis of a Future State Architecture (FSA). The FSA is composed of business-oriented domains, which provide a logical collection of business processes, data subjects, systems, and services that enable competency, as enterprise services, and Application Programming Interface (API)”.

Information Week has recognized Humana IT as an Elite 100 company in back-to-back years (2015 and 2016) as the most innovative user of technology. Humana has several IT leaders who have been recognized for their leadership excellence in the Computerworld Premier 100 technology lists. In 2017, Humana was ranked in the Top 15 on the Computerworld list of the “Best Places to Work in IT.”

We have invested heavily in IT systems over the past few years and recently refreshed our technology roadmap to continue to make significant investment in the coming years. We are one of the top global companies in regards to IT, and we are committed to keeping pace with the changing healthcare environment through continued innovation and investment.

==========

a. How the respondent will initiate and coordinate internal modifications for any of its core systems (including, but not limited to, encounter submission, EDI/Clearinghouse, and financial reporting) or any potential subcontractor's core systems.

==========

INITIATION AND COORDINATION OF CORE SYSTEMS MODIFICATIONS

We have a defined and structured process to identify, assess, and implement technology updates and solutions.

Internal systems changes are continuously identified through multiple means which include, but are not limited to regulatory and contractual changes, internal trend analyses, operational functions performance to internal and external benchmarks, enterprise architecture capabilities, compliance with operational metrics, independent audit results, strategic roadmaps; and review of emerging technologies. As an example, our Compliance department routinely monitors our Florida performance against benchmarks and supports the operational business to identify system change requests to improve performance.

Annually, our Business Technology leadership evaluates our current system and recommends a plan for the coming year. These projects are also submitted and evaluated with the same rigor and planning to ensure a carefully designed and an effective implementation.

In addition to our internal assessments, we have hired Deloitte, a national leader in conducting IT assessments and due diligence, to perform a full systems capability assessment to determine

our functionalities compared to national standards. Deloitte has reviewed our systems twice in the past four years and has helped inform future system enhancements. They found our Medicaid IT platform to be performing in line with, and exceeding the industry standard. We leverage Deloitte's feedback to identify projects to enhance our systems and continue to keep pace with technology advancements.

Regardless of the channel used to identify a project or requests for modifications, each is clearly documented to define the intent and purpose behind the request and how the change is designed to support the delivery of service to our members.

CORE SYSTEMS MODIFICATION REQUESTS AND CHANGE CONTROL PROCESS

Humana has a systematic and thoughtful process to ensure all system changes, especially those impacting core systems, are vetted, prioritized, and maintained through an end-to-end change control mechanism. All project requests for core systems modifications are vetted through our Medicaid Governance Committee through which business area owners and Medicaid IT leadership report.

The Medicaid Governance Committee structure includes a tiered approach to vetting and approving IT projects or changes. All new project requests for core systems modifications are submitted by the business area owners. New projects requests are reviewed by the Medicaid Implementation team and Business Technology leadership to ensure the requests for change are well defined for presentation during the weekly Medicaid Operations Triage meeting. All modifications impacting core systems are thoroughly reviewed during the assessment of the modification. We also assess and monitor all systems modifications requested of our subcontractors. The Medicaid Operations Triage meeting includes associates from our IT team who can validate the appropriateness of the change, the impact on other systems, and the level of effort required. As an outcome of this meeting, all requests are reviewed and approved for detailed planning, or are declined. Attachment 28-1 lists the workflow of our project initiation process, including the triage and approval process.

As part of the governance process, each potential project is assessed for its value and prioritized based on the lens of regulatory compliance, member experience, strategic alignment, and operational process. Projects are scored for each lens and ranked to provide the Governance team guidance on how to prioritize efforts to ensure we are applying resources to the most impactful changes.

Projects which are approved for planning are then assigned an Information Technology Project Manager and a Business Analyst to define the lT impacts for each requirement. The team works collaboratively across disciplines to provide the best solution for the request. Once requirements are approved, the Information Technology Project Manager submits requests to the Enterprise Release Management (ERM) team to discuss the project on the weekly ERM Impacts call. On this call, the project's impact on other systems, including Humana's core systems and any subcontractor systems, is reviewed and discussed in detail. Segment President Review Committee meetings are held to review change requests, ensuring the downstream impacts are assessed by each area's leader.

Attachment 28-1 explains the project intake and approval process. Strategic changes or large projects are vetted for approval through our Medicaid Operations Steering Committee, which includes our market and corporate leadership teams.

RELEASE PLANNING – PRIORITIZATION PROCESS

All internal modifications are completed within one (1) to nine (9) months. The timeframe depends on the IT estimates, number of systems impacted, IT capacity, and business need. Projects that represent a compliance risk to contractual standards are addressed prior to other requests. To support the planning of the systems change and the release of changes to our production environments, we work across our departments and within our IT teams to prioritize projects and plan the release. As soon as targeted deployment dates are determined, the IT Project Manager creates a Production Turn Task to identify the planned release date, impacted applications, and the project features and capability being delivered. The ERM team assigns implementation dates based on the magnitude of the changes needed and the impact on our members and providers. The ERM team receives input from the relevant IT leaders to determine if the implementation dates are appropriate and achievable. While Humana's ERM team plans and establishes a schedule for integrated software releases at least eighteen (18) months in advance, the timelines can be mitigated by holding accelerated meetings for the scope, requirements, and design phases. On a monthly basis, the ERM team produces and publishes a heat map report, illustrating the volume of planned changes with impact to critical, shared systems. The Segment President Release Committee (SPRC), comprised of Business Technology and Business Segment leaders, uses this report to prepare for the monthly SPRC meeting. During this meeting, associates share operational risks for technology changes to shared systems and validate that operational risks identified in previous meetings have been mitigated. The SPRC team also reviews the schedule of major infrastructure projects deploying in the coming months and checks in on the status of current projects. Attachment 28-2 explains the IT Project Intake and Release Planning Process.

COMMUNICATION PROCESS

Humana Medicaid resources proactively monitor the status of all change requests or systems change projects. Progress is reviewed during weekly meetings. These meetings offer an avenue to provide a status update of each project and identify barriers to IT leadership. We communicate project issues impacting members, providers, or the Agency. Further, we ensure transparency by informing our stakeholders of the issue and the anticipated impact, including timeframes.

IT PROCESSES ADDRESSING INTERNAL MODIFICATIONS FOR CORE SYSTEMS

All our IT projects are tracked and monitored through the Systems Development Life Cycle (SDLC) project management framework using agile and waterfall methodologies and following Project Management best practices. Attachment 28-3 and 28-4 provides a diagram of the SDLC process Humana utilizes for the agile and waterfall approaches. The methodology used is dependent on the level of iterations needed, scope of project, and constant need to test and retest. Most systems changes impacting clinical systems use the agile process to allow for

faster turnaround times. The assigned IT Project Manager (PM) is in continuous contact with the IT development teams and at least weekly reviews progress, issues and risks. The IT PM provides weekly project status updates to Medicaid leadership and escalates any issues or risks for visibility and assistance with resolution.

TESTING APPROACH

Application and business teams leverage a wide range of testing methodologies. The following practices are widely used across the enterprise:

- Functional testing is based on an analysis of the specification of the functionality of a component or system.

- Non-functional testing reviews the attributes of a component or system that do not relate to functionality (e.g., reliability, efficiency, usability, maintainability, and portability).

- Integration testing is performed to expose defects in the interfaces and in the interactions between integrated components or systems. This includes the testing of interfaces to external organizations (e.g., Electronic Data Interchange, Internet).

- Performance testing evaluates the degree to which a system or component accomplishes its designated functions within given constraints regarding processing time and throughput rate, based on service-level agreements and business expectations.

- Security Testing reviews the attributes of software products that impair its ability to prevent unauthorized access, whether accidental or deliberate, to programs and data.

- Regression testing of a previously existing program or application following modification is conducted to ensure that defects have not been introduced or uncovered in unchanged areas of the software as a result of the changes made. It is performed when the software or its environment is changed.

- User Acceptance is formal testing with respect to user needs, requirements, and business processes conducted to determine whether or not a system satisfies the acceptance criteria and to enable the user, customers, or other authorized entities to determine whether or not to accept the system.

- Test cases are created to verify each requirement for a product, including functional, non-functional, and structural requirements. Test cases are also created to verify existing functionality through regression. Traceability is established between requirements and related test cases to ensure thorough testing coverage. Defects are created when the product or system is not behaving as desired. Test cases, defects, and traceability are documented in the Test Management System of record.

- After final testing approvals are received, each IT development team submits their turns to move the changed code into production. The Enterprise Change Management team reviews each turn for all the critical applications and provides approval to turn on the release date. Humana has monthly releases which are monitored by the Enterprise Release Manager

assigned to the release. The Release Manager provides regular updates during the release day and ensures all the applications are validated in production after the turn and all issues found during post production validation are resolved.

ENTERPRISE CHANGE MANAGEMENT OVERSIGHT

The Enterprise Change Management team is responsible for evaluating risk and preparedness for all technology changes across Humana and our subcontractors. The Enterprise Change Management team facilitates Change Approval Board meetings multiple times each week to ensure high and medium risk infrastructure and security changes as well as changes impacting critical systems are operationally ready for deployment. As part of the operational readiness review, the following artifacts for change are reviewed and discussed: evidence of testing (e.g. lower environment testing, pilot) step-by-step implementation plan step-by step back-out plan robust post-production validation plan monitoring plan; load testing plan and communication plan.

Changes that do not meet Change Management process standards are rejected and controls are in place to ensure they do not reach production.

After successful deployment of the changes in production, the projects move to warranty phase where the processes are monitored in production and any issues are logged as Incident tickets. The issues are resolved by the IT development teams as part of a ninety-day (90-day) warranty. After the end of the warranty phase, the monitoring of all processes is done by Production Support Management teams.

After the end of the warranty period the IT project is closed. A lessons learned meeting is organized by the IT PM with all project team members. In this forum, all lessons learned are shared by the IT PM, in support of future implementations.

SUBCONTRACTOR CORE SYSTEM MODIFICATIONS

Humana maintains a strong relationship with our subcontractors and ensures the same level of detailed planning and oversight of any changes made to our subcontractors' systems to ensure our members' ability to access care. We have a Relationship Manager assigned to each of our subcontractors, who meets with the subcontractor on a routine (typically monthly) basis to discuss performance. Planned updates to both Humana's and the subcontractors' systems are discussed during these meetings and are tracked to validate that there is no downstream impact, from the planning phase through testing and implementation. We conduct thorough regression testing with our subcontractors upon any core systems change to test and validate that updates to file formats, software updates, and system modifications have not resulted in defects in the way information is interchanged.

Our IT platform is built to seamlessly exchange the appropriate levels of information with our subcontractors' core systems. All of our subcontractors exchange data with Humana in a nightly batch feed. Key subcontracted functions critical to our members' experience are performed on Humana's platform so as to avoid any delay in sharing of key data elements and allow for full

clinical integration. Subcontractors are required to align with our business impact analysis and other interim assessments and to ensure our systems interact correctly.

CONTINUAL INVESTMENT TO MAINTAIN CORE SYSTEMS

Humana's technology strategy is directly linked to the business strategy and enterprise priorities. Our strategy considers industry and technology trends, organizational positioning, and capabilities that will offer the greatest differentiation in the rapidly evolving market. Humana has the resources, abilities and capacity to not be a traditional health insurance transactional processor, but rather an integrated care delivery organization that stays ahead of the curve and proactively enacts on technology changes to make appropriate systems modifications.

Our technology roadmap consists of six areas of greatest differentiation: seamlessly integrated clinical, population health, differentiated member experience, 360-degree views, turning insights into action, and platform for innovation. To fund the strategy and focus our efforts, we have been investing nearly two hundred million ($200M) annually.

With AHCA's support and guidance, Humana has implemented capabilities to systematically support a comprehensive plan for enrollees having both MMA and LTSS. We have made system changes to ensure our back-end operations function seamlessly for our enrollees as they access services, and with providers as they engage with our members. As an example, we have streamlined our processing of MMA and LTSS claims and encounters on our enterprise platform. Clinical operations are also performed on our integrated care management platform, which provides the 360-degree view of all Care Management activities. Our Care Management platform is already set up with the necessary rules to trigger appropriate workflows. These enhancements align Humana ideally to serve as a Comprehensive plan under the updated SMMC program model.

We also have a proactive approach to the maintenance of our core systems and applications. Our core enterprise applications, including but not limited to, our Enrollment Systems, Provider Systems , Claims Adjudication System (CAS), our Encounter Processing Engine (Edifecs), our Clinical Program (Clinical Guidance eXchange (CGX)), and Enterprise Data Warehouse (EDW), are tested during each major system release to validate that there are no negative downstream impacts. We also maintain these core enterprise applications with regular testing and monitoring throughout the year. We continually run reports of these applications or systems to assess for capacity, appropriate functioning (e.g., workflow triggers), and security.

==========

b. How the respondent will accommodate Agency-directed IT modifications

==========

PRIORITIZATION OF AGENCY-DIRECTED IT MODIFICATIONS

Agency-directed IT modifications follow the same process as outlined above. Humana assigns Agency-directed IT modifications the highest level of priority and drives our systems change process to implement within ninety (90) days. Our corporate resources offer expertise and

capabilities to make changes to IT systems timely. Over the current contract term, we have worked with AHCA and complied with the timeframes for systems change turnaround.

Our process for Agency-directed modifications is designed to be responsive to the request and guided by the timeline established by AHCA for the change. We follow a process similar to the systems change processes, from intake to prioritization and all the way to production and testing, to mitigate adverse events, but within the timeframe requested by AHCA. Further, our Regulatory Compliance department continuously monitors and reviews our contract and any amendments to identify any need for IT modifications.

All Agency-directed modifications are reviewed by our Medicaid Governance Committee and assigned an IT Project Manager and Business Analysts. Agency-directed IT modifications which need to be implemented in shorter time frames will be processed quickly through the intake process and offline approval.

CASE STUDY: EXPRESS ENROLLMENT REQUEST FROM AHCA

Humana partnered with AHCA to implement Express Enrollment. At the end of 2015 we supported implementation of the Mid-Month Express Enrollment in partnership with AHCA to ensure that enrollees receive benefits upon enrollment, removing the lag time between becoming Medicaid eligible and accessing plan benefits. Our expertise, resources, and scale enabled us to quickly assess the requirements and form a team to complete the project without any error within two (2) months.

TESTING WITH THE AGENCY

We utilize our internal systems integration testing and user acceptance testing on all Agency-directed modifications to prepare for and prevent issues or negative impacts. We will continue to work with AHCA by utilizing their test files, when provided, prior to go-live.

==========

c. How the respondent will identify, track, communicate, and resolve IT production issues that affect internal or external stakeholders.

==========

Humana follows industry standard best practice Information Technology Information Library (ITIL) processes for production issues management. Humana has an end-to-end Incident Management process to identify, track, and manage all IT issues to full resolution for both internal and external stakeholders. Humana's Network Operations Center (NOC), IT Command Center (ITCC), Production Support Management (PSM), and Central System Support (CSS) teams work together on a twenty-four (24) hours a day, seven (7) days a week schedule to address all IT issues with appropriate urgency based on impact and priority. All issues are tracked in our Computer Associates (CA) Service Desk platform, a best-in-class issue management tool. The CA Service Desk tracking ensures our extensive planning, validation, and testing processes are followed. Tickets are routed to the appropriate incident resolution teams and are then prioritized based on impact to our providers, members, and to AHCA. Our associates work the individual tickets, providing updates within the CA Service Desk tool until

the issues are resolved. The updates are then communicated back to the impacted parties. Production issues with widespread impacts are addressed with a troubleshooting conference call.

Routine reports are run on enrollment, claims, premium, clinical, provider, pharmacy, and financial data. Our IT Command Center hosts a daily meeting to provide a business-driven, centralized location for escalation of issues, risk identification with key dates for fixes, discussion of events and remedies, and communication and change management.

Humana has significant reporting and analytics capabilities within its ITIL processes. These reporting and analytics capabilities allow us to closely monitor and manage any issue trends, and to ensure excellent service levels for issue resolution.

In addition to ITIL processes for tracking, communicating and resolving IT production issues, Humana has invested significantly in system monitoring and alerting capabilities to track issues as they are happening or before they actually cause impacts to members, partners, or internal users. We have twenty-four (24) hours a day, seven (7) days a week support staff for both the hardware and software components of our operations. We also have a robust environment monitoring platform which provides real-time information on the status of our most important systems.

COMMUNICATION PROCESS

Humana has dedicated resources within our Florida Medicaid Operations team responsible for communicating necessary IT issues within the timeframes and frequency required. Our systems are purposefully structured to interact with compliance and regulatory agencies (e.g., CMS, AHCA) and to produce data and reports in required formats to interact with those agencies. All business areas have teams for monitoring production issues, prioritizing and implementing fixes. Our Provider Communications and Member Communications teams are engaged to draft communication notices to offer details of the project, including a timeframe for any continue anticipated interruptions. The content is submitted to AHCA for approvals, as necessary, and is internally vetted by Risk Management, Privacy, Regulatory Compliance, and our Legal departments. Communications impacting members and providers are shared via email, fax blasts, post mail, and our website, including our provider and member portals.

As described earlier, our Relationship Managers assigned to each of our subcontractors meet with the subcontractor on a routine (typically monthly) basis to discuss performance. During these meetings, system issues deriving from the subcontractor's platform or those impact their platform are discussed to ensure files are being shared correctly and timely, and to validate that our members and providers do not experience any downtime with accessing care or providing services. These issues are tracked by our Relationship Managers, who also bring in our IT team to support and inform further conversations and decisions to remediate system impact issues. Production issues impacting providers, members, or AHCA are communicated timely.

==========

The descriptions shall also address any applicable claims/encounter reprocessing for historical or retroactive system changes.

==========

In the event we identify a systems production issue impacting the processing of our claims or encounters, we identify the date and time stamp of the origination of the issue and use our archived and historical system to reprocess all claims processed from that period. Our IT team identifies the issue, conducts research, and stands up a project that flows through the same testing rigor described earlier in our response. We also validate the claims that have been identified as needing to be reprocessed and confirm the new method in which the claims are to be processed (e.g., the change in the system). We verify all key mechanisms, including the fee schedule, authorization process, and provider network files in advance of reprocessing these claims. Our systems are fully capable of reprocessing all affected data while avoiding any incorrect or duplicate payment.

CASE STUDY: CLAIMS REPROCESSING DUE TO SYSTEMS CHANGE

Recently, we identified that select claims passing through Conduent (our contractor responsible for receiving paper claims and converting them to an electronic format) were acting as encounters, causing the claims to go unpaid. Our Claims team and IT team worked together to identify the root cause of this issue and worked with our claims front-end team to test similar cases in our test environment. We then developed a test strategy, created an interim fix to ensure claims that were processed incorrectly were paid on time, completed user acceptance testing, and fixed the issue within three (3) weeks of initially identifying the problem.

Humana's systems change mechanism has been well thought-out and is considerate of the impact these changes could have on our members, providers, and the Agency. Our goal is to ensure transparency with AHCA and offer routine updates for any systems issues. Finally, our MIS platform is sophisticated and is built with the strategy, tools, and mechanisms to maintain a proactive approach to addressing system changes, limiting our need to be reactive to system issues.

Evaluation Criteria:

1. The adequacy of the respondent's IT processes addressing internal modifications for its core systems and subcontractor's systems.

2. The extent to which the respondent's IT processes documented for implementing Agency-directed modifications is less than ninety (90) days.

3. The adequacy of the respondent's processes documented for handling production IT system issues.

4. The adequacy of the respondent's communication process used when system issues/updates are identified and resolved by the respondent and/or its subcontractors throughout the change control process.

5. The adequacy of the respondent's approach to system internal testing to ensure the respondent's and/or subcontractors' system changes/updates are accurate.

6. The adequacy of the respondent's approach to integration testing to ensure the respondent's and/or subcontractors' system changes/updates do not adversely affect other systems, including systems operated by Florida Medicaid and subcontractors' systems.

7. The adequacy of the respondent's approach to applicable claims reprocessing for retroactive system changes, including processing performed by its subcontractor(s).

Score: This section is worth a maximum of 35 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Attachment 28-1: Medicaid Governance – Project Intake and Approval

Executive Steering

- Establish Medicaid strategy, goals, and objectives
  - Provide strategic leadership and oversight to Medicaid business
  - Pulse Operational Health - Market status updates, metric reviews, etc.
  - Resolve escalated issues and risks

Operations Steering

- Review, evaluate, and approve/reject all material Medicaid projects
  - To include IT and non IT related
  - To allocate funding and resources
- Resolve escalated issues and risks
- Communicate - Business Development status, cross-market synergies, strategic opportunities, and planned changes, etc.

Program & Project Management – Implementation & Process Improvement

- Support program implementations and facilitate Command Center (e.g. New Plans & Plan Expansions)
- Host Triage and evaluate process improvement (PI) opportunities:
  - Assess impact to current/future Implementations, market operations, delegate operations, etc.
  - Develop and prioritize business cases
- Present implementation programs and prioritized process improvement business cases to Operations steering
- Provide Program and Project Management support for approved initiatives
- Own and drive closure of all escalated project issues and risks

FL Medicaid Market Operations

- Host regular Market Operating and 360 Committee meetings with shared services, IT, and Corporate Medicaid Consultant (no less than bi-weekly)
  - Own and drive closure of all Market issues
  - Identify potential opportunities for process improvements and efficiency

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 29 – Encounter Data Submission (Statewide):

a. The respondent shall submit a flow chart and narrative description of its encounter data submission process including, but not limited to, how accuracy, timeliness and completeness are ensured.

b. Completeness of encounter submissions requires that key fields are populated accurately for every encounter submission. The respondent must describe quality control processes that will ensure key fields including, but not limited to, recipient Medicaid ID, provider Medicaid ID, claim type, place of service, revenue code, diagnosis codes, amount paid, and procedure code are accurately populated when encounters are submitted.

c. The respondent shall demonstrate quality control procedures to ensure documentation and coding of encounters are consistent throughout all records and data sources (ASR, FMMIS, special submissions) and across providers and provider types. The description should include tracking, trending, reporting, process improvement, and monitoring of encounter submissions, encounter revisions, and methodology to eliminate duplicate data.

d. The respondent shall include any feedback mechanisms to improve encounter accuracy, timeliness and completeness.

e. The respondent shall include documentation of the most recent three (3) years of encounter data submission compliance ratings, corrective actions, if indicated, and timeframe for completing corrective actions for Florida Medicaid.

f. The respondent shall submit documentation describing the tools and methodologies used to determine compliance with encounter data submission requirements.

Response:

Humana understands the importance of encounter data to support identification of provider performance and track actual cost of care. As such, we manage the submission of all encounters internally across all our providers and subcontractors and do not delegate this function. Humana is a national expert and is one of the top performing managed care organizations when it comes to the submission of accurate and timely encounter data. We have been submitting encounter data to government authorities, including both Medicare and State Medicaid programs, for more than twenty (20) years. We have a long history working with the Centers for Medicare and Medicaid Services (CMS) for encounter submissions including being one of the first plans to be certified for encounter submissions to CMS for Virginia and Illinois Dual Demonstration plans. Further, we are called upon by CMS on a routine basis to support their standard development processes for encounter processing.

To date in 2017, we have not found any variance that has required us to request supporting documentation from the Agency for Health Care Administration (AHCA). Humana's encounter data submission process includes electronic editing systems, quality checks, quality control procedures, tracking tools, metrics, and the compliance oversight mechanisms necessary to

ensure that our encounter data submissions meet the State's standards for accurate, complete, and timely encounter data submissions. The key to our ability to consistently meet the State's requirements for accurate and complete encounter data submission metrics is our electronic editing process. By requiring that all claims submitted to us (paper as well as electronic), and all encounter files from our sub-capitated providers and subcontractors, pass the same electronic edits, we can ensure that only those encounters in which the required fields are accurately and fully populated are submitted to the state and that the documentation and coding of encounters are consistent throughout all records, regardless of the data source or provider type.

To ensure that we comply with the State's timeliness standards, we closely track and trend our performance through daily, weekly, and biweekly reports. We have effective processes for analyzing and responding to any internal report or data received from the State that signals negative trends, including procedures for rapid issue escalation and resolution. Over the past three years, Humana has improved our encounter data submission accuracy and timeliness performance for our Florida Managed Medical Assistance (MMA) and Long-term Care (LTC) contracts. Today, we are consistently meeting overall encounter submission timeliness standards at levels between ninety-six percent (96%) and ninety-nine percent (99%). Further, we have already streamlined the submission of encounters for our MMA and LTC providers by leveraging one internal process to create, submit, and monitor encounters.

As part of Humana's IT strategy, we are investing in reviewing and upgrading our encounter data submission architecture. Humana understands the importance of continuous reduction of encounter rejections. This project will offer additional automation to manual processes and is designed to improve the accuracy and timeliness of encounter submissions to the Agency. The project focuses on reviewing the encounter errors from our Florida Medicaid encounter submissions and will determine how our architecture and mapping of encounter elements can be enhanced to improve submissions.

As a transparent partner, Humana is committed to vigorously monitoring and continuously improving our encounter data submission processes, including compliance with the State's findings and updated standards. Humana will continue to maintain and improve our strong performance in accurately and timely submitting encounters to the State.

Below we outline processes in detail in response to this SRC. The accompanying flowcharts can be found (as will be directly referenced later) in the attachments that follow this response.

==========

1. The adequacy of the respondent's process to ensure accurate, timely and complete encounter data.

==========

NON-PHARMACY ENCOUNTERS

ACCURATE ENCOUNTER DATA SUBMISSIONS

Accurate encounters begin with properly received and processed claims. Our network providers are required in their contracts to submit complete claims based on industry standard clean claim guidelines. We require our subcontractors to include similar contract provisions with their providers. These guidelines are enforced through our clearinghouse partners. We educate our

providers about requirements for submitting accurate claims and encounters at the time of onboarding, on our website, through web-based trainings, through our provider manuals, provider communications/newsletters, in-person meetings with our contract management associates, Provider Relations representatives, and through our provider customer service center.

FRONT-END EDITS

Our high accuracy rate for encounters is in part a result of the front-end claims editing performed by our clearinghouses and our Electronic Hub (eHub), which serves as the gateway to the submission of data into our Claims Adjudication System (CAS). These processes enable us to isolate and address quality issues prior to the receipt of claims and encounters by CAS. With a few exceptions, all claims, including paper claims and encounters from sub-capitated providers and subcontractors, must pass the edits in eHub. These edits include both the state-mandated edits (e.g., key fields including Medicaid registration ID, dollar amount paid, etc.), and edits specific to Humana (e.g., NPI number). Dental encounters are submitted to Humana by our subcontractor, DentaQuest, and must clear the edits in DentalXChange, our dental clearinghouse partner, and subsequently eHUB.

Claims and encounters that do not pass our Health Insurance Portability & Accountability Act (HIPAA) edits have acknowledgements returned to the provider and subcontractors via our clearinghouses, indicating errors that need correction. They can then review and correct failed files electronically for resubmission.

EDIFECS ENCOUNTER SUBMISSION PLATFORM EDITS

Humana has customized the Edifecs Transaction Management (TM) software to begin the creation of encounters. Edifecs' customized rules allow Humana to combine the 837 files we receive from providers and subcontractors with the outbound 835 files we send to providers and subcontractors in accordance with Florida's companion guide and the standard X12 implementation guide.

After creating an encounter, the Edifecs software validates that the encounter is HIPAA X12 compliant. Any encounters with errors are corrected prior to submission to the State. Encounters are then batched based on State specifications, file-naming conventions are added, and the encounters are uploaded to our file transfer site. All acknowledgments received from the State are loaded into the Edifecs system for tracking. Encounters identified on acknowledgements as having errors are added to the exception worklist in the Edifecs software for error resolution. Brief documentation describing the Edifecs software and how it supports accurate and timely encounter submission is provided in Attachment 29-1.

OTHER STRATEGIES TO IMPROVE ACCURACY

Humana's Encounter submission team analyzes the errors in Edifecs and identifies who is responsible for researching and resolving the State's denial reasons. This team has a cumulative seventy-eight (78) years of expertise in performing encounters-related functions. This team also reviews claim-associated acceptance and rejection rates to ensure accuracy and increase acceptance rates. We use our assessment of errors and AHCA's denial rates to target providers for education, identify associates for additional training, and recommend system edits and process improvements.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

Our systems are designed to ensure that encounters and claims are processed with appropriate Current Procedural Terminology (CPT) and Diagnosis (DX) codes as seen on AHCA's Data Submission report card. The high scores given to Humana on the submission of Diagnosis, Procedure and Revenue codes, as well as Date Span Adjustments and Duplicates, proves Humana's ability to send accurate and timely encounter data to AHCA.

TIMELY SUBMISSION OF ENCOUNTER DATA

Humana closely tracks the timeliness of our encounter submissions. Our overall encounter submission timeliness has been consistently exceeding the requirement of ninety-five percent (95%) due to several system enhancements and operational processes we have implemented as well as through an array of reporting tools that offer real-time results. Over ninety-six percent (96%) of the time, we have exceeded the state requirement for ninety-five percent (95%) of encounters to be submitted within seven (7) days of adjudication. In rare instances when we are unable to meet the standard, Humana maintains transparency by proactively communicating any issues and the path to resolution for identified deficiencies.

One of the ways in which Humana ensures the timeliness of its encounter submissions is through our encounter reporting system. The system generates reports that help us monitor the aging of our encounter queue and generates an alert when we are at risk of missing an upcoming State timeliness standard.

Humana utilizes a daily reporting tool that identifies encounters in jeopardy of falling out of compliance for submissions. The report allows for adequate distribution of work based on timeliness, where those encounters closest to failing state requirements are prioritized for same day resolution.

We validate the accuracy of our reporting by comparing our own data with the results in AHCA's weekly timeliness reports. If we find a discrepancy, we request supporting information from AHCA to help us assess the reason. To date in 2017, we have not found a variance that has required us to request supporting documentation from AHCA.

COMPLETE ENCOUNTER SUBMISSIONS

During the extraction and creation of trigger files, IT alerts indicate any record that failed during this process (i.e. uploading to Transaction Manager (TM)). A trigger file is based on claims processed in CAS. Necessary stakeholders are notified and immediate action is taken to address any failed processes. After encounters reach TM, monitoring is done to track the status and to ensure encounter submissions to AHCA occur. Our reporting, based on the encounter and service line counts, indicates the volume of encounters received into the Edifecs system that have not yet been submitted to AHCA. The Florida Encounters Submission team will monitor volume and ensure complete and timely submission.

To ensure that we include complete data in our encounter submissions, we have implemented HIPAA level edits for data integrity and validity to evaluate the data being submitted in the encounter files we receive from our providers and subcontractors. Prior to submission to AHCA, we validate that all necessary claim and encounter fields, in particular the key fields identified by AHCA, are populated with values of the appropriate range and type and have the proper layout. We maintain multiple reports that monitor the status of all encounters to ensure complete encounter submissions.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

PHARMACY ENCOUNTERS

Humana uses a wholly-owned subsidiary, Humana Pharmacy Solutions (HPS), as our Pharmacy Benefits Manager (PBM). HPS contracts with a claims adjudication platform called DST Pharmacy Solutions. DST Pharmacy Solutions adjudicates all pharmacy claims at the point of sale, rejecting claims that do not meet point of sale processing requirements. DST Pharmacy Solutions sends Humana a feed of paid claims daily, which are then sent to our Enterprise Data Warehouse (EDW). The Humana Pharmacy Encounter team automatically picks up this feed and creates the National Council for Prescription Drug Programs (NCPDP) encounter data file, ensuring all required fields are completed and in the required format. This is translated into an encounter data file that we transmit to the State's vendor, Magellan, four (4) times a week.

One recent success of the Humana Pharmacy Encounter team was the automation of our encounter processing mechanism in 2016. To achieve this automation, we examined every guideline from the AHCA manual and D.0 file layout and worked with our Information Technology team to develop, test, and deploy an encounter file based on the Agency's requirements. We have automated the process in which the encounter data elements are captured from the submitted claims information and the end-to-end process to generate and submit the file to Magellan, ensuring that all data submitted is accurate, timely, and complete.

In fact, our Pharmacy Encounters team has held leadership positions at NCPDP and informs discussions and decisions at a national level. We also continuously monitor NCPDP updates and readily engage with the organization in implementing their guidance.

Our pharmacy encounter submission process includes daily tracking and monitoring of our submissions to Magellan, response reports from AHCA, and resubmissions. We track timely submission of pharmacy encounter data through our monthly Timeliness Audit report. This report tracks our compliance with the State's timeliness requirements. We also trend our compliance month by month in our Timeliness Metric report. We have consistently surpassed the contractually established encounter completeness, accuracy, and timeliness metrics.

We track the accuracy of our encounter submissions through our Encounter Submission and Error Tracking report, which identifies the volume of errors in our encounter submissions and trends our improvement opportunities. We monitor that we are submitting an encounter for every pharmacy claim through a completeness report.

To ensure that we resubmit all encounters that have been rejected by Magellan, we have implemented an automatic trigger process that resubmits an encounter when it was rejected due to a system timeout by Magellan. Additionally, when we do not receive all encounters back from Magellan following submission, our system searches for those encounters and automatically resubmits them.

==========

2. Demonstrated knowledge of the combination of key fields needed to identify services.

==========

Our high rate of encounter acceptance by AHCA for both non-pharmacy and pharmacy encounters is strong evidence of our knowledge of the key fields needed to identify services. To

ensure correct and complete submission of encounter data to AHCA, Humana has developed a series of front-end edits to ensure all key fields are complete and accurately distinguished based on institutional, professional, and dental services.

During submission of claims and encounter data, Humana's electronic Hub (eHub) and CAS ensure all fields are entered and pass edits to ensure the data is valid. Claims and encounter data submitted with incomplete or inaccurate data fields are rejected and are not processed further. Humana converts claims data and validates encounters submitted from our sub-capitated providers and subcontractors to match against all key fields required for correct submission, including a review of the revenue field, diagnosis field, and procedure code field. Claims that pass this validation go through McKesson's claim auditing platform (Claims Xten) edits, our correct coding mechanism, and are then passed to the Encounters Submission team.

During the final creation of the outbound encounter, Humana's customized Edifecs Transaction Management Solution runs the encounters through contract level editing. We conduct relational coding and map our revenue code, diagnosis code, and procedure code to cross-walk an institutional, professional, or dental encounter. These edits contain HIPAA-level validation to ensure structurally sound encounters and valid data. We have also added business level edits to comply with key Florida-specific requirements and to match the Companion Guide. If an encounter fails to meet these base requirements, then the encounter is placed on our internal exception worklist for review and correction. These checks ensure that the required key fields are submitted accurately to the state. For our claims data, this is accomplished by using eHub and CAS platform edits combined with the edits applied by the clearinghouses assuring key fields are populated.

Humana's Encounter Submission team has extensive experience, knowledge and understanding of the companion guide, user guide, report guide and the State's Web Portal. The team thoroughly reviews and documents all updates and changes made to the Companion Guide identifying any logic or system impacts that will ensure that the changes are in line with the submission and processing requirements defined by AHCA. Team members also attend internal X12 trainings as well as the industry recognized annual X12 and Workgroup for Electronic Data Interchange (WEDI) conferences to maintain up-to-date knowledge and clarity of EDI standards.

Humana also conducts clinical audit reviews and encounter validation to ensure our providers are submitting data accurately, including coding data elements. Clinical audit reviews are used as a mechanism to educate our providers and discuss opportunities for improvement across clinical and administrative performance. Records are matched to submitted claims or encounters to validate for accurate submission.

==========

3. Adequacy of procedures, including quality control procedures, to identify key fields and ensure they are accurately populated during encounter data submission.

==========

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

NON-PHARMACY ENCOUNTERS

Upon receipt of claims data from our clearinghouses, Humana's eHub verifies the entry of all key fields necessary for complete encounter submissions that ensures a proper 5010 compliant submission format. Our clearinghouses are contractually required to meet HIPAA edits and standards, including edits to validate for correct coding. Our preferred clearinghouse and trading partner, Availity, performs the highest level of HIPAA edits (HIPAA level seven), well above the AHCA HIPAA level requirements, reviewing fields such as CPT, ICD-9, ICD-10, CDT, NDC, status codes, adjustment reason codes, and their appropriate use for the transaction. ZirMed, another clearhouse, performs HIPAA level five edits and reviews for CPT, ICD-9, ICD-10, CDT, NDC, status codes, adjustment reason codes, and their appropriate use for the transaction.

We also have a quality certification check with our clearinghouses, through which we receive reports from the clearinghouses on the provider data submissions that have been rejected, which informs our strategy on provider education and engagement.

Humana uses the editing logic for key fields to ensure the data is accurately populated during encounter data submissions. The list below describes select editing logic we have in place.

- Recipient Medicaid ID – The enrollee's Medicaid ID is added to the encounter at the time of generation based on the enrollee's Medicaid ID currently stored in our Enrollment system.

- Provider Medicaid ID – Humana submits the NPI (National Provider Identifier) included on the claim in encounter submissions for all providers who are able to bill with an NPI. For those providers who do not have an NPI, Humana crosswalks their information to the Medicaid ID stored in our claims platform for submission on the outbound encounter.

- Claim type – Claim types are confirmed during HIPAA validation at the claims clearinghouses and in Humana's claim platform. If the claim type is not correct, the claim will be rejected and no encounter will be generated.

- Place of service – The place of service is confirmed during HIPAA validation at the clearinghouses. If the place of service is incorrect, the clearinghouse returns the claim to the sender. Humana performs a secondary review in our eHub platform to ensure the correct place of service is included for the service being billed and the provider. If the place of service is not correct, no encounter will be generated since the claim is rejected initially.

- Revenue code – Revenue codes are confirmed during HIPAA validation at the claims clearinghouses. If the clearinghouse finds an incorrect revenue code, it returns the claim to the sender. Humana performs a secondary review in our eHub platform to ensure the correct revenue code is included for the service being billed and the provider. If the revenue code is not correct, the claim will be rejected and no encounter will be generated.

- Diagnosis code – Diagnosis codes are confirmed during HIPAA validation at the clearinghouses. If the clearinghouse finds an incorrect diagnosis code, it returns the claim to the sender. Humana performs a secondary review in our eHub platform to ensure the correct diagnosis code is included for the service being billed and the provider. If the diagnosis code is not correct, the claim will be rejected and no encounter will be generated.

- Amount paid – Humana utilizes standard X12 matching and balancing logic for applying the correct paid amount to the service lines for encounters or fee-for-service claims. Encounters and claims received from a sub-capitated provider, fee-for-service providers and subcontractors are subject to up-front HIPAA validation edits to confirm the population of the paid amount field.

- Procedure code – Procedure codes are confirmed during HIPAA validation at the clearinghouses. If the clearinghouse finds an incorrect procedure code, it returns the claim to the sender. Humana performs a secondary review in our eHub platform to ensure the correct procedure code is included for the service being billed and the rendering provider. If the procedure code is not correct, the claim will be rejected and no encounter will be generated.

PHARMACY ENCOUNTERS

For pharmacy encounters, our claims adjudication vendor applies extensive edits at the point of sale to ensure that all claims meet appropriate standards for claim processing. In the event we are missing an AHCA required field, the encounter is held until the data has been populated.

As mentioned before, our Pharmacy Encounters team developed an automated process to ensure all encounter data fields are populated per the guidance in the Agency's companion guide. We have designed our systems to pull the appropriate data elements from our claims and to include quality control mechanisms to support the accuracy of encounter data submissions.

The Pharmacy Encounters team also reviews encounters bi-weekly to assess performance on encounter submissions to Magellan and to discuss fluctuations and errors. During these meetings, we develop action plans to resolve issues.

Pharmacy claims require the submission of all key encounter data elements, ensuring all key fields are identified for pharmacy encounters. These key fields are matched to the field submitted on the claim and include: Transaction Code, Service Provider Id, Date Of Service, Cardholder Id, Prescription/Service Reference Number, Product/Service Id, Number Of Refills Authorized, Prescriber Id, Segment Identification, Compound Ingredient Quantity, Date Of Birth, Patient Gender Code, Medicaid Id Number, Quantity Dispensed, Other Payer Date, Internal Control Number, Other Payer Amount Paid (First Occurrence), Other Payer-Patient Responsibility Amount, Ingredient Cost Submitted, Dispensing Fee Submitted, Usual And Customary Charge, Compound Ingredient Drug Cost, and Gross Amount Due.

==========

4. Adequacy of procedures to ensure encounters are coded consistently across providers and provider types.

==========

NON-PHARMACY ENCOUNTERS

Humana can ensure that encounters are coded consistently across providers and provider types because all claims and encounter submissions for all types of providers and subcontractors must clear the same edits in the claims clearinghouses and our eHub. The HIPAA level 7 edits

that most of our claims and encounters are processed through identify and reject data for incorrect coding at the front-end.

Additional edits are applied by our claims platform. We periodically update our policies and claims payment systems to align with correct-coding initiatives, as well as these national benchmarks and industry standards:
- Centers for Medicare & Medicaid Services (CMS) guidelines
- American Medical Association (AMA) Current Procedural Terminology (CPT®)
- Health Care Common Procedure Coding System (HCPCS)
- International Classification of Diseases, 9th Edition (ICD-9) and 10th Edition (ICD-10)

These updates support Humana's continuing efforts to process claims accurately. Thus, the same logic, edits, and rules concerning coding are applied to all claims and encounters before we prepare our encounter submission file for AHCA. Systematic creation of encounters ensures that data fields are coded consistently based on source data from the originally submitted claim. Any time encounter processing is changed, there is extensive testing to validate the changes.

In addition to edits to ensure consistent coding, Humana has a proactive approach to conduct provider outreach. Humana’s Provider Reporting, Communication and Education Department develops various provider communications to promote accurate and consistent coding. This includes condition-specific coding guidelines and industry best practice materials, which are shared with providers and office associates by request or as the need arises. The educational materials are sourced from organizations such as CMS, American Heart Association, Mayo Clinic, and ICD-10-CM Official Guidelines for Coding and Reporting. Examples of condition-specific coding guidelines include Depression and Adult Wellness Visit. Attachment 29-2 and Attachment 29-3, respectively, include the materials we have developed and share with our providers to educate them on the coding for these conditions and tests. These materials may be delivered electronically as well as in person by our local Provider Relations representatives or peer-to-peer, as appropriate, by the local market Medicaid Medical Director.

Additionally, Humana has developed a coding improvement process in which recommendations are given to providers guiding them on commonly missed data points including diagnosis codes, coding specificity, and more. The coding improvement plan also suggests best practices to improve coding for specific conditions. The plan is reviewed and specific coding issues are addressed by our Provider Relations team. The template improvement plan and our best practices guidance for diagnosis coding can be found in Attachment 29-4.

PHARMACY ENCOUNTERS

Humana’s pharmacy data submitted at point of sale are rejected if the codes entered are not valid. We also ensure that pharmacy encounters are coded consistently by applying edits at the point of sale. Once Humana receives these claims, Humana creates the encounter submission file based upon the AHCA NCPDP guidelines to ensure accuracy. Our automated and systematic creation of encounters ensures that encounter fields are coded consistently based on source data from the claim. Any time the encounter processing is modified, there is extensive testing to validate the changes.

==========

5. Adequacy of procedures to ensure encounters (volume, categorization, dollar amounts, dates) are consistent across data sources, including applicable subcontractors.

==========

NON-PHARMACY ENCOUNTERS

Humana ensures the consistency of volume, categorization, dollar amount, and dates for encounters across data sources by requiring that all medical claims and encounters from providers and subcontractors clear HIPAA, State, and Humana edits. Only after a claim or encounter has passed the required edits, is it moved to the next stage, Edifecs, to be converted into an encounter that Humana submits to the Agency.

Humana has an encounter reconciliation program to ensure Humana receives all claims and codes timely and accurately from providers. This is measured by completing a reconciliation process between the provider and Humana. The reconciliation process summarizes claims and code data processed, isolates data not received by Humana, and identifies any gaps in the data. Humana and the provider collaborate on the results of the process, identify gaps in data, and the provider resubmits as needed. Humana and the provider will remedy any identified issues for accurate and timely submissions in support of future processing.

Because the 837 has to go through a series of edits from the provider to the clearinghouse to Humana, there is the possibility of dropped or truncated claims within various provider practice management systems. The encounter reconciliation program gives claim and code level analysis to determine averages and benchmarking based on overall claim performance. Furthermore, we request a collection of claims data for a specified period of time, referred to as a “shadow file,” from our providers and Medical Service Organizations (MSO). The shadow file is used to measure accuracy of all provider claims submitted to, and received by, Humana.
The reconciliation model compares shadow file data to Humana’s received data to determine potential data gaps. There is matching logic behind the reconciliation model to determine a match or a non-match. During the process, Humana looks at specific key data fields including provider tax ID, date of service (DOS), enrollee ID, diagnosis codes, Current Procedural Terminology (CPT)/Healthcare Common Procedure Coding System (HCPCS) codes and claim ID.

Additionally, we reconcile at a claim, service line, and diagnosis code level. The results of the reconciliation process are shared with the provider. If any gaps are identified, Humana and the provider work together to locate and resubmit claims and identify and address any system issues among the provider, the clearinghouse, and Humana. The date of service, shadow claims, matching claims, claim outage, claim outage percentage, shadow diagnosis codes, matching diagnosis codes, outlier diagnosis codes, and percentages are included in the summary report shared with the healthcare provider.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

PHARMACY ENCOUNTERS

Humana ensures that encounters (volume, categorization, dollar amounts, and dates) are consistent across all pharmacies in our network by requiring our claims adjudication subcontractor (DST Pharmacy Solutions) to apply the same edits to all pharmacy claims.

We also conduct an analysis of total claims paid, volume, and categorization of claims and our encounters to ensure they align and do not have any discrepancies.

==========
6. The completeness of the respondent's flowcharts describing its encounter data submission process.
==========

Please refer to Attachment 29-5, Non-Pharmacy Encounters Data Flow Chart, for a flow chart depicting the medical encounter data submission process.

Please refer to Attachment 29-6, Pharmacy Encounters Data Flow Chart, for a flow chart depicting the pharmacy encounter data submission process.

==========
7. The adequacy of the respondent's mechanisms for tracking, trending, monitoring encounter submissions and revisions, including the type and frequency of activities, and methodology to eliminate duplicate data.
==========

NON-PHARMACY ENCOUNTERS

As previously discussed, Humana utilizes a customized version of the Edifecs TM platform to execute, manage and monitor encounter submissions with State agencies. The system provides a comprehensive view of an encounter's life cycle and serves as the platform in which the status of an encounter can be observed and any rejections are addressed for resolution through our multi-prong approach. At any point in time, our approach may include one or more of the following activities:

- Prioritizing error correction efforts performed by our in-house, experienced Encounter Data Improvement team

- Collaborating with our corporate and market provider outreach and education teams

- Including agenda topics during our periodic AHCA/DXC Technology (DXC) meetings held in Florida

- Continuing to identify and improve the logic within our systems and processes

The above are all supported and driven through our robust reporting that gives clear end-to-end tracking, trending, and monitoring of non-pharmacy encounter initial submission as well as

resubmissions. The source of our reporting is derived through a combination of our Enterprise Data Warehouse (EDW) and the Edifecs data repository. All encounter data resides within our IT systems. A particular component of our reporting focuses significantly on ensuring the completeness, accuracy, and timeliness of our encounter submissions.

Humana continues to establish and refine internal error correction steps as well as monitoring aging processes, that focus on ensuring errors are resolved accurately the first-time while also being submitted within the State requirements.

As a true partner, we also openly participate in face-to-face discussions with AHCA/ DXC to further understand the nature of certain errors and to identify best practices for resolution.

TIMELINESS

Our reporting tools are a key asset to our operating success. As part of our strategy, we strive to maintain effective internal performance reporting tools that are based on best-practices. Over the course of the last two (2) years, our timeliness reports have evolved and offer greater insight into where operational process and IT improvements can be implemented to drive improvements. When an unusual result is identified (e.g. an impact greater than one percent (1%)), the team will conduct research and verify if the results are in line with expectations, assess whether it is due to a one-time event, and/or determine if corrective action is necessary. The timeliness reports are coupled with error inventories that focus on ensuring the company's error resolution efforts are prioritized to optimize our submission timeliness results.

Humana employs the use of multiple reports to ensure that we meet the State's requirements for timely initial submissions (submitted within seven (7) days of the adjudication date). Our reports specifically delineate our submission activity between initial submissions and resubmissions. We also organize our rejection inventories of internal business/compliance edits, TA1 errors, 999 rejections and 835 rejections. Further, our reports monitor the progression of an encounter from inception to final acceptance with the state based on Edifecs' activity states. The reporting combines the activity state and error information to deliver alerts and prioritization of inventories to ensure that contract timeliness requirements are being met. We are also able to forecast and determine when non-compliance is expected. This allows Humana the opportunity to deliver timely notice to the Agency.

ACCURACY

One key element of our strategy and success is a focus on data accuracy as demonstrated by a drive towards the highest level of acceptance on initial encounter submission. During instances in which a rejection occurs, our Encounter Submission and Data Improvement teams utilizes several reporting tools that provide an organized view of all rejections based on the encounter's status, exception type, aging, workability and specific errors. The teams utilize these reports on a daily basis to assign work to Louisville-based Data Improvement associates and to determine if other efforts are needed. We also monitor our rejection and acceptance rates to determine if results exceed minimum tolerance standards, identify unusual trends, give feedback and training to associates, and identify process improvements that can yield increased efficiency.

An accurate encounter begins with properly received and processed claims. EHub and CAS have numerous edits that ensure accuracy of data. In addition to the validity of data there is built-in logic to identify duplicates. The logic is split into two (2) categories: exact duplicates and near exact duplicates. For exact duplicates, logic will consider the claim an exact duplicate and

reject. The second category is near exact duplicate, which pends the claim as a possible duplicate allowing the associate to further interrogate the claim to confirm duplication. The logic looks for key fields when determining duplicate data (e.g., enrollee, procedure code, provider, and date of service).

In addition to eliminating duplicate claims, the Edifecs Transaction Management system reviews all requests for new encounters to determine if a previous encounter is still pending acknowledgment. If an encounter is waiting for acknowledgement, the Edifecs system will stop the request from completing to prevent duplicate data from being sent to AHCA.
Additionally, the array of reports and analytics we conduct gives transparency and actionable information on how we can improve the accuracy of our reports and continually feeds into process improvements in our effort to meet and exceed AHCA's encounter data standards.

COMPLETENESS
Humana oversees the end-to-end encounter process through reporting that provides a view from all systems, reflecting the beginning processes of claims adjudication all the way to the final encounter submission. Our processes and supporting reports monitor all encounters to ensure the completeness of our submissions based on our adjudication processes and State agency requirements. IT alerts are designed to notify key associates immediately when certain IT processes fail. Also, meetings with IT occur weekly, at a minimum, to discuss status and any upcoming changes. We are able to utilize this information, coupled with our reporting, to ensure that our submission processes operate with the highest level of effectiveness and efficiency.

PHARMACY ENCOUNTERS

TIMELINESS
Humana tracks the timeliness of our pharmacy encounters to ensure that we meet the State's requirements. We do so using a monthly report that includes all encounters and claims other than those that have been resubmitted (those claims are not subjected to the seven (7) day window). Within the monthly report, we divide claims into two (2) groups -- within the seven (7) day window and outside the seven (7) day window. We use our monthly timeliness audit report to ensure that if anything is not meeting the seven-day timeframe, we understand the root cause why. We notify AHCA of any special circumstances that we know would cause claims to be processed outside of the seven (7) day window.

ACCURACY
Our Encounter Submission and Error Tracking daily report allows us to track how well we did per submission and over time. It includes the volume of errors and trending of our improvements (clearing of errors). It also includes the program, date of submission, volume of submission, total accepted, total rejected, rejection percent (passing percent) and total error count by submission overall. In 2017 to date, our encounters acceptance rate for MMA services has consistently been above ninety-nine-point five percent (99.5%).

COMPLETENESS
Our Rx Flow Completeness report is a monthly report that compares paid claim detail from DSP to what has been submitted to Magellan via the NCPDP encounter file. This report helps us ensure all encounters have successfully been submitted to the State. Humana has a multi-year

record of one hundred percent (100%) compliance for submission of all paid pharmacy encounters to the State.

PREVENTING DUPLICATE PHARMACY ENCOUNTERS
Humana's pharmacy claims adjudication vendor, DPS, has software logic that identifies all duplicates and rejects them at the point of service. Occasionally, a duplicate pharmacy encounter is not caught by this logic. The only situation in which this would occur is where a prescriber has called in a prescription to the pharmacy for, as an example, thirty (30) pills, but the enrollee decides to pick up less than the total count, for example, only fifteen (15) days of medication. Pharmacy claim reversals result in a corresponding encounter reversal if they happen in different cycles, e.g. the original encounter has already been sent when the pharmacy reversal occurs.

==========
8. The adequacy of the respondent's encounter data submission historical compliance ratings.
==========

Our complaince rating history for the past three (3) years is provided in Attachment 29-7. 29-7a includes compliance ratings that are reflective of timely encounter submissions data as provided by AHCA. 29-7b offers additional internal compliance ratings related to encounter submissions.

==========
9. The adequacy of the respondent's ability to implement timely corrective actions to compliance ratings, if indicated.
==========

Humana is able to implement timely internal corrective actions to compliance findings through internal CAPs, conducted via Enterprise Solution Point (ESP). ESP is Humana's Governance, Risk, and Compliance tool, which tracks important contractual information, including but not limited to: internal CAPs and business impacts from regulatory changes. Humana leverages the ESP workflow to manage and capture internal corrective action details such as root cause analysis and plans for remediation. Contract and regulatory requirements are documented in ESP and routed to the appropriate impacted business owners, operational leaders, compliance associates, and senior management for acknowledgement, documentation of the impact, implementation monitoring (as appropriate), gathering and storing attestations, and housing of metrics for compliance monitoring. Escalation occurs to ensure timeliness.

This system is designed to make the efforts of our frontline business leaders more simple, efficient, transparent, and effective with regard to managing processes, risks, controls and compliance.

Humana develops a monthly Operational Risk Management Medicaid Compliance Metrics Dashboards and Medicaid Integrated Compliance scorecard to coordinate and facilitate Medicaid Compliance Committee Meetings. Meeting invitees include leaders that are critical to the escalation process: Medicaid Operational Leadership including CEO and President of our Corporate Medicaid structure, Medicaid Market Leadership, Medicaid Segment VP and President, Regulatory Compliance VP, and the Operational Risk Management VP. During these meetings, we review the Medicaid Integrated Scorecard, which includes encounter performance metrics. During the review of each operational area, we discuss new issues,

concerns, and barriers. Respective owners also offer updates on historical issues, concerns, and barriers. In addition to the highlights, each component area reports on their overall status.

Should a request for a corrective action be received from AHCA, our Regulatory Compliance Department manages and oversees the response. In ESP, our Compliance Associates creates an Issue and Opportunity (IOP) entry and assigns responsibility for initiating and implementing an Improvement Action Plan (IAP) to the responsible business owners. The IAP describes what the responsible business owners will do to address the IOP along with an expected completion date. Our Compliance Associates continually monitor the progress of the IAP and will intervene should a business owner not meet the expected completion date or experience any other obstacle. Compliance Officers facilitate remediation with both the business owner and appropriate leadership. If necessary, the issue can be addressed through an accelerated escalation process to senior leadership. This ensures that the issue can be completely and timely addressed according to AHCA's direction. Our Risk Compliance Associates and associates monitor this process through completion and until AHCA's approval is received. Should status reports or additional information be required by AHCA, our compliance team will work with the business to provide reporting and information in the format and timeframe that AHCA requires.

AHCA has not issued a corrective action for Humana for non-pharmacy or pharmacy encounter submission issues during the current contract.

==========

10. The adequacy of the tools and methodologies used to determine compliance

==========

NON-PHARMACY ENCOUNTERS

Ramp Manager is Humana's encounter quality assurance tool. The tool allows us to test the logic and updates made to reflect Companion Guide changes before it goes into production. Humana then tests dummy encounter data to validate accurate and timely processing, ensuring compliance. Attachment 29-8 offers our policy and procedure on how we use our proprietary Ramp Manager tool to support the submission of compliant encounter data. Examples of customized edits include, but are not limited to:

- Skilled Nursing Facility
- Atypical Provider
- Coordination of Benefits (COB)/Balancing
- Provider level compliance edits

Humana utilizes various reporting tools aligned with the AHCA methodology for determining compliance with the contract. Results are routinely provided by AHCA outlining our compliance rates with the initial submission compliance timeliness measure. Humana generates reports internally for determining results for additional operational and compliance oversight. Our reports are generated on a varying schedule ranging from daily, weekly, or monthly depending on their particular purpose and use. Some key reports utilized include:

- Expected vs. Actual Submission Compliance Report (daily) - Utilized to monitor, track, and trend Humana's initial submission activities and response statuses by contract type. This report

forecasts and analyzes compliance for timeliness and is aligned to mimic results received on weekly Encounter Timeliness Report provided by AHCA. Our report allows us to quickly analyze and determine why any changes to our compliance score are happening.

- Florida Status Summary report (weekly) - Provides a current status of the complete submission process on a weekly basis that rolls-up based on a monthly summary. This report monitors the completeness and trends volume of encounters received into our Edifecs system against our submissions to AHCA. This report is also utilized to monitor submission compliance for timeliness and accuracy.

- Encounter Initial Submission and Response Report (daily) - Monitors the completeness, timeliness, and accuracy of encounters received into the Edifecs system compared to first-pass submissions to AHCA.

- Enterprise Solution Point Metrics Report (monthly) - Drives operational efficiency by monitoring and reporting compliance timeliness and completeness on a daily basis. Provides senior leadership with oversight of the company's compliance results and any action plans in place to improve processes.

Examples of these reports are attached at Attachment 29-9.

PHARMACY ENCOUNTERS

Humana utilizes the following tools to determine compliance of its pharmacy encounters with the State's requirements:

Our Monthly Timeliness Audit Report tracks compliance with the State's timeliness requirements. We also trend our compliance month by month in our Timeliness Metric report.
Our Encounter Submission and Error Tracking report tracks the volume of errors in our encounter submissions and trends of our improvements (clearing of errors). It includes the program, date of submission, volume of submission, total accepted, total rejected, rejection percent, passing percent, person submission, and total error count by submission and overall. We monitor this report every business day.

Our RX Flow Chart Control Point 3 Completeness report is a monthly report that compares paid claim detail from DPS to what has been submitted to Magellan via the NCPDP encounter file. This report helps ensure all encounters have successfully been submitted to the State.
To ensure that we resubmit all encounters that have been rejected by Magellan, we have implemented an automatic retrigger process that resubmits an encounter when it was rejected due to a system timeout by Magellan. Additionally, when we do not receive all encounters back from Magellan following processing, our system searches for these encounters and automatically resubmits them.

Examples of these reports are attached at Attachment 29-10.

==========

11. The adequacy of the respondent's process for converting paper claims to electronic encounter data.

==========

NON-PHARMACY ENCOUNTERS

In 2017, only four percent (4%) of our Medicaid claims were submitted in paper form. We accept paper claims as a CMS 1500, UB-04, and other form types. If a provider bills by paper, the provider mails their claim to a P.O. Box that is listed in the Humana provider manual. Our vendor, Conduent, retrieves, opens, and sorts the mail. Once a claim has been sorted, it is then scanned, and passes through a quality check at the Scan Quality Control area. A five percent (5%) audit is performed daily on all the sorting for quality assurance. The image is then transmitted to the Optical Character Recognition (OCR) team to begin the process of gathering the claim data. The claim data is then placed in a proprietary template and is passed to the First Pass team for review of the OCR data of critical fields and any other field that Humana requests. Conduent translates data submitted in a CMS 1500 and UB-04 forms and submits it to eHub as a pseudoi-837 file. Paper claims submitted in other formats are processed manually by our Associates.

If the scanning cannot be done electronically, because for example, the handwriting on the claim cannot be read by the OCR process, a Conduent employee will manually enter the information from the claim into the template. The data entry team also performs a second review of the claim data that is processed through the First Pass team, along with specific fields as requested by Humana. To ensure accuracy of the manually keyed data, a routine random audit of five percent (5%) of the claim fields is performed daily at Conduent. Conduent then converts the data into an X12 837 file and transmits to Humana in real time, utilizing the current infrastructure of the EDI systems, for maximum efficiency in passing data to the adjudication platforms. On average, this process takes less than twenty-four (24) hours.

Although we have a well-developed process for accepting paper claims, Humana realizes the benefits of electronic submissions. Humana completes ongoing outreach to providers who are submitting paper claims to give them guidance on how to submit electronically. This includes options for them to use Humana's clearinghouses to manually enter the claims through direct data entry if they are not able to create an electronic 837.

PHARMACY ENCOUNTERS

Less than zero-point-zero three percent (0.03%) of pharmacy claims and encounters were submitted via paper in 2017. Paper claims can be submitted by the pharmacist or the enrollee. The paper claims are scanned into DST Pharmacy Solutions where each is converted to an electronic claim. We require the pharmacists in our network to bill electronically.

A pharmacy or enrollee paper claim is a claim that is received in paper form to Humana's P.O. Box or via fax. The paper claims received through the P.O. Box are then scanned by our mail vendor, Conduent. We process paper claims using the Universal Claims Form. Upon receipt, a

claims processor enters the claims using the DST 3270 claims processing system. This takes them from paper to electronic form.

Once the claim is entered and pays, the claim(s) will be paid to the pharmacy using the negotiated rate for that pharmacy on file. The negotiated price includes any negotiated pricing mechanism, e.g. Wholesale Acquisition Cost (WAC), Maximum Allowable Cost (MAC), Floor Price. Payment should be reflected on the pharmacies Financial 835 record they receive each month.

==========

12. The adequacy of the respondent's approach to identifying and correcting specific processing/systems issues that could result in invalid data being submitted to the State.

==========

NON-PHARMACY ENCOUNTERS

Humana continuously tracks and trends encounter submission issues that could result in invalid encounter data being submitted to AHCA. We implement internal system enhancements to better support business logic updates whenever we receive notice that AHCA has updated the Companion Guide or revised the contract.

ENCOUNTER ERROR RESOLUTION APPROACH
Correcting encounter errors for resubmission to AHCA begins daily with reviewing the Encounters Status and Reject 835 Response report which tracks and trends the encounter rejects received from AHCA.

Our Encounter Submission team assesses the report to understand the types of rejections received and identify the errors based on volume and error type. We then determine the steps needed to correct the errors for resubmission.

Claims that are pended due to internal edits or AHCA rejects are reviewed by Humana's Data Improvement team. The user will access Humana's customized Edifecs TM software which allows us to track the status of all encounters. Users are able to access each encounter via the user interface and are able to see both a business version and the X12 version. All encounter versions that have been sent to an outside agency are linked together, so the users are able to review each iteration. All original outbound batches are stored in the system for users to view at any time. This system serves as a data source to assist with research and resolution of errors and identification of future enhancements.

Encounter acknowledgements received from AHCA are loaded to the software to update the status of the encounter. The software also automatically creates an exception report for users to work if an error is received. This allows the user to make encounter-related corrections quickly in the system. Any corrected encounters are automatically added to the next round of outbound batches. Humana also makes all error corrections in the Edifecs TM tool. The Edifecs TM tool tracks each time an encounter is processed and the success of that submission. A weekly Error Corrections Success report is generated which allows us to monitor and track the end result of a submission. The report is used by the Encounter Data Improvement and the Encounter

Submission team to perform quality checks, develop process and procedure improvements and isolate matters requiring possible escalation. The report assigns a status to the encounter:

- Successful - Progressed to be submitted, next level exception or completed.

- Different Errors - Next exception is the same as the previous exception type, but different errors.

- Regressed - Next exception is of a lower level exception type.

- Unsuccessful - Next exception returned the same exact errors as the previous one.

- Exception Loop - Identifies claims with a history of exceptions, a possible pattern between errors.

These corrections are linked back to the original encounter to allow for long term audit tracking. The software and all the data is kept in house at Humana, so we have control of the data to optimally support reporting and analytics. The Efifecs TM software allows for Humana to send encounter original, adjustments and voids to the agency to ensure accurate and complete encounter submissions.

Errors that fall outside of the Encounter Data Improvement area are categorized, presented, and vetted during a weekly team meeting. A plan of action is created and next steps are identified. The error is assigned to an Analyst to begin scope development and root cause analysis. The Analyst documents and presents the findings of his/her analysis during the weekly team meeting. The analysis is then referred to a Consultant for validation. The validated analysis determines how we will proceed with resolving the error.

The Consultant then reaches out to the respective area to begin working towards resolution, including, but not limited to, kickoff meetings, desk procedure updates, and drafting heads-up communications. After an error resolution has been implemented, the Consultant develops a test plan to ensure the accuracy of error resolution.

Humana has worked with the Agency to identify encounter errors and improve the reporting process and mechanism. As a transparent partner, we have participated in offering data to conduct validation studies and to support ad-hoc projects. Below are some examples where we employed this encounter error resolution approach.

BUSINESS LOGIC MODIFICATIONS
While reviewing the Encounters Status and Reject 835 Responses report, Humana identified a significant increase in N703 denials, indicating that certain claims previously submitted were resubmitted in error. The encounters were submitted with either the incorrect ICN or without an ICN. After an internal review and clarification from DXC, it was determined that a system fix could be implemented to resolve the error. After the system fix was implemented, the encounters were reprocessed and resubmitted to AHCA. The report later indicated an eighty-three percent (83%) decrease in N703 errors from March 2016 to November 2016.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

FINANCIAL CLASS CODE (FCC) UPDATE

In reviewing the 835 Error report, we searched for increases in M56 rejection errors (FCC). From our past experience and root cause analyses, we identified that the FCC logic was not mapped correctly and it was subsequently causing incorrect encounter data. As a result of Humana's internal process of categorizing and assigning tasks to develop error resolutions, we have reduced our FCC error rate by twelve-point six percent (12.6%); today this error code is at zero point six percent (0.6%).

PRESENT-ON-ADMISSION (POA) INDICATOR

The N434 (POA) rejection was identified due to the present-on-admissions indicator being missing or invalid. The definition of the error led us to inquire about how the provider was submitting the POA per 5010 HIPAA Compliant Standards as well as AHCA guidelines. We decided to place an edit at the front end of claims to not accept any claims with missing or invalid POA. The issue was submitted through the Ongoing Escalation process for validation and the Claims Process Organization to ensure the research was accurate. The edit was placed to prevent further N434 rejections from AHCA.

CROSSOVER CLAIMS

As an example of Humana's encounter knowledge and partnership, in December of 2015, AHCA asked Humana to consider being a Beta Test Site for crossover claims. Humana knew that the request would require new processes and reporting, technical support, and provider outreach. With more than twenty (20) years of experience with Medicaid Encounter Submissions and as a proven industry leader, we believed we had sufficient knowledge, technical support, and experience to assist AHCA with Beta testing. The Beta Test process required Humana to: conduct file transfer of enrollee eligibility, identify other payer information (e.g., coordination of benefits), engage and provide oversight to the clearinghouse, give routine feedback and status updates, test validation; and conduct provider outreach.

Our efforts, in coordination with AHCA and CMS, resulted in a successful transition that went into production in October 2016. We received very positive feedback for our efforts from both AHCA and CMS, and were acknowledged as being one (1) of the two (2) test sites that went in production successfully.

To address the administrative burden of submitting, waiting, receiving approvals on cross-over claims from both CMS and from Humana separately, we implemented an initiative to streamline the process for our providers so that the claims must be submitted only once. Humana coordinates the transmission of the provider claim along with COB data to Emdeon using Medicaid COBA ID, which is shared with our systems for processing. This process creates efficiencies within the systems between payers and reduces the administrative and monitoring burden on our nursing facility providers.

ENHANCEMENT OPPORTUNITIES OF ENCOUNTER SUBMISSIONS

Humana has a team of associates that meet weekly to strategize on proactive approaches to implement process improvements. We understand the importance of error resolution. The team is also focused on proactively identifying issues and introducing enhancements to prevent or mitigate future errors. Humana utilizes numerous tools that allow us to stay well informed of future changes and possible impacts.

One example is by using the Florida Medicaid Health Alert, whereby our Associates receive an email generated alert that notifies Humana of "late-breaking" healthcare information. Each alert is treated with importance. A Consultant is responsible for reading each alert to determine potential impact. As an example, Humana received communication from AHCA, via their Florida Medicaid Health Care Alert emails, indicating outpatient encounters would be denied if not submitted with the correct HCPC/CPT codes. This communication was taken to our committee for review to determine if any system changes were needed to ensure encounters with the correct HCPC/CPT codes were not rejected in error. Fortunately, Humana's planned system updates to our Enhanced Ambulatory Patient Grouping (EAPG) logic comprehensively addressed any changes necessary to meet the new requirements. The alert provided confirmation that we were moving in the same direction as AHCA. When it was time for implementation, the impact for Humana was minimal and the related process changes were implemented efficiently and timely.

ESCALATION PROCESS FOR ENCOUNTER ISSUES

Humana has an established escalation team, the Claims Process Organization (CPO) team, which reviews encounter issues. The team is comprised of Claim Subject Matter Experts, Encounter Submission Experts, and IT system support. This diverse team of experts identifies the root causes of errors, brings encounter issues to the attention of management level associates across the enterprise, and develops quick efficient fixes for all the impacted areas of the organization.

The escalation process for encounters starts when the Florida Medicaid encounter team identifies an issue that needs to be addressed at a higher level and refers the issue to the CPO leader and Encounters Process Manager. This Associate adds the issue to the agenda for the weekly meeting that includes associates from different departments such as Claims, Medicare/Medicare Risk Assessment, eHub, Provider Connect, and Humana Medicaid Market team. The goal of these meetings is to determine whether the issue can be resolved with a system enhancement to eHub or CAS. If an electronic change would not be sufficient to address the error in question, the Encounter Submission team is asked to assess whether a manual process would correct the issue.

PHARMACY ENCOUNTERS

When we receive a response file from Magellan, we review and research all errors. Our IT team and business owners assess whether any of the errors can be remedied via Humana code changes. Any issues that are a result of data-related errors (e.g., pharmacy registration) are escalated through the Florida market and compliance leadership for swift resolution.

==========

13. The adequacy of the tool to ensure that all encounters are submitted.

==========

NON-PHARMACY ENCOUNTERS

As previously discussed, Humana utilizes a customized version of the Edifecs Transaction Management platform to execute, manage, and monitor encounter submissions with our

contracted state agencies. Edifecs is the only vendor with a single solution for submission, tracking, and error correction that allows Humana to manage our data internally. The system gives a comprehensive view of an encounter's life cycle and serves as the platform in which the status of an encounter can be observed and any rejections are addressed for resolution through our multi-prong approach. We have tailored Edifecs with customized edits.

Humana has two (2) reports to ensure that all medical encounters are submitted, the Initial Submission Report and the Expected versus Actual Report. The Initial Submission report is a weekly tool that shows the number of claims and encounters received by Edifecs from CAS and DentaQuest (which represents the total number of our encounters) and the percentage of those encounters submitted to the state on a timely basis (within seven days following the date of adjudication by the Plan). The Expected versus Actual report is a tool that tracks for each week our initial submission compliance within seven (7) days of the adjudication date, lists the total encounters submitted that passed 999 compliance edits, and indicates the 835 status. Both tools show our performance on these metrics over time. Samples of these reports are provided in Attachment 29-9.

To ensure that we submit an encounter for every service provided to an enrollee during the applicable reporting period, prior to transmitting our encounter file to AHCA, we run a report that compares the number of encounters in the file with the number of expected encounters based on our claims payments.

To verify that that our subcontractors and provider groups have submitted complete encounters for all the services they provided to our enrollees, we conduct annual audits during which we review a sample of the subcontractor's or provider's claims against their encounter submissions over the prior year. If an audit shows that one or more encounters were not submitted, Humana issues a corrective action plan. Sub-capitated providers are incentivized to submit complete encounters because their capitation rate is reduced if the error file is found to be incomplete.

As a result of our tools and monitoring mechanisms, we have been consistently surpassing our initial completeness submission rate above ninety-five percent (95%).

PHARMACY ENCOUNTERS

Humana uses our monthly RX Flow Chart Control Point 3 Completeness report to monitor that an encounter is submitted for every pharmacy claim we have paid. The report pulls the latest claim picture from our submission tables and checks to see if there are any outstanding claims that need to be submitted. The results are then narrowed to include only the current claim picture and claims that were not internally voided.

Evaluation Criteria:

1. The adequacy of the respondent's process to ensure accurate, timely, and complete encounter data.

2. Demonstrated knowledge of the combination of key fields needed to identify services.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

3. Adequacy of procedures, including quality control procedures, to identify key fields and ensure they are accurately populated during encounter data submission.

4. Adequacy of procedures to ensure encounters are coded consistently across providers and provider types.

5. Adequacy of procedures to ensure encounters (volume, categorization, dollar amounts, dates) are consistent across data sources, including applicable subcontractors.

6. The completeness of the respondent's flowcharts describing its encounter data submission process.

7. The adequacy of the respondent's mechanisms for tracking, trending, monitoring encounter submissions and revisions, including the type and frequency of activities, and methodology to eliminate duplicate data.

8. The adequacy of the respondent's encounter data submission historical compliance ratings.

9. The adequacy of the respondent's ability to implement timely corrective actions to compliance ratings, if indicated.

10. The adequacy of the tools and methodologies used to determine compliance.

11. The adequacy of the respondent's process for converting paper claims to electronic encounter data.

12. The adequacy of the respondent's approach to identifying and correcting specific processing/systems issues that could result in invalid data being submitted to the State.

13. The adequacy of the tool to ensure that all encounters are submitted.

Score: This section is worth a maximum of 65 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Edifecs Transaction Management

DATA SHEET

Gain deep insight into the end-to-end healthcare transaction lifecycle

As soon as a transaction is received by a healthcare organization, it begins a complex journey, spanning multiple systems, through which it is acknowledged, processed, and modified at several points in its lifecycle – often with limited or no visibility by operations staff. Healthcare organizations that lack visibility into their transaction lifecycles will spend unnecessary time, resources and expense processing transactions and supporting partners.

Edifecs Transaction Management (TM) provides a secure, end-to-end view of the healthcare transaction lifecycle to internal users and trading partners to enable better business decision-making, monitor performance against internal and external SLAs, enhance claims first-pass rates, and improve customer satisfaction.

WHY EDIFECS TRANSACTION MANAGEMENT?

- Supports the unique needs of the healthcare market by leveraging pre-built templates for common transaction processing scenarios
- Leverages commercial off-the-shelf components that lower costs to implement and maintain IT infrastructure
- Is a market-proven solution used by a majority of the nation's Blue plans and major commercial insurance plans

Capabilities

WITH EDIFECS TRANSACTION MANAGEMENT, OPERATIONS AND CUSTOMER SUPPORT STAFF CAN:

- Configure trading partner transaction processing by defining partners within the community, transactions supported and partner-specific processing rules. Support and manage large partner communities with shared master agreements and Edifecs Ramp Management add-on for partner self-testing.
- Analyze Service Level Agreements (SLAs) and troubleshoot deviations using visual dashboards and reports.
- Search and manage a variety of file formats including HIPAA, NCPDP and proprietary file formats. View HIPAA transactions in a business-friendly view or in a paper-based format.
- Secure transaction access by departments or transaction types through granular, role-based access control.
- Audit transaction lifecycle activity using archived original file, history, internal events and third-party processing events, along with other linked transactions.
- Issue alerts and notifications about business or processing exceptions and track responses to support resolution. Publish events to internal or partners systems.

Benefits

As shown in Table 1, Edifecs Transaction Management improves operations and transaction visibility resulting in more informed decision-making, better monitoring of performance against SLAs, enhanced claims first pass rates and improved customer satisfaction.

BENEFITS	SUPPORTING FEATURES
Make Better Operational and Business Decisions	▪ Generate scheduled or on-demand reports with summary or detailed analysis on operations and business activity. ▪ Create reporting on metrics including trending and threshold comparisons. ▪ Run balancing reports, such as comparing claims received vs. those sent to core processing systems. ▪ Use ad hoc reporting to support business analysis related to special projects or new initiatives, or use ad hoc queries for quick access to information. ▪ Configure automated alerts to trigger when processing exceptions occur.
Monitor Performance against Internal and External SLAs	▪ Report on external SLAs such as turnaround times on claims and request response times. ▪ Report on internal SLAs such as such as percent of claims originating on paper vs. electronic form. ▪ Use automated alerts when processing SLA-related exceptions such as excessive time to process transmissions or excessive timeouts on response transactions. ▪ Auto-generate notifications or interim responses when processing time exceeds expectations. ▪ Run balancing reports such as comparison of claims received to claims sent to core processing systems. ▪ Configuration notifications for processing exceptions, including full tracking and resolution via the Exception Management Module to ensure successful processing of individual items during run-time.
Improve Claims First-Pass Rates	▪ Run scheduled or on-demand reports on key metrics such as most frequently occurring errors or partner with most rejected claims. ▪ Use ad hoc reporting to support analysis such as determining the root cause of claim rejections. ▪ Send reports to partners or make reports accessible via web portal to facilitate error resolution. ▪ Provide partners with self-service testing via Ramp Management Add-on to ensure partners can create compliant claims.
Improve Delivery of Customer Support	▪ Provide a secure self-service portal (stand-alone or integrated into existing portal) that lets internal and partner users view transactions and related information in business-friendly formats. ▪ Configure and leverage granular, role-based control to secure transactions and views by department or line of business. ▪ Use contextual search based on transaction type to quickly find and display business and transaction information. ▪ Use an integrated, three-pane view containing data structure, content, and error listing to provide convenient access to original data sent or received. ▪ Create partner reports that can be auto-generated and delivered directly (through FTP, SFTP, email, etc.) or made available through partner portal. ▪ Schedule reports that include key metrics and information monitored by support organizations. ▪ Create on-demand reports that allow internal users to quickly access information. ▪ Use “Browse and Attach” feature to let low-volume partners upload transaction files for processing.

Table 1: Benefits and Features of Edifecs Transaction Management

edifecs

An industry leader since 1996, Edifecs provides healthcare software solutions that improve operational performance by streamlining the exchange of information among health plans, hospitals, and other healthcare organizations, while enabling compliance with current mandates such as HIPAA, Operating Rules and ICD-10. Today, more than 250 healthcare customers use Edifecs technology to unify transactions from any information channel source and input mechanism, while automating manual business processes such as enrollment, claims and payments management. Edifecs is currently recognized as one of the 100 Fastest Growing Private Companies in the state of Washington, 100 Best Places to Work in the state of Washington, an Inc. 5000 fastest-growing private company and one of the 500 Fastest Growing Companies in North America by Deloitte. Edifecs is headquartered in Bellevue, WA. For more information, please visit http://www.edifecs.com

Depression

ICD-10-CM
Documentation and coding guidelines

Humana 2653ALL0916-A

Disclaimer

This presentation is intended for both physicians and office staff. The information contained in this presentation and responses to the questions asked are not intended to serve as official coding or legal advice. All coding must be considered on a case-by-case basis and supported by medical necessity and the appropriate documentation in the medical record.

Topics

1. Definition
2. Causes and risk factors
3. Complications
4. Best documentation practices
5. Coding examples

Definition

Major depression is a mental disorder, marked by a depressed mood and loss of interest or pleasure in all activities that last for at least two weeks and represents a change from previous functioning.

American Psychiatric Association (APA) Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition – Text Revision (DSM-5)

DSM-5 criteria for diagnosis of major depression or major depressive disorder

Criterion A:

Five (or more) of the symptoms below during same two-week period that are a change from previous functioning, and at least one of the symptoms is either:

- **Depressed mood**
- **Loss of interest or pleasure**

Does not include symptoms clearly attributable to another medical condition

- Depressed mood most of the day
- Markedly diminished interest or pleasure in all/almost all activities
- Significant weight loss or gain, or decrease or increase in appetite
- Insomnia or hypersomnia
- Psychomotor agitation or retardation
- Fatigue or loss of energy
- Feelings of worthlessness or excessive or inappropriate guilt
- Diminished ability to concentrate or indecisiveness
- Recurrent thoughts of death, suicidal ideation or plan for committing suicide

DSM-5 criteria for diagnosis of major depression or major depressive disorder

Criterion B:

Symptoms cause clinically significant distress or impairment in social, occupational or other important areas of functioning.

Criterion C:

Episode is not attributable to the physiological effects of a substance or to another medical condition.

Criteria A-C represent a major depressive episode

Note:

- Responses to a significant loss may include Criterion A symptoms and could resemble a depressive episode.
- Such symptoms may be understandable or appropriate to the loss; however, the presence of a major depressive episode in addition to the normal response to significant loss should be considered.
- Exercise of clinical judgment is inevitably required.

DSM-5 criteria for diagnosis of major depression or major depressive disorder

Criterion D:

Major depressive episode not better explained by:

- Schizoaffective disorder
- Schizophrenia
- Schizophreniform disorder
- Delusional disorder
- Other specified and unspecified schizophrenia spectrum disorders
- Other psychotic disorders

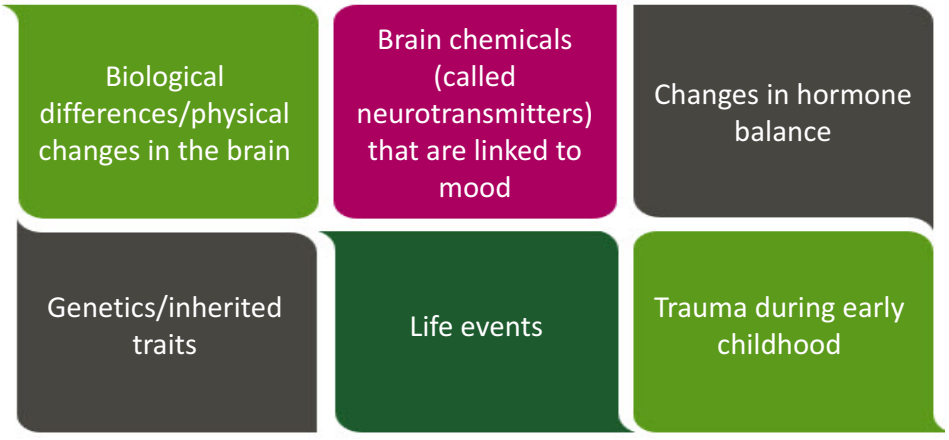
Criterion E:

There never has been a manic or hypomanic episode

(Does not apply if substance-induced or attributable to physiological effects of another medical condition)

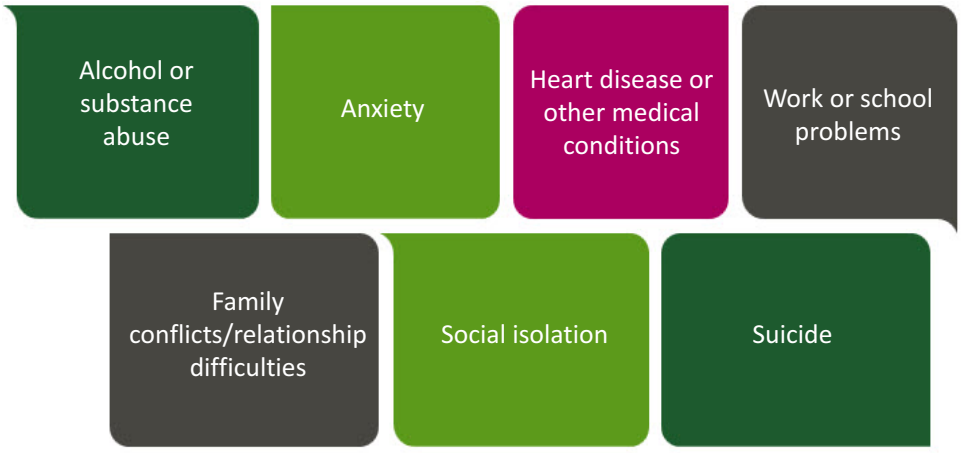
Causes and risk factors

The exact cause of depression is not known. Many factors may play a role. These include, but are not limited to:



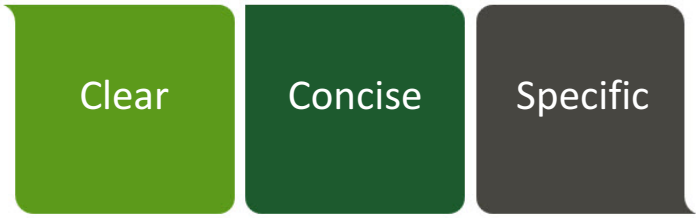
Complications

Major depression left untreated can cause complications such as:



HHS and CMS "Evaluation and Management Services" guide

Documentation that is:



May lead to:

- Accurate diagnosis code assignment
- Appropriate and timely health care provider payment for furnished services

Centers for Medicare & Medicaid Services (CMS) documentation guidelines

CLEAR

- Communicate to all readers the documenter's intent.

CONCISE

- Use key coding terms.
- Avoid use of abbreviations, acronyms or truncated words.

CONSISTENT

- Use caution when documenting in medical record templates or electronic medical records that may inadvertently insert inconsistent information.

COMPLETE

- In the final assessment, describe to the highest level of specificity all medical conditions that were evaluated and treated during the encounter.
- Include all chronic conditions impacting patient care, treatment or management.
- Include a timely provider signature with printed and legible name and credentials.

LEGIBLE

- Medical record documentation must be legible to any objective reader.

Documentation tips for health care providers

S **Subjective** section of office note:

- Document the presence or absence of any current symptom related to major depressive disorder.
- If there are no current symptoms, this section should show the patient was asked about symptoms.

O **Objective** section of office note:

- Document any positive associated physical exam finding.
- If there are no related exam findings, this section should show that the patient was evaluated for related findings.

A **Final** assessment**:**

- Spell out each diagnosis in full with current status.
- Avoid the use of abbreviations, acronyms or truncated words.

P **Treatment** plan**:**

- Clearly link major depressive disorder to medications that are being used to treat the condition; also include this information in the medications list.
- Document referrals to specialists or other providers.
- Indicate when you plan to see the patient again.

Documentation tips for providers

ICD-10-CM classifies "depression" without further description as major depression.

Remember to document all of the following:

- **Episode:** single or recurrent
- **Severity:** mild, moderate or severe
- **Presence or absence of:** psychosis or psychotic features
- **Remission status:** partial or full

Major depressive disorder

Use fourth and fifth characters for further specification

Major depressive disorder, single episode:

- F32.Ø Major depressive disorder, single episode, mild
- F32.1 Major depressive disorder, single episode, moderate
- F32.2 Major depressive disorder, single episode, severe without psychotic features
- F32.3 Major depressive disorder, single episode, severe with psychotic features
- F32.4 Major depressive disorder, single episode, in partial remission
- F32.5 Major depressive disorder, single episode, in full remission

Major depressive disorder, recurrent episode

- F33.Ø Major depressive disorder, recurrent, mild
- F33.1 Major depressive disorder, recurrent, moderate
- F33.2 Major depressive disorder, recurrent, severe without psychotic features
- F33.3 Major depressive disorder, recurrent, severe with psychotic symptoms
- F33.4- Major depressive disorder, recurrent, in remission
- F33.4Ø Major depressive disorder, recurrent, in remission, unspecified
- F33.41 Major depressive disorder, recurrent, in partial remission
- F33.42 Major depressive disorder, recurrent, in full remission
- F33.8 Other recurrent depressive disorders (document the specific "other" recurrent depressive condition, as in "recurrent brief depressive episodes")
- F33.9 Major depressive disorder, recurrent, unspecified

Documentation tips for providers

Avoid using unclear abbreviations, such as MDD.

- MDD can have more than one meaning, such as manic depressive disorder.
- Major depressive disorder should be spelled out clearly.

Code assignment is based solely on the provider's clinical judgment.

- Only diagnosis codes for the exact diagnosis documented in the medical record can be assigned.
- Coders cannot make assumptions based on signs and symptoms.

Coding example
Depression, unspecified code

Final diagnosis	Depression
ICD-10-CM code(s)	F32.9 Major depressive disorder, single episode, unspecified
Rationale	F32.9 is an unspecified code, assigned for both depression and major depression.

Coding example
Major depressive disorder

Final diagnosis	Single episode severe major depression with psychotic behavior
ICD-10-CM code(s)	F32.3 Major depressive disorder, single episode, severe with psychotic features
Rationale	F32.3 is assigned for major depressive disorder, single episode, severe with psychotic behavior.

Coding example
Recurrent depressive episode

Final diagnosis	Recurrent depressive episode
ICD-10-CM code(s)	F33.9 Major depressive disorder, recurrent, unspecified
Rationale	The alphabetic index of ICD-10-CM – episode, depressive, recurrent – codes to F33.9. Verification of the code in the tabular list shows code F33.9 represents major depressive disorder, recurrent, unspecified.

Coding example
Unclear documentation

Past medical history	History of major depressive disorder
Final diagnosis	MDD
ICD-10-CM code(s)	Unable to code. Query physician for clarification.
Rationale	MDD can represent major depressive disorder or manic depressive disorder. Provider clarification is needed before code assignment.

Coding example
Reactive psychotic depression

Final diagnosis	Reactive psychotic depression
ICD-10-CM code(s)	F32.3 Major depressive disorder, single episode, severe with psychotic features
Rationale	The alphabetic index of ICD-10-CM – depression, reactive, psychotic – codes to F32.3. Verification of the code in the tabular list shows code F32.3 represents major depressive disorder, single episode, severe with psychotic features.

Thank you

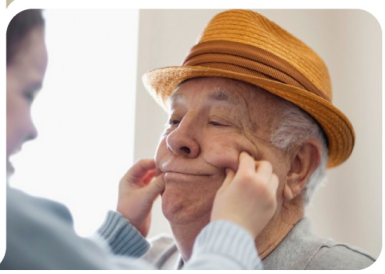
Annual Wellness Visits (AWVs)

Documentation and coding basics



<Insert name>
<Insert title>
<Insert phone>
<Insert email

Humana 2962ALL0517-A

Agenda

1. Purpose of an Annual Wellness Visit (AWV)
2. Coding an AWV
3. Documenting an AWV
4. Takeaways

Purpose of an AWV

What is an AWV?

The AWV is a face-to-face **visit** to:

- **Review all chronic conditions**
  - Update a patient's problem list
- **Plan for needed health services for the upcoming year**
  - Review a patient's quality measures
- **Counsel the patient**
  - Ensure the patient is taking advantage of all free services and screenings available

Preventive and wellness care

- In 2011, less than half of adults age 65 years old or older were up to date with core preventive services despite regular checkups.
- Older adults who obtain clinical preventive services and practice healthy behaviors are more likely to remain healthy and functionally independent.

Components of the Annual Wellness Visit

A Annual health status review

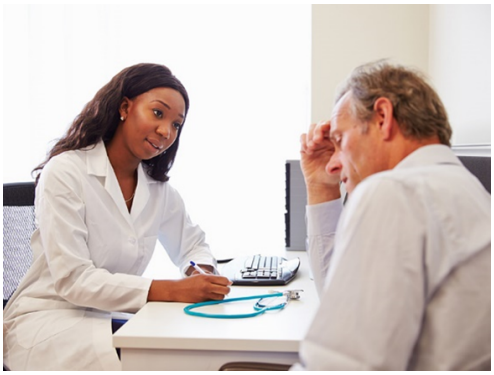
W Wellness planning

V Counseling visit

Annual health status review

Administer health risk assessment (HRA)

- Collect self-reported information from the patient, including self-assessment of health status.
- Identify psychosocial and behavioral risk factors.



Annual health status review

Acquire patient information and update medical history

- Confirm whether documented medical conditions are active or resolved.
- Document the date of any major medical events, accidents or surgical interventions.
- List all physicians and suppliers participating in the care of each condition.
- Review functional status, safety and potential risk factors for depression.

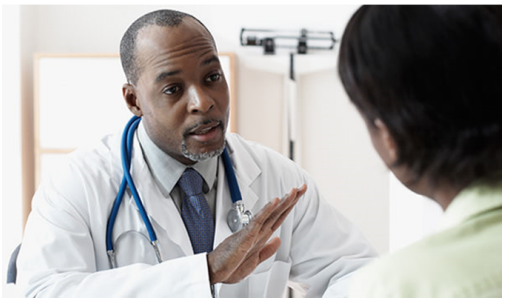
Assess patient

- Assess cognitive status by direct observation.
- Acquire height, weight, body mass index (BMI) and blood pressure measurements.

Wellness planning

Review patient quality measures

- Spend some time focusing on quality measures during the visit.
- Follow up later in the year with an annual preventive physical exam.
- Attach quality measures to either the AWV or the annual preventive exam.



Counsel patient

1. Ensure the patient is taking advantage of all free services and screenings available.

2. Following up later in the year with an annual preventive physical exam to confirm patient follow-through with referrals and screening recommendations.

Coding an AWV

Humana

Current Procedural Terminology (CPT®) coding for an Annual Wellness Visit

- G0438 and G0439 are the correct Healthcare Common Procedure Coding System (HCPCS) codes for an Annual Wellness Visit.
- This service could be submitted with the appropriate initial or periodic comprehensive preventive medicine code – ***but only if all components of these services are performed.***
  - Many elements of the Annual Wellness Visit overlap with an annual physical exam.
  - Completing the AWV on a separate date of service maximizes a patient's opportunity for preventive care.

Humana

CPT coding for an Annual Wellness Visit

Annual Wellness Visits with problem-oriented exams

- **If a patient presents with a problem at the AWV that requires a physician exam/assessment**, a problem-oriented evaluation and management (E/M) service will be covered at the same visit (99201 – 99205; 99211 – 99215).
  - The problem-oriented portion of the visit must be significant, separately identifiable and medically necessary to treat the patient's illness or injury or to improve the functioning of a malformed body member.
  - Ensure the documentation is complete and both types of visits are fully documented.
  - Use modifier -25 on the problem-oriented E/M service code.

Diagnosis coding for an Annual Wellness Visit

- Any appropriate diagnosis code may be used with the Annual Wellness Visit.
- Diagnose all conditions reviewed or updated during the visit:
  - If a face-to-face encounter has occurred
  - If an assessment includes the status of each active condition as stable, unstable, improved, worsening, active or resolved
- Because the AWV is not an examination, do not use:
  - `Z00.00` – Encounter for general adult medical examination without abnormal findings
  - `Z00.01` – Encounter for general adult medical examination with abnormal findings

Coding Annual Wellness Visits

- AWVs include a comprehensive review of a patient's medical status.
- A certified coder can review the selected diagnosis codes for accuracy and specificity prior to the visit being submitted for payment.

Diagnosis coding for additional services ordered

- Ordering additional preventive services in conjunction with the Annual Wellness Visit is allowed.
- Refer to the CMS publication "Medicare Preventive Services" for detailed information on requirements related to covered preventive services and screenings:
  - CPT/HCPCS codes
  - ICD-10 codes
  - Frequency
  - Eligibility requirements

Documenting an AWV

Humana

Documenting an Annual Wellness Visit

Documentation requirements are specific

- Provide all components of the AWV prior to submitting a claim for the AWV.
- Acquire patient's history, including a health risk assessment.
- Perform required assessments.
- Counsel the patient.

Humana

Review chronic conditions

Update the patient's final diagnostic statement

- Assess each condition in the problem list and list all current coexisting conditions in the final assessment, final impression or final diagnosis list.
- Verify that the diagnoses in the final diagnosis list accurately and specifically reflect the patient's current condition.

Help from Humana

Humana Medicare risk adjustment (MRA) educators are available to meet with practices and help them understand documentation requirements of Annual Wellness Visits outlined by Medicare.

Takeaways

- The AWV is a planning visit.
- The AWV is:
  - An annual health status review
  - A wellness-planning visit (quality review)
  - A counseling visit
- MRA learning facilitators are available to help.

Coding Improvement Plan

<Insert managed service organization (MSO)/provider name — site/center number>

<Insert current month, current year>

ELEMENT	IMPROVEMENT ACTIVITIES	RESPONSIBILITY	NOTES
Medical record elements:			
Legibility	❑ Clear, concise, consistent, complete and legible	Physician	
Provider signature and credentials	❑ Rendering provider name(s) and credentials clearly identified on each progress note ❑ Signature and date by rendering provider within 30 days of date of encounter		
Final diagnosis/ impression/assessment	❑ All conditions or diagnoses evaluated and managed during each patient visit ❑ All coexisting conditions or diagnoses that impacted patient care, treatment or management during each patient visit ❑ Current status of each condition (improved, stable, worsening, in remission, followed by specialist, etc.) ❑ Manifestations or complications clearly linked to the underlying diagnosis in a cause-and-effect relationship ("associated with," "complicated by," "secondary to," "due to," etc.) ❑ "Status" conditions (ostomy status, dialysis status, amputation status, major organ transplant status, etc.)		
Treatment plan	❑ Current and specific plan of treatment clearly documented for each diagnosis		
Best practices	See "**Best Documentation Practices for Diagnosis Coding**" for additional guidance on: ▪ Legibility ▪ Patient demographics ▪ Page numbering ▪ Provider signature and credentials ▪ Abbreviations and acronyms ▪ Timelines and dates ▪ Historical versus current ▪ Consistency ▪ Final diagnostic statement ▪ Specificity ▪ Confirmed versus uncertain ▪ Status conditions ▪ Supporting documentation ▪ Treatment plan		

Coding Improvement Plan

<Insert managed service organization (MSO)/provider name — site/center number>

<Insert current month, current year>

ELEMENT	IMPROVEMENT ACTIVITIES	RESPONSIBILITY	NOTES
Coding:			
Diagnosis code assignment	❑ Diagnosis codes from a complete, signed and dated progress note for each individual visit. Code assignment based on: ▪ A diagnosis coding manual that corresponds to the encounter date of service ▪ Industry-standard coding guidelines. Examples: ○ ICD-9-CM or ICD-10-CM Official Guidelines for Coding and Reporting (Located in front of coding manual or most up-to-date version at www.cdc.gov.) ○ American Hospital Association (AHA) Coding Clinic Guidelines	Coder	
Coding specificity	❑ ICD-9-CM: Three- to five-digit numeric codes are assigned with appropriate fourth and fifth digits ❑ ICD-10-CM: Three- to seven-character alphanumeric codes are assigned with appropriate fourth, fifth, sixth and seventh characters		
Condition-specific improvement opportunities:			
Humana coding guidelines	See separate condition-specific coding guidelines for additional detail	Physician and coder	
Angina	❑ All applicable descriptors (acute, chronic, nocturnal, stable, unstable, etc.) ❑ Current status (controlled by medication, stable, worsening, improved, etc.) ❑ Clearly linked to any condition-specific medications, procedures and/or recommended lifestyle changes		
Aortic aneurysm	❑ Current signs or symptoms (thrill, bruit, increased growth, etc.) ❑ Specific location along the aorta (abdominal, thoracic, thoracoabdominal, etc.) ❑ Current status (stable, enlarging, specific measurements, etc.) ❑ Current treatment plan (date of past or future ultrasound, referral to vascular surgeon, etc.)		

Coding Improvement Plan

<Insert managed service organization (MSO)/provider name — site/center number>

<Insert current month, current year>

ELEMENT	IMPROVEMENT ACTIVITIES	RESPONSIBILITY	NOTES
Atrial fibrillation	❑ All applicable descriptors (chronic, paroxysmal, persistent, permanent, etc.) ❑ Signs and symptoms (irregular rhythm, tachycardia, shortness of breath, fatigue, etc.) ❑ Current status (controlled by antiarrhythmic medication, stable, worsening, improved, etc.) ❑ Historical with risk of recurrence versus current ❑ Specific and concise treatment plan with clear linkage between atrial fibrillation and any medication used in the management of atrial fibrillation: ▪ Antiarrhythmic or rate control medications used to treat the atrial fibrillation itself ▪ Long-term preventive anticoagulant medications (to prevent complications caused by blood clots) ○ Specify purpose of long-term anticoagulant therapy, i.e., stroke prevention in patient with • current atrial fibrillation; versus • history of atrial fibrillation at risk for recurrence		
Cerebrovascular accident (CVA)	❑ Clear differentiation between acute CVA in progress versus past CVA (coded differently) ❑ CVA described to highest degree of specificity (e.g., ischemic, embolic, thrombotic, hemorrhagic; specific location, including artery or region of brain affected, laterality; etc.) ❑ Neurologic deficits caused by acute or past CVA clearly linked to CVA (“with,” “due to,” “secondary to,” “associated with,” “related to,” etc.) and described to the highest level of specificity ❑ Documentation consistent and not contradictory (For example, a completely normal neurologic exam would contradict a final diagnosis of “left hemiparesis, due to past CVA.”) ❑ Clear and concise current treatment plan for CVA and any related neurologic deficit		

Coding Improvement Plan

<Insert managed service organization (MSO)/provider name — site/center number>

<Insert current month, current year>

ELEMENT	IMPROVEMENT ACTIVITIES	RESPONSIBILITY	NOTES
Chronic kidney disease (CKD)	❑ Clearly stated cause is specifically linked to CKD in a cause-and-effect relationship ("due to," "caused by," "associated with," etc.) ❑ Specific stage of CKD documented in the final assessment or final impression ❑ Current status (stable, worsening, improving, etc.) ❑ Specific and concise treatment plan ❑ Notation of dialysis status with the specific dialysis regimen and/or the presence of an arteriovenous (AV) fistula for the purpose of dialysis		
Deep venous thrombosis (DVT)	❑ All applicable descriptors (acute, subacute, chronic, "history of," etc.) ❑ Location (laterality and specific vein involved) ❑ Current signs or symptoms (pain, swelling, redness, warmth, diagnostic testing results, etc.) ❑ Simple DVT versus DVT with thrombophlebitis ❑ Specific and concise treatment plan, including purpose of long-term anticoagulant therapy: ▪ Part of active treatment of a current acute, current subacute or current chronic DVT; versus ▪ Prophylactic treatment of a historical DVT with the goal of preventing a recurrence		
Diabetes mellitus and manifestations	❑ Type of diabetes (due to underlying cause, drug or chemical induced, Type 1, Type 2, "other" type clearly described) ❑ Current status of diabetes control (controlled, uncontrolled, out of control, etc.) ❑ Manifestations linked to diabetes unless specified that they are due to another cause ▪ Best practice: Use the descriptor "diabetic" for every complication. ❑ All associated diabetic complications described to the highest level of specificity with any related sign and symptom ❑ Clear and concise treatment plan ❑ Linkage to current medications ❑ Specific insulin regimen (final assessment clearly and specifically states "long-		

Coding Improvement Plan

<Insert managed service organization (MSO)/provider name — site/center number>

<Insert current month, current year>

ELEMENT	IMPROVEMENT ACTIVITIES	RESPONSIBILITY	NOTES
	term current use" or "temporary use of insulin" as applicable) ❑ Cause of secondary diabetes specifically stated		
Drug dependence	❑ Specifically noted as "use," "abuse" or "dependence" ❑ Specific drug or substance involved ❑ Described to the highest level of specificity with any related signs, symptoms, complications, behavioral disorders, etc.		
Fractures	❑ Specific site (body part, particular bone and location along the bone, laterality, etc.) ❑ Current associated signs and symptoms, including diagnostic imaging results ❑ Episode of care (initial, active treatment versus follow-up aftercare) ❑ Cause (pathologic with clear linkage to disease process versus trauma, including injury details) ❑ Current status (improving, stable, healed, etc.) ❑ Specific and concise treatment plan		
Major depression	❑ All applicable descriptors (mild, moderate, severe, with or without psychotic features, etc.) ❑ Episode of care clearly documented (single or recurrent) ❑ Associated signs and symptoms ❑ Specific diagnosis with descriptors spelled out in full in the final impression (no abbreviations) ❑ Current status (stable, in partial or full remission, controlled, etc.) ❑ Specific and concise treatment plan		
Morbid obesity/body mass index (BMI)	❑ Height, weight and BMI ❑ Current, associated physical exam findings (obese, morbidly obese, overweight, etc.) ❑ Overweight or obesity diagnosis documented to the highest level of specificity (morbid obesity, severe obesity, extreme obesity, overweight, etc.) ❑ Associated diagnosis(es) that caused the overweight or obesity diagnosis		

Coding Improvement Plan

<Insert managed service organization (MSO)/provider name — site/center number>

<Insert current month, current year>

ELEMENT	IMPROVEMENT ACTIVITIES	RESPONSIBILITY	NOTES
	(excess calorie intake, drug induced, diabetes induced, etc.) using terms that show the cause-and-effect relationship ("due to," "secondary to," "related to," etc.) ❑ Coexisting diagnoses impacted by the overweight or obesity diagnosis ❑ Current obesity diagnosis not described as "history of" ❑ Specific treatment plan for the obesity condition (referral to nutritionist, patient education, plan for return follow-up, etc.)		
Neoplasm	❑ Histological type (adenocarcinoma, squamous cell, etc.) or behavior (benign, malignant, uncertain, unspecified) ❑ Exact location, including the site within a body part (such as inner, outer quadrant of right breast) ❑ Primary, secondary or carcinoma in situ (confined to original site/no spread) ❑ All sites or locations clearly identified as primary or secondary ❑ Current neoplasm not described as "history of" ❑ Historical neoplasm not documented as if current ❑ Neoplasm in remission described as "in remission" ❑ Clear and concise treatment plan ▪ Documentation indicates whether treatment directed at primary, secondary or in situ malignancy ▪ Goal of current treatment plan clearly noted (active treatment of current neoplasm versus monitoring of historical cancer to check for recurrence) ▪ Purpose of adjuvant therapy clearly stated (curative, palliative or preventive)		
Pressure ulcer	❑ Site/location and stage ❑ Specific description (size in centimeters; undermining, sinus tracts or tunneling; wound base description; absence or presence of drainage – amount, color, consistency, odor; pain; description of area up to 4 cm from edge of the wound – measure in centimeters and describe characteristics – light pink, deep red,		

Coding Improvement Plan

<Insert managed service organization (MSO)/provider name — site/center number>

<Insert current month, current year>

ELEMENT	IMPROVEMENT ACTIVITIES	RESPONSIBILITY	NOTES
	purple, macerated, calloused; etc.). ❑ Specific and concise treatment plan (devices such as foam pads or mattresses; wound care instructions; prescriptions for ointments, creams or other medications; planned debridement; etc.)		
Rheumatoid arthritis	❑ Validate patient-reported diagnosis by review of prior medical records, past and current diagnostic test results and specialist reports with notation of findings in the patient record ❑ Signs and symptoms (joint pain and/or deformity, warmth, redness, swelling; rheumatoid nodules) ❑ Associated conditions or manifestations of rheumatoid arthritis clearly linked ("with," "due to," "secondary to," "associated with," "related to," etc.) ❑ Terms such as "apparently," "likely," "consistent with" or "probable" are not to be used when rheumatoid arthritis is a confirmed diagnosis ❑ Spelled out in full in the final diagnosis, as there are other meanings for the abbreviation "RA" (e.g., refractory anemia) ❑ Drug therapy (e.g., disease-modifying antirheumatic drug [DMARD] therapy, immunosuppressants) with clear linkage of the medication to the rheumatoid arthritis diagnosis		
Seizure disorder	❑ Type (simple, complex, partial, generalized, absence, myoclonic, atonic, tonic-clonic, grand mal, etc.) ❑ "Seizure" specified as seizure disorder, versus single seizure, versus recurrent seizures ❑ Current status (controlled, stable, improved, worsening, historical with no recurrence, etc.) ❑ Specific and concise treatment plan ❑ Clearly linked to any medications prescribed to treat the condition		

Coding Improvement Plan

<Insert managed service organization (MSO)/provider name — site/center number>

<Insert current month, current year>

ELEMENT	IMPROVEMENT ACTIVITIES	RESPONSIBILITY	NOTES
Sick sinus syndrome	❑ Current associated signs and symptoms ❑ Current status (stable, worsening, controlled by pacemaker, etc.) ❑ Pacemaker issues or problems versus normally functioning pacemaker ❑ Specific and concise treatment plan ▪ Condition clearly linked to medications prescribed to treat the condition (including documentation that antiarrhythmic medication is being used to control fast heart rate, when applicable) ▪ Planned diagnostic testing		
Compliance program:			
Conducting internal monitoring and auditing	Program recommendations to include: ❑ Conduct reviews of coding and chart documentation ❑ Implement compliance and practice standards ❑ Develop and communicate medical record documentation and coding standards in accordance with Centers for Medicare & Medicaid Services (CMS), Humana and ICD-9 or ICD-10 guidelines ❑ Use certified coders	MSO	
Follow-up review post-education	❑ Conduct training and education ❑ <Insert number>-month re-review ❑ Develop performance standards and follow up for results less than the established acceptable standard of 85 percent or greater	Humana provider data validation

Best Documentation Practices for Diagnosis Coding

The "Evaluation and Management Services Guide" issued by the Department of Health and Human Services and the Centers for Medicare & Medicaid Services (CMS) advises:
"Clear and concise medical record documentation is critical to providing patients with quality care and is required in order for providers to receive accurate and timely payment for furnished services. Medical records chronologically report the care a patient received and are used to record pertinent facts, findings and observations about the patient's health history. Medical record documentation assists physicians and other health care professionals in evaluating and planning the patient's immediate treatment and monitoring the patient's health care over time."

Medical record documentation of patient diagnoses that is clear, concise and described to the highest level of specificity leads to:

- Quality patient care with better outcomes
- Accurate diagnosis code assignment
- Appropriate and timely health care provider payment for furnished services

Key points

Legibility
The entire medical record must be legible. Remember this basic rule: If it is not documented, it was not done. Likewise, if it is not legible, it cannot be read. If it cannot be read, it cannot be proven that the diagnoses are supported and appropriate medical services were performed. An illegible record is of no use in assigning diagnosis codes or determining the medical services performed.

Patient demographics
Each page of the medical record should include, at a minimum, the date of service and the patient's name and date of birth. Also include the patient identification number, if applicable.

Page numbering
Each page for each date of service should be numbered.

Best practice

- *Page 1 of 3*
- *Page 2 of 3*
- *Page 3 of 3*

If numbered in this way, it will be clear to an objective reviewer whether the record for a particular date is complete.

Health care provider signature and credentials

- Only authorized personnel may document in the medical record, and each person must be clearly identified with full name and credentials.
- All entries must be signed and dated in a timely manner by the health care provider who performed the service. Signatures should be identified by a printed, legible name and credentials.
- Signature stamps are not accepted by CMS.
- Electronic signatures must be authenticated by the health care provider. For a signature to be valid, the following criteria must be met:
    - Services provided or ordered must be authenticated by the ordering practitioner.
    - Signatures are to be handwritten or electronic (stamped signatures are not acceptable).
    - Signatures should be legible.

  Reference: CMS Medicare Program Integrity Manual (Publication [Pub.] 100-08), Chapter 3, Section 3.3.2.4

Abbreviations and acronyms

- Limit the use of abbreviations and acronyms, or avoid them altogether.
- Use only industry-standard abbreviations and acronyms. Keep a current list on file from a respected source.
- Realize some standard abbreviations and acronyms have multiple meanings. The meaning of the abbreviation or acronym often can be determined based on context, but this is not always true.

Best practice

- *The initial notation of a diagnosis should be spelled out in full with the abbreviation in parentheses, such as "myocardial infarction (MI)" or "rheumatoid arthritis (RA)."*
- *Subsequent mention of the condition can be made using the abbreviation.*
- *The diagnosis should again be spelled out in full in the final impression or plan.*

Timelines and dates

Specific dates and timelines provide important information and can affect diagnosis code assignment (see second example below regarding myocardial infarction).

- Post-hospitalization or post-operative follow-up office visits:

  Vague: "Patient was recently discharged from the hospital."

  Vague: "Patient is here for hospital follow-up."

  Specific: "Patient was discharged from the hospital on 1/15/20xx after admission for ____."

  Specific: "Patient was discharged from the hospital two weeks ago after admission for _____."

  Vague: "Post-op visit for recent splenectomy."

  Specific: "Patient is here for first post-op visit for splenectomy performed on 3/25/20xx."

- "Recent" myocardial infarction (MI) is a vague description that does not specify whether the patient experienced an acute myocardial infarction within the last four weeks (coded as acute MI) versus a myocardial infarction that is older than four weeks with no current symptoms (coded as historical MI).

  Vague: "Follow-up office visit for recent myocardial infarction."

  Specific: "Patient was discharged from ABC Medical Center on 2/25/20xx after inpatient admission for acute myocardial infarction."

  Specific: "Patient was discharged from ABC Medical Center one week ago after inpatient admission for acute myocardial infarction."

Historical versus current

- Do not use the descriptor "history of" to describe a current or chronic condition that is still present, active or ongoing.
- Do not use the descriptor "history of" to describe a current condition that is in remission. Describe the condition as "in remission."
- Do not document a condition as current if it is historical only. For example: A patient with a history of prostate cancer that has been eradicated in the past presents to the office for an evaluation, examination and prostate-specific antigen (PSA) lab test to monitor for recurrence. The assessment section should not state "prostate cancer," but rather "history of prostate cancer." The related plan should state, "Will continue to monitor PSA every six months to check for prostate cancer recurrence."

Consistency

Use caution when using record templates or electronic medical records that are conflicting or contradictory. Examples of conflicting or contradictory documentation include:

- The final assessment states right hemiparesis due to prior cerebrovascular accident, but the neurologic review of systems (ROS) and neurologic examination are noted as completely normal.
- The chief complaint states the patient presents for evaluation of chest pain, and the final assessment states acute angina. However, the review of systems states, "Patient denies any episodes of chest pain."
- The office notes refer to the patient as both "he" and "she," creating a consistency issue.

Specificity

Describe each condition to the highest level of specificity, such as:

- with or without exacerbation
- with or without complications
- acute versus chronic
- severity – mild, moderate, severe
- stages or types
- controlled or uncontrolled
- underlying cause
- location or site, including laterality, specific site within a body part (upper outer quadrant, lower inner quadrant, etc.), distal, proximal, etc.

Examples:

Chronic kidney disease (CKD) – Specify stage I-V or end-stage renal disease (ESRD).

- Even if lab values and/or the glomerular filtration rate (GFR) are documented, the record must clearly specify the stage of CKD. Medical coders are not allowed to assign a stage of CKD based on the documented GFR.

Diabetes mellitus (DM) – specify:

- Type (Type 1, Type 2, secondary to − specify causal condition)
- Status of diabetes control (controlled or out of control)
- With or without complications or manifestations (fully describe each complication or manifestation)

If there are complications or manifestations of diabetes mellitus, you must clearly and directly link diabetes to those complications or manifestations using terms such as "with," "due to," "secondary to," "associated with" and "related to." Avoid the use of punctuation marks (e.g., slashes and commas) to separate diabetes and its manifestations, as they may not clearly indicate a causal relationship.

Best practice

- *Document each complication of diabetes with the descriptor "diabetic," as in "diabetes mellitus Type 2, controlled, with diabetic neuropathy."*

Confirmed versus uncertain
Avoid use of terms that imply uncertainty (such as “probable,” “apparently,” “likely” or “consistent with”) to describe diagnoses or conditions that are confirmed. Always document the signs and symptoms in the absence of a confirmed diagnosis.

Status conditions
Document status conditions when applicable (e.g., ostomy status, dialysis status, amputation status, major organ transplant, etc.).

Final diagnostic statement
This is the section of the record where you state your final assessment or final impression of the patient’s current diagnoses based on all other information you gathered as you evaluated the patient on an individual date of service. In your final diagnostic statement, you should include:

- All conditions or diagnoses that impacted the patient’s care on this date
- All conditions or diagnoses you evaluated and managed on this date
- All comorbid or coexisting conditions that impacted patient care, treatment or management on this date
- Current status (improved, stable, worsening, etc.) of each diagnosis or condition

Supporting documentation
Keep in mind that the previous sections of the record should provide supporting documentation for each condition or diagnosis listed. For example:

- Related signs and symptoms and physical exam findings should be listed.
- Medication lists should document the drug name, dosage with times and/or frequency and the condition(s) for which the drug has been prescribed.
- Results of diagnostic testing should be documented.

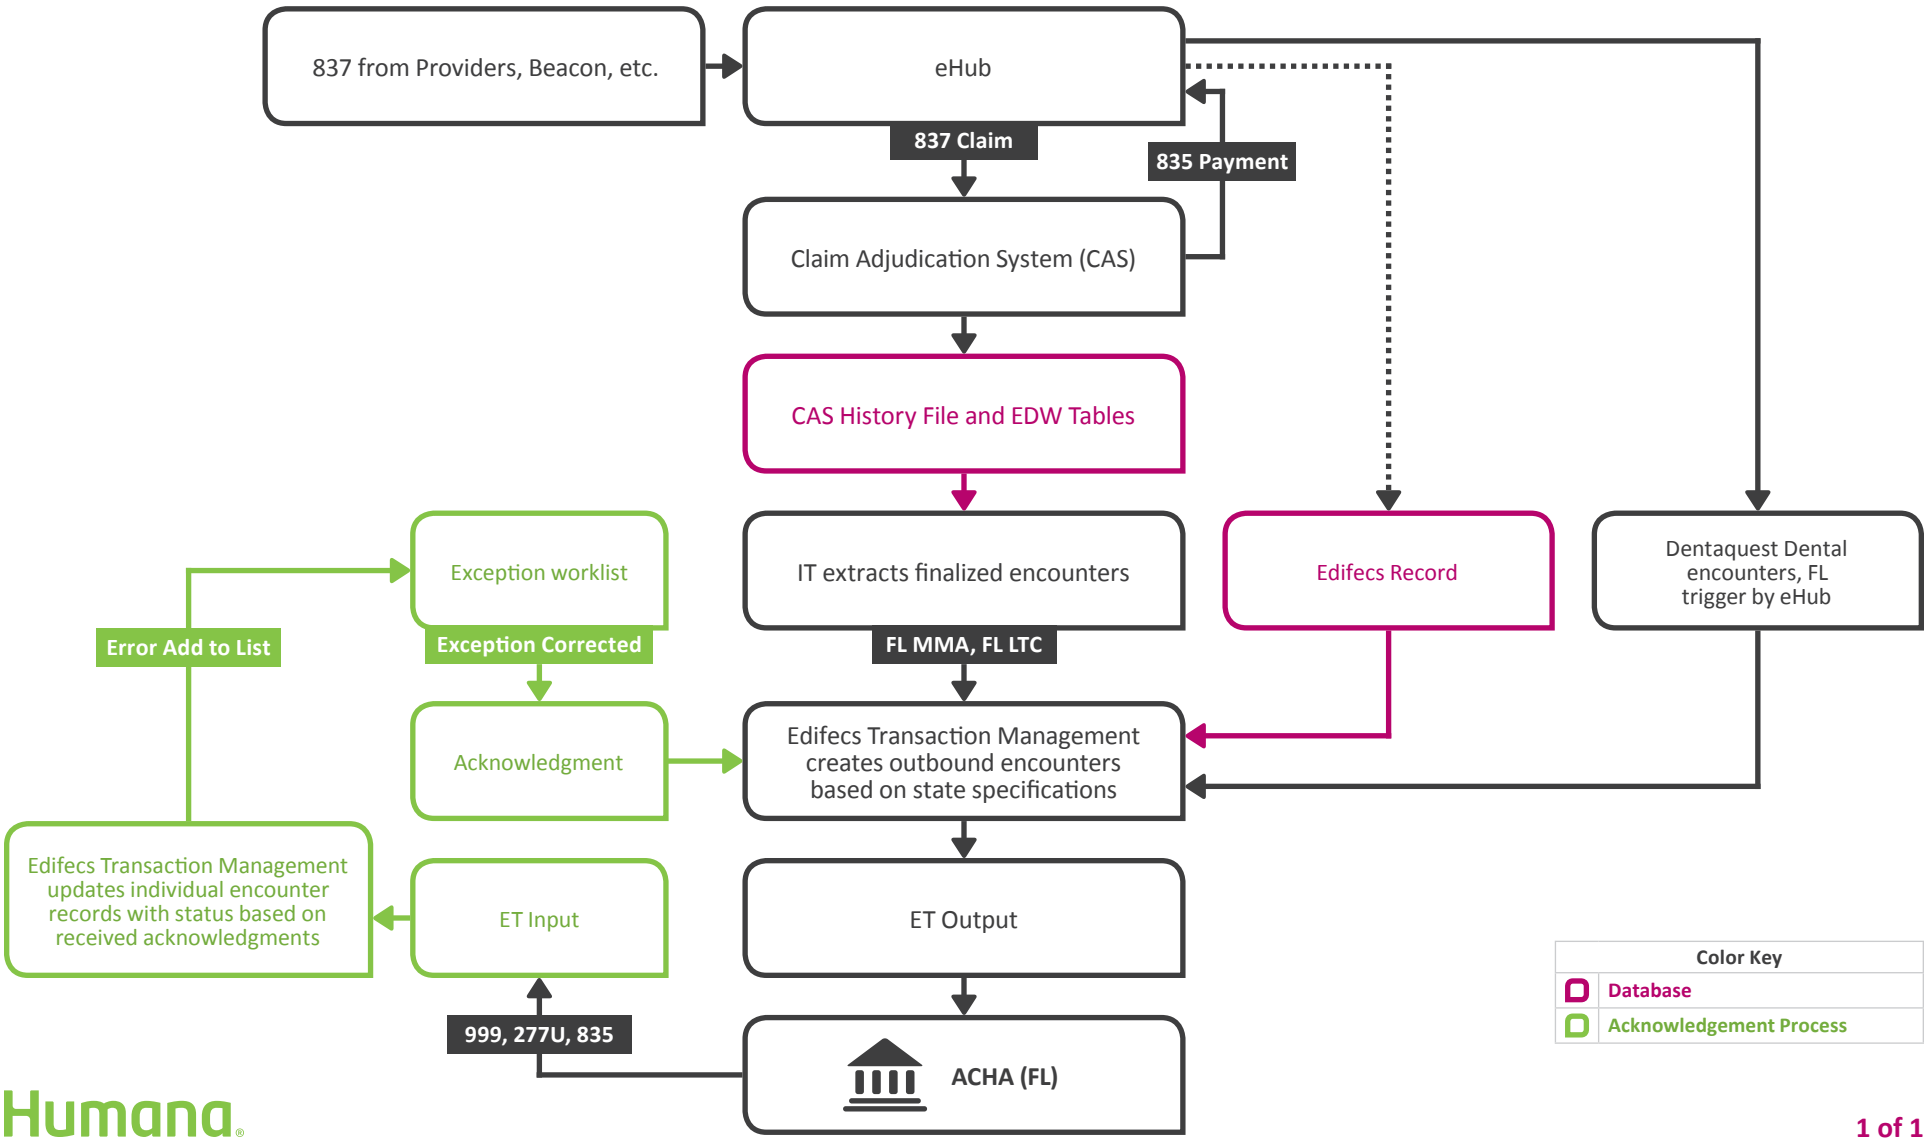
Treatment plan
Your current plan of treatment for each diagnosis should be clearly documented and specific. Examples should include dietary recommendations, medication changes, scheduling of diagnostic testing, specific patient education or counseling provided, continued monitoring and other factors that affect diagnosis. If referrals are made or consultations requested, the office note should indicate to whom or where the referral or consultation is made or from whom consultation advice is requested. Document when you plan to see the patient again, even if on an as-needed basis only.

A final note

Industry-standard diagnosis coding guidelines require medical coders to apply a strict literal interpretation to your medical record documentation. Coders are not allowed to “connect the dots,” make assumptions or presume to know the health care provider’s intent. Coders cannot apply a clinical interpretation to information within the record, such as diagnostic test results or physical exam findings. Accurate diagnosis code assignment is dependent on the health care provider clearly describing each medical diagnosis to the highest level of specificity.

Attachment 29-5: Encounter Submission Process Flow

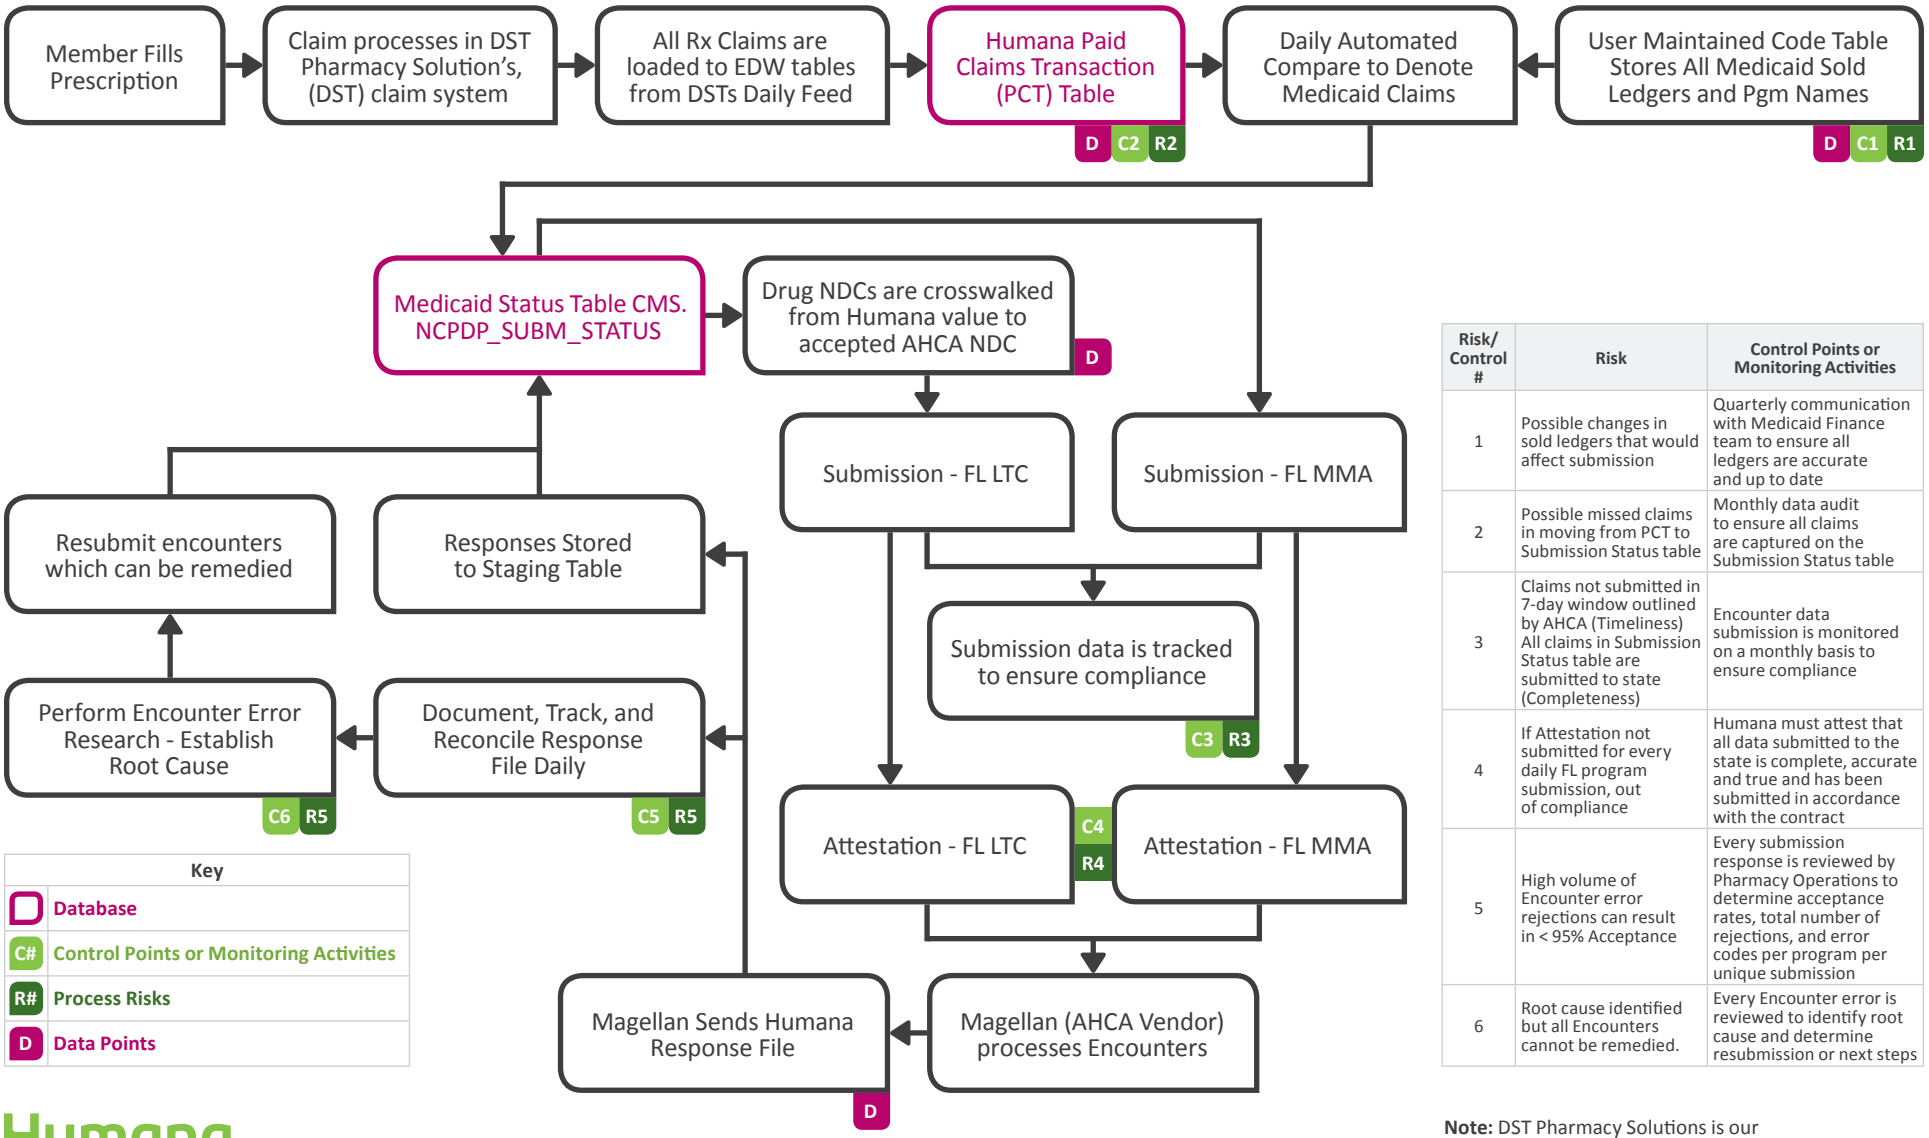
Non-Pharmacy Encounter Submission Process



Humana.

Attachment 29-6: Encounter Submission Process Flow

Pharmacy Encounter Submission Process – Compliance



Risk/ Control #	Risk	Control Points or Monitoring Activities
1	Possible changes in sold ledgers that would affect submission	Quarterly communication with Medicaid Finance team to ensure all ledgers are accurate and up to date
2	Possible missed claims in moving from PCT to Submission Status table	Monthly data audit to ensure all claims are captured on the Submission Status table
3	Claims not submitted in 7-day window outlined by AHCA (Timeliness) All claims in Submission Status table are submitted to state (Completeness)	Encounter data submission is monitored on a monthly basis to ensure compliance
4	If Attestation not submitted for every daily FL program submission, out of compliance	Humana must attest that all data submitted to the state is complete, accurate and true and has been submitted in accordance with the contract
5	High volume of Encounter error rejections can result in < 95% Acceptance	Every submission response is reviewed by Pharmacy Operations to determine acceptance rates, total number of rejections, and error codes per program per unique submission
6	Root cause identified but all Encounters cannot be remedied.	Every Encounter error is reviewed to identify root cause and determine resubmission or next steps

Note: DST Pharmacy Solutions is our Pharmacy Claims Processing Partner

Attachment 29-7: Encounters Data Submission Compliance Ratings

29-7b: Encounter Submission Internal Compliance Ratings

1. Internal Compliance Rating Metrics and Definitions

Reference ID	Title	Details	Numerator Prompt	Denominator Prompt
CLM-09-FL	Encounter Accuracy – EDI Edits	Ninety-five percent of the records in an encounter batch submission must pass X12 EDI edits and MMIS edits	Number of encounter submissions accepted without EDI compliance edits for the reporting period	Total number of encounter submissions for the reporting period
CLM-10-FL	Encounter Accuracy – NCPDP Edits	Ninety-five percent of the records in an encounter batch submission must pass NCPDP edits and the pharmacy benefits system edits	Number of encounter submissions accepted without NCPDP compliance edits for the reporting period	Total number of encounter submissions for the reporting period
CLM-12-FL	Pharmacy Encounter Submissions	Pharmacy encounter data shall be submitted no later than seven days following the date on which the Managed Care Plan adjudicated the claims.	Number of pharmacy encounters sent by the 15th day of the month after the date-of-service month for the reporting period	Total number of pharmacy claims made on or after 12/01/2011 for the reporting period
CLM-13-FL	Non-Pharmacy Encounter Submissions	Non-pharmacy encounter data shall be submitted no later than seven days following the date on which the Managed Care Plan adjudicated the claims.	Number of non-pharmacy encounters sent within 60 calendar days following the end of the month in which the plan paid for claims for services for the reporting period	Total number of non-pharmacy claims made for the reporting period
CLM-05-LTC	Submission of Encounter Data	All encounter data must be submitted to the agency	Number of encounters submitted to AHCA	Total number of encounters for the reporting period
CLM-06-LTC	Encounter Accuracy – EDI Edits	Ninety-five percent of the records in an encounter batch submission must pass X12 EDI edits and MMIS edits	Number of encounters passing X12 EDI edits and MMIS edits after submission	Total number of X12 encounters submitted for the reporting period
CLM-07-LTC	Encounter Accuracy - NCPDP Edits	Ninety-five percent of the records in an encounter batch submission must pass NCPDP edits and the pharmacy benefits system edits	Number of encounters passing NCPDP and pharmacy benefits system edits after submission	Total number of NCPDP encounters submitted for the reporting period
CLM-17-LTC	Timely Initial Encounter Submissions	Encounter data shall be submitted no later than seven days following the date on which the Managed Care Plan adjudicated the claim	Total amount of encounters submitted within 7 days of adjudicating the claim within the reporting period	Total amount of claims adjudicated during the reporting period
CLM-10-FLLT	Encounter Accuracy – EDI Edits	Ninety-five percent of the records in an encounter batch submission must pass X12 EDI edits and MMIS edits	Number of encounter submissions that pass EDI and MMIS edits for the reporting period	Total number of encounters submitted for the reporting period
CLM-18-FLLT	Encounter Submissions	Encounter data shall be submitted no later than seven days following the date on which the Managed Care Plan adjudicated the claims.	Total number of encounter data submitted within 7 days of adjudicating the claim for the reporting period	Total number of adjudicated claims for the reporting period

Humana	***Desktop Procedure Ramp Manager***		
Original Issue Date: 07/30/2014	***Procedure Number: FLM-PCDR-001***	***Page 1 of 4***	
Subject: Ramp Manager	***Original Approval Date: 07/30/2014***	***Revision Approval Date: N/a***	
Change Summary:	*Original issue*		

Purpose of Procedure:

Ramp Manager is an application that provides interactive, self-service tools to verify accuracy of encounters transactions against the Florida Medicaid Companion Guides. Ramp Manager is hosted by EDIFECs in an environment customized for Florida Medicaid transaction activities.

Line of Business Procedure Applies to:

- Florida Medicaid

Procedure Definitions:

- Define key terms or acronyms

UNCONTROLLED WHEN PRINTED, Check controlled location to verify that this is the current version before use

Humana	Desktop Procedure Ramp Manager	
Original Issue Date: 07/30/2014	Procedure Number: FLM-PCDR-001	Page 2 of 4
Subject: Ramp Manager	Revision Approval Date: N/A	

Ramp Manager

1. **Download File from Edifecs**

   a. Logon to Edifecs via *TM Dual Prod*

   b. Navigate to the *Transmissions* page

   c. Direction field click on *Outbound*

   d. Enter in Partner- State of Florida LTSS, State of Florida Medicaid or State of Florida Medicaid F03

   e. Select the type of search (last 24 hrs., last 30 days)

   f. Click on *Search*

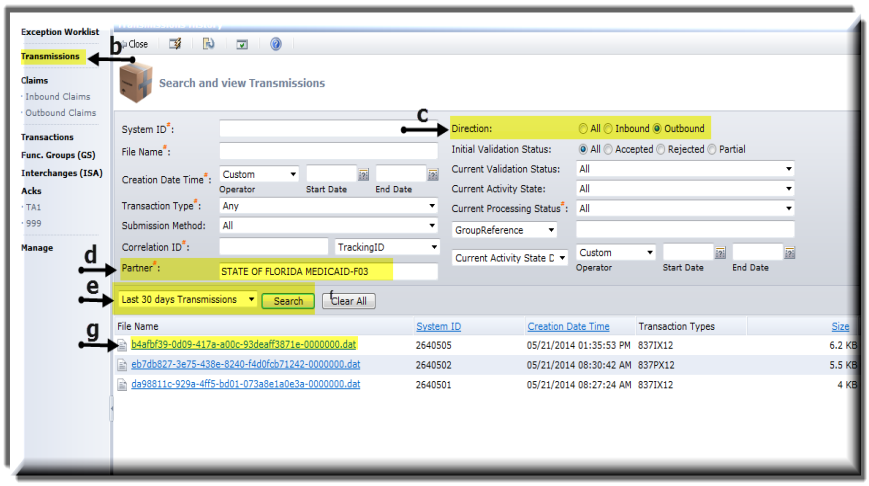
   g. Results are displayed on the bottom of the page, Click the *File Name* to open

   h. Locate the *Transaction Type* on the *General* tab and note if it is 837I, 837P or 837D

   i. Navigate to the *Attachments* tab

   j. Click on *File Name*

   k. Save document to a drive on your computer



UNCONTROLLED WHEN PRINTED, Check controlled location to verify that this is the current version before use

Humana	Desktop Procedure Ramp Manager	
Original Issue Date: 07/30/2014	Procedure Number: FLM-PCDR-001	Page 3 of 4
Subject: Ramp Manager	Revision Approval Date: N/A	

2. **Logon to Florida's Edifecs site**

   https://sites.edifecs.com/index.jsp?flmedicaid

   a. Click on *5010-Testing Program- All Transactions* in the top navigation bar
   b. In the Task field select type of encounters to be tested *5010-837 Dental Task, 5010-837 Institutional Task or 5010-837-Professional Task*
   c. Click on *Run Test*
   d. A "Welcome to Validation Test Wizard" screen will pop up click *Next*
   e. Click on *Browse* and locate the file from step 1.
   f. Click on *Next*
   g. Click *Finish*
   h. In the Test Results field will process the file, once complete it will advise if the file Passed or Failed

3. **Did Test Pass or Fail**

Passed	Failed
Allow Edifecs to submit encounters	Click on *Error Report* to open, review errors and determine if they need to be corrected

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

SRC# 30 – Encounter Submission for Sub-Capitated, Subcontracted, Non-Pay and Atypical (Statewide):

The respondent shall describe how it will work with providers, particularly subcapitated providers, subcontractors, atypical providers, and non-participating providers to ensure the accuracy, timeliness and completeness of encounter data.

Response:

Humana understands the importance of complete and accurate encounter data and the role each data field plays in validating services and quality of care provided. We have built a team of experts that understands the challenges providers face, the importance of the electronic data interchange (EDI), and the strategies necessary to ensure accurate data. Our associates attend and are active participants at national conferences and associations, including the Workgroup for Electronic Data Interchange (WEDI), which discusses and develops standards. Over the past three (3) years, we have delivered this expertise in collaboration with our Provider Relations team to educate our providers in Florida about the importance of the data they submit to Humana. As an example, we have worked with our providers to improve Florida Medicaid Management Information Systems (FMMIS) registration and submission of accurate provider identification (ID) information in our encounter data.

Humana's ability to meet the Agency for Health Care Administration's (AHCA) encounter data requirements depends upon our providers fully understanding their obligations to submit accurate, timely, and complete encounter data, and their willingness to consistently meet those obligations. Consequently, we recognize the importance of educating providers regarding claims and encounters is ongiong. We offer a variety of delivery methods to ensure that information is accessible, convenient, and accomodates all of our provider types. The training formats used include face-to-face orientation and monthly meetings, Humana's Provider Handbook, Quarterly Provider Newsletters, materials available on our Availity provider portal and website, and ongoing support available from our Provider Relations Representatives. We prepare our highly trained provider Customer Care associates to answer questions about encounter submission requirements. We also provide one-on-one outreach to providers, particularly our atypical providers.

As the only statewide Long-term Care (LTC) plan, we have built experience in working with our LTC providers to educate them on encounter data. In the past three (3) years, we have developed strong relationships with our LTC providers to educate them on claims submission and to develop an understanding of encounter data. We have also worked with our sub-capitated Managed Medical Assistance (MMA) providers to encourage complete submission of encounter data.

Our provider trainings and communications notify providers that we will subject claims and encounters data submissions to electronic edits, and that we may reject and return claims and encounters that are incorrectly coded, lack key information, or otherwise fail to meet our requirements to the provider with an explanation of the reason for rejection. Prior to entering into a contract with a subcontractor, we carefully review our encounter data submission requirements with the company's associates.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana has processes in place to ensure the completeness of our encounter submissions to AHCA. Prior to submitting our weekly encounter file to AHCA, we run a report that compares the number of encounters in the file with the number of expected encounters based on our claims payments. We verify that our capitated subcontractors and providers have submitted encounters for all the claims they paid through an annual audit, during which we review a sample of the provider's claims against their encounter submissions. If that audit shows that the capitated provider or subcontractor failed to submit even one encounter, Humana issues a corrective action plan (CAP). We also penalize capitated providers and subcontractors by adjusting their capitation payments based on their encounter submission performance.

==========

1. The adequacy of the respondent's approach to ensure that all network providers, including sub-capitated providers, are known to the Florida Medicaid Management Information System (FMMIS) for the purposes of encounter data submission.

==========

Over the past year, we have been working with our providers to enforce the correct and complete submission of provider IDs in encounter and claims data. Our strategy consists of three (3) components.

First, during the credentialing phase, Humana requires the submission of provider IDs and validates the providers' registration on the Florida Medicaid Management Information System (FMMIS). We recently implemented this verification requirement as part of our approach to address this systemically. In the past six (6) months, one hundred percent (100%) of our newly credentialed providers were verified and validated for FMMIS registration, reducing claims and encounter error rates. We do not offer providers who are not registered with FMMIS a contract with Humana.

Second, for our providers we contracted with prior to our FMMIS registration credentialing requirement, we have been developing and disseminating educational materials to encourage providers to register with FMMIS and receive a provider ID. We stress the importance of this information using regular provider updates and offer guidance on how to register with FMMIS. We also offer resources they can access at any point, including videos, materials, and our Provider Relations call center, to walk providers through FMMIS training.

We target our educational strategy to focus on our providers identified in our Encounter Error Reports from the State. If a provider is not registered or if their registration has expired, Humana's Medicaid Risk Adjustment (MRA) Team validates that the provider is not pending registration and researches AHCA's search engine to research for different variations of the provider's name, for example. As needed, our MRA Team and Provider Relations Team conduct telephonic outreach and site visits to discuss claims and encounter issues, including Medicaid ID reject reasons.

For non-participating providers, during approval of service, we identify if the provider has an active Medicaid ID number. If we determine that the provider does not have an active Medicaid ID number, we complete the registration on behalf of the provider and have the provider sign a Managed Care Organization (MCO) Treating Provider Registration Form, which we submit to AHCA prior to services being rendered.

Humana works with our providers to process the FMMIS registration on their behalf. We work to complete the enrollment documentation and submit it to AHCA on behalf of the provider as needed. Should issues arise with the enrollment process, we work with the provider to address and reconcile the matter and ensure they receive a valid provider ID.

Third, we are in the process of implementing an automated edit in our Claims Adjudication System (CAS) to validate the submission of provider IDs with the AHCA file. This enhancement will deny claims and encounters submitted by our providers with missing or incorrect provider IDs. We are rolling out this strategy after ensuring we have adequately communicated this change and educated our providers.

This edit will cross-walk to the AHCA Provider Network Validation (PNV) file and automatically pend claims that contain missing and incorrect Medicaid ID numbers for possible rejection, thus reducing our claims errors and overall encounter error submission rates. We will validate non-participating provider IDs through similar logic.

To prepare our providers for our new CAS edit, we provided advance notice using alerts on our Humana provider portal and through provider updates. In addition, Humana's Provider Relations teams conducted outreach to providers using phone calls, face-to-face visits, and provider training sessions. Upon implementation of this edit, Humana envisions a substantial reduction in our encounters rejecting for missing or incorrect provider IDs. Further, we will implement a proactive outreach and education strategy upon identifying providers not registered with FMMIS, as the claim or encounter is submitted and thereby denied.

SUBCONTRACTORS

Humana's Encounter Team also hosts weekly meetings with our subcontractors to review their contracted providers not registered with FMMIS. We share reports of missing and incomplete encounter data, as a result of incomplete data submitted by the subcontractor, with our Relationship Managers who oversee our subcontractors' performance. The Relationship Managers monitor and track these issues to completion.

==========

2. The adequacy of the respondent's approach to educating all providers about the importance of key field combinations in accurately identifying the service/s provided, the importance of populating all key fields, and the importance of consistency in coding across all records, providers, and provider types on encounter data submissions.

==========

TRADITIONAL CLAIMS AND ENCOUNTER EDUCATION

Humana understands the importance of educating our providers about our requirements for accurate and complete encounters. Our provider onboarding training materials for all new providers include information about our claims and encounter submission requirements. We supplement the initial training with refresher trainings, provider updates and alerts, and one-on-one instruction on how to address claim and encounter errors, including correcting coding

omissions and mistakes. Humana's "Making It Easier for Providers" series includes on-demand presentations on Humana's claims processing and payment policies.

Our Provider Customer Service Center plays a central role in educating providers about Humana's claims and encounters requirements. Our highly trained representatives can answer specific questions about claims and encounters requirements, the reason a provider's claim or encounter submission was rejected, and the status of payment of a claim. Each associate receives eight (8) full weeks of training on claims and encounters, including technical training on our electronic claims processing and payment system (e.g., CAS). Associates have access to Humana's claims processing and payment system so they can research the reason why the provider's claim or encounter submission was rejected. They refer providers to the Humana website for claims-specific provider education materials.

TARGETED OUTREACH
When a provider or subcontractor contacts us after a claim or encounter rejection or we notice that a provider's encounter errors have been more frequent, we view this as an opportunity to reach out to the provider or subcontractor to provide additional training on how to meet encounter requirements. Our Provider Relations team may contact the provider and offer to visit them.

As part of Humana's enterprise-wide strategy to correct and complete submission of claims and encounter data, our Medicaid Risk Adjustment Team has developed a proactive education strategy. In fact, we have dedicated Learning Facilitators who are responsible for educating our providers on documentation and coding. We base education on approved Coding Guidelines. Attachment 30-1 offers a sample of the best practice guidelines our Learning Facilitators use to discuss diagnosis coding.

We base an additional strategy that complements our enterprise-wide strategy on the work of our Provider Data Validation Audit (PDVA) team. The PDVA team conducts provider audits, identifies providers who need education on accurate and complete submission of claims and encounter data, and places these providers on a Coding Improvement Plan (CIP). We identify providers for a CIP if their encounter and claims submission scores fall below the benchmark goal of ninety percent (90%).

REAL-TIME EDUCATION AND FEEDBACK THROUGH ADVANCED CODE EDITOR
Additionally, we are developing, piloting, and testing a Humana-specific tool on Availity's Payer Space platform called Advanced Code Editor. This tool offers code edits and checks to validate complete and accurate submission of claims and encounter data submitted through Availity. The tool immediately identifies claims and encounters that are not accurate, notifying the provider in near real-time with rejections along with reasons for these rejections. One edit we recently implemented is the PCD-ICD-10-CM Primary Diagnosis Only (PDO). The PDO rule identifies certain Z codes and categories that may only be reported as the principal or first-listed diagnosis, except when there are multiple encounters on the same day and the medical records for the encounters are combined.

Humana has a list of additional edits scheduled for implementation after thorough testing to support accurate and complete submission of claim and encounter data from our providers, supporting Humana's complete and accurate submission of encounter data to AHCA. Examples

include edits to identify invalid modifier codes and inappropriate diagnosis combinations. This tool also offers education to our providers on their claims submission.

ATYPICAL PROVIDERS

Atypical providers are often small businesses that may have limited experience in claims billing, and may need more education and support to submit claims that include accurate and complete encounter data. Most atypical providers in Humana's network are LTC providers. Humana has established a special Provider Relations team to work closely with our LTC providers one-on-one, either in-person or over the phone, to review the reasons why the provider's claim was rejected and to provide step-by-step instructions on how to submit correct claims, including using correct procedure codes, and how to resubmit claims that have been rejected.

To support our atypical providers in their submission of complete and accurate claims and with the goal of achieving first pass success, we developed a direct data entry tool in Availity that guides these providers on all the key fields required to generate the 837 file and ensure complete submission of the claims and encounter data. While we initially built this platform on Humana.com, we have since moved it to our provider engagement portal, Availity, to streamline our providers' access to claims status, clinical information, guidance, and more.

SUB-CAPITATED PRIMARY CARE MEDICAL GROUPS

During contract negotiations with sub-capitated primary care medical groups, our Provider Contracting team reviews the contract requirements for monthly encounter data submissions with the provider and emphasizes the importance of submitting complete and accurate encounters. The onboarding training that our Provider Relations team conducts for all new sub-capitated providers and their associates includes a segment on the reasons for encounter rejections. We reinforce this information and provide updates on new encounter submission requirements in our refresher training. We also require that at least one (1) representative from each sub-capitated medical group take our online training program that covers encounter submission requirements and attest that he or she has completed the training.

The Provider Relations team targets outreach to sub-capitated primary care medical providers that repeatedly submit incomplete or inaccurate encounter data. They meet with the provider to help them identify the cause of the problem, which might be that the provider has started using a new vendor to prepare their encounters, and provide guidance on encounter submissions. The team documents the content of the meeting with the provider's associates and requires the provider to sign an acknowledgement that they have received the training.

SUBCONTRACTORS

Prior to executing a contract with a prospective subcontractor and conducting testing of the entity's ability to produce accurate and complete encounters, Humana meets one-on-one with the entity to walk through the encounter submission requirements in the Delegated Entity Companion Guide for Delegated Encounters, or "Companion Guide". Designed to ensure all data fields are populated and accurate, the Companion Guide offers guidance on the requirements of transactions and data submitted to Humana.

We require our subcontractors to submit their encounter data to our clearinghouses. The clearinghouses and our electronic claim and encounter editing platform, eHub, identifies encounters that do not include the key field combinations, have incorrect coding, or contain other encounter errors, and rejects them. A claim rejection is usually an effective incentive to

encourage our providers and subcontractors to take steps to meet our encounter data requirements.

Additionally, as part of the contracting process, we establish key measures and performance thresholds that reflect our contract with AHCA to ensure our subcontractors perform to the same expectations we are accountable for, thereby driving timely, accurate, and complete submission of claims and encounters. Humana meets with key subcontractors monthly to discuss performance across all functions, including claims and encounters. We also take the appropriate steps to educate our subcontractors during onboarding on encounter submissions. Attachment 30-2 includes our encounter education materials we develop and offer our providers to inform them on the importance of encounters and coding validation.

PHARMACIES
Humana Pharmacy Solutions (HPS) owns and manages our pharmacy network. We educate our pharmacists about the requirements for submitting a complete and accurate claim in our Pharmacy Manual and through published payer sheets. In addition, we require our pharmacists to complete a self-guided online training program that highlights the State's requirements for claims. These requirements include the elements needed for a complete and accurate encounter. HPS is an affiliate to Humana Medical Plan, Inc., sharing the same parent (Humana, Inc.).

NON-PARTICIPATING PROVIDERS
Humana does not mandate training of non-participating providers on encounter requirements. We direct non-participating providers to our non-secured provider portal at Humana.com to learn about Humana's claim processing and payment requirements. This portal includes detailed guidance about requirements for claims to pass our electronic edits. Providers can also speak directly with a Provider Customer Service associate to discuss their questions about claim and encounter requirements.

==========
3. The adequacy of the respondent's approach to ensuring that all providers, including sub-capitated providers and subcontractors, provide an amount or cost of the Medicaid service provided (including pharmacy paid amount). For pharmacy claims, this includes the adequacy of the respondent's approach to ensuring the amount or cost of the Medicaid service provided must be the amount that was actually paid to the pharmacy excluding any PBM or other administrative costs.
==========

To ensure all our providers, sub-capitated providers and subcontractors submit accurate and complete encounters, Humana has developed front-end edits to ensure we reject claims and encounters when the amount or cost of Medicaid service is not complete. We remit the rejection with an explanation of the reason for the rejection so the provider understands that they must resubmit the claim or encounter with this information for processing. The encounter submissions by Humana's subcontractors must clear these edits, beginning with the submission to our preferred clearinghouse, Availity, and the submission into our electronic platform, eHub. We reject claims and encounters with this missing field upfront.

We also use our Provider Bulletin and other communication mechanisms to educate our providers on the importance of complete submission of encounter and claims data.

SUBCONTRACTORS
Our Claims and Encounters Teams works with our Relationship Managers and subcontractors to support our subcontractors' understanding of complete claims and encounter submission. Our internal teams work together to share encounter data performance on completeness metrics and conduct re-education, as needed.

PHARMACIES
Humana manages its own pharmacy network and uses DST Pharmacy Solutions, a claims processing subcontractor, to handle the processing and payment of claims. We have configured DST's claim processing and adjudication software with the necessary edits to validate that the amount or cost of the Medicaid service provided by the pharmacy is the amount actually paid to the pharmacy and does not include other administrative costs. All pharmacy claims, regardless of the source, adjudicate through DST. The criteria and reviews that process through our clinical analysis apply to retail, specialty, and mail service. Since all claims coordinate through the same database, we are able to integrate and track all drug utilization review (DUR), deductible, and prior authorizations accordingly.

==========

4. The adequacy of the respondent's approach to educating and supporting providers who submit paper claims.

==========

SUPPORTING PROVIDERS WHO SUBMIT PAPER CLAIMS

Humana understands the administrative challenges that our smaller providers in particular face in submitting claims. Over the past three (3) years, we have worked with our providers to educate them on the complete and proper submission of clean paper claims. All providers, including those that submit paper claims, receive orientation training on the requirements for claims to pass our electronic claims edits. Humana works closely with providers that submit paper claims, and monitors their claim denial rates. Our Provider Relations teams reach out to those providers that bill by paper and have higher-than-average claims denials to hold one-on-one phone training sessions and consultations with them. The training includes instructions on how to correct a denied claim. For those providers that speak only Spanish, we have Spanish-speaking Provider Relations representatives to help them directly with understanding Humana's claim and encounter requirements.

Our Provider Customer Service Center maintains an important role in educating and supporting providers that submit paper claims. This is particularly true for small or atypical providers who are not comfortable with the claims process. Our Provider Customer Service Center associates have sufficient training and experience in answering provider questions about claims and encounters so that they can explain the complexities of the Humana claims processing and payment system in terms that providers can easily understand. We also thoroughly train them

on the soft skills that are important in communicating with a provider who may be angry or upset because of a rejected claim. If the provider does not speak English, we will offer the provider the opportunity to use the translation services of our interpretation and translation vendor, or possibly be transferred to one of our Call Center associates who speak Spanish.

SUPPORTING PROVIDERS TRANSITION FROM PAPER TO ELECTRONIC CLAIMS SUBMISSION

Humana has an enterprise-wide strategy to transition our providers to electronic claims submission. Since 2015, we have reduced paper claims submission from five percent (5%) to four percent (4%), and have transitioned six thousand (6,000) paper claims to electronic submission on a monthly average (when comparing our 2016 performance to our 2017 performance to date). Our dedicated eBusiness Consulting team maintains a targeted outreach strategy and engages with providers one-on-one to support their transition to electronic claims. The eBusiness Consulting team targets our providers that have had high volume of phone calls to our Provider Call Center, high volume of paper checks, and high paper claims and encounters. The team initially engages the providers with an email and follows up with a phone call. Providers who submit a high volume of claims via paper also receive in-person sessions. We provide information to all providers on weekly webinars, designed specifically for our Florida providers, hosted by the team to discuss the claims submission process and to ask any questions. This far in 2017, our eBusiness consulting team has held more than nine hundred (900) webinars and more than seventeen thousand (17,000) interactions with providers to date.

Additionally, with our transition to Availity, we have designed a similar direct data entry form on the provider portal, making information on the status of the claim and remittance information for all claims available in one centralized location. Provided at no cost to our providers, Availity simplifies the entry of claims data for our providers and supports the completeness and accuracy of claims and encounter data, helping us achieve contractual requirements. Another feature we have designed with Availity is the submission of supplemental information electronically for paper claims that have been rejected because of a lack of information. To reduce the communication time we often face with paper claims, we alert our providers of the missing information via mail and via the online provider engagement portal while offering an electronic means to submit supplemental information to reprocess the claim.

==========

5. The adequacy of the respondent's approach to encouraging providers, particularly sub-capitated providers, subcontractors, atypical providers, and non-participating providers to submit accurate, timely, and complete encounter data, including the type and frequency of activities and any incentives/penalties.

==========

SUB-CAPITATED PRIMARY CARE MEDICAL GROUPS

Our Medicaid Finance department reviews encounter detail data for our sub-capitated medical groups annually to validate accuracy of our capitation rates. We contact providers who do not submit complete encounter data to indicate the discrepancy between services rendered and capitation rate provided to identify whether quality improvements need to be in place, or if the provider's office needs additional education on encounter data submission.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana maintains strong oversight of our sub-capitated primary care medical groups. We meet with them on a routine basis and review reports to assess performance. We meet with our Primary Care Providers (PCPs) monthly and review several performance reports, including their encounter rate. Our Provider Relations representatives discuss the PCPs' encounter rates as compared with the county average to identify root causes for low encounter rate submissions. If a sub-capitated medical group's encounter error rate is high, our Provider Relations team works with the provider one-on-one to identify where education is needed and offer our expertise in fixing the error rate.

We determine capitation rates based on the encounter data submitted by our sub-capitated providers. When providers fail to submit complete and accurate encounter data in a timely fashion, their routinely assessed capitation rates will not reflect the actual cost of services they provide enrollees. To improve our validation of complete encounter submissions from our sub-capitated providers, we will conduct a more frequent review of encounter detail data and the capitation payments. Through this mechanism, we plan to track and trend quarterly claim and service counts as well as the average claims paid amount. The report will highlight significant variances between capitation payments and encounters.

Additionally, our sub-capitated providers enroll in either our Quality Capitation Bonus program or the MMA Physician Incentive Plan (MPIP), in which providers receive their bonus or award in each of these programs based on submitted encounters. These programs naturally incentivize providers to submit complete and accurate encounter data so they qualify for the bonus or reward designed in these programs. To this end, when they do not submit encounter data elements, the provider will not receive the bonus they have worked toward. Continuously, we educate and engage with our sub-capitated providers to ensure they understand that it is in their best interest to ensure completeness, accuracy, and timeliness of encounter data submission. When providers consistently fail to submit encounter data in a complete, accurate, and timely fashion, Humana conducts enrollment freezes and imposes liquidated damages.

SUBCONTRACTORS

Humana maintains oversight of subcontractor encounter accuracy, completeness, and timeliness metrics. We have developed a new position to ensure local oversight of our subcontracted functions. The Vendor Performance Leader will be responsible for monitoring performance of all subcontractors in their performance on the Florida Medicaid contract, including performance on data submitted to Humana. The Provider Relations Network Leadership supports our Vendor Oversight team. Relationship Managers work with our subcontractors on a regular basis to address areas of opportunity.

The Vendor Performance Leader reviews vendor performance on encounter data for completeness, accuracy, and timeliness of submission, and shares these reports with our subcontractors during Joint Operating Committee (JOC) meetings, and internal reporting to the Quality Improvement Committee (QIC). We put in place Corrective Action Plans (CAPs) where performance falls under the expected Service Level Agreement (SLA).

We require our subcontractors to submit their encounter data to one (1) of our two (2) preferred clearinghouses, Availity or ZirMed. These clearinghouses, together with our electronic claims receiving platform, eHub, identify encounters that do not include the necessary key field combinations, have incorrect coding, or contain other encounter errors, and reject them upfront.

As described earlier, we establish key measures and performance thresholds with our subcontractors to reflect our contract with AHCA as a strategy to ensure our subcontractors perform to the same expectations to which we are accountable. While a rejection is usually an effective incentive to encourage our subcontractors to implement corrective steps to meet our encounter requirements, we also apply any penalty received because of the performance of our subcontractor's data downstream to that entity.

ATYPICAL PROVIDERS
Our Provider Relations team works closely with atypical providers to ensure that they understand our requirements for claims payment and complete encounter data. Humana's strategy to work with our atypical providers focuses on engaging with our Spanish-speaking providers and targeted education for our atypical providers to support re-education on problematic areas related to submission of encounter data.

Because some of our atypical providers in South Florida speak only Spanish, we have assigned three (3) Spanish-speaking Provider Relations representatives in that region to help these providers submit accurate, correct, and complete claims and encounter data. Recently, Humana held a special in-person training session in Spanish on claims requirements for atypical providers in South Florida.

Our eBusiness Consulting team conducts targeted training, focused on our atypical providers, to identify our providers who have had high call volumes, high error rates, and low electronic submissions. The team then conducts email and telephonic outreach to work with these atypical providers to address these issues.

NON-PARTICIPATING PROVIDERS
Humana encourages non-participating providers to submit accurate, timely, and complete encounter data by making our claims submission requirements publicly available through our non-secure provider portal website. Our claims processing system includes front-line edits to ensure accurate and complete submission of data to create an encounter. We reject claims upfront when all the required data fields are incomplete or inaccurate. In addition, our Provider Customer Services associates are also available to help non-participating providers understand our encounter submission requirements.

==========
6. The adequacy of the respondent's description of how it will connect with providers to revise encounter submissions in a timely manner.
==========

As described throughout this response, we have multiple teams that engage with our providers, including sub-capitated, subcontractors, atypical, and non-participating providers. This is done to educate them about the importance of accurate, complete, and timely submission of encounters. To ensure timely submission of revised encounter data, we have developed a process and defined roles for our associates to support this function.

When Humana receives 835 encounter retections from the State, our Edifecs system captures all retections and centralizes the information to create actionable reports to resolve the encounter issue. We categorize errors into three (3) queues and disseminate to the appropriate resources for timely resolution: errors that can be resolved internally are handled by encounters

teams, errors that require outreach to providers for resolution are directed to Provider Realtions representatives, and errors that require resolution by subcontractors are overseen by Relationship Managers and Delegation Compliance.

We communicate summary reports with our Florida Medicaid Corporate Governance Committee and our Local Joint Operating Committee to identify additional opportunities. Whenever a provider submits an inaccurate or incomplete encounter to Humana, the provider receives a letter from us stating that we have rejected the encounter because of missing information. The letter specifies which information is missing and directs the provider to revise and resubmit. We deny any encounters submitted past the timely filing deadline.

==========
7. The adequacy of the respondent's approach to work with providers to comply with correct coding.
==========

Humana works with providers to comply with correct coding in several ways. First, CAS has correct coding edits to identify improper coding and will deny claims. Remittance files made available to providers via Availity explain the specific coding error that resulted in the denial, offering education to the provider. Our Provider Relations team also receives a report of errors, including coding errors, to inform their education strategy.

Humana has a proactive approach to provider outreach on encounter coding. Humana's Provider Reporting, Communication, and Education department develops various provider communications to promote accurate and consistent coding. This includes condition-specific coding guidelines and industry best practice materials, which we share with providers and office associates. We source educational materials from organizations such as the Centers for Medicare and Medicaid Services (CMS), American Heart Association, Mayo Clinic, and ICD-10-CM Official Guidelines for Coding and Reporting. Examples of condition-specific coding guidelines include depression and adult wellness visit. We may deliver these materials electronically as well as in person using our local Provider Relations representatives or peer-to-peer, as appropriate, by the local market Medicaid Medical Director.

Humana has developed a coding improvement process in which we give providers plans to guide them on commonly missed data points including diagnosis codes and coding specificity. The coding improvement plan also suggests best practices to improve coding for specific conditions. Our Provider Relations team reviews the plan and addresses specific coding issues. Provider Relations associates also share the State's clinical coding guidelines with providers and encourage them to follow the guidelines. In our provider newsletter and provider updates, we include recent releases from the State on coding issues and discuss coding errors we have seen in claim submissions. In addition, our coding experts provide detailed physician-based training on correct coding, and we offer peer-to-peer review with physicians on coding issues.

==========
8. The adequacy of the respondent's approach to ensure that all encounters are included in submissions.
==========

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana uses a customized version of the Edifecs Transaction Management platform to execute, manage, and monitor encounter submissions with our contracted State agencies. Edifecs is the only subcontractor with a single solution for submission, tracking, and error correction that allows Humana to manage our data internally.

Humana has an encounter reconciliation program to ensure we receive all claims and codes that providers submit accurately and timely. We measure this by completing a reconciliation process between the provider and Humana. The reconciliation process summarizes claim and code data processed, isolates data not received by Humana, and identifies any gaps in the data. Humana and the provider collaborate on the results of the process, identify gaps in the data, and the provider resubmits as needed. Humana and the provider will remedy any identified issues for accurate and timely submissions in support of future processing.

Since the 837 has to go through a series of edits from the provider to the clearinghouse to Humana, there is the possibility of dropped or truncated claims within various provider practice management systems. The encounter reconciliation program provides claim- and code-level analysis to determine averages and benchmarking based on overall claim performance. Furthermore, we request a collection of claims data for a specified period of time, a "shadow file," from our providers and Management Service Organization. We use the shadow file to measure accuracy of submission of all provider claims submitted to, and received by, Humana. The reconciliation model compares shadow file data to Humana's received data to determine potential data gaps. There is matching logic behind the reconciliation model to determine a match or a non-match. During the process, Humana looks at specific key data fields, including provider tax identification, date of service, enrollee identification, diagnosis codes, Current Procedural Terminology/Healthcare Common Procedure Coding System codes, and claim identification.

Additionally, we reconcile at a claim-, claim line-, and diagnosis code-level. We share results of the reconciliation process with the provider and if we identify any gaps, Humana and the provider work together to locate and resubmit any missing claims. We also work together to identify and address any system issues among the provider, the clearinghouse, and Humana. The summary report we share with the healthcare provider includes the date of service, shadow claims, matching claims, claim outage, claim outage percentage, shadow diagnosis codes, matching diagnosis codes, outlier diagnosis codes, and percentage.

Evaluation Criteria:

1. The adequacy of the respondent's approach to ensure that all network providers, including subcapitated providers, are known to the Florida Medicaid Management Information System (FMMIS) for the purposes of encounter data submission.

2. The adequacy of the respondent's approach to educating all providers about the importance of key field combinations in accurately identifying the service/s provided, the importance of populating all key fields, and the importance of consistency in coding across all records, providers, and provider types on encounter data submissions.

3. The adequacy of the respondent's approach to ensuring that all providers, including subcapitated providers and subcontractors, provide an amount or cost of the Medicaid service provided (including pharmacy paid amount). For pharmacy claims, this includes

the adequacy of the respondent's approach to ensuring the amount or cost of the Medicaid service provided must be the amount that was actually paid to the pharmacy excluding any PBM or other administrative costs.

4. The adequacy of the respondent's approach to educating and supporting providers who submit paper claims.

5. The adequacy of the respondent's approach to encouraging providers, particularly subcapitated providers, subcontractors, atypical providers, and non-participating providers to submit accurate, timely, and complete encounter data, including the type and frequency of activities and any incentives/penalties.

6. The adequacy of the respondent's description of how it will connect with providers to revise encounter submissions in a timely manner.

7. The adequacy of the respondent's approach to work with providers to comply with correct coding.

8. The adequacy of the respondent's approach to ensure that all encounters are included in submissions.

Score: This section is worth a maximum of 40 raw points with each of the above components being worth a maximum of 5 points each.

SRC# 31 – Fraud and Abuse/Compliance Office (Statewide):

The respondent shall describe its compliance program including the compliance officer's level of authority and reporting relationships. The respondent shall describe its experience in identifying subcontractor fraud and internal fraud and abuse in managed care programs. The respondent shall include a résumé or curriculum vitae for the compliance officer. The respondent shall also include an organizational chart that specifies which staff are involved in compliance, along with staff levels of authority.

Response:

"Our dream is to help people achieve lifelong well-being. Part of realizing that dream is a steadfast commitment to act with integrity and maintain the highest ethical standards. The values we share and a set of clear ethical principles help us make good decisions, allowing us to deliver a perfect experience for everyone we do business with." – Greg Catron, Humana's Chief Compliance Officer

Humana is fully committed to a culture of compliance that shapes every aspect of how we operate. Our Chief Compliance Officer, associates, and corporate advisors, along with our Florida compliance officers, exercise active oversight and informed judgment on behalf of the organization, and our oversight program ensures that every subcontractor we work with also adheres to our strict compliance standards. Our culture of compliance begins with our national leadership and (as described in our Compliance Plan) our overall compliance and accountability-centered mindset extends to associates, enrollees, shareholders, healthcare providers, subcontracted business partners, the community, and government agencies.

Best Documentation Practices for Diagnosis Coding

The "Evaluation and Management Services Guide" issued by the Department of Health and Human Services and the Centers for Medicare & Medicaid Services (CMS) advises:

"Clear and concise medical record documentation is critical to providing patients with quality care and is required in order for providers to receive accurate and timely payment for furnished services. Medical records chronologically report the care a patient received and are used to record pertinent facts, findings and observations about the patient's health history. Medical record documentation assists physicians and other health care professionals in evaluating and planning the patient's immediate treatment and monitoring the patient's health care over time."

Medical record documentation of patient diagnoses that is clear, concise and described to the highest level of specificity facilitates:

- Quality patient care with better outcomes
- Accurate diagnosis code assignment
- Appropriate and timely health care provider payment for furnished services

Key points

Legibility

The entire medical record must be legible. Remember this basic rule: If it is not documented, it was not done. Likewise, if it is not legible, it cannot be read. If it cannot be read, it cannot be proven that the diagnoses are supported and appropriate medical services were performed. An illegible record is of no use in assigning diagnosis codes or determining the medical services performed.

Patient demographics

Each page of the medical record should include, at a minimum, the date of service and the patient's name and date of birth. Also include the patient identification number, if applicable.

Page numbering

Each page for each date of service should be numbered.

Best practice

- *Page 1 of 3*
- *Page 2 of 3*
- *Page 3 of 3*

If pages are numbered in this way, it will be clear to an objective reviewer whether the record for a particular date is complete. If the printed pages are inadvertently separated, page numbers allow the medical record to be reassembled in proper order.

Health care provider signature and credentials

- Only authorized personnel may document in the medical record, and each person must be clearly identified with full name and credentials.
- All entries must be signed and dated in a timely manner by the health care provider who performed the service. Signatures should be identified by a printed, legible name and credentials.
- Signature stamps are not accepted by CMS.
- Electronic signatures must be authenticated by the health care provider. For a signature to be valid, the following criteria must be met:
    - Services provided or ordered must be authenticated by the ordering practitioner.
    - Signatures are to be handwritten or electronic (stamped signatures are not acceptable).
    - Signatures should be legible.

  Reference: CMS Medicare Program Integrity Manual (Publication [Pub.] 100-08), Chapter 3, Section 3.3.2.4

Abbreviations and acronyms

- Limit the use of abbreviations and acronyms, or avoid them altogether.
- Use only industry-standard abbreviations and acronyms.
- Realize some standard abbreviations and acronyms have multiple meanings. The meaning of the abbreviation or acronym often can be determined based on context, but this is not always true.

Best practice

- *The initial notation of a diagnosis should be spelled out in full with the abbreviation in parentheses, such as "myocardial infarction (MI)" or "rheumatoid arthritis (RA)."*
- *Subsequent mention of the condition can be made using the abbreviation.*
- *The diagnosis should again be spelled out in full in the final impression or plan.*

Timelines and dates

Specific dates and timelines provide important information and can affect diagnosis code assignment (see second example below regarding myocardial infarction).

- Post-hospitalization or post-operative follow-up office visits:

  Vague: "Patient was recently discharged from the hospital."

  Vague: "Patient is here for hospital follow-up."

  Specific: "Patient was discharged from the hospital on 1/15/20xx after admission for ____."

  Specific: "Patient was discharged from the hospital two weeks ago after admission for _____."

  Vague: "Post-op visit for recent splenectomy."

  Specific: "Patient is here for first post-op visit for splenectomy performed on 3/25/20xx."

- "Recent" myocardial infarction (MI) is a vague description that does not specify whether the patient experienced an acute myocardial infarction within the last four weeks (coded as acute MI) versus a myocardial infarction that is older than four weeks with no current symptoms (coded as historical MI).

  Vague: "Follow-up office visit for recent myocardial infarction."

  Specific: "Patient was discharged from ABC Medical Center on 2/25/20xx after inpatient admission for acute myocardial infarction."

  Specific: "Patient was discharged from ABC Medical Center one week ago after inpatient admission for acute myocardial infarction."

Historical versus current

- Do not use the descriptor "history of" to describe a current or chronic condition that is still present, active or ongoing.
- Do not use the descriptor "history of" to describe a current condition that is in remission. Describe the condition as "in remission."
- Do not document a condition as current if it is historical only. For example: A patient with a history of prostate cancer that has been eradicated in the past presents to the office for an evaluation, examination and prostate-specific antigen (PSA) lab test to monitor for recurrence. The assessment section should not state "prostate cancer," but rather "history of prostate cancer." The related plan should state, "Will continue to monitor PSA every six months to check for prostate cancer recurrence."

Consistency

Use caution when using record templates or electronic medical records (EMR) that might introduce conflicting or contradictory information. Many EMR systems default to "normal" values that may conflict with previous "abnormal" entries.

Examples of conflicting or contradictory documentation include:

- The final assessment states right hemiparesis due to prior cerebrovascular accident, but the neurologic review of systems (ROS) and neurologic examination are noted as completely normal.
- The chief complaint states the patient presents for evaluation of chest pain, and the final assessment states acute angina. However, the review of systems states, "Patient denies any episodes of chest pain."
- The office notes refer to the patient as both "he" and "she," creating a consistency issue.

Specificity

Describe each condition to the highest level of specificity, such as:

- with or without exacerbation
- with or without complications
- acute versus chronic
- severity – mild, moderate, severe
- stages or types
- controlled or uncontrolled
- underlying cause
- location or site, including laterality, specific site within a body part (upper outer quadrant, lower inner quadrant, etc.), distal, proximal, etc.

Examples:

Chronic kidney disease (CKD) – Specify stage I-V or end-stage renal disease (ESRD).

- Even if lab values and/or the glomerular filtration rate (GFR) are documented, the record must clearly specify the stage of CKD. Medical coders are not allowed to assign a stage of CKD based on the documented GFR.

Diabetes mellitus (DM) – Specify:

- Type (Type 1, Type 2, secondary to – specify causal condition)
- Status of diabetes control, as in "well controlled" or "uncontrolled due to hyperglycemia" (ICD-10-CM considers "uncontrolled" to be a diabetic complication and requires the physician to specify "uncontrolled" as either hyperglycemia or hypoglycemia)
- With or without complications or manifestations (fully describe each complication or manifestation)

If there are complications or manifestations of diabetes mellitus, best practice is to clearly and directly link diabetes to those complications or manifestations using terms such as "with," "due to," "secondary to," "associated with" and "related to." Avoid the use of punctuation marks (e.g., slashes and commas) to separate diabetes and its manifestations, as they may not clearly indicate a causal relationship.

Best practice

- *Document each complication of diabetes with the descriptor "diabetic," as in "diabetes mellitus Type 2, well controlled, with diabetic neuropathy."*

Confirmed versus uncertain

Avoid use of terms that imply uncertainty (such as "probable," "apparently," "likely" or "consistent with") to describe diagnoses or conditions that are confirmed. Always document the signs and symptoms in the absence of a confirmed diagnosis.

Status conditions

Document status conditions when applicable (e.g., ostomy status, dialysis status, amputation status, major organ transplant, etc.).

Final diagnostic statement

This is the section of the record where the health care provider states the final assessment or final impression of the patient's current diagnoses based on all other information gathered as the patient was evaluated on an individual date of service. The final diagnostic statement should include:

- All conditions or diagnoses that impacted the patient's care on this date
- All conditions or diagnoses evaluated and managed on this date
- All comorbid or coexisting conditions that impacted patient care, treatment or management on this date
- Status of each condition that currently exists (not historical), such as improved, stable, worsening, in remission, etc.

Supporting documentation

Keep in mind that the record should provide supporting documentation for each condition or diagnosis listed. For example:

- Related signs and symptoms and physical exam findings should be listed
- Medication lists should document the drug name, dosage with times and/or frequency and the condition(s) for which the drug has been prescribed
- Results of diagnostic testing should be documented

For chronic conditions that are being followed by a different health care provider, supporting documentation would be a simple notation to that effect. For example, "Chronic obstructive pulmonary disease (COPD), under treatment by pulmonologist."

Treatment plan

Your current plan of treatment for each diagnosis should be clearly documented and specific. Examples should include dietary recommendations, medication changes, scheduling of diagnostic testing, specific patient education or counseling provided, continued monitoring and other factors that affect diagnosis. If referrals are made or consultations requested, the office note should indicate to whom or where the referral or consultation is made or from whom consultation advice is requested. Document when it is planned to see the patient again, even if on an as-needed basis only.

A final note

Industry-standard diagnosis coding guidelines require medical coders to apply a strict literal interpretation to the health care provider's medical record documentation. Coders are not allowed to "connect the dots," make assumptions or presume to know the health care provider's intent. Coders cannot apply a clinical interpretation to information within the record, such as diagnostic test results or physical exam findings. Accurate diagnosis code assignment is dependent on the health care provider clearly describing each medical diagnosis to the highest level of specificity.

Humana's Encounter Series

The Basics of Encounters

As we move closer to the proposed ICD-10 compliance date of Oct. 1, 2015, one of Humana's top priorities is to minimize disruption to our provider groups for claims delegation and to reduce potential financial impact to revenue streams. We are committed to continue delivering accurate and timely claims payment and processing of submitted encounters.

We want providers to know why submitting accurate, complete and timely claims and encounter data is critical to financial and operational continuity for them and Humana.

What is an encounter?

- An encounter is a unique type of claim.
- Encounter data are used to determine the member's health status.
- Encounter data are submitted by Humana's provider groups.

What is the difference between a claim and an encounter?

- Encounter data contain the same provider, member, service and diagnosis information that a claim does.
- A claim generates a payment or a denial; an encounter does not.
- Encounters are the responsibility of the provider under the capitation agreement.

Why is an encounter so critical?

- Encounters are used for HEDIS® (Healthcare Effectiveness Data & Information) reporting as well as being a primary driver for risk adjustment scoring.
- Encounters must contain **all diagnosis codes** for which the member was treated and/or monitored during his or her visit.
- Encounters enable accurate and complete reporting of risk adjustment data to the Centers for Medicare & Medicaid Services (CMS) for reimbursement.

Important Risk Information

Risk adjustment applies to every Medicare Advantage (MA) plan member.

A member's health status is determined through diagnosis codes. These codes are tied to hierarchical condition categories (HCC) that determine a member's risk score, and risk scores directly impact CMS reimbursement.

If encounters do not describe a member's condition accurately, there may be a negative impact to a member's risk score. Risk scores are higher for members with greater levels of illness. If diagnosis codes are missing on a member's encounter, then risk score assigned to the member may be understated.

These materials are not designed or intended to provide medical, accounting, business, financial, investment, legal, tax or other professional advice; nor should the materials be used as a basis for any decision or action that may affect a particular business. If professional advice is needed, the services of an appropriate professional advisor should be sought. © 2014 Humana Inc.

Humana.

Humana.com

What is a hierarchical condition category (HCC)?

You may be wondering how HCCs influence a member's risk score. HCCs represent categories of health conditions, which can be chronic and acute. Diagnosis codes are mapped to HCCs for conditions, such as diabetes or congestive heart failure. It also is important to note that a member can have multiple HCCs. Each HCC is assigned a value that contributes to a member's risk score. CMS controls the mapping of these diagnosis codes to the appropriate HCC.

What is the encounter flow process?

The flow of data from physician to Humana contains several intermediaries that perform key functions.

Type	Physician	Practice Management System (PMS)	Intermediary / Billing Service	Provider Group	Billing Service/ Clearinghouse	Clearinghouse
Description	Medical practitioner that performs the service on the claim and ensures that all diagnosis codes are on the claim	Management software used to schedule, administer claims and to code ICD codes for member's visit (may also generate 837s)	Service/ company that generates the 837 or performs billing related functions on behalf of the physician	Company that performs select administrative tasks on behalf of Humana, such as claim adjudication	Service/ company that generates the initial validation of encounter file; may also perform billing-related functions on behalf of the provider group	Service/ company that performs front-end validation of encounter file and transmits responses back to submitter and sends encounter to Humana
Example	Any contracted Physician	Cerner	Emdeon	IPA/MSO/MG/TPA	Transunion	Availity

Provider groups submit encounters to document the treatments provided to members. Unlike fee-for service (FFS) claims, encounters do not generate a payment when processed. The diagnosis and procedure codes on the encounter support Humana managed care programs, confirm that gaps in quality measures have been closed and provide data to calculate Medicare risk scores, which affect capitation rates, member premiums and plan benefits.

The term delegate represents entities that may be referred to as claims delegate or provider group, as well as delivery system (DS), independent practice association (IPA), management service organization (MSO), medical groups (MG), physician hospital organization (PHO), third-party administrator (TPA) and other entities to which Humana delegates its claim adjudication function.

Contact Information

The ICD-10 deadline is right around the corner; therefore, providers need to be prepared. Humana encourages providers to start testing and measuring associated risks that may impact their practices.

For more information about encounters or ICD-10, please email IPAICD10Inquiries@humana.com.

the adequacy of the respondent's approach to ensuring the amount or cost of the Medicaid service provided must be the amount that was actually paid to the pharmacy excluding any PBM or other administrative costs.

4. The adequacy of the respondent's approach to educating and supporting providers who submit paper claims.

5. The adequacy of the respondent's approach to encouraging providers, particularly subcapitated providers, subcontractors, atypical providers, and non-participating providers to submit accurate, timely, and complete encounter data, including the type and frequency of activities and any incentives/penalties.

6. The adequacy of the respondent's description of how it will connect with providers to revise encounter submissions in a timely manner.

7. The adequacy of the respondent's approach to work with providers to comply with correct coding.

8. The adequacy of the respondent's approach to ensure that all encounters are included in submissions.

Score: This section is worth a maximum of 40 raw points with each of the above components being worth a maximum of 5 points each.

SRC# 31 – Fraud and Abuse/Compliance Office (Statewide):

The respondent shall describe its compliance program including the compliance officer's level of authority and reporting relationships. The respondent shall describe its experience in identifying subcontractor fraud and internal fraud and abuse in managed care programs. The respondent shall include a résumé or curriculum vitae for the compliance officer. The respondent shall also include an organizational chart that specifies which staff are involved in compliance, along with staff levels of authority.

Response:

"Our dream is to help people achieve lifelong well-being. Part of realizing that dream is a steadfast commitment to act with integrity and maintain the highest ethical standards. The values we share and a set of clear ethical principles help us make good decisions, allowing us to deliver a perfect experience for everyone we do business with." – Greg Catron, Humana's Chief Compliance Officer

Humana is fully committed to a culture of compliance that shapes every aspect of how we operate. Our Chief Compliance Officer, associates, and corporate advisors, along with our Florida compliance officers, exercise active oversight and informed judgment on behalf of the organization, and our oversight program ensures that every subcontractor we work with also adheres to our strict compliance standards. Our culture of compliance begins with our national leadership and (as described in our Compliance Plan) our overall compliance and accountability-centered mindset extends to associates, enrollees, shareholders, healthcare providers, subcontracted business partners, the community, and government agencies.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Incorporating the Office of Inspector General's (OIG) guidance, we have built our Compliance Plan on a strong code of conduct for our associates and contractors across all lines of business, and have structured it to adhere to all relevant federal and State requirements. We are committed to compliance with the contractual and regulatory requirements of our programs. The following details our compliance efforts, compliance structure, and experience in identifying and mitigating subcontractor fraud, and internal fraud, waste and abuse.

Our Compliance Plan is comprised of seven (7) key elements:

1. Written Policies, Procedures and Standards of Conduct
2. A Corporate Commitment to Oversight: Compliance Officers and Compliance Committee
3. Effective Training and Education for all Employees and Contractors
4. Effective Lines of Communication
5. Well-Publicized Disciplinary Standards and Strong Enforcement Mechanisms
6. Routine Monitoring and Auditing
7. Corrective Action: Procedures and System for Prompt Response to Compliance Issues

1. WRITTEN POLICIES, PROCEDURES AND STANDARDS OF CONDUCT
Humana establishes standards of conduct within Ethics Every Day, our comprehensive ethics and compliance training program. Ethics Every Day is supported by an extensive policy library with written guidelines which:

- Provide direction as to how to identify, manage, and report potential issues

- Describe how potential issues are investigated and resolved by the organization

- Include a policy of non-intimidation and no-retaliation for good-faith participation in the compliance program. This includes, but is not limited to, reporting potential issues, investigating issues, conducting self-evaluations, audits and remedial actions, and reporting to appropriate regulatory officials.

We are committed to complying with all federal or state laws, rules, and regulations associated with the privacy of protected health, financial, and personal information described below and in detail in our Compliance Plan. Since regulatory and other requirements change over time, we review compliance policies annually and revise policies as appropriate. The Policy Governance Committee, chaired by the Privacy Officer (who reports to the Chief Compliance Officer), gives oversight for this annual review process.

Finally, we conduct an annual assessment to evaluate the overall performance and effectiveness of the Compliance Plan, introducing modifications to the Plan as deemed necessary or appropriate per the assessment results.

2. A CORPORATE COMMITMENT TO OVERSIGHT: COMPLIANCE OFFICERS AND COMPLIANCE COMMITTEE
Humana's Board of Directors is ultimately responsible for our compliance with all state and federal requirements, and with ensuring the effectiveness of the compliance program. Our Board of Directors has delegated compliance program oversight to the Audit Committee of the

Board, which oversees our Compliance Plan. Both the Board of Directors and the Audit Committee receive quarterly reports about compliance matters throughout the organization.
We have an established Chief Compliance Officer who, in recognition of the importance of this position, also serves as a Vice President of Humana, Inc. The Chief Compliance Officer works in conjunction with several other key senior executive level positions, including our Medicare and Medicaid Compliance Officer and Chief Risk Officer. The Medicare and Medicaid Compliance Officer reports quarterly to the Corporate Compliance Committee and Audit Committee.

We have also appointed a highly experienced Compliance Officer (CO) at the Florida Medicaid market level who oversees the Florida implementation of our Compliance Plan, ensures compliance with federal and State regulations, and acts as a point of contact for our Florida Medicaid compliance operations. This CO has deep expertise in with the Florida Medicaid program, both in Long-term Care (LTC) and Managed Medical Assistance (MMA). In addition, the CO is also able to use additional associates, with significant regulatory compliance experience, in addressing our market-directed compliance efforts. The Florida CO has direct access to our Chief Executive Officer and Board of Directors, submits quarterly Florida-market specific reports to the Audit Committee, and receives steady support from our broader national compliance structure.

3. EFFECTIVE TRAINING AND EDUCATION FOR ALL EMPLOYEES AND CONTRACTORS
Effective compliance and Fraud Waste and Abuse (FWA) training is a cornerstone of Humana's Compliance Plan, and is administered in a curriculum called Ethics and Compliance Training. This required training is completed annually by all Humana associates, including the Chief Executive Officer, all senior leaders, the Board of Directors, and contingent labor, including all subcontractors. Additionally, our new associates, senior leaders, and members of the Board of Directors (including temporary workers) are required to complete Ethics and Compliance Training within thirty (30) days of hire or start date and are required to complete the "Ethics Every Day" training annually thereafter. Employees of entities we acquire are required to complete the Ethics and Compliance Training within sixty (60) days of acquisition close date, and complete the "Ethics Every Day" training annually thereafter.

4. EFFECTIVE LINES OF COMMUNICATION
As mentioned above, the Corporate Compliance Committee, which includes the Chief Executive Officer (CEO), governs the Corporate Compliance Program, updating the Audit Committee of the Board of Directors when necessary. Senior management is fully engaged in the compliance program, and Humana's CEO stands behind the Chief Compliance Officer to ensure that all necessary resources and support are available to operate an effective program. The CEO participates in, and is a member of, the Corporate Compliance Committee, which also receives quarterly reports from the Medicare and Medicaid Compliance Officer, along with the Audit Committee.

Humana has an "open door" policy when it comes to reporting FWA. Any Humana associate can safely report concerns of compliance. Our compliance hotline is well-publicized and prominently featured on our website and numerous other materials. Our website also includes a link for anyone to report any suspected FWA. All reports can be made confidentially via the phone, website, or email, which is well-publicized during our required training. Market-based compliance officers, market-based leadership, and associates who oversee subcontractors

have direct lines of communication with the CEO and the Audit Committee of the Board of Directors in a culture that is free of fear of retaliation.

5. WELL-PUBLICIZED DISCIPLINARY STANDARDS AND STRONG ENFORCEMENT MECHANISMS

To support our compliance culture and the expectation that all associates report any compliance issue or unethical behavior, we maintain well-publicized disciplinary standards, described in our internal policies, and a comprehensive guide for ethical conduct, Ethics Every Day. Reported violations are thoroughly investigated and resolved. Violations of law or company policy or behavior that is not aligned with our standards of ethics and integrity may constitute critical offenses, justifying immediate disciplinary action up to, and including, termination of employment. Subcontractors must abide by the same policies. Disciplinary action for any violation(s) committed by subcontractors could include, but is not limited to, mandatory (re)training, corrective action plans, or contract termination.

6. ROUTINE MONITORING AND AUDITING

Humana has many internal departments engaged in the identification of compliance risks. Monitoring occurs through the effort of the following teams:

- Human Resources
- The Ethics Office
- The Privacy Office
- Regulatory Compliance
- Delegation Compliance
- First Tier, Downstream, and Related Entities (FDR) Compliance
- The Internal Audit Consulting Group
- The Enterprise Information Protection team
- The Special Investigations Unit (SIU)
- Provider Payment Integrity (PPI)
- Risk Adjustment Integrity Unit (RAIU)
- Pharmacy department
- Insurance Risk Management

We also engage various independent review organizations, including nationally-recognized experts such as Deloitte Consulting, LLP, to assist with compliance risk identification. Each of the departments listed above has subject matter expertise to monitor and assess adequate control systems and risks associated with ongoing and one-time processes. This activity ensures that reporting mechanisms are in place, fully functional, and that serious deficiencies are reported to the appropriate authorities.

Compliance events are communicated to the Compliance Officers, reviewed by appropriate leadership, and communicated to senior management on a monthly basis through the Integrated Compliance Scorecard and our compliance dashboard, which are both discussed in detail below. When appropriate, the Enterprise Compliance team voluntarily self-reports identified violations to government agencies.

7. CORRECTIVE ACTION: PROCEDURES AND SYSTEMS FOR PROMPT RESPONSE TO COMPLIANCE ISSUES

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana has procedures and systems in place for responding to compliance issues in managed care programs as they are raised, both with respect to potential internal fraud and abuse as well as with identifying subcontractor fraud. We utilize a continuous improvement mindset implemented through our Enterprise Solution Point (ESP) system, which is an enterprise-wide tool for improving the management processes, risk, controls, and compliance. This integrated solution begins with policies and procedures, coupled with an audit and assessment framework, to continuously improve the management process as efficiently as possible. To that end, we conduct timely investigations of potential compliance problems identified in the course of self-evaluations and audits. These problems are corrected promptly and thoroughly to reduce the potential for recurrence and to ensure ongoing compliance with state and federal requirements for all product offerings. We have also developed policies and procedures to facilitate timely and reasonable inquiry into potential fraud or misconduct. We voluntarily self-report identified instances of fraud or misconduct to the appropriate regulatory body internal-to-Humana, based on the associated line of business, and all associates are expected to ensure policies are consistently followed, regardless of operational needs, financial concerns, level or degree of influence, or other business factors.

ONGOING PARTNERSHIP WITH AHCA

Humana considers one of our biggest successes related to compliance to be our strong partnership with Agency for Health Care Administration (AHCA) and its other local partners. As an example, several years ago when AHCA Medicaid Program Integrity (MPI) suggested holding quarterly meetings outside of the AHCA offices at plan locales, we offered to host the first meeting of all the plans. Similarly, when AHCA sought input to perfect its own audit tool and process, we dedicated time to ensure that we assisted AHCA by meeting with them and providing input about our auditing process and tool used in recognition of this partnership. This ongoing successful partnership with AHCA is a critical component to the success of our compliance program in Florida.

==========

1. The extent to which the respondent's compliance program complies with all State and federal requirements.

==========

HUMANA'S CORPORATE-LOCAL APPROACH TO PROGRAM COMPLIANCE

Humana's efforts to ensure our compliance program complies with all current state and federal requirements are multi-level and comprehensive. On the corporate enterprise level, Humana's Chief Compliance Officer (CCO) oversees numerous associates charged with ensuring our associates and contractors comply with Federal laws, regulations, policies, and guidance. We are also actively involved with multiple national anti-fraud organizations including, but not limited to, the National Health Care Anti-Fraud Association (NHCAA) and the Special Investigations Unit Anti-Fraud Coalition (SIUAC). We are also founding members of an innovative public-private partnership, the Healthcare Fraud Prevention Partnership, formed by the Department of Health and Human Services (HHS) following passage of the Affordable Care Act (ACA). These partnerships, coupled with participation in numerous industry conferences, have helped us confirm our compliance with current Federal requirements and allow us to stay ahead of

inappropriate or illegal trends and schemes as they are emerging. We ensure the knowledge we learn from our partners is incorporated into our day-to-day operations, and distributed to our associates nationally.

In Florida, we have been an active partner with AHCA to prevent and detect fraud, waste and abuse. We have built upon our broad and longstanding experience operating as a Comprehensive Plan in Florida Medicaid to appoint a CO and additional experienced compliance associates. Our CO and Florida compliance associates lead our compliance program integrity efforts with the assistance from our SIU and PPI units. Similar to our federal activities, our Florida associates participate actively in State and local workgroups, calls, and discussions, including quarterly meetings and calls with AHCA and Florida anti-fraud task forces. This participation, along with the expertise of our Florida CO and compliance associates, ensures we remain current with Florida laws and regulations and AHCA's policies and requirements.

ENSURING COMPLIANCE WITH STATE AND FEDERAL REQUIREMENTS
Humana's compliance endeavors are described in detail in our Compliance Plan, which includes a detailed description of the laws and regulations that apply to our operations including policies related to gifts and gratuities to government employees and conflicts of interest. Examples of the federal laws incorporated into our Compliance Plan include:

- The Medicaid Act, 42 U.S.C §1932 et seq.,
- The Medicaid Program, 42 CFR Part 400, et al. Medicaid Program
- The Medicaid Managed Care Rule, 42 CFR Part 438
- False Claims Act, Civil and Criminal, 31 USC §37§29-3733 and 18 USC §287
- Anti-Kickback Statute, 42 U.S.C. §1320a-7b(b)
- Physician Self-Referral Statute (Stark), 42 USC § 1395nn
- Criminal Health Care Fraud 18 USC §1347
- Regulatory Safe Harbors, 42 CFR § 1001.952
- The Health Insurance Portability and Accountability Act of 1996 (HIPAA), Public Law 104-191
- HIPPA Privacy, Security and Administrative Simplification Regulations, 45 CRF Parts 160 and 164

Our CO also monitors compliance-related laws and regulations specific to the State of Florida, including Title Social Welfare,Chapter 409 - Social and Economic Assistance of the Florida Statute, specifically Parts III and IV, along with the corresponding regulations.

Various executives and groups within Humana review the compliance plan at least annually, and often more frequently. This includes our CEO, Board of Directors and Audit Committee. We are required to submit this plan to AHCA for approval annually. AHCA approved our most recent submission in August of 2017 with a favorable response.

TOOLS TO MONITOR COMPLIANCE WITH STATE AND FEDERAL REQUIREMENTS
There are several tools and resources we use to monitor our compliance with State and federal requirements, including:

- Enterprise Solution Point
- Metrics and Scorecards to monitor and track activities
- Contract Management Unit Implementation

- Active Risk Ranking System
- Aggressive Internal Audit Efforts
- Compliance Training

Enterprise Solution Point (ESP)
Our ESP system allows us to tailor all of our required reports to meet state and federal contractual requirements. The ESP dashboard allows us to view metrics relating to internal compliance (ethics training, and internal audits), as well as metrics related to compliance with our contract with AHCA. ESP also houses compliance-related policies and procedures to ensure our associates are operating under the same guiding principles across the organization.

Metrics and scorecards to monitor and track activities
On a regular basis, we track and report on compliance for Florida Medicaid operations, allowing compliance associates and leadership to examine our compliance status and the success of our efforts. Several units within Humana analyze this information to provide a full view across the organization including, for example, our Quality Improvement Committee, utilization management associates, and our market review teams, among others.

Our Medicaid Integrated Compliance Scorecard is compiled monthly by Operational Risk Management and is comprised of two (2) parts: 1) a point-in-time assessment of compliance for each contract; and 2) compliance metrics including current compliance measurements for the reporting month. The results are trended and showcase a realistic view of business operations, taking into consideration normal and unusual occurrences. Discussion of the metrics facilitates the closure of external and internal corrective action plans and other notifications of non-compliance.

On top of the standing monthly meeting and metric reporting described above, we also produce regular reports to examine and ensure compliance for specific areas. These regular reports include, but are not limited to, the following:

- Monthly reports of enrollees and providers

- Monthly compliance reports

- Weekly compliance reports help to confirm cases were closed timely in compliance with the Medicaid Grievance and Appeals compliance regulations

- Daily open critical inquiry (CI) inventory summaries on open and pending statuses with their due dates, created dates, owner information, and more

- Bi-weekly AHCA CI inventory reports detail the inventory and reason code management dealing with Florida Medicaid cases, tracking all received cases for the year and giving a summary of open and pending cases

- Weekly acknowledgement reports to determine which cases were acknowledged in a timely manner for Medicaid Grievance and Appeals in relation to Medicaid rules

- Discretionary payment reports giving the number of discretionary payments made, including the overturn amount and the reason

Contract Management Unit Implementation
A standing agenda item for the Operational Risk Management meeting is High-Risk Implementations, which are any risks associated with a new regulation or contract provision. As necessary, discussion is held to identify any risks, barriers, or gaps that would impede timely implementation of the new regulation or contract provision.

Active Risk Ranking System
Our monthly compliance dashboard displays performance on metrics using criteria that include the following considerations: criticality to key business processes; seasonality impact; and at-risk or under-performance for the reporting period. This monitoring tool allows us to identify and address potential AHCA compliance issues by gathering data across the following primary business functions: claims, clinical, enrollee services, grievances and appeals, and provider network. Compliance scorecards and dashboards are published to senior leaders across Humana, including the Chief Compliance Officer, Medicare and Medicaid Compliance Officer, Segment VP and President, Medicaid, and other senior leaders who are responsible for oversight of Medicaid across Humana.

Medicaid Regulatory Compliance leverages findings from ongoing monitoring activities and Risk Assessment Subcommittees to perform an annual compliance risk assessment. Informed by the risk assessment, a work plan is developed to outline monitoring and auditing activities that will take place during the year, including those items that are at a higher risk-ranking. This work plan, created annually, encompasses activity that will take place in Medicaid Service Operations, Customer Service and Resolution, Pharmacy Operations, and Healthcare Delivery. The work plan is reviewed regularly by the Chief Compliance Officer and updated by Compliance leaders throughout the year.

Aggressive Internal Audit Efforts
Regulatory Compliance monitors adherence to the AHCA Contract and regulatory requirements. The requirement “owner” within Humana for each requirement, this individual’s leadership, Medicaid operations and leadership, operational risk management associates, and enterprise compliance associates are engaged in this monitoring activity. On a monthly basis, these groups present the performance of these key contract requirements to our compliance and executive leadership.

The Humana Medicaid Compliance Committee meets each month, is chaired by the Medicare and Medicaid Compliance Officer, and includes representatives from Compliance, Legal, Internal Audit, and Medicaid Operations, among others. The purpose of the Medicaid Compliance Committee is to provide a forum to present, review, analyze, and make recommendations on issues pertaining to our Medicaid programs. The agenda includes discussion of pressing compliance issues in each Medicaid program, including Florida Medicaid. The Medicaid Integrated Compliance Scorecard drives the discussion, providing the opportunity to monitor and report out Medicaid compliance risks.

Compliance Training
Our thorough strategies for ensuring compliance with federal and state laws are coupled with a strict Standards of Conduct policy which applies to all Humana associates and contractors. All our associates and contractors are required to complete training within thirty (30) days of their employment with Humana and annually thereafter. This training includes details about our

expectations for adhering to the law and discusses the consequences for those who violate those expectations.

==========

2. The extent to which the respondent has identified a qualified individual with sufficient authority and adequate corporate governance reporting relationships to effectively implement and maintain the compliance program.

==========

The success of Humana's compliance program is due, in significant part, to the emphasis we place on compliance throughout every facet of our organization. Our "culture of compliance" begins with strong leadership at the top of the organization that consistently emphasizes that compliance is an unwavering expectation for all associates and contractors. Our senior-most leadership – Humana President and CEO, Bruce Broussard -- and the Audit Committee of the Board of Directors, play an active role in oversight of our compliance functions. Attachment 31-1 presents our Medicaid Regulatory Compliance Organizational Chart, depicting key Florida-based and corporate-level leadership responsible for compliance and demonstrates their clear access to leadership.

Our enterprise- wide commitment to compliance has led to strong relationships with our partners at AHCA and CMS. We have capitalized on our Local-Corporate compliance oversight model to establish a clear leadership structure for our on-the-ground compliance operations in Florida, supported by our robust national compliance monitoring resources.

FLORIDA COMPLIANCE LEADERSHIP

COMPLIANCE OFFICER

Humana's Florida SMMC Comprehensive Plan compliance efforts are led by our Florida-based Compliance Officer (CO), Linda Lawrence, whose resume is provided in Attachment 31-2. Ms. Lawrence has been with Humana since 1985. Linda's thirty-two (32) years of work history with Humana provide her with extensive knowledge and experience of the business. She was a medical center administrator before joining the Compliance team where she has served for the past twenty-five (25) years. She has worked in both the Commercial and Medicare areas in addition to Medicaid, and has been dedicated to Medicaid for the last eight years.

Ms. Lawrence will continue to be supported by her experienced compliance associates, including Shannon Childers. Ms. Childers has been with Humana for nearly four (4) years and has extensive experience in both the financial industry as an analyst and as a practicing attorney. Specifically, Ms. Childers has represented clients on Medicaid and Medicare reimbursement complaints, including both enrollees and providers, giving her a valuable perspective on how Medicaid functions from their perspectives. In addition, Ms. Childers brings years of experience in financial roles and a strong understanding of types of reports to run and anomalies to look for in identifying fraud, waste, and abuse and monitoring operational compliance.

We believe that compliance must be a partnership with the state to truly be successful. To that end, Ms. Lawrence and her associates have provided strong leadership in Florida to ensure that our compliance efforts are as successful as possible. We have led or participated in numerous

meetings with AHCA and worked diligently to build a strong relationship to foster compliance across the state. Our compliance associates have either led or participated in at least fifteen (15) regular AHCA Medicaid Program Integrity (MPI) meetings to ensure an effective relationship with AHCA, as well as the other health plans, when it comes to detecting and resolving instances of fraud, waste and abuse. This cooperative effort allows all parties to share information quickly to prevent or respond to issues and mitigate the associated risk. The Florida Compliance Officer reports to our Medicare and Medicaid Compliance Officer; however, our compliance associates have the ability to escalate compliance matters directly to the CEO and the Audit Committee of the Board of Directors.

NATIONAL COMPLIANCE LEADERSHIP

CHIEF COMPLIANCE OFFICER
Humana's Chief Compliance Officer is responsible for our Compliance function – which includes federal and State Regulatory Compliance, Delegation Compliance, Ethics, Privacy, National Regulatory Implementation, and Enterprise Policy Management and Compliance Training – and has authority to report out directly to the Chairman of the Board, the CEO, and the Audit Committee of the Board of Directors. Humana holds each of its operational areas accountable for the daily adherence to the Compliance Plan, making various leaders accountable to the Chief Compliance Officer.

CHIEF RISK OFFICER
In September 2017, we took a progressive step in the healthcare industry by creating a Chief Risk Office, uniting our risk and compliance organizations to ensure easier collaboration while maintaining strong partnerships across our operations. While this type of position is common in other industries, such as the banking industry, this position is unique for a healthcare organization. We believe the introduction of the Chief Risk Office will be a significant step forward in optimally serving our enrollees and the organizations and agencies with whom we partner, including AHCA. Leading this joint organization is the newly created position of Senior Vice President and Chief Risk Officer. This leader reports directly to our President and CEO and serves as a member of Humana's Management team while overseeing the development of the company's Chief Risk Office. The Chief Risk Officer sets direction and establishes policy in the areas of enterprise risk management and compliance, while building a strategy and a culture that manages risk appropriately and establishing a consistent definition of risk across the enterprise. This enables the organization to drive connections and collaboration throughout the business to ensure timely and proactive discovery as well as faster mitigation of risks and their causes.

MEDICARE AND MEDICAID COMPLIANCE OFFICER
Humana's Chief Compliance Officer and Chief Risk Officer are supported by a Medicare and Medicaid Compliance Officer who reports directly to our Chief Compliance Officer and has full direct access to report any compliance matters to the Audit Committee of the Board of Directors or our CEO, including quarterly updates on fraud, waste and abuse and our Compliance Program. The Medicare and Medicaid Compliance Officer's responsibilities and authority are delineated in the Compliance Program.

Our Medicare and Medicaid Compliance Officer reports quarterly, in writing or in person, to the Audit Committee of Humana's Board of Directors about Compliance issues, including Florida

Medicaid issues as they arise. Generally, the Medicaid Compliance reports include significant issues of non-compliance, audit schedules and results, liquidated damages/Corrective Action Plans, root causes of compliance challenges and plans to mitigate these incidences, and any other compliance matters that warrant the attention of the Board of Directors. The goal of these reports is to allow the governing body to exercise reasonable oversight with respect to implementation and effectiveness of the compliance program.

COMPLIANCE COMMITTEE
The Compliance Committee, chaired by the Medicare and Medicaid Compliance Officer, oversees the Medicaid FWA Control Program. The FWA Control Program is designed to meet federal and state laws, rules and regulations, including fraud, waste, and abuse detection, correction, and prevention guidelines that apply to Humana and its FDR entities.

==========
3. The extent to which there are sufficient staff to implement the compliance program.
==========

Our commitment to compliance is substantial, fully operational, and supported by significant resources. This includes financial resources, human resources, and state-of-the-art information systems. As described in detail above, we have developed a strong leadership structure that combines local Florida compliance expertise, with extensive national resources. The enterprise function is supported by more than one hundred twenty (120) Full Time Equivalent (FTE) associates across our compliance organizational structure; however, this does not provide a full picture of our dedication to our compliance functions. We also have numerous individuals who work for our Claims Cost Management (CCM) department, which includes our SIU and PPI Unit, all of which play an essential role in compliance efforts, but who are accounted for separately. Further, we have numerous associates who deliver compliance-related functions within each department, such as our quality or case management departments, who are accounted for under those functions. Included in Attachment 31-1 is our Compliance Structure.

As described above, associates at both our state market level and at our national enterprise level have clearly defined responsibilities and work together to fill out the full staffing allocated to our compliance functions.

FLORIDA COMPLIANCE STAFF

At the State level, the Regulatory Compliance (RC) associates, specifically the Florida Compliance Officer (CO), has responsibility for oversight of contract requirements, whether of an administrative or operational nature. Oversight is completed with the assistance of many associates through document and data reviews, Joint and Local Operational Committee meetings, audits, and ad-hoc meetings. RC associates are engaged in all phases of these activities with the appropriate support and oversight that is needed by the function or business area. Some areas are well established and run with minimal need for support, while others are in a transitional or developmental phase and thus require more involvement. Additionally, it is our philosophy that each associate is responsible for compliance with ethical standards as well as the stipulated contract requirements of their respective work area. Our functional departments typically identify an individual who is charged with monitoring their area's compliance with Medicaid requirements.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Our Florida compliance associates have support and oversight at both the local and national level, relying on the experience within the large set of associates supporting our ongoing compliance. When there are special projects or audits, additional associates may contribute to support the area that is under review or in need of assistance. This may include anything from reviewing responses, locating policy and procedure documentation, or researching contract or federal and State requirements. Often, regulatory compliance makes requests across departmental lines so Humana associates work together to provide a thorough response and data extract. This is applicable to requests both planned or ad-hoc. Examples include but are not limited to: Special Feed Encounter requests, complaint handling, MPI self-audits or specific provider audits, on-site reviews, university studies, and CMS studies.

NATIONAL COMPLIANCE STAFF

Our Enterprise Compliance team provides regulatory interpretations, clarification, and effective, timely guidance to achieve:

- Comprehensive business and contract-based controls driven by regulations, policies, processes and systems

- A framework for risk and compliance assessment, identification, and mitigation in a preventive and preemptive manner

- Timely identification of risk and compliance vulnerabilities and gaps in policies and procedures for meeting laws, rules, and regulations

Humana's Medicaid Regulatory Compliance team adds additional resources and oversight at the national level to:

- Manage relationships with regulatory agencies through various communication points

- Serve as a contact with regulatory agencies, including primary contact with Medicaid Program Integrity

- Function as lead for regulatory audits

- Provide guidance to business areas upon implementation of new regulations by our Contract Management Unit

- Assist business areas in interpretation and clarification of regulations or processes

- Assess risk and perform monitoring and auditing of high-risk operational processes

- Provide oversight and direction of the established Compliance Program

- Provide oversight and direction of the established Fraud, Waste and Abuse Program

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

ADDITIONAL RESOURCES CONTRIBUTING TO COMPLIANCE EFFORTS

DELEGATION COMPLIANCE

As delegated functions are subject to the same federal and state regulations, we are ultimately responsible for the performance of any delegated business function. Delegation Compliance evaluates the capability of an entity to determine if they are able to perform delegated functions prior to contracting. In addition to the pre-delegation assessment, Delegation Compliance conducts audits of delegated entities on at least an annual basis, or more frequently if required by regulations or contractual requirements. Our annual audits include both a policy review and a file review and may be conducted on-site. In addition, our Delegation Compliance and Market Clinical associates (including our Quality Improvement Committee (QIC), if relevant) conduct ongoing monitoring through a series of mandatory reporting requirements. Periodic evaluation of a delegated entity's performance is also completed at regional delegation or operational oversight committees.

MONITORING AND AUDITING OF FDRS

We conduct monitoring and auditing activities for our relationships with First Tier, Downstream, and Related Entities (FDRs) that support Humana's Medicaid programs. The activities monitored and audited may include, but are not limited to:

- Operational performance, as outlined in executed contracts. This oversight is conducted by operations teams and/or operational business owners.

- Compliance Program requirements, as described throughout our Compliance Policy for Contracted Health Care Providers and Business Partners. This oversight is conducted by a collaborative effort between the FDR Compliance team and operations areas.

To facilitate these initiatives, we separate monitoring and auditing work plans to address the risks associated with these FDR relationships. We submitted a copy of our Subcontractor Monitoring Schedule to AHCA for 2017 and are currently preparing our plan for 2018. This work plan documents planned auditing and monitoring of FDR relationships. The FDR team uses a variety of tools to monitor compliance, including a self-assessment questionnaire, survey, document reviews, on-site or desktop audits, which may include inspection of the facilities, systems, books, procedures, audit work plans and results, and records that relate to the services provided under the contractual agreement.

INTERNAL AUDIT CONSULTING GROUP

The Internal Audit Consulting Group (IACG) Annual Audit Plan outlines specific areas to be monitored by the IACG. The Annual Audit Plan is implemented through audits, assessments, consulting engagements and investigations of the identified areas. With an eye towards process and stability, the IACG performs risk-based process audits with a focus on contractual obligations, CMS and other regulatory requirements, and other areas of risk.

SPECIAL INVESTIGATIONS UNIT AND PROVIDER PAYMENT INTEGRITY — FRAUD, WASTE AND ABUSE

The Claims Cost Management (CCM) Compliance team is responsible for detection, prevention, and recommendation of process improvement for our publicly funded healthcare programs, including Medicaid. CCM works in conjunction with the SIU and PPI to ensure all regulatory

reporting is completed in a timely and compliant manner, and that each department stays abreast of changes to federal and state regulations. The CCM Compliance team, with support from the law department, is also responsible for responding to subpoenas and requests for information from government agencies as they pertain to fraud, waste and abuse reviews.

SPECIAL INVESTIGATIONS UNIT (SIU)
Our SIU is responsible for all investigations related to fraud and abuse. The SIU Anti-Fraud Plan, which is approved by AHCA annually, details the processes taken by Humana's SIU for the detection, investigation, and prevention of suspected fraud and abuse. SIU receives referrals from various sources, including, but not limited to, hotline calls, data-mining results, fraud detection software, and government agencies. SIU investigates these referrals to determine if the suspected fraud and abuse activities have occurred. If an allegation is substantiated, SIU may refer the provider to the appropriate government or law enforcement agency (or agencies) and may also recommend action up to, and including, termination from Humana's network. SIU also gives recommendations for process improvements to proactively address potential fraud risks identified in our business practices.

PROVIDER PAYMENT INTEGRITY
The PPI unit conducts reviews and audits related to waste and abuse, along with handling all written inquiries related to overpayments. PPI utilizes complex data analytics including outlier analysis, trending and link analysis to identify potential fraud, waste, and abuse. The PPI reviews all leads for fraud, waste and abuse, and routes each allegation to the appropriate area for further review. Fraud allegations, for instance, are routed to our SIU department for investigation. Our PPI also conducts pre-payment and post-payment audits to identify potential overpayments. In the event PPI substantiates waste or abuse, it may refer the provider to the appropriate government agencies. PPI also gives recommendations for process and system improvements to proactively prevent overpayments.

RISK ADJUSTMENT INTEGRITY UNIT (RAIU)
The RAIU is responsible for investigating instances of FWA in our provider network that impact the integrity of risk adjustment submissions. RAIU performs investigations on case referrals from various sources, including, but not limited to, internal and external legal counsel, SIU, Hotline and Outlier Data Analysis.

==========

4. The extent to which the respondent's compliance program has experience identifying subcontractor fraud and internal fraud and abuse in managed care programs.

==========

Humana has high standards for identifying and resolving fraud and abuse for our associates and we maintain the same high standards for our subcontractors. We have an oversight structure that is company-wide and coordinated across multiple teams at both the local and national level. For Florida, our CO and compliance associates are deeply engaged with CCM, SIU and PPI as well as other teams, such as Delegation Oversight, to ensure subcontractor fraud, waste and abuse (FWA) is identified and addressed. This includes changes in our processes whenever necessary to prevent future FWA. Additionally, detailed information about our general subcontractor oversight policies and processes is found in SRC 26.

IDENTIFYING INTERNAL FRAUD AND ABUSE

Humana's culture of compliance is predicated upon open lines of communication and a workplace free from fear of retaliation. We widely publicize our Hotline, including on our website, and actively encourage associates and contractors to report suspected instances of fraud and abuse, but also waste and areas of improvement. All instances of suspected FWA may be reported anonymously. We make this widely known and feature it prominently in our annual all-associate training. These efforts are intended to ensure that all our associates and contractors feel comfortable in assisting in our FWA efforts, including those related to our internal operations. Our Florida CO may receive reports of FWA directly from associates. The CO then refers the report to the appropriate associates within Humana to resolve. The CO asists as necessary but does not lead the investigation.

Additionally, we have a large team of individuals specifically dedicated to identifying fraud and abuse. Specifically (and as described in greater detail in SRC 32 and above) our Claims Cost Management (CCM) team is responsible for detection, prevention, and recommendation of fraud, waste and abuse. To assist in efforts related to investigating healthcare fraud, we also have a Special Investigations Unit (SIU). The SIU, which has been operational since 1985, has investigated thousands of cases of FWA internally and related to our subcontractors across all our lines of business, including commercial, Medicare, and Medicaid managed care. The SIU maintains a thorough anti-fraud program that includes drafting and implementing an annual Anti-Fraud Plan that describes general oversight and auditing of internal functions and subcontractors and this plan is supplemented with investigations that result from hotline calls, detection from our on-going analytical tools, and requests or referrals from our federal and state partners, including AHCA.

Along with the SIU, our anti-fraud work is supplemented by the PPI unit, which conducts reviews and audits related to provider FWA, including pre-payment audits that focused on proper payments and reduction of waste. Additionally, our RAIU is specifically focused on investigating instances of FWA within the provider network which affect the integrity of our risk adjustment submissions. In addition to reactive detection efforts, we also have a proactive approach to detection of FWA. This is led by our Fraud Research, Analytics and Concepts (FRAC) team. The FRAC utilizes data mining along with other analytical tools to review claims, patterns of services and numerous other data points to detect trends, identify outliers and anomalies. The FRAC team is broad in scope and includes review of providers, pharmacies, enrollees and associates.

IDENTIFYING SUBCONTRACTOR FRAUD AND ABUSE

While our FWA investigation efforts are thorough and include our subcontractors, we also have a dedicated process related to our subcontractors. Our process for ensuring robust compliance by our subcontractors, led by our Delegation Oversight department, begins with a careful screening program to allow only those who are qualified and able to meet our expectations to provide services to us, our state partners, and our enrollees. Each subcontractor must complete a pre-delegation audit prior to selection. Once selected, our subcontractors are required to complete annual compliance and ethics training that includes training about a wide variety of topics including compliance obligations, privacy and security and reporting

requirements. We give all our subcontractors our Compliance Policy and our subcontracts specifically require cooperation with our compliance efforts.

The last step in our fraud and abuse detection efforts related to our subcontractors is our on-going monitoring of their performance. Our structure allows for robust oversight. Specifically we have established nationwide policies for our subcontractors to ensure consistency across our organization. In Florida, our local executive leadership oversees our Florida subcontractors on a day-to-day basis, implementing the policies and procedures established nationally.
Our compliance experience has resulted in the development of several internal departments that coordinate to identify subcontractor fraud across all lines of business. These departments use our technology systems, standardized reporting, and weekly, monthly, quarterly, and annual data sharing and root-cause analysis meetings to prevent, identify, investigate, and resolve suspected fraud and abuse cases. We require that all subcontracted lines of business that support our Medicaid plans ensure they have the following in place for their employees and those who support them:

- Standards of Conduct
- Sufficient Compliance Program policies and procedures
- Effective training on general compliance and fraud, waste, and abuse
- OIG and GSA exclusion screening

ADDRESSING SUBCONTRACTOR FRAUD AND ABUSE

On the national level, our Contract Management Unit (CMU) tracks contract compliance (including subcontract compliance), and facilitates our corporate subcontractor compliance committees, including coordination of our audit activities and readiness assessments. We monitor and address subcontractor fraud via the following mechanisms:

Florida-Based Mechanisms:

- We utilize Joint Operating Committee (JOC) meetings as a mechanism with providers and subcontractors to interactively discuss and resolve issues or concerns. JOC meetings may be scheduled monthly, every other month, or quarterly depending on the needs of the provider network or Humana. All subcontractors must participate in a JOC at least annually or more frequently depending upon the services the subcontractor provides and the scope of the relationship. For example, a printing vendor may only have one (1) JOC each year while a large provider may be required to participate in these formal meetings more frequently. JOC meetings also give us with an opportunity to communicate updates on contractual and program changes or offer technical assistance. Florida's two (2) compliance officers regularly attend JOCs and, in fact, were charter members of our JOC, participating actively in document reviews and other activities.

- The Florida Market Operations team initiates the subcontractor contract and engages Delegation Compliance if any functions will be delegated. The Florida Market Operations team also identifies the Relationship Manager for each subcontractor to ensure clear lines of communication and accountability. This team is accountable for subcontractor compliance, reviewing service-level agreement performance and convening JOC meetings. This team will

also assist with resolution of complaints or issues and works in partnership with the Florida CO to support each other's efforts.

- Our Delegated Vendor Oversight Committee (DVOC), which is based in Florida, monitors the quality of the services delivered or managed by subcontractors and meets quarterly. This key committee monitors the subcontractors support Florida Medicaid and ensures that all delegated entities and subcontractors meet our standards of care, customer service standards, as well as Department of Insurance (DOI) standards, and State and federal regulatory requirements, along with accrediting agencies such as National Committee for Quality Assurance (NCQA). The DVOC also reports to our Quality Improvement Committee (QIC) to ensure sufficient internal communication and continuous improvements in quality of care. In addition, we have a centralized Delegation Compliance Committee that is responsible for coordination of, among other functions, claims payment and utilization and meets at least quarterly.

Enterprise-Wide Mechanisms:

- Delegation Compliance is a centralized national team that conducts operational compliance oversight for subcontractors performing claims, clinical health services, or credentialing services. This team initiates corrective actions when instances of noncompliance are identified and notifies the Florida Market Operations team. Florida's compliance officers participate in Delegation Compliance meetings and assist with related functions such as providing review, guidance, interpretation, and other types of oversight. Delegation Compliance works closely with the Florida Compliance Officers to ensure subcontractors' performance meets or exceeds contract requirements and related laws, regulations, and AHCA procedures.

- FDR Compliance is a centralized national team that conducts oversight activities related to compliance program requirements. Similar to Delegation Compliance, this team initiates corrective actions when instances of noncompliance by FDRs are identified and notifies the Florida Market Operations team. FDR Compliance monitors compliance with auditing standards and checks subcontractors against federal exclusion lists monthly.

- Regulatory Compliance also supports the Florida Market Operations team and other compliance teams with oversight and issues identified as needed. It also assists Delegation and FDR Compliance with desk reviews and audits as needed.

- The Medicaid Compliance Committee, discussed above, meets monthly to present, review, analyze, and make recommendations on issues pertaining to Florida Medicaid. The Medicaid Integrated Compliance Scorecard includes metrics on the compliance status, including those related to subcontractors. The results are used to identify trends and implement improvements.

HUMANA TEAMS DEDICATED TO PHARMACY FRAUD AND ABUSE

Because of our experience related to risks associated with pharmacy services, we have dedicated teams to monitor and address potential pharmaceutical fraud and abuse. Humana Pharmacy Solutions (HPS) utilizes our cross-functional teams, external software products, project management techniques, issue tracking processes, and other resources and systems to accomplish and measure our contracted Point of Sale (POS) accuracy and performance. Claim reviews occur through desktop, onsite, telephone, and overpayment review processes and

include reviewing accuracy of pharmacy provider claim submission, as well as pharmacy provider compliance with applicable laws, regulations, contractual agreements, and our policies. The Pharmacy Audit department also conducts outreach and investigations related to potential pharmacy waste and abuse situations identified through data analysis, complaints, or allegations. Issues identified through audit processes and investigations are resolved through provider education, claim correction, claim recovery, corrective action plans, terminations or referral to our SIU for further investigation.

The Pharmacy Fraud Waste and Abuse & Prevention team monitors and audits the pharmacy network to prevent fraud, waste and abuse, promote appropriate claims processing according to Humana and CMS guidelines, and correct overpayment and underpayment of claims. Across Humana we conduct a minimum of five thousand (5,000) pharmacy desk top audits annually. We also conduct a minimum of two thousand (2,000) pharmacy onsite audits annually.

Another component of the pharmacy auditing and monitoring plan is the implementation of point of sale edits to promote appropriate claims processing. Through the pharmacy audit process, we often become aware of trends in inappropriate billing practices that could be prevented through point of sale claim system edits and makes adjustments across our subcontractors to improve performance.

CASE STUDY: IDENTIFYING FRAUD IN FLORIDA
AHCA's Medicaid Program Integrity Unit (MPI) contacted our Special Investigations Unit (SIU) about suspicious billing activity from an assisted living facility in the Miami area. MPI identified the irregularities through a combination of data mining efforts and observations made during an inspection of one of the related facilities. The issue identified was that the assisted living facility continued to bill for services after an enrollee had been discharged.

SIU opened an investigation into the matter. The preliminary investigation of the allegations established that there were more entities that needed to be considered as being complicit in the concerns noted by MPI in their initial allegation. Irregularities in addresses related to the suspects were identified by the assigned Investigator. A Humana SIU Investigator made contact with MPI to convey plan findings and concerns. The plan suggested that collaboration and coordination of investigative efforts would be beneficial to our mutual interests. MPI invited us to participate in site visits of the suspect locations, including those formerly unknown to MPI.

Site visits revealed substantial violations. Each of the facilities was over legal capacity. There were substantial administrative deficiencies. The address that we gave to MPI was established as a property owned by the suspect and operating as an unlicensed assisted living facility and adult day care campus. In another instance, a person in the care of the suspect was found entirely unattended in a facility operated by the suspect.

The collaborative investigation produced evidence which prompted an immediate response from Florida's Department of Children and Families (DCF). DCF relocated eight (8) individuals to an appropriate facility where they would be certain to receive adequate care in a licensed facility by qualified clinicians. Though we did not receive formal notice of the final action, it was related that AHCA intended to revoke the provider's license, for cause, effectively eliminating the opportunity for the suspect to reenter the industry. MPI intended to recommend substantial financial penalties for the violation. Florida's MFCU began a criminal investigation into the matter which is still active.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Evaluation Criteria:

1. The extent to which the respondent's compliance program complies with all State and federal requirements.

2. The extent to which the respondent has identified a qualified individual with sufficient authority and adequate corporate governance reporting relationships to effectively implement and maintain the compliance program.

3. The extent to which there are sufficient staff to implement the compliance program.

4. The extent to which the respondent's compliance program has experience identifying subcontractor fraud and internal fraud and abuse in managed care programs.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

Linda Lawrence

Upon Award: Compliance Officer, Florida Medicaid Market

Qualifications

- Expertise in managing compliance and regulatory requirements for the managed care industry with 30+ years' experience working in the healthcare industry
- Experience working in the Florida Medicaid market, specifically coordinating compliance and training and mitigating risks
- Managed suite of on-site specialty providers, and an urgent walk-in clinic servicing approximately 15,000 Medicare and Commercial members

Professional Experience

1985–Present Humana's Compliance Officer, Florida Medicaid Market

- Manages Humana's relationship with regulatory agencies and provides guidance for complying with regulatory requirements for the statewide Medicaid Managed Care Program including both Managed Medical Assistance (MMA) and Long-Term Care (LTC) as administered by the Florida Agency for Health Care Administration (AHCA)
- Conducts audits on operational activities/reports results/implements and monitors corrective actions
- Interacts with regulatory agencies
- Participates in company and external work groups/committees
- Directs regulatory exams
- Provides consultation and direction for government products.

Past Positions

- Regulatory Compliance Director, Medicare & Medicaid
- Compliance Coordinator
- Training Coordinator
- Medical Center Administrator
- Systems Technician
- Senior Field Service Coordinator
- Field Service Coordinator

Education and Certifications

- Bachelor of Science in Professional Studies from Barry University

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

SRC# 32 – Fraud and Abuse Special Investigations Unit (SIU) (Statewide):

The respondent shall describe its Special Investigations Unit (SIU) program and its controls for prevention and detection of potential or suspected fraud and abuse and overpayment, including the use of biometric or other technology to ensure that services are provided to the correct enrollee, including verification of home-based visits and services, to ensure those services are being appropriately provided and that services billed were received by the correct enrollee.

Response:

HUMANA'S COMMITMENT TO FRAUD, WASTE, AND ABUSE DETECTION AND PREVENTION

Detecting and preventing fraud, waste, and abuse (FWA) is essential to maintaining a health system that is cost effective for everyone and trusted by enrollees. As discussed in detail in SRC#31, Humana's culture of compliance begins with our Board of Directors and executive leadership and permeates every aspect of our business. We expect our employees and contractors to adhere to a strict standard of conduct that includes comprehensive ethical standards, and we require annual training to ensure these expectations are understood and agreed to. Our comprehensive Compliance Plan delineates our expectations and an approach to ensure organizational compliance. This includes a commitment to detecting, identifying, mitigating, and preventing fraud, waste, and abuse (FWA).

Humana has extensive experience preventing, detecting, and mitigating FWA. Because Humana has been providing publicly financed healthcare services since the mid-1980s, we have deep content knowledge related to FWA. Our Special Investigations Unit (SIU), which was formed in 1985, has led these efforts.

In addition to being experienced in FWA efforts, Humana is actively involved with multiple anti-fraud organizations, and is a founding member of the Healthcare Fraud Prevention Partnership (HFPP), established as a result of the passage of the Affordable Care Act (ACA). We also routinely work with other organizations such as the National Health Care Anti-Fraud Association (NHCAA), Special Investigations Unit Anti-Fraud Coalition (SIUAC), and other regional and local organizations. In fact, Humana's SIU director, Christa Jewsbury, is a member of the Board of Directors of the NHCAA. These partnerships, along with our recurring meetings with Agency for Health Care Administration (AHCA) and the Department of Justice (DOJ) led anti-fraud task force, ensure that we remain apprised of current laws and regulations, as well as trends in the industry and newly emerging schemes to monitor.

As a Medicaid provider in the State of Florida since 1997, Humana works on a daily basis at all levels of our organization to serve as a true partner to AHCA with a commitment to efficiency and resource optimization. Humana has numerous compliance and SIU-related staff located in Florida to ensure an active and engaged presence in the State. Along with prioritizing our partnership with AHCA to detect and prevent FWA, we actively works with other managed care organizations (MCOs) to share information on suspected cases of FWA. Through this process,

Humana simultaneously leads efforts to mitigate potential fraud and learns from others' experiences.

Strong partnerships, a clear communication and accountability structure, sophisticated information technology systems, mandatory and regular training of our workforce, and additional investments by Humana ensure rapid and complete clinical reviews support our comprehensive approach to prevent and detect potential or suspected fraud and abuse and overpayment. These efforts are described in detail below.

HUMANA'S FRAUD, WASTE AND ABUSE FRAMEWORK

Humana has a comprehensive FWA framework in place to prevent and correct fraud risk events. Fraud risk events can be malicious, unintentional, or simply the result of a misunderstanding. Through this framework, we work to prevent, identify, and rectify potential cases related to: corruption (kickbacks and bribes); insurance and billing issues (billing for services not performed, fraudulent claims, misrepresentation); reporting issues (false timesheets, misrepresentation of financial information); strategic items (budgetary expansion, intercompany payments, improper incentive structures); and theft and losses (direct payments via cash, accounts payable, theft or misrepresentation). Humana's goal is to achieve risk and resource optimization that contributes to our care and supports delivery objectives in a sustainable and ethical manner. This risk and resource optimization translates into efficiencies for the State as well. Our framework is based upon four (4) essential tools:

- A Compliance Plan that is comprehensive, AHCA-approved, reviewed annually (and modified as needed), and clear on Humana's expectations. These expectations include standards of conduct and ethics, and required training for all employees and contractors.

- An Anti-Fraud Plan that is reviewed annually and modified as needed, approved by AHCA. This plan clearly describes Humana's strategic efforts at detecting FWA internally and amongst our providers and subcontractors.

- Sufficient numbers of highly qualified staff at the national enterprise level and State market level to monitor relevant developments, and engage in active FWA detection and prevention activities. These include a Regulatory Compliance Officer and an additional Compliance Officer that serve Florida's Medicaid enrollees.

- State-of-the art technology that provides tools and platforms to proactively detect FWA and track ongoing investigations.

The overarching organization within Humana responsible for program integrity is Claims Cost Management (CCM). To proactively monitor claims and encounter payments, as well as to limit exposure to FWA, CCM oversees the following four (4) platforms:

- Expense Mitigation, the flagship platform, monitors more than three point four (3.4) million claims each year

- Value-Based Provider (VBP) Monitoring monitors FWA among providers submitting encounter and risk adjustment data

- Revenue Preservation identifies enrollees for whom the Centers for Medicare and Medicaid Services (CMS) is improperly compensating Humana

- Underpayment Distribution enables us to quickly reprocess incorrect expense recoveries and claims underpayments identified by our provider partners

While these systems proactively monitor for FWA, Humana also maintains multiple groups that work to aggressively investigate new areas of risk. While these departments within CCM work together, they each manage their own case work independently:

- The Special Investigations Unit (SIU) is responsible for all investigations related to fraud and complex abuse

- The Provider Payment Integrity (PPI) unit conducts all reviews and audits related to waste and abuse, along with handling all written inquiries related to overpayments

- The Risk Adjustment Integrity Unit (RAIU) is responsible for investigating instances of FWA in Humana's provider network that impact the integrity of risk adjustment submissions

- Clinical Integrity Review (CIR) is responsible for medical services substantiation and clinical necessity auditing, recovery, and loss prevention

- Medical Coding Integrity Review (MCIR) updates medical coding standards validation, billing abuse and waste detection and proactive billing correction

- Coordination of Enrollees' Benefits (COB) reviews proactive benefit coordination for enrollees who have Humana as their secondary insurance coverage

- Service Fund Integrity Review (SFIR) is responsible for provider service fund payment issue detection, recovery, and loss prevention

- Subrogation Capture (SUB) identifies, investigates, and coordinates payments with third-party medical liability holders

Humana's AHCA-approved annual Anti-Fraud Plan guides our efforts related to FWA detection and investigation, which is led by the SIU, our primary investigative arm. Our processes include data analytics to identify trends, fraud, schemes, and potential fraudulent activity that may warrant further investigation. Humana's SIU goals include, but are not limited to:

- Maintaining an anti-fraud program to protect Humana and government funds from potential fraud

- Conducting thorough and effective investigations into alleged fraud or abuse

- Educating providers regarding billing and documentation errors identified during the course of investigations

- Coordinating with the Pharmacy Audit Team to investigate egregious cases of pharmacy-related FWA

- Recommending termination of Humana's contractual arrangements with providers, agents, brokers, enrollees, and other business entities when appropriate

- Recovering or denying payment for claims deemed to be fraudulent or inappropriately billed

- Reporting suspected fraudulent acts to the appropriate federal or State government agency or law enforcement agency, as required

- Cooperating, if requested, with federal or State officials in civil or criminal matters as a witness for Humana and/or attesting to the validity of information provided by Humana

- Training Humana associates in detecting, preventing, and reporting suspected fraudulent activities

The SIU investigates claims-related fraud at all levels from subcontractors and delegated entities, providers, enrollees, and associates. When warranted, the SIU collaborates on investigations with law enforcement at the federal, State, and local levels. SIU reports any suspected or confirmed fraud or abuse regarding Florida Medicaid to AHCA within fifteen (15) days after review and approval of confirmed suspicion of FWA from our internal Government Referral Panel. Since 2015, through our pre-pay and post-pay recovery efforts, Humana's SIU prevented approximately seven hundred thirty-six thousand ($736,000) in fraud and abuse related payments. This number represents a small part of our efforts to prevent FWA. PPI audits of waste and abuse have identified approximately seven million, seven hundred forty-two, two hundred seventy-five ($7,742,275) saved in addition to the SIU provider specific investigations. PPI's audits of waste and abuse do not include general billing errors identified.

To ensure consistency and a fair and proper review of all investigations, the Government Referral Panel was established to review all cases that the SIU or other departments have identified as meeting State or federal agency requirements for reporting to a relevant agency or regulatory body. This panel was created to consider cases and ensure that criteria are met to refer a case on to the appropriate government agency. This innovative approach to streamline and operate efficiently in referring cases appropriately enables Humana, AHCA and other agencies to pursue cases with merit. Investigators bring cases to the Government Referral Panel when a case has met one of the following milestones:

- Completed post-pay audit that resulted in findings

- Confirmation of multiple instances services not rendered

- Referral was received from a government agency and Humana's Medicaid exposure fits within the scope of that allegation

- Any indication that the provider is a phantom provider

- Other evidence of credible fraud

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

The Government Referral Panel ensures that the case has been properly investigated and that the referral has clear language, meets the relevant requirements for referral, and is consistent with best practices. As a result, this process produces better quality referrals for Florida's Medicaid Program Integrity (MPI) unit to send directly to the Medicaid Fraud Control Unit (MFCU), offering more actionable information and additional details to support next steps. This process ensures that MPI's time is not wasted reviewing referrals that are unsubstantiated or not a FWA issue.

Humana's SIU is supported by the Enterprise Investigations Consortium (EIC) and is comprised of key executives representing the Operations, Medical, Compliance, Finance, and Legal departments. The Committee provides oversight, prioritization, and direction to the investigative process and associated corrective actions conducting investigations into fraud, waste, abuse, criminal activity, ethics, and compliance concerns. The EIC's role in FWA prevention and detection rests in the identification of opportunities for investigations, training, development, and process improvement across Humana. Additionally, the EIC provides guidance and collaboration with various investigative groups across Humana.

==========

1. The extent to which the respondent uses various types of controls and automated approaches as part of a comprehensive approach to prevent and detect potential or suspected fraud and abuse and overpayment.

==========

Humana employs a comprehensive, enrollee- and logic-driven process to prevent, detect, and respond to patterns of FWA. Our approach to prevent and detect fraud, abuse, and overpayment relies on the combination of sophisticated data systems and analytics operated by highly skilled associates coordinated through oversight bodies. It includes the implementation of specific FWA detection mechanisms, including: identification of potential aberrations in service utilization through comparison of approved services and enrollee needs documented in the plan of care (POC); monitoring of medical, behavioral health, and pharmacy utilization metrics; and robust data analytics from encounter submission to claim payment. While our automated systems identify these data points, our associates and contractors continuously analyze this data for risks.

Humana's Fraud Research, Analytics and Concepts (FRAC) team conducts a variety of processes to proactively detect FWA. This involves the review of information provided through a variety of sources, including communication from government agencies, industry associations, internal referrals, provider partner referrals, and other private payers. These processes also include risk assessment and data analysis to determine which potential fraudulent activities require further investigation. This sophisticated combination of controls and automated approaches are designed to efficiently prevent and detect potential or suspected fraud and abuse and overpayment.

Our FWA process is also based upon the use of good data. We use data mining to identify trends, such as gaps in payment or common overpayments and outliers. Some data markers indicating FWA are:

- Outlier Analysis
- Trend Analysis

- Anomaly Detection
- Statistical Analysis
- Rules-Based Anomaly Detection

As a result of data mining and audit queries, on average CCM:

- Audits more than three (3) million claims per year

- Identifies opportunities to recover claims overpayments on approximately thirty percent (30%) of audited claims

- Recovers or prevents loss on approximately five percent (5%) of total claims paid across our lines of business

Humana's automated Claims Adjudication System (CAS) supports FWA detection, through various systems edits, as it is designed with both pre- and post-payment algorithms to scan all claims for overpayment, double payment, and fraudulent payments. Because our system also scans claims post-payment, Humana is able to recoup payments after they have been made if we later deem them improper. In addition to scanning claims for payment-related measures, CAS also uses robust algorithms to look for impossible points in care. For example, a male cannot have a live-birth C-section, so CAS will not permit payment if a claim is received for such a scenario.

Humana also uses state-of-the-art software applications to construct analytical, statistical, and predictive models that identify and detect FWA. Models can be focused on specialty or type of services. Data is selected based upon detailed investigation on identified risk and research into potential fraud schemes impacting potential models. The tools include, but are not limited to:

- SAS Analytics Software: SAS is a strong data analytics engine used to analyze identified FWA claims, search for claim payment aberrancies, and calculate FWA recoveries. Our Data Analyst generates a case file that includes written and statistical information, which aids the SIU in presenting our case to our internal Investigation Committee, law enforcement, providers and/or their attorneys. This detailed investigative report may be used by the SIU in any legal efforts (e.g., litigation, arbitration, and mediation), as well as in provider dispute resolution and recoupment efforts. SAS Analytics software is used in monthly increments depending on the topic.

- Qlikview: Qlikview enables Humana to build dynamic models that can accept data from multiple sources. Qlikview processes large amounts of data, and through the use of a variety of visualizations, dynamically identifies interesting and suspicious billing patterns.

- Centrifuge®: Centrifuge® uses advanced link analysis, complemented by charts, timelines, and geospatial views, to discover relationships and significant insights that are not always obvious in the claims data, often more quickly than other technology. This program enables analysts to more easily combine data from disparate sources and interact with large data sets using multiple visual representations of that data in a single integrated workspace. Centrifuge® links analyses and data visualizations to help find provider fraud patterns.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

ADDITIONAL FWA CONTROLS: HUMANA'S HIGHLY-QUALIFIED STAFF

Even the best automated processes are unable to prevent or detect all cases of FWA. Consequently, Humana has developed a highly skilled and trained staff to perform manual audits at all levels, including at the individual provider level. Numerous controls are built in to all aspects of Humana's operational management, from day-to-day operations for claims processing and data analysis to ongoing maintenance of systems employee training requirements. These controls include, but are not limited to:

- Florida Medicaid Compliance Staff: There are two experienced Florida Compliance associates dedicated to Medicaid to ensure robust, comprehensive, focused compliance efforts. Our Compliance Officer is the designated point of contact and responsible for the pulse of compliance for all regulatory and operational functions and responsible for oversight in accordance with our current contract with AHCA.

- Associate Education: Every Humana associate – including the Chief Executive Officer, all senior leaders, the Board of Directors, full and part-time employees, and business partners (first tier, downstream and related entities [FDRs]) – is required to complete annual web-based ethics and compliance training. The training includes a FWA module with information on the Federal False Claims Act, Anti-kickback, and Whistleblower Protection, as well as examples of various types of healthcare FWA and potential fraud indicators. All associates must complete ethics and compliance training annually and are given our Ethics Every Day resource, which includes our standards of conduct, to keep and refer to on an ongoing basis.

- Provider Education: Via the Provider Network team, the provider website, and the provider manual, providers receive information regarding FWA. We have also posted visual reminders, such as signs and posters, throughout Humana's offices to remind providers of our compliance and FWA efforts, including posting of our hotline number.

- Enrollee Education: Enrollees receive information regarding FWA, including how to contact the SIU. Information is located in the enrollee handbook, Humana's website, and Explanation of Benefits (EOBs) and enrollees are encouraged to report suspicious activity through our well-publicized hotline.

- Regulatory Monitoring: Humana monitors federal and State enforcement actions and Office of Inspector General work plans for new and/or recurring trends. Humana also monitors our associates, providers and vendors for OIG-excluded individuals and entities.

- Provider Network Maintenance: Humana monitors our provider network excluded and suspended providers and AHCA-terminated providers, and confirms the credentialing of providers and facilities.

- Delegation Oversight: Humana ensures subcontract provisions are inclusive of federal, State and Humana-related requirements. The Delegated Vendor Oversight Committee monitors Humana's delegated services and performs oversight of quality and service activities delivered/managed by vendors. Florida Medicaid has a dedicated Director of Vendor Performance who oversees vendor compliance and coordinates with the SIU.

- Claims Administration: Humana performs ongoing monitoring of claims system validation rules, conducting detailed reviews of service claims at both pre-payment and post-payment points.

- Utilization Management: Humana monitors hospital utilization and care management records daily, using Case Managers as gateways to the healthcare system via prior authorization requirements.

==========

2. The extent to which the respondent uses biometric or other technology at the point of service delivery to prevent and detect potential or suspected fraud and abuse and overpayment.

==========

Ensuring prudent use of Medicaid funds is of the upmost importance to Humana. As a result, we employ several methods to verify that our enrollees receive approved and appropriate care at the point of service. Humana has partnered with Sandata Technologies LLC to utilize electronic visit verification (EVV) with innovative technology, including geo-mapping combined with mobile technology, across several states, including Florida, for our Medicare Advantage line of business. Humana has also developed and is currently testing our own technology to support internal Case Managers through a mobile application that verifies and logs the Case Manager's visits to enrollees via geo-location. Prior to implementation of this contract, Humana plans to develop additional EVV processes to serve our Medicaid plans and institute an enterprise-wide approach to ensuring that we can prevent and detect potential or suspected fraud and abuse and overpayment.

In compliance with the 21st Century Cures Act and as AHCA builds its guidance for managed care organizations to integrate EVV technology into care delivery and FWA prevention, Humana is committed to ensuring that the following elements of any EVV technology are included within our process:

- Data capture, compatibility, and aggregation
-- Regardless of the EVV platform used, data capture across providers will comply with minimum data requirements to be set forth by Humana based on AHCA guidelines. Through our contracting process, provider data systems will be required to offer compatibility with Humana's systems and comply with Humana's strict privacy and authentication requirements. Humana will also require providers to comply with our timelines for rapid use in claims payments and adjudication.

- EVV point of service capabilities
-- All subcontracted home-based care providers must ensure that their EVV capabilities allow for point of service verification with the support of scheduling, tracking, and/or other capabilities that support active and real time prevention and identification of potential fraud and abuse. Humana will require the use of GPS EVV as the primary capture method with Interactive Voice Response (IVR) as a backup.

- EVV system capacity requirements and integration
--Humana EVV vendors must ensure their systems have the capacity to handle a full patient load with twenty-four (24) hours a day, seven (7) days a week, data refresh and backup capabilities. Data regarding services delivered to Humana enrollees is the property of Humana.

EVV vendor capability must allow for seamless data integration with Humana's information systems.

- EVV Analytical Capabilities
-- Humana will develop analytical tools to match EVV data (e.g., geolocation, service dates, service times) with authorization, claims, and related services. Output will be included within claims overpayment rejection/recoupment processes, identification of missed services, and integrated into our FWA systems.

Any provider wishing to subcontract with Humana for home-based and personal care services will be required to comply with Humana's requirements for point of service verification as outlined above. While Humana is currently building our EVV capacity internally, we will explore whether to develop a contractual relationship with an EVV aggregator once we have received AHCA's requirements regarding EVVs.

==========
3. The extent to which the respondent conducts clinical reviews and SIU investigations to detect potential or suspected fraud and abuse and overpayment.
==========

Humana has numerous controls in place to support clinical reviews and SIU investigations of potential cases of fraud and abuse and overpayment. Those controls include: prior authorizations; utilization management; subcontract and provider contract provisions; provisions from the provider manual and the enrollee manual; and standards for a code of conduct. Humana further relies on clinical reviews of utilization and care management to detect potential FWA cases and escalate those cases to SIU for further investigation.

Humana's CCM Medical Record Audit Team conducts a wide range of coding and medical records audits to identify potential FWA. CCM has a team of medical personnel including Medical Directors, Registered Nurses, Nurse Practitioners, Certified Coders, and Pharmacists, which cover dozens of specialties. This audit team uses proprietary tools to automate selections, record requests, and records management, and streamline audit processes. This team also works very closely with the SIU and if an auditor or investigator identifies a potential case of fraud in the course of an audit, it is immediately referred to the SIU for further investigations.

For all new referrals, Humana's SIU conducts an initial review to determine:

- If a reasonable inquiry should be initiated, at which time the referral will be opened as a case and assigned to an investigator for a further investigation

- If a provider should be placed on a watch list

- If the referral should be closed with education provided to the individual who submitted the referral

- If the referral should be closed with no further action

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Each referral and case is inherently unique. However, SIU Investigators often employ similar investigative techniques to complete a case review. SIU's investigative techniques include, but are not limited to:

- Verifying the allegation validates a reasonable inquiry to be opened

- Reviewing medical, dental, and/or pharmacy claim information

- Interviewing enrollees, providers, and/or pharmacies

- Requesting and reviewing copies of medical or dental records from providers or prescriptions/signature logs from pharmacies

- Sending and reviewing enrollee questionnaires or Rx verification letters

- Researching non-Humana resources (i.e., Internet resources)

- Requesting and reviewing provider or pharmacy network contracts

- Requesting and reviewing enrollee benefit plan documents

- Requesting or conducting pharmacy desk-top or on-site audits and reviewing results

- Reviewing enrollee eligibility

- Reviewing provider licensure information

- Monitoring providers (participating and non-participating) who:
-- Demonstrate a pattern of falsified encounter data and service reports
-- Demonstrate a pattern of overstated reports or up coding
-- Alter, falsify or destroy record documentation
-- Make false statements
-- Misrepresent medical information to justify referrals or billing
-- Charge enrollees for covered services
-- Bill for services not rendered
-- Fail to render medically necessary services they are obligated to provide according to their contract or pursuant to government regulation

All incoming referrals are tracked in our proprietary tool, Fraud Investigations Tracker (FIT), which we built in-house to provide a more robust tracking system for our investigations and to enhance Humana's ability to fulfill our compliance and reporting goals. When it is fully implemented, we anticipate the FIT will set a new industry standard for case documentation while actively integrating with key business systems to enhance data supporting our investigations. As the case progresses, the investigative steps are documented in the appropriate activity in the FIT and electronic copies of all documents pertaining to the case are attached. Details of relevant case documentation can be viewed by SIU and can be extracted for reporting from the Electronic Data Warehouse (EDW). If the SIU Triage team does not open a case upon reviewing a new referral, the reason(s) are documented and the referral is rejected, but continues to be stored in FIT for future retrieval if needed.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana's SIU is comprised of staff with various backgrounds including data analytics, clinical credentials, and investigative training. The SIU staff consists of the following:

- LEADERSHIP: Director: Manages team's case load efficiently and effectively and ensures team operates in accordance with Humana and SIU policies, processes, standards, and procedures. Also ensures the team has appropriate access to resources, tools, and business areas necessary to accomplish objectives.

- TRIAGE TEAM: Investigators review referrals, regardless of source, to determine whether the case has merit and prioritizes those cases requiring immediate action.

- INVESTIGATIVE LEADS: Ensure Investigators are managing their cases effectively and in accordance with Humana and SIU's policies, processes, standards, and procedures. Effectively investigate and manage complex and non-complex fraud allegations.

- INVESTIGATOR: Investigate potential fraud related to providers, enrollees, agents and others who may be committing healthcare fraud. Identify fraud schemes and trends within their assigned line of business, geographic region, or across specialties.

- INVESTIGATIVE RESEARCHER: Research background information and compile initial case facts for the Investigator. Obtain and research additional information as requested by the Investigator.

- BUSINESS CONSULTANTS: Develop a project plan for each assigned project including a timeline of activities to be performed. Understand the business impacts to the SIU department when there are processes or IT changes/update.

- CONSULTANTS: Manage projects appropriately, prioritizing to ensure deadlines are met. Identify impacts to other areas. Engage impacted areas and work through process changes/updates.

- FACILITATOR: Develop training plans and training content, facilitate training sessions, and support consultants on updates to policies, procedures, and process flows. Manage projects appropriately, prioritizing to ensure deadlines are met.

- SPECIALIST: Assist with gathering and assembling information as needed to respond to inquiries, appeals, and general correspondence. Handle and route correspondence related to SIU investigations as appropriate.

- CLAIM COST MANAGEMENT COMPLIANCE ANALYST: Review State and federal regulations to ensure SIU is aware of and relying on most current regulations. Complete and submit required federal and State government reporting. Coordinate and act as point of contact for federal and State audits impacting SIU and/or Claim Cost Management.

- ADMINISTRATIVE ASSISTANT/OFFICE SUPPORT: Scan, load, and work faxes. Pick up and deliver mail. Provide support to the department as needed.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Following an initial referral and review, SIU's Triage Team identifies the appropriate investigative or audit group at Humana. If further investigation is warranted, the case is then assigned to an Investigator based on the primary product line impacted as well as geographic region. The Investigators or Investigative Leads are responsible for conducting an investigation into potential violations of federal and state criminal, civil, administrative laws, rules and regulations, as well as any misconduct related to the payment or delivery of claims.

In addition, the SIU is also supported by a dedicated clinical team of approximately eighty (80) clinicians. These clinicians are comprised of Medical Directors, Registered Nurses, Nurse Practitioners, Certified Coders, Chiropractors, Pharmacists, and other specialties. The SIU may also access clinicians throughout Humana should a particular scheme arise involving a specialty with which our dedicated team does not have expertise. SIU is currently supported by three (3) Medical Directors, and other Medical Directors are available to assist with certain specialties as follows:

- Ongoing education and guidance from a clinical perspective

- Review of all medical necessity reviews

- Review of all experimental and investigational reviews

- Clinician representation on peer-to-peer, provider education, and market calls

- Guidance on various cases and types of reviews for both the SIU investigators and the clinical team

- Attendance in the various meetings of the SIU clinical team to promote consistency in reviews

- Clinical trainings sessions for SIU investigators and clinical team

- Clinical representation if needed for litigation or pre-litigation meetings with the Legal department

This significant collaboration between the Humana's SIU and clinical teams has also led to continuous review for cost saving efficiencies and process improvements; new case set/meeting with investigative team to discuss cases; review and follow up on post-pay cases; and monthly clinical training sessions for SIU and clinical staff.

CLINICAL REVIEWS ALSO INFORM POTENTIAL FWA CASES

Humana's Utilization Management and Care Management programs have policies in place to immediately identify utilization problems. Daily reports on hospital admissions and care management activity are reviewed to address all identified service utilization concerns. Because services for Long-Term Care (LTC) enrollees and certain MMA services must be authorized by a designated Case Manager, Humana's Case Managers serve as gatekeepers to the healthcare system and are in a unique position to quickly identify possible fraud and abuse cases, and are trained to act on them. Our Case Managers are trained upon hire and receive refresher training

at least annually regarding compliance and FWA in order to further our culture of compliance. Any potential cases are addressed immediately and forwarded to Humana's SIU.

On a monthly basis, LTC Case Managers must submit attestations to Humana's SIU, that to the best of their knowledge, information, and belief, that any missed services or suspected fraud and abuse reported by enrollees during the monthly contact were assessed and referred to the SIU, if appropriate.

Humana's SIU also conducts reviews of clinical data to inform potential FWA cases. Humana's Clinical Guidance eXchange (CGX) houses enrollee medical prior authorization data. The SIU uses the CGX platform to search and view medical prior authorization data after security approval is obtained and HIPAA training has been completed. The SIU searches CGX by authorization number and enrollee identification number. Once an authorization is located, the system provides authorization dates, approval status, relevant nurse documentation of the clinical timeline, and nurse phone call logs. Humana also performs data mining to search for unusual or impossible situations. Specifically, the data teams look for overuse and abuse of durable medical equipment, a common area of concern particularly for LTC. If SIU detects an issue, it ensures that payment is stopped or recouped if applicable.

SIU may notify Humana Market Medical Officers, market network contracting management or Medical Directors across our operations of investigations that are ongoing or completed on non-participating (out-of-network) providers, or discuss with them for input on handling these cases in the event the provider is being considered for contracting.

Humana's Florida Compliance Officer and enterprise compliance staff attend a monthly meeting and ad hoc meetings as necessary with the SIU and PPI to ensure information is shared and that communication channels remain open. Attendees at this meeting discuss open cases, operational needs and changes, and review the SIU Compliance Dashboard. Staff from SIU and PPI, along with the Florida Compliance Officer, attend quarterly in-person meetings and quarterly interim calls with AHCA's MPI.

Finally, SIU is responsible for communication with law enforcement officials. SIU reports cases of suspected fraud activity within 15 days of confirmation of a suspected case by the Government Referral Panel, or as required by federal and State laws, rules and regulations, to the appropriate law enforcement and/or the appropriate government agencies.

==========

4. The extent to which respondent uses innovative technology for the purposes of verifying home-based visits and services.

==========

Humana has taken important steps toward using innovative technology for the purpose of verifying home-based services and reducing the risk of fraud waste and abuse.

Humana has invested heavily in technology to improve care management compliance, efficiency and the enrollee experience. By removing obstacles to providing care coordination to members within the community we are increasing the time case managers spend with enrollees and appropriately documenting contractual components of the visit. Specifically, we have developed a case manager assignment program that utilizes linear algorithms to determine the

most appropriate care manager to assign to each enrollee. The algorithm has been paired with a user interface that enhances the clinical management team's ability to make future care manager hiring and membership distribution decisions best serving our enrollees. Factors accounted for within the algorithm include: distance from case manager to enrollee, membership clustering, language preference, enrollment and term projections, and current-to-optimal model care manager reassignment thresholds. The utilization of advanced mathematical clustering techniques combined with a linear program solver and enrollee directed inputs creates an industry leading practice that reduces the risk of internal fraud.

Secondly, Humana has implemented a state-of-the-art Care App, a mobile application for use by our case managers. The Care App is designed to provide users with the ability to display member demographic information and input information regarding the visit. This technology further advances efficiencies within the care model, increases compliance, and reduces the occurrence of fraud. For example, a case manager can retrieve their next appointment, pull up the contact information for the member or member's caregiver, and call the member or caregiver directly from the application. Once the appointment is confirmed, the application provides point-to-point directions to the member's location. The application also enables the care manager to scan documents directly into Humana's clinical platform and electronically capture signatures on contractual documents and to demonstrate compliance with care management requirements. Furthermore, the Care App is designed to electronically verify home and facility based visits via a check in and check out system. Case managers are checked into enrollees locations based on geo fencing around member locations. Upon exiting the location, the care manager is prompted to check out of the visit. The care manager confirms the system generated data elements from the visit, including the name of the enrollee visited, time exited, and the tasks completed. The electronic verification of the visit is maintained regardless of the action by the case manager. With this app, we aim to utilize dashboards and relevant analytics to monitor home-based visits, including for purposes of verifying care coordination delivery and monitoring FWA.

We have coupled these technology advancements with a new communication model that stems from our Medicaid Governance Structure that identifies risks and opportunities. The governance structure, technology investments, and our communication strategies result in thoughtful redundancies to verify home visits and services.

In addition, Humana's efforts to implement the 21st Century Cures Act (Cures Act) are well underway. For example, we have procedures in place to report providers in accordance with Title V of the Cures Act. We also have effort underway to comply with AHCA's desire to implement EVV capability for both personal care and home health services effective January 1, 2019. As we await AHCA's guidance on the end-to-end EVV data management approach for Managed Care Organizations (MCOs) relevant to the services in question, we have established procedures to integrate the resulting requirements into our operating model. As set out in the Cures Act, we understand this to include the ability to capture the required six (6) data elements (e.g. date, location, type of service, individual providing the service, individual receiving the service, and service time beginning and end) and, via a systematic match of the EVV detail to its related claim and authorization, address services not supported by EVV detail to further reduce FWA exposure. Furthermore, the data captured will support drill-down analytical capability to identify anomalies and patterns to address provider performance issues, under and over utilization of enrollee-specific services, authorizations without resulting service, and potential FWA exposure. Wishing to maximize the accuracy of data collected and the resulting

impact on FWA, we plan to stress the adoption of Global Positioning System (GPS) location detail, as opposed to Interactive Voice Response (IVR), as the primary location-related data source. We look forward to the future guidance from AHCA to ensure that we continue to work in lock-step.

Evaluation Criteria:

1. The extent to which the respondent uses various types of controls and automated approaches as part of a comprehensive approach to prevent and detect potential or suspected fraud and abuse and overpayment.

2. The extent to which the respondent uses biometric or other technology at the point of service delivery to prevent and detect potential or suspected fraud and abuse and overpayment.

3. The extent to which the respondent conducts clinical reviews and SIU investigations to detect potential or suspected fraud and abuse and overpayment.

4. The extent to which the respondent uses innovative technology for the purposes of verifying home-based visits and services.

Score: This section is worth a maximum of 20 raw points with each of the above components being worth a maximum of 5 points each.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS AND EVALUATION CRITERIA (10-2-17)

SRC# 33 – Disaster Recovery Requirements (Statewide):

The respondent shall demonstrate its capability and approach to meet the requirements described in **Attachment B**, Scope of Services, **Section X.D.4.h.**

Response:

Humana understands the critical nature of effective Disaster Recovery (DR) Plans and Business Continuity (BC) Plans. We have designated multiple teams to strategically support our disaster recovery functions. The Crisis Management, BC, DR, and Emergency Response teams maintain responsibility for preparing for threats and disasters. Our Enterprise Resiliency Office (ERO) serves as the central office for collaboration among these teams. Annually, the ERO facilitates various Business Impact Analyses (BIAs) to establish the criticality of business functions and supporting applications for our enrollees. The ERO shares results with executive leadership for their review and to make adjustments, if needed. The DR team uses the results of the BIAs to apply recovery tiers to each application and adjust the DR Plans, as needed.

We have Agency for Health Care Administration (AHCA) approved plans in place that meet all current requirements, including for the restoration of critical applications of software and master files for hardware backup in the event production systems are disabled or destroyed. We also have an integrated process to update those plans when requirements, information systems, or policies and procedures change. In instances when Humana experiences equipment failure or disasters, we have back-up systems which protect our data and information technology (IT) systems and rely on an off-site host for disaster recovery communications.

All production servers are housed in Humana's primary hardened data center, twenty (20) miles south of our corporate headquarters in Louisville, Kentucky. Our secondary data center is located in Simpsonville, Kentucky. This makes them easily accessible by the IT associates who are responsible for DR and BC plan maintenance. The secondary data center offers redundancy and can be activated remotely. We have back-ups of critical systems in both our primary data center and our secondary data center. Both our primary and secondary data centers are state-of-the-art facilities. Our Kentucky-based primary and secondary data centers are protected from the weather-related events impacting the State of Florida, ensuring our systems are live and protected from these disturbances. During Hurricane Irma, our associates experienced no downtime when accessing software applications and data stored in hardware servers and databases, allowing us to offer our enrollees the attention they needed.

Through our experience serving Florida Medicaid enrollees since 1997, we understand the communication processes and triggers AHCA expects of its contractors during disaster events. We have built in touchpoint tasks in our Crisis Management and Crisis Communication Plans. These touch points support specific contractually compliant timings of communications throughout a crisis or significant event including, but not limited to, our Contract Manager notifying AHCA of system outages every hour until they are resolved. We use an externally hosted communication system to support crisis and emergency notification to key leaders, Crisis Management team (CMT) members, and associates. To ensure that we are always prepared for potential disaster or crisis events, our Executive Management team participates in Crisis Exercises approximately every six (6) months.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

PREVENTIVE STRATEGY TO ELIMINATE DATA AND SOFTWARE RISK

To prevent and ward off man-made disasters, we have maintained a preventive strategy to eliminate data and software risk. All hardware and system software on which the applications run are upgraded regularly, as new upgrades are released. Mainframe and its operating systems are upgraded per IBM standards; Humana continues to use only best-in-class hardware (Mainframe and Unix Servers) and systems software developed by IBM. Similarly, our Windows servers and Microsoft core software, used for application development, are upgraded regularly before the support for the old version is no longer available.

As an added safeguard against hacking and other electronic disasters, we employ McAfee VirusScan Enterprise, VirusScan Enterprise for Linux, McAfee Management Optimized for Virtual Environments (MOVE), and McAfee Endpoint Security on all machines that could interact with our network. We use a suite of products from FireEye (HX, NX, and EX), which looks for compromised hosts, indicators of compromise (IOCs), and phishing attacks across our environment. We also use a web filter proxy from Zscaler that has virus detection and mitigation capabilities, as well as Cisco/SourceFire network intrusion prevention sensors that monitor for issues including, but not limited to, web attacks, viruses, malicious code, and drive-by downloads. These measures help to prevent our systems from experiencing any unanticipated electronic disaster.

DISASTER RECOVERY TEAM CAPABILITY AND EXPERIENCE

Our corporate DR Program team facilitates creation and maintenance of DR Plans. The DR team has five (5) full time consultants and one (1) Team Manager. The team has twenty-seven (27) years of cumulative experience in DR and BC at Humana and nearly fifty (50) years of overall experience in DR. The team includes experts with training in material science and engineering and enterprise content management. The team also includes experts certified in BC Planning, Project Management Professional, and IT Infrastructure Library.

Our DR team is structured to rely on the expertise, insight, and active participation from a variety of sources to proactively plan for the successful recovery of production following an event or disaster. Multiple business areas form our DR team so that we have a well-rounded approach. The DR team includes, but is not limited to, members from the: DR Program team, Crisis Management team, Data Center Operations Administration team, Network Services team, Production Control team, Database Administration team, Configuration and Change Management team, Storage Management team, Performance and Capacity Management team, Systems and Software team, Application Engineering teams, Corporate Communications team, Enterprise Information Security teams, and Security Administration team.

==========

1. The adequacy of the respondent's proposed approach and capability to develop and maintain a disaster recovery plan for restoring the application of software and current master files and for hardware backup in the event the production systems are disabled or destroyed.

==========

Our DR planning revolves around safeguarding our data and computers, and ensuring we have plans in place for application recovery. Our DR plans address scenarios including, but not limited to: destruction of computer or software systems, interruption or failure of network based systems, operating hardware, or software, interruption of transactions in live and archival systems caused by operational errors, malicious acts; and weather-related events that affect our

data or computers. We conduct disaster recovery tests throughout the year, hosting tests at our secondary data center as well as at remote facilities, to test various scenarios.

Humana employs a proactive approach to DR by staying ahead of any anticipated or unanticipated disasters. To achieve this, we build, test, and continuously update DR plans for each software application, including third-party software to which we subscribe. As such, all applications have DR plans. Each IT Application Owner and Technical Services Owner is responsible for documenting, maintaining, and testing his or her application recovery plan or plans. The DR team assists the plan owners with recovery planning and testing, as needed, and serves as experts on industry best practices and business and regulatory compliance. The DR Program team facilitates planning sessions, consults, and conducts testing validation for Humana's DR Plans. The DR Program team also coordinates with the Tactical team, the Operational team, and the Local Market Crisis Event Management team in these processes.

STANDARDS TO RESTORE APPLICATION OF SOFTWARE AND CURRENT MASTER FILES
Humana follows all applicable federal and State laws and regulations. Humana will provide backup and recovery to meet security, privacy andother regulatory standards for both systems and data. At the broadest level, our DR Plan ensures that IT systems containing, using, processing, or storing protected health information, protected financial information, and protected personal information have a documented DR plan defining how the organization continues its role if service, use, or access to its computer resources is disrupted for an extended period of time. Our systems adhere to the following standards:

- Gramm-Leach-Bliley Act (1999)

- Privacy Act (1974)

- HIPAA, 45 CFR Parts 160, 162 and 164, Health Insurance Reform: Security Standards

- ISO/IEC 27002:2013, Information Security Management – Code of Practice

- ISO/IEC 27001:2013, Information Security Management System

- ISO/IEC 22301:2012, Societal Security – Business Continuity Management Systems – Requirements

- ISO/IEC 24762:2008 Guidelines for Information and Communications Technology Disaster - Recovery Services

- Sarbanes-Oxley Act of 2002, SOX

- CoBiT V5, Control Objectives Management Guidelines Maturity Model, DS4 Ensure Continuous Service

- PCI/DSS Security Standard V3 issued October 2008, Credit Card Security

- ITIL Version 3 Service Design Volume Section 4.5

- NFPA 1600, Standard on Disaster / Emergency Management and Business Continuity / Continuity of Operations Programs

These baseline standards protect critical infrastructure such as computer operations, networks, power, security, and telecommunications. Critical systems use real-time mirroring to our secondary data center, while non-critical systems, databases, and files are backed up nightly. Data are replicated at the file level in the event some subset of replicated data becomes corrupt.

APPROACH TO HARDWARE BACKUP AND PRODUCTION SYSTEM FAILURE
To ensure protections of our systems, all data and soft copies of files are kept on servers housed outside the state of Florida, avoiding potential disasters from weather events in the state. We keep three (3) copies of our production systems—the primary copy supporting on-going operations, a backup of this at our main data center, and a redundant backup at our secondary data center.

Humana maintains a private, encrypted data link between the primary and secondary data centers. Data that are critical to our operations are stored at both data centers automatically, rather than relying on the primary data center to push data to the secondary one. Backups are performed on a daily basis, at a minimum. We are fully capable of recovering and operating from the secondary data center in the event the primary data center is not available. We have a robust infrastructure for the maintenance of all applications and systems that are critical to business functions. These applications and systems are duplicated in both data centers. Data is replicated between both data centers via a private, secure high-capacity connection, so the data never leaves our secure areas. Backups of critical servers and critical data at the file level are completed nightly by the enterprise back up team in the event that a subset of the replicated data becomes corrupt. During any IT disaster in which our primary data center is not functional, our secondary data center serves as the primary data center until restoration is complete. Development, testing, and implementation of new technologies and applications are suspended during crisis and significant events so that all available resources can be dedicated to resuming normal operations.

We perform yearly tests of our DR Plans. Most of these tests are conducted at the secondary data center using an in-house DR strategy. However, some testing for remote facilities are conducted from contracted vendor facilities. These tests provide the ideal settings under which updates to DR Plans can be made. During tests, we track responses to notifications to join calls, team responsiveness and validation steps. Our latest DR Plan test conducted on August 28, 2017, demonstrated our ability to meet the recovery time objectives. All testing results are documented and maintained for future review.

DR Plans are stored in hard (paper) and soft (electronic) copies. DR Plan owners maintain hard copies of the plans at their homes and at their desk for quick access. The DR team also uses a company-wide shared site as the primary repository to store copies of the recovery plans; the servers used to store these files are designated as critical and have never experienced a disaster. As an additional precaution, DR Plans are loaded onto twenty (20) laptops and updated monthly. Mainframe application recovery plans are replicated alongside copies of the applications, and all are replicated at our secondary data center.

Our Security Office is responsible for physical access at both primary and secondary data centers. The Security Operations Group is responsible for protecting computer hardware,

software, and data against unauthorized access from threats such as viruses, Trojan horses, hacking, and other events such as a denial of service attack. The Security Administration Group is responsible for granting logical access to computer information systems based on data owner approvals. The Enterprise Information Security Organization has a compliance group responsible for routine monitoring of data systems for compliance with the regulatory security requirements. Our security teams have two hundred fifty-one (251) associates, averaging seven (7) years of tenure at Humana.

We maintain all files, including our disaster recovery plans, for our Florida Medicaid plan on physical servers for at least eleven (11) years, exceeding the AHCA retention requirement.

MAINTAINING DISASTER RECOVERY AND BUSINESS CONTINUITY PLANS FOR EXECUTION

Our Corporate Operational team supports the Florida Medicaid market with DR and BC plans. The corporate team works directly with the Florida Medicaid Market Vice President and includes several dedicated BC Liaisons within the Enterprise Resiliency Office who are responsible for coordinating with our Florida associates during any crisis or significant event. Our business and technical associates' response to events is coordinated using their BC and DR Plans.

The Enterprise Resiliency Office works with our Florida business and engages Situational Awareness teams that have responsibility for monitoring and acting during incidents and disasters by offering response plans, including cyber responses, BC Plans, DR Plans, emergency response plans, and crisis communication plans.

EXECUTING DISASTER RECOVERY PLANS

In the event of a disaster, the core recovery teams and Executive Management make an initial assessment of the damages after a crisis or significant event occurs. This group then decides on a course of action, including activation of appropriate DR plans. Our integral partners, including AHCA, are notified per contractual requirements.

Events may also be reported through a variety of methods, including automated incident reporting. Data Center Operations issues are typically reported through the corporate Help Desk (CSS) or through the Network Operations Control Center (NOC), both of which operate twenty-four (24) hours a day, seven (7) days a week. The NOC maintains an escalation contact list that includes the DR team Manager for major events. Our latest test had all required managers in communication via a secure telecommunications line within ten (10) minutes.

Our Crisis Communications Plan includes directions on communicating with enrollees, providers, and AHCA. We notify AHCA of significant system outages every hour, as required by the Contract.

SUBCONTRACTOR DISASTER RECOVERY AND BUSINESS CONTINUITY PLANS

We ensure that all subcontractors have appropriate DR and BC Plans that adhere to Florida's requirements. The ERO established a third Party Risk and Resiliency Program to monitor subcontractor risk and resolution strategies. Critical subcontractors provide their DR Plans and BC Plans to demonstrate compliance with AHCA's contract. In addition, each critical subcontractor annually provides updated plan(s) and evidence of their BC and DR exercises.

==========

2. The adequacy of the respondent's proposed approach and capability to ensure the disaster recovery plan limits service interruption to a period of twenty-four (24) hours and ensures compliance with all requirements under the resulting Contract.

==========

Access to software, current master files, and backups of production systems is critical to our successful systems availability. Our secondary data center is maintained and continuously monitored, as described earlier, with careful attention to ensure we can backup and restore information. Our DR Plan is based on the assumption of catastrophic loss of the main corporate data center in Louisville and includes a tiered approach (based on criticality) for recovery. DR Plans are updated annually or more often, based on the information we gain from our experienced associates, industry insights, and our robust testing processes. Our leadership team operates in compliance with regulatory requirements in establishing criticality (e.g., if a system must be recovered within twenty-four (24) hours, this will be considered critical). The final DR Plan is approved by the DR team.

Humana meets and often exceeds CMS Essential Functions Guidelines in limiting service interruption to a period of twenty-four (24) hours in a disaster event. Our DR Plan establishes roles and responsibilities for documenting disaster recovery and application recovery procedures for computer infrastructure and its supporting networks, applications, and communications in the event of a disaster at the primary data center. We perform annual tests to validate that Humana can meet both the twenty-four (24) hour Recovery Time Objective and the Recovery Point Objective of near zero data loss for Critical systems.

To best support our expansive lines of business, we have established a strong and highly skilled IT team and crafted effective BC Plans. This allows us to effectively respond with the necessary expertise and resources to limit service interruptions. Our recovery strategies are based on a tested process that allows for expedient recovery for applications and services that are critical to delivering and ensuring access to care. Our DR Plan is designed to ensure that our enrollees have access to clinical services and our associates have access to appropriate clinical systems.

BUSINESS CONTINUITY

BC planning ensures we have the necessary resources to satisfy our obligations to AHCA, our enrollees, and our providers. We utilize a tiered approach to our disaster response based on an event's anticipated severity. The process we use to determine which version of the BC Plan to use is detailed below under "Events Management." Our ERO facilitates the execution of recovery during crisis and significant events. Our Florida Market Plan directors are responsible for executing the Florida Market BC Plans. The Florida Market Plan directors report to our President of Florida Medicaid Market Operations. During Crisis and Significant events, our President of Florida Medical Operations facilitates the Florida Market's communication with the CMT.

EVENTS MANAGEMENT

The CMT maintains the Crisis Management Plan (CMP). The CMP guides the CMT on how to handle crises and significant events, with particular guidance for events that are expected to last forty-eight (48) hours or longer. Attachment 33-1 gives an overview of our organizational structure for Crisis Management.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

Humana.com displays actions we take for Medicaid enrollees based on CMS disaster guidance to protect our enrollees. These actions include, but are not limited to, overriding refill timelines, paying out-of-network claims for impacted enrollees, and waiving prior-authorization requirements for impacted enrollees. During crises and significant events, we will look to partner with CMS and AHCA to swiftly implement additional disaster-specific mitigation activity, if necessary.

Business impacting events are reviewed by the ERO for severity of impact on our enrollees and providers, and are then categorized as incident, local market or nationwide crisis, and significant events.

The following paragraphs describe the actions we take for each event severity level:

- Incident: Events categorized as an incident reflect situations where there is minimal, if any, impact to our enrollees accessing or providers delivering care. An example includes minor access to care impacts. Our Emergency and Incident Response team responds to these situations.

- Local Market Crisis or Nationwide Crisis: Nationwide crises would affect Humana's operations in multiple locations. Events categorized as Local Market or Nationwide Crisis events reflect situations where access to care does not pose long-term health risks. The BC and CMTs support Market Leaders in our response efforts to provide a timely action to these situations. Examples of Local Market Crises include weather related disasters in a specific regional area that prevent our employees from accessing our offices. In these situations, the business areas have developed processes that redirect work to other sites, if possible. All production servers are housed in Humana's hardened data center in Louisville, Kentucky; as such, they are not vulnerable to weather-related events in Florida. The servers are accessible from any location within Humana's nationwide private data network.

- Significant Events: Events are identified as significant when we are limited or unable to access critical care systems, resulting in critical care issues that could pose long-term health risks. The Significant Event Management (SEM) team manages significant events, with ERO Crisis Management providing support and guidance. Our CMT is also activated during any significant event. The ERO team works with our business and technical operations in Florida and engages Situational Awareness teams that have responsibility for monitoring and acting during incidents and disasters by offering response plans, which include cyber responses, business continuity plans, disaster recovery plans, emergency response plans, and crisis communication plans.

Access-to-care and critical-to-operations applications and services are stored and backed up at our primary data center and are duplicated at our secondary data center. Data replication occurs via a secure, private network between both data centers, so the data never leaves corporate secure facilities. Backups of critical servers and data are done nightly at the file level to mitigate data loss in the event some subset of the replicated data becomes corrupt.

DR Plan testing, which is the main avenue used to measure time to bring systems back up, occurs throughout the year. The testing drives toward full recovery in a timely fashion. From 2008 to 2016 we have been able to reduce our real-world simulation test recovery times by more than thirty-eight percent (38%).

Humana uses an external mass communication system to support Crisis Management that can be accessed remotely to notify associates of the BC and DR plans to use for the event. Emergency notification can be sent to thousands of associates in just minutes and can be one-way (to the emergency personnel only) or two-way (requesting the recipient to press a number to join a teleconference, provide a status on personnel safety, or give them a number to call for more details). Additionally, the tool provides a report showing the key personnel who have responded. We even utilize this system during annual DR tests and during our semi-annual Crisis Management exercises.

==========

3. The adequacy of the respondent's proposed approach and capability to ensure the records backup standards and a comprehensive disaster recovery plan are developed and maintained by the respondent for the entire period of the resulting Contract and submitted for review annually by the anniversary date of the resulting Contract.

==========

Humana has extensive records backup to ensure our systems remain operable during adverse events. We retain three (3) copies of our critical systems to mitigate issues if one of the copies is damaged or destroyed. The production copy and one (1) backup are stored in our primary data center, and a redundant backup copy is stored in our secondary data center. Changes and updates to the data are pushed between the two (2) data centers automatically via a secure, private, encrypted corporate data link. Backups of critical servers and critical data at the file level are taken nightly by the application teams in the event some subset of the replicated data becomes corrupt. Data replication for applications defined as Tier 1 (catastrophic/must have) occurs between both data centers so the data never leaves corporate secure facilities. This allows for compliance with the AHCA Contract and for us to satisfy the requirements of our DR Plan.

Our DR team reviews our DR Plan annually or more frequently (when needed). The DR Plan covers the recovery of computer systems, hardware, and software applications our market plan and corporate teams need access to. The DR Plan outlines the overall recovery plan strategy and defines roles and responsibilities for all DR planning. Humana's DR Plan will continue to be made available to AHCA. Our comprehensive Corporate DR Plan follows all state and federal laws and regulations. In the event that there is a conflict between state and federal laws, we follow the more stringent requirements. Recovery team owners are responsible for maintaining, testing, and executing, when needed, their DR Plans.

==========

4. The adequacy of the respondent's proposed approach and capability to ensure it maintains a disaster recovery plan for restoring day-to-day operations including alternative locations for the vendor to conduct the requirements of the resulting Contract.

==========

DISASTER RECOVERY

Humana's DR Plans are designed to guide our associates to recover systems. They are written with the level of detail needed to allow trained IT resources to understand and implement recovery activities at alternative locations. These plans are reviewed annually and are updated as any system or application change is made.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

BUSINESS CONTINUITY

BC Plans ensure we have the necessary resources to satisfy our obligations to AHCA, our enrollees, and our providers. All BC Plans include accommodations for alternate-site operations in the event our primary sites are inoperable. BC Plans are also stored off-site with managers on their laptops and on a dedicated secure network drive site that is accessible through a virtual private network. Our key market and corporate business leaders maintain hard copies of the BC Plans are kept in their offices and homes, ensuring access to physical access to these plans in the event of system or electricity failures.

Humana maintains unique BC Plans for each business area that are tailored to address events and support the restoration of day-to-day operations, based on business criticality established by business leaders. These plans include operating from alternative locations for critical business functions.

Our BC Plans offer the day-to-day operational guidance to carry out critical operational functions. BC Plans begin with a recovery strategy that includes recovery approaches based on business criticality. BC Plans are built on the assumption that the event could occur during or after business hours, the relevant Humana facilities are inaccessible for an extended period of up to six (6) months, and key business area associates are not able to assist in recovery. As a result, BC Plans are written with the level of detail necessary so that associates or managers with similar skill sets can execute the plan.

The BC Plan has the following steps:

1. Notification and activation, to notify key individuals impacted and begin to act on key elements of the plan

2. Assessment, to determine disruption scope and initiate recovery

3. Recovery site, to maintain a temporary recovery site if needed

4. Process recovery, to restore day-to-day operations

5. Salvage efforts, to clean up abandoned site and retrieve records

6. Return to permanent facility, to restore day-to-day operations at the permanent site

Business Continuity Plans are executed by plan Directors, with support from the Enterprise Resiliency Office during Local Market, Nationwide Crisis, and Significant Events. Plan Directors maintain overall responsibility for business functions and attest to the BC Plan for its approval. The BC team works with Managers, Supervisors, and Subject Matter Experts to create, update, and test the BC Plan. Final approval for BC Plans occurs when the plan is submitted with attestations that the plan meets specific requirements. Mission and Business Critical BC Plans are updated after tests and events.

The CMT maintains the Crisis Management Plan (CMP). The CMP directs the CMT on how to handle all events, with guidance for events that could impact our enrollees, providers, associates, and stakeholders (e.g., AHCA).

The Business Continuity team oversees the development of tools for the creation of plans and the facilitation of the business impact analyses. These analyses help identify critical applications, the recovery time objectives, and key information provided to the Disaster Recovery teams.

The Tactical team comprises Directors and Vice Presidents. This team's primary responsibilities during a recovery include emergency response, cyber response, BC, DR, and crisis communication. The Tactical team reports to the Operational and Local Market Crisis Event Management teams.

Our corporate Operational team and Local Market Crisis Event Management team are made up of Segment Presidents and Enterprise Vice Presidents. Higher level events, especially those that have the potential to cause a maximum of twenty-four (24) hours of disruption are escalated to this level. When an event could exceed twenty-four (24) hours of disruption, the Significant Event Management team is immediately called into action. This team is comprised of the Chief Executive Officer and direct reports. It is responsible for strategically guiding the enterprise though the Disaster Recovery process to minimize disruption during, or as a result of, a major event.

To restore day to day operations, Humana's telecom systems have remote login capability that allows business associates to login at alternate work locations or from their homes to take calls. Associates have this remote capability because they are assigned to a specific skillset that aligns to the incoming phone numbers. For example, our Critical Inquiry team (CIT) associates working from various Humana locations or from their home can take CIT calls virtually anywhere, as they are assigned the CIT skillset. This remote login and work at home capability helps to provide continuity of CIT services should Humana experience a facility interruption.

==========

5. The adequacy of the respondent's proposed approach and capability to ensure it maintains database backups in a manner that eliminates disruption of service or loss of data due to system or program failures or destruction.

==========

As a result of our comprehensive system security protections, Humana has never experienced a loss of data due to a system or program failure or destruction. We maintain backups of critical applications and systems, which are updated nightly. Our data centers are accessible via Humana's secured virtual private network, allowing us to maintain operational functionality, regardless of time or place, because our associates can access their files in a secure manner remotely. Humana's secondary data center is located in Simpsonville, Kentucky, and is always privy to the information found within our primary data center. The secondary data center is fed data through our high-capacity data link and includes real-time mirroring for critical systems. As an additional precaution, we have two (2) backup power sources – large battery banks and generators – for our data centers.

Our Primary Data Center is protected by our security teams, a barbed wire fence, and drop-gate parking entrances. Both data centers require that visitors have a Humana Associate Identification (ID) to enter. Visitors who do not have a Humana Associate ID are required to register with the security office, are issued a temporary ID, and are escorted by a security member or associate at all times. The Associate ID or temporary ID is required to enter and exit

the centers. Both data centers are Tier 3 certified, which means that they require no shutdowns for equipment replacement and maintenance, have exterior walls built to withstand one hundred fifty (150) mile-per-hour winds, and are fully enclosed (without windows for the area storing data).

The Storage Management team provides storage capability for all computer processing needs. The team is responsible for providing mainframe disk and tape storage for production operations and replicating production data in real time, which is then transmitted to the secondary data center where data is also stored on disk. They also provide open systems storage for servers based on the amount of data to be stored on each server. During emergency events, the Storage Management teams work closely with the open system vendors to expand the storage as required at the alternative processing site, either on a temporary or permanent basis. The software management team also has responsibility for replicating critical system production data in near real time and transmitting the data to our secondary data center where the data is stored on a disk.

The accountable systems and software teams have responsibility for mainframe system level software, including installation, servicing, and ongoing maintenance. The team also provides all production operating system images to the recovery teams.

==========

6. The adequacy of the respondent's proposed approach and capability to ensure the disaster recovery plan is finalized no later than thirty (30) calendar days prior to the resulting Contract effective date.

==========

Humana's tenure in healthcare and within the Florida market has enabled us to develop the relevant expertise needed to ensure our DR processes are thorough and up-to-date. Our Contract Management Unit will ensure that all necessary updates to our BC and DR Plans align with the Contract and are finalized no later than thirty (30) days prior to the resulting contract's effective date.

Our Contract Manager is ultimately responsible for the submission of our enterprise DR plan to AHCA. Our Contract Manager works with our BC Plan liaison to support BC and DR planning to ensure we plan for potential impacts to our enrollees. Since we joined the Florida Medicaid program in 1997, we have always submitted our Enterprise DR Plan to AHCA in a timely fashion.

==========

7. The adequacy of the respondent's proposed approach and capability to ensure it amends or updates its disaster recovery plan in accordance with the best interests of the Agency and at no additional cost to the Agency.

==========

Humana prioritizes opportunities identified in our DR plan updates to support business function priorities and AHCA's requirements, as well as to adhere to national standards. Any updates and changes we determine through this process are always made in the best interest of the Agency and our enrollees and providers. Our Contract Manager shares updates to our DR

Plans with AHCA annually or as DR Plan changes are made. Changes occur after tests or events and as new protocols are established.

Humana meets and often exceeds CMS Essential Functions Guidelines and maintains responsibility for related DR costs. Annually, or as needed, Humana will assess AHCA business functional recovery requirements or new service offerings and compare them to CMS Essential Functions. When AHCA's recovery requirements do not align with CMS' Essential Functions, our Senior Leadership reviews any additional requirements or variation in requirements and will amend and update our plan in the best interest of the Agency. Our Contract Manager shares updates we are making to our Enterprise DR Plans to the Agency in a timely manner and at no additional cost to the Agency.

==========

8. The adequacy of the respondent's proposed approach and capability to ensure it makes all aspects of the disaster recovery plan available to the Agency at all times.

==========

Humana has made our DR Plan available to the Agency at all times and will continue to make the DR Plan available at all times. We will submit the DR annually and at any time AHCA requests.

==========

9. The adequacy of the respondent's proposed approach and capability to ensure it conducts an annual Disaster Recovery Plan test and submits the results for review to the Agency.

==========

Humana performs annual simulation tests on our DR Plans. These tests provide the ideal settings under which updates to DR Plans can be made. The test scope includes recovery of the infrastructure, functionality, data, and applications supporting national Humana and local Florida Medicaid business at the secondary data center in Simpsonville.

During tests, we track responses to notifications to join calls, team responsiveness, and validation steps. Our DR Plan tests are used to validate successful operations and provide scenarios to serve as experience to test the effectiveness and comprehensiveness of our DR Plan. Our latest test, on August 27, 2017, demonstrated we met the recovery time objectives.

Special tests are conducted whenever major revisions are made to the recovery plans or significant changes have occurred to software, hardware, or data communications environments. When practical, the test exercises may use tabletop, walkthrough, technical, backup media restore, simulated, or automated test exercises to walk through a recovery plan.

The DR Program Manager is responsible for coordinating and documenting all testing and testing results. The DR Program team monitors testing, gathers evidence of testing documentation, identifies gaps in the existing DR Plans being tested, and works with the test teams to update plans accordingly. Test results will be documented in the Executive Summary report. The Executive Summary test report is given to Executive management shortly after testing is completed and posted to the DR SharePoint site. Follow-up focus meetings are held with participating teams to discuss lessons learned and identify where specific changes must be made to the individual team plans and give teams with test objectives for the next test exercise.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

We have established minimum criteria to complete these tests and set new objectives each year to ensure we consistently achieve improved objectives and are aligned with the priorities established by the field and by AHCA. As referenced earlier, over the past eight (8) years we have been able to reduce our real-world simulation test recovery times by more than thirty-eight percent (38%). We take the knowledge gained in these exercises and apply it to update all of our DR Plans.

Humana will continue to submit a summary report of our DR exercise and results to AHCA on an annual basis. This validates our capability to meet our recovery time objectives.

Evaluation Criteria:

1. The adequacy of the respondent's proposed approach and capability to develop and maintain a disaster recovery plan for restoring the application of software and current master files and for hardware backup in the event the production systems are disabled or destroyed.

2. The adequacy of the respondent's proposed approach and capability to ensure the disaster recovery plan limits service interruption to a period of twenty-four (24) hours and ensures compliance with all requirements under the resulting Contract.

3. The adequacy of the respondent's proposed approach and capability to ensure the records backup standards and a comprehensive disaster recovery plan are developed and maintained by the respondent for the entire period of the resulting Contract and submitted for review annually by the anniversary date of the resulting Contract.

4. The adequacy of the respondent's proposed approach and capability to ensure it maintains a disaster recovery plan for restoring day-to-day operations including alternative locations for the vendor to conduct the requirements of the resulting Contract.

5. The adequacy of the respondent's proposed approach and capability to ensure it maintains database backups in a manner that eliminates disruption of service or loss of data due to system or program failures or destruction.

6. The adequacy of the respondent's proposed approach and capability to ensure the disaster recovery plan is finalized no later than thirty (30) calendar days prior to the resulting Contract effective date.

7. The adequacy of the respondent's proposed approach and capability to ensure it amends or updates its disaster recovery plan in accordance with the best interests of the Agency and at no additional cost to the Agency.

8. The adequacy of the respondent's proposed approach and capability to ensure it makes all aspects of the disaster recovery plan available to the Agency at all times.

EXHIBIT A-4-a
GENERAL SUBMISSION REQUIREMENTS
AND EVALUATION CRITERIA (10-2-17)

9. The adequacy of the respondent's proposed approach and capability to ensure it conducts an annual Disaster Recovery Plan test and submits the results for review to the Agency.

Score: This section is worth a maximum of 45 raw points with each of the above components being worth a maximum of 5 points each.

G. STATUTORY REQUIREMENTS

SRC# 34 – Statutory Community Partnerships (Regional):

The respondent shall describe the extent to which its organization has established community partnerships with local providers or agencies that create opportunities for reinvestment in community-based services that play a critical role in improving the health and quality of life for enrollees, including:

a. Participation by senior executive leadership staff on local health and human service boards, councils, and commissions.

b. Partnerships with local community organizations focused on addressing the following social determinants of health:

(1) Access to Food;
(2) Employment;
(3) Housing Stability;
(4) Education; and
(5) Exposure to Crime/Violence.

c. Participation in both grass-roots and grass-tops provider initiatives.

Response:

==========
The respondent shall describe the extent to which its organization has established community partnerships with local providers or agencies that create opportunities for reinvestment in community-based services that play a critical role in improving the health and quality of life for enrollees.
==========

Partnerships with local organizations and providers are critical to improve the health and quality of life for the Medicaid enrollees that depend on them. This is particularly true for programs supporting the complex care and social supports needs of vulnerable subpopulations covered in Florida's Statewide Medicaid Managed Care (SMMC) program. There are countless organizations that have provided foundationally important work for decades in communities across Florida. Humana is committed to enhancing these existing support structures rather than supplanting them with overly prescriptive national models. Partnerships with local community organizations also help us more effectively remove access to care barriers. We have built this approach on the understanding that success requires working within current system infrastructures and collaborating with community partners to support programs and initiatives centered on a common goal to improve the health, well-being, and quality of life for Florida enrollees.

Humana has formed community partnerships deliberately and gradually through strong, historical experience across the State, where we currently serve more than two point two five (2.25) million enrollees across Medicaid, Medicare, and Commercial health plans. Humana's

more than ten thousand (10,000) Florida-based associates are highly engaged in their communities, with more than thirty-three thousand six hundred (33,600) volunteerism hours logged in 2016. In fact, Humana encourages associates to give back to their communities by offering paid time off for volunteerism. We've built community partnerships with nearly three hundred (300) different local organizations, in addition to hundreds of long-established, highly-engaged relationships with locally-based providers. Separately, the Humana Foundation, a 501(c)(3) entity with a governing and grant-making body separate from Humana Inc. market leadership, has contributed more than four point one million dollars ($4.1M) to a variety of local Florida non-profits over the last five (5) years, further demonstrating the company's overarching commitment to the communities we serve. Most recently, in the immediate aftermath of Hurricane Irma, the Humana Foundation donated one million dollars ($1M) to the American Red Cross and one hundred thousand dollars ($100,000) to Feeding America partners throughout Florida for relief efforts.

Humana's corporate "Bold Goal" captures the spirit of our approach to community partnerships: to make the communities we serve twenty percent (20%) healthier by 2020. Achieving this goal is only possible through a deep company leadership commitment to community engagement coupled with strong relationships with local organizations that help enrollees adopt healthy behaviors and address the many social determinants of health and wellness. Jaimie White, President of Florida Medicaid Operations, as well as John Barger, Humana's Vice President of National Medicaid and Dual-Eligible Programs, have demonstrated a commitment to achieving this goal by serving on Humana's Florida Bold Goal Board of Directors to align their leadership and expertise with community health priorities.

In 2015 Humana's corporate Bold Goal team, housed under the Office of the Chief Medical Officer, launched Bold Goal markets in Florida, including Broward County, Tampa, and Jacksonville. To truly understand these communities, the Bold Goal team conducted in-depth analyses of each community's specific social determinants of health, prevalent chronic conditions, provider landscapes, and access barriers. In each of these regions, Humana helped convene and establish a local Health Advisory Board, which brings dozens of local stakeholders together to collaborate and find solutions to improve the local systems of care. The Health Advisory Boards hold quarterly meetings to foster collaboration among community organizations. Our leaders, in collaboration with critical community stakeholders, explore and validate opportunities for enhanced clinical and community partnerships, then remove barriers and align resources for support. During the Health Advisory Board meetings, the group charters and leads subcommittees to implement high-impact opportunities throughout the year. The response from organizations in these communities has been remarkable: one hundred seventy-five (175) local organizations have already signed on as Bold Goal Health Advisory Board members across Broward County, Jacksonville, and Tampa, and the list continues to grow.

==========

a. Participation by senior executive leadership staff on local health and human service boards, councils, and commissions.

==========

Humana emphasizes the importance of volunteerism and community involvement for all our associates and executives. By directly working with local organizations, we have a better understanding of our communities and enrollees' needs. Similarly, Humana offers these local health organizations our senior executives' leadership and expertise, which creates mutually beneficial partnerships. Our senior executive staff, through their leadership on the Florida Bold Goal Board of Directors and numerous other local health boards, councils, and commissions, helps to build extensive community partnerships. Our leaders care deeply about improving the health of their local communities, and they independently participate on Florida boards and councils that align with their individual interests. Below is a list of several Florida-based leaders and the organizations with which they are involved:

Jaimie White, President, Florida Medicaid Operations
- Board of Directors, Anne Storck Center
- Board of Directors, The FOOT Foundation – Florida Orthotics and Prosthetics Outreach Team
- Governance Board Member, Healthy Start Coalition of Escambia County

- Board of Directors, Humana Bold Goal Tampa

John Barger, Segment Vice President, Humana Dual Eligible and Medicaid Programs
- Board of Directors, Florida Hunger Action Alliance in partnership with Feeding Tampa Bay
- Board of Directors, Humana Bold Goal Tampa

Dr. Ian Nathanson, MD, Florida Medicaid Medical Director
- Pediatric Council Member, Florida Chapter of the American Academy of Pediatrics
- Board of Trustees, American College of Chest Physicians
- Decision Skills Committee Chair, Maintenance of Certification for the American Board of Pediatrics

Liz Webster, Florida Medicaid MMA Clinical Director
- Board of Directors, South Florida March of Dimes
- Florida Board of Nursing

Natalia Aresu, Director, Florida Medicaid LTC
- Advisory Committee Member, Impact Broward

Ela Alarcon-Cabrera, Clinical Director, Florida Medicaid LTC
- Board Member, Health Council of South Florida

Fernando Valverde, Florida Regional President
- Dean's Advisory Committee Member, Florida International University College of Medicine
- Board of Governors for all twelve (12) State Universities in Florida
- St. Thomas University Science Board

Kurt Strohmeyer, South Florida Medicaid Community Engagement Director
- Board of Directors, Florida Introduces Physical Activity and Nutrition to Youth (FLIPANY)
- Board of Directors, Humana Bold Goal Broward County

Katie Fleetwood, North Florida Medicaid Community Engagement Director
- Voting Member, Homeless Coalition of Polk County

Melissa Blum, Bold Goal Integration Leader
- Health Access Committee Member, United Way of Broward County
- Health Access Committee Member, Broward Regional Health Planning Council

MEDICAID COMMUNITY ENGAGEMENT

In 2014 Humana launched Community Engagement Teams specifically focused on supporting local organizations that can help Humana’s Florida Medicaid enrollees. These regionally-based teams collaborate with community partners and providers, host health events, present health education sessions at conferences, and most importantly, help our Medicaid enrollees and their families connect with local resources to address all aspects of their health. As one example, we forged a partnership between Escambia County School District and Escambia County

Community Clinic to bring a mobile dental clinic into more than twenty (20) local schools. As a result, more than one thousand one hundred forty (1,140) children have received dental services. To forge relationships like these, Humana's Community Engagement teams serve on local health committees and build strategic partnerships, including the following:

HEALTH AND HUMAN SERVICE BOARDS, COUNCILS, AND COMMITTEES
Aging and Disability Resource Center (ADRC) Monthly Partners Committee
Alliance for Aging New Face of Aging Committee
Alliance for Aging Board of Directors
Bridges of Pahokee and Riviera Beach, Community Events Committee
Diabetes Coalition of Palm Beach County, Outreach Committee
Escambia County Council PTA and Florida State PTA, Health and Safety Committee Chairperson
Estate Planning Council, Committee Member
Florida Assisted Living Association (FALA) Board of Directors
Florida Assisted Living Association (FALA) Conference and Education Committee
Florida Assisted Living Association (FALA) Governance Committee
Head Start Advisory Committee, Gold Star Volunteer
Head Start Policy Council
Healthy Start Coalition
Hillsborough County Board of Commissioners Back 2 School Coalition
Homeless Coalition of Polk County
Helping Youth in Pensacola Endure (HYPE), Board Member
Junior League of Pensacola
Mentor at West Perrine Park
Palm Beach County HIV Care Council, Committee Member
Promoting Health in Homeless Shelters
Student Health Advisory Committee of Hillsborough County
The Beautiful Gate, Outreach Committee
The Urban League of Broward, Bold Goal committee
Tobacco Free Florida
United Way Children's Week Committee
United Way Loaned Executive Program
United Way Senior Day Committee
Volusia Flagler Coalition, Board Member
Wellness Committee Rotary Club of Perrine-Cutler Ridge/Palmetto Bay
West Palm Mental Health Coalition, Outreach Committee
Women's Health and Education Network of Palm Beach County, Outreach Committee

==========

b. Partnerships with local community organizations focused on addressing the following social determinants of health:

==========

Social determinants, including economic and environmental factors, can play as big a role in enrollees' health as their access to high quality primary care providers (PCP) and hospitals. Fortunately, there are strong local organizations throughout Florida dedicated to improving their communities. Many of these organizations are focused on a single issue within one (1) specific

community, which puts them in the best position to lead progress on the issue. Across the company, Humana builds partnerships with these organizations to provide a variety of support, including:

- Launching collaborative events: Our Medicaid Community Engagement Teams have helped organize, coordinate, and present at more than two hundred (200) health fairs and events in 2017.

- Volunteerism: In 2016 alone, Humana associates logged more than thirty-three thousand six hundred (33,600) volunteer hours in Florida.

- Making connections with other organizations: Humana's Bold Goal Health Advisory Boards build strategic partnerships between hundreds of local organizations.

- Corporate Philanthropy: The Humana Foundation, a 501(c)(3) entity with a governing and grant-making body separate from Humana Inc. market leadership, has contributed more than four point one million dollars ($4.1M) to local Florida non-profits since 2012.

Our partnerships with local community organizations are critical to address a broad range of social determinants that drive health and well-being, including food insecurity, employment, housing stability, education, and exposure to crime and violence.

(1) ACCESS TO FOOD

Studies by Feeding America suggest that food insecurity affects one (1) in seven (7) Americans. Humana has been studying Florida's food insecurity challenges in collaboration with the University of South Florida, Feeding Tampa Bay, Bank of America, Community Foundation of Tampa Bay, and Mosaic. Using the Centers for Disease Control and Prevention's (CDC) four (4)-question Healthy Days survey, our findings suggest that enrollees who experience food insecurity struggle with twice as many "Unhealthy Days" as food-secure enrollees. "Unhealthy Days" refer to the number of days in a month during which the individual feels unwell mentally or physically. Thus, through our food security programs, we aim to mitigate one of the strongest influences on enrollees' health.

Together with our community partners, we have launched initiatives and supported food drive events to work toward alleviating food insecurity issues for many individuals across Florida. Food insecurity has a powerful influence on an individual's health, and Humana focuses heavily on partnering with local community organizations to address it. Below are examples of how we have worked to alleviate food insecurity through partnerships with Florida community organizations.

HURRICANE IRMA DISASTER RELIEF

Food insecurity is already a serious health concern throughout much of Florida, which disasters like hurricanes magnify even further. When Hurricane Irma left a widespread path of destruction across Florida, Feeding America worked quickly and diligently with local food banks to meet the critical food needs of Floridians affected by the storm. Immediately following Hurricane Irma, the Humana Foundation donated one hundred thousand dollars ($100,000) to Feeding America partners in South Florida, Tampa Bay, and Northeast Florida for hurricane relief efforts. Feeding

America used these funds to supply critical items such as water, produce, snack foods, ready-to-eat products, personal hygiene items, and cleaning supplies.

FEEDING AMERICA FOOD INSECURITY PILOT

In 2016, Humana collaborated with Continucare Medical Centers, Feeding America, and Feeding South Florida to conduct a pilot program to address food insecurity. When enrollees came for a doctor's visit, the Continucare associates evaluated them to determine whether they experienced food insecurity. They referred individuals who screened positive to meet with Feeding South Florida, with representatives onsite at the clinic. Feeding South Florida helped them enroll in Supplemental Nutrition Assistance Program (SNAP), Women, Infants, and Child (WIC), and other applicable assistance programs, and provided information about local food pantries. To address their most immediate needs, food insecure patients then received a care package of food.

The results from this program show how programs like this can impact enrollees' well-being by identifying those who experience food insecurities and helping them identify options for obtaining affordable food options. In this pilot program, we screened five hundred thirty (530) enrollees over a three (3)-week period. Of those screened, two hundred forty-six (246), or forty-six percent (46%), screened positive for food insecurity so we referred them to meet with Feeding South Florida. Of the two hundred forty-six (246) referred: two hundred eleven (211), or eighty-six percent (86%), accepted the referral and met with Feeding South Florida; one hundred ninety-eight (198), or ninety-four percent (94%), accepted an emergency box of food; and one hundred seventy-six (176), or eighty-three percent (83%), were referred to local food pantries or other agencies. Furthermore, seventy-eight point three percent (78.3%) of the dual-eligible enrollees screened were food insecure – a significantly higher percentage than that of Medicare Advantage (MA) enrollees screened.

Following the success of this pilot program, Humana launched large-scale, long-term food insecurity programs in both South Florida and Tampa that not only support enrollees in signing up for resources that provide ongoing food assistance, but also allow food-insecure patients to receive a package of food designed to last a full month. These programs, which went live in May 2017, build on the foundation of the pilot and expand geographic reach by extending into additional medical centers.

FOOD PANTRY VOLUNTEERISM AND SUPPORT

Humana's Community Engagement team works onsite with the City of Refuge food pantry on a weekly basis to provide health education. Last year, as the 2016 holiday season approached, the pantry director was concerned about a food shortage after Thanksgiving. The director also noted the pantry needed to replace a broken refrigerator to hold its annual Christmas giving event. To meet the need, the Humana team organized an office-wide initiative, and in two (2) weeks, we collected and donated more than three thousand seven hundred (3,700) non-perishable food items to the pantry. As a result, two (2) truckloads of food went to volunteers at the City of Refuge Compassion Food Pantry in Polk County in December. Our Community Engagement team also found a gently used refrigerator for sale. After speaking with the seller about the pantry's need, the seller offered to donate and deliver the appliance to the pantry free of charge. As a result, more than three hundred (300) families received dinner at the Christmas giving event.

OUTREACH CENTER REFERRALS

The Helping Other People Everyday (HOPE) Outreach Center is a South Florida agency that supports families with a variety of services, including a food pantry, after-school enrichment programs for children, senior companionship, and financial support for low-income families. In 2016 alone, the HOPE Outreach Center provided nearly one hundred (100) tons of food to their neighbors in Broward County. Humana has a longstanding partnership to help this local organization improve its community by fighting food insecurity. When we identify enrollees as food insecure, we connect them with the HOPE Outreach Center. To support their operations, Humana has provided fundraising sponsorships, which help cover costs for their food pantry. Additionally, our South Florida team participates at public events for the HOPE Outreach Center throughout the year.
